tion and retains the two together. [L, 16.]—**A. cutanea septi narium.** Ger., *Hautanhang der Nasenscheidewand.* Syn.: *statica septi narium.* The cutaneous edge of the septum narium. [A, 322.]—**A. ensiformis.** See *Xiphoid* CARTILAGE.—**A. epididymidis.** See VAS *aberrans.*—**Appendices epiploicæ.** Fr., *appendices épiploïques.* Ger., *Fettenhänge des Dickdarms.* It., *appendici epiploiche.* Certain small fringe-like projections of the serous coat of the colon and the upper part of the rectum containing fat and resembling the omentum. [A, 301; C; L, 142.]—**Appendices fallopiæ.** See *Appendices epiploicæ.*—**A. funicularis.** Fr., *appendice funiculaire.* Ger., *Anhängsel vom Nabelstrang herrührend.* That portion of an ovule of a plant to which the funiculus is attached. It is spongy or indurated and differs in color from the rest of the embryo. Also called *epiphysis*, *strophiolum*, *caruncula*, *spongiola seminis*, etc. [B. 198.]—**A. funicularis adnata.** The a. funicularis when it is attached to the rest of the embryo by its entire length. [B, 198.]—**A. funicularis libera.** The a. funicularis when it is attached by one extremity only to the rest of the embryo. [B. 198.]—**A. glandulæ pituitariæ.** The anterior lobe of the pituitary body. [I, 3.]—**A. glandulæ thyreoideæ.** See PYRAMID *of the thyreoid gland.*—**A. inferior ligamenti cruciati epistrophei.** See CRUS *inferius ligamenti cruciati epistrophei.*—**A. lobularis** [Chaussier], **A. lobularis anterior.** See FLOCCULUS.—**Appendices musculosæ diaphragmatis.** The pillars of the diaphragm. [L, 44.]—**A. of the epididymis.** See VAS *aberrans.*—**Appendices omentulæ, Appendices pinguedinosæ.** See *Appendices epiploicæ.*—**Appendices pyloricæ.** See APPENDICULÆ *pyloricæ.*—**A. seminis.** See *A. funicularis.*—**A. superior anterior ligamenti cruciati epistrophei.** See CRUS *superius ligamenti cruciati epistrophei.*—**A. superior ligamenti transversi.** A small band of the ligamentum latum epistrophei which is attached to the upper part of the ligamentum transversum. [L, 31.]—**A. superior posterior ligamenti transversi.** See *A. superior ligamenti transversi.*—**A. suprasphenoidalis** [Chaussier]. The pituitary body. [I, 3.]—**A. terminalis** [Cassini]. Fr., *appendice terminal.* Ger., *Anhängsel der Spitze.* An appendix at the apex of the anther, especially one consisting of the connectile produced beyond the apex of the anther. [B, 198.]—**A. ventriculi.** 1. The pituitary body. [I, 3.] 2. The duodenum. [L.]—**A. vermicularis, A. vermiformis.** See *A. cæci.*—**A. vesicæ.** A hernia-like protrusion of the mucous membrane of the bladder between the fibres of its muscular coat, constituting sacculation (*q. v.*). [L, 142.]—**Auricular a.** See *Auricular* APPENDAGE.—**Ensiform a.** The xiphoid cartilage.—**Vermiform a.** See *A. cæci.*—**Xiphoid a.** The xiphoid cartilage.

THE OPENING OF THE APPENDIX CÆCI. (AFTER LE BON [A, 440].)

1, small intestine; 2, ileo-cæcal valve; 3, cæcum; 4, opening of the appendix vermiformis; 5, mucous fold at the opening of the appendix; 6, large intestine; 7, 7, folds of the mucous membrane.

APPENSIO (Lat.). n. f. A^{2}p(a^{3}p)-pe^{2}n'si^2-o. Gen., *appensio'nis.* See ANALEPSIS (2d def.).

APPENSUS (Lat.), adj. A^{2}p(a^{3}p)-pe^{2}ns'u^{3}s(u^{4}s). From *appendere*, to hang up. 1. See APPENDENS. 2. Hung upon the person like amulets (*appensa*). [L, 119.]

APPENZELL (Ger.), n. A^{3}p'pe^{2}n-tze^{2}l. A Swiss town near which there is a cold carbonated magnesian spring, the water of which is used for atonic dyspepsia, also a whey-cure establishment. [A, 385; L, 49, 63.]

APPERCEPTION, n. A^{2}p-pu^{5}r-se^{2}p'shu^{3}n. From *ad*, to the last degree, and *percipere*, to perceive. Fr., *aperception* [Leibnitz]. Ger., *Apperception, Wahrnehmung der Wahrnehmung.* 1. As used by Leibnitz, the conscious reception of sensory impressions, as distinguished from perception in general, which might be either conscious or unconscious. The conscious perception of a color, for example, represents, according to Leibnitz, the sum of a number of lesser perceptions, no one of which would by itself be capable of affecting the consciousness. [B, 235.] 2. The faculty of appreciative perception (nearly equivalent to thought) as opposed to mere sensory perception. [Kant, quoted by J. Ross, "Med. Chron.," Jan., 1886, p. 265.]

APPERCEPTIVE, adj. A^{2}p-pu^{5}r-se^{2}p'ti^{2}v. Fr., *apperceptif.* Ger., *appercipirend.* Pertaining to apperception. [A, 304; J. Ross, "Med. Chron.," Jan., 1886, p. 265.]

APPETENCE, APPETENCY, n's. A^{2}p'pe^{2}t-e^{2}ns, -e^{2}ns-i^2. Lat., *appetentia* (from *appetere*, to long for). Fr., *appétence.* Ger., *Appetenz, Naturtrieb.* It., *appetenza.* Sp., *apetencia.* See APPETITE.

APPÉTIBLE, APPÉTISANT (Fr.), adj's. A^{3}p-pa-tebl, -teza^{3}n^2. See APPETIZING.

APPÉTIT (Fr.), n. A^{3}p-pa-te. 1. See APPETITE. 2. The *Allium schœnoprasum* in the Middle Ages, also *A. ascalonium.* [B, 121, 173.]—**A.-besoin.** Appetite or hunger caused by actual want of food. [Fonssagrives (L, 87).]—**A. bizarre, A. dépravé.** See PICA.—**A.-désire.** A desire to eat simply for the pleasure of doing so. [Fonssagrives (L, 87).]—**A. d'habitude.** A desire to eat coming on at certain hours because the person has been in the habit of eating at those hours. [Fonssagrives (L, 87).]

APPETITE, n. A^{2}p'pe^{2}t-it. Gr., ὄρεξις (from ὀρέγειν, to long for). Lat., *appetitus.* Fr., *appétit.* Ger., *Appetit.* It., *appetito.* Sp., *apetito.* 1. A desire or disposition to do anything which is attended with a physical sensation of pleasure; as commonly understood, the desire to eat or drink. 2. In chemistry, affinity. [L, 73.]—**Canine a.** See CYNOREXIS.—**Depraved a.** See PICA.—**Sexual a., Venereal a.** Desire for sexual intercourse. [A, 385.]

APPETITION, n. A^{2}p-pe^{2}t-i^{2}sh'u^{3}n. See APPETITE.

APPETITIVE, adj. A^{2}p-pe^{2}t'i^{2}t-i^{2}v, a^{2}p'pe^{2}t-i-ti^{2}v. Fr., *appétitif.* Pertaining to an appetite. [A, 306.]

APPETITLICH (Ger.), adj. A^{3}p-pe^{2}t-et'li^{2}ch^2. See APPETIZING.

APPETITUS (Lat.), n. m. A^{2}p(a^{3}p)-pe^{2}t-i(e)'tu^{3}s(tu^{4}s). Gen., *appeti'tus.* See APPETITE.—**A. amissio.** See ANOREXIA.—**A. caninus.** See CYNOREXIS.—**A. carentia, A. deficiens, A. deperditio.** See ANOREXIA.—**A. depravatus, A. erroneus.** See PICA.

APPETIZER, n. A^{2}p'pe^{2}t-i-zu^{5}r. An excitant of the appetite. [L, 56.]

APPETIZING, adj. A^{2}p'pe^{2}t-i-zi^{2}ng. Fr., *appétisant.* Ger., *appetitlich.* Tempting to the appetite (said of articles of food).

APPLANATÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-pla^{2}n(pla^{3}n)-a(a^3)'te-(ta^3-e^2). A section of the genus *Tremella*, including species with flat receptacle. These species are now referred to *Exidia.* [B, 121.]

APPLANATIO (Lat.), n. f. A^{2}p(a^{3}p)-pla^{2}n(pla^{3}n)-a(a^3)'shi^2-(ti^2)-o. Gen., *applanatio'nis.* Fr., *aplanissement, aplatissement.* Ger., *Applattung, Flachwerden.* A flattening (as of the cornea after suppuration or in the course of phthisis bulbi). [F.]

APPLANATUS (Lat.), adj. A^{2}p(a^{3}p)-pla^{2}n(pla^{3}n)-a(a^3)'tu^{3}s-(tu^{4}s). Fr., *aplani.* Flattened on the anterior aspect. [B, 121.]

APPLE, n. A^{2}p'pl. A.-S., *æppel, æpl.* Perhaps from Sanscr., *ap*, water, and *p'hala*, fruit. [Prior (B, 7).] Gr., μῆλον. Lat., *malum, pomum.* Fr., *pomme.* Ger., *Apfel.* It., *pomo, mela.* Sp., *manzana.* The fruit of the *Pyrus malus*, also any large fleshy fruit. [L, 108.]—**Acid of a's.** See MALIC ACID.—**Adam's a.** See the major list, also POMUM *Adami* and CITRUS *limetta.*—**Alligator a.** The fruit of *Anona palustris* (*q. v.*). [B, 19.]—**Amorous a.** See *Love-a.*—**A.-berry.** The *Billardiera.* [B, 19.]—**A.-brandy.** See *A.-jack.*—**A. essence.** A flavoring preparation consisting of 1 part of amyl valerianate and 6 or 8 parts of alcohol. [A, 308.]—**A.-eye.** See EXOPHTHALMIA.—**A.-haw.** The *Cratægus æstivalis.* [B, 34.]—**A.-jack.** Ger., *Apfelbranntwein.* A spirituous liquor made by distilling cider.—**A. of Peru.** 1. The genus *Nicandra.* [B, 34.] 2. The fruit of *Nicandra physaloides.* [B, 19.] 3. The *Datura stramonium.* [L, 105.]—**A. of Sodom.** 1. The *Calotropis gigantea.* 2. The gall of the *Quercus infectoria.* Cf. *Dead-Sea a.* 3. The *Solanum sodomeum.* [B, 19.] 4. The *Solanum mammosum.* [B, 34.]—**A. of the eye.** Ger., *Augapfel.* The globe of the eye, also the pupil.—**A. oil.** See AMYL *valerianate.*—**A. poultice.** See *Cataplasma* POMI *redolentis.*—**A.-tree.** Fr., *pommier.* Ger., *Apfelbaum.* 1. The *Pyrus malus* and its varieties. 2. In Australia and New South Wales, a name given to several species of *Angophora* and to the *Eucalyptus stuartiana.* [B, 19.]—**A.-whisky.** See *A.-jack.*—**A'worts.** See the major list.—**Argyle a.** The *Eucalyptus pulverulenta.* [B, 19.]—**Armenian a.** See APRICOT.—**Balsam a.** The fruit of *Momordica balsamina.* [B, 19.]—**Beef-a.** The *Sapota rugosa.* [B, 19.]—**Bitter a.** The fruit of colocynth. [L.]—**Brush-a.** The *Achras australis.* [B, 19.]—**Carthaginian a.** The pomegranate (*Punica granatum*). [B, 19.]—**Cherry-a.** The *Pyrus baccata.* [B, 19.]—**Crab-a.** See PYRUS *coronaria* and *Siberian crab-a.*—**Curassoa a's.** See *Fructus* AURANTII *immaturi.*—**Custard-a.** See ANONA *squamosa* and ASIMINA *triloba.*—**Dead-Sea a's.** Bussorah galls; the galls of *Quercus infectoria.* [B, 19; L.]—**Devil's a.** The fruit of *Mandragora officinalis.* [B, 19.]—**Egg-a.** The fruit of the egg-plant (*Solanum esculentum*). [B, 19.]—**Elephant a.** The fruit of *Feronia elephantum.* [B, 19.]—**Jew's a.** See *Egg-a.*—**Kan a.** See ABERIA *kaffra.*—**Kangaroo-a.** The fruit of *Solanum laciniatum.* [B, 19.]—**Kei a., Kei a. of the Cape.** See ABERIA *kaffra.*—**Love-a.** The tomato (the fruit of *Lycopersicum esculentum*). [B, 19; L, 120.]—**Mad a.** 1. The fruit of the egg-plant (*Solanum esculentum*). [B, 19.] 2. The Bussorah gall (the gall of *Quercus infectoria*). [L.]—**Malay a.** The *Eugenia malaccensis.* [B, 19.]—**Mammee a.** The fruit of *Mammea americana.* [B, 19.] Cf. ACHRAS.—**Mandrake a.** The fruit of *Mandragora officinalis.* [B, 19.]—**May a.** 1. The *Podophyllum peltatum.* 2. The *Passiflora incarnata.* [B, 19.]—**Median a.** The *Citrus medica.* [B, 19.]—**Mess a.** The *Karstenia quinquenervia.* [B, 19.]—**Monkey-a.** 1. A West Indian name for the *Anona palustris.* 2. A Sierra Leone name for the *Anisophyllea laurina.* 3. The *Clusia flava.* [B, 19.]—**Moor's a.** The tomato (*Lycopersicum esculentum*). [B, 19.]—**Oak-a.** See GALL.—**Otaheite a.** The fruit of *Spondias dulcis.* [B, 19.]—**Persian a.** An old name for the peach (*Malus persica*). [B, 19.]—**Pine-a.** 1. An old name for the pine-cone (the cone of *Pinus silvestris*). [B, 19.] 2. See ANANAS *sativus.*—**Prairie-a.** The *Psoralea esculenta.* [B, 19.]—**Rennet-a's.** See POMA *renettia.*—**Rose-a.** A name given to various species of *Eugenia.* [B, 19.]—**Sage a.** The gall formed upon the *Salvia officinalis.* [B, 71.]—**Sea-a.** The *Manicaria Plunkenetii.* [B, 19.]—**Siberian crab-a.** The *Pyrus prunifolia* and *P. baccata.* [B, 75.]—**Star-a.** The fruit of *Chrysophyllum cainito.* [B, 19.]—**Sugar-a.** The *Rollinia Sieberi* and the *Anona squamosa.* [B, 19.]—**Thorn-a.** The *Datura stramonium.* [B, 19.] See STRAMONIUM.—**Wild balsam-a.** The *Echinocystis lobata.* [B, 19.]—**Wild star-a.** The *Chrysophyllum*

oliviforme. [B, 19.]—**Wood-a.** The *Feronia elephantum.* [B, 19, 72.]

APPLEWORTS, n. pl. A^{2}p'pl-wu^{5}rts. A name for the botanical suborder *Pomaceæ.* [B, 19.]

APPLICATA (Lat.), n., n. pl. of adj. *applicatus.* A^{2}p(a^{3}p)-pli^2-ka(ka^3)'ta^3. From *applicare,* to apply. 1. An old term for a class of causes of disease acting by contact with the surface of the body. [Boerhaave (L, 41).] 2. In hygiene, articles of clothing, cosmetics, etc., applied to the surface of the body. [L, 32.] 3. Dressings, remedies, etc., applied to the body. [A. 385.]

APPLICATE, adj. A^{2}p'pli^{2}k-at. Lat., *applicatus.* Fr., *appliqué.* Ger., *angelegt.* See APPRESSED.

APPLICATIF (Fr.), adj. A^{3}p-ple-ka^{3}t-ef. See APPRESSED.

APPLICATION, n. A^{2}p-pli^2-ka'shu^{3}n. Gr., ἐπίθεσις (1st def.), ἐπίθημα (2d def.). Lat., *applicatio* (1st def.), *applicatum* (2d def.). Fr., *application.* Ger., *Anwendung* (1st def.), *Angelegte* (2d def.). It., *applicazione.* Sp., *aplicación.* 1. The act of applying anything (such as a forceps, a leech, a plaster, etc.). 2. Anything applied (said of surgical dressings and of remedies used externally or applied to a particular part). 3. In botany, the state of being applied or appressed. [B.]

APPLICATIVUS (Lat.), adj. A^{2}p(a^{3}p)-pli^{2}k-a^3-ti(te)'vu^{3}s(wu^{4}s). Fr., *applicatif.* Ger., *aneinander gefügt.* In botany, appressed. [B, 1.]

APPLICATOR (Lat.), n. m. A^{2}p(a^{3}p)-pli^2-ka(ka^3)'to^{2}r. Gen., *applicato'ris.* Fr., *porte-ouate.* An instrument for applying remedies to a particular part, such as the uterine canal or the urethra; either a flexible shaft on which cotton imbued with the medicament is wrapped, or a tube to contain the medicament with a piston for expelling it.

APPLICATUM (Lat.), n., n. of adj. *applicatus.* A^{2}p(a^{3}p)-pli^{2}k-a(a^3)'tu^{3}m(tu^{4}m). See pl., APPLICATA.

APPLICATUS (Lat.), adj. A^{2}p(a^{3}p)-pli^{2}k-a(a^3)'tu^{3}s(tu^{4}s). From *applicare,* to apply. Fr., *appliqué.* Ger., *aneinander gelehnt.* Applied; in botany, appressed (*q. v.*). [B.]

APPLIED, adj. A^{2}p-plid'. See APPRESSED.

APPOSED, APPOSITE, adj's. A^{2}p-pozd', a^{2}p'po-zi^{2}t. Lat., *appositus* (from *apponere,* to place by the side of). Fr., *apposé.* Ger., *nebeneinander stehend.* In botany, placed near to; in a reciprocal sense, placed near together. [B, 123.]

APPOSITION, n. A^{2}p-po-zi^{2}sh'u^{3}n. Gr., πρόσθεσις. Lat., *appositio.* Fr., *apposition.* Ger., *Anlagerung.* It., *apposizione.* Sp., *aposición.* 1. An addition of parts. [Hippocrates (L, 53).] See PROSTHESIS. 2. The act of bringing the lips of a wound or the fragments of a broken bone into their proper relations; also the state of their being in such relations. 3. Growth by accretion (said of crystals, of plants, of the animal embryo, of the formation of bone from the periosteum, etc.). [A, 300, 385; L, 49.] See also *A.* THEORY.

APPOSITIONAL, adj. A^{2}p-po-zi^{2}sh'u^{3}n-a^{2}l. Pertaining to apposition (*q. v.*).

APPOSITORIUM (Lat.), n. n. A^{2}p(a^{3}p)-po^{2}z(po^{2}s)-i^{2}t-o'ri^2-u^{3}m(u^{4}m). See ADAPTER.

APPOSITUS (Lat.), adj. A^{2}p(a^{3}p)-po^{2}z(po^{2}s)'i^{2}t-u^{3}s(u^{4}s). See APPOSED.

APPREHENSIO (Lat.), n. f. A^{2}p(a^{3}p)-pre^2-he^{2}n'shi^2(si^2)-o. Gen., *apprehensio'nis.* From *apprehendere,* to seize upon. 1. See ANALEPSIS (2d def.). 2. An old term for catalepsy. [P. Zacchias (L, 53).]

APPRELLE (Fr.), n. A^{3}p-pre^{2}l. The *Equisetum arvense.* [L, 105.]

APPRESSED, adj. A^{2}p-pre^{2}st'. Lat., *appressus* (from *apprimere,* to press to). Fr., *apprimé, appressé, appliqué.* Ger., *angedrückt.* Also written *adpressed.* In botany, touching, or having the surface closely applied to something, but without adherence or connection. [B, 19.]

APPRIMÉ (Fr.), adj. A^{3}p-pre-ma. See APPRESSED.

APPROCHE (Fr.), n. A^{3}p-prosh. Sexual intercourse. [L, 111.]

APPROCHÉ (Fr.), adj. A^{3}p-pro-sha. Approximated. [B.]

APPROPRIATION, n. A^{2}p-pro''pri^2-a'shu^{3}n. Lat., *appropriatio.* 1. In chemistry, the union or combination of two substances. [L, 46.] 2. The act or process by which an organism or any part of an organism seizes upon foreign material (nutritive or medicinal) and incorporates it with itself. [A, 325; K.] See ASSIMILATION.

APPROXIMATE, APPROXIMATED, adj's. A^{2}p-pro^{2}x'-i^{2}m-at, -at-e^{2}d. Lat., *approximatus* (from *approximare,* to approach). Fr., *approché.* Ger., *genähert.* 1. Placed close together (said of the teeth). [L, 108.] 2. In botany, brought near; in a reciprocal sense, brought near together. [B, 198.]

APPROXIMATIO (Lat.), n. f. A^{2}p(a^{3}p)-pro^{2}x''i^2-ma(ma^3)'-shi^2(ti^2)-o. Gen., *approximatio'nis.* Fr., *approchement.* Ger., *Annäherung.* It., *approssimazione.* Sp., *aproximación.* An approximation; according to Ettmüller, a pretended method of ridding a person of a disease by causing the latter to seize upon another organism, animal or vegetable, brought into contact with him for that purpose. [L, 32, 53.]

APPUI (Fr.), n. A^{3}p-pwe. 1. A fulcrum, a support. 2. The point of insertion of a muscle. [A, 385.]

APPUYÉ (Fr.), n. A^{3}p-pwe-a. In botany, supported, *suffultus.* [B, 198.]

APRACTA (Lat.), n., n. pl. of adj *apractus.* A^{2}p(a^{3}p)-ra^{2}k-(ra^{3}k)'ta^3. Gr., ἄπρακτα (from ἀπρακτεῖν, to do nothing, to be idle [αἰδοῖα understood]). Genital organs that are useless on account of functional incapacity. [K, 4; L, 53.]

APRAGMONIA (Lat.), n. f. A^{2}p(a^{3}p)-ra^{2}g(ra^{3}g)-mo'ni^2-a^3. Gr., ἀπραγμοσύνη. Inactivity, inertness. [M, 13.]

APRAXIA (Lat.), n. f. A^{2}p(a^{3}p)-ra^{2}x(ra^{3}x)'i^2-a^3. Gr., ἀπραξία. Ger., *Apraxie.* Complete loss of the power of communication, whether by words or by signs, also of knowledge of the uses of objects; only a few unintelligible interjections are uttered, and the subject washes in his soup, drinks the water provided for his ablutions, etc. [R. Arndt (D, 18).]

ÂPRE (Fr.), adj. A^{3}pr. Rough, harsh, scabrous, bitter, disagreeable. [A, 385; B.]—**Ligne â.** See LINEA *aspera.*

APRÈLE (Fr.), n. A^3-pre^{2}l. See APPRELLE.

ÂPRETÉ (Fr.), n. A^{3}pr-ta. The quality of being harsh to the taste. [A, 301.]

APRICA (Lat.), n., n. pl. of adj. *apricus.* A^{2}p(a^{3}p)-ri(re)'ka^3. Sunny, dry places in which certain plants (*plantæ apricæ*) grow readily. [B, 121.]

APRICARIUM (Lat.), n. n. A^{2}p(a^{3}p)-ri^2-ka(ka^3)'ri^2-u^{3}m(u^{4}m). Ger., *Sonnenhaus.* See SOLARIUM.

APRICATION, n. A^{2}p-ri^2-ka'shu^{3}n. Lat., *apricatio* (from *apricari,* to bask in the sun). Gr., ἡλίωσις. Fr., *aprication.* Ger., *Aprikation.* The treatment of disease by exposing the patient to the sun. [A, 304.] Cf. *Sun*-BATH and INSOLATION.

APRICOT, n. A'pri^2-ko^{2}t. O. E., *apricock, abricot.* Gr., πραικόκκιον, πρεκόκιον. Lat., *præcoquum* (neut. of adj. *præcoquus* [=*præcox*], precocious). Pers., *al-barquq.* Fr., *abricot.* Ger., *Aprikose.* It., *albercocca, albicocca.* Sp., *albaricoque.* The Armenian apple (Gr., μῆλον ἀρμενιακὸν; Lat., *malum armeniacum*); the fruit of *Prunus armeniaca* (*Armeniaca vulgaris*), resembling a peach externally, but having a stone like that of a plum. Dried a's are known in the East as *mishmish.* The grain, or "meat," of the

THE APRICOT. (A, 327.)

stone has properties like those of the bitter almond, and is often employed in making the liqueur known as *ratafia.* [A, 300, 321, 327.]—**A. essence.** Ger., *Aprikosenäther.* A flavoring preparation consisting of chloroform, 1 part; butyric ether, 10 parts; valerianic ether, 5 parts; œnanthylic ether, 1 part; amyl alcohol, 2 parts; amylbutylic ether, 1 part; a saturated alcoholic solution of tartaric acid, 1 part; glycerin, 4 parts; and alcohol, 100 parts. [Kletzinski (A, 308).]—**A.-plum.** Ger., *Aprikosenpflaume.* A species of plum growing in France, often preserved in sugar and exported. [B.]—**Briançon a.** The fruit of *Armeniaca brigantica.* from the seeds of which *huile de marmotte* is expressed. [L, 120.]

APRICUS (Lat.), adj. A^{2}p(a^{3}p)-ri(re)'ku^{3}s(ku^{4}s). Contr. from *apericus* (from *aperire,* to lay bare). 1. Open, exposed to the sun. 2. Growing especially in sunny situations (said of plants). [A. 312.]

APRIKOSE (Ger.), n. A^3-pre-ko'ze^2. The apricot. [B.]—**A'näther.** See APRICOT *essence.*—**A'nbaum.** See PRUNUS *armeniaca.*—**A'nkern.** The kernel of an apricot. [A, 315.]—**A'npflaume.** See APRICOT-*plum.*—**Wilde A'n.** The fruit of *Couroupita guianensis* (*Lecythis bracteata*). [B, 180.]

APRILBLUME (Ger.), n. A^3-prel'blu-me^2. The wood-anemone (*Anemone nemorosa*). [B.]

APRILMUSCHEL (Ger.), n. A^3-prel'mush-e^{2}l. The oyster. [L.]

APRINON (Lat.), n. n. A^{2}p(a^{3}p)-ri(re)'no^{2}n. An ancient name for the pomegranate. [Pliny, Dioscorides (L, 105).] See APRYNON.

APROCTA (Lat.), n., n. pl. of adj. *aproctus.* A^{2}p(a^{3}p)-ro^{2}k'ta^3. A group of the *Turbellaria* having no anal aperture. [L, 11.]

APROCTHELMINTHES (Lat.), n. f. pl. A^{2}p(a^{3}p)-ro^{2}k-the^{2}l-mi^{2}nth'ez(e^{2}s). From α priv., πρωκτός, the anus, and ἕλμινς, a worm. Fr., *aprocthelminthes.* Ger., *afterlose Eingeweidwürmer.* Syn.: *Helminthaprocta.* Intestinal worms having no anus. [A, 322.]

APROCTIA (Lat.), n. f. A^{2}p(a^{3}p)-ro^{2}k'shi^2(ti^2)-a^3. From α priv., and πρωκτός, the anus. Fr., *aproctie.* Ger., *Aftermangel, Hinternlosigkeit.* Absence or an imperforate condition of the anus. [A, 322.]

APROCTOSIS (Lat.), n. f. A^{2}p(a^{3}p)-ro^{2}k-to'si^{2}s. Gen., *aprocto'seos (-sis).* Fr., *aproctose.* Properly, the formation of the defect termed aproctia (*q. v.*), but commonly used as synonymous with that word. [A, 322.]

APROCTOUS, adj. A^{2}p-ro^{2}k'tu^{3}s. Lat., *aproctus.* Ger., *afterlos.* Having no anal aperture. [B, 100.]

APRON, n. A'pu^{5}rn (-pru^{3}n). Fr., *tablier.* Ger., *Schürze.* It., *grembiale.* Sp., *mandil.* A term sometimes applied to any structure resembling the garment so called (*e. g.*, the omentum, also the subcutaneous fat of the anterior abdominal wall).—**A. of succor.** Sp., *mandil de socorro.* An appliance devised by N. Landa y Alvarez, a Spanish army surgeon, for transporting wounded men by

THE APRON OF SUCCOR. (AFTER LONGMORE.)

hand; a stout piece of canvas, fashioned at one end so as to be secured over a man's shoulders, and having at the other end a stitched fold for receiving a wooden bar. [A, 244.]—**Hottentot a.** See *Pudendal a.*—**Masonic a.** A name sometimes given to a sort of a. attached to the waist and used for supporting the penis and testicles in cases of gonorrhœa. [B.]—**Pudendal a.** Fr., *tablier des Hottentotes.* An hypertrophy of the nymphæ and the præputium clitoridis in the form of an a. hanging down over the vulva.

APRONIA (Lat.), n. f. A^{2}p(a^{3}p)-ro'ni^2-a^3. From *Apros*, an ancient city. [Pliny (B, 121).] An old name for the black bryony. [L, 84.]

APROSIA (Lat.), n. f. A^{2}p(a^{3}p)-ro'zi^2(si^2)-a^3. An ancient name for the *Salvia officinalis.* [L, 105.]

APROSOPIA (Lat.), n. f. A^{2}p(a^{3}p)-ro^{2}s-o'pi^2-a^3. From α priv., and πρόσωπον, the face. Fr., *aprosopie.* Ger., *Aprosopie, Gesichtlosigkeit.* It., *aprosopia.* Sp., *aprosopia.* A congenital malformation characterized by absence of the eyelids and more or less of the rest of the face. [D, 142; F; L, 50.]

APROSOPUS (Lat.), adj. A^{2}p(a^{3}p)-ro^{2}s-o'pu^{3}s(pu^{4}s). Gr., ἀπρόσωπος. Fr., *aprosope.* Ger., *gesichtmangelnd.* Affected with aprosopia. [L, 50.]

APROSTATOTROPHIE [Piorry] (Fr.), n. A^3-pro^{2}s-ta^3-to-trofe. From α priv., προστάτα, the prostate, and τροφή, nutrition. Atrophy of the prostate. [L, 82.]

APRYNON (Lat.), n. n. A^{2}p(a^{3}p)'ri^{2}n(ru^{6}n)-o^{2}n. The pomegranate-tree. [Dioscorides (B, 121).]

APSELAPHESIA, APSELAPHESIS (Lat.), n's f. A^{2}p(a^{3}p)-se^{2}l-a^3-fe(fa)'zi^2(si^2)-a^3, -si^{2}s. Gen., *apselaphe'siæ, -phe'seos (-sis).* From α priv., and ψηλάφησις (from ψηλαφᾶν, to touch), a feeling, touching. Fr., *apsélaphésie.* Ger., *Apselaphesie.* A form of partial paralysis of sensation characterized by loss of the sense of touch, independently of loss of the other elements of cutaneous sensibility; observed especially in cases of degeneration of the posterior columns of the spinal cord. [A, 319.]

APSINTHATUM (Lat.), n. n. A^{2}p(a^{3}p)-si^{2}nth-a(a^3)'tu^{3}m(tu^{4}m). Gr., ἀψίνθατον. An ancient stomachic preparation consisting largely of absinthium. [Aetius (L, 53).]

APSINTHITES (Lat.), n. m. A^{2}p(a^{3}p)-si^{2}nth-i(e)'tez(te^{2}s). See Absinthites.

APSINTHIUM (Lat.), n. n. A^{2}p(a^{3}p)-si^{2}nth'i^2-u^{3}m(u^{4}m). See Absinthium.

APSITHURIA, APSITHYRIA [the latter to be preferred] (Lat.), n's f. A^{2}p(a^{3}p)-si^{3}th-u^2(u)'ri^2-a^3, -i^{2}r(u^{6}r)'i^2-a^3. From α priv., and ψιθυρίζειν, to whisper. A form of paralysis or spasm of the larynx in which there is inability to whisper. [J. Solis-Cohen, "Med. and Surg. Reporter," Nov. 10, 1883, p. 508; L. Elsberg, "N. Y. Med. Jour.," Dec. 20, 1884, p. 685.]

APSYCHIA (Lat.), n. f. A^{2}p(a^{3}p)-si^{2}k(su^{6}ch^2)'i^2-a^3. Gr., ἀψυχία (from α priv., and ψυχή, life). Fr., *apsychie.* Ger., *Apsychie, Bewusstlosigkeit, Ohnmacht.* It., *apsichia.* Sp., *apsiquia.* Loss of consciousness, fainting. [Hippocrates (A, 325).]

APSYCHICUS (Lat.), adj. A^{2}p(a^{3}p)-si^{2}k(su^{6}ch^2)'i^{2}k-u^{3}s(u^{4}s). See Apsychos.

APSYCHISMIE [Piorry] (Fr.), n. A^{3}p-se-ki^{2}z-me. Idiocy. [L, 82.]

APSYCHOS, APSYCHUS (Lat.), adj's. A^{2}p(a^{3}p)-si(su^6)'ko^{2}s-(ch^{2}o^{2}s), -ku^{3}s(ch^{2}u^{4}s). Gr., ἄψυχος. Pertaining to or affected with apsychia. [A, 322.]

APSYXIA (Lat.), n. f. A^{2}p(a^{3}p)-si^{2}x(su^{6}x)'i^2-a^3. Gr., ἀψυξία [Aretæus]. See Apsychia.

APTANDRACEÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-ta^{2}n(ta^{3}n)-dra-(dra^3)'se^2(ke^2)-e(a^3-e^2). From *Aptandra*, the only genus. An order of plants made by Miers. [B, 170.]

APTENUS (Lat.), adj. A^{2}p(a^{3}p)-te(ta)'nu^{3}s(nu^{4}s). Gr., ἀπτήν. See Apterous.

APTERA (Lat.), n., n. pl. of adj. *apterus* (see Apterous). A^{2}p-(a^{3}p)'te^{2}r-a^3. Fr., *aptères.* Ger., *Flügellose.* It., *apteri.* The division of ametabolic insects including lice and some other parasitic insects; so called because in the adult state they have no wings. [B, 28.]

APTERAL, adj. A^{2}p'te^{2}r-a^{2}l. See Apterous.

APTERANTHEÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-a^{2}n(a^{3}n)'the^2-e(a^3-e^2). From α priv., πτερόν, a wing, and ἄνθος, a flower. Fr., *aptéranthées.* A section of burmanniaceous plants including colorless aphyllous species having the segments of the perianth non-alate and with 3 stamens and a unilocular ovary. [B, 104.]

APTERIA (Lat.), n. f. A^{2}p(a^{3}p)-te(ta)'ri^2-a^3. From α priv., and πτερόν, a wing. A genus of burmanniaceous plants, closely allied to *Burmannia* but distinguished by the fruit not being provided with wings. [B, 19.]—**A. setacea.** A North American species. [B, 19.]

APTERIEÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-i(e)'e^2-e(a^3-e^2). A tribe of burmanniaceous plants, made by Miers, including the genus *Apteria.* [B, 170.]

APTERION, APTERIUM (Lat.), n. n. A^{2}p(a^{3}p)-te(ta)'ri^2-o^{2}n, -u^{3}m(u^{4}m). Ger., *Federrain.* A naked space on the skin of a bird (*i. e.*, one having no contour-feathers). [Nitzsch (A, 322).]—**A. alæ inferius.** Ger., *unterer Flügelrain.* An a. extending over the lower part of the upper arm, the great wing-membrane, the axillary wing-membrane, and sometimes the forearm of birds. [L, 194.]—**A. alæ superius.** An a. extending over a portion of the upper arm and the great wing-membrane of birds which separates the axillary tract from the other feathered parts. [L, 194.]—**A. colli laterale.** Ger., *Halsseitenrain.* An a. upon the side of the neck of birds; it varies greatly in extent according to the genus. [L, 194.]—**A. crurale.** Ger., *Unterschenkelrain.* An a. at the upper end of the tibial region of birds. [L, 194.]—**A. mesogastræi.** An a. in the middle line of the ventral surface of birds. [L, 194.]—**A. nuchale.** An a. at the nape of the neck of some birds. [L, 194.]—**A. spinale.** Ger., *Rückgratsrain.* An a. sometimes occurring upon the backs of birds. [L, 194.]—**A. temporale.** An a. sometimes occurring upon the heads of birds. [L, 194.]—**A. trunci laterale.** Ger., *Rumpfseitenrain.* An a. on the side of the trunk of birds. [L, 194.]

APTEROCARPÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-o-ka^{3}r'pe-(pa^3-e^2). From α priv., πτερόν, a wing, and καρπός, a fruit, because

the fruit is usually not alate. A tribe of polygonaceous plants, made by Meissner, including the subtribes *Ceratogoneæ*, *Rumiceæ*, *Eupolygoneæ*, *Coccolobeæ*, and *Triplarideæ*. [B, 121, 170.]

APTERODICEROUS, adj. A^{2}p″te^{2}r-o-di^{2}s′e^{2}r-u^{3}s. Lat., *apterodicerus* (from α priv., πτερόν, a wing, δίς, twice, and κέρας, a horn). Fr., *aptérodicère*. Sp., *apterodícero*. Without wings and having two antennæ. [L, 41, 116.]

APTEROLOGIA (Lat.), n. f. A^{2}p(a^{3}p)-te^{2}r-o-lo′ji^2(gi^2)-a^3. For deriv., see APTEROUS and *-logy**. That department of entomology which relates to the *Aptera*. [A, 316.]

APTEROUS, adj. A^{2}p′te^{2}r-u^{3}s. Gr., ἄπτερος (from α priv., and πτερόν, a wing). Lat., *apterus*. Fr., *aptère*. Ger., *flügellos*, *ungeflügelt*. It., *aptero*. Sp., *áptero*. 1. In zoology, having no wings or analogous organs. 2. In botany, destitute of alæ. [B, 34, 100.]

APTERYGIA (Lat.), n. n. pl. A^{2}p(a^{3}p)-te^{2}r-i^{2}j(u^{6}g)′i^2-a^3. From α priv., and πτέρυξ (gen., πτέρυγος), a fin. Fr., *aptérygiens*. *Mullusca* having no locomotor appendages. [B, 38.]

APTERYGIÆ [Jussieu] (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-i^{2}j(u^{6}g)′-i^2-e(a^3-e^2). See MALPIGHIEÆ.

APTERYGIDÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-i^{2}j(u^{6}g)′i^{2}d-e-(a^3-e^2). From α priv., and πτέρυξ, a wing. A family of wingless birds of the order *Cursores*, comprising the single genus *Apteryx*, indigenous to New Zealand. [A, 359.]

APTERYGIEÆ [Jussieu] (Lat.), n. f. pl. A^{2}p(a^{3}p)-te^{2}r-i^{2}j(u^{6}g)-i(e)′e^2-e(a^3-e^2). See MALPIGHIEÆ.

APTISTOS (Lat.), adj. A^{2}p(a^{3}p)-ti^{2}st′o^{2}s. Gr., ἄπτιστος (from α priv., and πτίσσειν, to husk). Not decorticated (said of grain). [Hippocrates (A, 325).]

APTITUDE, n. A^{2}p′ti^2-tu^{2}d. Lat., *aptitudo* (from *aptare*, to fit). Fr., *aptitude*. Ger., *Fähigkeit*, *Anlage*. It., *attitudine*. Sp., *aptitud*. Any natural tendency or disposition to a particular kind of behavior under certain influences, or to undergo certain normal or abnormal changes. [A, 385.]

APTOSIMEÆ (Lat.), n. f. pl. A^{2}p(a^{3}p)-to-si^{2}m′e^2-e(a^3-e^2). From *Aptosimum*, one of the genera. Of Bentham, a subtribe of *Gratioleæ*, characterized by having alternate leaves. [B, 121, 170.]

APTYALIA (Lat.), n. f. A^{2}p(a^{3}p)-ti^2(tu^6)-a^{2}l(a^{3}l)′i^2-a^3. From α priv., and πτύαλον, saliva. Fr., *aptyalie*. Ger., *Speichelmangel*. A deficiency of the saliva. [M, 13.]

APTYALIZOMENOS (Lat.), adj. A^{2}p(a^{3}p)-ti^2(tu^6)-a^{2}l(a^{3}l)-i^{2}z-o^{2}m′e^{2}n-o^{2}s. From α priv., and πτυαλιζόμενος, part. of πτυαλίζεσθαι, to ptyalize. Curing, preventing, or not causing ptyalism, as *unguentum mercuriale aptyalizomenon*. [B, 97.]

APTYCHUS (Lat.), n. m. A^{2}p(a^{3}p)′ti^{2}k(tu^{6}k)-u^{3}s(u^{4}s). From α priv., and πτυχή (= πτύξ), a fold. A name given to the operculum of certain extinct *Mollusca*. [B, 7.]

APTYSTIA (Lat.), n. f. A^{2}p(a^{3}p)-ti^{2}st(tu^{6}st)′i^2-a^3. From α priv., and πτύειν, to spit. 1. Aptyalia (*q. v.*). 2. Absence of expectoration. [Hippocrates (A, 322).]

APTYSTOS, APTYSTUS (Lat.), adj's. A^{2}p(a^{3}p)-ti^{2}st(tu^{6}st)′-o^{2}s, -u^{3}s(u^{4}s). Gr., ἄπτυστος. 1. Not spit out. 2. Not accompanied with expectoration (said of dry pleurisy). [Hippocrates (A, 322).]

APULOSIS (Lat.), n. f. A^{2}p(a^{3}p)-u^2(u)-lo′si^{2}s. Gen., *apulo′seos* (*-sis*). Gr., ἀπούλωσις. Cicatrization. [Dioscorides (A, 311).]

APULOTIC, adj. A^{2}p-u^2-lo^{2}t′i^{2}k. Gr., ἀπουλωτικός. Lat., *apuloticus*. Healing, causing cicatrization. [Dioscorides (A, 311).]

APUS (Lat.), adj. A(a^3)′pu^{3}s(pu^{4}s). Gr., ἄπους (from α priv., and πούς, a foot). See APODOUS ; as a n., the swift (*Cypselus a.*), so called from its seldom lighting on the ground, a bird formerly used as a remedy for epilepsy, weak eyes, and nephritic pain. [A, 311, 322, 325 ; L, 94.]

APUSSEY, n. The Ashantee name of a leguminous plant, supposed to be allied to *Robinia*, the bark of which, pounded with cardamom, is used topically for headache. [Waring (A, 316).]

APUTTASY, n. A Guinea plant, the decoction of which is used in scorbutic affections of the mouth. [L, 105.]

APYETOS, APYETUS (Lat.), adj's. A^{2}p(a^{3}p)-i(u^6)-e(a)′to^{2}s, -tu^{3}s(tu^{4}s). Gr., ἀπύητος (from α priv., and πύον, pus). Fr., *apyète*, *apyique*. 1. Not suppurating. 2. Deficient in pus. [A, 325.]

APYICUS (Lat.), adj. A^{2}p(a^{3}p)-i(u^6)′i^{2}k-u^{3}s(u^{4}s). See APYETOS.

APYITES (Lat.), n. m. A^{2}p(a^{3}p)-i^2(u^6)-i(e)′tez(te^{2}s). Gen., *apyitæ*. Fr., *apyite*. An old name for perry. [L, 116.]

APYOUS, adj. A^{2}p′i^2-u^{3}s. See APYETOS.

APYRECTIC, adj. A^{2}p-i^2-re^{2}k′ti^{2}k. Gr., ἀπυρεκτικός (from α priv., and πυρέσσειν, to be feverish). Lat., *apyrecticus*, *apyrectos*, *apyrectus*. See APYRETIC.

APYRENÆMATA (Lat.), n. n. pl. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-e^{2}n-e^{2}m′-(a^3′e^{2}m)-a^3-ta^3. From α priv., πυρήν, the stone of a fruit, and αἷμα, blood. The *Mammalia*, because their red blood-corpuscles are non-nucleated. [Gulliver (K).]

APYRENOMELE (Lat.), n. f. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-e^{2}n-o-me-(ma)′-le(la). From α priv., πυρήν, the stone of a fruit, and μήλη, a probe. Fr., *apyrénomèle*, *sonde sans bouton*. Ger., *Sonde ohne Knöpfchen*. A probe or sound without a terminal enlargement. [A, 322.]

APYRENUS (Lat.), adj. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-e(a)′nu^{3}s(nu^{4}s). Fr., *apyrène*. Ger., *kernlos*. Without a kernel, or pit (said of fruits). [B, 123.]

APYRETIC, adj. A^{2}p-i^{2}r-e^{2}t′i^{2}k. Gr., ἀπύρετος (from α priv., and πυρετός, fever). Lat., *apyretus*, *apyreticus*. Fr., *apyrétique*. Ger., *apyretisch*, *fieberlos*, *fieberfrei*. It., *apiretico*. Sp., *apirético*. Free from fever. [D, 1.]

APYREXIA (Lat.), n. f. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-e^{2}x′i^2-a^3. Gr., ἀπυρεξία (from α priv., and πυρέσσειν, to be feverish). Fr., *apyrexie*. Ger., *Apyrexie*. It., *apiressia*. Sp., *apirexia*. Freedom from fever. [L, 50.]

APYREXIQUE (Fr.), adj. A^3-pe-re^{2}x-ek. See APYRETIC.

APYRINA (Lat.), n. f. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-i(e)′na^3. 1. The currant-vine. [L, 97.] 2. See APYRINE.

APYRINE, n. A^{2}p′i^{2}r-en. Lat., *apyrina*, *apyrinum*. Fr., *apyrine*. Ger., *Apyrin*. It., Sp., *apirina*. An alkaline substance said to be contained in the nut of the *Cocos nucifera* and that of the *Cocos lapidea*. [B, 2.]

APYROMELE (Lat.), n. f. A^{2}p(a^{3}p)-i^{2}r(u^{6}r)-o-me(ma)′le(la). Gr., ἀπυρομήλη. See APYRENOMELE.

APYRON (Lat.), n. n. A^{2}p(a^{3}p)′i^{2}r(u^{6}r)-o^{2}n. Gr., ἄπυρον (from α priv., and πῦρ, fire). An ancient name for various substances prepared without the aid of fire, especially sulfur vivum and æthiops mineralis. [Dioscorides (L, 53).]

APYROTHION, APYROTHIUM (Lat.), n's n. A^{2}p(a^{3}p)-i^{2}r-(u^{6}r)-o-thi(the)′o^{2}n, -u^{3}m(u^{4}m). From α priv., πῦρ, fire, and θεῖον, sulphur. Sulfur vivum ; unsmelted native sulphur. [L, 50.]

APYROUS, adj. A^{2}p′i^{2}r-u^{3}s. Lat., *apyrus* (from α priv., and πῦρ, fire). Fr., *apyre*. Ger., *feuerfest*, *feuerbeständig*. It., Sp., *apiro*. Refractory to heat. [B, 86.]

APYRUM (Lat.), n. n. A^{2}p(a^{3}p)′i^{2}r(u^{6}r)-u^{3}m(u^{4}m). 1. See APYRON. 2. Brugnatelli's name for an apyrous salt found by him in urine. [L, 50.]

APYRUS (Lat.), adj. A^{2}p(a^{2}p)′i^{2}r(u^{6}r)-u^{3}s(u^{4}s). From α priv. (1st def.), or α collect. (2d def.), and πῦρ, fire. 1. Apyrous. 2. Resembling fire. [L, 50.]

APYUS (Lat.), adj. A^{2}p(a^{3}p)-i(u^6)′u^{3}s(u^{4}s). Gr., ἄπυος (from α priv., and πῦον, pus). See APYETOS.

AQUA (Lat.), n. f. A(a^3)′kwa^3. Fr., *eau*. Ger., *Wasser*. It., *acqua*. Sp., *agua*. 1. Water. 2. Natural water in the purest attainable state [U. S. Ph.] ; natural water purified by filtration if necessary [Br. Ph.] ; water filtered through alternate layers of sand and charcoal [Ger. Ph.]. 3. Cataract. 4. Urine. 5. Ichor. [Foesius (L, 53).] 6. As a pharmaceutical preparation, water containing a volatile substance in solution, obtained either by distilling the substance with water or by dissolving it in water after distillation. In this sense it corresponds to the Fr. *eau distillée* or *hydrolat*. 7. In the plural, *aquæ*, formerly applied to the liquor amnii. [L, 51.]—**A. acetatis superplumbici.** See *Liquor* PLUMBI *subacetatis*.—**A. acidula alcalina.** See *Liquor* SODÆ *effervescens* and *Liquor* POTASSÆ *effervescens*.—**A. acidula cum bicarbonate magnesico.** See *A.* MAGNESIÆ *aerata* [Belg. Ph.].—**A. acidula hydrosulphurata.** Fr., *eau gazeuse hydrosulfurée*. A mineral water containing hydrogen sulphide.—**A. acidula martialis.** Fr., *eau gazeuse martiale*. A preparation formerly official in a number of pharmacopœias, made by combining carbonic-acid water and scales of iron in varying proportions and decanting after several days. [L, 85.]—**A. acidula salina.** See EAU *acidule saline*.—**A. acidula simplex.** See *A.* ACIDI CARBONICI.—**A. acidula simplicior.** See EAU *gazeuse simple*.—**Aquæ acidulæ.** Aerated waters.—**A. acidulo-salsa** [Fr. Cod.]. See EAU *acidule saline*.—**A. acoustica.** Fr., *eau acoustique*. 1. An old term for any fluid preparation used in diseases of the ears. [L.] 2. See LIQUOR *Cotunnii*.—**A. acustica Ludwigii, A. acustica of Ludwig.** Fr., *eau acoustique de Ludwig*. It., *acqua acustica di Ludwig*. A camphorated alcoholic infusion of valerian, rosemary, lavender, laurel berries, and castoreum, with the addition of ammonia-water and essence of juniper ; formerly in repute as a remedy for deafness. [A, 314.]—**A. acuta.** See *A. solvens*.—**A. ad gingivas.** See EAU *gingivale de Vogt* and EAU *gingivale de Kopp*.—**A. ad gonorrhœam Quercitani.** Fr., *eau contre la gonorrhée*. A preparation official in the Würtem. Ph. of 1798 ; made by mixing 20 parts of Venice turpentine, 4 of Florentine iris root, 4 of dry mint, 4 of *Origanum dictamnus*, 5 each of the seeds of rue and *Vitex agnus castus*, and 24 of white wine, and distilling one half over a water-bath. [L, 85.]—**A. adstringens.** See *Liquor* ALUMINIS *compositus*.—**A. ad synoviam.** See *A. grisea*.—**A. aerata.** See *A.* ACIDI CARBONICI.—**Aquæ aeratæ.** Aerated waters. [L, 119.]—**A. aerata alcalina.** See *A. mephitico-alcalina*.—**A. aeris fixi.** See *A.* ACIDI CARBONICI.—**A. aere orbata.** Water deprived of air by boiling. [L, 165.]—**A. aere hepatico impregnata.** See *A. hydrogenata sulphurata*.—**A. ætherea, A. æthereata.** Fr., *eau éthérée*. A mixture of ether and water in any proportions. [L, 165.]—**A. ætherea camphorata, A. æthereata camphorata.** A mixture of 1 part of camphor, 3 parts of ether, and 60 of distilled water [L, 165], or 1 part of camphor, 10 parts of ether, and 200 of distilled water. [L, 63.]—**A. æthiopica.** See ACQUA *d'Egitto*.—**A. africana.** Fr., *eau d'Afrique*. See ACQUA *d'Egitto*.—**A. alba prima.** An alchemical term for the urine of maidens. [L, 53.]—**Aquæ albulæ.** See ACQUA *Albule*.—**A. albuminata, A. albuminosa.** See EAU *albumineuse*.—**A. alcalina carbonica, A. alcalina effervescens.** See EAU *alcaline gazeuse*.—**A. alcalina mineralis aerata.** See *A. mephitica alcalina*.—**A. alcalina oxymuriatica.** See *Javelle* WATER.—**Aquæ alcalinæ.** Alkaline waters. [L, 119.]—**Aquæ alcalinæ aeratæ.** Aerated alkaline waters. [L, 119.]—**A. alexiteria.** Fr., *eau alexitère*. A term formerly applied to various fluid preparations regarded as having alexiteric properties. [L, 85.]—**A. alexiteria oxygenata.** See *A.* CHLORI.—**A. alexiteria simplex.** Fr., *eau alexitère simple*. A preparation official in the Batav. Ph. of 1805 and the Brunsw. Dispens. of 1777, made by distilling 5,120 parts of a mixture of 375 parts each of *Artemisia maritima* tops and fresh angelica leaves and sufficient water. [L, 85.]—**A. alexiteria spirituosa.** Fr., *eau alexitère spiriteuse*. A preparation official in the Batav. Ph. of 1805, made by taking 120 grammes each of the tops of *Artemisia maritima* and fresh angelica leaves, 180 grammes of fresh mint leaves, 7 kilogrammes of alcohol, and sufficient water, and distilling 7 kilogrammes. [L, 85.]—**A. alexiteria**

spirituosa cum aceto. A. alexiteria spirituosa to which vinegar has been added. [L, 119.]—**A. Alibouri.** Fr., *eau d'Alibour.* See Collirio *di Saint-Jermernon.*—**Aquæ Allobrogum.** An old Roman name for Aix-les-Bains. [A, 42.]—**A. alma.** Alcohol. [B, 50.]—**A. aloetica mercurialis.** Fr., *eau aloétique mercurielle.* A preparation official in the Dispensatorium Fuldense of 1791, made by mixing 10 parts of mercury bichloride, 6 of ammonium chloride, 5 of aqueous extract of aloes, and 2,880 of lime-water. [L, 85.]—**A. Alregi.** See *Liquor* calcis.—**A. aluminata** [Sp. Ph.]. Sp., *solución de sulfato aluminico potásico* [Sp. Ph.]. A solution of 1 part of alum in 144 of rose-water. [L, 123.]—**A. aluminosa.** See Acqua *alluminosa.*—**A. aluminosa bateana, A. aluminosa composita.** See *Liquor* aluminis *compositus.*—**Aquæ aluminosæ.** Aluminous mineral waters. [L, 119.]—**A. aluminosa Fallopii.** Fr., *eau alumineuse de Fallope.* See *Aluminous* solution *of Fallopius.*—**A. amara.** See *A. sulphatis* magnesiæ *carbonicæ,* and Cf. Acqua *amara.*—**A. amara Meyeri.** Ger., *meyerisches Bitterwasser.* A mixture of 32 parts of magnesium sulphate, 4 of sodium bicarbonate, 8 of sodium sulphate, and 500 of water impregnated with 3 volumes of carbonic anhydride. [L, 63.]—**A. amarella.** A mixture of sodium chloride, lead acetate, and water; used for dyeing the hair. [L, 120.]—**A. ammoniacalis.** See *Liquor* ammonii *carbonatis.* It may be applied also to any solution containing ammonia. [L.]—**A. angelica.** Fr., *eau angélique.* A mixture of 7 parts of cream of tartar, 56 of manna, 226 of water, and 14 of lemon-juice, with a little orange-peel added, the whole clarified with white of egg and filtered. [L, 85.]—**A. angelica viennensis.** See Cassia *cum manna.*—**A. anhaltina.** Fr., *eau d'Anhalt.* Ger., *Anhalt'sches Wasser.* It., *acqua d'Anhalt* (o *anhaltina*). Syn.: *spiritus anhaltinus.* A preparation made by digesting 6 days and distilling 120 parts of turpentine, 90 of powdered aloes-wood, 22 each of mastic, cloves, nutmeg, cubebs, and canella, 9 each of saffron, fennel, and bayberries, and 1,800 of alcohol. [Palatin. Dispens., 1764.] Several old pharmacopœias give the preparation with trifling variations. [L, 85.]—**A. anodina.** See *A. anodyna.*—**A. anodina pragensis.** Fr., *eau de Prague.* See Acqua *anodina di Praga.*—**A. anodyna.** Fr., *eau anodyne.* A name given to several preparations containing ammonia, opium, and camphor in varying proportions. [L, 85.]—**A. antarthritica effervescens.** See *Liquor* lithiæ *effervescens.*—**A. antherpetica de Luynes.** See Acqua *del Cardinale di Luynes.*—**A. anthysterica fœtida, A. anthysterica pragensis.** See *A. fœtida antihysterica.*—**A. antiblennorrhœica.** See Acqua *antiblennorragica.*—**A. antiepileptica de Langio, A. antiepileptica Langii.** Fr., *eau antiépileptique de Lange.* A preparation official in the Würtem. Ph. of 1798 and the Pruss. Ph. of 1829, made by macerating for 3 days and distilling one half of a mixture of 180 parts of *Convallaria majalis* flowers, 30 of lavender flowers, 15 each of French lavender flowers and nutmeg, 22 of canella, 7 each of long pepper and cubebs, 15 each of mistletoe, peony root, and white dittany, and 2,880 of generous wine. [L, 85.]—**A. antimelancholica.** Fr., *eau antimélancolique.* A preparation official in the Würtem. Ph. of 1798, made by infusing for 24 hours and distilling one half of a mixture of 7 parts of saffron, 30 each of borage, bugloss, and rosemary-leaves, 60 of lemon-peel, 120 of bugloss-root, 180 of fructus cydoniæ, and 2,880 of white wine.—**A. antimiasmatica Beisserii.** See *A.* cupri *ammonio-muriatici.*—**A. antimiasmatica composita.** See Cuprum *chloratum ammoniacale cum hydrargyro solutum concentratum.*—**A. antimiasmatica Koechlini.** A mixture of 1 part of liquor antimiasmaticus (*q. v.*, under Liquor) and 80 parts of water. [B, 270.]—**A. antimiasmatica simplex.** See *A.* cupri *ammonio-muriatici.*—**A. antophthalmica de Loche.** See Acqua *antiottalmica di Loche.*—**A. antiputrida.** A solution of 1 part of potassium permanganate in 200 of water. [L, 63.]—**A. antiscorbutica.** Fr., *eau antiscorbutique.* A preparation official in the Swed. Ph. of 1773, made of equal parts of cochlearia, sorrel, agrimony, beccabunga, lesser chelidonium, wild chicory, hack bean, and veronica, distilled with a sufficient quantity of water. [L, 85.]—**A. antivenerialis preservativa.** A solution of caustic potash. [L, 119.]—**A. aperitiva viennensis.** See *A. laxativa viennensis.*—**Aquæ apollinares.** Springs situated between Tarquinii and Cerveteri, now known as "Bagni di Stegliani." [L, 30.]—**Aquæ aponenses.** See Abano.—**A. apoplectica.** 1. See *A.* ammoniæ. 2. A preparation official in the Würtem. Ph. of 1798, made by macerating for three days and distilling one half of a mixture of 64 parts of sage, 4 each of marjoram and wild thyme, 12 of flowers of lily of the valley, 1 part each of lavender and rosemary, 6 parts of cinnamon, 4 of cubebs, 3 of cloves, 2 of mace, and 7,680 of water. [L, 85.]—**A. apoplectica Langii.** A preparation very similar to the preceding. [L, 85.]—**Aquæ aquisgranenses.** See Aachen.—**A. ardens.** 1. See Alcohol. 2. Oil of turpentine. [B, 18.]—**A. argentea.** See Mercury.—**A. aromatica.** Fr., *eau aromatique.* A preparation official in several European pharmacopœias, not differing materially from that of the Ger. Ph. (1st ed.), which is made by macerating for 24 hours a mixture of 1 part of cinnamon, 2 parts each of lavender flowers, rosemary-leaves, and peppermint-leaves, 4 parts of salvia leaves, 1 part of fennel fruit, 26 parts of 83-per-cent. alcohol, and 120 of water. [L, 123.]—**A. aromatica danica.** See Spiritus *aromaticus.*—**A. aromatica spirituosa.** Fr., *eau aromatique spiritueuse.* Ger., *geistig-aromatisches Wasser, Kinderbalsam.* A preparation official in the Austr. Ph. of 1855, made by macerating for 12 hours and distilling 2 parts each of lavender flowers, melissa, *Mentha crispa,* and salvia-leaves, 1 part each of cloves, cinnamon, mace, nutmeg, and ginger root, 23 of 83-per-cent. alcohol, and 160 of water. [L, 123.]—**A. arsenicalis Biettii.** See *Liquor* ammonii *arsenici.*—**A. arsenicalis antipedicularis.** See Acqua *arsenicale antipediculare.*—**A. arsenicalis Pearsonii.** See *Liquor* sodii *arseniatis.*—**A. articulorum.** See Synovia.—**A. asthmatica.** Fr., *eau antiasthmatique.* A preparation official in the Würtem. Ph. of 1798, made by digesting and distilling 60 parts each of alder, Florentine iris, and licorice roots, 90 each of ground ivy, coltsfoot, chenopodium, hyssop, white horehound, and pennyroyal, 30 each of anise and fennel, 3,600 of water, and 360 of alcohol. Other old pharmacopœias order very similar preparations. [L, 85.]—**A. astricta.** Frozen water. [L, 119.]—**A. atheniensis.** Fr., *eau athénienne.* A French preparation for cleansing the scalp; an alcoholic solution of potash-soap, with some solution of potash and aromatic oil. [F. Goppelsröder (A, 377).]—**A. aucta.** Mercury.—**A. auditoria.** See Liquor *Cotunnii.*—**Aquæ augustæ, Aquæ augustæ-tarbellæ.** See Aquæ *tarbellæ.*—**A. aurea.** A "spirit distilled from human brains." [B, 260.]—**A. aurea divina Fernelii.** See *Lotio* hydrargyri *flava.*—**Aquæ Aureliæ.** An ancient name for Baden-Baden. [L, 37.]—**Aquæ badiæ, Aquæ badiguæ, Aquæ badizæ.** See Bath (1st def.).—**Aquæ Balneoli.** See Bagnoles.—**A. balsamica.** 1. Of Fuller, a mixture of 3 handfuls each of ivy, horehound, hyssop, and pennyroyal, 8 grms. each of mint and iris root, 160 grms. of turpentine, 2,000 of milk, and 160 of alcohol. [L, 63.] 2. Of Jackson, an aromatic dentifrice containing Spanish pellitory, balsam of tolu, etc. [L, 53.]—**A. balsamica arterialis.** See *A. Binelli.*—**Aquæ baredginæ, Aquæ bareginenses, Aquæ baretginenses.** See Barèges.—**A. barytica.** See *Solutio* barytæ *muriaticæ.*—**A. bateana.** See *Liquor* aluminis *compositus.*—**Aquæ bathionæ, Aquæ bathonienses.** See Bath (1st def.).—**Aquæ Beeri.** A mixture of 8 parts of cuprum aluminatum, 100 of distilled water, 3 of tinctura anodyna, and 2 of lead acetate. [L, 57.]—**A. Beisserii.** See *A. antimiasmatica Beisserii.*—**Aquæ bellæ.** The springs of Aquabella, now Aigue-Belle, in Savoy. [L, 30.]—**A. bellilucana, Aquæ bellilucanæ.** See Balaruc.—**A. benedicta.** See *A. calcis.*—**A. benedicta composita.** According to the Sardinian (1773) and Turin (1833) pharmacopœias, 4 handfuls of creeping thyme and 1 handful each of chamomile, savory, and thyme are to be digested for three days in 6 lbs. of wine. Half of the mixture is then to be distilled off, and ½ oz. each of *Acorus aromaticus, Laurus cassia,* cinnamon, and mace is to be infused in the distillate. The whole is then distilled. [A, 362.]—**A. benedicta Rulandii.** Fr., *eau bénite de Ruland.* See *Vinum* antimonii.—**A. benzoata aerata.** A mixture of 512 parts of carbonic-acid water, 15 each of borax and potassium benzoate, and 2 of potassium bicarbonate. [L, 165.]—**Aquæ Bigerrorum.** See Bigorre.—**A. bilina.** See Bilin.—**Aquæ Binelli.** Fr., *eau de Binelli.* It., *acqua di Binelli.* A hæmostatic preparation containing creasote, named from its inventor. [L, 37.]—**Aquæ bonnenses.** See Bonnes.—**A. borbonensis.** See Bourbonne-les-Bains.—**Aquæ borboniæ, Aquæ Borbonis.** See Bourbon l'Archambault.—**Aquæ borvonidæ, Aquæ Borvonis.** See Bourbonne-les-Bains.—**A. Bredfeldii.** A mixture of 5 parts of compound tincture of musk, 250 of rose-water, and 1,500 of cologne-water. [L, 63.]—**A. bristoliensis.** See Bristol.—**A. Brocchierii.** See Eau *de Brocchieri.*—**A. bromata.** See *A. bromi.*—**A. bromata Erlenmeyeri.** A solution of 4 parts of potassium bromide, 4 of sodium bromide, and 2 of ammonium bromide in 750 of carbonic-acid water. [A. Poehl, "St. Petersb. med. Woch.," May 3 (15), 1886, p. 167 (L).]—**A. bulliens.** Boiling water. [L, 119.]—**A. buxtoniensis.** See Bath (1st def.).—**A. cærulea.** Sp., *solución de sulfato cuprico-amónico* [Sp. Ph.]. A preparation official in the Belg., Gr., Sp., and Pruss. (5th ed.) pharmacopœias. The Belg. Ph. orders 15 parts of sulphate of copper, 890 of distilled water, and 95 of a. ammoniæ (sp. gr., 0·935); the Sp. Ph., 1 part of copper sulphate, 576 parts of distilled water, and sufficient a. ammoniæ to dissolve the precipitate first thrown down; the Gr. and Pruss. Ph's order 1 part of cuprum limatum, 2 parts of ammonium chloride, 48 of lime-water, and 384 of distilled water. [L, 123.]—**A. Cæsaris.** See *A. regia.*—**A. calida.** Hot water.—**Aquæ calidæ.** 1. Vichy. 2. Bath (1st def.).—**Aquæ calidæ Belgarum transductorum.** See Bath (1st def.).—**A. camphorata.** See *A.* camphoræ.—**A. camphorata acidula.** Fr., *eau camphrée.* A preparation official in the Sp. Ph. of 1798; a mixture of 1 part of camphor and 23 parts of carbonic-acid water. [L, 85.]—**A. camphorata-ætherea.** Fr., *eau éthérée camphrée.* Sp., *solución de éter alcanforada* [Sp. Ph.], *agua eterea alcanforada.* A mixture of 2 parts of camphor, 6 of ether (sp. gr., 0·758), and 120 of distilled water. [L, 123.]—**A. camphorata bateana.** A mixture of copper sulphate, camphor, and boiling water in varying proportions. [L.]—**Aquæ canturienses.** See Canterbury.—**A. carbolica.** A 1-per-cent. solution of carbolic acid in water. [L, 63.]—**A. carbolisata** [Ger. Ph.]. Fr., *soluté d'acide phénique* [Fr. Cod.], *eau phéniquée.* Ger., *carbolsaures Wasser.* Syn.: *a. acidi carbolici* [U. S. Ph., 1870], *solutio acidi carbolici* [Norw. Ph.], *solutio acidi phenylici* [Swed. Ph.], *acidum carbolicum solutum* [Russ. Ph.]. In the Ger. Ph., a 3-per-cent. solution of carbolic acid in water; in the U. S. Ph. (1870), a solution of 1 part of glycerite of carbolic acid in 128 parts of water; in the Fr. Cod., a solution of 1 part, in the Russ. Ph., one of 10 parts, and in the Norw. and Swed. Ph's, one of 20 parts of carbolic acid in 1,000 parts of water. [B; L.]—**A. carbonica.** See *A.* acidi carbonici.—**A. carbonica ferrata.** A solution of iron and potassium tartrate in carbonic-acid water. [Kirsch (L, 57).]—**A. carbonica oxygenata.** See *A. carbonica.*—**A. carbunculi.** Fr., *eau carbunculeuse.* A mixture official in the Bruns. Disp. of 1777, the Palatin. Disp. of 1764, and the Würtem. Ph. of 1798, of a large number of aromatic seeds, herbs, and roots and wine, supposed to prevent the striking in of carbuncular diseases. [L, 85.]—**A. cardinalis.** See Acqua *del Cardinale di Luynes.*—**A. carmelitana, A. Carmelitarum.** Fr., *eau des Carmes.* See *Spiritus* melissæ *compositus.*—**A. Carmichaelis.** See *A. benedicta composita.*—**A. carminativa.** Fr., *eau carminative.* Ger., *Windwasser.* A preparation official in the Austr. Ph., made by macerating for 24 hours and distilling 2,000 parts of a mixture of 30 parts each of lemon- and orange-peels, mint-leaves, cloves, coriander seeds, and fennel, 100 of Roman chamomile flowers, and 2,000 of water. [L, 123.] Cf. Claretum *ex sex seminibus.*—**A. carminativa regia.** Ger., *königliches Windwasser.* A mixture of a. carminativa simplex, aromatic spirits, white sugar, and cochineal. [L, 129.]—**A. carminativa simplex.** Fr., *eau carminative simple.* Ger., *einfaches Windwasser.* An aromatic water obtained

by the distillation of various aromatic and sweet-smelling substances with water; official in the Austr. Ph. of 1820, the Brunsw. Dispens. of 1777, the Sardin. Ph. of 1773, and the Würtem. Ph. of 1798. [L, 85.]—**A. carminativa spirituosa.** Fr., *eau carminative spiritueuse.* A preparation official in the Würtem. Ph. of 1798, made by digesting for 3 days and distilling 3,600 parts of a mixture of 1,800 parts of water, 3,240 of alcohol, 60 each of sweet-flag, mint, and serpyllum, 180 of chamomile, 75 each of anise and fennel, 90 each of cinnamon, mace, bayberries, and juniper, and 60 of orange-peel. [L, 85.]—**Aquæ carolinæ.** See CARLSBAD.—**A. carrica.** See *Liquor* CALCIS.—**A. catapultarum.** See *A. vulneraria.*—**Aquæ catharticæ amaræ.** Bitter purging waters. [L, 119.]—**Aquæ celenæ.** See CALDAS DEL REY.—**A. cephalica.** An old term applied to several aromatic waters, on account of their supposed virtues in apoplexy. Cf. *A. aromatica* and *A. apoplectica.* [L.]—**A. cephalica Caroli Quinti.** Fr., *eau céphalique de Charles Quint.* A preparation official in the Palatin. Disp. of 1764, made by digesting for 6 days and distilling 60 parts each of sweet marjoram, balm, and origanum tops, 15 each of cloves, cardamons, cinnamon, grana paradisi, mace, and nutmeg, and 2,180 of alcohol. [L, 85.]—**A. cerebri.** See *A. tartari.*—**Aquæ chalybeatæ.** Fr., *eaux chalybées.* Chalybeate waters. [L, 119.]—**A. chlorata.** See *A.* CHLORI.—**A. chlorinica.** See *A.* CHLORI and HYDROCHLORIC ACID.—**A. chloroformata.** Fr., *eau chloroformisée.* See *A.* CHLOROFORMI.—**A. chrysulea.** See *A. regia.*—**Aquæ cllenæ.** See *Aquæ celenæ.*—**A. citrina.** A distillation of orange- and lemon-peels and alcohol. [L, 119.]—**A. cœlestina.** See *A. permanens.*—**A. cœlestis.** Fr., *eau celeste.* It., *acqua celesta.* 1. A solution of ammonio-sulphate of copper, prepared extemporaneously by dissolving the sulphate in water and adding ammonia till all turbidity is removed and a sky-blue solution is produced. It has been official in various degrees of strength in different pharmacopœias. [B, 10, 50.] Cf. *A. cœrulea.* 2. See *A. cœrulea.* 3. Alcohol. [B, 260.]—**A. cœrulea.** See *A. cœrulea.*—**A. colcestrensis.** See COLCHESTER.—**A. coloniensis.** See SPIRITUS *odoratus.*—**A. coloniensis medicinalis.** See *Alcoholetum aromaticum de* CITREIS.—**A. colorata.** Colored water; used to give a pleasing tint to mixtures and as a placebo. [L, 63.]—**A. comfortativa.** Fr., *eau confortante.* A mixture official in the Sax. Ph. of 1837, of a. cinnamomi buglossata 1 part, and waters of violets, of red roses, of borage, and of black cherry, each 4 parts. [L, 85.]—**A. communis.** The official title for water in the Ger. Ph.—**A. communis destillata.** See *A. destillata.*—**Aquæ compositæ.** Compound waters. [L, 119.]—**Aquæ concentratæ.** Concentrated waters; ordered made, in the Dan., Swiss, and Ger. Ph's, by distilling 10 parts of a water containing volatile principles in solution; the Russ. and Roumanian Ph's order the distillation of a relatively large quantity of a volatile principle with water. [B, 95.]—**A. confortativa.** See *A. comfortativa.*—**A. congregationis.** See MERCURY.—**A. Conradi.** A mixture of 3 parts of corrosive sublimate, 100 of distilled water, and 5 to 10 of tinctura opii crocata, used as an eye-water. [Reuss (L, 157).]—**A. contra alopeciam.** A mixture of 5 parts of tincture of galls, 1 part of tincture of cantharides, 15 parts of cologne-water, and 50 of rose-water; or 20 parts each of glycerin and mistura oleobalsamica, 1 part of tincture of cantharides, 60 parts of spirits of wine, and 2 of tannic acid. Both should be filtered. [L, 63.]—**Aquæ Convenarum.** See *Bagnères de* BIGORRE.—**A. cordialis frigida.** Fr., *eau cordiale froide.* A preparation official in the Würtem. Ph. of 1798, made by distilling two thirds of a mixture of 75 grammes of cinnamon, 360 each of red saunders, bugloss, and sorrel waters, 540 each of rose, raspberry, and black-cherry waters, and the juice of 8 lemons. [L, 85.]—**A. cordialis temperata.** Fr., *eau cordiale tempérée.* A preparation very similar to the preceding, but much more complex. [L, 85.]—**A. corrodens.** Strong vinegar or any corrosive fluid. [B, 50.]—**A. corrosiva.** See *A. caustica.*—**A. cosmetica.** Fr., *eau cosmétique.* Syn.: *lac virginum.* Cosmetic-water; in several old pharmacopœias, a mixture of tincture of benzoin and water. [L, 162.]—**A. cosmetica orientalis.** A mixture of 3 parts of corrosive sublimate, 300 of distilled water, white of egg as desired, 10 parts of lemon-juice, 24 of sugar, and 40 of some aromatic water. [Bernatzik (L, 57).]—**A. Cotunnii.** See PERILYMPH.—**A. cristallina, A. crystallina.** See *Solutio* TARTARI *depurati.*—**Aquæ cupreæ.** Waters containing copper. [L, 119.]—**A. depurata.** Water purified by filtration, distillation, etc. [L.]—**A. descensus, Aquæ descensus.** See *A.* DESCENSUS.—**A. destillata.** Fr., *eau distillée.* Ger., *destillirtes Wasser.* It., *acqua distillata.* Sp., *agua destilada.* The official title of distilled water in a large number of pharmacopœias. The U. S. and Br. Ph's order the first 50 parts passing over to be thrown away, and the next 800 preserved, and the U. S. Ph. directs the condenser of the distilling apparatus to be made of glass or block tin. [L, 65.]—**Aquæ destillatæ** [Ger. Ph.]. Fr., *eaux distillées.* Ger., *destillirte Wasser.* Waters impregnated with volatile substances during distillation. [L, 65.]—**A. destillata simplex.** The official title of a. destillata in the Austr. and Hung. Ph's. [B, 95.]—**A. de tribus, A. diatron.** See MIXTURA *pyrotartarica.*—**A. discussoria.** See *A. vulneraria.*—**A. distillata.** See *A. destillata.*—**A. diuretica e nucleis.** Fr., *eau diurétique.* A preparation official in the Palat. Disp. of 1764, made by digesting for two days and distilling one half of a mixture of 48 parts of wine, 3 of dry elder flowers, 2 each of bitter almonds and peach pits, and 1 part of cherry pits. [L, 85.]—**A. divina, A. divina Fernelii.** See *Liquor* HYDRARGYRI *muriatici corrosivi.*—**Aquæ domitianæ.** An old Roman name for Aix-les-Bains. [A, 42.]—**A. driburgensis.** See DREIBURG.—**A. dulcis.** Soft water. [L, 119.]—**A. dura.** Hard water. [L, 119.]—**A. e lacu.** Lake water.—**A. elementaris.** An old name for dew. [L, 105.]—**A. elsabon.** See *A. holsabon.*—**A. embryonum.** See *A. aromatica* [Ger. Ph.] and ELIXIR *vitæ mulierum.*—**A. emetica.** See *Liquor* ANTIMONII *tartarisati.*—**Aquæ emissorium.** See AQUEDUCT *of Sylvius.*—**Aquæ enggenses.** See ENGHIEN.—**A. epidemica.** Fr., *eau épidémique.* See ALEXITERIA *spirituosa.*—**A. epidemica londonensis.** A preparation official in the Würtem. Ph. of 1798, made by macerating and distilling 4,320 parts of white wine, 30 each of angelica, tormentilla, gentian, zedoary, and licorice roots, chelidonium, rosemary, rue, sage, *Artemisia vulgaris*, wormwood, anagallis, scabiosa, *Artemisia dracunculus*, agrimony, balm, scordium, little centaury, blessed thistle, betony, and *Drosera rotundifolia* herbs. [L, 85.]—**A. epileptica Langii.** Fr., *eau épileptique de Lange.* It., *acqua antilepilettica di Langio.* A limpid, aromatic liquid, made by distilling a mixture of linden flowers 70 parts, flower-de-luce 140, fresh peony seeds 130, and generous white wine 200, adding bruised cinnamon 10 parts, nutmeg 20, cardamon, cubebs, and long pepper, each 2, lavender flowers 30, and rosemary, mistletoe, peony root, and dittany, each 15, and redistilling the whole; used internally and externally for epilepsy. [A, 314.]—**A. essentialis.** It., *acqua essenziale.* An aqueous solution of a volatile active principle obtained by distilling fresh plants without the addition of water. [B.] Cf. HYDROLAT.—**A. ex Bannares.** Sp., *agua de Bañares.* A preparation official in the Sp. Ph., made extemporaneously by mixing 2·16 parts of magnesium sulphate, 0·01 part of tartrate of antimony, 0·06 of iron sulphate, 276·48 parts of sodium tartrate and 276·48 of water. [L, 123.]—**A. ex flumine.** River water. [L, 120.]—**A. ex nive.** Snow water. [L, 120.]—**A. ex puteo.** Well water.—**Aquæ extemporaneæ.** Aqueous solutions of the volatile oils made either by shaking the latter with water, by rubbing up the oils with sugar, etc., and then dissolving in water, or [U. S. Ph.] by causing water to percolate through cotton moistened with the oil. [B, 95.]—**Aquæ fabariæ.** See FAVIÈRES.—**A. fabrorum.** The water in which smiths cool iron and steel. It is a feeble chalybeate. [L, 105.]—**A. ferrata.** A chalybeate water. [L.] Cf. *A. fabrorum.*—**A. ferrata effervescens.** A mixture of 1 part of iron citrate and 400 parts of carbonic-acid water. [Kisch (L, 57).]—**Aquæ ferreæ, Aquæ ferrosæ.** Chalybeate waters. [L.]—**A. ferruginosa aerata.** See EAU *ferrée gazeuse.*—**Aquæ ferruginosæ.** See *Aquæ ferrosæ.*—**A. fervens.** Hot water. [L, 119.]—**Aquæ flaviæ.** See CHAVES.—**A. fluvialis, A. fluviatilis.** River water. [L.]—**A. fœtida.** See *A.* MERCURII.—**A. fœtida antihysterica.** The Ger. Ph. orders 1 part of castoreum canadense, 12 parts of asafœtida, 8 of Roman chamomile flowers, 12 of peppermint-leaves, 8 each of galbanum and climbing thyme, 6 of myrrh, 16 each of valerian and zedoary roots, 4 of angelica root, 150 of alcohol (sp. gr., 0·892), and 300 of water; 300 parts to be distilled. The Gr. Ph. orders 12 parts each of asafœtida and peppermint-leaves, 8 each of castoreum, chamomile flowers, coriander seeds, galbanum, and climbing thyme, 16 each of zedoary and valerian roots, 6 of myrrh, 4 of angelica root, 144 of alcohol (sp. gr. 0·840), and water q. s.; 288 parts to be distilled. [L, 123.]—**A. fœtida pragensis.** Fr., *eau de Prague.* Ger., *stinkendes Pragerwasser.* It., *acqua antisterica fetida* (*o di Praga*). A tincture containing galbanum, asafœtida, valerian, zedoary, angelica, mint, chamomile, coriander, and castoreum; formerly used in Germany for hysteria. [A, 314.]—**A. fontana, A. fontis.** See *Spring* WATER.—**Aquæ forgiarum.** 1. See FORGES-LES-EAUX. 2. See *A. fabrorum.*—**A. fortis.** Fr., *eau forte.* Ger., *Aquafort.* It., *acqua forte.* Sp., *agua fuerte.* See NITRIC *acid.*—**A. fortis diluta.** Dilute nitric acid.—**A. fortis duplex.** See *Double a. fortis.*—**A. fortis secundaria.** Dilute nitric acid. [L.]—**A. fortis simplex.** See *Single a. fortis.*—**A. frigida.** 1. Cold water; usually applied to water below 64° F. [L.] 2. Mercury. [L, 53.]—**A. gingivalis.** See *A. ad gingivas.*—**A. Goulardii, A. Goulardii propria.** See *Liquor* PLUMBI *subacetatis dilutus.*—**A. græca.** Fr., *eau grècque.* A hair-dye containing nitrate of silver. [L, 120.]—**Aquæ Grani, Aquæ graniæ, Aquæ gratianæ.** Ancient names for Aix-la-Chapelle. See AACHEN.—**A. grisea, A. grisea Gohlii, A. grysea.** Fr., *eau grise.* A preparation official in several old pharmacopœias, containing nitrate of mercury and an infusion of a number of herbs. [L, 85.]—**A. gummosa.** Fr., *tisane de gomme* [Fr. Cod.]. Sp., *solución de goma arábiga* [Sp. Ph.]. A solution of 1 part of gum arabic in 48 parts of water [Sp. Ph.], or 50 parts [Fr. Cod.]. [L, 123.]—**A. hæmostatica** [Pagliari]. Fr., *eau hémostatique.* A solution, official in the Belg. Ph., of 1 part of benzoin and 2 parts of potash alum in 20 of water. [L, 123.]—**A. hæmostatica Monseli.** A preparation made by mixing a solution of 6 parts of alum in 100 of rose-water with one of 3 parts of tannin in 100 of rose-water. [B, 270.]—**A. halogenata.** See *A.* CHLORI.—**Aquæ helvetiæ, Aquæ helveticæ.** See BADEN (Switzerland).—**A. hepatica.** Fr., *eau hépatique.* It., *acqua epatica.* See *A. hydrosulphurata.*—**A. hepatica acida.** See *A. sulphureo-acida.*—**A. hepatisata.** See *A. hepatica.*—**A. hepatisata fortior.** See *A. sulphureo-acida.*—**A. holsabon.** Salt water. [B, 50.]—**A. hordeata.** See *Decoctum* HORDEI.—**A. hordeata cum gummi.** A preparation official in the Geneva Ph. of 1780, made by boiling 6 parts of barley in a small quantity of water, which water is rejected, adding 56 parts of boiling water, reducing one half, and adding 1 part of licorice and 3 parts of gum arabic. [L, 162.]—**A. hungarica.** See *A. reginæ hungaricæ.*—**A. hydrocyanica vegetabilis.** Fr., *eau hydrocyanique.* A mixture, official in the Batav. Ph. of 1805 and the Lusitanian Ph. of 1836, of 1 part of essential oil of bitter almonds, 12 parts of alcohol, and 128 of distilled water. [L, 85.]—**A. hydrogenata sulphurata, A. hydrosulphurata, A. hydrosulphurica acida** (**seu acidula**). An aqueous solution of hydrogen sulphide. [L.] See EAU *sulphurée* and ACIDUM *sulpho-hydricum liquidum.*—**A. hysterica.** Fr., *eau antihystérique.* A preparation official in the Bruns. Disp. of 1777 and the Würtem. Ph. of 1798, made by digesting for 2 days and distilling 1,440 parts of a mixture of 252 parts of water, 180 of alcohol, 30 each of imperatoria, *Ligusticum levisticum*, peony, and zedoary roots, 45 each of balm, fever-few, mint, and chamomile, and 30 each of lemon-peel, cloves, *Laserpitium latifolium*, and fennel. [L, 85.]—**A. imbrium.** Rain water.—**A. imperialis.** Fr., *eau impériale.* A preparation official in the Turin Ph. of 1833, made by boiling and expressing 664 parts of water, 7 of lemon-peel, 10 of cream of tartar, and 55 of water. Also applied to an old distilled preparation of aromatic herbs, alcohol, and water. [L, 85, 94.]—**A. infernalis.** Fr., *eau infernale.* Syn.: *hell water.* A term applied to

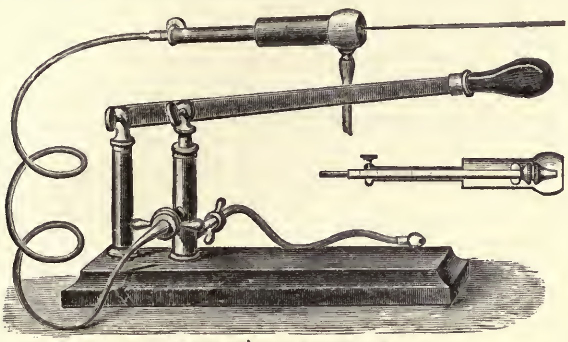
the juice of the fruit of the *Saguerus saccharifer*, which is very corrosive. [L, 105.]—**A. intercus, A. intercutem, Aquæ intercutis.** See Anasarca.—**Aquæ jasæ.** An old name for the springs of Saint Leonard. [L, 30.]—**A. javellensis, A. Javelli.** See *Javelle* water.—**A. kalina effervescens.** See *Liquor* potassæ *effervescens*.—**Aquæ labodæ.** See Sciacca.—**A. labyrinthi.** See Perilymph.—**A. labyrinthi membranacei.** See Endolymph.—**A. labyrinthi ossei.** See Perilymph.—**Aquæ lapidificantes.** Waters which deposit an earthy sediment upon standing or after boiling. [L, 164.]—**Aquæ larodæ.** See Sciacca.—**A. laxativa viennensis.** Fr., *eau laxative de Vienne.* Ger., *Wiener Laxiertränkchen.* A preparation official in the Palat. Disp. of 1764 and the Würtem. Ph. of 1798, made by digesting for several hours 90 parts of senna-leaves, 45 of dried currants, 11 of polypodium root, 7 of coriander, 15 of cream of tartar, and 900 of boiling water, filtering, and adding to the filtrate 200 of manna. Slightly differing formulæ are found in several old pharmacopœias. [L, 85.] Cf. *Infusum* sennæ *compositum*.—**A. liberans.** See *A.* calcis *magis composita*.—**A. lilii.** See Orpiment.—**A. lithonthriptica.** See *A. mephitico-alcalina*.—**A. lixiviæ causticæ.** See *Liquor* potassæ.—**A. lubrica.** An old term for mercury. [L, 53.]—**A. lubricata.** A mucilaginous or demulcent drink made of water, sugar, etc. [B, 50.]—**A. lucens.** See Mercury.—**A. lucia, A. Lucii.** Fr., *eau de luce.* See *Spiritus* ammoniæ *cum succino*.—**Aquæ luvienses Tungrorum.** See Spa.—**A. magnanimitatis, A. magnanimitatis simplex.** Fr., *eau de magnanimité.* It., *acqua di magnanimità.* An old term for an alcoholic infusion of red ants, used as an aphrodisiac. [A, 314.]—**A. magnesio-effervescens** [Fr. Cod.]. See Eau *magnésienne*.—**A. marina.** Salt water, sea-water. [B, 50; L, 53.]—**A. marina arte facta** (seu **factitia**). Artificial sea-water. [L, 164.]—**A. martia effervescens.** See Eau *ferrée gazeuse*.—**Aquæ martiales.** Chalybeate waters. [L, 119.]—**A. mastichina.** Fr., *eau de mastic.* A preparation official in the Würtem. Ph. of 1798 and the Brunsw. Disp. of 1777, made by digesting for 3 days and distilling 108 parts of a mixture of 144 parts of water, 12 of mastic, 3 of nutmeg, and 36 of alcohol. [L, 85.]—**Aquæ mattiacæ.** The old Roman name for Wiesbaden. [A, 363.]—**Aquæ medicatæ.** See *Aquæ destillatæ* and *Aquæ extemporaneæ*.—**A. medicinalis Hussonii.** Fr., *eau médicinale d'Husson.* A mixture of 1 part of tincture of gratiola and 2 parts of Spanish wine. [B, 270.]—**A. megi.** See *A.* vitrioli.—**A. mellis.** See Hydromel.—**A. mephitico-alcalina.** Fr., *eau méphitique gazeuse.* Syn.: *potio alcalina.* A solution, official in a number of old pharmacopœias, of potassium bicarbonate in carbonic-acid water; used for gravel. [L, 85.]. Cf. *A. supercarbonatis* sodæ and Eau *alcaline gazeuse*.—**A. mercurialis.** Fr., *eau mercurielle.* A term loosely applied to almost any solution containing mercury. See Acetum *philosophicum*.—**A. mercurialis charras.** See *Liquor* hydrargyri *nitratis*.—**A. mercurialis composita.** See *Liquor* hydrargyri *perchloridi*.—**A. mercurialis nigra.** See *Lotio* hydrargyri *nigra*.—**A. mercurialis pro scabiosis.** A preparation of Horstius consisting of equal parts of corrosive sublimate and euphorbium with an excess of arsenic beyond what the menstruum can dissolve. In a similar preparation of Zwelper's, aloes was added, and in that of Junken a number of ingredients were employed. [B, 59.]—**A. mercurii.** See under Mercurius.—**A. metallorum.** An alchemical name for mercury. [L, 77.]—**Aquæ metus.** See Hydrophobia.—**Aquæ minerales.** Mineral waters. [L, 119.]—**Aquæ minerales acidulæ.** Mineral waters containing gases. [L, 45.]—**Aquæ minerales artificiales.** Artificial mineral waters. [L, 119.]—**Aquæ minerales ferruginosæ.** See *Aquæ ferreæ*.—**Aquæ minerales sulphureæ.** Mineral waters containing sulphur. [L, 45.]—**A. mineralis.** A mineral water.—**A. mineralis cathartica.** 1. A mineral water having cathartic properties. 2. See *Mixtura* magnesiæ *sulphurica*.—**A. mineralis ferruginosa** [Gr. Ph.]. See Eau *ferrée gazeuse*.—**A. mineralis pullnensis.** An artificial Pullna water, made of 21 parts of magnesium sulphate, 3 of magnesium chlorate, 15 of sodium sulphate, 1 each of sodium and calcium chlorates, and 625 of carbonic-acid water. [Gr. Ph. (L, 123).]—**A. mineralis seidlizensis artificialis.** An artificial Seidlitz water made of 30 parts of magnesium sulphate, 4 each of sodium bicarbonate and tartaric acid, and 650 of water. [Gr. Ph. (L, 123).]—**A. mirabilis.** An old term for several aromatic preparations used for the relief of colic. Cf. *A. aromatica* and *Spiritus* pimentæ.—**A. Monterossi.** See Acqua *stagnotica di Monterossi*.—**A. Morgagni.** Fr., *eau* (ou *liquide*) *de Morgagni.* Ger., *Morgagni'sche Flüssigkeit.* It., *acqua di Morgagni.* Sp., *agua de Morgagni.* A fluid which was formerly supposed to surround the crystalline lens and separate it from the capsule. [F.]—**A. mulsa.** See Hydromel.—**A. muriatico-mercurialis.** See *Lotio* hydrargyri *lutea*.—**A. natro-effervescens** [Fr. Cod.]. Fr., *eau acidule bicarbonatée.* It., *acqua degli' Inglesi.* A preparation consisting of 15 grains of sodium bicarbonate dissolved in a little water and placed in a bottle with 22 fluidounces of water charged with carbon dioxide under a pressure of 7 atmospheres. [B.]—**A. nephretica.** Fr., *eau antinéphritique.* A mixture of 7 parts of sodium carbonate and 720 of lime-water, official in several old pharmacopœias; also see *Spiritus* myristicæ. [L, 85.]—**A. nephritica.** Snow water. [L, 119.]—**Aquæ nerenses, Aquæ Neri, Aquæ Neris.** See Néris.—**A. nigra.** See *Lotio* hydrargyri *nigra*.—**A. Nisinii.** See Bourbon-Lancy.—**A. nivalis, A. nivata.** Snow water. [L, 119.]—**A. non madefaciens manus.** See Mercury.—**A. nubis.** See *A. solvens*.—**A. obscura.** See Cataract.—**A. odorifera.** Fr., *eau odoriferante.* A preparation official in the Würtem. Ph. of 1798, made by digesting for three days and distilling three quarters of a mixture of 60 parts each of cinnamon, rose and convallaria blossoms, 45 each of cloves, lignum rhodii, and fresh lemon-peel, 30 each of marjolane, lavender, and rosemary, 1,440 of water, and 2,880 of alcohol. [L, 85.]—**A. omnium florum.** A liquid obtained by the distillation of cow dung collected in May; formerly used in phthisis. [L, 164.]—**A. ophthalmica.** Fr., *eau ophthalmique.* 1. Any variety of liquid application for the eyes. 2. A mixture of 2 parts of ammonium chloride and 31 of water, official in the Batav. Ph. of 1811. [L, 85.]—**A. ophthalmica adstringens.** See *A. ophthalmica aluminosa* and *Collyrium adstringens* zinci.—**A. ophthalmica alba.** A mixture of 5 parts each of zinc sulphate and zinc oxide, 20 of tincture of opium, 40 of alcohol, and 1,000 of rose-water. [B, 270.]—**A. ophthalmica aluminosa.** A preparation official in several old pharmacopœias, consisting of alum and water in varying proportions. [L, 85.]—**A. ophthalmica cærulea.** See *Solutio* cupri *ammoniacalis*.—**A. ophthalmica Conradi.** Fr., *eau ophthalmique de Conrad.* See *Collyrium ex* hydrargyro *muriatico corrosivo*.—**A. ophthalmica Lanfranci.** See Mixture *cathérétique*.—**A. ophthalmica mercurialis.** Fr., *eau ophthalmique mercurielle.* See *Collyrium ex muriate* hydrargyri *oxygenato*.—**A. ophthalmica nigra Græfi.** A mixture of 3 parts of calomel, 5 of extract of hyoscyamus, 150 of rose-water, and 500 of lime-water. [B, 270.]—**A. ophthalmica Odhelii.** See *Decoctum* rutæ *zincatum*.—**A. ophthalmica pragensis.** A mixture of 1 part of zinc sulphate, 1 part of mucilage of gum arabic, and 50 parts each of rose-water and elder-flower-water. [B, 270.]—**A. ophthalmica resolvens.** Fr., *eau ophthalmique resolutive.* A preparation official in the Hamburg Cod. of 1835, containing 1 part of antimony and potassium tartrate, 60 parts of laudanum, and 240 of water. [L, 85.]—**A. ophthalmica Romerhauseni.** See *A. ophthalmica fœniculata*.—**A. ophthalmica Saturnii** (seu **saturnina**). A mixture of 1 part of acetate of lead, 15 parts of mucilage of quince-seeds, and 240 of rose-water. [B, 270.]—**A. ophthalmica vitriolica.** See *Collyrium adstringens* zinci.—**A. orientalis.** A hair-dye containing nitrate of silver. [L, 120.]—**A. orientalis Hebræ.** A mixture of 1 part of corrosive sublimate, 600 parts of emulsion of bitter almonds, and 3 of tincture of benzoin. [L, 57.]—**Aquæ Originis.** See Bande.—**A. oxygenata.** Fr., *eau oxygenée.* 1. Water containing oxygen in solution. 2. See *A.* chlori.—**A. oxygeno-muriatica, A. oxymuriata.** See *A.* chlori.—**Aquæ paciacæ.** See Passy.—**A. Pagliari.** See *A. hæmostatica*.—**A. palæstina.** Verdigris. [B, 50.]—**A. paludosa, A. palustris.** Pond water. [L, 119.]—**Aquæ pannonicæ.** See Baden (1st def.).—**A. paralyseos.** Fr., *eau de primevère.* See under Paralysis.—**Aquæ Passeri.** See Passy.—**Aquæ patavinæ.** See Abano.—**Aquæ pavor.** See Hydrophobia.—**A. pedum.** Urine. [K, 3.]—**A. pericardii.** The pericardial fluid. [B, 260.]—**A. perlata.** See *A. comfortativa*.—**A. permanens.** A liquid formed by the "philosophical solution" of the two most perfect metallic bodies (gold and silver) at the same time. [B, 50.]—**A. pestilentialis.** Syn.: *alcohol camphoratum crocatum.* A mixture of spirits of camphor and tincture of saffron in varying proportions; formerly official in several pharmacopœias. [L, 85.]—**Aquæ Petrimontis.** See Pyrmont.—**A. phagedænica.** Fr., *eau phagédénique* [Fr. Cod.]. Ger., *phagedänisches Wasser.* It., *acqua fagedenica.* Sp., *agua fagedénica.* 1. A solution of 1 part of corrosive sublimate in 30 parts of lime-water [Ger. Ph., Swiss Ph.], 1 to 250 [Dan. Ph.], or 1 to 300 [Fr. Cod.], or 1 to 144 [Netherl. Ph.]. 2. An old term for an aqueous solution of corrosive sublimate and sal ammoniac. [A, 305.]—**A. phagedænica decolorata.** Ger., *farbloses phagedänische Wasser.* A solution containing 16 grains of corrosive sublimate, 1 drachm of ammonium chloride, and 4 lbs. of water. [L, 129.]—**A. phagedænica flava.** A preparation made by dissolving 1 part of corrosive sublimate in an equal quantity of distilled water and adding 248 parts of lime-water. [L, 123.]—**A. phagedænica lutea.** Ger., *gelbes phagedänische Wasser.* A mixture of one part of corrosive sublimate and 128 of lime-water. [L, 129.]—**A. phagedænica nigra.** See *Lotio* hydrargyri *nigra*.—**A. phagedænica rubra.** A preparation official in the Gr. Ph., containing one part of corrosive sublimate and 240 of water. [L, 123.]—**A. phagedenica** [Fr. Cod.]. See *A. phagedænica*.—**A. philosophica.** An alchemical name for various liquids, including distilled vinegar. [B. 50.]—**A. philosophorum.** Of the alchemists, the radical moisture found in animal, vegetable, and liquid substances. [B, 260.]—**A. physagoga.** Fr., *eau physagogue.* A preparation official in the Würtem. Ph. of 1798, made by distilling one half of a mixture of 24 parts of aniseed, 3 of *Laserpitium latifolium* seeds, 1 each of cinnamon, nutmeg, galangal, caraway, and mace, 384 of white wine, and 48 of alcohol. [L, 85.]—**A. picea** [Fr. Cod.]. See *A.* picis.—**Aquæ pintianæ.** See *Aquæ segestanæ*.—**Aquæ pisanæ.** An old name of a warm mineral spring northeast of Pisa. [L, 30.]—**A. plumbia.** See *Liquor* plumbi *subacetatis dilutus*.—**Aquæ plumbiariæ.** See Plombières.—**A. plumbica.** See *A. plumbia*.—**A. pluvia, A. pluvialis.** Rain water. [B, 50.]—**A. pontificalis.** Fr., *eau pontificale.* An old term for the spiritus millefolii acetatus, the liquor vulnerarius vegetabilis Dippelii, the spiritus rosmarini acetatus, and the spiritus aromaticus. [B, 97.]—**A. pragensis.** See *A. fœtida pragensis*.—**A. preservativa.** See *A. antivenerealis*.—**A. prophylactica.** Fr., *eau prophylactique.* Syn.: *acetum bezoardicum Sylvii.* A preparation official in the Wirtem. Ph. of 1798, made by digesting for 12 hours 1 part each of angelica and zedoary roots, 2 parts of petasites root, 12 of freshly sliced lemon, 4 each of rue, balm, and scabiosa leaves, 2 of calendula flowers, 24 of young walnuts, and 144 of vinegar. [L, 85.]—**Aquæ provinæ.** See Provins.—**A. pugilum.** See *A. regia*.—**A. pulversiata.** Nebulized or atomized water. [B.]—**A. pura.** Pure water. [L.]—**A. putealis, A. puteana.** Well water. [L.]—**Aquæ pyrmontanæ.** See Pyrmont.—**A. rabeliana, A. Rabelii, A. rabelliana.** Fr., *eau de Rabel.* See Mixtura *sulfurico-acida*.—**A. regalis** [Fr. Cod.], **A. regia, A. reginæ, A. regis.** See Nitro-hydrochloric acid.—**A. reginæ hungaricæ.** See *Spiritus* rosmarini *compositus*.—**A. rosa.** A name applied to two mineral springs in Switzerland, the one in the canton of Ticino and the other in the canton of Grison. [L, 30.]—**A. rubea.** An alchemical term for the urine of men. [L, 53.]—**A. rubicunda.** See *A.* vitrioli.—**Aquæ sabaudicæ.** See Aix-les-bains.—**A. saccharata.** See Eau *sucrée*.—**A. Saidschütz factitia** [Swiss Ph.]. An artificial mineral water made by placing in a tightly corked bottle 70 parts of magnesium sulphate, 5 of sodium bicarbonate, 700 of

distilled water, and 15 of dilute sulphuric acid (sp. gr., 1·117). [L, 123.]—**A. saidschützensis.** See *A. sedlitzensis.*—**A. salina pyrmontana.** See PYRMONT.—**Aquæ saletiæ.** See SELTZ.—**A. salmatina.** Salt water. [B, 50.]—**A. salubris.** Mineral water. [L, 45.]—**A. Sanctæ Elisabethæ, A. Sanctæ Isabellæ.** See *A. reginæ hungaricæ.*—**A. Sanctæ Luciæ.** See *A. Lucii.*—**A. saphirina, A. sappharina.** See *A. cœlestis.*—**A. Saturni.** See *A. saturnina.*—**A. saturnia.** An acidulous mineral spring. [B, 50.]—**A. saturnina.** See *Liquor* PLUMBI *subacetatis dilutus.*—**A. sclopetaria.** See *A. vulneraria.*—**A. sclopetaria aromatica.** See *Alcohol* SALVIÆ *vulnerarius.*—**A. sclopetaria spirituosa.** See *A. vulneraria spirituosa.*—**A. sclopetaria Thedenii.** See *A. vulneraria Thedenii.*—**A. secunda.** A very dilute solution of nitric acid used for cleaning the surface of silver. [B, 86.]—**A. sedativa, A. sedativa Raspail** [Belg. Ph., Swiss Ph., Russ. Ph.]. Fr., *eau sédative* [Fr. Cod.]. A preparation official in the Belg., Swiss, Russ., and Sp. Ph's. The Belg. Ph. orders 20 parts of sodium chlorate, 873 of water, 100 of a. ammoniæ (sp. gr., 0·935), 2 of camphor, and 5 of alcohol; the Swiss Ph., 60 of sodium chlorate, 1,000 of water, 100 of a. ammoniæ (sp. gr., 0·960), 1 of camphor, and 9 of spirits; the Russ. Ph., 60 of sodium chlorate, 900 of water, 200 of a. ammoniæ (sp. gr., 0·960), 0·77 of camphor, and 9·23 of spirits. The Sp. Ph. orders 3 grades, of which the first contains 60 parts of sodium chlorate, 1,000 of water, 60 of a. ammoniæ (sp. gr., 0·923), 0·4 of camphor, and 9·6 of spirits; the second, 80 parts of sodium chlorate; and the third, 90, the other proportions and ingredients remaining the same. [L, 123.]—**A. sedlitzensis, A. sedlitzensis extemporanea.** Sp., *agua de Sedlitz.* An artificial seltzer water ordered made by the Belg. Ph. of 60 parts of magnesium sulphate, 930 of water, and 5 each of sodium bicarbonate and tartaric acid; the Sp. Ph. orders 60 of magnesium sulphate, 1,920 of water, 25 of sodium bicarbonate, and 10 of concentrated sulphuric acid. [L, 123.]—**Aquæ sedlitzenses.** See SEDLITZ.—**A. segl.** See *A.* VITRIOLI.—**Aquæ selinuntiæ.** See SCIACCA.—**A. selterana.** Sp., *agua de Seltz.* An artificial water official in the Sp. Ph., containing 6 parts of calcium chloride, 5 of magnesium chloride, and 11·52 of water saturated with carbonic anhydride, or 20 parts of sodium chloride, 16 of sodium carbonate, 1 of sodium phosphate, 1 of sodium sulphate, and water as in the first. [L, 123.]—**Aquæ selteranæ.** See SELTZ.—**A. serena.** See AMAUROSIS.—**Aquæ sextiæ, Aquæ sextiliæ.** See AIX-LES-BAINS.—**A. sicca.** See MERCURY.—**Aquæ siccæ.** An ancient town of Gaul, near the present Toulouse, the situation of mineral springs highly esteemed by the Romans. [L.]—**A. sine pari.** See EAU *sans pareille.*—**A. sodacea.** Carbonic-acid water. [L, 119.]—**A. solvens.** A name given to a strong solvent liquid obtained by distillation; especially applied to distilled vinegar and nitric acid. [B, 50.]—**A. spadana, Aquæ spadanæ.** See SPA.—**Aquæ sinensanæ.** Mineral springs near Rocca di Mandragone in Italy. They were held in high esteem by the Romans. [L, 30.]—**Aquæ solis.** See BATH (1st def.).—**Aquæ spirituosæ.** Distilled waters containing alcohol. [B, 95.]—**A. splenetica.** Fr., *eau splénétique.* A preparation official in the Würtem. Ph. of 1798, containing 4 parts of tincture of castoreum, 11 of mistura pyrotartarica, 90 each of a. melissæ, mint-water, and the a. epileptica Langii, and 7 of oleosaccharum of rosemary. [L, 85.]—**Aquæ statiellæ.** See ACQUI.—**A. stettinensis ad usus externos.** Fr., *eau de Stettin.* A preparation official in the Brunsw. Disp. of 1777, made by expressing and filtering 16 parts each of pomegranate flowers and crystallized acetate of lead, 4 of white argol, 7 of tormentilla root, 30 of saccharated alum, 4 each of corrosive sublimate and red sandal wood, and 480 of alcohol. [L, 85.]—**A. stibiata.** See *Liquor* ANTIMONII *tartarisati.*—**A. stillatitia.** See *A. destillata.*—**Aquæ stillatitiæ simplices.** See *Aquæ destillatæ.*—**Aquæ stillatitiæ spirituosæ.** See *Aquæ spirituosæ.*—**A. stomachica.** Fr., *eau stomachique.* A preparation official in the Würtem. Ph. of 1798, made by distilling one half of a mixture of 1 part each of cinnamon, galangal root, and nutmeg, 3 of fresh mint, and 96 of generous wine. [L, 85.]—**A. stygia.** See NITRIC *acid.*—**A. styptica.** Fr., *eau styptique.* Sp., *solución de sulfato zincico aluminosa* [Sp. Ph.]. A preparation official in the Sp. Ph., containing 1 part each of zinc sulphate and alum, and 24 parts of rose-water. [L, 123.] See also *Solutio sulphatis* CUPRI *composita.*—**A. styptica clementina.** See ACQUA *stitica clementina.*—**A. sulfurata.** Sp., *agua sulfurosa.* 1. See EAU *sulfurée.* 2. A preparation official in the Sp. Ph., containing 5 parts each of sodium carbonate, chlorate, and crystallized monosulphate, and 40 of water. [L, 123.]—**A. sulphurata acida, A. sulphurata acidula, A. sulphurato-acida.** See *A. sulphureo-acida.*—**A. sulphurato-stibiata.** See *Aqua* CALCARIÆ *sulphurato-stibiatæ.*—**Aquæ sulphureæ.** A term applied to sulphur springs by Sydenham. [B.]—**Aquæ Tacapınæ.** Warm mineral springs in Tripoli. [L, 109.]—**A. tarbellæ, Aquæ tarbellicæ.** See DAX.—**A. tartarea.** The distillate from a mixture of antimony, nitre, and water. [L, 119.] Cf. ANTIMONIUM *diaphoreticum non ablutum.*—**A. tepida.** Tepid water; water ranging in temperature from 85° to 92° F. [B.]—**A. thediana, A. Thedeni.** See *A. vulneraria Thedenii.*—**A. theriacalis bezoardica.** A liquor distilled from the theriaca Andromachi, the mithridate of Damocrates, tormentilla root, ash bark, and a large number of other ingredients. [L, 94.]—**A. theriacalis composita, A. theriacalis frigida, A. theriacalis romana.** See *A.* SCORDII *composita.* [L, 30.]—**A. soteria, A. thermarum.** Mineral water. [L, 30.]—**A. tofana, A. toffana, A. toffania.** See ACQUA *Tofana.*—**A. tonitrualis.** Water that falls in a thunder-shower. [B, 260.]—**A. traumatica.** See *A. vulneraria.*—**A. traumatica Sendneri.** A milk-like mixture composed of 1 part of powdered sulphate of cinchonine and 2 parts of powdered alum dissolved in 200 parts of distilled water, with the addition of 5 parts of tincture of opium and 20 of tincture of benzoin; used as an application to wounds. ["Pharm. Centralh.," 1882; "Am. Jour. of Pharm.," June, 1882, p. 308 (B).]—**A. traumatica Thedenii, A. traumatica vegeto-mineralis Thedenii.** See *A. vulneraria Thedenii.*—**A. Tungrorum.** See SPA.—**A. valens.** See *A. fortis.*—**A. vegeto-mineralis** [Fr. Cod.]. See *Liquor* PLUMBI *subacetatis dilutus.*—**A. vegeto-mineralis Goulardii.** See *A. Goulardii.*—**A. vegeto-mercurialis Pressavini.** Fr., *eau végéto-mercurielle.* An aqueous solution of the tartrate of mercury and potassium. [L, 85.]—**Aquæ Verbigenæ.** See *Aquæ Helvetiæ.*—**A. vichiensis artificialis, A. viciensis artificialis.** An artificial Vichy water; official in the Belg. Ph., containing 6 parts of sodium bicarbonate, 0·3 part each of sodium and calcium chlorates, 0·6 of sodium sulphate, 0·25 of magnesium sulphate, ·015 of iron sulphate, and 1,000 of carbonated water. [L, 123.]—**Aquæ Vici calidi, Aquæ vicienses.** See VICHY.—**A. vini.** See ACETUM and ALCOHOL.—**A. vinosa.** See *A. vulneraria.*—**Aquæ vinosæ.** See *Aquæ spirituosæ.*—**A. virginea viscosa.** See *A. permanens.*—**A. viridis Hartmanni.** Fr., *eau de Hartmann.* A preparation official in the Lippiacan Disp. of 1794, composed of 7 parts each of verdigris and burned alum, 15 of honey, and 360 of white wine. [L, 85.]—**A. visceralis.** Fr., *eau viscérale.* A very complex preparation, official in the Würtem. Ph. of 1798, made by distilling a mixture of crabs' eyes, calves' lungs, and a great number of herbs with water. [L, 85.]—**A. viscosa.** See MERCURY and *A. permanens.*—**A. vitæ.** Fr., *eau de vie.* Ger., *Aquavit.* 1. Mercury in its alchemical sense. 2. Alcohol. 3. A preparation containing alcohol. 4. Brandy. 5. A commercial term for ardent spirits of the first distillation, the so-called "low wines." [B, 2, 50.] 6. Of Paracelsus, a preparation made by infusing rose-leaves, rosemary, hellebore, cinnamon, mace, nutmeg, cloves, ginger, and other vegetable aromatics, with bean-ashes and the juices of chelidonium, thapsia, and melissa, in ardent wine. [B, 255.]—**A. vitæ camphorata.** See *Alcoholetum* CAMPHORÆ *debile.*—**A. vitæ germanica.** See *Tinctura* JALAPÆ *composita.* [Belg. Ph.]—**A. vitæ rectificata.** Rectified spirit; alcohol obtained by the rectification of spirit of wine. [B, 97.]—**A. vitrioli alba.** See *Collyrium adstringens* ZINCI.—**A. vitriolica camphorata.** See *Liquor* ZINCI *sulphatis cum camphora.*—**A. vitriolica cærulea.** See *A. styptica.*—**A. vitrioli cærulea.** See *A. cœrulea.*—**A. viva.** See MERCURY.—**A. vulneraria.** Fr., *eau vulnéraire.* Ger., *Wundwasser.* See *A. vulneraria Thedenii, A. vulneraria spirituosa,* and *Alcohol* SALVIÆ *vulnerarius.*—**A. vulneraria acida, A. vulneraria acida Thedenii.** See *A. vulneraria Thedenii.*—**A. vulneraria alba.** See *A. vulneraria spirituosa.*—**A. vulneraria romana.** See *A. pontificialis.*—**A. vulneraria rubra.** See ALCOOLATURE *vulnéraire.*—**A. vulneraria spirituosa.** Fr., *eau vulnéraire spiritueuse.* Ger., *geistiges Wundwasser.* It., *acqua vulneraria spirituosa.* Sp., *agua vulneraria espirituosa, alcohol de salvia vulnerario* [Sp. Ph.]. A stimulating application for wounds; the Ger. Ph. (1st ed.) orders 1 part each of peppermint, rosemary, rue, and salvia leaves, herba absinthii, and lavender flowers, 18 of dilute alcohol, and 50 of water, to be macerated 2 days and 36 parts distilled; the Sp. Ph., 6 parts each of agrimony, artemisia, and betony leaves, 4 each of the tops and flowers of wormwood, hypericum, *Mentha arvensis,* salvia, and tansy, 2 each of the leaves and tops of lavender, marjoram, rosemary, and scordium, to be digested for 2 days in 192 parts of white wine, and 96 parts distilled; the Russ. Ph., 1 part each of lavender flowers, salvia, rosemary, and peppermint leaves, wormwood, and origanum herbs, 15 parts of dilute alcohol, and 50 of water, to be digested 24 hours, and 36 parts distilled. [L, 123.]—**A. vulneraria Thedenii.** Ger., *Theden's saures Wundwasser* (oder *Schusswasser*). A preparation containing acetic acid, alcohol, and sulphuric acid in varying proportions, either with or without honey or sugar. [B, 97.]—**A. vulneraria vinosa.** See *A. vulneraria spirituosa.*—**A. vulnerata.** See *A. vulneraria.*—**Balneum aquæ marinæ artificialis** [Belg. Ph.]. Fr., *bain de sel marin* [Fr. Cod.]. Sp., *baño de mar* [Sp. Ph.]. A bath to be made extemporaneously with 5,000 grammes of sea-salt [Fr. Cod.], or with a mixture of sodium chloride 7,980 grammes [Belg. Ph.] (4,830 grammes [Sp. Ph.]), sodium sulphate 3,150 grammes [Belg. Ph.] (862·5 [Sp. Ph.]), magnesium chloride 2,990 grammes [Belg. Ph.] (949 [Sp. Ph.]), and calcium chloride 730 grammes [Belg. Ph.] (230 [Sp. Ph.]). [B, 95.]—**Double a. fortis.** Lat., *a. fortis duplex.* An aqueous solution of nitric acid of the sp. gr. of 1·36 and of half the strength of concentrated nitric acid. [B, 5.]—**Single a. fortis.** Lat., *a. fortis simplex.* An aqueous solution of nitric acid of the sp. gr. of 1·22 and of half the strength of double a. fortis. [B, 5.]—**Syrupus cum a. picea.** See *Syrupus* PICIS *liquidæ.*

AQUÆDUCTUS (Lat.), n. m. A(a^3)-kwe(kwa^3-e^2)-du^{3}kt(dukt)′-u^{3}s(u^{4}s). Gen., *aquæductus.* From *aqua,* water, and *ducere,* to conduct. See AQUEDUCT.—**A. cerebri.** See INFUNDIBULUM (2d def.).—**A. cochleæ.** See AQUEDUCT *of the cochlea.*—**A. communicationis.** A small canal often found at the junction of the mastoid and petrous portions of the temporal bone, transmitting a small venous twig to the termination of the transverse sinus. [Verga, "Ann. univers. di med.," 1856, p. 175 (L, 31).]—**A. Cotunnii.** See AQUEDUCT *of the vestibule.*—**A. der Schnecke** (Ger.). See AQUEDUCT *of the cochlea.*—**A. Fallopii.** See AQUEDUCT *of Fallopius.*—**A. Sylvii.** See AQUEDUCT *of Sylvius.*—**A. temporalis.** A canal sometimes found at the posterior part of the superior angle of the petrous portion of the temporal bone, for the passage of the squamoso-petrosal sinus. [Verga (L, 31).]—**A. vestibuli.** See AQUEDUCT *of the vestibule.*

AQUÆMETUS (Lat.), n. m. A^{2}k(a^{3}k)-we^{2}m′(wa^3′e^{2}m)-e^{2}t-u^{3}s-(u^{4}s). Gen., *aquæmetus.* More properly written *aquæ metus* (dread of water). See HYDROPHOBIA.

AQUALA (Lat.), n. f. A^{2}k(a^{3}k)-wa(wa^3)′la^3. An old name for sulphur and for arsenic. [L, 104.]



AQUALICULUS (Lat.), n. m. A^{2}k(a^{3}k)-wa^3-li^{2}k′u^2(u)-lu^{3}s(lu^{4}s). An old term for the abdomen, especially its lower portion. [Galen (A, 325).]

AQUA-MALARIAL, adj. A″kwa^3-ma^{2}l-a′ri^2-a^{2}l. See *A.-m.* FEVER.

AQUAMARINE. n. A^{2}k-wa^3-ma^{3}r-en′. Ger., *Aquamarin.* The green variety of topaz. [B, 180.]—**Oriental a.** Ger., *orien-*

talischer Aquamarin. The green variety of the beryl, formerly used in medicine. [B, 180.] See *Quinque fragmenta* LAPIDUM *pretiosorum.*

AQUAPUNCTEUR (Fr.), n. A^3-ka^3-pu^{6}n^{2}k-tu^{5}r. An instrument for performing aquapuncture (*q. v.*).

MATHIEU'S AQUAPUNCTEUR.

AQUAPUNCTURE, n. A″kwa^3-pu^{3}n^{2}k′tu^{2}r. From *aqua*, water, and *punctura*, a puncture. Fr., *aquapuncture.* Ger., *Aquapunctur.* It., *acquapuntura.* Sp., *aguapuntura.* 1. A French method of producing counter-irritation or revulsion by forcing a fine jet of water or some other liquid into or through the unbroken skin. Mathieu's instrument for the purpose (see AQUAPUNCTEUR) is a force-pump capable of forcing the liquid even into the subcutaneous tissue, the delivery tube being held at a distance of about a third of an inch from the skin. A wheal-like elevation of the skin usually results, with occasionally a minute extravasation of blood at its centre. The pain is severe at first, but usually disappears in 15 or 20 minutes. The method has been used successfully in neuralgia, muscular rheumatism, etc. [A, 319.] 2. The subcutaneous injection of water as a placebo. [B.]

AQUARACINHA-ACU (Port.), n. A^3-kwa^3-ra^3-then′ya-a^3′ku. See AGUARACIUNHA-ACU.

AQUARA-IBI, n. See AGUARAIBAY and SCHINUS *molle.*

AQUARIUM (Lat), n. n. A^{2}k(a^{3}k)-wa(wa^3)′ri^2-u^{3}m(u^{4}m). Lit., a watering-place for cattle ; a vessel or tank made entirely or largely of glass, for containing living aquatic animals or plants. [A, 385.]—**A. fluviatile.** An a. made in the form of a conduit so as to be filled with running water. [B, 198.]—**A. lacustre.** An a. in the form of a basin. [B, 198.]—**A. palustre.** An a. consisting of a swampy basin ; used in the cultivation of swamp-plants. [B, 198.]—**A. uliginosum.** An a. filled with boggy soil and stagnant water, for the cultivation of bog-plants. [B, 198.]

AQUARIUS (Lat.), adj. A^{2}k(a^{3}k)-wa(wa^3)′ri^2-u^{3}s(u^{4}s). Pertaining to water, aqueous ; as a n., an old name for iron. [Ruland, Johnson (A, 325).]

AQUASTER (Lat.), n. m. A^{2}k(a^{3}k)-wa^{2}st(wa^{3}st)′u^{5}r(e^{2}r). Gen., *aquast′ri.* A word used by Paracelsus to signify a faculty by which past events or distant objects are conceived of as present ; a sort of second sight, regarded by Paracelsus as a variety of magical science. [B, 255.]

AQUATE, n. A′kwat. A substance containing water of crystallization with which it is in molecular combination. [B, 159.]

AQUATIC, adj. A^{2}k-wa^{2}t′i^{2}k. Lat., *aquaticus, aquatilis.* Fr., *aquatique, aquatile.* Ger., *aquatisch, wasserlebend.* It., *acquatico.* Sp., *acuático.* Belonging or living in water (said of animals and plants, and sometimes applied to animals that simply spend most of their time in or on the water).—**A.-respiratory.** Pertaining to or performing the function of a. respiration. [L.]

AQUATICÆ (Lat.), n. f. pl. A^{2}k(a^{3}k)-wa^{2}t(wa^{3}t)′i^{2}s(i^{2}k)-e(a^3-e^2). Of Endlicher, a class of apetalous plants comprising the orders *Ceratophylleæ, Callitrichineæ,* and *Podostemmeæ.* [B, 170.] Cf. APETALÆ.

AQUATICAL, AQUATILE, adj's. A^{2}k-wa^{2}t′i^{2}k-a^{2}l, A^{2}k′-wa^{2}t-i^{2}l. See AQUATIC.

AQUATUM (Lat.), n. n. A^{2}k(a^{3}k)-wa(wa^3)′tu^{3}m(tu^{4}m). 1. A dilute, watery preparation. 2. The chalazion of an egg. [Severinus (A, 325) ; L, 104.]

AQUAVIT (Ger.), n. A^3-kwa^3-fet′. See AQUA *vitæ.*

AQUEDUC, AQUÉDUC (Fr.), n's. A^3-k′-du^{6}k, -ka-du^{6}k. See AQUEDUCT.—**A. de Cotugno.** See AQUEDUCT *of the vestibule.*—**A. de Fallope.** See AQUEDUCT *of Fallopius.*—**A. des tubercules quadrijumeaux, A. de Sylvius.** See AQUEDUCT *of Sylvius.*—**A. du limaçon.** See AQUEDUCT *of the cochlea.*

AQUEDUCT, n. A^{2}k′we^2-du^{3}kt. Gr., ὑδροχόα [Oribasius]. Lat., *aquæductus* (=*aquæ ductus* [from *ducere*, to lead, conduct]). Fr., *aqueduc, aquéduc.* Ger., *Wasserleitung.* It., *acquedotto.* Sp., *acueducto.* A canal, channel, or tube for the conveyance of a watery liquid (said also of a few canals which transmit blood-vessels or nerves). [L.]—**A. of Cotunnius.** Lat., *aquæductus Cotunnii* (from the Latinized name of Cotugno). Fr., *aqueduc de Cotugno.* See *A. of the vestibule.*—**A. of Fallopius.** Lat., *aquæductus Fallopii* (from the Latinized name of Falloppio). Fr., *aqueduc de Fallope.* Ger., *Fallopische Wasserleitung, Spiralgang in der Paukenhöhle.* It., *acquedotto di Falloppio.* Sp., *acueducto de Falopio.* A canal in the petrous portion of the temporal bone, transmitting the facial nerve ; it begins at the upper part of the lamina cribrosa, passes outward and backward over the labyrinth of the ear, and terminates in the stylo-mastoid foramen. [C ; L, 142.]—**A. of Sylvius.** Lat., *aquæ ductus Sylvii* (from the Latinized name of Dubois). Fr., *aqueduc de Sylvius, entonnoire, canal intermédiaire des ventricules.* Ger., *Sylvischer Gang, Sylvische Wasserleitung, Canal der Vierhügel.* It., *acquedotto di Silvio, canale intermediario dei ventricoli.* Sp., *acueducto de Silvio.* Syn. : *iter e tertio ad quartum ventriculum, canalis medianus* (seu *corporum* [seu *tuberculorum*] *quadrigeminorum*). A narrow canal, about half an inch long, leading from the third into the fourth ventricle of the brain. It is lined with ciliated epithelium and surrounded with gray matter which is in relation with the roots of the third, fourth, and fifth nerves. [I, 15 ; K.]—**A. of the cochlea.** Lat., *aquæductus cochleæ.* Fr., *aqueduc du limaçon.* Ger., *Wasserleitung der Schnecke.* It., *acquedotto della chiocciola.* Sp., *acueducto del caracol.* A small canal which arises in the scala tympani, in the neighborhood of the fenestra rotunda, and opens into the cranial cavity near the lower edge of the pyramid, effecting an immediate communication of the arachnoid space with the perilymphatic fluid of the labyrinth. [F, 32.]—**A. of the vestibule.** Lat., *aquæductus vestibuli* (seu *Cotunnii*), *canalis endolymphaticus.* Fr., *aqueduc du vestibule.* Ger., *Wasserleitung des Vorhofs.* It., *acquedotto del vestibolo.* Sp., *acueducto del vestibulo.* A canal which arises as a thin membranous tube from the utricle, in the immediate neighborhood of the embouchure of the superior and posterior semicircular canals, then proceeds through a thin osseous canal to the posterior wall of the pyramid, and opens into a spacious cul-de-sac covered by the dura mater and connected with the endolymphatic spaces of the labyrinth. [F, 32.]—**Sylvian a.** See *A. of Sylvius.*

AQUEO-IGNEOUS, adj. A^{2}k″we-o-i^{2}g′ne-u^{3}s. From *aqua*, water, and *ignis*, fire. Of, pertaining to, or produced by the aid of water and heat, or superheated water. [B, 39.]

AQUEO-IGNEOUSLY, adv. A^{2}k″we-o-i^{2}g′ne-u^{3}s-li^2. In an aqueo-igneous manner. [B, 39.]

AQUEOLA (Lat.), n.f. A^{2}k(a^{3}k)-we(wa)′o-la^3. See AQUULA.

AQUEOSE, adj. A′kwe-os. See AQUEOUS.

AQUEOUS, adj. A′kwe-u^{3}s. Lat., *aquosus, aqueus.* Fr., *aqueux.* Ger., *wässerig.* It., *acquoso.* Sp., *acuoso.* Watery ; resembling, containing, combined with, dissolved in, diluted with, made with, or formed from water. [B.]

AQUEOUSNESS, n. A′kwe-u^{3}s-ne^{2}s. See AQUOSITY.

AQUETTE (Fr.), n. A^3-ke^{2}t. 1. See ACQUA *Tofana.* 2. An Italian liqueur made of wine, water, and various aromatics. [L, 42.]

AQUEUS (Lat.), adj. A(a^3)′kwe(kwe^2)-u^{3}s(u^{4}s). See AQUEOUS.

AQUEUX (Fr.), adj. A^3-ku^5. See AQUEOUS.

AQUICOLE (Fr.), adj. A^3-ke-kol. From *aqua*, water, and *colere*, to inhabit. See AQUATIC.

AQUIDUCOUS, adj. A^{2}k-wi^2-du^2′ku^{3}s. Lat., *aquiducus* (from *aqua*, water, and *ducere*, to lead). Hydragogue. [Cælius Aurelianus (A, 325).]

AQUIFEROUS, adj. A^{2}k-wi^{2}f′e^{2}r-u^{3}s. Lat., *aquiferus* (from *aqua*, water, and *ferre*, to bear). Fr., *aquifère.* Ger., *wassertragend.* Water-carrying (said of the water-vascular system of the *Annuloida*). [B, 28.] See *A.* CANALS.

AQUIFOLIACEÆ (Lat.), n. f. pl. A^{2}k(a^{3}k)-wi^2-fo-li^2-a(a^3)′se^2-(ke^2)-e(a^3-e^2). From *acus*, a needle, and *folium*, a leaf. Fr., *aquifoliacées.* Sp., *aquifoliáceas.* Syn. : *Ilicineæ.* The hollyworts ; in the systems of De Candolle, Reichenbach, Lindley, and others, an order of shrubs or trees bearing simple, evergreen, exstipulate leaves ; and small axillary flowers with 4 to 6 very minute sepals, a 4-cleft or 6-cleft hypogynous corolla, a definite number of stamens inserted into the corolla and alternate with its segments, and a 2- to 8-celled ovary with a single ovule suspended in each cell. The fruit is drupaceous. The principal genera are *Ilex, Prinos,* and *Cassine.* [B, 34, 104.]

AQUIFOLIACEOUS, AQUIFOLIOUS, adj's. A^{2}k-wi^2-fo-li^2-a′shu^{3}s, -fo′li^2-u^{3}s. Fr., *aquifoliacé.* See ACUMINIFOLIOUS.

AQUIFOLIUM (Lat.), n. n. A^{2}k(a^{3}k)-wi^2-fo′li^2-u^{3}m(u^{4}m). 1. See ILEX and ILEX *a.* 2. The leaves of *Ilex a.* [B, 180.]—**A. carolinense** [Cat. car.]. See ILEX *cassine.*—**A. ilex** [Scopoli], **A. spinosum** [Gärtner]. See ILEX *a.*—**Folia aquifolii.** The leaves of *Ilex a.* [B, 180.]

AQUIFORM, adj. A^{2}k′wi^2-fo^{2}rm. From *aqua*, water, and *forma*, form. Resembling water. [L, 73.]

AQUIFOUX (Fr.), n. A^3-ke-fu. See ALQUIFUZ.

AQUIGENOUS, adj. A^{2}k-wi^{2}j′e^{2}n-u^{3}s. From *aqua*, water, and *genere* (= *gignere*), to grow. Fr., *aquigène.* Growing in the water. [L, 41.]

AQUILA (Lat.), n. f. A^{2}k(a^{3}k)′wi^{2}l-a^3. Gen., *a′quilai, -æ.* Gr., ἀετός. Fr., *aigle.* Ger., *Adler.* It., *aquila.* Sp., *águila.* 1. The eagle. Its gall, distilled with oil of violets, was recommended by Avicenna for pains and ringing in the ears, and its excrement to prevent abortion. Various parts of the bird were used medicinally by the ancients. [L, 94.] 2. An alchemical name for sal ammoniac, mercurius præcipitatus, arsenic, sulphur, the philosopher's stone, and a number of other things more or less mystical. [B, 50.] 3. In the pl., *aquilæ* (fem. pl. of adj. *aquilus*), see VENÆ *aquilæ.*—**A. alba.** An old term for calomel, sal ammoniac, or any white sublimate. [B, 86 ; L, 109.]—**A. alba philosophorum.** Sal ammoniac. [L, 104.]—**A. cælestis.** An old name for some mercurial sublimate (according to various authors, calomel, mercurous sulphate, or white precipitate). [A, 314. 316, 325.]—**Aquilæ lacrima, Aquilæ lacrimæ.** An old name for some liquid mercurial preparation. [L, 94, 116.]—**A. mercurii, A. mitigata.** Old terms for calomel.—**A. nigra.** An old name for some preparation of cobalt, supposed to be the material of the "mercurius philosophorum." [A, 325 ; L, 84.]—**A. philosophorum.** An old name for mercury ("mercurius metallorum, id est metallum in primam sui materiam redactum"). [B, 50.]—**A. Veneris.** An old preparation of verdi-

gris and sal ammoniac. [L, 104.]—**Lignum aquilæ.** See ALOESWOOD.—**Venæ aquilæ.** See under VENA.

AQUILANEUS (Lat.), n. m. A^{2}k(a^{3}k)-wi^{2}l-a(a^3)′ne^2-u^{3}s(u^{4}s). See VISCUM *album*.

AQUILARIA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-a(a^3)′ri^2-a^3. Ger., *Adlerholz*. A genus of trees, made by Lamarck, belonging to the order *Aquilariaceæ*, distinguished by its 5-parted top-shaped calyx, with reflexed sepals and with 10 woolly scales adherent to the interior of the calyx tube and alternating with the 10 stamens, which are also adherent for almost their whole length to the calyx. The anthers are versatile, and there is a single short style placed upon a bilocular ovary with a single suspended ovule in each cell. [B, 19.]—**A. agallocha** [Roxburgh]. Syn.: *Aloexylum agallochum* [Batsch]. A large tree with alternate lanceolate leaves, growing in Silhet, and furnishing one of the best varieties of aloes-wood. [B, 19; L, 105.]—**A. chinensis** [Sprengel]. Syn.: *Ophiospermum sinense* [Loureiro]. A species growing in southern China, having lanceolate, undulate, shining leaves and solitary, terminal, 6-parted flowers. [B, 46.]—**A. malaccensis** [Lamarck], **A. ovata** [Cavanilles]. Syn.: *Aloexylum ovatum* [Batsch]. A tree 60 feet high growing in Malacca and in China; having short-petiolate ovate, acuminate, entire leaves, yellow leathery flowers with ovate sepals, and woody capsular fruit about 1 inch in length and 1½ inch broad. Its wood is the *lignum aspalathum officinale*, one of the varieties of aloes-wood. [B, 180.]—**A. secundaria** [De Candolle]. A tree, growing in the Moluccas, closely resembling the *A. malaccensis*, and like it furnishing a variety of aloes-wood. [B, 180.]

AQUILARIACEÆ (Lat.), n. f. pl. A^{2}k(a^{3}k)-wi^{2}l-a(a^3)-ri^2-a(a^3)′se^2(ke^2)-e(a^3-e^2). Fr., *aquilariacées*. The aquilariads; an order of calycifiorous trees, placed by Lindley in the daphnal alliance, comprising fragrant tropical species with minute apetalous flowers. By some this order is referred to the *Thymelæa* or to the *Ulmaceæ*. The principal genus is *Aquilaria*. [B, 19, 170.]

AQUILARIADS, n. pl. A^{2}k-wi^{2}l-a′ri^2-a^{2}dz. See AQUILARIACEÆ.

AQUILARIEÆ [Decaisne], **AQUILARINÆ** [R. Brown], **AQUILARINEÆ** [De Candolle] (Lat.), n's. f. pl. A^{2}k(a^{3}k)-wi^{2}l-a^{3}r-i(e)′e^2-e(a^3-e^2), -i(e)′ne(na^3-e^2), -i^{2}n′e^2-e(a^3-e^2). See AQUILARIACEÆ.

AQUILEGIA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-e(a)′ji^2(gi^2)-a^3. From *aquila*, an eagle, on account of the spurred petals. A genus of ranunculaceous plants of the tribe *Helleboreæ*, distinguished by having 5 equal, ovate, spreading, colored sepals, and 5 equal, tubular, spurred petals larger than the sepals. [B, 34.]—**A. alpina.** A European species with larger flowers and shorter spurs than *A. vulgaris* [B, 19], to which it is sometimes referred. [B, 7.]—**A. cærulea.** The Rocky Mountain long-spurred columbine; a species found in the western United States. [B, 75.]—**A. canadensis** [Linnæus]. The American columbine; found throughout the United States, having flowers of a bright scarlet without, yellow within, and with straight spurs; supposed to have similar medicinal properties to those of *A. vulgaris*. [J. U. and C. G. Lloyd, "Drugs and Med. of N. Am.," Sept., 1885, p. 211.]—**A. communis.** See *A. vulgaris*.—**A. slivestris.** See *A. vulgaris*.—**A. vulgaris** [Lin-

AQUILEGIA CANADENSIS (AFTER J. U. AND C. G. LLOYD.)

THE FLOWER OF AQUILEGIA VULGARIS. (AFTER DE LANESSAN.)

næus]. Fr., *ancolie*, *aiglantine*, *cornette*, *galantine*, *colombine*, *gonneau*, *clochette*, *gants de Notre-Dame*, *manteau royal*. Ger., *gemeine Akelei*, *Pantöffelchen*. Sp., *aquilema*, *guantes de Nuestra Señora*. The columbine; a species indigenous to Europe and cultivated in America, distinguished by the incurvation of the spurs upon the petals. It stands from 1 to 2 feet high, and bears large flowers which in the natural state are purple, but under cultivation assume all shades from purple to white. A syrup prepared from the flowers has been used as a calmative in cases of bronchitis, and is a more delicate test than syrup of violets; the seeds are reputed diaphoretic, diuretic, and depurative, and were formerly much given to children with the eruptive fevers; the whole herb and the root are considered emmenagogue, aperient, antiscorbutic, and diuretic. [A, 260, 304; B, 34; D, 119.]—**Flores, herba, radix, et semina aquilegiæ.** The flowers, herb, root, and seeds of *A. vulgaris*, formerly official under this title. [B, 180.]

AQUILEGIEÆ [H. Baillon], **AQUILEGINÆ** [Reichenbach] (Lat.), n's f. pl. A^{2}k(a^{3}k)-wi^{2}l-e^{2}j(e^{2}g)-i(e)′e^2-e(a^3-e^2), -i(e)′ne(na^3-e^2). Fr., *aquilégiées*. A section of ranunculaceous plants including *Aquilegia*, *Isopyrum*, and other genera. [B, 170.]

AQUILEGIFOLIUS (Lat.), adj. A^{2}k(a^{3}k)-wi^2-le^{2}j(le^{2}g)-i^2-fo′-li^2-u^{3}s(u^{4}s). From *aquilegia* (*q. v.*), and *folium*, a leaf. Having leaves like those of the columbine. [B.]

AQUILEIA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-i′(a′i^2)-a^3. See AQUILEGIA.

AQUILENA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-e(a)′na^3. The larkspur. [L, 94.] See DELPHINIUM *consolida*.

AQUILICIA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-i^{2}sh(i^{2}k)′i^2-a^3. See LEEA.—**A. ottilis** [Gärtner], **A. sambucina** [Linnæus]. See LEEA *sambucina*.

AQUILICIEÆ [Jussieu] (Lat.), n. f. pl. A^{2}k(a^{3}k)-wi^{2}l-i^{2}s(i^{2}k)-i(e)′e^2-e(a^3-e^2). Fr., *aquiliciées*. See LEEACEÆ.

AQUILINA (Lat.), n. f. A^{2}k(a^{3}k)-wi^{2}l-i(e)′na^3. See AQUILEGIA.

AQUILINUS (Lat.), adj. A^{2}k(a^{3}k)-wi^{2}l-i(e)′nu^{3}s(nu^{4}s). Fr., *aquilin*. Ger., *adlerähnlich*. Resembling an eagle or an eagle's beak. [L, 42, 116.]

AQUINO (It.), n. A^3-kwe′no. An Italian town (the ancient Aquinum) near which there is a cold sulphurous spring. [A, 385.]

AQUIPARIA (Lat.), n. n. pl. A^{2}k(a^{3}k)-wi^2-pa(pa^3)′ri^2-a^3. From *aqua*, water, and *parire*, to bring forth. Fr., *aquipares*. Animals which bring forth their young in water. [L, 180.]

AQUIPAROUS, adj. A^{2}k-wi^{2}p′a^3-ru^{3}s. Lat., *aquiparus*. Fr., *aquipare*. 1. Water-producing (said of glands the secretion of which contains a large amount of water, like the parotid, as contrasted with muciparous glands). [K.] 2. Laying eggs or bringing forth young in the water. [L, 109.]

AQUO-CAPSULITIS, AQUO-MEMBRANITIS (Lat.), n's f. A(a^3)-kwo-ka^{2}p(ka^{3}p)-su^2(su)-li(le)′ti^{2}s, -me^{2}m-bra^{2}n(bra^{3}n)-i(e)′ti^{2}s. Gen., *aquo-capsulit′idis*, *-membranit′idis*. For deriv., see AQUA, CAPSULA (or MEMBRANA), and *-itis**. See *Serous* IRITIS.

AQUOSITAS (Lat.), n. f. A^{2}k(a^{3}k)-wo^{2}s′i^{2}t-a^{2}s(a^{3}s). Gen., *aquosita′tis*. 1. Aquosity (*q. v.*). 2. An old term for the contents of a hydatid tumor or a watery cyst. [B.]

AQUOSITY, n. A^{2}k-wo^{2}s′i^{2}t-i^2. Lat., *aquositas*. Fr., *aquosité*. Ger., *Aquosität*, *Wässerigkeit*. Sp., *acuosidad*. 1. The state of being watery. [L, 52.] 2. A watery liquid.

AQUOSUS (Lat.). adj. A^{2}k(a^{3}k)-wo′su^{3}s(su^{4}s). 1. Aqueous (*q. v.*). 2. In botany, gorged with fluid. [B.]

AQUULA (Lat.), n. f. A^{2}k(a^{3}k)′wu^2(wu)-la^3. 1. Any little collection of water, such as a drop of water or a bleb. [L, 50.] 2. A term applied by Celsus to hernia of the cornea, meaning a prolapse of the membrane of Descemet through an ulceration of the anterior layers of the cornea which has not led to perforation. [Beer, Hirsch (F).] 3. The crystalline lens of the eye. [L, 104.] 4. See CHALAZION.—**A. acustica, A. auditura, A. Cotunnii, A. labyrinthi, A. labyrinthi externa.** See PERILYMPH.—**A. labyrinthi interna, A. labyrinthi membranacei.** See ENDOLYMPH.

ARA (Lat.), n. f. A(a^3)′ra^3. An altar. [A, 322.]—**A. parva.** Gr., βωμὸς μικρός. An ancient name for a sort of bandage attributed to Sostratus. [Galen (A, 325).]

ARABETTE (Fr.), n. A^3-ra^3-be^{2}t. The botanical genus *Arabis*. [A, 385.]—**A. des Alpes, A. printanière.** See ARABIS *alpina*.—**A. rose.** See ARABIS *rosea*.

ARABIA (Lat.), n. f. A^{2}r(a^{3}r)-a(a^3)′bi^2-a^3. A genus of araliaceous plants. [B.]—**A. digitata** [Roxburgh]. See PARATROPIA *venulosa*.

ARABIC ACID, n. A^{2}r′a^{2}b-i^{2}k. Fr., *acide arabique*. Ger., *Arabinsäure*. See ARABIN.

ARABICUS (Lat.), adj. A^{2}r(a^{3}r)-a^{2}b(a^{3}b)′i^{2}k-u^{3}s(u^{4}s). Fr., *arabique*. Ger., *arabisch*. It., *arabico*. Sp., *arábico*. Arabian, Arabic.—**Antidotus hepatica arabica.** See under ANTIDOTUS.—**Faba arabica.** See under FABA.—**Gummi arabicum.** See ACACIA (2d def.).—**Lapis a.** See under LAPIS.

ARABIDÆ [Lindley], **ARABIDEÆ** [De Candolle, Reichenbach, Koch, Brongniart] (Lat.), n's f. pl. A^{2}r(a^{3}r)-a^{2}b(a^{3}b)′i^{2}d-e-(a^3-e^2), -a^{2}b(a^{3}b)-i^{2}d′e^2-e(a^3-e^2). From *Arabis* (*q. v.*). Fr., *arabidées*. A tribe or section of cruciferous plants belonging to the *Pleurorrhizæ* or *Siliquosæ*, characterized by bearing a straight elongated siliqua, with seeds usually biseriate and having accumbent cotyledons. [B, 121, 170.]

ARABIDINÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{2}b(a^{3}b)-i^{2}d-i(e)′ne-(na^3-e^2). Fr., *arabidinées*. A subseries of cruciferous plants belonging to the *Cheirantheæ*, comprising those genera with accumbent cotyledons. [H. Baillon (B, 121).]

ARABIN, n. A^{2}r′a^{2}b-i^{2}n. Lat., *arabinum*. Fr., *arabine*. Ger., *Arabin*. It., *arabina*. Syn.: *arabic* (or *gummic*) *acid*. The essential constituent of gum arabic and the gum of cherry and plum trees, in which it occurs combined with calcium or with calcium and potassium. It is found also in the sugar-beet. It is a vitreous mass, soluble in water; chemically, a carbo-hydrate having feebly acid properties and a constitution expressed by the formula $nC_{12}H_{22}C_{11}$ or $n(C_{12}H_{20}O_{10},H_2O)$—probably $C_{36}H_{66}O_{33}$. On heating to 120° C. or over, it is converted into *metarabin*. [B, 4.]

ARABINIC ACID, n. A^{2}r-a^{2}b-i^{2}n′i^{2}k. See ARABIN.

ARABINOSE, n. A^{2}r′a^{2}b-i^{2}n-os. Syn.: *gum sugar*, *pectinose*. A carbo-hydrate, $C_6H_{12}O_6$ (according to Kiliani, identical with lactose), derived from arabin by decomposition, forming large, transparent, prismatic crystals of a very sweet taste, readily soluble in water. Its aqueous solution has a specific dextrorotary power of 116°. [B, 4, 5.] According to C. O'Sullivan, there are four varieties obtainable by the decomposition of arabin, differing in their physical properties. ["Jour. of the Chem. Soc.," cclv, p. 41 (B).]

ARABINUM (Lat.), n. n. A^{2}r(a^{3}r)-a^{2}b(a^{3}b)-i(e)′nu^{3}m(nu^{4}m). See ARABIN.

ARABIS (Lat.), n. f. A^{2}r(a^{3}r)′a^{3}b-i^{2}s. So called because delighting in a sandy soil, like that of Arabia. Fr., *arabette*. Ger., *Gänsekraut*, *Gänsekresse*. A genus of cruciferous plants, belonging to the tribe *Arabideæ*, established by Linnæus, characterized

by their erect sepals, their linearly-compressed siliques, their valves each provided with 1 to 3 longitudinal veins, the single row of seeds in each cell, and the accumbent or oblique cotyledons. [B, 34.]—**A. Allionii** [De Candolle]. Fr., *arabette d'Allioni.* Syn.: *Turritis stricta* [Allioni]. A perennial species with white flowers, growing in the meadows of Piedmont. [B, 214.]—**A. arenosa** [Scopoli]. Syn.: *Sisymbrium arenosum* [Linnæus]. A species found in the sandy limestone regions of Europe; used for the same purposes as *A. sagittata.* [H. Baillon (L, 87).] It is closely allied to, if not identical with, the *A. lyrata.* [B.]—**A. canadensis** [Linnæus]. The sickle pod; a species growing throughout the eastern sections of the United States, distinguished by its long drooping scythe-shaped pods. [B, 34.]—**A. chinensis** [Rottler]. A species used in India as a stomachic, in the form of *alivérie* (*q. v.*). [D, 79; L, 105.]—**A. ciliata** [Koch]. A species found in rocky districts throughout middle Europe, with oblong, dentate or entire, ciliate leaves, of which those growing upon the stem are sessile and rounded at the base, and with seeds provided with a border and non-alate. There are 2 varieties, *A. ciliata*, var. *glabra* [Koch], the *A. ciliata* of R. Brown, and *Turritis ciliata* [Schleich.] (seu *rupestris* [Hoppe], seu *alpina* [Linnæus], with glabrous stem and leaves, hairy at the edges only; and *A. ciliata*, var. *hirsuta* [Koch], the *Turritis alpestris* [Schleich.], which has both stem and leaves covered all over with short rough hairs. [B, 178; H. Baillon (L, 87).]—**A. glabra** [Bernhardi]. See *A. perfoliata.*—**A. hirsuta.** 1. Of De Candolle, the *A. ciliata*, var. *hirsuta.* 2. Of Scopoli, a European and American species resembling the *A. sagittata*, but with auriculate or cordate leaves and with seeds alate at the apex and not punctate. The stem and leaves are hirsute, except in the variety *A. hirsuta*, var. *glaberrima*, in which the leaves are glabrous or ciliate at the edges only. 3. Of Smith, a variety of *A. sagittata.* [B, 34, 178, 214.]—**A. longisiliqua** [Wallroth]. See *A. sagittata.*—**A. lyrata** [Linnæus]. The wall- or rock-cress; a species characterized by the smooth entire upper leaves, by the lyrate division of the radical leaves, and by the absence of border from the seeds. It grows in the northern parts of the United States and in Canada. [B, 34; L, 65.]—**A. perfoliata** [Lamarck]. Syn.: *Turritis glabra.* A European species, used for the same purposes as *A. sagittata.* [H. Baillon (L, 87).]—**A. rosea** [De Candolle]. Fr., *arabette rose.* A Calabrian species with purplish-rose-colored flowers. [B, 214.]—**A. sagittata** [De Candolle]. Syn.: *Turritis multiflora.* A species growing throughout rocky districts in Europe, with stem hairy below, glabrous above, finely dentate amplexicaul, saggitate cauline leaves, and oblong-ovate radical leaves tapering to a petiole, straight erect siliques, and finely-punctate seeds with narrow alæ. The seeds contain a fixed oil used like rape-seed oil, and the whole plant contains a volatile stimulant principle having properties like those of oil of mustard. [B, 46, 178.]—**A. thaliana** [Linnæus]. Syn.: *Conringia thaliana* [Reichenbach], *Sisymbrium thalianum* [Gay]. Mouse-ear cress; a European species, naturalized in the United States, having the same uses as *A. sagittata.* [B, 34; H. Baillon (L, 87).]—**A. turrita** [Linnæus]. A European species with deeply cordate amplexicaul hairy cauline leaves petiolate radical leaves, and seeds provided with broad membranous alæ. [B, 178.]

ARABIST, n. A^{2}r'a^{2}b-i^{2}st. Fr., *arabiste.* An adherent of the Arabian school of medicine. [A, 385; L, 42.]

ARABOS (Lat.), n. m. A^{2}r(a^{3}r)'a^{3}b-o^{2}s. Gr., ἄραβος. Ger., *Zähneklappern.* Syn.: *stridor dentium.* A grinding or chattering of the teeth. [A, 322.]

ARABOSE, n. A^{2}r'a^{2}b-os. Scheibler's name for arabinose (*q. v.*). ["Ber. d. dtsch. chem. Gesellsch."; "Ann. di chim. e di farm.," Aug., 1886, p. 112 (B).]

ARABOUTAN, n. Ger., *Brasilienholzbaum.* The tree furnishing Brazil-wood. [B, 121.] See Cæsalpinia.

ARABUS (Lat.), n. m. A^{2}r(a^{3}r)'a^{3}b-u^{3}s(u^{4}s). See Arabos.

ARAC, n. An East Indian name for rice. [L, 104.] Cf. Arrack.

ARACA, n. A weak spirituous liquor prepared by the Tartars from Kumyss. [B, 2.] See also Arsa.

ARACACHA (Lat.), n. f. A^{2}r(a^{3}r)-a^3-ka(ka^3)'ka^3. See Arracacia.

ARACA-GUACU, n. A South American name for a plant supposed to be the *Psidium pomiferum.* [L, 105.]

ARACA-GUAM, n. A species of guava. [L, 94.]

ARACA-IBA, n. A general name for the araca-guacu and the araca-miri. [L, 105.]

ARACA-MIRI, n. A Brazilian shrub, supposed to be the *Psidium pyriferum*, the fruit of which, candied or made into marmalade, is considered cooling and moderate y astringent, and the root diuretic and antidysenteric. [L, 104, 105.]

ARACA-PUDA, n. The native name of a Malabar plant from which is extracted a substance said to be a specific in diseases of the liver and spleen. [L, 109.]

ARACATCHA, n. See Arracacia.

ARACEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a(a^3)'se^2(ke^2)-e(a^3-e^2). From the genus-name *Arum* (*q. v.*). Fr., *aracées.* Ger., *Arongewächse.* Syn.: *Aroideæ.* The aroids; of Necker, Lindley, and others, an order of monocotyledons belonging to the series *Nudifloræ*, comprising herbs that contain a volatile acrid principle and have a creeping rhizome or corm rich in starch. The flowers, which are usually diclinous, are densely arranged in a spadix, often embraced by a large spathe, and are either naked or surrounded by a perianth of from four to six scales. The stamens are hypogynous, and the stigma is sessile. Lindley divided the *A.* into four tribes, the *Cryptocoryneæ*, the *Dracunculeæ*, the *Caladieæ*, and the *Anaporeæ*, to which Endlicher added a fifth, the *Pistiaceæ*, and Meissner, a sixth, the *Lemnaceæ*. This last tribe is usually regarded as a separate order. Brongniart divided the *A.* into the *Callaceæ* and the *Colocasieæ*. Schott, one of the best authorities upon the *A.*, divided them into the *Monoclinous A.*, comprising the tribes *Orontieæ* and *Calleæ*, and the *Diclinous A.*, including 2 sections: (1) The *Filamentatæ*, comprising the tribe *Stylochitoneæ*; and (2) The *Effilamentatæ*, comprising the tribes *Alleluchieæ*, *Arisareæ*, *Dracunculeæ*, *Zomiocarpeæ*, and *Pythonieæ*, grouped in the subsection *Stenozeugmaticæ*, and the tribes *Caladieæ*, *Philodendreæ*, *Richardieæ*, and *Asterostigmeæ*, grouped in the subsection *Pachyzeugmaticæ*. Engler divides the *A.* into the sub-families, *Pothoideæ*, *Monsteroideæ*, *Lasioideæ*, *Philodendroideæ*, *Aglaonemoideæ*, *Colocasioideæ*, *Staurostigmoideæ*, *Aroideæ*, *Pistioideæ*, and *Lemnoideæ* (the last corresponding to the order *Lemnaceæ* of most systems); and these are divided into a large number of tribes and subtribes. Bentham and Hooker divide the *A.* (*Aroideæ*) into three series: A, those with monœcious flowers and no perianth, including the tribes *Arineæ*, *Stilochitoneæ*, *Zomiocarpeæ*, *Pythonieæ*, *Colocasieæ*, *Philodendreæ*, *Dieffenbachieæ*, and *Spathicarpeæ*; B, those with hermaphrodite flowers and no perianth, comprising the tribe *Calleæ*; C, those with flowers all hermaphrodite and a perianth of scales, including the tribes *Zomioculcasieæ* and *Orontieæ*. The *A.* of Le Maout and Decaisne are a tribe of the *Aroideæ* (= *A.* of this work) corresponding to the diclinous *A.* of Schott and including the sections *Anaporeæ*, *Colocasieæ*, *Dracunculineæ*, *Cryptocoryneæ*, and *Pistiaceæ*. [B, 34, 42, 121, 168, 170, 216.]

ARACEOUS, adj. A^{2}r-a'shu^{3}s. Lat., *araceus.* Fr., *aracé.* Belonging to the *Araceæ* (*q. v.*).

ARACH, n. A^{2}r'a^{2}k. See Arrack and Orach.

ARACHAMIDE, n. A^{2}r-a^{2}k'a^{2}m-i^{2}d(id). For deriv., see Arachis and Amide. A compound, $(C_{20}H_{39}O_2.N_2)N$, obtained by the action of ammonia on earth-nut oil. [B, 2.]

ARACHAN, n. A place in Central Asia where there are hot springs. [A, 385.]

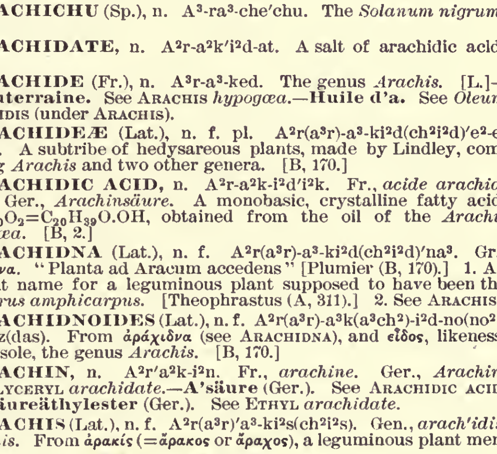
ARACHIC ACID, n. A^{2}r-a^{2}k'i^{2}k. Fr., *acide arachique.* Ger., *Arachinsäure.* See Arachidic acid.

ARACHICHU (Sp.), n. A^3-ra^3-che'chu. The *Solanum nigrum.* [B.]

ARACHIDATE, n. A^{2}r-a^{2}k'i^{2}d-at. A salt of arachidic acid. [B, 2.]

ARACHIDE (Fr.), n. A^{3}r-a^3-ked. The genus *Arachis.* [L.]—**A. souterraine.** See Arachis *hypogœa.*—**Huile d'a.** See *Oleum* arachidis (under Arachis).

ARACHIDEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^3-ki^{2}d(ch^{2}i^{2}d)'e^2-e-(a^3-e^2). A subtribe of hedysareous plants, made by Lindley, comprising *Arachis* and two other genera. [B, 170.]



ARACHIDIC ACID, n. A^{2}r-a^{2}k-i^{2}d'i^{2}k. Fr., *acide arachidique.* Ger., *Arachinsäure.* A monobasic, crystalline fatty acid, $C_{20}H_{40}O_2=C_{20}H_{39}O.OH$, obtained from the oil of the *Arachis hypogœa.* [B, 2.]

ARACHIDNA (Lat.), n. f. A^{2}r(a^{3}r)-a^3-ki^{2}d(ch^{2}i^{2}d)'na^3. Gr., ἀράχιδνα. "Planta ad Aracum accedens" [Plumier (B, 170).] 1. An ancient name for a leguminous plant supposed to have been the *Lathyrus amphicarpus.* [Theophrastus (A, 311).] 2. See Arachis.

ARACHIDNOIDES (Lat.), n. f. A^{2}r(a^{3}r)-a^{3}k(a^{3}ch^2)-i^{2}d-no(no^2)-i(e)'dez(das). From ἀράχιδνα (see Arachidna), and εἶδος, likeness. Of Nissole, the genus *Arachis.* [B, 170.]

ARACHIN, n. A^{2}r'a^{2}k-i^{2}n. Fr., *arachine.* Ger., *Arachin.* See Glyceryl *arachidate.*—**A'säure** (Ger.). See Arachidic acid.—**A'säureäthylester** (Ger.). See Ethyl *arachidate.*

ARACHIS (Lat.), n. f. A^{2}r(a^{3}r)'a^3-ki^{2}s(ch^{2}i^{2}s). Gen., *arach'idis*, *ar'achis.* From ἀρακίς (=ἄρακος or ἄραχος), a leguminous plant mentioned by Theophrastus. Fr., *arachide.* It., *arachide.* Sp., *aráquida.* A genus of leguminous plants of the suborder *Papiliona-*

THE ARACHIS HYPOGÆA. [A, 327.]

ceæ, characterized by the fruit maturing under ground. [B, 34.]—**A. africana** [Loureiro], **A. americana** [Tenore], **A. asiatica** [Loureiro]. African, American, and Asiatic varieties of the *A. hypogæa*. [L.]—**A. hypogæa** [Willdenow]. Fr., *arachide souterraine, pistache de terre*. Ger., *Erdnuss, Erdeichel, Ackereichel*. It., *arachide ipogea*. Sp., *cacaguate, cacahuate, cacahuete, maní*. The peanut, earth-nut, ground-nut, ground-pea, underground kidney-bean, goober, or pindar (the *amendoin*, or *mandubi*, of the Brazilians); a species indigenous to South America, but cultivated in the southern United States and on the west coast of Africa, to which latter locality some have considered it indigenous. It is a diffusely branched trailing annual characterized by the pod being forced beneath the surface of the ground, after the fall of the flower, by the growth of the rigid stalk to which it is attached, where it enlarges rapidly, in the form of a thick, deeply netted, indehiscent shell, an inch or more long, often contracted between the seeds, which are two or three in number. These seeds, roasted, are largely eaten, and have been recommended for habitual constipation; they are used also in the manufacture of chocolate. On expression, they yield a fixed oil (see *Oleum arachidis*). [A, 327; a, 5; B, 2.]—**A. oil.** See *Oleum arachidis*.—**A. subterranea.** See *A. hypogæa*.—**Oleum arachidis, Oleum a.** [Ind. Ph.]. Fr., *huile d'arachide* (ou *de pistache de terre*). Ger., *Erdnussöl*. Sp., *aceite de cacaguate* (ó *de maní*). Peanut, or earth-nut, oil; a bland fixed oil, nearly colorless, non-drying (remaining liquid several degrees below 32° F.), of an agreeable odor and taste like those of olive oil. It contains oleic, palmitic, and arachidic acids. It is chiefly used in making soap, but also to a considerable extent for the same purposes as olive oil. It is used by the Chinese for affections of the chest. [A, 327; B; L, 75.]

ARACHNE (Lat.), n. f. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)′ne(na). Gr., ἀράχνη. See ARANEA, ARACHNOID, and ANDRACHNE.

ARACHNIC, adj. A^{2}r-a^{2}k′ni^{2}k. Gr., ἀραχνικός. Fr., *arachnique*. Pertaining to the *Arachnida*. [A, 385.]

ARACHNIDA (Lat.), n. n. pl. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)′ni^{2}d-a^3. From ἀράχνη, a spider's web. Fr., *arachnides*. Ger., *Arachniden, Spinnenthiere, spinnenartige Thiere*. It., *aracnidi*. Sp., *arañas*. A class of the *Arthropoda*, comprising animals breathing by means of tracheæ or pulmonary sacs, and having the head and thorax fused into a cephalo-thorax which bears 2 pairs of maxillary appendages (cheliceræ and pedipalpi) and 4 pairs of legs, and a segmented or unsegmented abdomen (sometimes fused with the cephalo-thorax) which never bears any limbs. The eyes, if present, are 2 to 8 in number, simple, and sessile. It is divided into the orders *Acarida* (mites, ticks, and the itch parasite), *Podosomata*, *Adelarthrosomata*, *Pedipalpi* or *Arthrogastra* (scorpions), and *Araneida* (spiders). It is also divided into the orders *Pulmonariæ* or *A.* breathing by pulmonary-sacs, including the *Araneida* and *Pedipalpi*, and *Trachearīæ* or *A.* breathing by tracheæ, including the *Acarina*. [B, 27, 28, 180.]—**Acarideous A.** Lamarck's name for a section of his antennated tracheal *A.*, consisting of parasitic animals now classed among the insects, including the genera *Pediculus* (*Phtheirius*) and *Ricinus*. [B, 77.]—**Antennated tracheal A.** In Lamarck's classification, the first order of *A.*, comprising individuals furnished with antennæ and respiring by plexiform tracheæ; they include the crustaceous *A.* and the acarideous *A.*, now classed among *Insecta* and *Myriapoda*. [B, 77.]—**A. vagabunda.** See *Crustaceous A.*—**Crustaceous A.** Fr., *arachnides crustacées*. A section of the antennated tracheal *A.* distinguished by their composite eyes, often having a granular surface, by their scaly structure, by the cutting character of their mandibles, and by their wandering habits. They correspond to the class *Myriapoda* and the order *Thysanura* of insects, of other systems. [B, 77.]—**Masticatory A.** Latreille's first section of the *A.*, comprising the orders *Tetracera* (now referred to the *Crustacea*), *Myriapoda* (now regarded as a distinct class), and *Thysanura* (now referred to the insects). [B, 77.]—**Non-antennated branchial A.** Lamarck's name for an order of *A.* corresponding to the pulmonary *A.* (*Pulmonariæ*) of other systems, including the *Pedipalpi* (scorpions) and *Araneida* (spiders). [B, 77.]—**Non-antennated tracheal A.** An order in Lamarck's classification, corresponding to the tracheary *A.* (*Trachearīæ*) of other systems. [B, 77.]—**Spinning A.** Fr., *arachnides fileuses* [Lamarck]. Ger., *Spinnenthiere*. See ARANEIDA.—**Suctorial A.** Latreille's second section of the *A.*, comprising the whole class *A.* of recent systems and some genera now included among the insects. Its orders were the *Parasita*, the *Pycnogonides*, and the *Acera*. [B, 77.]—**Tracheal A., Tracheary A.** See TRACHEARIÆ.

ARACHNIDAN, ARACHNIDEAN, adj's. A^{2}r-a^{2}k′ni^{2}d-a^{2}n, -a^{2}k-ni^{2}d′e^2-a^{2}n. Belonging to the *Arachnida*. [B, 100.]

ARACHNIDEN (Ger.), n. pl. A^{3}r-a^{3}ch^2′ni^{2}d-e^{2}n. The *Arachnida*. [B, 180.]—**Lungen-A.** The *Pulmonariæ*. [B, 180.]—**Tracheen-A.** The *Trachearīæ*. [B, 180.]

ARACHNIDES (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)′ni^{2}d-ez(e^{2}s). See ARACHNIDA.—**A. pulmonariæ.** See PULMONARIÆ.—**A. trachearīæ.** See TRACHEARIÆ.

ARACHNIDES (Fr.), n. pl. A^3-ra^{3}k-ned. See ARACHNIDA.—**A. fileuses** [Latreille]. The spinning *Arachnida*. [B.] See ARANEIDA.—**A. palpistes.** *Arachnida* which are furnished with palpi instead of antennæ (non-antennated *Arachnida*), comprising the whole of the class *Arachnida* of other systems. [B.]—**A. pedipalpes.** See PEDIPALPI.

ARACHNIDIAL, adj. A^{2}r-a^{2}k-ni^{2}d′i^2-a^{2}l. Of or pertaining to the arachnidium. [B, 100.] See *A.* MAMMILLÆ and *A.* PAPILLÆ.

ARACHNIDIUM (Lat.), n. n. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-ni^{2}d′i^2-u^{3}m-(u^{4}m). The organ which furnishes the substance of the web in spiders. It consists of a great number of glands of the acinous, tubular, and other varieties, secreting a viscid material which passes out through the glandular ducts, and is excreted on the surface of minute papillæ (the *arachnidial papillæ*) placed upon 6 prominent elevations (the *arachnidial mammillæ*) located upon the posterior part of the abdomen. The secretion on exposure to the air hardens into a silky material, which by the motion of the spider is drawn out into a long thread. [B, 100.]

ARACHNIDS, n. pl. A^{2}r-a^{2}k′ni^{2}dz. See ARACHNIDA.

ARACHNITIS (Lat.), n. f. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-ni(ne)′ti^{2}s. Gen., *arachnit′idis*. From ἀράχνη, a spider's web (see also *-itis**). Fr., *arachnite*. Ger., *Arachnitis, Spinnenwebenhautentzündung*. It., *aracnite*. Sp., *aracnitis*. Inflammation of the arachnoid membrane, to which structure alone, however, inflammation is rarely limited. [D, 1; M.] Cf. MENINGITIS.—**A. of the ventricles.** Inflammation of the arachnoid membrane said to line the ventricles of the brain. It is held by some anatomists that no such lining exists, and it has been suggested that, as meningitis elsewhere is usually present, the ventricular trouble may be regarded rather as a result of "contiguous sympathetic effusion" than as an extension of the inflammatory exudation by continuity. [D, 1.]—**Rhachidian a., Spinal a.** See *Spinal* MENINGITIS.

ARACHNODEITIS (Lat.), n f. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no-de^2-i(e)′ti^{2}s. Gen., *arachnodeit′idis*. See ARACHNITIS.

ARACHNODERMOUS, adj. A^{2}r-a^{2}k″no-du^{5}rm′u^{3}s. Lat., *arachnodermus* (from ἀράχνη, a spider's web, and δέρμα, the skin). Fr., *arachnodermaire*. Sp., *aracnodérmico*. Having a very delicate skin, like a spider's web (said of insects). [L, 41.]

ARACHNODES (Lat.), adj. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no′dez(das). See ARACHNOID, adj.

ARACHNODITIS (Lat.), n. f. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no-di(de)′ti^{2}s. Gen., *arachnodit′idis*. See ARACHNITIS.

ARACHNOGÈNE (Fr.), adj. A^3-ra^{3}k-no-zhe^{2}n. Due to the bite of a spider. [L, 41.]

ARACHNOGÉNOSE (Fr.), n. A^3-ra^{3}k-no-zha-nos. Sp., *aracnojenósis*. A morbid condition ascribed to the bite of a spider. [L, 41.]

ARACHNOID, adj. A^{2}r-a^{2}k′noid. Lat., *arachnoideus* (from ἀράχνη, a spider's web, and εἶδος appearance), *araneosus*. Fr., *arachnoïde, arachnoïdien*. Ger., *spinnenwebig, spinnenwebenartig*. It., *aracnoide*. Sp., *aracnoideo*. 1. Resembling a spider's web in texture. [B.] 2. Pertaining to the a. membrane. [B.] 3. See ARANEOSUS (2d def.).

ARACHNOID, n. Lat., *membrana arachnoidea* (seu *media*, seu *tenuis*), *meninx arachnoidea* (seu *media*). Fr., *arachnoïde*. Ger., *Spinnenwebenhaut*. It., *aracnoide*. Sp., *aracnoidea*. The a. membrane; the middle one of the three membranes which invest the brain and spinal cord, separated from the pia mater by the subarachnoid space containing serous fluid. [I, 14; K.] It is usually described as consisting of a parietal and a visceral layer, enclosing the a. space or cavity; Kölliker, however, denies the existence of a parietal layer distinct from the epithelium of the dura mater. [L.] Tuke maintains that there is no separate membrane answering to this description, and thinks the name should be dropped. ["Edinburgh Med. Jour.," June, 1882, p. 1068.] The term has also been applied to several delicate investing and lining membranes. [L.]—**A. of the eye.** Lat., *arachnoidea oculi*. Fr., *arachnoïde de l'œil*. Ger., *Spinnenwebenhaut des Auges*. It., *aracnoide dell' occhio*. Sp., *aracnoidea del ojo*. An old term for a serous membrane which was supposed to line the cornea and spread over the iris, the ciliary body, and the chorioid; also for the supposed lining membrane of the lymphatic space between the chorioid and the sclerotic. [F.] See LAMINA *fusca*.—**Cerebral a.** Lat., *arachnoidea cerebri* (seu *cerebralis*). Fr., *arachnoïde crânienne*. Ger., *Spinnenwebenhaut des Gehirns*. The a. which covers the brain. [L.]—**Internal a.** Fr., *arachnoïde intérieure* [Laënnec]. See EPENDYMA.—**Parietal a.** Fr., *arachnoïde pariétale*. The supposed external layer of the a., closely attached to the dura mater. [L.]—**Spinal a.** Lat., *arachnoidea medullæ spinalis*. Fr., *arachnoïde spinale* (ou *médullaire vertébrale*). That portion of the a. which is situated within the spinal canal. [L.]—**Visceral a.** Fr., *arachnoïde viscérale*. The internal layer of the a., separated from the pia mater by loose areolar tissue except over the pons Varolii and the lower surface of the cerebellum. [L.]

ARACHNOIDAL, adj. A^{2}r-a^{2}k-noid′a^{2}l. See ARACHNOID, adj.—**A'raum** (Ger.), **A'sack** (Ger.). See *Subarachnoid* SPACE.—**A. villi, A'zotten** (Ger.). See *Pacchionian* BODIES.

ARACHNOÏDE (Fr.), adj. and n. A^3-ra^{3}k-no-ed. See ARACHNOID.—**A. crânienne.** See *Cerebral* ARACHNOID.—**A. de l'œil.** See ARACHNOID *of the eye*.—**A. extérieure.** See *Parietal* ARACHNOID.—**A. intérieure.** See EPENDYMA.—**A. médullaire vertébrale, A. spinale, A. vertébrale.** See *Spinal* ARACHNOID.

ARACHNOIDEA (Lat.), n., f. sing. and n. pl. of adj. *arachnoideus* (*membrana* or *tunica* understood, 1st def., and *animalia*, 2d def.). A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no(no^2)-i^{2}d(ed)′e^2-a^3. 1. See ARACHNOID, n. 2. See ARACHNIDA.—**A. cerebralis, A. cerebri.** See *Cerebral* ARACHNOID.—**A. chorioideæ** [Arnold]. The outer layer of the chorioid coat of the eye. [L, 7.] See LAMINA *fusca* and ARACHNOID *of the eye*.—**A. lentis.** The capsule of the crystalline lens. [L, 7.]—**A. medullæ spinalis.** See *Spinal* ARACHNOID.—**A. oculi.** See ARACHNOID *of the eye* and LAMINA *fusca*.

ARACHNOIDEAL, adj. A^{2}r-a^{2}k-no-i^{2}d′e^2-a^{2}l. Lat., *arachnoideus*. Ger., *arachnoideal*. See ARACHNOID, adj.—**A'zotten** (Ger.). See *Pacchionian* BODIES.

ARACHNOIDEAN, adj. A^{2}r-a^{2}k-no-i^{2}d′e^2-a^{2}n. See ARACHNOID, adj.

ARACHNOIDEITIS (Lat.), n. f. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no^2-i^{2}d-(ed)-e^2-i(e)′ti^{2}s. Gen., *arachnoideit′idis*. See ARACHNITIS.

ARACHNOIDES, ARACHNOIDEUS (Lat.), adj's. A^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)-no(no^2)-i(e)′dez(das), -i^{2}d(ed)′e^2-u^{3}s(u^{4}s). See ARACHNOID.

ARACHNOIDITIS (Lat.), n. f. A2r(a3r)-a2k(a3ch2)-no-i2d-i(e)′-ti2s. Gen., *arachnoïdit′idis.* Fr., *arachnoïdite.* See ARACHNITIS.

ARACHNOITIS (Lat.), n. f. A2r(a3r)-a2k(a3ch2)-no-i(e)′ti2s. Gen., *arachnoit′idis.* Fr., *arachnoïte.* See ARACHNITIS.

ARACHNOLOGY, n. A2r-a2k-no2l′o-ji2. Lat., *arachnologia* (from ἀράχνη, a spider). Fr., *arachnologie.* Ger., *Arachnologie.* That department of zoology which relates to the spiders [L, 50], especially the study of spiders applied to the prediction of meteorological conditions. [B, 49.]

ARACHNOPHILOUS, adj. A2r-a2k-no2f′i2l-u3s. Lat., *arachnophilus* (from ἀράχνη, a spider, and φιλεῖν, to love). Fr., *arachnophile.* Sp., *aracnófilo.* Growing on dead spiders (said of *Fungi*). [L, 116.]

ARACHNOPODA (Lat.), n. n. pl. A2r(a3r)-a2k(a3ch2)-no2p′o-da3. From ἀράχνη, a spider, and πούς, a foot. See PODOSOMATA.

ARACHNOPODION (Lat.), n. n. A2r(a3r)-a2k(a3ch2)-no-po′-di2-o2n. From ἀράχνη, a spider, and πόδιον (dim. of πούς), a little foot. Ger., *Spinnenfuss.* An instrument devised by Woolhose for use in the operation of removing a pterygium. [L, 30.]

ARACHNORRHINITIS (Lat.), n. f. A2r(a3r)-a2k(a3ch2)′′no2r-ri2n-i(e)′ti2s. Gen., *arachnorrhinit′idis.* From ἀράχνη, a spider, and ῥίς, the nose. Sp., *aracnorrinitis.* A disease attributed to the presence of a spider in the nasal passages or the frontal sinus. [D, 98.]

ARACHNOTITIS (Lat.), n. f. A2r(a3r)-a2k(a3ch)-no-ti(te)′ti2s. Gen., *arachnotit′idis.* From ἀράχνη, a spider, and οὖς, the ear. Sp., *aracnotitis.* A disease attributed to the presence of a spider in the auditory canal. [D, 98.]

ARACHUS (Lat.), n. m. A2r(a3r)′a3-ku3s(ch2u4s). Gr., ἄραχος. See ARACHIS.—**A. de l'Inde** (Fr.). See ABRUS *precatorius.*

ARACHYDNA (Lat.), n. f. A2r(a3r)-a3-ki2d(ch2u6d)′na3. See ARACHIDNA.

ARACHYL, n. A2r′a3-ki2l. The hypothetical radicle, $C_{20}H_{39}O$, of arachidic acid. [B, 2.]

ARACIDNA (Lat.), n. f. A2r(a3r)-a3-si2d(ki2d)′na3. See ARACHIDNA.

ARACIUM (Lat.), n. n. A2r(a3r)-a(a3)′shi2(ki2)-u3m(u4m). See CREPIS.—**A. alpinum** [Monnier]. The *Sonchus alpinus* of Linnæus, a species referred by Bentham and Hooker to *Lactuca.* [B, 214.]

ARACK, n. A2r′a2k. See ARRACK.

ARACKA, n. See ARACA.

ARACONCHINI, ARACOUCHILI, n's. See ARACOUCHINI.

ARACOUCHINI, n. 1. A native name for a resin of Cayenne, obtained from the *Icica a.*, used as a vulnerary. [L, 30, 105.] 2. A Guiana name for alouchi resin. [A, 385.]

ARACOUI, n. See ARACOUCHINI (1st def.).

ARACU, n. See KUMYSS.

ARACUS (Lat.), n. m. A2r(a3r)′a3-ku3s(ku4s). Gr., ἄρακος. An ancient term for the wild vetch; of Dodonæus, the *Lathyrus cicera.* [B; L, 84.]—**A. americanus.** The Indian vetch. [L, 119.]—**A. aromaticus.** Vanilla. [L, 104.]—**A. phaseolus africanus.** The Egyptian kidney-bean. [L, 119.]—**Capsulæ araci aromatici, Siliquæ araci aromatici.** Vanilla-pods. [B, 180.] See VANILLA.

ARACYNAPPIL, n. An old name for some fruit resembling a small orange, or for the plant that bears it. [Ray (L, 94).]

ARADA, n. The *Cucumis anguria.* [B, 121.]

ARADECH, n. A name given in Languedoc to the *Vaccinium myrtillus.* [B, 121.]

ARADOS (Lat.), n. m. A2r(a3r)′a3d-o2s. Gr., ἄραδος (from ἀραδεῖν, to disturb). Literally, a disturbance. As used by Hippocrates, a perturbation of the humors; also any violent movement or disturbance of an organ, like that produced in the stomach by the processes of digestion, in the bowels by purgation, and in the heart by violent exercise. [K, 3; M, 13, 56.]

ARADS, n. pl. A2r′a2dz. For deriv., see ARUM. The *Araceæ.* [Lindley (B, 197).]

ARADUS (Lat.), n. m. A2r(a3r)′a3d-u3s(u4s). See ARADOS.

ARÆA (Lat.), n. f. A2r(a3r)-e′(a3′e2)-a3. Gr., ἀραιά (from ἀραιός, agreeing with γαστήρ understood). The abdomen. [B, 78.]

ARÆOIDEA (Lat.), n. n. pl. A2r(a3r)-e(a3-e2)-o-i2d′e2-a3. From ἀραιός, rare, light, and εἶδος, form. P. T. Meissner's name for the supposed compounds of caloric, considered as a substance. [B, 78.]

ARÆOMA (Lat.), n. n. A2r(a3r)-e(a3-e2)-o′ma3. Gen., *aræo′-matos (-tis).* Gr., ἀραίωμα (from ἀραιός, rare, thin). Unoccupied space; space existing between the atoms of substance. [B, 78.]

ARÆOMETER, n. A2r′′e2-o2m′e2t-u3r. From ἀραιός, rare, and μέτρον, a measure. Lat., *aræometrum.* Fr., *aréomètre.* Ger., *Aräometer.* It., *areometro.* Literally, a measurer of lightness; hence that which measures specific gravity, especially a hydrometer. [B.] See HYDROMETER, and also ALCOHOLOMETER, LACTOMETER, and UROMETER.

ARÆOMETRIC, adj. A2r′′e2-o2m-e2t′ri2k. Fr., *aréométrique.* Ger., *aräometrisch.* It., *areometrico.* Sp., *areométrico.* Of or pertaining to aræometry. [B.]

ARÆOMETRY, n. A2r′′e2-o2m′e2t-ri2. Lat., *aræometria.* Fr., *aréométrie.* Ger., *Aräometrie.* It., *areometria.* The determination of specific gravity by means of an aræometer; hydrometry. [B.]

ARÆOS (Lat.), adj. A2r(a3r)-e′(a3′e2)-o2s. Gr., ἀραιός. Thin, rare. [B, 78.]

ARÆOSARCOS (Lat.), adj. A2r(a3r)-e(a3-e2)-o-sa3r′ko2s. Gr., ἀραιόσαρκος (from ἀραιός, thin, and σάρξ, flesh). Having spongy or porous flesh. [Hippocrates (B, 115).]

ARÆOSIS (Lat.), n. f. A2r(a3r)-e(a3-e2)-o′si2s. Gen., *aræo′seos (-sis).* Gr., ἀραίωσις. The act of making loose, lighter, or more porous; dilution. [B, 78, 115.]

ARÆOSYNCRITOS (Lat.), adj. A2r(a3r)-e(a3-e2)-o-si2n(su6n)′-kri2t-o2s. From ἀραιός, slight, and συγκρίνειν, to put together. Of slight frame (said of persons). [Galen (M, 59).]

ARÆOTES (Lat.), n. f. A2r(a3r)-e′(a3′e2)-o2t-ez(e2s). Gen., *aræote′tos (-tis).* Gr., ἀραιότης. The state of being porous; sponginess. [Hippocrates (B, 115).]

ARÆOTICA (Lat.), n., n. pl. of *aræoticos.* A2r(a3r)-e2(a3-e2)-o2t′i2k-a3. Ger., *Aräotica.* Remedies or agents which dilute the humors, expand the tissues, or open the pores of the body. [B, 48.]

ARÆOTICON (Lat.), n., n. of adj. *aræoticos.* A name given by P. T. Meissner to the supposititious substance caloric. [B, 78.]

ARÆOTICOS, ARÆOTICUS (Lat.), adj's. A2r(a3r)-e(a3-e2)-o2t′i2k-o2s, -u3s(u4s). Gr., ἀραιωτικός (from ἀραιός, light, rare). Capable of or adapted for expansion or rarefaction. [B, 78.]

ARÆUS (Lat.), adj. A2r(a3r)-e′(a3′e2)-u3s(u4s). See ARÆOS.

ARAGALLUS (Lat.), n. m. A2r(a2r)-a3-ga2l(ga3l)′lu3s(lu4s). Of Necker, the genus *Astragalus.* [B, 170.]

ÁRAGBADHA (Sanscr.), n. The *Cassia fistula.* [B, 181.]

ÁRAGBADHÁDI (Sanscr.), n. A purgative decoction, made of *Cassia fistula* and other ingredients, much used in India. [B, 181.]

ARAGMA (Lat.), n. n. A2r(a3r)-a2g(a3g)′ma3. Gen., *arag′matos (-tis).* Gr., ἄραγμα (from ἀράσσειν, to strike hard). 1. That which is cast together; also that which is thrown asunder, beaten, or shattered. 2. A throwing together or throwing apart, a shattering; also a rattling or clashing (as of the teeth together). [B, 78, 115.]

ARAGMOS (Lat.), n. m. A2r(a3r)-a2g(a3g)′mo2s. See ARAGMA (2d def.).

ARAGNON (Fr.), n. A3r-a3n-yo2n2. Sp., *arañon.* The fruit of the *Prunus spinosa*, or sloe. [B, 121.]

ARAGO, n. See ALAGOA.

ARAGOACEÆ (Lat.), n. f. pl. A3r-a3g-o-a(a3)′se2(ke2)-e(a3-e2). From *Aragoa*, one of the genera, named after the French physicist Arago. A section of plants made by Don, including genera now classed under the *Scrophulariaceæ.* [B, 197.]

ARAGONA (It.), n. A3-ra3-go′na3. A place in Sicily, where there is a cold sulphurous spring. [A, 385.]

ARAGUS (Lat.), n. m. A2r(a3r)′a3g-u3s(u4s). Of Necker, the genus *Astragalus.* [B, 121.]

ARAH (Ar.), n. Mastic, or the mastic-tree (*Pistacia lentiscus*). [B, 5, 121.]

ARAIGNÉE (Fr.), n. A3r-a2n-ya. A spider. [B, 93.] See ARANEA.—**A. de mer.** The *Sepia officinalis.* [B, 92.]

ARAIRA, n. The *Pistacia lentiscus.* [L, 119.] See ARAH.

ARAIS-EL-NIL (Ar.), n. Literally, the "bride of the Nile"; an Egyptian name for the *Nymphæa lotus.* [B, 121.]

ARAK (Ar.), n. 1. The *Salvadora persica.* 2. An undetermined species of *Cissus.* [B, 19; Forskål (B, 121).]

ARAK, n. A2r′a2k. See ARRACK.

ARAKA, n. See ARRACK.

ARAKACHA, ARAKATSCHA, n's. The tuber of the *Arracacia esculenta*, also of the *Conium moschatum.* [B, 48; L.]

ARAKI (Ar.), n. An intoxicating Egyptian beverage made from dates. [B, 7, 48.] See ARRACK.

ARAL, adj. A′ra2l. Lat., *aralis.* Of or resembling *Arum*; belonging to the *Arales.* [B, 197.]—**A. alliance.** See ARALES.

ARALDA, n. See DIGITALIS.

ARALEE (Tamil), n. The *Nerium odorum.* [B, 172.]

ARALES (Lat.), n., f. pl. of *aralis* (*plantæ* understood). A2r(a3r)-a(a3)′lez(le2s). The aral alliance; in Lindley's classification, the 8th alliance of endogens, including those with unisexual petaloid or apetalous flowers borne upon a simple naked spadix and with the embryo surrounded by mealy or fleshy albumen. It comprises the orders *Pistiaceæ*, *Typhaceæ*, *Araceæ*, and *Pandanaceæ.* The same name is adopted for a cohort of monocotyledonous plants nearly equivalent to Lindley's *A.* [B, 75, 197.]

ARALIA (Lat.), n. f. A2r(a3r)-a(a3)′li2-a3. Fr., *aralie.* Ger., *Aralie, Angelikbaum.* Wild sarsaparilla. A genus of herbs, shrubs, and small trees with alternate or whorled compound leaves, and flowers, borne on jointed pedicels, having 5 ovate petals imbricate in æstivation, 5 stamens, 2 to 5 free styles, and a 2- to 5-celled ovary. It comprises the sections: (1) *Ginseng*, including herbs having 2 to 3 styles and whorled leaves; (2) *Euaralia*, erect shrubs with pinnate, bipinnate, or tripinnate leaves, 5 styles, and a 5-carpelled, dorsally ridged fruit; (3) a section consisting of erect or climbing shrubs, or of trees resembling those of the second section, but with digitate leaves. By Baillon the genus is made to include also *Pentapanax*, *Macropanax*, *Brassaiopsis*, *Acanthopanax*, and *Eleutherococcus*, regarded by Bentham and Hooker as distinct genera. [B, 42, 212, 262.]—**A. arborea** [Linnæus]. See HEDERA *arborea.*—**A. bipinnatifida** [C. B. Clarke]. Syn.: *Panax bipinnatifidum.* A species growing in the Sikkim Himalayas, resembling *A. pseudoginseng* and perhaps identical with it. [B, 212.]—**A. californica.** California spikenard; a species closely resembling *A. racemosa*, but much larger. [B, 81.]—**A. chinensis** [Linnæus]. An arborescent Chinese species with aculeate petioles and decompound bipinnate leaves, the wood of which is used to make fire by friction. [B, 173, 214.]—**A. cochleata** [Lamarck]. See PANAX *cochleatus.*—**A. cordata** [Thunberg]. A species perhaps identical with *A. edulis.*

[B, 267.]—**A. edulis** [Siebold and Zuccarini]. Syn.: *Dimorphanthus edulis.* A species distinguished by the flowers being wholly or in part unisexual. It has aromatic roots, and the young shoots are eaten in China and Japan, where also the plant is used as a remedy in chlorosis, disorders of menstruation, and puerperal diseases. [B, 267; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 756 (B).]—**A. ginseng.** Syn.: *Panax ginseng.* A species belonging to the section *Ginseng*, growing in Manchori. Its forked rhizome constitutes the true ginseng, and was formerly exported in large quantities to China. It is now, however, largely replaced by the rhizome of *A. quinquefolia*, of which perhaps it is only a variety. [B, 1.]—**A. hispida** [Linnæus]. Bristly a., bristly sarsaparilla, wild elder, dwarf elder. A species growing in the North Atlantic United States. It has a stalk 1 to 2 feet high, woody and covered with sharp bristles below, herbaceous above, and bearing dark-colored berries of a disagreeable taste. Its root has been used as a diuretic in dropsy. [B, 5, 34.]—**A. humilis.** See *A. ginseng.*—**A. muhlenbergiana** [Schultes]. See *A. hispida.*—**A. nudicaulis** [Linnæus]. Fr., *a. nude.* Ger., *nacktstenglige Aralie, kahler Angelikbaum.* False (or wild) sarsaparilla, shotbush, small spikenard. A perennial herb growing in the Northern and Eastern States. It is nearly stemless, and the greenish flowers are disposed in 3 simple umbels upon a naked scape springing almost directly from the large fleshy rhizome. The leaf-stalk, also springing from the rhizome, bears a single decompound leaf longer than the scape. The rhizome contains resin, sugar, starch, and a volatile oil. *A. nudicaulis*, especially the rhizome is aromatic, diuretic, and diaphoretic, and is used in domestic practice as a substitute for sarsaparilla, particularly in syphilis, rheumatism, and skin diseases. [B, 5, 33, 34.]—**A. octophylla** [Loureiro]. A tree about 10 feet high, growing in Cochin-China, where its leaves and bark are used as an aperient, diuretic, and diaphoretic. [B, 180.]—**A. palmata.** 1. Of Lamarck, a shrub growing in the Moluccas, the leaves and bark of which are bitter and acrid and are employed as a remedy against gonorrhœa and a disease of the abdomen supposed to be produced by polypi. 2. Of Loureiro, the *A. scandens.* [B, 180.]—**A. papyrifera** [Hooker]. Syn.: *Didymopanax papyrifera.* The rice-paper plant. A small tree growing in swampy districts in Formosa, the white pith of which constitutes the rice-paper of commerce, and is used as a tonic and diuretic. By Bentham and Hooker it is referred to *Fatsia.* [B, 19, 42; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 755 (B).]—**A. pentaphylla** [Thunberg]. See *A. arborea*—**A. polaris.** See Stilbocarpa *polaris.*—**A. polyscias** [Sprengel]. See Polyscias *pinnata.*—**A. pseudo-ginseng** [Bentham]. Syn.: *Panax pseudo-ginseng* [Wallich]. A species belonging to the section *Ginseng*, growing in the Khasia Mountains, Sikkim, and Nepal, having a horizontal tuberous rhizome. It is distinguished from *A. ginseng* (of which it is perhaps only a variety) by its narrower, lanceolate, bristly leaves. [B, 212.]—**A. quinquefolia** [A. Gray]. Syn.: *Panax quinquefolius* [Linnæus]. American ginseng; a species belonging to the section *Ginseng*, indigenous to North America. It is an herb about 1 foot in height, bearing yellowish flowers, a terminal whorl of 3 quinquefoliate leaves, and scarlet berries. The thick, fleshy, fusiform rhizome is one variety of ginseng. It is said to contain *paniquilon* and *panacon.* [B, 34, 270.] See Ginseng.—**A. racemosa** [Linnæus]. Fr., *aralie à grappes.* American spikenard, petty morrel. A perennial herb, growing in the United States and Canada. It has a smooth stalk, 3 to 4 feet high, and bears decompound leaves and numerous small umbels of flowers disposed in the form of a decompound panicle. Its rhizome is short and thick, has an agreeable aromatic odor and taste, and contains resin, starch, sugar, and probably a little volatile oil. It is used for flavoring beer, and also in domestic medical practice, like the *A. nudicaulis*, as a diaphoretic in thoracic and abdominal diseases, and as an application to ulcers. [B, 5, 33, 34, 180.]—**A. scandens** [Poiret]. A species referred to *Brassaiopsis.* [B, 267.]—**A. spinosa** [Linnæus]. Fr., *angélique épineuse.* Angelica-tree, toothache-tree, Hercules's club. A species growing in the middle and southern United States. In the former, it is a shrub 8 to 12 feet in height; in the latter, a tree of 20 to 30 feet, with leaves 4 to 6 feet long. The bark is smooth and furnished with transverse rows of spines; the leaves are bipinnate or tripinnate, and borne only or chiefly at the summit of the stem; the white flowers form numerous umbels arranged in the form of a large panicle. The bark has an aromatic odor and bitter taste, and contains starch, sugar, gum, pectin, two resins of acrid properties, a volatile oil, and an uncrystallizable alkaloid [Elkins]; or, according to others, a glucoside, *araliin* [Holden]. It is used as a diaphoretic in syphilitic, rheumatic, gouty, and cutaneous disorders. The bark of the root is said to be emeto-cathartic. The leaves are employed like the bark, and the berries yield a pungent tincture which has been used to relieve the pain of rheumatism, toothache, and colic. [B, 5, 34, 180.]—**A. triphylla** [Poiret]. Syn.: *Panax trifolius* [Linnæus]. The groundnut, dwarf ginseng; a North American species belonging to the section *Ginseng;* an herb 3 to 6 inches high, bearing white flowers, a terminal whorl of 3 leaves (usually trifoliate), and green berries. Its root is globose and tuberous. [B, 34.]—**A. umbellifera** [Lamarck]. See Osmoxylon *umbelliferum.*—**Bristly A.** See *A. hispida.*—**Écorce d'a. épineuse** (Fr.). The bark of *A. spinosa.* [B, 5.]

ARALIACEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a(a^3)-li^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *araliacées.* Ger., *Araliaceen, Araliengewächse.* It., *araliacee.* The araliads; ivyworts. An order of trees, shrubs, and herbs belonging to the umbellal alliance of epigynous exogens [Lindley], the cohort *Umbellales* [Bentham and Hooker], or the order (= cohort) *Umbellifloræ* [Eichler]. It is closely allied to the *Umbelliferæ* (in which it is included by some botanists) in the character and arrangement of the flowers and leaves, but differs in that the petals are never inflected and are usually valvate in æstivation, that the ovary usually possesses more than 2 styles and 2 loculi, each loculus containing one ovule, and that the fruit contains from 3 to 5 cells, with one albuminous seed in each cell. The *A.* are divided by Bentham and Hooker into 5 tribes: 1. The *Aralieæ*, including *Aralia* and other genera in which the petals are more or less imbricate and are enlarged at their insertion. 2. The *Mackinlayæ.* 3. The *Panaceæ*, including *Panax* and allied genera. 4. The *Hedereæ*, including *Hedera* and other genera. 5. The *Plerandreæ.* By Reichenbach and others the *A.* are divided into the *Aralieæ*, plants usually with a woody stem and having a polypetalous corolla valvate in æstivation, and the *Adoxeæ*, comprising the genus *Adoxa*, distinguished by their herbaceous stem, by their corolla being subpolypetalous and imbricate in æstivation, and by the bipartite filaments of their stamens. The latter genus is, however, now usually referred to *Caprifoliaceæ.* [B, 19, 34, 104, 121, 197.]

ARALIACEOUS, adj. A^{2}r-a''li^2-a'shu^{3}s. Lat., *araliaceus.* Fr., *araliacé.* It., *araliaceo.* Of, pertaining to, or resembling the genus *Aralia;* belonging to the *Araliaceæ.* [B.]

ARALIADS, n. pl. A^{2}r-a'li^2-a^{2}dz. The *Araliaceæ.* [B, 197.]

ARALIÆ [Jussieu] (Lat.), n. f. pl. A^{2}r(a^{3}r)-a(a^3)'li^2-e(a^3-e^2). See Araliaceæ.

ARALIASTRUM (Lat.), n. n. A^{2}r(a^{3}r)-a(a^3)-li^2-a^{2}s(a^{3}s)'tru^{3}m-(tru^{4}m). Of Vaillant, the genus *Panax.* [B, 197.]

ARALIE (Fr., Ger.), n. A^{3}r-a^{3}l-e, -e'. The *Aralia.* [B, 93, 180.]—**A. à grappes** (Fr.). The *Aralia racemosa.* [B, 173.]—**A. épineuse.** The *Aralia spinosa.* [B, 173.]—**A'ngewächse** (Ger.). The *Araliaceæ.* [B, 35.]—**Dornige A'nrinde** (Ger.). The bark of *Aralia spinosa.* [B, 5.]—**Nacktstenglige A.** (Ger.). The *Aralia nudicaulis.* [B, 180.]

ARALIEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{2}l(a^{3}l)-i(e)'e^2-e(a^3-e^2). Fr., *araliées.* Ger., *Aralieen.* 1. Of Sprengel and of Baillon, an order (series) of umbelliferous plants including *Aralia*, *Panax*, and other genera now described under *Araliaceæ.* 2. Of Reichenbach and others, a section of the *Araliaceæ* (*q. v.*), including all the genera except *Adoxa.* 3. Of Bentham and Hooker, a tribe of the *Araliaceæ* comprising *Aralia* and 5 other genera. See Araliaceæ. [B, 121, 170.]

ARALIETIN, n. A^{2}r-a^{2}l-i'e^{2}t-i^{2}n. Fr., *araliétine.* Ger., *Aralietin.* A substance produced by the decomposition of araliin. [B, 207.]

ARALIIN, n. A^{2}r-a'li^2-i^{2}n. Fr., *araliine.* Ger., *Araliin.* A glucoside found by Holden in *Aralia spinosa.* On treatment with dilute acids, it decomposes into glucose and aralietin. [B, 207.]

ARALIRETIN, n. A^{2}r-a^{2}l-i^{2}r'e^{2}t-i^{2}n. See Aralietin.

ARALOO, ARALU (Sanscr.), n's. The *Calosanthus indica.* [B, 181.]

ARAMAYONA (Sp.), n. A^{3}r-a^{3}m-a^3-yo'na^3. A place in the province of Alava, Spain, at which there are two mineral springs, one containing sulphur, the other iron. The former has the following constitution in 1,000 grammes:

Calcium carbonate	0·7050
Magnesium carbonate	0·0020
Calcium sulphate	0·0105
Magnesium sulphate	0·0030
Sodium chloride	0·0075
Magnesium chloride	0·0032
Total solids	0·7312
Hydrogen sulphide	20·000 cu. cent.
Carbon dioxide	a small proportion.

They are resorted to for respiratory and rheumatic affections. [B, 46, 93.]

ARAN (Ar.), n. The *Capparis spinosa.* [B, 121.]

ARANÉ (Fr.), adj. A^{3}r-a^3-na. See Aranéen.

ARANEA (Lat.), n. f. A^{2}r(a^{3}r)-a(a^3)'ne^2-a^3. From ἀράχνη, a spider or its web. 1. A spider; also a genus of *Araneida*, made by Linnæus, comprising a great number of species now relegated to distinct genera. 2. A spider's web. [Pliny.] 3. In anatomy, the arachnoid membrane (in this sense really f. of *araneus*, agreeing with *tunica*, understood). [B, 48, 134.]—**A. diadema** [Linnæus]. See Epeira *diadema.*—**A. domestica** [Linnæus], **A. fusca** [Clerck]. See Tegeneria domestica.—**A. tarantula.** See Tarantula.—**Tela araneæ.** See under Tela.

ARANEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a(a^3)'ne^2-e(a^3-e^2). See Araneida.

ARANÉEN (Fr.), adj. A^{3}r-a^{3}n-a-a^{3}n^2. 1. Of or resembling a spider. 2. See Araneosus (2d def.).

ARANÉEUX (Fr.), adj. A^{3}r-a^{3}n-a-u^5. See Araneosus and Araneus.

ARANEIDA (Lat.), n. n. pl. A^{2}r(a^{3}r)-a^{3}n-e(a)'i^{2}d-a^3. From *aranea*, and εἶδος, a likeness. Fr., *aranéides.* Ger., *Spinnen.* The spiders. An order of articulate (arthropodous) animals belonging to the class *Arachnida*, distinguished by the fusion of the head and thorax into a single mass, by the non-segmentation of the abdomen, by the presence of poison-glands the ducts of which are borne upon the hooked mandibles, and by the absence of chelæ. [B, 28.]

ARANEIDÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{3}n-e(a)'i^{2}d-e(a^3-e^2). See Araneida.

ARANEIDANS, n. pl. A^{2}r-a^{2}n-e'i^{2}d-a^{2}nz. See Araneida.

ARANEIDES (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)-e(a)'i^{2}d-ez(e^{2}s). See Araneida.

ARANEIFEROUS, adj. A^{2}r-a^{2}n''e^2-i^{2}f'e^{2}r-u^{3}s. Lat., *araneiferus* (from *aranea*, a spider, and *ferre*, to bear). Fr., *aranéifère.* Bearing or producing spiders. [B, 38.]

ARANEIFORM, adj. A^{2}r''a^{2}n-e'i^{2}f-o^{3}rm. Lat., *araneiformis* (from *aranea*, a spider, and *forma*, form). Fr., *aranéiforme.* Spider-shaped, having a form like a spider. [B, 116.]

ARANEIN, n. A^{2}r-a'ne^2-i^{2}n. A name given by homœopathic

practitioners to a liquid obtained by puncturing the abdomen of the common spider (*Epeira diadema*). Used as an embrocation. [B, 270.]

ARANEINA (Lat.), n. n. pl. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)-e^2-i(e)'na^3. The *Araneida*. [B, 27.]

ARANEOID, adj. A^{2}r-a^{2}n'e^2-oid. From *Aranea* and εἶδος, likeness. Fr., *aranéoïde*. Resembling a spider; spider-like. [B, 38.]

ARANEOLOGIST, n. A^{2}r-a^{2}n''e^2-o^{2}l'o^{2}j-i^{2}st. Fr., *aranéologue*. One skilled in araneology. [B, 38, 77.]

ARANEOLOGY, n. A^{2}r-a^{2}n''e^2-o^{2}l'o^{2}j-i^2. For deriv., see ARANEA and *-logy**. Fr., *aranéologie*. That branch of natural science which treats of spiders. [B, 38.]

ARANEOSUS (Lat.), adj. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)-e^2-o'su^{3}s(su^{4}s). Fr., *aranéeux*. 1. In botany, resembling a spider's web in texture; made up of fine interlacing threads; arachnoid. [B, 1, 121.] 2. Of the pulse, thready, feeble. [B.]

ARANEOUS, adj. A^{2}r-a'ne^2-u^{3}s. See ARANEUS and ARANEOSUS.

ARANEUM (Lat.), n. n. A^{2}r(a^{3}r)-a(a^3)'ne^2-u^{3}m(u^{4}m). 1. A cobweb. See TELA *aranea*. 2. A sort of dew or frost, resembling a spider's web in appearance, deposited upon grapes and olives and spoiling them. [Pliny (B, 134).] 3. A term used by Paracelsus as synonymous with astchachilos (*q. v.*).

ARANEUS (Lat.), adj. and n. A^{2}r(a^{3}r)-a(a^3)'ne^2-u^{3}s(u^{4}s). Fr., *aranéeux*. 1. Web-like, said of interlaced fine hairs or threads. See ARACHNOID. 2. Covered, provided with, or consisting of a fine cobweb-like tissue; consisting of separate filaments, like the ring of an agaric. [B, 93, 121.] 3. As a n., a spider; also a sort of sea-fish. [Pliny (B, 134).]

ARANGIUM (Lat.), n. n. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)'ji^2(gi^2)-u^{3}m(u^{4}m). See ARANTIUM and AURANTIUM.

ARANGOS, n. A place in Transylvania, where there is a ferruginous alkaline spring. [A, 385.]

ARANIDEA (Lat.), n. n. pl. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)-i^{2}d'e^2-a^3. Kirby's name for the ARANEIDA. [B, 77 (8th ed.).]

ARANIDES (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)'i^{2}d-ez(e^{2}s). A family of *Arachnida*, made by Latreille, corresponding to the *Araneida*. [B, 77 (8th ed.).]

ARANJAT, n. A name given in southern Europe to the *Agaricus aurantiacus*. [B, 121.]

ARANJUEZ (Sp.), n. A^3-ra^{3}n-hu-ath^2'. A place near Madrid, in Spain, where there is a purgative and diuretic spring. [A, 255, 385.]

ARANTIUM (Lat.), n. n. A^{2}r(a^{3}r)-a^{2}n(a^{3}n)'shi^2(ti^2)-u^{3}m(u^{4}m). The original form of aurantium (*q. v.*). [B, 121.]

ARANTSKAMMER [Günther] (Ger.), n. A^{3}r'a^{3}nts-ka^{3}m-me^{2}r. Lat., *ventriculus Arantii*. [I, 3.] See CALAMUS *scriptorius*.

ARANZARI (Sp.), n. A^{3}r-a^{3}n-th^{2}a^{3}r'e. A cold mineral spring in Spain (province of Guipuzcoa) containing sulphur and calcium; used in cutaneous and respiratory diseases. [B, 93.]

ARÄOMETER (Ger.), n. A^{3}r-e^2-o^{2}m'e^{2}t-e^{2}r. See ARÆOMETER. [B. 49.]—**A.-Pipette.** An instrument consisting of a hydrometer to which is attached a pipette, so arranged that on closing the orifice of the latter with the thumb and so aspirating a portion of the liquid under examination into the pipette, the weight of the portion thus aspirated is constant. [B, 48.]—**Fahrenheit'sches Gewichtsa'.** See *Fahrenheit's* HYDROMETER.—**Gewichtsa'.** A hydrometer which indicates the specific gravity by the weight required to depress it to a fixed point upon its scale. [B, 49.] See HYDROMETER *of constant volume*.—**Harn-A.** See UROMETER.—**Nicholson'sches A.** See *Nicholson's* HYDROMETER.—**Procent-A., Prozent-A.** A hydrometer the scale of which is so graduated as to indicate directly the percentage composition of the liquid in which it is immersed. [B, 49.] See *Centesimal* ALCOHOLOMETER.—**Scalen-A.** A hydrometer which indicates the specific gravity by the depth (measured upon a scale attached to the instrument) to which it sinks in the liquid examined. [B, 48.] See HYDROMETER *of constant weight*.

ARÄOMETRIE (Ger.), n. A^{3}r-e^2-o^{2}m-e^{2}t-re'. See ARÆOMETRY.

ARÄOMETRISCH (Ger.), adj. A^{3}r-e^2-o^{2}m-e^{2}t'ri^{2}sh. See ARÆOMETRIC.

ARAPABACA (Lat.), n. f. A^{3}r-a^{3}p-a^3-ba^3'ka^3. From *arapabaca*, the Brazilian name of the *Spigelia anthelmia*. Plumier's name for the genus *Spigelia*. [B, 121, 170.]

ARAPA-MAN, n. From *attrape-main* = catch the hand. A Languedoc name for the *Galium aparine*. [B, 121.]

ARAPATAK, n. A place situated in Siebenbürgen, about 4 hours' ride from Kronstadt, at which there are three springs, used in the treatment of scrofula and rickets, also bathing establishments. The composition of the mineral water is as follows in 1,000 parts:

	Stammbrunnen.	Neubrunnen.	Béldlbrunnen.
Total solids	3·643	3·359	2·360
Sodium carbonate	1·284	0·922	0·627
Calcium carbonate	1·175	1·382	0·599
Ferrous carbonate	0·208	0·306	0·145
Free carbonic acid	1·983	1·536	1·215

[B, 108.]

ARAR (Beng.), n. The *Cajanus indicus*. [B, 181.]

ARAR, n. Lit., a tree; a name given in Barbary to the *Callitris quadrivalvis* (or *C. articulata*), the tree which furnishes sandarach. [B, 19, 93.]

ARARA, n. See JOHANNESIA.—**A. fructus americanus, A. fructus secundus.** A tree of French Guiana, of unknown botanical station, but allied to the juniper. It is said to be applied to ulcers. [B, 200.]

ARARE, n. The *Terminalia citrina*. [B, 121.]

ARARIBA (Lat.), n. f. A^{3}r-a^{3}r-e'ba^3. From the Brazilian name. 1. A name given by Marcgraff to a whitish wood supposed to be derived from a species of *Pterocarpus* (according to others, from the *Acacia*). 2. A genus of Brazilian trees. 3. Araroba. [B, 121.]—**A. bark.** Lat., *cortex araribæ*. A variety of spurious cinchona bark said to be derived from *A. rubra*. It closely resembles the bark called *cinchona rosa*, and contains *aribine*. [B, 23.]—**A. rosa.** A tree the wood of which, according to Guibourt, is identical with Diababul wood or that of *Acacia arabica*. [B, 121.]—**A. rubra** [Martius]. A tree of eastern Brazil, the red bark of which is used by the Indians in dyeing. [B, 121.]—**Cortex araribæ.** See *A. bark*.

ARARIBINE, n. A^{3}r-a^{3}r-e'ben. See ARIBINE.

ARARIEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^3-ri(re)'e^2-e(a^3-e^2). Of Dumortier, an order of plants belonging to the *Spadicatæ*, comprising the families *Zosteraceæ*, *Arideæ*, and *Cyclantheæ*. [B, 170.]

ARAROBA (Lat.), n. f. A^{3}r-a^{3}r-o'ba^3. From the Brazilian name. Chrysarobin or Goa-powder, derived from the *Andira a.*, or, according to some, the *Centrolobium tomentosum*. [B, 5, 121.] See CHRYSAROBIN.—**A. depurata.** A. purified by solution in benzene; chrysarobin (*q. v.*). [B, 270.]

ARAROUT, ARA-ROOT, n's. A^{2}r'a^3-rut. See ARROW-ROOT.

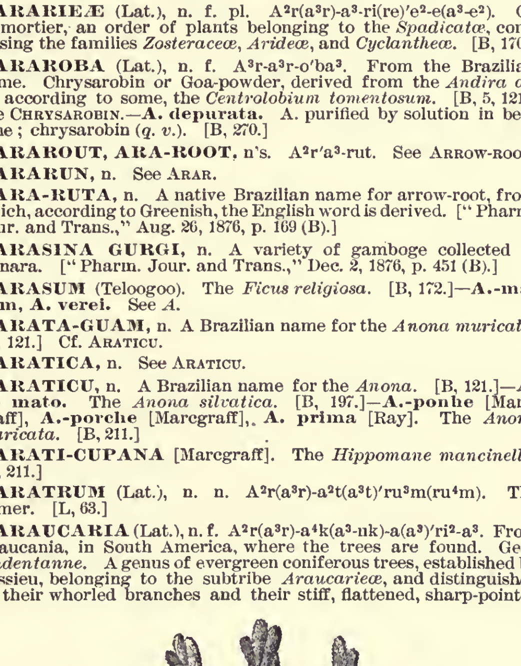
ARARUN, n. See ARAR.

ARA-RUTA, n. A native Brazilian name for arrow-root, from which, according to Greenish, the English word is derived. ["Pharm. Jour. and Trans.," Aug. 26, 1876, p. 169 (B).]

ARASINA GURGI, n. A variety of gamboge collected in Canara. ["Pharm. Jour. and Trans.," Dec. 2, 1876, p. 451 (B).]

ARASUM (Teloogoo). The *Ficus religiosa*. [B, 172.]—**A.-marum, A. verei.** See *A.*

ARATA-GUAM, n. A Brazilian name for the *Anona muricata*. [B, 121.] Cf. ARATICU.



ARATICA, n. See ARATICU.

ARATICU, n. A Brazilian name for the *Anona*. [B, 121.]—**A. do mato.** The *Anona silvatica*. [B, 197.]—**A.-ponhe** [Marcgraff], **A.-porche** [Marcgraff], **A. prima** [Ray]. The *Anona muricata*. [B, 211.]

ARATI-CUPANA [Marcgraff]. The *Hippomane mancinella*. [B, 211.]

ARATRUM (Lat.), n. n. A^{2}r(a^{3}r)-a^{2}t(a^{3}t)'ru^{3}m(ru^{4}m). The vomer. [L, 63.]

ARAUCARIA (Lat.), n. f. A^{2}r(a^{3}r)-a^{4}k(a^3-uk)-a(a^3)'ri^2-a^3. From Araucania, in South America, where the trees are found. Ger., *Andentanne*. A genus of evergreen coniferous trees, established by Jussieu, belonging to the subtribe *Araucarieæ*, and distinguished by their whorled branches and their stiff, flattened, sharp-pointed

THE ARAUCARIA IMBRICATA. [B, 49.]

leaves. Salisbury made out of this genus two new genera (*Colymbea* and *Eutassa*), and Link restricted the genus *A.* to the species (*A. brasiliensis* and *A. imbricata*) referred by Salisbury to *Colymbea*. [B, 19, 75, 170.]—**A. Bidwillii** [Hooker]. The bunya-bunya pine; a

lofty tree growing between the Brisbane and Burnett rivers in Australia. It bears large cones containing edible seeds. [B, 19, 49.]—**A. brasiliana, A. brasiliensis** [Richard]. The Brazil pine. A lofty Brazilian tree which furnishes a very fragrant resin. [B, 49, 197.]—**A. columnaris** [Hooker], **A. Cookii** [R. Brown]. Ger., *Säulencypresse.* A tall Australian species from the cones of which a resinous matter exudes. [B, 49.]—**A. Cunninghami** [Aiton]. Syn.: *Eutacta* (*Eutassa*) *Cunninghami.* The Moreton Bay pine; an Australian species furnishing no resin but a white transparent exudation. [B, 49, 77.]—**A. Dombeyi** [Richard]. See *A. imbricata.*—**A. excelsa** [R. Brown]. Ger., *Norfolksfichte, Norfolktanne.* Syn.: *Dombeya* (seu *Eutassa,* seu *Altingia*) *excelsa.* The Norfolk Island pine; a tree growing in New Caledonia and Norfolk Island, and attaining a height of 200 feet and upwards. The seeds are said to be edible; but this is denied. [B, 19, 49.]—**A. imbricata** [Pav.]. Ger., *Chilifichte.* Syn.: *Dombeya chilensis* [Lamarck], *Pinus araucana* [Molin], *Colymbea quadrifaria* [Salisbury]. The Chili pine; a tree growing in the mountains of Chili, by some identified with *A. excelsa.* Upon incision it furnishes a milky, glutinous juice of strong odor and taste, called *Dombeya turpentine.* [B, 5.]—**A. Rulei** [Müller]. A New Caledonian species of smaller size than the others. [B, 77.]

ARAUCARIEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-a^{4}(a^{3}-u)-ka^{3}r-i(e)'e^{2}-e(a^{3}-e^{2}). Fr., *araucariées.* Of Reichenbach and others, a subtribe of coniferous trees belonging to the tribe *Abietineæ,* characterized by the spirally arranged deciduous scales of the cones, and the flat or quadrangular leaves, subopposite or disposed in spirals. It includes the genera *Araucaria* and *Dammara.* [B, 75, 170.]

ARAXAS, n. Soot. [B, 59.] See FULIGO.

ARAXAT, n. From Ar., *Al-ratsats* or *al-razâz,* lead. An alchemical name for lead. [B, 52.]

ARAYANA, n. An unknown tree used in the preparation of chica from the *Bignonia chica.* [B, 197.]

ARAYA-ANGELI, n. The *Antiaris saccidora.* [B, 172.]

ARBACIADÆ (Lat.), n. f. pl.

ARBEIT (Ger.), n. A^{3}r'bit. Work, labor. [L, 115, p. 894.]—**A'sammler.** Literally a labor-accumulator. An apparatus constructed by Fick whereby a contracting muscle is enabled to raise a weight to the greatest possible distance. By means of a lever acting upon a toothed wheel the weight is retained at the point to which it is raised at the end of each contraction of the muscle, so that the result of a series of stimulations applied to a muscle is indicated by the total height to which the weight is lifted. [K, 35.]—**A'stheilung.** Division of labor; in biology, the assumption of special functions by special parts or individuals constituting a single organism. [B, 49.]—**A'szeit.** The working hours of a laborer; also the maximum time which is allowed by the rules of hygiene to be consumed in labor. [M, 1.]

ARBEITER (Ger.), n. A^{3}r'bit-e^{2}r. A workman.—**A'herz.** See under HERZ.—**A'hygiene.** See under HYGIENE.—**A'kleidung.** A form of dress designed to obviate the evil effects of certain occupations. [M, 1.]

ARBI (Hind.), n. The *Colocasia antiquorum.* [B, 172.]

ARBI, n. A Basque name for several varieties of cabbage (*Brassica fera* and *oleracea*). [B, 121.]

ARBOIS (Fr.), n. A^{3}r-bwa^{3}. The *Cytisus laburnum.* [B, 173.]

ÁRBOL (Sp.), n. A^{3}r'bo^{2}l. A tree. [B.]—**A.-a-brea resin.** A grayish-yellow, soft, glutinous substance, of strong, agreeable odor, obtained from the *Canarium album.* [B, 2.]—**A.-abrea.** Literally the pitch-tree; a Spanish name for the tree furnishing elemi.—**A. de amor.** The *Cercis siliquastrum.* [B.]—**A. de coral.** The *Picramnia corallodendron.* [B, 19, 121.]—**A. del aceite de Maria.** The *Calophyllum Mariæ.* [B, 121.]—**A. de la vida.** See ARBOR VITÆ.—**A. del cera.** The *Elæagia utilis.* [B, 121.]—**A. de leche.** The *Piratinera utilis.* [B, 93.]—**A. del pan.** The *Artocarpus incisa.* [B.]—**A. del paraíso.** The *Elæagnus angustifolia.* [B.]—**A. de manitas.** The *Cheiranthodendron.* [B. 121.]—**A. de sangre.** The *Croton sanguifluum.*—**A. de ule.** A Mexican name for the *Castilloa elastica.*—**A. paraíso.** See *A. del paraíso.*

ARBON, n. A health resort in Switzerland. [A, 385.]

ARBONNE (Fr.), n. A^{3}r-bo^{2}n. A place in Upper Savoy, where there is a saline spring. [A, 385.]

ARBOR (Lat.), n. f. A^{3}r'bo^{2}r. Gen., *arbo'ris.* From the root *arb-* or *urb-,* found in the Sanscr., *urvará,* fertile land. Ger., *urbar,* fertile. Celt., *arbara,* a plant with seed. [B, 52.] Fr., *arbre.* It., *albero.* Sp., *árbol.* Also written *arbos.* A tree; a plant of more or less considerable stature with a woody trunk and branches. Metaphorically, anything tree-like or branching; a term applied in anatomy to certain portions of the body, and in chemistry to an arborescent precipitate produced by the slow reduction of a metal in solution. [B.]—**A. aculeata caroliniana,** etc. [Plukenet]. The *Xanthoxylum clava Herculis.* [B, 211.]—**A. africana** [Plukenet]. The *Ochna atropurpurea.* [B, 121.]—**A. alba** [Rumphius], **A. alba Cayputi** [Rumphius]. The *Melaleuca leucadendra.* [B, 211.]—**A. alba minor** [Rumphius]. The *Melaleuca Cajuputi.* [B, 51.]—**A. aluminosa.** The *Decadia aluminosa.* [B, 121.]—**A. americana, alatis foliis, succo lacteo venenato** [Plukenet]. The *Rhus vernix.* [B, 211.]—**A. americana cucurbitifera, folio longo mucronato, fructu oblongo** [Comm.]. The *Crescentia cujete.* [B, 211.]—**A. americana venenata** [Pet.]. The *Rhus vernix.* [B, 211.]—**A. aquatica brasiliensis.** See ANINGAIBA.—**A. benivi, A. benzoinifera.** The *Styrax benzoin.* [A, 316; B, 200.]—**A. bovina** [Herm.]. The *Chionanthus zeylanica.* [B, 211.]—**A. brasilia dicta.** The tree (*Cæsalpina echinata* and other species which furnishes Brazil wood. [B, 211.]—**A. cacavi cacavifera** [Hern.], **A. cacavifera americana,** etc. [Plukenet]. The *Theobroma cacao.* [B, 211.]—**A. camphorifera, A. camphorifera japonica** [Breyn.]. The camphor-tree, *Camphora officinarum.* [B, 59, 211.]—**A. citri** [Pliny]. Probably the sandarach tree, *Callitris quadrivalvis* (seu *articulata*). [Schousboe (B, 180).]—**A. cœli** [Rumphius]. Perhaps a species of *Adenanthera* (B, 211); according to others (B, 121), a species of *Ailantus* (*A. moluccana*).—**A. conciliorum** [Rumphius]. Fr., *arbre des conseils.* Probably the *Ficus religiosa.* [B, 211.]—**A. crepitans** [Hern.]. The *Hura crepitans.* [B, 211.]—**A. Diaboli.** A name given by the Christians in Malabar to the *Ficus religiosa* because adored by the heathens there. [Rheede (B, 211).]—**A. Dianæ.** Fr., *arbre de Diane.* Ger., *Silberbaum, Dianenbaum.* It., *albero di Diana.* The silver-tree; an arborescent amalgam of silver obtained by pouring mercury into a solution of silver nitrate. [B, 3.]—**A. dracæna, A. draconis.** The *Dracæna draco.* [B, 211.]—**A. excæcans** [Rumphius]. Fr., *arbre aveuglant.* The *Excæcaria agallocha.* [B, 211.]—**A. exotica fraxini folio.** The *Acer negundo.* [B, 211.]—**A. exotica spinosa.** The *Guilandina bonducella.* [B, 211.]—**A. fabifera prima.** The *Erythrina corallodendron.* [B, 211.]—**A. farinifera.** The sago-palm. [B, 59.]—**A. febrifuga peruviana** [Ray]. The *Cinchona officinalis* of Linnæus. [B, 211.]—**A. ferrea.** 1. The *Dracæna ferrea.* 2. The *Mesua ferrea.* [B, 211.]—**A. finium regundorum** [Dalech]. The *Bixa orellana.* [B, 211.]—**A. fraxini folio.** The *Melia azederach.* [B, 211.]—**A. glutinosa** [Rumphius]. The *Cordia myxa.* [B, 211.]—**A. incana siliquis torosis.** The *Cajanus indicus,* var. *flavus.* [B, 59.]—**A. indica, A. indica flore maximo,** etc. The *Dillenia indica.* [B, 211.]—**A. indica fraxini folio.** The *Aralia spinosa.* [B, 211.]—**A. indica fructu conoide.** The *Semecarpus anacardium.* [B, 211.]—**A. indica mamei dicta** [Bauhin]. The mammee-tree, *Mammea americana.* [B, 211.]—**A. insania.** The *Caragana.* [B, 121.]—**A. Jovis.** Fr., *arbre de Jupiter.* Ger., *Zinnbaum.* The tin-tree. An arborescent crystalline deposit of metallic tin formed when zinc is added to a solution of tin chloride. [B, 3.]—**A. jucadice.** See CASSIA *lignea* and CANELLA *alba.*—**A. Judæ.** Fr., *arbre de Judas* (ou *Judée*). The Judas-tree, or *Cercis siliquastrum.* [B, 211.]—**A. Judæ americana** [Ray]. The *Cercis canadensis.* [B, 211.]—**A. kauki Indorum, floribus odoratis** [Breyn.]. The *Mimusops elengi.* [B, 211.]—**A. lactaria** [Rumphius]. The *Cerbera manghas.* [B, 211.]—**A. lanigera.** The cotton-plant. [B, 200.] See GOSSYPIUM.—**A. lanigera spinosa.** The tree formerly known as *Bombax ceiba.* [B, 59.] See ERIODENDRON *anfractuosum.*—**A. laurifolia sinensis.** See LICHI.—**A. magna serpentum** [Grimm.]. The *Strychnos colubrina.* [B, 211.]—**A. malabarica lactescens.** The tree furnishing conessi bark; the *Wrightia antidysenterica.* [B, 19, 59.]—**A. mannifera.** The tree furnishing manna. [B, 200.] See FRAXINUS.—**A. maris.** Tree of the sea; coral. [B, 50.]—**A. Martis.** Fr.. *arbre de Mars.* An arborescent grayish-white precipitate, made up of a silicate of iron and potassium carbonate, obtained by plunging a crystal of iron sulphate into a solution of a mixture of potassium carbonate and silicate. [B, 2, 38.]—**A. medullaris cerebelli.** Ger., *Markbaum des kleinen Hirns.* See A. VITÆ *cerebelli.*—**A. mexicoana, fructu castaneæ, coccifera.** The *Bixa orellana.* [B, 211.]—**A. mineralis philosophica.** See *A. Dianæ.*—**A. nigra** [Rumphius]. Probably the *Uvaria zeylanica.* [B, 211.]—**A. nucifera.** The *Andira.* [B, 59.]—**A. ovigera** [Rumphius]. The *Hernandia ovigera.* [B, 211.]—**A. palorum** [Rumphius]. A name given to trees or shrubs furnishing the different varieties of the *bois de pieux;* especially the *Euphorbia pometia.* [B, 121.]—**A. pentaphyllos virginiana.** The *Æsculus pavia.* [B, 211.]—**A. philosophorum.** Fr., *arbre des philosophes.* See *A. Dianæ.*—**A. plumbi.** See *A. Saturni.*—**A. pomifera et prunifera indica.** The cashew-tree; *Anacardium occidentale.* [B, 59.]—**A. regis** [Rumphius]. The *Hernandia sonora.* [B, 211.]—**A. saguisan** [Ray]. The *Unona* (*Uvaria*) *odorata.* [B, 211.]—**A. Sancti Thomæ.** The *Bauhinia variegata.* [B, 59.]—**A. sarmentosa fabifera** [Burm.]. The *Pterocarpus draco* of Linnæus. [B, 211.]—**A. Saturni.** Fr., *arbre de Saturne.* Ger., *Bleibaum.* The lead-tree; an arborescent precipitate of lead obtained by adding zinc to a solution of the former metal. [B, 49.]—**A. scientiæ.** The tree of knowledge spoken of in Genesis; according to Plukenet, the *Citrus decumanus;* according to others, a species of *Tabernæmontana.* [B, 19. 211.]—**A. seguisan.** See *A. saguisan.*—**A. semper viridis.** The *Thuja occidentalis.* [B, 200.]—**A. spicularum** [Rumphius]. The *Trigonostemon.* [B, 121.]—**A. spinosa.** The *Lycium afrum.* [B, 59.]—**A. spinosa indica, muricatis siliquis,** etc. The *Guilandina bonduc.* [B, 59.]—**A. stanni.** See *A. Jovis.*—**A. tinctoria.** An Ethiopian tree, used in dyeing. [B, 200.]—**A. toxicaria.** The *Antiaris toxicaria.* [B, 180.]—**A. tristis, A. tristis myrto similis.** Fr., *arbre triste.* Ger., *Trauerbaum.* The *Nyctanthes a. tristis.* [B, 211.]—**A. tristis Shardonii.** The *Elæagnus angustifolia.* [B, 211.]—**A. tulipifera, A. tulipifera virginiana** [Catesby]. The *Liriodendron tulipifera.* [B, 200, 211.]—**Arborum fungus** [Lobel]. A name given to the *Polyporus, Exidia,* and other *Fungi* growing upon trees. [B, 121.]—**A. uteri.** See A. VITÆ *uterina.*—**A. uvifera indica.** The *Michelia champaca.* [B, 211.]—**A. venenata** [Kalm.]. The *Rhus vernix* [B 211.]—**A. venenata mancinello dicta** [Ray]. The *Hippomane mancinella.* [B, 211.]—**A. vernicifera spuria silvestris angustifolia** [Kæmpfer]. The *Rhus succedanea.* [B, 211.]—**A. vernicis** [Rumphius]. The *Gluta benghas.* [B, 121.]—**A. versicolor.** See AYALLA.—**A. vinifera, A. vinifera couton juglandi similis** [Bauhin]. See COUTON.—**A. vitæ.** See the major list.—**A. vivicans.** See A. VITÆ *uterina.*—**A. zagoe amboinensis.** The *Cycas circinalis.* [B, 211.]

ARBORARIUS (Lat.), adj. A^{3}r-bo-ra(ra^{3})'ri^{2}-u^{3}s(u^{4}s). Of or pertaining to a tree. [B, 134.]

ARBOREAL, adj. A^{3}r-bo're^{2}-a^{2}l. Of or pertaining to trees; dwelling upon trees. [R. Owen (B, 116).]

ARBORÉE (Fr.), n. A^{3}r-bo-ra. The trunk of a tree. [B, 1.]

ARBOREI (Lat.), n. m. pl. A^{3}r bo're^{2}-i(e). A name given by Ruelle to *Fungi* which grow upon trees. [B, 121.] Cf. ARBORUM *fungus.*

ARBOREOUS, adj. A^{3}r-bo′re^2-u^{3}s. Lat., *arboreus*. It., *arboreo*. Of or pertaining to a tree; resembling a tree; growing upon a tree. [B, 7, 116.]

ARBORES, n. An old name for a superficial macular eruption of the skin, which subsequently goes on to ulceration; a sort of morphœa. [B, 50.]

ARBORESCENCE, n. A^{3}r″bo^{2}r-e^{2}s′e^{2}ns. Lat., *arborescentia* (from *arboresci*, to grow into a tree). Fr., *a*. The state of being arborescent; also the assumption of a tree-like form as seen in certain crystals. [B.]

ARBORESCENT, adj. A^{3}r″bo^{2}r-e^{2}s′e^{2}nt. Lat., *arborescens*. Fr., *arborescent*. 1. Of a plant, tree-like; or resembling a tree in size and in having a woody stem and branches. 2. Branching like a tree, as a. crystals. [B.]

ARBORETUM (Lat.), n. n. A^{3}r-bo-re(ra)′tu^{3}m(tu^{4}m). A grove, or plantation of trees. [B, 134.]

ARBOREUS (Lat.), adj. A^{3}r-bo′re^2-u^{3}s(u^{4}s). See ARBOREOUS.

ARBORICOLA (Lat.), n., f. of adj., *arboricolus* (*planta* understood). A^{3}r-bo-ri^{2}k′o^{2}l-a^3. A vegetable which grows upon a tree. [B, 121.]

ARBORICOLOUS, adj. A^{3}r-bo-ri^{2}k′o^{2}l-u^{3}s. Lat., *arboricolus* (from *arbor*, a tree, and *colere*, to inhabit). Fr., *arboricole*. It., *arboricolo*. Sp., *arborícolo*. Growing upon trees. [B, 121.]

ARBORIFORM, adj. A^{3}r-bo^{2}r′i^2-fo^{3}rm. Lat., *arboriformis* (from *arbor*, a tree, and *forma*, shape). Fr., *arboriforme*. Tree-shaped. [B, 116.]

ARBORISATION (Fr.), n. A^{3}r-bo^{2}r-e-za^3-si^2-o^{2}n^2. Arborization.—**A. terminale.** See *Terminal* ARBORIZATION.—**A. vasculaire.** Repeated dichotomous division of blood-vessels after the manner of a tree. [B, 93.]

ARBORISATUS (Lat.), adj. A^{3}r-bo^{2}r-i^{2}z(i^{2}s)-a(a^3)′tu^{3}s(tu^{4}s). See ARBORIZED.

ARBORIZATION, n. A^{3}r-bo^{2}r″i^{2}z-a′shu^{3}n. Fr., *arborisation*. It., *arborizazzione*. Sp., *arborización*. A tree-like figure occurring in minerals; also a similar tree-like figure produced by the injection of the capillary blood-vessels. [B, 93, 116.]—**Terminal a.** Fr., *arborisation terminale*. 1. See *Motor* END-PLATE. 2. A term also sometimes applied to the branched terminations of sensory nerves. [J.]

ARBORIZED, adj. A^{3}r″bo^{2}r-izd. Lat., *arborisatus*. Fr., *arborisé*. Having an appearance like that of a tree; a term applied to agates. [Wright (B, 116).]

ARBOR-VINE, n. A^{3}r′bo^{3}r-vin. A species of *Convolvulus*. [B, 116.]

ARBOR VITÆ (Lat.), n. f. Vi(we)′te(ta^3-e^2). Fr., *arbre de vie*. Ger., *Lebensbaum*. It., *albero di* (o *della*) *vita*. Sp., *árbol de la vida*. Tree of life. 1. In botany, a name given to various trees supposed to have the power of prolonging life, like the *Juniperus sabina*, and especially the *Thuja occidentalis*, and, in New Zealand, to the *Libocedrus doniana*. [B, 19, 78.] 2. In anatomy, an arborescent structure found in various parts of the body; especially the a. v. cerebelli (*q. v.*). [I.]—**A. v. cerebelli.** Fr., *arbre de vie du cervelet*. Ger., *Markbaum des kleinen Hirns*. An arborescent structure

THE ARBOR VITÆ CEREBELLI. (FROM RANNEY, AFTER HIRSCHFELD.)

1, 1, corpus dentatum; 2, tuber annulare; 3, section of the middle peduncle; 4, 4, 4, 4, 4, laminæ forming the arbor vitæ; 5, 5, olivary body of the medulla oblongata; 6, anterior pyramid of the medulla oblongata; 7, upper extremity of the spinal cord.

seen upon vertical section of the cerebellum, due to the peculiar arrangement of the white and gray laminæ. [I, 15.]—**A. v. uterina.** Fr., *arbre de vie de l'utérus*. Sp., *árbol de la vida uterino*. A fanciful term applied to the ridges of the canal of the cervix uteri—an anterior and a posterior median longitudinal ridge, from each of which a number of branching ridges extend obliquely upward. [A, 22.]—**Folia arboris v.** See *Ramuli arboris v.*—**Lignum arboris v.** The wood of *Thuja occidentalis*. [B, 180.]—**Ramuli arboris v.** The leafy branches of *Thuja occidentalis*, formerly official. [B, 180.]

ARBOS (Lat.), n. f. A^{3}r′bo^{2}s. See ARBOR.

ARBOUFLE D'ASTRACAN (Fr.), n. A^{3}r-bufl da^{3}s-tra^3-ka^{3}n^2. The *Cucurbita clypeata* (*melopepo*). [B, 121, 173.]

ARBOUS, n. A Languedoc name for the *Arbutus unedo*. [B, 121.]

ARBOUSE (Fr.), n. A^{3}r-buz. 1. The fruit of *Arbutus unedo*. See ARBUTUM. 2. See ARBOUFLE D'ASTRACAN. [B, 38.]

ARBOUSIER (Fr.), n. A^{3}r-bu-zi^2-a. The *Arbutus*; especially the *Arbutus unedo*, official under this title in the French Codex, which directs the root, fruit, and leaves to be employed. [B, 93, 113.]—**A. à panicules, A. arbre de corail.** The *Arbutus andrachne*. [B, 105.]—**A. commun.** The *Arctostaphylos uva ursi*. [B, 38.]—**A. des alpes.** The *Arctostaphylos alpina*. [B, 38.]—**A. des Pyrénées.** The *Arbutus unedo*. [B, 105.]—**A. raisin d'ours.** The *Arctostaphylos uva ursi*. [B, 38.]

ARBOUSSE, ARBOUSTE (Fr.), n's. A^{3}r-bus, -bust. See ARBOUSE.—**A. d'Astrakhan.** See ARBOUFLE D'ASTRACAN.

ARBRE (Fr.), n. A^{3}rbr. A tree. [B.]—**A. à baume.** Any tree with a balsamic juice. [B, 38.]—**A. à beurre.** A name given to several sapotaceous trees, especially the *Bassia butyracea*. [B, 121, 173.]—**A. à bourre.** The *Areca crinita*. [B, 38.]—**A. à brai.** A Manilla tree the resin of which is used in ship-building. [B, 38].—**A. à café.** The *Gymnocladus dioica*. [B, 121.]—**A. à calebasses.** The *Crescentia cujete*. [B, 121.]—**A. à cannelle.** The *Laurus quixos*. [B, 121, 173.] **A. à chandelles.** See *A. à suif.*—**A. à chapelet** (ou **chapelets**). 1. The *Melia azederach*. 2. The *Abrus precatorius*. [B, 173.]—**A. à chou.** The cabbage-tree (*Andira inermis*). [B, 121.]—**A. à cire.** A name given to several trees from which a vegetable wax is obtained; especially to the *Myrica cerifera* (and other species of *Myrica*), *Ceroxylon andicola*, *Rhus succedanea* (and other species of *Rhus*), *Ligustrum glabrum*, and *Hibiscus syriacus*. [B, 121.]—**A. à cordes.** A species of fig-tree growing in the Isle of Bourbon, where ropes are made from its bark. [B, 38.]—**A. à couis.** A name given to several species of *Crescentia*, especially *Crescentia cujete*. [B, 121, 173.]—**A. à dentelle.** The *Lagetta lintearia*. [B, 93.]—**A. à enivrer.** A name given to several trees which are used for poisoning or stupefying fish so that they can be more readily taken; especially applied to species of *Piscidia*, *Galega* (*G. sericea*), and *Phyllanthus*, and to the *Anamirta cocculus*. [B, 121, 173.]—**A. à éponges.** A species of *Acacia*. [B, 38.]—**A. à épreuves.** See *A. ordéal.*—**A. à fraises.** See ARBUTUS *unedo*.—**A. à franges.** The *Chionanthus virginica*. [B, 121.]—**A. à galles de l'Inde.** The *Acacia bambolah*. [B, 121.]—**A. à grives.** A name given to the *Sorbus aucuparia*, *Cratægus azarolus*, and *Pyrus aria*. [B, 38, 121.]—**A. à huile.** See *A. à l'huile.*—**A. à la cire.** See *A. à cire.*—**A. à la fièvre.** The *Vismia guianensis* and *Vismia cayennensis*. [B, 121.]—**A. à la flèche.** The *Aloe dichotoma*. [B, 121.]—**A. à la foire.** See *A. à la fièvre.*—**A. à la gale.** The *Rhus toxicodendron*. [B, 173.]—**A. à la glu.** 1. The *Ilex aquifolium*. 2. The *Hippomane biglandulosa*. [B, 121.]—**A. à la gomme.** A name given to the *Metrosideros costata*, the *Eucalyptus resinifera*, the *Acacia*, and other trees furnishing gum. [B, 121, 173.]—**A. à l'ail.** A name applied to several trees distinguished by their garlicky odor, like the *Petiveria alliacea*, and species of *Cassia*, *Seguiera*, and *Cerdana*. [B, 121.]—**A. à lait.** 1. The *Piratinera utilis*. 2. In Demerara, the *Tabernœmontana utilis*. [B, 121, 173.]—**A. à lait de Demerara.** See *A. à lait* (2d def.).—**A. à la laque du Malabar.** The *Butea frondosa*. [B, 121.]—**A. à la main.** The *Cheiranthodendron platanoides*. [B, 121.]—**A. à la mâture.** The *Uvaria longifolia*. [B, 121.]—**A. à la migraine.** The *Premna corymbosa* (*integrifolia*). [B, 173.]—**A. à lance.** The *Lansium domesticum*. [B, 93.]—**A. à la pistache.** The *Staphylea trifoliata*. [B, 121.]—**A. à la puce.** See *A. à la gale.*—**A. à laque du Malabar.** See *A. à la laque du Malabar.*—**A. à la vache.** Syn.: *lait de vache*. The *Piratinera utilis*. [B, 173.]—**A. à l'encens.** See *A. d'encens.*—**A. à l'huile.** A name applied to *Aleurites cordata*, *Terminalia catappa*, and to species of *Elæococca* and *Dipterocarpus*. [B, 121, 173.]—**A. à l'oseille.** The *Oxydendron arboreum*. [B, 173.]—**A. à Marie.** The balsam-of-Tolu tree (*Myroxylon toluifera*). [B, 121.]—**A. à pain.** The bread-fruit tree; *Artocarpus incisa*. [B, 121.]—**A. à pain des Cafres.** The *Zamia caffra*. [B, 173.]—**A. à papier.** The *Broussonetia papyrifera*. [B, 121.]—**A. à pauvre homme.** The *Ulmus campestris*. [B, 121.]—**A. à perruque** (ou **à perruques**). The *Rhus cotinus*. [B, 121.]—**A. à pipa.** A species of *Rhus*. [B, 121.]—**A. à pois Cafre.** The *Erythrina corallodendron*. [B, 121.]—**A. à poivre.** The *Schinus molle* and *Vitex agnus castus*, also a species of *Xylopia*. [B, 121.]—**A. à salade.** The *Olax*. [B, 121.]—**A. à sang.** The *Vismia cayennensis*. [B, 121.]—**A. à savon.** A name given to species of *Sapindus* and *Quillaja*. [B, 121.]—**A. à savonnettes.** The *Sapindus saponaria*. [B, 121.]—**A. à sel.** The *Areca madagascariensis*. [B, 121.]—**A. à séringue** (ou **à séringues**). The seringa-tree or caoutchouc-tree. [B, 121.] See SIPHONIA.—**A. à soie.** See *A. de soie.*—**A. à suif.** 1. The *Stillingia sebifera*. 2. The *Myristica kombo*. 3. The *Pentadesma butyraceum*. [B, 121, 173.]—**A. à tan.** The *Weinmannia tinctoria*. [B, 121.]—**A. à toucas.** A Brazilian tree with an oily fruit. The stems are used for masts. [B, 121.]—**A. au castor.** The *Magnolia glauca*. [B, 106.]—**A. au chou.** The cabbage-palm (*Oreodoxa oleracea*). [B, 121.]—**A. au corail.** 1. The *Erythrina corallodendron* of the West Indies. 2. The *Adenanthera pavonina*. [A, 385.]—**A. au kermès.** See *A. au vermillon.*—**A. au lis.** The tulip-tree (*Tulipa*) and the *Magnolia*. [B, 121.]—**A. au mastic.** The *Amyris elemifera*. [B, 173.]—**A. au poivre.** See *A. à poivre.*—**A. au raisin.** The *Staphylea* and *Coccoloba*. [B, 121.]—**A. au sagou.** The sago-tree (*Sagus Rumphii*, also other species of *Sagus* and the *Saguerus Rumphii*). [B, 121, 173.]—**A. au vermillon.** The *Quercus coccifera*. [B, 121.]—**A. au vernis.** A name applied to several trees from which varnish is obtained, especially the *Aleurites cordata*,

Terminalia catappa, and *Rhus vernix*. [B, 121.]—**A. aux anémones.** The *Calycanthus*. [B, 173.]—**A. aux écus.** See *A. aux quarante écus*.—**A. aux fraises.** The *Arbutus unedo*. [B, 173.]—**A. aux grives.** See *A. à grives*.—**A. aux lis.** See *A. au lis*.—**A. aux pois.** The *Caragana arborescens*. [B, 121.]—**A. aux quarante écus.** The *Gingko biloba*. [B, 121.]—**A. aux quatre épices.** The *Ravensara aromatica*. [B, 121, 173.]—**A. aux savonnettes.** See *A. à savonnettes*.—**A. aux savons.** See *A. à savon*.—**A. aux serpens.** The *Aristolochia* and *Ophioxylon*. ARBRISSEAU (Fr.), n. A^{3}r-bris-o. A shrub; the same as arbustum (*q. v.*). [B, 1.]

ARBROATH, n. A^{3}r'broth. Also written *Aberbrothwick*. A place in Scotland, where there is a ferruginous spring. [A, 385.]

ARBUSCLE, n. A^{3}r'bu^{3}s-sl. See ARBUSCULA (1st def.).

ARBUSCULA (Lat.), n. f. A^{3}r-bu^{3}s(bu^{4}s)'ku^2(ku)-la^3. Dim. of *arbor*. Fr., *arbrisseau*, *arbuscule*. 1. A shrub or small tree; larger than an arbustum and smaller than a tree, which it resembles in the possession of axillary buds. 2. See ANABLASTEMA *glomerulosum*. [B, 1, 198.]—**A. coralle, A. coralloides.** The *Erythrina corallodendron*. [B, 59.]—**A. gummifera brasiliensis.** The *Cadopia* or *Hypericum latifolium*. [B, 59.]

ARBUSCULAR, adj. A^{3}r-bu^{3}s'ku^2-la^{3}r. Fr., *arbusculaire*. Of, pertaining to, or having the figure of an arbuscula. [B, 116.]

ARBUSTE (Fr.), n. A^{3}r-bu^{6}st. See ARBUSTUM.

ARBUSTIVA (Lat.), n., n. pl. of adj., *arbustivus* (*vegetabilia* understood). An order of plants in one of the classifications of Linnæus comprising *Philadelphus*, *Eugenia*, *Myrtus*, *Caryophyllus*, and *Psidium*. [B, 170.]

ARBUSTIVE, adj. A^{3}r-bu^{3}s'ti^{2}v. See ARBUSTIVUS (1st def.).

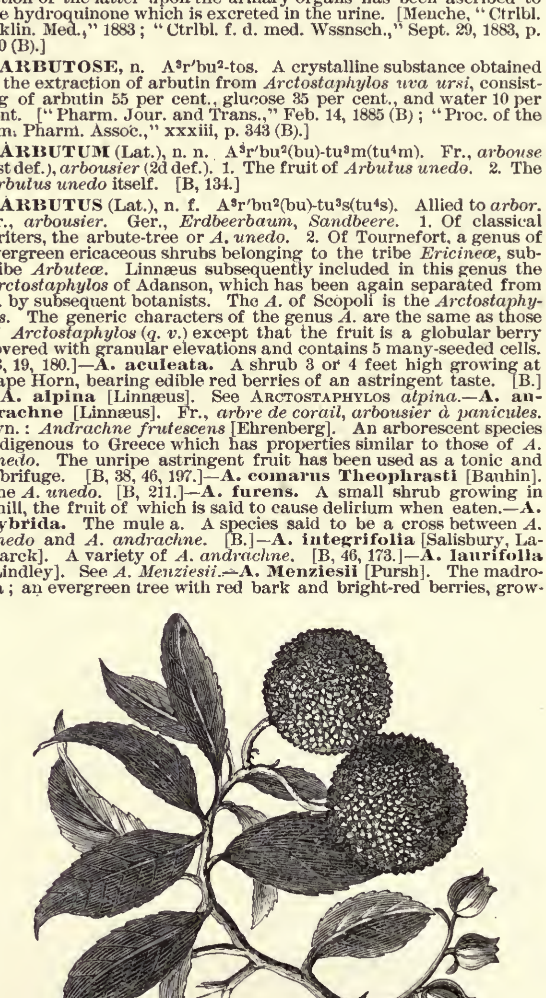
ARBUSTIVUS (Lat.), adj. A^{3}r-bu^{3}s(bu^{4}s)-ti(te)'vu^{3}s(wu^{4}s). From *arbor*. Fr., *arbustif*. 1. Covered with trees. 2. Growing upon a tree. [Columella (B, 134).] 3. Of or pertaining to a shrub (arbustum). [B.]

ARBUSTUM (Lat.), n. n. A^{3}r-bu^{3}s(bus)'tu^{3}m(tu^{4}m). Fr., *arbuste*. 1. In classical Latin, a shrubbery or vineyard; also a tree. 2. In botany, a shrub. Cf. ARBUSCULA. [B, 1, 134.]

ARBUSTUS (Lat.), adj. A^{3}r-bu^{3}s(bus)'tu^{3}s(tu^{4}s). See ARBUSTIVUS (1st def.).

ARBUTE, n. A^{3}r'bu^{2}t. See ARBUTUS *unedo*.

ARBUTEÆ (Lat.), n. f. pl. A^{3}r-bu^2(bu)'te^2-e(a^3-e^2). Fr., *arbutées*. Ger., *Arbuteen*. A tribe of ericaceous evergreen shrubs belonging to the suborder *Ericineæ*, comprising the genera *Arbutus* and *Arctostaphylos*, characterized by their fleshy fruit and caducous corolla. [B, 104.]



ARBUTEUS (Lat.), adj. A^{3}r-bu^2(bu)'te^2-u^{3}s(u^{4}s). Arbutean; of or pertaining to the *Arbutus*. [B, 134.]

ARBUTIN, n. A^{3}r'bu^2-ti^{2}n. For deriv., see ARBUTUS. Fr., *arbutine*. Ger., *Arbutin*. It., Sp., *arbutina*. A glucoside extracted from the leaves of *Arctostaphylos* (*Arbutus*) *uva ursi*. It forms colorless acicular, agglomerated crystals of a bitter taste, soluble in water, alcohol, and ether. It was formerly thought to have the formula $C_{25}H_{34}O_{14}$, but pure a. has been shown by Schiff to have the constitution $C_{12}H_{16}O_7$ = O.CH − CH.OH − CH.OH − CH.OH − CH.OH − $CH_2.OC_6H_4$.OH. [B, 3.] By heating with sulphuric acid it is converted into glucose and hydroquinone. The same change takes place in the body when a. is ingested, and the physiological action of the latter upon the urinary organs has been ascribed to the hydroquinone which is excreted in the urine. [Menche, "Ctrlbl. f. klin. Med.," 1883; "Ctrlbl. f. d. med. Wssnsch.," Sept. 29, 1883, p. 700 (B).]

ARBUTOSE, n. A^{3}r'bu^2-tos. A crystalline substance obtained in the extraction of arbutin from *Arctostaphylos uva ursi*, consisting of arbutin 55 per cent., glucose 35 per cent., and water 10 per cent. ["Pharm. Jour. and Trans.," Feb. 14, 1885 (B); "Proc. of the Am. Pharm. Assoc.," xxxiii, p. 343 (B).]

ARBUTUM (Lat.), n. n. A^{3}r'bu^2(bu)-tu^{3}m(tu^{4}m). Fr., *arbouse* (1st def.), *arbousier* (2d def.). 1. The fruit of *Arbutus unedo*. 2. The *Arbutus unedo* itself. [B, 134.]

ARBUTUS (Lat.), n. f. A^{3}r'bu^2(bu)-tu^{3}s(tu^{4}s). Allied to *arbor*. Fr., *arbousier*. Ger., *Erdbeerbaum*, *Sandbeere*. 1. Of classical writers, the arbute-tree or *A. unedo*. 2. Of Tournefort, a genus of evergreen ericaceous shrubs belonging to the tribe *Ericineæ*, subtribe *Arbuteæ*. Linnæus subsequently included in this genus the *Arctostaphylos* of Adanson, which has been again separated from *A.* by subsequent botanists. The *A.* of Scopoli is the *Arctostaphylos*. The generic characters of the genus *A.* are the same as those of *Arctostaphylos* (*q. v.*) except that the fruit is a globular berry covered with granular elevations and contains 5 many-seeded cells. [B, 19, 180.]—**A. aculeata.** A shrub 3 or 4 feet high growing at Cape Horn, bearing edible red berries of an astringent taste. [B.]—**A. alpina** [Linnæus]. See ARCTOSTAPHYLOS *alpina*.—**A. andrachne** [Linnæus]. Fr., *arbre de corail*, *arbousier à panicules*. Syn.: *Andrachne frutescens* [Ehrenberg]. An arborescent species indigenous to Greece which has properties similar to those of *A. unedo*. The unripe astringent fruit has been used as a tonic and febrifuge. [B, 38, 46, 197.]—**A. comarus Theophrasti** [Bauhin]. The *A. unedo*. [B, 211.]—**A. furens.** A small shrub growing in Chili, the fruit of which is said to cause delirium when eaten.—**A. hybrida.** The mule a. A species said to be a cross between *A. unedo* and *A. andrachne*. [B.]—**A. integrifolia** [Salisbury, Lamarck]. A variety of *A. andrachne*. [B, 46, 173.]—**A. laurifolia** [Lindley]. See *A. Menziesii*.—**A. Menziesii** [Pursh]. The madroña; an evergreen tree with red bark and bright-red berries, grow-

THE ARBUTUS UNEDO. [A, 327.]

ing upon the Pacific coast of North America. The bark is astringent, and is used in the treatment of diarrhœa and dysentery. ["Proc. of the Am. Pharm. Assoc.," xxvii (B).]—**A. mucronata** [Linnæus fil.]. See PERNETTYA *mucronata*.—**A. myrtilloides** [Humboldt]. See VACCINIUM *stamineum*.—**A. petiolaris** [Humboldt]. A Mexican species. A species of *Phalæna* living upon it furnishes a sort of silk. [B, 173.]—**A. procera** [Douglas]. See

A. Menziesii.—**A. texana** [Buckley]. A Texan and Mexican variety of *A. Menziesii.* [B, 215.]—**A. tomentosa** [Pursh]. See ARCTOSTAPHYLOS *tomentosa.*—**A. unedo** [Linnæus]. Gr., κόμαρος [Dioscorides]; Lat., *a.* [Vergil]. Fr., *arbousier* [Fr. Cod.], *arbousier des Pyrénées, olonier, fraisier en arbre.* Ger., *Erdbeerenbaum, gemeiner Erdbeerbaum.* It., *albatro, corbezzolo.* Sp., *madronero, madroño.* The strawberry-tree; arbute-tree. A shrub, sometimes attaining the size of a large tree, growing throughout Continental Europe and in Ireland, distinguished by its scarlet berries, which resemble those of the strawberry in size and appearance. The berries, called *arbutum, unedo, comarus,* and *mœmacylon,* have a mawkish sweet taste, and, although eaten in some parts of Europe, are said to cause headache, dyspeptic troubles, and, in overdose, narcotic symptoms. In Corsica, a wine having mildly narcotic properties is prepared from them. They have been employed as a diuretic and laxative and in the preparation of cooling drinks. The bark and the stiff leathery leaves are astringent, and are employed in diarrhœa and dysentery. The fruit, bark, and leaves are official in the Fr. Codex. [B, 19, 59, 180.]—**A. uva ursi** [Linnæus]. See ARCTOSTAPHYLOS *uva ursi.*—**A. vulgaris** [Burr.]. The *A. unedo.* [B, 211.]—**Fructus arbuti.** The fruit of *A. unedo.* [B, 95.]—**Oriental a.** The *A. andrachne.* [B, 138.]—**Trailing a.** 1. The *Epigœa repens.* [B, 34.] 2. The *Arctostaphylos uva ursi.* [B, 59.]

ARC, n. A³rk. See ARCH.—**Animal a.** Fr., *a. animal.* It., *arco animale.* A term applied to the parts of an animal, in certain experiments, placed between the poles of a battery. [L, 41.]—**A. anastomotique** (Fr.). See *Anastomotic* ARCH.—**A. antérieur de l'atlas** (Fr.). See *Anterior* ARCH *of the atlas.*—**A's aortiques** (Fr.). See *Aortic* ARCHES.—**A.-bois** (Fr.). See *Zygomatic* ARCH.—**Inferior temporal a.** See *Zygomatic* ARCH.—**Palato-quadrate a.** See *Palato-quadrate* ARCH.—**Superior temporal a.** See *Orbital* ARCH.

ARCADI-TEMPORO-MAXILLAIRE (Fr.), n. A³r-ka³-de-ta³m-po-ro-ma³x-i²l-la²r. See *Temporal* MUSCLE.

ARCANE (Fr.), n. A³r-ka³n. See ARCANUM.—**A. corallin.** See ARCANUM *corallinum.*—**A. cosmetique.** See ARCANUM *cosmeticum.*—**A. double.** See ARCANUM *duplicatum.*—**A. fébrifuge de Rivière.** A mixture of 2 parts of calcium phosphate and 1 part of precipitated antimony oxide. [L, 49.]

ARCANIA (Lat.), n. f. A³r-ka(ka³)'ni²-a³. Of Dumortier, an order of plants belonging to the class *Virescinia* and including the families *Equisetaceœ, Lentibulaceœ, Rhizospermeœ, Filiceœ, Ophioglosseœ,* and *Lycopodineœ.* [B, 170.]

ARCANNE, n. A³r-ka³n'. Red chalk or ruddle. [L, 84.]

ARCANSON (Fr.), n. A³r-ka³n²-so²n². Colophony; resin. [B.]

ARCANUM (Lat.), n. A³r-ka(ka³)'nu³m(nu⁴m). Fr., *arcane.* Ger., *Geheimmittel.* Sp., *arcano.* 1. Any secret preparation. 2. In alchemy, a thing secret, incorporeal, and immortal, which can only be known to man by experience; the virtue or essence of anything, which is more powerful than the thing itself. [Ruland (L, 120).]—**A. album.** See PULVIS *viennensis virgineus.*—**A. Archedeti.** See *Linimentum* CALCARIÆ *sulphuratœ.*—**A. astrale.** See under *A. specificum.*—**A. bechicum, A. bechicum Willisii.** See *Syrupus* KALI *sulphurati.*—**A. corallinum, A. corallinum Paracelsi.** An alchemical name for the red oxide of mercury on which alcohol has been burned several times to render it milder. [B, 7, 86.]—**A. cosmeticum.** Fr., *arcane cosmétique.* A mixture of 1 part of powdered talc and 2 parts of camphorated oil. [L, 85.]—**A. duplex, A. duplicatum.** Fr., *arcane double.* Sp., *arcano duplicado.* Normal potassium sulphate; so called because it was regarded as being made up of the alkaline base existing in tartar (arcanum tartari) combined with the acid principle of sulphuric acid. [B.]—**A. duplicatum catholicum.** An amulet composed of colchicum and plantain-roots. [L, 120.]—**A. duplicatum depuratum.** Potassium sulphate. [B.]—**A. duplicatum Mynsichti.** See *A. duplicatum.*—**A. epilepticum.** A name given by Stisser to the ammonio-sulphate of copper. [B.]—**A. holsaticum, A. holsteinense.** See *A. duplicatum.*—**A. joviale, A. Jovis.** A preparation made by digesting an amalgam of tin and mercury in spirit of nitre (nitric acid). [L, 104.]—**A. Ludemanni.** See ZINC *oxide.*—**A. materiale.** A principle extracted from a substance and representing its essential portion ("extractum specificum materiæ corporis vicinius"). When formed from a composite substance, *i. e.,* one composed of a moist and a dry principle (such as air and fire), the a. m. likewise consisted of a moist and a dry component ("aqua stillatitia et coagulum specificum"). [B, 50.]—**A. specificum.** An extract representing the inner principle of a substance, especially a principle peculiar to that substance and unmixed with other substances. It was regarded as less ethereal than the quintessence, and was said to have two components—one formative ("formalius"), called the *a. astrale,* and the other of a more material nature. [B, 50.]——**A. tartari, A. tartari dulce.** Old terms for normal tartrate of potassium. [B, 2.]—**A. Theophrasti.** "The quintessence of anything most high or the virtue of anything refined by a thousand exaltations." [L, 104.]—**A. vitæ.** See ELIXIR *vitœ.*

ARCATE, adj. A³r'kat. See ARCUATE.

ARCATURA (Lat.), n. f. A³r-ka³-tu²(tu)'ra³. From *arcus,* a bow. Fr., *arqure.* Ger., *Vorbügkeit.* It., *arcatura.* The condition in which the forelegs of horses are unduly curved forward. [L, 44.]

ARCÄUSBALSAM (Ger.), n. A³r-tsa'u⁴s-ba³l-za³m. See BALSAMUM *Arcœi.*

ARC-BOIS (Fr.), n. A³rk-bwa³. See CYTISUS *laburnum.*

ARCE (It.), n. A³r'cha. A cold chalybeate sulphur spring in the Campagna. [L, 124.]

ARCEAU (Fr.), n. A³r-so. 1. See ARCULUS. 2. An arch.—**A. sternal.** The lower or ventral portion of the rings of which the *Arthropoda* are formed. [L, 158.]—**A. supérieur, A. tergal.** The superior or dorsal portion of the rings of which the *Arthropoda* are formed. [L, 158.]—**A. ventral.** See *A. sternal.*

ARCEION (Lat.), n. n. A³r-si'(ka'i²)-o²n. Gr., ἄρκειον. See ARCTIUM.

ARCÉLI (Fr.), n. A³r-sa-le. The *Venus virginea.* [L, 124.]

ARCELL, n. A³r'se²l. See PARMELIA *caperata.*—**A. corker.** See PARMELIA *omphalodes.*

ARCELLI (Lat.), n. m. pl. A³r-se²l(ke²l)'li(le). Flask-shaped infusoria found by W. Lambl in the stools of children affected with enteritis. [B, 70.]

ARCELLINA (Lat.), n. n. pl. A³r-se²l(ke²l)-li(le)'na³. A suborder of the *Amœba,* comprising those in which the body is covered with a carapace. [L, 147.]

ARCENTHOS, ARCENTIS (Lat.), n's f. A³r-se²n(ke²n)'tho²s, -ti²s. See ARCEUTHIS.

ARCERIA (It.), n. A³r-cha're-a³. A locality in Italy where there are cold saline sulphur springs. [L, 124.]

ARCESTHIDA (Lat.), n. n. pl. A³r-se²s(ke²s)'thi²d-a³. Literally juniper berries, but also applied to all fruits of similar conformation and arrangement. [B.]

ARCEUTHIS, ARCEUTHOS, ARCEUTHUS (Lat.), n's f. A³r-su²(ku²)'thi²s, -tho²s, -thu³s(thu⁴s). Gen., *arceu'thidos (-dis), -ceu'thi.* Gr., ἀρκευθίς, ἄρκευθος. The juniper-tree or its fruit. [L, 50, 104.]

ARCEUTHOBIUM (Lat.), n. n. A³r-su²(ku²)-tho'bi²-u³m(u⁴m). From ἀρκευθίς, the juniper, and βιοῦν, to live, because one species is parasitic on the juniper. A genus of loranthaceous plants of the tribe *Visceœ,* separated by Bieber from the genus *Viscum.* [B, 42, 170.]—**A. camphylopodium** [Engelmann]. A species growing on black spruce-trees, found in the United States from New York to the Pacific coast and also in Mexico. ["Proc. of the Am. Pharm. Assoc.," xxvi, p. 247 (B).]

ARCH, n. A³rch. Lat., *arcus.* Fr., *arc, arcade, arceau.* Ger., *Bogen.* It., *arco, arcata.* Sp., *arco, arcada.* 1. A segment of a circle. 2. In anatomy, the curved portion of any tissue or organ, or a curve made by a nerve or vessel; applied also to the dorsal and ventral portions of the segments of articulate animals. [L.]—**Alveolar a.** Lat., *arcus alveolaris.* Fr., *arcade alvéolaire.* Ger.,

Alveolarbogen. It., *arcata alveolare.* Sp., *arcada alveolare.* The alveolar processes of the maxillæ. [L, 142.]—**Anastomotic a.** Lat., *arcus anastomoticus.* Fr., *arcade anastomotique.* Ger., *anastomotischer Bogen.* It., *arcata anastomotica.* Sp., *arcada anastomótica.* A curved vessel uniting two veins or arteries. [L, 44.]—**Anterior aortic a.** A branch of the truncus arteriosus of certain *Amphibia*, distributed to the tongue and the brain. [L, 186.]—**Anterior a. of the arm.** A plexus in front of and above the elbow, formed by a branch of the anastomotic artery of the arm and branches of the ulnar and radial recurrent arteries distributed to the joint and its surroundings. [L, 179.]—**Anterior a. of the atlas.** Lat., *arcus anterior atlantis.* Fr., *arc antérieur de l'atlas.* That portion of the atlas which is anterior to its articular surfaces. [L, 124.]—**Anterior a's of the palate.** Lat., *arcus palato-glossi.* The anterior pillars of the fauces. [L, 115.]—**Anterior carpal a.** An arterial network on the anterior aspect of the wrist, formed of twigs of the carpal branches of the radial and ulnar arteries. [L, 142.]—**Anterior hyoid a.** A general term for the tympano-hyal, stylo-hyal, epihyal, and cerato-hyal a'es. [L, 153.]—**Aortic a.** See *A. of the aorta.*—**Aortic a'es.** Fr., *arcs aortiques.* Sp., *arcos aórticos.* A term applied to the pairs of arterial vessels situated in the branchial arches of the vertebrate embryo and the adult *Branchiata*, which connect the cardiac and dorsal aortæ. In the human embryo they are five in number; the first and second pairs disappear early in fœtal life; from the third pair the carotid arteries are formed, and from the fourth the arch of the aorta and the subclavian arteries; the fifth atrophies on the right side, but on the left is developed into the pulmonary artery, the ductus arteriosus, and the aorta. In the perennibranchiate vertebrates, the a's may be nine in number, of which, however, but five persist throughout life, and from them spring the branches to the branchial tufts. [L, 13, 14, 27.]—**A'es of Corti.** See Rods *of Corti.*—**A. of Fallopius.** See *Poupart's* ligament.—**A. of the aorta.** Lat., *arcus aortæ.* Fr., *arc* (ou *arcade*, ou *crosse*) *de l'aorte.* Ger., *Aortenbogen, bogenförmige Aorte.* It., *arco dell' aorte.* The curved portion of the aorta, extending from the upper border of the left ventricle to the lower border of the body of the fourth dorsal vertebra. The ascending portion is about two inches in length and ascends toward the right to about the level of the upper border of the second costal cartilage; close to the heart it presents three small dilatations termed the "sinuses of Valsalva." The transverse portion commences at the upper border of the second costo-sternal articulation on the right side and passes from right to left, and from before backward, to the left side of the second dorsal vertebra. The descending portion extends from the termination of the transverse portion to the lower border of the body of the fourth dorsal vertebra, where it takes the name of the thoracic aorta. From the ascending portion are given off the coronary arteries of the heart, and from the transverse, the innominate, left carotid, and left subclavian arteries. [L, 142, 172.]—**A. of the colon.** Fr., *arc du colon.* See *Transverse* colon.—**A'es of the foot.** A term applied to certain a'es made up of the bones of the foot. The inner longitudinal a. is formed of the os calcis, the astragalus, the navicular, the three cuneiforms, and the first, second, and third toes, the astragalus being the key-stone. The outer longitudinal a. is formed by the os calcis, the cuboid, and the fourth and fifth toes. The transverse a., most marked in the line of the tarso-metatarsal articulations, is maintained by the wedge-shape of the bones and by the plantar ligaments. [C, 3.]—**A. of the palate.** Lat., *arcus palati.* The arch formed by the anterior pillars of the fauces. [L, 115.]—**A. of the pubes.** See *Pubic a.*—**A'es of the vertebræ.** See *Vertebral a'es.*—**A. of the zygoma.** See *Zygomatic a.*—**A.-system.** Ger., *Bogensystem.* A term applied by Meynert to the arching bundles of nerve fibres which connect different regions of a cerebral hemisphere. [I, 31.]—**Arterial a'es.** See *Aortic a'es* and *Arterial gill-a'es.*—**Arterial gill-a'es.** In the *Branchiata*, those (the lower) of the aortic a'es which contain venous blood. [L, 146.]—**Axillary a'es.** Lat., *arcus axillares.* Fibres of the latissimus dorsi which occasionally pass over the vessels and nerves in the axilla to its anterior part, where they become lost in the muscular or fibrous tissues. [L, 142.]—**Branchial a'es.** Lat., *arcus branchiales.* Fr., *arcs branchiaux.* 1. The postoral visceral a'es, especially the third, fourth, and fifth. 2. In fishes, the bony a'es which serve to support the gills; they are attached above to the base of the cranium by ligaments and cellular tissue, and below adhere to a chain of median ossicles. The three first are made up of the hypobranchial, cerato-branchial, and epibranchial bones, the fourth of the cerato-branchial, epibranchial, and pharyngo-branchial bones, and the fifth of the cerato-branchials alone. [L, 27.]—**Cephalic a'es.** Fr., *arcs céphaliques.* See *Postoral a'es.*—**Cervical a'es.** Fr., *arcs cervicaux.* See *Posthyoid* and *Aortic a'es.*—**Cotylo-pubic a.** See *Pubic a.*—**Cotylo-sacral a.** Syn.: *standing a.* The a. formed by the sacrum and the bony structures extending to the coxo-femoral articulations, the sacrum being the keystone. [J. Wood (L, 133).]—**Crural a.** Lat., *arcus cruralis.* Fr., *arc crural.* It., *arcata crurale.* Sp., *arco crural.* See *Poupart's* ligament.—**Cubital a.** The curved termination of the anterior carpal artery at the knee, in many quadrupeds. [L, 13.]—**Deep crural a., Deep femoral a.** Lat., *arcus cruralis profundus.* A fibrous band, arising apparently from the transversalis fascia, which arches across the crural sheath, and is attached to the centre of Poupart's ligament and the pectineal line. [L, 172.]—**Deep palmar a.** Lat., *arcus palmaris profundus.* Fr., *arcade palmaire profonde.* It., *arcata palmare profonda.* The a. in the palm of the hand formed by the union of the termination of the radial artery and the deep branch of the ulnar. It lies upon the interosseous muscles at the bases of the metacarpal bones, with its convexity downward, and gives off the palmar interosseous arteries and three perforating branches to the dorsal interosseous arteries. [L, 172.]—**Dental a.** Lat., *arcus dentalis.* Fr., *arcade dentaire.* 1. The alveolar a. 2. The curved line formed by the teeth. [L, 41.]—**Dorsal a. of the arm.** A plexus formed by branches of the anastomotic artery of the arm and the profunda and radial and ulnar recurrent arteries, above and below the elbow joint on its dorsal aspect. [L, 179.]—**Dorsal a. of the foot.** Lat., *arcus dorsalis pedis.* Fr., *arcade dorsale du tarse.* An anastomotic a. on the dorsum of the foot, formed by the union of branches from the tarsal and metatarsal branches of the dorsal artery of the foot. [L, 31.]—**Dorsal carpal a.** See *Posterior carpal a.*—**Dorsal vertebral a.** See *Neural a.*—**Epencephalic a.** The bones covering the epencephalon, which in man unite to form the occipital bone, regarded as the neural a. of the occipital vertebra. [L, 27.]—**Facial a.** Fr., *arc facial.* The first postoral arch. [L, 158.]—**Femoral a.** Lat., *arcus femoralis.* Fr., *arcade fémorale.* It., *arcata femorale.* See *Poupart's* ligament.—**Frontohæmal a.** See *Tympano-maxillary a.*—**Gill-a'es.** See *Branchial a'es.*—**Gluteal a.** An opening in the gluteal aponeurosis for the passage of the gluteal vessels and nerves. [L, 45.]—**Hæmal a.** The pre-axial portion of a vertebra, which surrounds a portion of the vascular system, organs of digestion, etc. It is made up of the centrum, the pleurapophyses, hæmapophyses, hæmal spine, and occasionally parts called parapophyses. [L, 27.]—**Hyoid a.** 1. The second postoral arch, reckoning from above downward. It gives origin to the lesser cornu of the hyoid, the styloid bone, and the stapes. [L, 153.] 2. See *Stylo-hyoid a.*—**Inferior maxillary a.** See *Mandibular a.*—**Inferior vertebral a., Infravertebral a.** See *Hæmal a.*—**Inguinal a.** See *Poupart's* ligament.—**Ischiadic a.** The space included between the posterior borders of the ischia of the horse. [L, 13.]—**Ischio-pubic a.** The a. formed by the ischio-pubic rami and the body of the os pubis. [J. Wood (L, 133).]—**Ischio-sacral a.** Syn.: *sitting a.* An a. formed by the sacrum, the descending rami of the ischia, and the intervening ilia. [J. Wood (L, 133).]—**Jaw a.** See *Mandibular a.*—**Jugal a.** See *Zygomatic a.*—**Laryngeal a.** An embryonic a. formed out of a membranous plate running down from the lower part of the skull, from which are developed the inferior constrictor muscle, the cartilages of the larynx, the upper part of the trachea, and the thyreoid body. [G. W. Callender, "Philosoph. Trans.," clxi, p. 119 (L).]—**Lateral inferior a'es of the skull.** A term applied to the bones inclosing the nose, mouth, and pharynx. [L, 142.]—**Lateral superior a'es of the skull.** A term applied to the bones inclosing the cerebrum, cerebellum, and medulla oblongata. [L, 142.]—**Limb a'es.** The pectoral and pelvic a'es. [L, 12.]—**Lingual a.** See *Hyoid a.*—**Mandibular a.** 1. The uppermost of the postoral arches. It forms the posterior margin of the mouth in the embryo, and from it are developed the lower jaw, the incus, and the malleus of mammals, and the quadrate bone in reptiles and birds. 2. See *Tympanomaxillary a.* [L, 27.]—**Maxillary a.** See *Mandibular a.* and *Palato-maxillary a.*—**Mesencephalic a.** A bony a. formed by the basisphenoid, alisphenoid, parietal, and mastoid bones, and regarded as the neural a. of the parietal vertebra. [L, 27.]—**Middle aortic a.** An a. formed by branches of the truncus arteriosus of certain *Amphibia*, distributed to the limbs and the abdominal viscera. [L, 186.]—**Nasal a.** An anastomotic vessel connecting the two frontal veins. [L, 172.]—**Naso-hæmal a.** See *Tympano-mandibular a.*—**Neural a.** 1. The post-axial portion of a vertebra, which incloses the medullary canal. It is formed by the neurapophyses and neural spine, which are sometimes separated by the diapophyses. [L, 27.] 2. In the higher *Annelida*, that half of a segment to which a branchia is attached. [L, 143.]—**Neuro-frontal a.** See *Prosencephalic a.*—**Neuro-nasal a.** See *Rhinencephalic a.*—**Neuro-occipital a.** See *Epencephalic a.*—**Neuro-parietal a.** See *Mesencephalic a.*—**Occipital a.** An a. formed by plates of cartilage sent up from the trabeculæ and the hard palate in some of the *Marsupiobranchii*, which unite above the brain and furnish the side walls of the cranium. [L, 200.]—**Occipito-hæmal a.** See *Pectoral a.*—**Orbital a., Orbitar a.** Lat., *arcus orbitalis.* Fr., *arcade orbitale.* Ger., *Orbital-Bogen.* It., *arcata orbitale.* Sp., *arcada orbitaria.* The upper margin of the orbit. [L, 31.]—**Osteoblastic a'es.** Ger., *Osteoblastenbogen.* The complete or incomplete a'es formed by the osteoblasts of developing bone, which spring from the bony trabeculæ already formed and finally become bony and form a part of the Haversian system. [I, 35.]—**Palatine a.** See *A. of the palate.*—**Palato-maxillary a.** A term applied to a more or less complete bony a. made up of the palatine, maxillary, and premaxillary bones, or their analogues, and regarded as the hæmal a. of the nasal vertebra. [L, 27.]—**Palato-pterygoid a.** A term sometimes applied to the palato-pterygoid bone in certain fishes, on account of its arched shape. [L, 12.]—**Palato-quadrate a.** A curved surface in the head of fishes, formed by the quadrate and palatine bones or their cartilaginous representatives and the skeletal parts connecting them. [L, 12.]—**Parieto-hæmal a.** See *Styloid a.*—**Pectoral a.** Syn.: *shoulder girdle.* A term applied to the scapulæ and clavicles, regarded as the hæmal a. of the occipital vertebra. [L, 27.]—**Pelvic a.** A term applied to the bones of the pelvis, regarded as the hæmal a'es of the sacral vertebræ. [L, 12.] See also *Cotylo-sacral a.*, *Cotylo-pubic a.*, *Ischio-sacral a.*, and *Ischio-pubic a.*—**Pharyngeal a'es.** The fifth pair of branchial a'es. [L, 27.]—**Plantar a.** Lat., *arcus plantaris.* Fr., *arc plantaire.* Ger., *Sohlenbogen.* It., *arcata plantare.* An arterial a. formed by the union of the external plantar artery and a communicating branch of the dorsal artery of the foot. It extends from the base of the metatarsal bone of the little toe to the back part of the first interosseous space, with its convexity forward. It gives off three perforating arteries and branches which supply the three outer toes and half of the second toe. [L, 172.]—**Posterior aortic a.** In certain of the *Amphibia*, an a. formed by the branches of the truncus arteriosus that are distributed to the lungs and to the dorsal integument. [L, 186.]—**Posterior a. of the atlas.** Lat., *arcus posterior atlantis.* Fr., *arc postérieur de l'atlas.* Ger., *hinterer Bogen des Trägers.* That portion of the atlas which lies posterior to its articular surfaces. [L, 124, 172.]—**Posterior a. of the palate.** Lat., *arcus palatinus posterior.* The a. formed by the posterior pillars of the fauces. [L, 115.]—**Posterior carpal a.** Lat., *arcus carpi dorsalis.* An arterial a. made by the union of the posterior carpal branch of the radial artery and a similar one of the ulnar. It is

situated upon the posterior surface of the carpus and gives off the dorsal interosseous arteries to the third and fourth interosseous spaces, also branches which anastomose with the anterior interosseous artery of the forearm. [L, 142.]—**Post-hyoid a'es.** The fourth and fifth of the postoral a'es. [A, 23.]—**Postoral a'es, Postoral visceral a'es.** Fr., *arcs branchiaux.* Ger., *Kiemenbogen.* Sickle-shaped ridges which spring from each side of the anterior aspect of the head of all vertebrate embryos at an early period of their development. In the higher vertebrates they are four or five in number, and serve for the development of the lateral and lower parts of the face, the lower jaw, the hyoid apparatus, the outer ear, and the tympano-Eustachian passages. In the *Branchiata* they may be nine in number, and they develop into the gills. Within each a. is one of the aortic a'es, and between them are the branchial clefts. [L, 27, 146.]—**Post-sternal a'es.** See *Postoral a'es.*—**Preoral a'es.** See *Facial* PLATES.—**Presternal a's.** See *Preoral a'es.*—**Prosencephalic a.** A bony a. formed by the presphenoid, orbitosphenoid, and frontal bones, regarded as the neural a. of the fronto-mandibular vertebra. [L, 27.]—**Pubic a.** Lat., *arcus pubis.* Fr., *arcade pubienne.* Ger., *Schambogen.* It., *arcata pubica.* Sp., *arco pubiano.* The a. formed by the ascending rami of the pubes and the lower surface of its body. [L, 27.]—**Radial a.** See *Deep palmar a.*—**Rhinencephalic a.** A bony a. formed by the vomer and the prefrontal and nasal bones, regarded as the neural a. of the nasal vertebra. [L, 27.]—**Scapular a., Scapulo-clavicular a., Scapulo-coracoid a.** See *Pectoral a.*—**Senile a.** See ARCUS *senilis.*—**Sitting a.** See *Ischio-sacral a.*—**Standing a.** See *Cotylo-sacral a.*—**Stylo-hyoid a.** A term applied to the a. formed by the stylo-hyal, epihyal, cerato-hyal, basihyal, glosso-hyal, and uro-hyal bones, regarded as the hæmal a. of the parietal vertebra. [L, 27.]—**Subaxial a'es.** See *Postoral a'es.*—**Subcarpal a.** The analogue in many quadrupeds of the deep palmar a. of man. [L, 13.]—**Sub-central a. of a vertebra.** See *Hæmal a.*—**Sub-ocular a.** 1. In certain of the *Branchiata*, an a. formed by the union of a process springing from the anterior end of the hard palate and one springing from the parachordal plate just beneath the auditory capsule. [L, 200.] 2. See *Zygomatic a.*—**Sub-orbital a.** See *Zygomatic a.*—**Subpubic a.** See *Pubic a.*—**Superciliary a'es.** Lat., *arcus superciliares.* Fr., *arcades surcilières.* Ger., *Augenbrauenbogen.* It., *arcate sopraciliari.* Sp., *arcadas sobreciliares.* See *Superciliary* RIDGES.—**Superficial palmar a.** Lat., *arcus palmaris superficialis.* Fr., *arcade palmaire superficielle.* Ger., *oberflächlicher Hohlhandbogen.* It., *arcata palmare superficiale.* The continuation of the ulnar artery across the palm of the hand. It lies upon the anterior annular ligament, the muscles of the little finger, the tendons of the flexor muscles, and the divisions of the radial and ulnar nerves, with its convexity downward, and anastomoses with a branch from the radialis indicis artery. Its principal branches are four in number, which are distributed to the ulnar side of the little finger and the adjoining sides of the little, ring, middle, and index fingers. [L, 142.]—**Superior vertebral a.** See *Neural a.*—**Supracarpal a.** The anastomosis between the epicondylar artery and branches of the posterior radial arteries in many quadrupeds, analogous to the superficial palmar a. of man. [L, 13.]—**Supraorbital a.** Lat., *arcus supraorbitalis.* See *Orbital a.*—**Supravertebral a.** See *Neural a.*—**Temporal a.** See *Zygomatic a.*—**Tergal a.** See *Dorsal a.*—**Thyreo-hyal a., Thyreo-hyoid a.** The third of the postoral a'es. From it are developed the body and greater cornua of the hyoid bone. [L, 171.]—**Tongue a.** See *Hyoid a.*—**Trabecular a.** An a. formed by the union of the middle trabeculæ of the skull, in which lie the pituitary body and the infundibulum. [L, 202.]—**Tympano-mandibular a.** A bony a. in fishes, formed by the epitympanic, mesotympanic, pretympanic, and hypotympanic bones and the articular, splenial, angular, and opercular bones, regarded as the hæmal a. of the frontal vertebra. [L, 27.]—**Ventral a.** In the *Annelida*, the ventral half of a segment. [L, 147.]—**Ventral vertebral a.** See *Hæmal a.*—**Vertebral a.** A term used indifferently for a neural or a hæmal a. [L.]—**Visceral a'es.** Lat., *arcus viscerales.* Fr., *arcs viscéraux.* Ger., *Visceralbogen.* It., *archi viscerali.* See *Postoral a'es.*—**Zygomatic a.** Lat., *arcus zygomaticus.* Fr., *arcade zygomatique.* Ger., *Jochbogen.* It., *arcata zigomatica.* Sp., *arcada zigomática.* The bony a. formed by the zygomatic process of the temporal bone and that of the malar bone. [L, 172.]

ARCHÆISM, n. A^{3}r-ke'i^{2}zm. Fr., *archéisme.* The doctrine of an archæus (*q. v.*). [L, 43.]

ARCHÆOPTERYGES (Lat.), n. f. pl. A^{3}rk(a^{3}rch^2)''e(a^3-e^2)-o^{2}p-te^{2}r'i^2(u^6)-jez(ge^{2}s). From ἀρχαῖος, primitive, and πτερύξ, a wing. Primeval birds. [L, 173.]

ARCHÆOSTOMA (Lat.), n. n. A^{3}r-ke^2(ch^{2}a^3-e^2)-o^{2}st'o^2-ma^3. Gen., *archæostom'atos* (*-tis*). From ἀρχαῖος, primitive, and στόμα, the mouth. See BLASTOPORE. In the pl., *Archæostomata*, a division of the *Metazoa* in which the aperture in the gastrula becomes the permanent mouth. [L, 121.]

ARCHÆOSTOMATOUS, adj. A^{3}r-ke-o-sto^{2}m'a^{2}t-u^{3}s. Persistent in the form of a mouth (said of a gastrula when the blastopore does not entirely close up). [L, 66.]

ARCHÆUS (Lat.), adj. A^{3}rk(a^{3}rch^2)-e'(a^3'e^2)-u^{3}s(u^{4}s). Gr., ἀρχαῖος. Fr., *archée* (2d and 3d def's). Ger., *Archäus* (2d and 3d def's). 1. Original, ancient, fundamental (said of ancient medicine in general, of the natural state before the advent of disease, and of the normal condition of a part). [Hippocrates (A, 325).] 2. As a n., Van Helmont's term for the original vital principle (the ruling principle) of the organism. [A, 300.] 3. An alchemical name for the molten central part of the earth. [A, 300.]—**A. cælestis.** Fr., *archée céleste.* A name given by Paracelsus to *nostoc* (*q. v.*). [B, 121.]

ARCHANGEL, n. A^{3}rk-an'je^{2}l. A name given to the genera *Archangelica* and *Lamium.* [B, 19.]

ARCHANGELICA (Lat.), n. f. A^{3}rk(a^{3}rch^2)-a^{2}n(a^{3}n^2)-je^{2}l-(ge^{2}l)'i^{2}k-a^3. From ἀρχάγγελος, an archangel, because held to be preeminently efficacious. [B, 34.] Ger., *Engelwurz.* Sp., *arcanjélica.* A genus of umbelliferous herbs separated by Hoffmann from the Linnæan genus *Angelica*, and distinguished from it by the dorsal ribs being thick and carinate and the seed being separated from the pericarp, which is covered with oil-tubes. [B, 34.]—**A. atropurpurea** [Hoffmann]. Syn.: *Angelica atropurpurea* [Linnæus] (seu *triquinata* [Michaux]). A species growing throughout the northern and western United States. An herbaceous plant 4 to 6 feet in height with dark-purple furrowed stalk and greenish-white flowers surrounded by involucels of setaceous bracts less than half as long as the pedicels. It has a strong odor and aromatic taste, and the juice of the root when fresh is acrid, but loses its acridity on drying. The whole plant was formerly official, and is used for the same purposes as the *A. officinalis.* [B, 5, 34.]—**A. decurrens** [Ledebour]. A species closely resembling *A. officinalis* growing in northern Asia. [B, 180.]—**A. Gmelini** [De Candolle]. A species distinguished by the obtuse sub-equal ribs of its mericarp with scarcely distinguishable alæ. It is found on the New England sea-coast and in Kamtschatka, where it is used as a substitute for parsley. [B, 34, 180.]—**A. hirsuta** [Torrey and Gray]. A species 3 to 5 feet in height, growing in the Atlantic States, distinguished by its striate stem, the upper part of which, together with the umbels, is tomentous-hirsute at the summit. It is sometimes used to replace the *A. officinalis.* [B, 34.]—**A. litoralis** [Agardh]. Ger., *uferständige Engelwurz.* A variety of *A. officinalis* (*A. officinalis*, var. β [Mert. and Koch]), found on river-banks in northern Europe. [B, 180.]—**A. officinalis** [Hoffmann]. Ger., *echte* (oder *edle*, oder *gebräuchliche*) *Engelwurz*, *Brustwurz.* Syn.: *Angelica a.* [Linnæus] (seu *officinalis* [Mönch], seu *sativa* [Miller]). Garden angelica; a species growing in damp localities in central and northern Europe, and also said to occur in Labrador, distinguished by its smooth, round, striped stalk and by the bipinnate leaves, the segments of which are lobate and acutely serrate and the terminal segment divided into 3 lobes. The fruit, or seeds as they are commonly called, are ash-colored, oval, obtuse, and 2 or 3 lines in length. The whole plant is aromatic, has a powerful fragrant odor and a sweetish, afterward bitter and aromatic, taste. It contains angelic, valerianic, malic, and tannic acids, resin, sugar, starch, and a bitter principle. Its root, leaves, and fruit—*radix*, *herba*, *et semen angelicæ* (seu *angelicæ hortensis*, seu *angelicæ sativæ*, seu *angelicæ archangelicæ*, seu *costi nigri*, seu *podagrariæ*, seu *smyrnii*)—have been official, and are used as an aromatic tonic, diaphoretic, diuretic, and carminative. The fruit is still official in the Fr. Codex, and the root is the *radix angelicæ* (*q. v.* for description) of the Ger. Ph. [B, 5, 34, 180.]—**A. sativa** [Fries]. The cultivated variety of *A. officinalis*, by some regarded as a distinct species. [B, 81.]—**A. triquinata.** See *A. atropurpurea.*—**Radix archangelicæ.** See *Radix* ANGELICÆ.

ARCHANGELICUS (Lat.), adj. A^{3}rk(a^{3}rch^2)-a^{2}n(a^{3}n^2)-je^{2}l-(ge^{2}l)'i^{2}k-u^{3}s(u^{4}s). Pertaining to the genus *Archangelica.* [L, 50.]

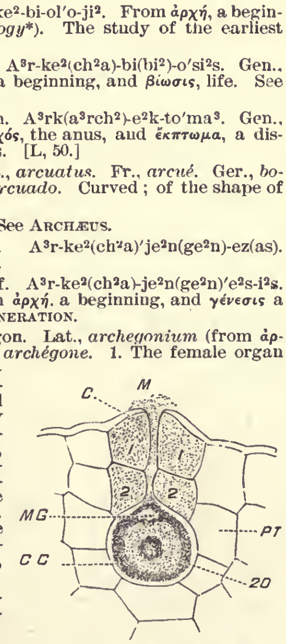
ARCHE (Lat.), n. f. A^{3}r'ke(ch^{2}a). Gr., ἀρχή. The origin, starting-point, or initial stage of a disease. [A, 322.]

ARCHE (Fr.), n. A^{3}rsh. See ARCH.

ARCHEBIOLOGY, n. A^{3}r-ke^2-bi-ol'o-ji^2. From ἀρχή, a beginning, βίος, life, and λόγος (see *-logy**). The study of the earliest forms of life. [L, 63.]

ARCHEBIOSIS (Lat.), n. f. A^{3}r-ke^2(ch^{2}a)-bi(bi^2)-o'si^{2}s. Gen., *archebio'seos* (*-sis*). From ἀρχή, a beginning, and βίωσις, life. See *Spontaneous* GENERATION.

ARCHECPTOMA (Lat.), n. n. A^{3}rk(a^{3}rch^2)-e^{2}k-to'ma^3. Gen., *archecptom'atos* (*-tis*). From ἀρχός, the anus, and ἔκπτωμα, a displacement. Prolapse of the anus. [L, 50.]



ARCHED, adj. A^{3}rchd. Lat., *arcuatus.* Fr., *arcué.* Ger., *bogenförmig.* It., *arcuato.* Sp., *arcuado.* Curved; of the shape of an arch. [L.]

ARCHÉE (Fr.), n. A^{3}r-ka. See ARCHÆUS.

ARCHEGENES (Lat.), adj. A^{3}r-ke^2(ch^{2}a)'je^{2}n(ge^{2}n)-ez(as). Gr., ἀρχηγενής. See ARCHEGONOS.

ARCHEGENESIS (Lat.), n. f. A^{3}r-ke^2(ch^{2}a)-je^{2}n(ge^{2}n)'e^{2}s-i^{2}s. Gen., *archegene'seos* (*-sis*). From ἀρχή. a beginning, and γένεσις a formation. See *Spontaneous* GENERATION.

ARCHEGONE, n. A^{3}r'ke^2-gon. Lat., *archegonium* (from ἀρχέγονος [see ARCHEGONOS]). Fr., *archégone.* 1. The female organ in the higher cryptogams (*Bryophyta* and *Pteridophyta*). It consists essentially of a flask-shaped cavity with a long neck, lined by a single layer of cells and inclosing a naked protoplasmic mass, the germ-cell. The latter is fecundated by the sperm-cells or spermatozoids which pass down the neck of the archegone cavity. 2. A name given by Sachs to the secondary embryo sac of gymnosperms. See under SAC. [B, 19, 75.]

LONGITUDINAL SECTION OF AN ARCHEGONE. (AFTER CAUVET.)

PT, the prothallue; *CC*, the central cellule; *ZO*, the oosphere; *MG*, its germinal spot: *C*, canal of the archegone; 1, 2, cells surrounding the canal; *M*, mucilage resulting from the liquefaction of the median cellule of the canal.

ARCHEGONIAL, adj. A^{3}r-ke^2-go'ni^2-a^{2}l. Relating to an archegonium. [L, 63.]

ARCHEGONOS (Lat.), adj. A^{3}r-ke^{2}g(ch^{2}e^{2}g)'o^{2}n-o^{2}s. Gr., ἀρχέγονος (from ἀρχή, a beginning, and γίγνεσθαι, to come into existence). Lit., primeval, primitive, original; as applied to diseases, acute. [A, 322.]

ARCHEGOSAURIA (Lat.), n. n. pl. A^{3}r''ke^2(ch^{2}a)-go(go^2)-sa^4'(sa^3'u^4)-ri^2-a^3. From ἀρχηγός, primitive, and σαύρα, a lizard. Primitive (extinct) saurians. [L, 173.]

ARCHÉISME (Fr.), n. A^{3}r-ka-i^{2}zm. See ARCHÆISM.

ARCHEL, n. A^{3}r'ke^{2}l. See ARCHILL.—**Auvergne a., Ground a.** See LECANORA *parella*.

ARCHELL, n. A^{3}r'ke^{2}l. See ARCHILL.

ARCHELMINTHES (Lat.), n. f. pl. A^{3}r-ke^{2}l(ch^{2}e^{2}l)-mi^{2}n'thez-(the^{2}s). From ἀρχή, a beginning, and ἕλμινς, a worm. Ger., *Urwürmer.* The primeval worms, *i. e.*, those which are extinct. [L, 173.]

ARCHELOGY, n. A^{3}r-ke^{2}l'o-ji^2. Lat., *archelogia* (from ἀρχή, a beginning, and λόγος, understanding). Fr., *archelogie.* The study of the fundamental principles of anthropology. [A, 301.]

ARCHEMY, n. A^{3}r'ke^{2}m-i^2. Lat., *archimia.* Fr., *archimie.* The transmutation of metals. [Libavius (L, 50).] Cf. ALCHEMY.

ARCHENA (Sp.), n. A^{3}r-cha'na^3. A Spanish town in the province of Murcia, with warm feebly alkaline carbonated springs, the water of which is drank and used for bathing. [Rotureau (L, 87).]

ARCHENAS (Ar.), n. The juniper. [L, 105.]

ARCHENCEPHALA (Lat.), n. n. pl. A^{3}rk(a^{3}rch^2)-e^{2}n-se^{2}f-(ke^{2}f)'a^3-la^3. From ἄρχειν, to govern, and ἐγκέφαλος, the brain. Fr., *archencéphales.* A name given by Owen to the group of mammals which includes man alone. [B, 28.]

ARCHENDA, ARCHENDE, n's. From Ar., *al-kenda.* A powder prepared from the leaves of a species of *Ligustrum*, applied to the feet by the Egyptians after bathing, also to prevent sweating and fœtor [Prosper Alpinus (L, 53)]; powdered henna. [B, 121.]

ARCHENTERIC, adj. A^{3}rk-e^{2}n-te^{2}r'i^{2}k. Of or relating to the archenteron. [B, 146.]

ARCHENTERON (Lat.), n. n. A^{3}rk(a^{3}rch^2)-e^{2}n'te^{2}r-o^{2}n. From ἀρχή, a beginning, and ἔντερον, an intestine. Fr., *archentéron.* Ger., *Urdarm.* The primitive alimentary cavity of the embryo; the cavity of the gastrula. [A. Thomson (A, 5); A, 385.]

ARCHEOSTIS (Lat.), n. f. See ARCHEZOSTIS.

ARCHEPHYCEÆ (Lat.), n. f. pl. A^{3}rk(a^{3}rch^2)-e^2-fi^{2}s(fu^{6}k)'-e^2-e(a^3-e^2). Haeckel's term for the protophytes. [L, 173.]

ARCHEPIN, n. A Mexican gum, used to cure scorpions' bites and as a cement. ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 768 (B).]

ARCHESPERMS, n. pl. A^{3}r'ke^2-spu^{5}rmz. Lat., *archespermæ.* See ARCHISPERMÆ.

ARCHESPORIUM (Lat.), n. n. A^{3}rk(a^{3}rch^2)-e^2-spo'ri^2-u^{3}m-(u^{4}m). In botany, the layer of cells constituting the pollen-sac. [B, 229.]

ARCHET (Fr.), n. A^{3}r-sha. Ger., *Wippe* (2d def.). It., *archetto.* 1. See CRADLE. 2. An instrument like a jeweler's bow, formerly used to rotate the drill in the operation of lithotrity. [A, 385.]

ARCHETYPAL, adj. A^{3}rk-e^{2}t'i^{2}p-a^{2}l. See ARCHETYPICAL.

ARCHETYPE, n. A^{3}r'ke^2-tip. Gr., ἀρχέτυπον (from ἀρχή, a beginning, and τύπος, a type). Lat., *archetypum.* Fr., *archétype.* Ger., *Archetyp.* It., *archetipo.* Sp., *arquetipo.* An abstract conception of an original type or pattern on which a group of animals or plants or a system of organs is assumed to have been constructed, and to which their various modifications may be referred. [A, 385; L, 108.]

ARCHETYPICAL, adj. A^{3}rk-e^2-ti^{2}p'i^{2}k-a^{2}l. Fr., *archétype.* Ger., *archetypisch.* Relating to or of the nature of an archetype. [L, 108.]

ARCHEUS (Lat.), adj. A^{3}rk(a^{3}rch^2)-e(a)'u^{3}s(u^{4}s). See ARCHÆUS.

ARCHEZOA (Lat.), n. n. pl. A^{3}rk(a^{3}rch^2)-e^2-zo'a^3. From ἀρχή, a beginning, and ζῷον, a living being. The simplest and most ancient primary forms of the *Ovularia*; the extinct animal *Monera* and *Amœbæ* and the animal *Synamœbæ.* [L, 173.]

ARCHEZOSTIS (Lat.), n. f. A^{3}rk(a^{3}rch^2)-e^2-zo^{2}s'ti^{2}s. An ancient name for the white bryony, so called because its tops or tendrils bind themselves around anything within their reach. [L, 104.]

ARCHIAMPHIASTER (Lat.), n. m. A^{3}rk(a^{3}rch^2)''i^2-a^{2}m-(a^{3}m)-fi^2-a^{2}st(a^{3}st)'u^{5}r(e^{2}r). From ἀρχή, a beginning (see also AMPHIASTER). A term proposed by Whitman for the first nuclear spindle, or amphiaster, in maturing ova. [Whitman, "Quart. Jour. of Micr. Sci.," 1878, p. 215 (J).]

ARCHIATER, ARCHIATROS (Lat.), n's m. A^{3}rk(a^{3}rch^2)-i^2-a(a^3)'tu^{5}r(te^{2}r), -tro^{2}s. Gr., ἀρχίατρος (from ἀρχός, a chief, and ἰατρός, a physician). Fr., *archiatre.* Ger., *Oberarzt.* It., *archiatro.* Sp., *arquiatro.* A title formerly used to designate the physician to a monarch, but afterward applied to any physician occupying an exalted official position. [A, 385.]

ARCHIBLAST, n. A^{3}rk'i^2-bla^{3}st. From ἀρχός, a chief, and βλαστός, a germ. Fr., *archiblaste.* Ger., *Archiblast, Hauptkeim* [His], *Keimschicht, Keimscheibe, Keimhügel.* Syn.: *discus proligerus* [von Baer], *cicatricula* (in birds' eggs), *germinal disc, neuroblast.* His's term for a small, whitish, circular granular areola that surrounds and incloses the germinal vesicle of the ovarian ovum. After fecundation, it becomes the blastoderm (*q. v.*). The term is sometimes used also as synonymous with epiblast. [A, 4, 8, 15.]

ARCHIBLASTIC, adj. A^{3}r-ki^2-bla^{2}s'ti^{2}k. Ger., *archiblastisch.* Pertaining to the archiblast or to the archiblastula. [L, 146.]

ARCHIBLASTULA (Lat.), n. f. A^{3}r-ki^2(ch^{2}i^2)-bla^{2}s(bla^{3}s)'tu^2-(tu)-la^3. From ἀρχός, a chief (see also BLASTULA). Haeckel's term for a blastula (*q. v.*) in the stage of a simple sac the wall of which consists of a single layer of similar cells. [L, 146.] See Fig. 4, plate i.

ARCHICARIDÆ (Lat.), n. f. pl. A^{3}rk(a^{3}rch^2)-i^2-ka^{2}r(ka^{3}r)'i^{2}d-e(a^3-e^2). From ἀρχή, a beginning, and καρίς, a prawn or shrimp. The primeval crabs. [L, 173.]

ARCHICARP, n. A^{3}r'ki^2-ka^{3}rp. Lat., *archicarpium* (from ἀρχή, a beginning, and καρπός, a fruit). A general name for any plant-cell which is capable of fertilization by sexual processes and development into a fruit or a new plant. [B, 54.]

ARCHICUS (Lat.), adj. A^{3}r'ki^2(ch^{2}i^2)-ku^{3}s(ku^{4}s). Gr., ἀρχικός. Properly, primary, principal; used improperly (as if from ἀρχός, the anus) as signifying relating to the rectum. [L, 50.]

ARCHICYTULA (Lat.), n. f. A^{3}r-ki^2(ch^{2}i^2)-si^{2}t(ku^{6}t)'u^2(u)-la^3. From ἀρχός, a chief, and κύτος, a hollow. Haeckel's term for a fertilized egg-cell in which a nucleus has again become evident. [L, 146.] See Fig. 1, plate i, and cf. ARCHIMONERULA.

ARCHIDIACEÆ (Lat.), n. f. pl. A^{3}r-ki^2(ch^{2}i^2)-di(di^2)-a(a^3)'-se^2(ke^2)-e(a^3-e^2). Fr., *archidiacées.* A family of mosses, made by Schimper, comprising a few species distinguished by their abnormal development, there being no sporangeium, in the proper sense of the word, as in other mosses. [B, 121.]

ARCHIDIEÆ (Lat.), n. f. pl. A^{3}r-ki^{2}d(ch^{2}i^{2}d)-i(e)'e^2-e(a^3-e^2). Fr., *archidiées.* A tribe of mosses belonging to the family *Archidiaceæ* and comprising a single genus *Archidium.* [B, 121.]

ARCHIGASTRULA (Lat.), n. f. A^{3}r-ki^2(ch^{2}i^2)-ga^{2}s(ga^{3}s)'tru^2-(tru)-la^3. From ἀρχός, a chief, and γαστήρ, the belly. Syn.: *bell-gastrula.* A gastrula of which the entoderm and exoderm consist of a single layer of cells, and in which the primitive intestinal cavity has been formed. [L, 146.] See Fig. 6, plate i.

ARCHIGENES (Lat.), adj. A^{3}rk(a^{3}rch^2)-i^{2}j(i^{2}g)'e^{2}n-ez(e^{2}s). See ARCHEGONOS.

ARCHIGENESIS (Lat.), n. f. A^{3}rk(a^{3}rch^2)-i^2-je^{2}n(ge^{2}n)'e^{2}s-i^{2}s. See ARCHEGENESIS.

ARCHIGENOS, ARCHIGENUS (Lat.), adj's. A^{3}r-ki^{2}j-(ch^{2}i^{2}g)'e^{2}n-o^{2}s, -u^{3}s(u^{4}s). See ARCHEGONOS.

ARCHIGETIDÆ (Lat.), n. f. pl. A^{3}r-ki^2(ch^{2}i^2)-je^{2}t(ge^{2}t)'i^{2}d-e-(a^3-e^2). A division of the *Bothriadæ* having two suctorial discs and a tail-like appendix bearing embryonal hooklets. [B.]

ARCHIGONOS (Lat.), adj. A^{3}r-ki^{2}g(ch^{2}i^{2}g)'o^{2}n-o^{2}s. See ARCHEGONOS.

ARCHIGONY, n. A^{3}r-ki^{2}g'o^{2}n-i^2. For deriv., see ARCHEGENESIS. Lat., *archigonia.* Fr., *archigonie.* Ger., *Archigonie.* Spontaneous generation. [L, 173.]

ARCHIL, ARCHILL, n's. A^{3}r'ki^{2}l. Lat., *archilium, archilla.* Fr., *archile, orseille.* A coloring matter, ranging from a violet-red to a blue, obtained from several varieties of lichens. [B, 19; L, 120.]—**Canary a.** See ROCCELLA *tinctoria.*

ARCHIMAGIA (Lat.), n. f. A^{3}r-ki^2(ch^{2}i^2)-ma^2(ma^3)-ji(ge)'a^3. From ἀρχός, a chief, and μαγεία, magic. Fr., *archimagie.* Sp., *archimajia.* 1. The chemical art. [L, 53.] 2. The art of making gold or silver. [L, 111.]

ARCHIMIA (Lat.), n. f. A^{3}r-ki^{2}m(ch^{2}i^{2}m)-i(e)'a^3. See ARCHEMY.

ARCHIMONERULA (Lat.), n. f. A^{3}r-ki(ch^{2}i^2)-mo^{2}n-e^{2}r'u^2(u)-la^3. From ἀρχός, a chief, and μονήρης, single, solitary. Haeckel's term for a fertilized egg-cell in which the formative and nutritive yolks are not yet distinct, and the nucleus has disappeared. [L, 146.]

ARCHIMORULA (Lat.), n. f. A^{3}r-ki^2(ch^{2}i^2)-mo^{2}r'u^2(u)-la^3. From ἀρχός, a chief, and μόρον, a mulberry. Haeckel's term for a morula (*q. v.*) made up of similar cells. [L, 146.] See Fig. 3, plate i.

ARCHINEPHRIC, adj. A^{3}r-ki^2-ne^{2}f'ri^{2}k. Relating to the archinephron. [B.]

ARCHINEPHRON (Lat.), n. n. A^{3}r-ki^2(ch^{2}i^2)-ne^{2}f'ro^{2}n. From ἀρχή, a beginning, and νεφρός, a kidney. The primitive renal excretory apparatus of the embryo.

ARCHIPIN, n. See ARCHEPIN.

ARCHIPTERA (Lat.), n. n. pl. A^{3}rk(a^{3}rch^2)-i^{2}p'te^{2}r-a^3. From ἀρχή, a beginning, and πτερόν, a wing. The primeval flies. [L, 173.]

ARCHIPTERYGIUM (Lat.), n. n. A^{3}r-ki^2(ch^{2}i^2)-te^{2}r-i^{2}j(u^{6}g)'-i^2-u^{3}m(u^{4}m). From ἀρχός, a chief, and πτέρυξ, a wing or a fin. The archetype of the anterior limbs of the higher vertebrates, represented by the pectoral fin of the *Ceratodus.* [L, 173.]

ARCHISPERMS, n. pl. A^{3}r'ki^2-spu^{5}rmz. Lat., *archispermæ* (from ἀρχή, a beginning, and σπέρμα, a seed), on account of the geological antiquity of the Gymnosperms. [B, 121.] Ger., *Archispermen.* See GYMNOSPERMÆ.

ARCHISPONGIÆ (Lat.), n. f. pl. A^{3}rk(a^{3}rch^2)-i^2-spo^{2}n-(spo^{2}n^2)'ji^2(gi^2)-e(a^3-e^2). From ἀρχή, a beginning, and σπόγγος, a sponge. The primeval sponges. [L, 173.]

ARCHISTOM, n. A^{3}r'ki^2-stom. From ἀρχή, a beginning, and στόμα, a mouth. Ger., *Urmund.* See BLASTOPORE.

ARCHITECTONIA, ARCHITECTURA (Lat.), n's f. A^{3}r-ki^2(ch^{2}i^2)-te^{2}k-to'ni^2-a^3, -tu^2(tu)'ra^3. From ἀρχιτεκτονεῖν, to construct. Fr., *architecture.* Ger., *Architektur, Körperconstitution.* The bodily constitution. [L, 50.]

ARCHITIS (Lat.), n. f. A^{3}r-ki(ch^{2}e)'ti^{2}s. Gen., *archit'idis.* From ἀρχός, the fundament (see also *-itis**). See PROCTITIS.

ARCHITYPE, n. A^{3}r'ki^{2}tip. See ARCHETYPE.

ARCHOCELE (Lat.), n. f. A^{3}r-ko(ch^{2}o^2)-se(ka)'le(la) [as an English word, a^{3}r'ko-sel]. From ἀρχός, the fundament, and κήλη, a hernia. See *Rectal* HERNIA.—**Vaginal a.** Lat., *a. vaginalis.* A hernia of the rectum projecting into the vagina.

ARCHOCYSTOCOLPOSYRINX (Lat.), n. f. A^{3}r-ko(ch^{2}o^2)-si^{2}st(ku^{6}st)-o-ko^{2}lp-o-si^{2}r(su^{6}r)'i^{2}n^{2}x. Gen., *archocystocolposyrin'gos (-gis).* From ἀρχός, the fundament, κύστις, the bladder, κόλπος, the vagina, and σῦριγξ, a fistula. Ger., *Mastdarm-Harnblasen-Mutterscheidenfistel.* Syn.: *fistula ani, vesicæ et vaginæ.* A recto-vesico-vaginal fistula. [L, 50.]

ARCHOCYSTOSYRINX (Lat.), n. f. A^{3}r-ko(ch^{2}o^2)-si^{2}st(ku^{6}st)-o-si^{2}r(su^{6}r)'i^{2}n^{2}x. Gen., *archocystosyrin'gos (-gis).* From ἀρχός, the

fundament, κύστις, the bladder, and σῦριγξ, a fistula. Ger., *Mastdarm-Harnblasenfistel.* A recto-vesical fistula. [A, 322.]

ARCHOMETRUM (Lat.), n. n. A^{3}r-ko(ch^{2}o^2)-me^{2}t'ru^{3}m(ru^{4}m). From ἀρχός, the fundament, and μέτρον, a measure. Ger., *Mastdarmmesser.* 1. An instrument for measuring the calibre of the anus. [L, 50.] 2. An anal dilator. [Howship (L, 50).]

ARCHOPTOMA (Lat.), n. n. A^{3}r-ko^{2}p(ch^{2}o^{2}p)-to'ma^3. Gen., *archoptom'atos* (*-tis*). From ἀρχός, the fundament, and πτῶμα, a fallen body. The mass formed by a prolapse of the rectum. [L, 50.]

ARCHOPTOSIS (Lat.), n. f. A^{3}r-ko^{2}p(ch^{2}o^{2}p)-to'si^{2}s. Gen., *archopto'seos* (*-sis*). From ἀρχός, the fundament, and πτῶσις, a falling. Fr., *archoptose.* Ger., *Mastdarmvorfall.* Prolapse of the rectum. [L, 50.]

ARCHOPTOTICUS (Lat.), adj. A^{3}r-ko^{2}p(ch^{2}o^{2}p)-to^{2}t'i^{2}k-u^{3}s-(u^{4}s). Pertaining to, caused by, or affected with, prolapse of the rectum. [A, 322.]

ARCHORRHAGIA (Lat.), n. f. A^{3}r-ko^{2}r(ch^{2}o^{2}r)-ra(ra^3)'ji-(gi^2)-a^3. From ἀρχός, the fundament, and ῥήγνυσθαι, to break forth. Fr., *archorrhagie.* Ger., *Archorrhagie, Darmblutung.* Sp., *arcorragia.* Active rectal hæmorrhage. [L, 43.]

ARCHORRHAGIQUE (Fr.), adj. A^{3}r-ko^{2}r-ra^3-zhek. Relating to archorrhagia. [L, 41.]

ARCHORRHÉIQUE (Fr.), adj. A^{3}r-ko^{2}r-ra-ek. Relating to archorrhœa. [L, 41.]

ARCHORRHŒA (Lat.), n. f. A^{3}r-ko^{2}r(ch^{2}o^{2}r)-re'(ro'e^2)-a^3. From ἀρχός, the fundament, and ῥεῖν, to flow. Fr., *archorrhée.* Ger., *Arcorrhöe.* Sp., *arcorrea.* 1. Passive rectal hæmorrhage. [L, 43.] 2. Any pathological discharge from the rectum. [A, 316.]

ARCHOS (Lat.), n. m. A^{3}r'ko^{2}s(ch^{2}o^{2}s). Gr., ἀρχός. The rectum or anus. [L, 53, 84.]

ARCHOSTEGNOMA (Lat.), n. n. A^{3}r-ko(ch^{2}o^2)-ste^{2}g-no'ma^3. Gen., *archostegnom'atos* (*-tis*). From ἀρχός, the fundament, and στεγνοῦν, to solder together. Stricture of the rectum. [L, 50.]

ARCHOSTEGNOSIS, ARCHOSTENOSIS (Lat.), n's f. A^{3}r-ko(ch^{2}o^2)-ste^{2}g-no'si^{2}s, -ste^{2}n-o'si^{2}s. Gen., *archostegno'seos* (*-sis*), *-steno'seos* (*-sis*). From ἀρχός, the fundament, and στέγνωσις, a stoppage, or στένωσις, a constriction. The formation of a stricture of the rectum. [D, 81.]

ARCHOSTENOTA, ARCHOSTENOTES (Lat.), n's f. A^{3}r-ko(ch^{2}o^2)-ste^{2}n'o-ta^3, -tez(te^{2}s). From ἀρχός, the fundament, and στενότης, narrowness. See ARCHOSTEGNOMA.

ARCHOSYRINX (Lat.), n. f. A^{3}r-ko(ch^{2}o^2)-si^{2}r(su^{6}r)'i^{2}n^{2}x. Gen., *archosyrin'gos* (*-gis*). From ἀρχός, the fundament, and σῦριγξ, a pipe. Ger., *Mastdarmfistel* (1st def.), *Klystirspritze* (2d def.). 1. Fistula in ano. 2. A syringe for rectal injections. [L, 50.]

ARCHOXYTES (Lat.), n. f. A^{3}rk(a^{3}rch^2)-o^{2}x'i^2(u^6)-tez(te^{2}s). Gen., *archoxyte'tos* (*-tis*). From ἀρχός, the fundament, and ὀξύτης, sharpness, acidity. Ger., *Mastdarmsäure.* Acidity of the rectum.

ARCHUS (Lat.), n. m. A^{3}r'ku^{3}s(ch^{2}u^{4}s). See ARCHOS.

ARCHYDRA (Lat.), n. n. pl. A^{3}rk(a^{3}rch^2)-id(u^{6}d)'ra^3. From ἀρχή, a beginning, and ὕδρα, the hydra. Haeckel's name for the hypothetical ancestral form of the *Cœlenterata.* [L, 193.]

ARCHYDRÆ (Lat.), n. f. pl. A^{3}rk(a^{3}rch^2)-id(u^{6}d)'re(ra^3-e^2). The hypothetical primeval form of the *Hydroida.* [L, 173.]

ARCHYLE (Lat.), n. f. A^{3}r-ki(ch^{2}u^6)'le(la). From ἀρχή, a beginning, and ὕλη, matter. Fr., *archyle.* Ger., *Grundstoff, Vorstoff, Anfangsstoff.* Syn.: *materia primitiva.* A hypothetical entity, more subtle than light, heat, electricity, etc., assumed to be generated in the human body and to constitute a principle peculiar to man. [Ritgen (A, 322).]

ARCIDOSSO (It.), n. A^{3}r-che-dos'so. A cold chalybeate, carbonated spring in Tuscany. [L, 49.]

ARCIÈLOUS (Fr.), n. A^{3}r-si^2-e^{2}l-u. A popular name in the southeast of France for the *Boletus edulis.* [B, 121.]

ARCIFERI (Lat.), n. m. pl. A^{3}r-si^{2}f(ki^{2}f)'e^{2}r-i(e). From *arcus*, an arch, and *ferre*, to bear. A group of the *Batrachia salienta* made by Cope, characterized by having teeth and by a longitudinally placed cartilaginous arch uniting the divergent coracoid and epicoracoid bones. The arch of one side overlaps that of the other. [E. D. Cope, "Nat. Hist. Rev.," 1865, p. 97 (L).]

ARCIFEROUS, adj. A^{3}r-si^{2}f'e^{2}r-u^{3}s. Belonging to or resembling the *Arciferi.* [L, 206.]

ARCIFORM, adj. A^{3}r'si^2-fo^{2}rm. Lat., *arciformis* (from *arcus*, an arch, and *forma*, form). Fr., *arciforme.* See ARCUATE.

ARCION, ARCIUM (Lat.), n's n. A^{3}r-si(ke)'o^{2}n, -u^{3}m(u^{4}m). From ἄρκειον, the burdock. See LAPPA.

ARCO (It.), n. A^{3}r'ko. A winter resort in the Tyrol, having a mild equable climate. [L, 57.]

ARCOCELE (Lat.), n. f. A^{3}r-ko-se(ka)'le(la) [as an English word, a^{3}r'ko-sel]. See ARCHOCELE.

ARCO DE PIPA, n. A Brazilian name for the *Erythroxylon utile.* [B, 121.]

ARCOLA (It.), n. A^{3}r-ko'la^3. A place in Piedmont, where there is a sulphurous chalybeate spring. [L, 124.]

ARCOLE (Fr.), n. A^{3}r-kol. A place in Algeria, where there is a cold chalybeate spring. [L, 124.]

ARCOS (Lat.), n. n. A^{3}r'ko^{2}s. Gen., *ar'ceos* (*-ceis*). Gr., ἄρκος (from ἀρκεῖν, to assist). 1. Æs ustum. [Ruland (L, 53).] 2. A resource or preventive. [L, 50.]

ARCOS DE PEIRAS (Sp.), n. A^{3}r'kos da pa'e-ra^{3}s. A place in Spain, where there is a cold sulphurous spring. [L, 124.]

ARCS (Fr.), n. A^{3}rks. A place in the department of Var, France, where there is a chalybeate spring. [L, 57.]

ARCTATION, n. A^{3}rk-ta'shu^{3}n. Lat., *arctatio* (from *arctare* [= *artare*], to contract). Fr., *arctation.* Ger., *Verengerung, Enge.* It., *arttazione.* Sp., *arctación.* An abnormal diminution in the size of any of the openings or canals of the body, especially the vagina. 2. Constriction. 3. Infibulation. 4. Constipation. [L, 50, 53.]

ARCTIEÆ (Lat.), n. f. pl. A^{3}rk-ti(te)'e^2-e(a^3-e^2). A division of the *Amphicenianthæ* made by Reichenbach, including *Arctium* and two or three other genera. [B, 170.]

ARCTION (Lat.), n. n. A^{3}rk'ti^2-on. See ARCTIUM.

ARCTISCA (Lat.), n. n. pl. A^{3}rk-ti^{2}s'ka^3. From ἄρκτος, a kind of crab mentioned by Aristotle. Syn.: *Macrobiotidæ.* The bear-animalcules; a family of the *Acarina* inhabiting damp moss and the gutters of houses. [L, 147.]

ARCTITUDO (Lat.), n. f. A^{3}rk-ti^2-tu^2(tu)'do. Gen., *arctitu'dinis.* Fr., *arctitude.* Sp., *arctitud.* See ARCTATION.

ARCTIUM (Lat.), n. n. A^{3}rk'shi^2(ti^2)-u^{3}m(u^{4}m). A genus of composite plants now referred to *Lappa.* [B.]—**A. bardana** [Willdenow]. See LAPPA *tomentosa.*—**A. lappa** [Linnæus], **A. majus** [Schkuhr]. See LAPPA *major.*—**A. minus** [Schkuhr]. See LAPPA *minor.*—**A. tomentosum.** See LAPPA *tomentosa.*

ARCTOPHYLLUM (Lat.), n. n. A^{3}rk-to-fi^{2}l(fu^{6}l)'lu^{3}m(lu^{4}m). From ἄρκτος, a bear, and φύλλον, a leaf. A name given by Apuleius to the *Anthriscus cerefolium.* [B, 121.]

ARCTOPITHECI, ARCTOPITHECINI (Lat.), n's m. pl. A^{3}rk-to-pi^{2}th-e(a)'si(ke), -si(ke)'ni(ne). From ἄρκτος, a bear, and πίθηκος, an ape. Ger., *Krallenaffen.* The marmosets: a family of the *Simiadæ*, without cheek-pouches or ischial callosities, having all the nails except that of the hallux falcate, the pollex non-opposable, and the fore-limbs shorter than the hind-limbs. [L, 12.]

ARCTOPUS (Lat.), n. m. A^{3}rk'to^2-pu^{3}s(pu^{4}s). Gen., *arctop'odis.* From ἄρκτος, a bear, and πούς, a foot. Ger., *Bärenfuss.* A genus of campylospermous, umbelliferous plants found at the Cape of Good Hope. [L, 124.]—**A. echinatus** [Linnæus]. A variety furnishing a gum-resin used in the treatment of chronic urethral discharges and syphilis. [B, 71; H. Baillon (L, 87).]

ARCTOSCORODON (Lat.), n. n. A^{3}rk-to-sko^{2}r'o-do^{2}n. From ἄρκτος, a bear, and σκόροδον, garlic. Ger., *Bärenknoblauch.* See ALLIUM *ursinum.*

ARCTOSTAPHYLOS (Lat.), n. f. A^{3}rk-to-sta^{2}f(sta^{3}f)'i^{2}l(u^{6}l)-o^{2}s. From ἄρκτος, a bear, and σταφυλή, a bunch of grapes, because bears eat the berries. Fr., *busserole.* Ger., *Bärentraube.* Bearberry; a genus of trailing ericaceous plants, established by Adanson, belonging to the suborder *Ericineæ* and the tribe *Arbuteæ*, having a 5-parted calyx, a monopetalous urceolate corolla, and a fleshy drupaceous fruit. [B, 34.]—**A. alpina** [Sprengel]. Fr., *arbousier des alpes.* Syn.: *Arbutus alpina* [Linnæus]. A small shrub, with edible black berries, growing on the Swiss Alps and in the tropical regions of Europe, Asia, and America. [B, 34, 49.]—**A. glauca** [Lindley]. The manzanita; a species found in California. Its leaves, which are petiolate, ovate-oblong in shape, and obtuse at the base, about 2 inches in length and of a glaucous hue, are used in medicine like those of *A. uva ursi* and contain *arbutin* and tannin. The *A. glauca* of Watson is the *A. pungens*, var. *platyphylla.* [B, 81, 215.]—**A. nevadensis.** A low, procumbent species found at altitudes of from 8,000 to 10,000 feet in the Sierra Nevada and California. [B, 215.]—**A. officinalis** [Wimmer and Grabowski]. See *A. uva ursi.* —**A. pungens** [Kunth.]. A large shrub growing on the Pacific coast of the United States constituting one of the varieties of the manzanita. [B, 75, 215.]—**A. tomentosa** [Douglas]. Syn.: *Arbutus tomentosa* [Pursh]. A North American species. [B, 215.]—**A. uva ursi** [Sprengel]. Fr., *busserole raisin d'ours.* Ger., *Bärentraube.* Syn.: *Arbutus uva ursi* [Linnæus]. Bearberry; trailing arbutus of Europe. A trailing shrub growing in the Alpine and Arctic districts of Europe and in North America, distinguished by its spatulate, peculiarly veined, glossy-green, leathery leaves, whitish-red flowers in terminal racemes, and scarlet berries. The leaves, which have a faint odor resembling that of hay, and a very astringent, somewhat bitter taste, contain gallic and tannic acids, malates, resin, sugar, a crystalline glucoside *arbutin*, and *eri-*

THE ARCTOSTAPHYLOS UVA URSI. (AFTER DE LANESSAN.)

colin and *ursone*. They are the *uva ursi* of the U. S. Ph., Fr. Cod., Aust. Ph., Hung. Ph., Netherl. Ph., Roum. Ph., Russ. Ph. (*uvæ ursi folia* [Br. Ph., Greek Ph.], *folia uvæ ursi* [Ger. Ph., Belg Ph., Dan. Ph., Norweg. Ph., Swed. Ph., Swiss Ph., Finn. Ph.], *gayuba* [Sp. Ph.]). They are much employed in chronic catarrh of the urinary tract, especially in that dependent upon calculi, and also occasionally as an astringent in diarrhœa, leucorrhœa, bronchitis, and hæmorrhages. [B, 49, 81, 95.]

ARCTOTEÆ (Lat.), n. f. pl. A^{3}rk-to'te^2-e(a^3-e^2). A division of composite plants of the *Arctotideæ* [De Candolle] or the *Cynareæ* [Lindley], comprising *Arctotis* and six or seven other genera. [B, 170.]

ARCTOTIDEÆ (Lat.), n. f. pl. A^{3}rk-to-ti^{2}d'e^2-e(a^3-e^2). 1. Of Cassini, De Candolle, and others, a tribe of composite plants including the subdivisions *Arctoteæ* and *Gorterieæ*, or *Euarctoteæ*, *Gorterieæ*, and *Grindelieæ* [Bentham and Hooker]. 2. Of Reichenbach, the *Arctoteæ*. [B, 42, 170.]

ARCTOTIS (Lat.), n. f. A^{3}rk-to'ti^{2}s. A genus of composite plants growing at the Cape of Good Hope and sometimes cultivated in Europe. [B, 19.]

ARCTOUS (Lat.), n. m. A^{3}rk-to'u^{3}s(u^{4}s). From ἀρκτῷος, northern. A section of the genus *Arctostaphylos*. [B, 215.]

ARCTURA (Lat.), n. f. A^{3}rk-tu^2(tu)'ra^3. Fr., *arcture*. 1. The effects produced by an ingrowing nail. [Linnæus (A, 301).] 2. See ARCTATION.—**A. unguis, A. unguium.** See *A.* (1st def.).

ARCTURIA (Lat.), n. f. A^{3}rk-tu^2(tu)'ri^2-a^3. A section of the genus *Drosera*. [B, 19.]

ARCTURIN, n. A^{3}rk-tu^2(tu)'ri^{2}n. Fr., *arcturine*. A bitter substance derived from arbutin. [L, 124.]

ARCTURUS (Lat.), n. m. A^{3}rk-tu^2(tu)'ru^{3}s(ru^{4}s). Gr., ἀρκτοῦρος. 1. A plant mentioned by Dioscorides as related to the *Verbascum thapsus*; probably a species of *Celsia*. [B, 121.] 2. A genus of scrophulariaceous plants made by Bentham from the genus *Celsia*, including the species in which the anthers are attached by their centre. [B, 19.]—**A. creticus.** See CELSIA *cretica*.

ARCTUVEIN, ARCTUVIN, n's. A^{3}rk-tu^2've^2-i^{2}n, -tu^2'vi^{2}n. Lat., *arctuvinum*. A substance obtained by the action of boiling sulphuric acid on arbutin. [A, 308.]

ARCUAL (Fr.), n., adj. A^{3}r-ku^6-a^{3}l. Bent, arched; as a n., the arch of a vertebra. [L, 124.]

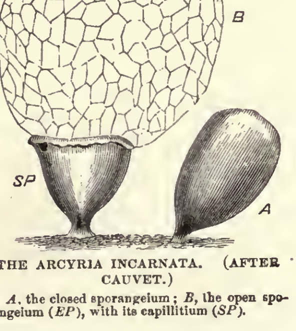
ARCUALIS (Lat.), adj. A^{3}r-ku^2(ku)-a(a^3)'li^{2}s. Fr., *arcual*. See ARCUATE. Bent, curved. [L, 53.] See OSSA *arcualia* and SUTURA *a.*

ARCUATE, adj. A^{3}r'ku^2-at. Lat., *arcuatus*. Fr., *arcué, arqué*. Ger., *Bogenförmig*. Bow-shaped. [B.]

ARCUATED, adj. A^{3}r'ku^{2}a-te^{2}d. Lat., *arcuatus*. Arched. [B.]

ARCUATILE, adj. A^{3}rk'wa^{2}t-i^{2}l. Lat., *arcuatilis*. See ARCUATE.

ARCUATION, n. A^{3}rk-u^2-a'shu^{3}n. Lat., *arcuatio*. Fr., *arcuation*. Ger., *Krümmung*. It., *arcuazione*. Sp., *arcuación*. 1. A deformity due to forward convexity of the sternum. [Avicenna (L, 53).] 2. A rhachitic or other curvature of any bone. [A, 385.] 3. An old term for the propagation of plants by layering. [L, 108.]



ARCUATUS (Lat.), adj. A^{3}r-ku^2(ku)-a(a^3)'tu^{3}s(tu^{4}s). 1. See ARCUATE. 2. See MORBUS *a.*

ARCUÉ (Fr.), adj. A^{3}r-ku^6-a. See ARCUATE.

ARCULA (Lat.), n. f. A^{3}r'ku^2(ku)-la^3. The orbit. [L, 84.]—**A. cordis.** The pericardium. [L, 63.]

ARCULUS (Lat.), n. m. A^{3}r'ku^2(ku)-lu^{3}s(lu^{4}s). Dim. of *arcus*, a bow. Fr., *arceau*. Ger., *Bogenkörbchen*. It., *arcuccio*. An arched apparatus (commonly called a cradle) used to prevent the contact of the bed-clothes with a diseased or injured part and the suffocation of infants by those sleeping with them. [L, 43, 50.]

ARCUS (Lat.), n. m. A^{3}r'ku^{3}s(ku^{4}s). See ARCH.—**A. adiposus.** See *A. senilis*.—**A. anastomoticus.** See *Anastomotic* ARCH.—**A. anterior atlantis, A. anterior vertebræ primæ colli.** See *Anterior* ARCH *of the atlas*.—**A. aortæ.** See ARCH *of the aorta*.—**A. arteriæ subclaviæ.** The curved portion of the subclavian artery. [L, 31.]—**A. arteriosus inferior.** The arterial arch on the greater curvature of the stomach formed by the union of the right and left gastro-epiploic arteries. [L, 31.]—**A. arteriosus superior.** The arterial arch on the lesser curvature of the stomach formed by the union of the right and left coronary arteries of the stomach. [L, 31.]—**A. atlantis anterior.** See *Anterior* ARCH *of the atlas*.—**A. atlantis posterior.** See *Posterior* ARCH *of the atlas*.—**A. axillares.** See *Axillary* ARCHES.—**A. brachialis.** See *Brachial* ARCH.—**A. branchiales.** See *Branchial* ARCHES and *Postoral* ARCHES.—**A. carpi dorsalis.** See *Posterior carpal* ARCH.—**A. cartilaginis cricoideæ.** The anterior arched portion of the cricoid cartilage. [L, 175.]—**A. coli intestini.** See *Transverse* COLON.—**A. cricothyreoideus.** A curved artery lying across the crico-thyreoid ligament, formed by the union of a branch from each superior thyreoid artery. [Barkow (L, 31).]—**A. cruralis profundus.** See *Deep crural* ARCH.—**A. cruralis.** See *Poupart's* LIGAMENT.—**A. dentalis.** See *Dental* ARCH.—**A. dorsalis humeri posticus.** The anastomosis just above the olecranon fossa, between the superior profunda artery of the arm and the anastomotic artery of the arm. [L, 63.]—**A. dorsalis pedis superficialis.** Fr., *arcade dorsale du pied superficielle*. An arch formed by the veins uniting the superficial metatarsal veins. [L.]—**A. epiploicus magnus.** The network of the branches of the left gastroepiploic artery which supply the walls of the stomach. [Barkow (L, 31).]—**A. faucium.** See ARCH *of the palate*.—**A. glossopalatinus.** See ARCH *of the palate*.—**A. hilicus.** A branch of the renal artery which furnishes branches to the pelvis of the kidney. [Barkow (L, 31).]—**A. jugalis.** See *Zygomatic* ARCH.—**A. major ventriculi.** The greater curvature of the stomach. [L, 175.]—**A. malaris.** See *Zygomatic* ARCH.—**A. medullaris.** See FORNIX.—**A minor ventriculi.** The lesser curvature of the stomach. [L, 174.]—**A. nervi hypoglossi.** The curve in the hypoglossal nerve as it crosses the carotid artery. [L, 63.]—**A. nervosus hæmorrhoidalis.** Fr., *arc nerveux hémorrhoïdal*. It., *arco emorroidale*. The filaments connecting the inferior and superior hæmorrhoidal plexuses. [L, 7.]—**A. ossium pubis.** See *Pubic* ARCH.—**A. palati, A. palati anterior, A. palatinus anterior, A. palatinus lingualis.** See ARCH *of the palate*.—**A. palatinus posterior.** See *A. palato-pharyngeus*.—**A. palato-glossus.** See ARCH *of the palate*.—**A. palato-pharyngeus.** The posterior pillars of the fauces. [L, 115.]—**A. palmaris contractus.** A contraction of the palmar fascia. [L, 63.]—**A. palmaris profundus.** See *Deep palmar* ARCH.—**A. palmaris superficialis.** See *Superficial palmar* ARCH.—**A. palpebralis inferior.** See *A. tarseus inferior*.—**A. palpebralis superior.** See *A. tarseus superior*.—**A. pharyngeus.** See *A. palato-pharyngeus*.—**A. plantaris.** See *Plantar* ARCH.—**A. plantaris profundus.** See *Deep plantar* ARCH.—**A. popliteus.** Fr., *arcade poplitée*. See LIGAMENTUM *popliteum arcuatum*.—**A. posterior atlantis, A. posterior vertebræ primæ colli.** See *Posterior* ARCH *of the atlas*.—**A. pubis.** See *Pubic* ARCH.—**A. semicirculares temporales.** The anastomosing branches between the middle and deep temporal arteries. [L, 31.]—**A. senilis.** Fr., *arc sénile*. Ger., *Greisenbogen*. It., Sp., *arco senile*. As most commonly used, the a. senilis corneæ.—**A. senilis corneæ.** Fr., *arc sénile de la cornée*. Ger., *Greisenbogen*. A degeneration of the periphery of the cornea, consisting in a deposit of fatty granules in the tissue proper of the cornea, which comes on in old age, always affects both eyes simultaneously, and is usually most marked in the upper and lower segments of the cornea. [G.]—**A. senilis lentis.**—Fr., *arc sénile de la lentille*. Ger., *Greisenbogen der Linse*. It., *arco senile della lente*. Sp., *arco senile de la lente*. Syn.: *gerontoxon lentis, incipient cataract*. Certain bifurcated linear opacities in the equatorial portions of the lens, occurring in persons of or past middle age. They may exist for years unchanged. [F.]—**A. subpubicus.** See *Pubic* ARCH.—**A. superciliaris.** See *Superciliary* RIDGE.—**A. superficialis volæ.** See *Superficial palmar* ARCH.—**A. supraorbitalis.** See *Supra-orbital* ARCH.—**A. tarsei inferior.** See *A. tarseus inferior*.—**A. tarsei superior.** See *A. tarseus superior*.—**A. tarseus.** See *A. dorsalis pedis*.—**A. tarseus inferior.** Fr., *arcade palpébrale inférieure*. Ger., *unterer Augenlidbogen*. A curved vessel lying between the tarsal cartilage and the orbicular muscle on the free border of the lower eyelid, formed by the union of a branch of the inferior palpebral artery and the palpebral branch of the nasal artery. [L, 7.]—**A. tarseus superior.** Fr., *arcade palpébrale supérieure*. Ger., *oberer Augenlidbogen*. The communicating branch between the superior palpebral artery and the palpebral branch of the lacrymal artery. [L, 7.]—**A. tendineus fasciæ pelvis.** A thickening of the pelvic fascia, at a level with a line extending from the lower part of the symphysis pubis to the spine of the ischium, to which the levator ani muscle is attached. [L, 7.]—**A. thyreocartilagineus.** A communicating branch, at about the level of the angle of the thyreoid cartilage, between the superior thyreoid arteries of the two sides. [L, 31.]—**A. thyreoglandularis intralobularis.** The arterial anastomosis within the thyreoid gland. [L, 31.]—**A. thyreoglandularis lobularis lateralis.** An anastomosis between the superior and inferior thyreoid arteries of the same side. [L, 31.]—**A. thyreoglandularis marginalis inferior.** An arterial anastomosis sometimes seen immediately below the thyreoid gland. [L, 31.]—**A. thyreoglandularis marginalis superior.** An occasional artery lying at the upper border of the thyreoid gland. [L, 31.]—**A. thyreoglandularis marginalis superior cruciatus.** A communicating branch between the superior thyreoid artery of one side and the inferior artery of the other side. [L, 31.]—**A. thyreoglandularis marginalis superior simplex.** See *A. thyreoglandularis marginalis superior*.—**A. thyreoglandularis medius.** An artery sometimes found lying across the middle of the thyreoid gland. [L, 31.]—**A. tonsillaris.** See ISTHMUS *of the fauces*.—**A. trachealis anterior.** The communicating branches of the inferior thyreoid arteries lying across the trachea. [L, 31.]—**A. unguim.** See LUNULA.—**A. venosi digitales.** Venous arches on the dorsum of the first phalanges of the fingers. [L, 117.]—**A. venosus juguli.** A connecting branch between the two anterior jugular veins. [A, 451.]—**A. venosus marginalis.** A venous network on the radial side of the index finger or the ulnar side of the little finger. [L, 117.]—**A. vertebralis.** See *Vertebral* ARCH.—**A. volaris carpi venosus profundus.** The venous network corresponding to the deep palmar arch. [L, 175.]—**A. volaris carpi venosus sublimis.** A venous network in the palm of the hand corresponding to the superficial palmar arch. [L, 175.]—**A. volaris profundus.** See *Deep palmar* ARCH.—**A. volaris sublimis, A. volaris superficialis.** See *Superficial palmar* ARCH.—**A. zygomaticus.** See *Zygomatic* ARCH.

THE ARCYRIA INCARNATA. (AFTER CAUVET.)

A, the closed sporangeium; *B*, the open sporangeium (*EP*), with its capillitium (*SP*).

ARCYDES (Lat.), n. f. pl. A^{3}r'si^2(ku^6)-dez(de^{2}s). A family of the *Araneida*. [Cambridge (B, 77).]

ARCYRIA (Lat.), n. f. A^{3}r-si^{2}r(ku^{6}r)'i^2-a^3. A species of low organisms, variously regarded as of animal and of vegetable nature, belonging to the class *Myxomycetes*, order *Calonemeæ*. [B, 76.]

ARCYTHOPHYTUM (Lat.), n. n. A^{3}r-si^2(ku^6)-tho^{2}f′i^{2}t(u^{6}t)-u^{3}m(u^{4}m). From ἄρκευθος, the juniper, and φυτόν, a plant. Of Necker, a genus (= order) of plants including the species (= genera) *Ligustrum*, *Nyctanthes*, *Phyllyrea*, *Chionanthus*, *Jasminum*, *Lycium*, *Ilex*, *Myrsine*, *Alstonia*, *Strydmos*, *Atropa*, *Mandrazora*, *Physalis*, *Achras*, *Prinos*, *Styrax*, and others, now referred to distinct orders. [B, 170.]

ARDA (Lat.), n. f. A^{3}r′da^3. Gr., ἄρδα. See ARDALOS.

ARDABAR, n. A species of *Arum*. [L, 84.]

ARDAFIANI, n. The *Zygophyllum fabago*. [Avicenna (B, 121).]

ARDALES (Sp.), n. A^{3}r-da^3′le^{2}s. The situation of several sulphurous springs in Andalusia. [L, 124.]

ARDALOS (Lat.), adj. Gr., ἄρδαλος (from ἀρδαλοῦσθαι, to soil). Soiled, dirty; as a n., filth, sordes. [Hippocrates (A, 325).]

ARDÁNYHÁZÁ, n. A mineral spring in Langenau, Hungary. [L, 184.]

ARDAS (Lat.), n. f. A^{3}r′da^{2}s(da^{3}s). Gr., ἄρδας. See ARDALOS.

ARDEA (Lat.), n. f. A^{3}r′de^2-a^3. Gr., ἐρωδιός. A genus of birds of the division *Ardeidæ*, including the herons. [A, 359.]—**A. ciconia** [Linnæus]. See CICONIA *alba*.—**A. cinerea** [Meyer.]. Ger., *gemeiner Reiher*, *Fischreiher*. The heron, a European bird furnishing *axungia ardeæ*. [B, 180.]—**A. grus.** The crane; its bile was formerly used as an application to wounds, and the dried head and eyes for fistulæ and ulcers. [L, 105.]—**A. major** [Gmelin]. See *A. cinerea*.—**A. stellaris.** The bittern; its burned skin and feathers were formerly used to stop hæmorrhages. [L, 94.]—**Axungia ardeæ.** Ger., *Reiherfett*. Heron's fat; it was formerly used to relieve the pains of gout, for removing specks from the eyes, and for curing deafness. [L, 94.]

ARDEIDÆ (Lat.), n. f. pl. A^{3}r-de(da)′i^{2}d-e(a^3-e^2). From *ardea*, a heron. A division of birds of the family *Cultirostres*, order *Grallatores*. [A, 359.]

ARDELLÆ (Lat.), n. f. pl. A^{3}r-de^{2}l′le(la^3-e^2). The small dust-like apothecia of certain lichens. [L, 63.]

ARDEL ODOGAM (Tamil). See JUSTICIA *bivalvis*.

ARDÈNE (Fr.), n. A^{3}r-de^{2}n. The *Melampyrum*. [B, 121.]

ARDENJOU (Hind.), n. The *Wrightia antidysenterica*. [B, 172.]

ARDENT, adj. A^{3}r′de^{2}nt. Gr., καυσώδης. Lat., *ardens* (from *ardere*, to burn). Fr., *ardent*. Ger., *brennend*. It., *ardente*. Sp., *ardiente*. Causing or accompanied by a sensation of burning. [L.]

ARDENZA (It.), n. A^{3}r-de^{2}nd′za^3. A sea-bathing station near Livorno. [L, 57.]

ARDES (Fr.), n. A^{3}rd. A town in the department of Puy-de-Dôme, France, having carbonated chalybeate springs. [L, 57.]

ARDESIA HIBERNICA (Lat.), n. f. A^{3}r-de(da)′zi^2(si^2)-a^3 hi(he)-bu^{5}rn(be^{2}rn)′i^{2}k-a^3. See LAPIS *hibernicus*.

ARDEUR (Fr.), n. A^{3}r-du^{5}r. See ARDOR.—**A. de la fièvre.** See ARDOR *febrilis*. **A. d'estomac, A. du cœur.** See PYROSIS.—**A. d'urine.** See ARDOR *urinæ*.—**A. du ventricule.** See PYROSIS.

ARDIFRIGI (Ar.), n. The *Zygophyllum fabago*. [Avicenna (L, 105).]

ARDIOTHERA (Lat.), n. f. A^{3}r-di^2-o-the(tha)′ra^3. Gr., ἀρδιοθήρα (from ἄρδις, an arrow-point). An ancient forceps for extracting arrow-heads, etc. [A, 311.]

ARDISIA (Lat.), n. f. A^{3}r-di^{2}s′i^2-a^3. From ἄρδις, a spear-point, on account of the shape of the anthers. Fr., *ardisie*. Ger., *Spitzblume*. A genus of ardisiaceous plants, established by Swartz. [B.]—**A. basal** [Poiret]. See EMBELIA *basal*.—**A. humilis** [Vahl]. A species the inspissated juice of which is used in India in fevers. [H. Baillon (L, 87).]—**A. tsjeriam-cottam** [Römer and Schultes]. See EMBELIA *tsjeriam-cottam*. [B, 180.]

ARDISIACEÆ (Lat.), n. f. pl. A^{3}r-di^{2}s-i^2-a(a^3)′se^2(ke^2)-e(a^3-e^2). From *Ardisia*, one of the genera. The ardisiads; a family of monopetalous plants, made by Jussieu, including *Ardisia* and *Myrsine*. By Reichenbach it was regarded as a family of the *Sapotaceæ* and divided into the *Trientaleæ*, *Myrsineæ*, and *Theophrusteæ*; by Bartling and Spach it was referred to the order *Myrsineæ* and was divided into the *Ardisieæ*, *Theophrasteæ*, and, according to Bartling, into the *Embelieæ*. [B, 170.]

ARDISIACEOUS, adj. A^{3}r-di^{2}z″i^2-a′shu^{3}s. Resembling *Ardisia*; of or pertaining to the *Ardisiaceæ*. [B.]

ARDISIADS, n. pl. A^{3}r-di^{2}s′i^3-a^{2}dz. See ARDISIACEÆ.

ARDISIEÆ (Lat.), n. f. pl. A^{3}r-di^{2}s-i(e)′e^2-e(a^3-e^2). A division of myrsineous (sapotaceous) plants belonging to the family *Ardisiaceæ*, made by Bartling, Spach, and others, comprising *Myrsine*, *Ardisia*, and other genera, including in some classifications genera classed among the *Embelieæ*. [B, 170.]

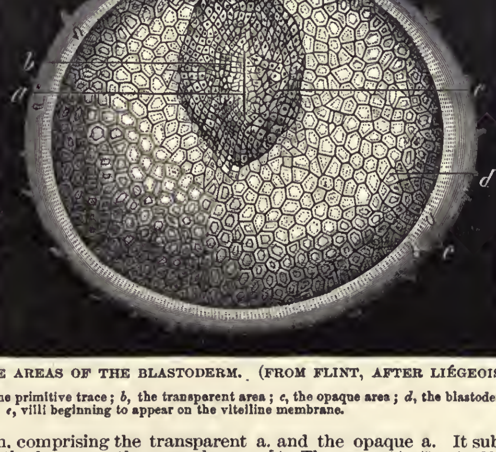
ARDMORE, n. A^{3}rd′mor. A village on the west coast of Ireland with excellent sea bathing. [L, 57.]

ARDOR (Lat.), n. A^{3}r′do^{2}r. Gen., *ardo′ris*. From *ardere*, to burn. Gr., καῦμα. Fr., *ardeur*. Ger., *Hitze*, *Brennen*. It., *ardore*. Sp., *ardor*. 1. A sensation of burning or heat. [L, 83.] 2. Pain. [A, 318.]—**A. febrilis.** Fr., *ardeur de la fièvre*. The heat of fever. [M.]—**A. stomachi.** Fr., *ardeur de l'estomac*. Ger., *Magenbrennen*, *Sodbrennen*. See PYROSIS.—**A. urinæ.** Fr., *ardeur de l'urine*. Ger., *Harnbrennen*. A burning sensation in the urethra during or after the passage of urine. [A, 385.]—**A. venereus.** 1. Rut. 2. Inordinate sexual desire. [M, 63.]—**A. ventriculi.** See PYROSIS.—**A. volaticus.** A redness and heat of the head and face, without other symptoms, lasting at the longest but four days. [L, 132.]

ARDRAKA (Sanscr.), n. See AMOMUM *zingiber* and ZINGIBER *officinale*.

ARDROSSAN, n. A^{3}r-dro^{2}s′sa^{3}n. A sea-bathing resort in Scotland on the Firth of Clyde with a ferruginous spring. [L, 57.]

ARDRUKUM (Sanscr.), n. See ZINGIBER *officinale*.



ARDUINA, ARDUINIA (Lat.), n's f. A^{3}r-du-e′na^3, -i^{2}n′i^2-a^3. From Arduini, an Italian botanist. A genus of plants now referred to *Carissa*. [B, 19.]—**A. bispinosa** [Linnæus]. See CARISSA *arduina* and CARISSA *ferox*.—**A. grandiflora.** See CARISSA *grandiflora*.

ARDUKUM (Sanscr.), n. The *Zingiber*. [B, 121.]

ARDURE (Fr.), n. A^{3}r-du^{6}r. A burn. [L. 109.]

ARE (Scot.), n. A^{2}r. See EAR.

AREA (Lat.), n. f. A(a^3)′re^2-a^3. Akin to ἅλως. Fr., *aire*. Ger., *Hof*, *Raum*, *offener Platz*. It., *area*. Sp., *área*. Lit., a vacant place. 1. A surface, district, or space, without reference to its size or shape. 2. As used by Celsus, a vacant space; hence, baldness in any of its varieties, including *alopecia* (that "spreads irregularly without assuming any particular form") and *ophiasis* (*q. v.*). Certain writers have erroneously regarded the a. of Celsus (*a. Celsi*) as synonymous with alopecia areata. [G, 13.] 3. In botany, the receptacle of *Fungi*. [Tode (B, 121).] 4. In entomology, see AREOLA (6th def.).—**Ambulacral a.** See AMBULACRUM.—**A. Celsi.** See *A.* (2d def.).—**A. diffluens.** See ALOPECIA *areata*.—**A. embryonalis, A. germinativa.** See *Embryonic a.*—**A. glandulosa.** Nees von Esenbeck's term for the semilunar granular cells surrounding the stomata of the epidermis of plants. [B, 198.]—**A. intercruralis.** The interpeduncular space of the brain. ["Science," Apr. 9, 1881, p. 165 (I, K).]—**A. Jonstoni.** See ALOPECIA *areata*.—**A'kokken** (Ger.). Certain micrococci that have been supposed to be peculiar to alopecia areata. [B.]—**A. lucida.** See *Transparent a.*—**Areæ maculæformes.** The vegetative filaments (hyphæ) of *Hymenomycetes* when aggregated into little masses. [B, 198.]—**A. mammæ.** The areola surrounding the nipple.—**A. Martigiani.** The funnel-shaped opening of the hyaloid canal on the posterior surface of the vitreous body, facing toward the optic nerve, through which the hyaloid artery of the fœtus runs. [F.]—**A. nummulata** [Squire]. Alopecia areata occurring in coin-shaped patches. [G.]—**A. obscura, A. opaca.** See *Opaque a.*—**A. ophiasis.** See OPHIASIS.—**A. optica.** The visual field. [L, 81.]—**A. pellucida.** See *Transparent a.*—**A. septalis.** See *Septal a.*—**A. serpens.** See OPHIASIS.—**A. serpiginosa** [Squire]. Alopecia areata with a tendency to spread at the periphery. [G.]—**A. tyria.** Alopecia areata. [G.]—**A. vasculosa.** See *Vascular a.*—**A. ventriculi quarti.** The floor of the fourth ventricle of the brain. [L, 115.]—**A. vitellina.** See *Vitelline a.*—**Auditory a.** Syn.: *psycho-acoustic centre*. According to Ferrier, an a. in the second primary convolution of the dog's brain, the destruction of which is followed by deafness in the opposite ear. [Landois (K).]—**Cohnheim's a's.** Fr., *champs de Cohnheim*. Ger., *Cohnheim'sche Felder*. Syn.: *Cohnheim's fields*. The polygonal a's, surrounded by clear lines, seen in the transverse section of a muscular fibre. According to Kölliker, they represent sections of the so-called muscle-columns or fibrils. [J, 30, 42.]—**Crypt a.** The a. surrounding an individual crypt in a collection of crypts, as on the surface of the uterine mucous membrane. [A, 11.]—**Embryonal a., Embryonic a.** Lat., *a. embryonalis* (seu *germinativa*). Fr., *aire embryonnaire* (ou *germinative*). Ger., *Fruchthof*. Syn.: *germinal a.* (or *disc*). In the fecundated ovum of a mammal, the a. of an oval thickening or opacity of the central part of the blasto-

THE AREAS OF THE BLASTODERM. (FROM FLINT, AFTER LIÉGEOIS.)

a, the primitive trace; *b*, the transparent area; *c*, the opaque area; *d*, the blastodermic cells; *e*, villi beginning to appear on the vitelline membrane.

derm, comprising the transparent a. and the opaque a. It subsequently becomes the vascular a. [A. Thomson (A, 5); A, 22.]—**Fœtal a., Germ-a., Germinal a.** See *Embryonic a.*—**Interambulacral a.** One of the lune-shaped segments upon the shell of an echinoderm interposed between two ambulacra. It contains no ambulacral tube-feet. [B, 28.] See AMBULACRUM.—**Intercalated a's.** See *Non-nucleated a's.*—**Middle lemniscus a.** The

median region of the lemniscus as seen in cross-section. [E. C. Spitzka, "Med. Record," Oct. 25, 1884, p. 449 (I, K).]—**Motor a's.** See *Motor* CENTRES.—**Non-nucleated a's.** Ger., *kernlose Felder.*

THE VASCULAR AREA OF THE OVUM. (FROM FLINT, AFTER BISCHOFF.)
a, a, b, the sinus terminalis; *c,* the omphalo-mesenteric vein; *d,* the heart; *e, f, f,* the posterior vertebral arteries.

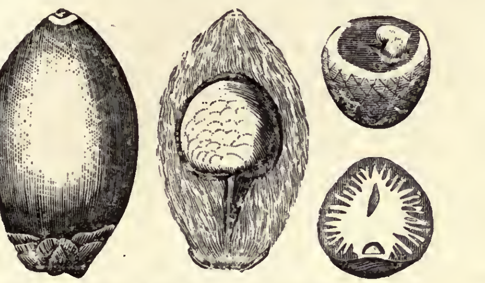
Schaltstücke. Syn.: *intercalated a's.* The clear spaces sometimes found between the endothelial cells of blood-vessels. They are supposed to be due to the removal of portions of the surrounding endothelium, and are always without nuclei and smaller than an endothelial cell. [J, 35.]—**Ocular a.** The facial space occupied by the eyes in spiders. [B, 77.]—**Opaque a.** Lat., *a. opaca* (seu *obscura*). Fr., *aire obscure.* Ger., *dunkler Fruchthof.* The outer part of the embryonic a. after it has become thickened by the accumulation of formative elements derived from the yolk. [A. Thomson (A, 5).]—**Septal a.** Lat., *a. septalis.* The inner surface of each of the laminæ which form the septum lucidum. [I, 13; K.]—**Subfrontal a.** The flattened anterior portion of the sternal surface of the *Xiphosura* (*Limulus*). [B, 100.]—**Transparent a.** Lat., *a. lucida* (seu *pellucida*). Fr., *aire transparente* (ou *claire*). Ger., *durchsichtiger Fruchthof.* Sp., *área pellúcida.* The thin central part of the embryonic a. of the ovum; so called from its being clear in comparison with the peripheral part.—**Vascular a.** Lat., *a. vasculosa.* Fr., *aire vasculaire.* Ger., *Gefässhof* (2d def.). Sp., *área vascular.* 1. The a. supplied by a particular artery. 2. In embryology, the embryonic a. after the primitive blood-vessels have formed. [A, 22.]—**Vitelline a.** Lat., *a. vitellina.* Fr., *aire vitelline.* Ger., *Dotterhof.* The outer surface of the vitelline membrane of the ovum, bordering on the opaque a.

AREÆ (Lat.), n. f. pl. $A(a^3)'re^2-e(a^3-e^2)$. 1. Of Dumortier, a tribe of araceous plants including *Arum* and several other genera. [B, 170.] 2. Of Engler, a tribe of araceous plants of the suborder *Aroideæ*, corresponding to the *Euarineæ* and *Arisareæ* of Bentham and Hooker, comprising the subtribes *Arisarinæ*, *Sauromatinæ*, *Biarinæ*, and *Arinæ*. [Engler (B, 216).]

AREALU (Malay), n. The *Ficus religiosa.* [B, 172.]

AREATUS (Lat.), adj. $A^2r(a^3r)-e^2-a(a^3)'tu^3s(tu^4s)$. In the form of patches. See ALOPECIA *areata.*

AREC (Fr.), n. A^3-re^2k. See ARECA.—**A. d'Amérique.** See OREODOXA *oleracea.*—**A. de l'Inde.** See ARECA *catechu.*—**A.-poison.** The *Areca lutescens.* [B, 121.]—**A. singe.** The *Areca madagascariensis.* [L, 87.]—**Noix d'a.** See ARECA *nut.*



ARECA (Lat.), n. f. $A^2r(a^3r)-e(a)'ka^3$. Fr., *arec, arecque, aréquier.* Ger., *Arekapalme.* 1. A genus of lofty palmaceous trees bearing pinnate leaves with the stalk rolled into the form of a cylinder, and unisexual flowers on a branched spadix enveloped in a double spathe. 2. In the Br. Ph., 1867, the a. nut. [B, 19.]—**A. alba** [Bory]. Fr., *palmiste blanc* (ou *commun*). Syn.: *Sublimia palmicaulis.* See DICTYOSPERMA *album.*—**A. americana.** See *A. oleracea.*—**A. Banksii** [Cunningham]. See *A. sapida.*—**A. betel** [Fée]. See *A. catechu.*—**A. catechu** [Linnæus]. Fr., *arec de l'Inde.* Ger., *Katechupalme, Betelnusspalme.* The betel-nut palm (the *pinang* of the Malays); a species growing in the East Indies, furnishing the a.- (or betel-) nut. The tree is cultivated extensively and in many varieties in the East Indies, especially in the neighborhood of the sea-coast. The spathes are used as vessels; the male flower has an exceedingly agreeable perfume, and is used as a medicine; the young leaves are eaten in the form of salad; and in Malabar intoxicating pastilles are made from the juice of the tree. [B. Franck (A, 304); B, 5, 33.] See also *A.-nut.*—**A. crinita** [Bory]. Fr., *palmiste-bourre, ashe à bourre.* Syn.: *Sublimia centennina* [Commerson]. A species more properly referred to *Acanthophœnix*, growing in the Mascarene Islands. It has an edible top. [B, 188.]—**A. Dicksonii** [Roxburgh]. See PTYCHOSPERMA *Dicksonii.*—**A. edulis.** See EUTERPE *edulis.*—**A. faufel** [Gärtner]. See *A. catechu.*—**A. glandiformis** [Lamarck]. A Moluccan species having properties and uses similar to those of *A. oleracea.* [B, 180.]—**A. globulifera** [Lamarck]. A species the fruit of which is used like that of *A. catechu.* [B, 180.]—**A. guvaca.** See *A. catechu.*—**A. humilis** [Willdenow]. A Moluccan species having properties and uses similar to those of *A. oleracea.* [B, 180.]—**A. indica.** See *A. catechu.*—**A. laxa** [Ham.]. A species growing in the Andaima Islands, the seeds of which are used like *A. catechu.* [B, 270.]—**A. lutescens** [Bory]. Fr., *arec-poison.* See HYOPHORBE *indica.*—**A. madagascariensis** [Martius]. Fr., *arec* (ou *arecque*) *singe, arbre à sel.* A species the oil obtained from which is used as an embrocation in gout and rheumatism. [B, 173.]—**A. nagensis** [Griff.]. A Bengal species, used like *A. catechu.* [B, 270.]—**A.-nut.** Lat., *areca* [Br. Ph., 1867], *semen arecæ.* Fr., *noix d'arec.* Ger., *Arekanuss.* It., *noce d'areca.* Syn.: *betel-nut* (because chewed with the leaf of the betel pepper). The nut of *A. catechu*; a drupe-like nut of about the size of a hen's egg, having a fibrous rind about half an inch thick inclosing the seed, which is about as large as a nutmeg. The nucleus, of a pale orange-color, contains 53 per cent. of fat and 30 per cent. of emulsin, together with sugar, catechu-tannic acid, catechin, gallic acid, and a. red (*q. v.*). The nut is extensively used in the East as a masticatory, and is thought to improve digestion. It colors the tongue and lips scarlet, and in time renders the teeth perfectly black unless, as in China, care is taken to remove the stain. The nut is sliced and wrapped in the leaf of the betel pepper (*Piper betle*), and a little quicklime is added. The seed is astringent, and is reputed tonic and anti-periodic. It has been used in dropsical affections and as an anthelminthic. A fibrous material resembling oakum, but softer, obtained from the husk, has been used in Ceylon as a dressing for wounds. [Stevenson, "Edinb. Med. Jour.," Feb., 1882 (A); A, 304, 327; B, 5; L, 75.] Cf. AREKANE.—**A. oleracea** [Linnæus]. Fr., *arec d'Amérique, chou palmiste, arbre*

THE ARECA CATECHU. (AFTER B. FRANCK [A, 304].)

au chou. Ger., *Kohlpalme.* See OREODOXA *oleracea.*—**A. oryzæformis** [Rumphius]. See PTYCHOSPERMA *oryzæforme.*—**A. palm.**

See *A. catechu.*—**A. red.** Ger., *Arekaroth.* A brownish-red coloring matter found in the a.-nut; odorless, tasteless, and insoluble in cold water. [B. Franck (A, 304).]—**A. rubra** [Bory]. Fr., *palmiste rouge.* A species more properly referred to *Acanthophœnix*, growing in the Mascarene Islands. It resembles *A. crinita.* [B, 19, 188.]—**A. sapida** [Solander]. A New Zealand species having properties and uses like *A. oleracea.* [B, 180.]—**A. silvestris** [Loureiro]. A species used like *A. catechu.* [B, 270.]—**A. spicata** [Lamarck]. A

THE ARECA-NUT, ENTIRE AND IN SECTION. [A, 327.]

species growing in the Sunda Islands and Amboyna, which by some has been referred to the *Euterpe globosa* (*oleracea*), but which is probably distinct. [B, 188.]—**A. vestiaria** [Giseke]. A species growing in the Isle of Bourbon, from the bark of which a thin white thread is spun that is woven into durable cloth. [B, 188.]—**Nux arecæ, Semen arecæ.** See *A.-nut.*

ARECACEÆ [Reichenbach] (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}k-a(a^3)′-se^2-e(a^3-e^2). See ARECINÆ. 1. As defined by Bentham and Hooker it comprises those with pinnatisect leaves, with segments reduplicate in vernation; monœcious or diœcious flowers; umbilicated seeds with a ventral rhaphe and a dorsally-placed embryo. It comprises the divisions *Euareceæ*, *Ptychospermæ*, *Oncospermæ*, *Iriarteæ*, *Wetteniеæ*, *Linospadiceæ*, *Ceroxyleæ*, *Malortieæ*, *Iganureæ*, *Chamædoreæ*, *Geonomeæ*, and *Caryotideæ.* 2. A subtribe of the *Arecineæ* [Drude] comprising genera with a 3-carpelled, unilocular, 1-seeded ovary, and a 1-seeded baccate fruit having a thin (rarely woody) endocarp. [Drude (B, 245).]

ARECA-GOLI (Hind.), n. The *Ficus benjamina.* [B, 121.]

ARECANE, n. See AREKANE.

ARECARIÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}k-a(a^3)′ri^2-e(a^3-e^2). A subdivision of palms, made by Reichenbach. [B, 170.]

ARECEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}s(ak)′e^2-e(a^3-e^2). 1. A tribe of palmaceous plants, made by Lindley, comprising *Areca*, *Saguerus*, and other genera. [B, 170.] See ARECINÆ. 2. A subtribe of the *Arecineæ* [Drude] comprising genera with a 3-carpelled, unilocular, 1-seeded ovary, and a 1-seeded baccate fruit having a thin endocarp, rarely woody. [Drude (B, 245).]

ARECHAVALETA (Sp.), n. A^3-ra″cha^3-va^3-la′ta^3. A place in the province of Alva, Spain, where there are springs feebly sulphurous, ferruginous, and alkaline. [Rotureau (L, 87).]

ARECIN, n. A^{2}r-e′si^{2}n. Fr., *arécine.* Ger., *Arecin.* See ARECA *red.*

ARECINÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}s(e^{2}k)-in(en)′(a^3-e^2). Fr., *arécinées.* Of Martius, Endlicher, Kunth, and others, a series or tribe of palmaceous plants, comprising *Areca* and other genera having the margins of the leaves depressed, diclinous flowers, basilar embryo, and a trilobate, baccate, or drupaceous fruit. [B, 104, 170.]

ARECINEÆ [Brongniart, Spach] (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^2-si^{2}n(ki^{2}n)′e^2-e(a^3-e^2). 1. See ARECINÆ. 2. A tribe of palms of the suborder *Ceroxylineæ*, distinguished by the baccate fruit composed of carpels either grown together or separating after maturity. It comprises the subtribes *Caryoteæ*, *Geonomeæ*, *Iriarteæ*, *Morenieæ*, and *Areceæ.* [Drude (B, 245).]

ARECQUE (Fr.), n. A^3-re^{2}k. See AREC.

AREFACTION, n. A^{2}r-e^2-fa^{2}k′shu^{3}n. Lat., *arefactio* (from *arefacere*, to make dry). Fr., *aréfaction.* Ger., *Dörren.* It., *arefazione.* Sp., *arefacción.* 1. The drying of a drug so that it may be reduced to a very fine powder. [L, 53.] 2. See ARIDURA.

AREGMA (Lat.), n. n. A^{2}r(a^{3}r)-e^{2}g′ma^3. Gen., *areg′matos* (*-tis*). See PHRAGMIDIUM.

AREGON (Lat.), n. m. and f. A^{2}r(a^{3}r)-e(a)′go^{2}n. Gen., *areg′onos* (*-nis*). Gr., ἀρηγών (from ἀρήγειν, to aid), an auxiliary. The name of a certain resolvent, relaxing, and attenuating ointment mentioned in several of the old dispensatories. [L, 51, 53.]

AREGOS (Sp), n. A^3-ra′gos. A place in Spain, where there are hot sulphur springs. [B, 270.]

AREKA (Ger.), n. A^{3}r-a′ka^3. See ARECA.—**A'nuss.** See ARECA-*nut.*—**A'palme.** See ARECA.—**Kohltragende A.** See ARECA *oleracea.*

AREKA (Tamil), n. The *Bauhinia parviflora.* [B, 177.]

AREKANE, n. A^{2}r′e^{2}k-an. A colorless, volatile, oily alkaloid, smelling like weak bouillon and of a strong alkaline reaction, obtained by E. Bombalon from the areca-nut; said to increase the flow of saliva, retard the pulse, and act as a purgative. [" Lancet," April 10, 1886, p. 709; " N. Y. Med. Jour.," June 5, 1886, p. 650.]

AREKEPA, n. A Carib name for an undetermined species of *Cotula.* [B, 121.]

AREMAROS, n. An alchemical name for cinnabar. [B, 50.]

ARENA (Lat.), n. f. A^{2}r(a^{3}r)-e(a)′na^3. Sand.—**A. rubra.** A lateritious urinary deposit. [L, 53.]

ARENACEOUS, adj. A^{2}r-e^{2}n-a′shu^{3}s. Lat., *arenaceus* (from *arena*, sand). Fr., *arenacé.* Ger., *sandartig.* Sandy; made up of, containing, or resembling sand (said of the testa of certain of the *Protozoa*). [A, 385; B; L, 147.]

ARÉNAIRE (Fr.), adj. and n. A^3-ra-na^{2}r. See ARENARIA and ARENARIOUS.

ARENAMEL, ARENAMEN, n's. Alchemical names for Armenian bole. [L, 53, 84.]

ARENAPO (It.), n. A^3-ra-na^2′po. A place in Italy, where there is a cold sulphurous spring. [L, 124.]

ARENARIA (Lat.), n. f. A^{2}r(a^{3}r)-e^{2}n-a(a^3)′ri^2-a^3. Fr., *arénaire.* Ger., *Sandkraut.* 1. Sandwort; a genus of caryophyllaceous plants. 2. Generically, any plant which lives in the sand. [B, 121.]—**A. glandulosa** [Jacquin], **A. marginata** [De Candolle]. See *A. media.*—**A. marina.** 1. Of Smith, see *A. media.* 2. Of Roth, a variety of *A. rubra.* [B.]—**A. maritima** [Linnæus], **A. media** [Linnæus]. Species to be referred to *Spergularia* (*q. v.*). [B.]—**A. peploides** [Linnæus]. Syn.: *Honkeneya peploides* [Ehrenberg]. A species the fermented juice of which furnishes a sort of food used by the Icelanders. [B, 173.]—**A. rubra.** Ger., *rothes Sandkraut.* It., *a. rossa.* See SPERGULARIA *rubra.*—**Radix arenariæ.** The root of *Carex a.* and *Carex hirta.* [B, 180.]

ARENARIÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}n-a(a^3)′ri^2-e(a^3-e^2). 1. Sand-plants; plants growing in the sand. 2. Of Lamarck, a section of the *Caryophyllaceæ.* [B, 121, 170.] Cf. ARENARIA.

ARENARIEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}n-a^{2}r(a^{3}r)-i(e)′e^2-e-(a^3-e^2). Of Fenzl and others, a subtribe of caryophyllaceous plants belonging to the *Stellarineæ*, including *Arenaria*, *Holosteum*, *Stellaria*, etc. [B, 170.]

ARENARINÆ [Reichenbach] (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^{2}n-a^{2}r-(a^{3}r)-i(e)′ne(na^3-e^2). See ARENARIEÆ.

ARENARIOUS, adj. A^{2}r-e^{2}n-a′ri^2-u^{3}s. Lat., *arenarius* (from *arena*, sand). Fr., *arénaire.* Growing in a sandy soil (said of plants). [B.]

ARENARMEI, ARENARMEN, n's. Alchemical names for Armenian bole. [B, 50.]

ARENATION, n. A^{2}r-e^{2}n-a′shu^{3}n. Gr., ψαμμισμός. Lat., *arenatio* (from *arena*, sand). Fr., *arénation.* Ger., *Sandbad.* It., *arenazione.* Sp., *arenación.* The therapeutical application of heat, either by immersing a portion of the body in hot sand or by applying bags of the same. [A, 385; Andreas Baccius (L, 53).]

AREND, ARENDI (Hind.), n's. The *Ricinus communis.* [L.]

ARENDRANTE (Fr.), n. A^{3}r-a^{3}n^2-dra^{3}nt. Syn.: *Gomme d'a.* Arindranto, a Madagascar resin, supposed by Bory to be a variety of anime resin. [L, 105.]

ARENDSEE (Ger.), n. A^3′re^{2}nd-za. A German town, on the lake of the same name, where there is a hydrotherapeutic establishment. [L, 124.]

ARENGA (Lat.), n. f. A^{2}r(a^{3}r)-e^{2}n^2′ga^3. From the native name, *areng.* A genus of palms of the *Areceæ*, subtribe *Euareceæ*, including lofty trees having bipinnatisect leaves, male flowers with 3 sepals and numerous stamens, and seeds with ruminated albumen. [B, 42.]—**A. saccharifera** [Labillardière]. Fr., *palmier-condiar.* Ger., *A.-Palme.* Syn.: *Palma indica vinaria secunda* [Rumphius], *Borassus gomutus* [Loureiro] (seu *saccharifer* [Sprengel]), *Sagnerus Rumphii* [Roxburgh] (seu *gamuto* [Houttuyn]), *Caryota onusta* [Blanco]. The *contar*, or *cantar*; a species growing in the Moluccas, the Philippines, the Sunda Islands, and Cochin-China. A sort of sago is obtained from the pith, and a saccharine juice from the male spadices (furnishing a brown sugar called *gaula-itan*, which on fermentation affords an alcoholic beverage). From the petiolar fibrils ropes are made. The green fruit is made into a confection and eaten, and the ripe fruit furnishes a highly irritant juice, which causes intense itching when applied to the skin, and inflammation of the mucous membranes. It constituted the hell-water (*aqua infernalis*) used by the natives as a means of warfare. [B, 121, 188.]

ARENICOLUS (Lat.), adj. A^{2}r(a^{3}r)-e^{2}n-i^{2}k′o-lu^{3}s(lu^{4}s). From *arena*, sand, and *colere*, to frequent. Fr., *arénicole.* Ger., *sandbewohnend.* In zoology, living in the sand. [A, 385; L, 109.]

ARENIFEROUS, adj. A^{2}r-e^{2}n-i^{2}f′e^{2}r-u^{3}s. From *arena*, sand, and *ferre*, to bear. Fr., *arénifère.* Ger., *sandtragend.* Containing or contaminated with sand. [A, 316.]

ARENIFORM, adj. A^{2}r-e^{2}n′i^2-fo^{2}rm. From *arena*, sand, and *forma*, form. Fr., *aréniforme.* Ger., *sandförmig.* Resembling sand. [L, 116.]

ARENOSILLA (Sp.), n. A^3-ra-no-sel′ya^3. A place in the province of Cordova, Spain, where there are alkaline springs. [L, 49.]

ARENOSUS (Lat.), adj. A^{2}r(a^{3}r)-e^{2}n-o′su^{3}s(su^{4}s). Fr., *aréneux.* Ger., *sandig.* Sp., *arenoso.* Sandy; as a n., a person who passes sandy urine (*urina arenosa*). [B; L, 45.]

ARENSBERG (Ger.), n. A^{3}r′e^{2}ns-be^{2}rg. A bathing station on an island in the Baltic Sea. [A, 385; L, 49.]

ARENTES (Lat.), n., f. pl. of pres. particip. *arens* (*cucurbitulæ* understood). A^{2}r(a^{3}r)-e^{2}nt′ez(e^{2}s). Dry cups. [L, 84.]

ARENULA (Lat.), n. f., dim. of *arena.* A^{2}r(a^{3}r)-e^{2}n′u^2(u)-la^3. Fine sand. [L, 50.]

ARENULACEOUS, ARENULOUS, adj's. A^{2}r-e^{2}n-u^2-la′shu^{3}s, -re^{2}n′u^2-lu^{3}s. Fr., *arenulacé.* Sp., *arenuláceo.* Sandy, gritty. [L, 73, 116.]

AREOLA (Lat.), n. f., dim. of *area* (*q. v.*). A^{2}r(a^{3}r)-e(a)′o-la^3. Gr., ἀλωνία. Fr., *aréole.* Ger., *Hof.* It., *areola.* Sp., *aréola.* Syn.: *halo.* 1. A zone of hyperæmia or pigmentation (*e. g.*, the circular blush surrounding a vaccinal lesion, the pigmented disc surrounding the nipple). [G.] 2. A space between adjacent constituents of organs or tissues, especially between the bundles and laminæ of areolar tissue (*q. v.*, under TISSUE). [J.] 3. In botany, a cell-like pit or depression; an interspace in the cellular tissue of the leaves of mosses; one of the flat polygonal areas of which the crustacean thallus of some lichens is formed. [B, 198.] 4. The term was also applied by R. Brown to the cell nucleus. [J.] 5. In zoology, a scaly plate of a chelonian's shell. [L, 41.] 6. In entomology, the space between two adjacent nervures of the wing. [L, 49.]—**A. apicilaris, A. basilaris.** Fr., *aréole apicilaire, aréole basilaire.* Names given by Cassini to the upper and lower extremities respectively in the rudimentary pericarp of the ovary in the *Compositæ.* [B, 1.]—**A. embryonalis.** Ger., *Keimhof.* 1. See *Embryonic* AREA. 2. In botany, Richard's term for the depressed a. upon the exterior of the caryopsis indicating the site of the embryo. [B, 198.]—**A. inflammatoria.** See *Inflammatory a.*—**A. mammæ.** See *A. of the breast.*—**A. of Chaussier.** An a. (1st def.) surrounding a malignant pustule. [A, 452.]—**A. of the breast, A. of the nipple.** Lat., *a. mammæ* (seu *papillæ*). Fr., *aréole* (ou *auréole*) *de la mamelle* (ou *du mamelon*). Ger., *Warzenhof, Brustwarzenhof.* It., *a. del capezzolo.* A circular area, usually from an inch to an inch and a half in diameter, surrounding the nipple; of a pink color (varying somewhat with the complexion) in healthy women who are not pregnant; provided with from ten to twenty visible sebaceous follicles. During pregnancy, and sometimes in consequence of uterine disease, it becomes darker in color, occasionally almost black, and somewhat raised above the surrounding skin, and the follicles are enlarged and moisten its surface with their secretion. [A, 22.] Cf. *Secondary a.*—**A. ovarifera.** Fr., *aréole ovarifère.* Cassini's name for one of the small depressions upon the clinanthium in the *Compositæ* corresponding to the areolæ basilares of the ovaries. [B, 1.]—**A. papillæ, A. papillaris.** See *A. of the breast.*—**A. umbilicalis.** A dark disc of pigmentation occasionally formed around the navel during pregnancy, from which a brown streak, about ¼ inch wide, runs down toward the pubes. [A, 126.]—**Inflammatory a.** Lat., *a. inflammatoria.* Fr., *aréole inflammatoire.* Ger., *entzündlicher Ring.* A circle of redness surrounding an inflamed point. [L, 44.]—**Primary areolæ.** Syn.: *primary marrow cavities, small medullary spaces.* Sharpey's term for the cell-spaces in the calcified matrix of an ossifying cartilage-bone which are still occupied by the cartilage cells, either singly or in groups. [J, 30.]—**Secondary a.** Fr., *aréole secondaire.* The spotted peripheral portion of the a. of the breast, or a spotted appearance around it, sometimes formed during the latter part of pregnancy, looking "as if the color had been discharged by a shower of drops." [Montgomery (A, 22); A, 38.]—**Secondary areolæ.** Syn.: *large medullary spaces.* Sharpey's term for the comparatively large spaces in an ossifying cartilage-bone which result from the absorption of the partitions between the primary areolæ, the spaces becoming filled at the same time with embryonic marrow. [J, 30.]—**True a.** Fr., *aréole vraie.* The central portion of the a. of the breast, containing a great number of sebaceous glands. [A, 38.]—**Vaccinal a.** Fr., *aréole vaccinale.* A ring-shaped redness of the skin which forms around a vaccinal pock, usually on the eighth or ninth day, and fades from the centre toward the border.

AREOLAR, adj. A^{2}r-e′o-la^{3}r. Lat., *areolaris.* Fr., *aréolaire.* Ger., *areolär, maschig, zellig.* It., *areolare.* Sp., *areolar.* Having or pertaining to areolæ or spaces, or pertaining to a tissue or part containing interspaces (see *A.* TISSUE). [J.]

AREOLATE, AREOLATED, adj's. A^{2}r-e′o-lat, -lat-e^{2}d. Lat., *areolatus.* Fr., *aréolé.* Ger., *gefeldert.* Divided into or containing depressed areas (areolæ). [B, 1.]

AREOLATION, n. A^{2}r-e-o-la′shu^{3}n. Fr., *aréolation.* The state of being or the process of becoming areolar or areolate. [L, 41, 56.]

AREOLUS (Lat.), n. m. A^{2}r(a^{3}r)-e(a)′o-lu^{3}s(lu^{4}s). See AREOLA.

AREOMETER, n. A^{2}r-e-o^{2}m′e^{2}t-u^{5}r. See ARÆOMETER and HYDROMETER.

AREOMETRY, n. A^{2}r-e-o^{2}m′e^{2}t-ri^2. See HYDROMETRY.

AREOTIC, adj. A^{2}r-e-o^{2}t′i^{2}k. See ARÆOTIC.

ARÉQUIER (Fr.), n. A^{3}r-a-ke-a. See ARECA.

AREREH, n. See CASSIA *a.*

ARES (Lat.), n. m. A(a^3)′rez(re^{2}s). Gen., *A′reos* (*-ris*). Gr., Ἄρης. Lit., the god Mars; a name given by the ancients to various metals, also to a pestilence and to a mortal wound. [A, 311, 322.]

ARES, n. A word employed by Paracelsus to designate a subtle force akin to (or, according to some, including) the *archæus* (*q. v.*). [L, 53.]

ARÉS (Fr.), n. A^3-ra. A sea-bathing station in the Gironde. [L, 57.]

ARESFATU (Ar.), n. The patella. [J. Hyrtl, quoted by F. B. Stephenson, "N. Y. Med. Jour.," July 24, 1886, p. 92.]

ARETE (Lat.), n. f. A^{2}r(a^{3}r)′e^{2}t-e(a). Gr., ἀρετή. Bodily vigor. [Hippocrates (L, 53).]

ARÊTE (Fr.), n. A^{3}r-e^{2}t. 1. An edge formed by the intersection of two planes. [B; I, 39; K.] See ACIES. 2. See ARISTA. 3. Any one of the component parts of the skeleton of a fish. [A, 385.]—**Grande a.** The vertebral column of a fish. [L, 32.]

ARETHUSA (Lat.), n. f. A^{2}r(a^{3}r)-e^2-thu^2(thu)′sa^3. A genus of orchidaceous plants. [B.]—**A. bulbosa** [Linnæus]. A North American species, the root-tubers of which are used as an application for the relief of toothache and for hastening the maturation of abscesses. [B, 180.]

ARETHUSEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-e^2-thu^2(thu)′se^2-e(a^3-e^2). A tribe of orchidaceous plants distinguished by the powdery pollen and the single terminal opercular anther. [B, 19.]

ARETOS (Lat.), n. m. A^{2}r(a^{3}r)′e^{2}t-o^{2}s. From ἀρετή, virtue. See VERBASCUM *blattaria.*

ARETTI (Teloogoo), n. The *Musa sapientium.* [B, 172.]

AREUS (Lat.), adj. A^{2}r(a^{3}r)-e(a)′u^{3}s(u^{4}s). Gr., Ἄρειος. Lit., pertaining to Mars; the title of a pessary mentioned by Paulus Ægineta. [L, 104.]

AREZZO (It.), n. A^3-re^{2}t′so. A town in Tuscany, where there are several springs containing sodium and calcium carbonates. [L, 57.]

ARFAR, n. An alchemical name for arsenic. [B, 50.]

ARGAL, n. A^{3}r′ga^{2}l. Written also *argol* and *orgal.* From *argilla,* clay. The commercial name of crude tartar as taken from the sides of wine-casks. [B, 2.]

ARGALIE (Fr.), n. A^{3}r-ga^{3}l-e. See HIBISCUS *abelmoschus* and *Semen* ABELMOSCHI.

ARGALOU (Fr.), n. A^{3}r-ga^{3}l-u. A name given in different parts of France to the *Paliurus aculeatus,* the *Lycium europæum,* and the *Rhamnus cathartica.* [B, 121.]

ARGAN, n. See ARGANIA.—**A'baum** (Ger.), **A. de Maroc** (Fr.). See ARGANIA *sideroxylon.*—**A. oil.** The oil of *Argania sideroxylon* (*q. v.*). [B.]

ARGANIA (Lat.), n. f. A^{3}r-ga(ga^3)′ni^2-a^3. From Ar., *arjân.* Fr., *argan, arganie.* A genus of sapotaceous plants, having 10 sepals arranged in a double row; 10 stamens, 5 abortive, forming scales placed upon the throat of the corolla, and 5 fertile; and an awl-shaped style. [A, 385; B, 19.]—**A. sideroxylon** [Römer and Schultes]. Ger., *Arganbaum.* Syn.: *Sideroxylon spinosum* [Linnæus], *Elæodendron a.* [Retzius]. The argan-tree, an evergreen tree growing in Morocco, distinguished by the large girth and small height of its spiny trunk. The drupaceous, egg-shaped fruit is eaten by cattle, and the hard seeds furnish a fixed oil which is used as a substitute for olive-oil. The wood is very hard and heavy. [B, 19, 180.]

ARGAS (Lat.), n. m. A^{3}r′ga^{2}s(ga^{3}s). A genus of parasitic insects of the order *Acarina,* class *Arachnoidea,* resembling the ticks. [B, 27; G; Packard (L).]—**A. americanus.** Syn.: *Amblyomma americanum* [Koch]. A species found in South America; it attacks the skin, causing intense irritation, which, it is said, is sometimes so severe as to cause death. [G.]—**A. chinche** [Gondet]. Fr., *a. chinche.* A species found in Colombia by Gondet. [B.]—**A. de Fischer** (Fr.). Supposed to be the same as the *A. Savignyi.* [L, 183.]—**A. mauritianus** [Guérin]. Fr., *a. de Maurice.* A variety very similar to the *A. reflexus,* found in the Mauritius. [L, 183.]—**A. moubouta** [Murray]. An Angola species, oblong, coriaceous, resembling slate or shark's skin, speckled with white. It attacks man and the lower animals. [L, 205.]—**A. persicus** [Fischer]. Pers., *malleh.* Fr., *a. de Perse, punaise de Miana.* A species indigenous to Persia and Egypt, from 4 to 6 mm. long, pear-shaped, brownish-red in color, with white indentations on the back. It attacks man at night, sucking the blood and, it is said, causing very alarming symptoms, and even death. [B, 27; G.]—**A. reflexus** [Latreille]. A species from 4·5 to 6·5 mm. long, of a rusty-yellow color. It lives in crevices or other secluded places during the day, and attacks birds or man at night. Its bite causes an intense itching, which may last for a very long time. [B, 27.]—**A. Savignyi** [P. Gervaise]. Fr., *a. de Savigny.* A. species differing from *A. persicus* by the posterior extremity being more decidedly oval than the anterior. [L, 183.]—**A. Talaje** [Guérin]. A species that infests houses in Central America. It is from 2 to 7 mm. long and nocturnal in its habits. Its bite produces a painful œdematous swelling. [B, 27.]—**A. Tholozani** [Laboullère and Mégnin]. A species indigenous to Persia. The male is from 4 to 5 mm. long and from 2 to 3 mm. broad, the female twice as large each way. It is of a brownish color, rectangular in shape, with a pointed anterior and a rounded posterior extremity. [B, 27.]

ARGAULE (Fr.), n. A^{3}r-gol. The *Hirundo esculenta.* [A, 385.]

ARGEL, n. A^{3}r′ge^{2}l. See SOLENOSTEMMA *argel* and GOMPHOCARPUS *fruticosus.*

ARGELIA (Lat.), n. f. A^{3}r-je^{2}l(ge^{2}l)′i^2-a^3. A genus of plants made by Decaisne out of *Solenostemma* (*q. v.*). [B, 121.]—**A. Delilii** [Decaisne]. See SOLENOSTEMMA *argel.*

ARGEMA, ARGEMON (Lat.), n's n. A^{3}r′je^{2}m(ge^{2}m)-a^3, -o^{2}n. Gen., *argem′atos* (*-tis*), *ar′gemi.* Gr., ἄργεμα, ἄργεμον. Fr., *argéma, argémon.* Ancient names for a white spot at the margin of the cornea, due to superficial ulceration following a phlyctænula. [A, 385; Vogel (D, 100).]

ARGEMONE (Lat.), n. f. A^{3}r-je^{2}m(ge^{2}m)-o′ne(na). Gr., ἀργεμώνη (from some plant of the genus having been used as a remedy for argemon [*q. v.*]). Fr., *argémone.* A genus of annual papaveraceous herbs. [B, 34.]—**A. mexicana** [Linnæus]. Fr., *argémone* (ou *pavot*) *de Mexique, pavot épineux, figue infernale, chardon bénit des Antilles.* Ger., *Stachelmohn, Teufelsfeige, Doppelklappe.* Syn.: *Papaver spinosum* [C. Bauhin]. The prickly poppy; a species indigenous to the southern and western United States, naturalized in the Northern States, having a stalk from 2 to 3 feet high, which, with the calyx and the capsule, is covered with prickles. The flowers have been used as a hypnotic, and the milky juice is said to contain morphine. The seeds yield a purgative oil similar to castor-oil. [A, 321; B, 34.]

ARGEMONEÆ (Lat.), n. f. pl. A^{3}r-je^2(ge^2)-mo′ne^2-e(a^3-e^2). A tribe of papaveraceous plants, made by Endlicher, including those with reddish-yellow juice. [B, 121.]

ARGEMONIA (Lat.), n. f. A^{3}r-je^{2}m(ge^{2}m)-o′ni^2-a^3. According to Celsus, the wild poppy (*Papaver argemone*), anciently used as an antidote to snake-bites. [B, 45.]

ARGEMONRÖSLEIN (Ger.), n. A^{3}r'ge^{2}m-on-ru^{5}s''lin. See PAPAVER *argemone.*

ARGEMOS (Lat.), n. m. A^{3}r'je^{2}m(ge^{2}m)-o^{2}s. Gr., ἄργεμος. See ARGEMON.

ARGENÇON (Fr.), **ARGENSON** (Fr.), n's. A^{3}r-zha^{3}n^{2}-so^{2}n^{2}. A place near Gap, in the department of the Hautes-Alpes, France, where there is a cold acidulous spring, said to contain iron and carbon dioxide, and having aperient properties, called *Fontaine de Saint-Pierre*, or *Fontaine Vineuse.* [B, 88.]

ARGENT (Fr.), n. A^{3}r-zha^{3}n^{2}. Silver. [B.]—**Acétate d'a.** See SILVER *acetate.*—**Acétylure d'a.** See SILVER *acetylide.*—**Aconitate d'a.** See SILVER *aconitate.*—**Acrylate d'a.** See SILVER *acrylate.*—**Adipate d'a.** See SILVER *adipate.*—**Albuminate d'a.** See SILVER *albuminate.*—**Alun d'a.** See *Silver* ALUM.—**Amalgame d'a.** See SILVER *amalgam.*—**Amidosulfonate d'a.** See SILVER *amidosulphonate.*—**Ammoniochlorure d'a.** See SILVER *ammonio-chloride.*—**Ammonio-nitrate d'a.** See SILVER *ammonio-nitrate.*—**Ammoniure d'a.** See SILVER *fulminate.*—**Antimoniure d'a.** See SILVER *antimonide.*—**Arachidate d'a.** See SILVER *arachidate.*—**A. amalgamé.** See SILVER *amalgam.*—**A. anglais.** An alloy resembling argentan. [B, 38.]—**A. antimonié sulfuré.** Argyrythrose, or native silver thioantimonite. [B, 38.]—**A. applati.** See *A. en lame.*—**A. ardent.** Metallic silver obtained by decomposing silver nitrate on hot charcoal. [B, 38.]—**A. arsénical.** A native arsenide of silver. [B, 38.]—**A. battu.** Silver-leaf. [B, 38.]—**A. blanc.** Argentiferous lead ore. [B, 38.]—**A. bromuré.** See SILVER *bromide.*—**A. carbonaté.** Silver carbonate. [B, 38.]—**A. chinois.** China silver. [B, 38.] See ARGENTAN.—**A. chlorüré.** See SILVER *chloride.*—**A. corné.** Horn-silver. [B, 38.] See SILVER *chloride.*—**A. de cendrée.** Powdered silver obtained from the liquids used in gold refining. [B, 38.]—**A. de mosaïque.** See *Mosaic* SILVER.—**A. détonant.** See *Fulminating* SILVER.—**A. du roi.** See ARGENTUM *regis.*—**A. en coquille.** See *Shell* SILVER.—**A. en feuilles.** Silver-leaf. [B, 38.]—**A. en lames.** Silver in the form of thin plates. [B, 38.]—**A. faux.** Silver-plated copper. [B, 38.]—**A. fin.** See ARGENTUM *regis.*—**A. fulminant.** Fulminating silver. [B, 93.] See SILVER *fulminate.*—**A. gris.** A sort of ivory. [B, 52.]—**A. haché.** White tombac; an alloy of copper and arsenic, [B, 49.]—**A. ioduré.** See SILVER *iodide.*—**A. muriaté.** Silver chloride. [B, 38.]—**A. noir.** Silver sulphide; also as a generic name, any black ore of silver. [B, 38.]—**A. pur, A. purifié** [Fr. Cod.]. Lat., *argentum purissimum* [Fr. Cod.]. Pure metallic silver suitable for pharmaceutical purposes. [B, 113.]—**A. rouge.** A native red thioantimonite of silver (argyrythrose); also, any red ore of silver. [B, 38.]—**A. sulfuré.** See SILVER *sulphide.*—**A. telluré.** Silver telluride. [B, 38.]—**A. trait.** Silver drawn out into a thin wire. [B.]—**A. vert.** A green native bromide of silver. [B, 38.]—**A. vierge.** Virgin silver; pure metallic silver occurring native. [B.]—**A.-vif.** Quicksilver; mercury. [B, 38.]—**A. vitreux.** Silver sulphide. [B, 38.]—**Arséniate d'a.** See SILVER *arsenate.*—**Arsénio-méthylate d'a.** See SILVER *arsenmethylate.*—**Arsénite d'a.** See SILVER *arsenite.*—**Arséniure d'a.** See SILVER *arsenide.*—**Auricyanure d'a.** See SILVER *auricyanide.*—**Aurothiocyanate d'a.** See GOLD *and silver thiocyanate.*—**Azotate d'a.** See SILVER *nitrate.*—**Azotate d'a. cristallisé** [Fr. Cod.]. Lat., *nitras argenticus cristallisatus* [Fr. Cod.]. Crystallized silver nitrate, a preparation corresponding to the argenti nitras of the U. S. Ph. [B, 113.]—**Azotate d'a. et d'ammonium.** See SILVER *ammonio-nitrate.*—**Azotate d'a. fondu.** See ARGENTI *nitras fusus.*—**Azotate d'a. nitraté.** See ARGENTI *nitras dilutus.*—**Azotite d'a.** See SILVER *nitrite.*—**Bichromate d'a.** See SILVER *dichromate.*—**Bioxyde d'a.** See SILVER *dioxide.*—**Bromate d'a.** See SILVER *bromate.*—**Bromure d'a.** See SILVER *bromide.*—**Cacodylate d'a.** See SILVER *cacodylate.*—**Carbonate d'a.** See SILVER *carbonate.*—**Chlorate d'a.** See SILVER *chlorate.*—**Chlorite d'a.** See SILVER *chlorite.*—**Chlorure d'a.** See SILVER *chloride.* —**Chlorure d'a. et d'ammonium.** See SILVER *ammonio-chloride.*—**Chromate d'a.** See SILVER *chromate.*—**Citrate d'a.** See SILVER *citrate.*—**Collyre à l'azotate d'a.** [Fr. Cod.]. A preparation intended for use in veterinary practice only, made by dissolving 1 part of silver nitrate in a mixture of 10 parts of the *laudanum de Sydenham* [Fr. Cod.] and 1,250 parts of rose-water. [B, 113.]—**Crayons d'azotate d'a.** [Fr. Cod.]. Lat., *nitras argenticus fusus* [Fr. Cod.]. See ARGENTI *nitras fusus.*—**Crayons d'azotate d'a. mitigé** [Fr. Cod.]. See ARGENTI *nitras dilutus.*—**Croconate d'a.** See SILVER *croconate.*—**Cyanate d'a.** See SILVER *cyanate.*—**Cyanurate d'a.** See SILVER *cyanurate.*—**Cyanure d'a.** See SILVER *cyanide.*—**Cyanure d'a. et de potassium.** See SILVER *and potassium cyanide.*—**Cyanure d'a. et d'or.** See SILVER *auricyanide.*—**Deuto-ammoniate d'a.** See SILVER *fulminate.*—**Dichromate d'a.** See SILVER *dichromate.*—**Dioxyde d'a.** See SILVER *dioxide.*—**Dithionate d'a.** See SILVER *dithionate.*—**Ferricyanure d'a.** See SILVER *ferricyanide.*—**Ferrocyanure d'a.** See SILVER *ferrocyanide.*—**Fluorure d'a.** See SILVER *fluoride.*—**Formiate d'a.** See SILVER *formate.*—**Fulminate d'a.** See SILVER *fulminate.*—**Fulminate d'a. et de potassium.** See SILVER *and potassium fulminate.*—**Fulminate d'a. et d'hydrogène.** Hydric argentic fulminate. [B.] See SILVER *fulminate.*—**Hémioxyde d'a.** Silver monoxide. [B.] See SILVER *oxide.*—**Hypochlorite d'a.** See SILVER *hypochlorite.*—**Hyposulfite d'a.** See SILVER *thiosulphate.*—**Hyposulfite d'a. et de soude (ou de sodium).** See SILVER *and sodium thiosulphate.*—**Hypovanadate d'a.** See SILVER *hypovanadate.*—**Iodate d'a.** See SILVER *iodate.*—**Iodure d'a.** See SILVER *iodide.*—**Isovalérate d'a.** See SILVER *valerianate.*—**Limaille d'a.** Silver-leaf. [B, 88.]—**Lune cornée d'a.** See *Horn* SILVER.—**Méconate d'a.** See SILVER *meconate.*—**Métapériodate d'a.** See SILVER *metaperiodate.*—**Métaphosphate d'a.** See SILVER *metaphosphate.*—**Métavanadate d'a.** See SILVER *metavanadate.*—**Monoxyde d'a.** Silver monoxide. [B.] See SILVER *oxide.*—**Nitrate d'a.** See SILVER *nitrate.*—**Nitrate d'a. cristallisé.** Crystallized silver nitrate. [B, 88.]—**Nitrate d'a. fondu** [Fr. Cod.]. See ARGENTI *nitras fusus.*—**Nitrate d'a. liquide.** A solution of silver nitrate. [B, 88.]—**Nitrite d'a.** See SILVER *nitrite.*—**Nitro-acétonitrile d'a.** See SILVER *fulminate.*—**Orthophosphate d'a.** Silver orthophosphate. [B.] See SILVER *phosphate.*—**Oxalate d'a.** See SILVER *oxalate.*—**Oxalurate d'a.** See SILVER *oxalurate.*—**Oxyde d'a.** See SILVER *oxide.*—**Oxyde d'a. et d'ammonium.** See *Ammoniated* SILVER *oxide.*—**Paracyanure d'a.** See SILVER *paracyanide.*—**Periodate d'a.** See SILVER *periodate.*—**Permanganate d'a.** See SILVER *permanganate.*—**Peroxyde d'a.** See SILVER *peroxide.*—**Phosphate acide d'a.** Acid silver phosphate. [B.] See SILVER *phosphate.*—**Phosphate d'a.** See SILVER *phosphate.*—**Phosphate d'a. monohydrique.** Acid silver phosphate. [B.] See SILVER *phosphate.*—**Phosphure d'a.** See SILVER *phosphide.*—**Platino-chlorure d'a.** See SILVER *platinochloride.*—**Platino-nitrite d'a.** See SILVER *platinonitrite.*—**Protoxyde d'a.** Silver monoxide. [B, 38.] See SILVER *oxide.*—**Purpurate d'a.** See SILVER *purpurate.*—**Pyrophosphate d'a.** See SILVER *pyrophosphate.*—**Pyrophosphate d'a. bihydrique** (ou **dihydrique**). Dihydric silver pyrophosphate. [B.] See SILVER *pyrophosphate.*—**Pyrovanadate d'a.** See SILVER *pyrovanadate.*—**Quadrantoxyde d'a.** See SILVER *tetrantoxide.*—**Régule d'a.** Metallic silver. [B, 88.]—**Rhodizonate d'a.** See SILVER *rhodizonate.*—**Salicylate d'a.** See SILVER *salicylate.*—**Sous-chlorure d'a.** See SILVER *subchloride.*—**Sous-oxyde d'a.** See SILVER *tetrantoxide.*—**Sulfantimoniate d'a.** See SILVER *thioantimonate.*—**Sulfantimonite d'a.** See SILVER *thioantimonite.*—**Sulfarséniate d'a.** See SILVER *thioarsenate.*—**Sulfarsénite d'a.** See SILVER *thioarsenite.*—**Sulfate acide d'a.** Hydrogen silver sulphate. [B.] See SILVER *sulphate.*—**Sulfate d'a.** See SILVER *sulphate.*—**Sulfate d'a. et d'hydrogène.** Hydrogen silver sulphate. [B.] See SILVER *sulphate.*—**Sulfite d'a.** See SILVER *sulphite.*—**Sulfocyanate d'a.** See SILVER *thiocyanate.*—**Sulfosulfate d'a.** See SILVER *thiosulphate.*—**Sulfure d'a.** See SILVER *sulphide.*—**Tellurure d'a.** See SILVER *telluride.*—**Tellurure d'a. et d'or.** See SILVER *and gold telluride.*—**Tétrantoxyde d'a.** See SILVER *tetrantoxide.*—**Thioantimoniate d'a.** See SILVER *thioantimonate.*—**Thioantimonite d'a.** See SILVER *thioantimonite.*—**Thioarséniate d'a.** See SILVER *thioarsenate.*—**Thioarsénite d'a.** See SILVER *thioarsenite.*—**Thiocyanate d'a.** See SILVER *thiocyanate.*—**Thiosulfate d'a.** See SILVER *thiosulphate.*—**Thiosulfate d'a. et de sodium** (ou **de soude**). See SILVER *and sodium thiosulphate.*—**Tricyanate d'a.** See SILVER *cyanurate.*—**Trimétaphosphate d'a.** See SILVER *trimetaphosphate.*—**Valérianate d'a.** See SILVER *valerianate.*—**Vanadate d'a.** See SILVER *vanadate.*—**Vif-a.** Quicksilver; mercury. [B.]

ARGENTAL, adj. A^{3}r-je^{2}n'ta^{2}l. Fr., *argental.* Containing silver, as a. mercury, an ore of silver and mercury. [B, 38, 116.]

ARGENTALLYLENE, n. A^{3}r''je^{2}nt-a^{2}l'li^{2}l-en. From *argentum* and *allylene.* Fr., *argentallylène.* Ger., *Argentallylen.* A white crystalline substance, C_3H_3Ag or, more probably, $(C_3H_3)_2Ag_2 = CH_3 - C \equiv CAg - Ag - C \equiv C - CH_3$, formed by the action of allylene upon silver. [B, 2, 4.]

ARGENTAMMONIUM (Lat.), n. n. A^{3}r-je^{2}nt(ge^{2}nt)-a^{2}m-(a^{3}m)-mo'ni^{2}-u^{3}m(u^{4}m). From *argentum* and *ammonium.* A univalent radicle, NH_3Ag, formed from ammonium by substituting an atom of silver for one of hydrogen. [B, 2.]—**A. oxide.** See SILVER *and ammonium oxide.*

ARGENTAN, n. A^{3}r'je^{2}n-ta^{2}n. From *argentum*, because of its resemblance to silver. Fr., *a. maillechor.* Ger., *Argentan, Neusilber, Weisskupfer.* Syn.: *German silver, packfong.* An alloy of copper 16 parts, zinc 3 to 10 parts, and nickel 4 to 12 parts, with traces of tin, iron, and lead, resembling silver in appearance and properties and applied to similar technical uses. *White a.* contains 4 parts of nickel, and the finest *Chinese a.* or *electrum* contains 8 parts. When silver-plated, a. is also called *Peru silver*, *China silver*, and *alpaca.* The *argyroid* of Moreau, the *argyrophan* of Wolf, and *semilargent* are silver-plated alloys of similar composition. [B, 2, 38, 48.]

ARGENTARIA (Lat.), n. f. A^{3}r-je^{2}n(ge^{2}n)-ta(ta^{3})'ri^{2}-a^{3}. From Lat., *argentarius*, relating to silver (*planta* understood). The *Potentilla anserina.* [B.]—**Radix argentariæ.** The root of *Potentilla anserina.* [B, 180.]

ARGENTATE, n. A^{3}r'je^{2}n-tat. A salt of argentic acid; a compound of argentic oxide with a base. [B.]

ARGENTATION, n. A^{3}r''je^{2}n-ta'shu^{3}n. Fr., *argentation.* 1. The act or process of silvering. [B, 116.] 2. The injection of the vessels of an anatomical specimen with mercury. [B, 52.] 3. The staining of a microscopical preparation with silver nitrate. [A, 385.] 4. Argyriasis. [A, 385.]

ARGENTÉ (Fr.), adj. A^{3}r-zha^{3}n^{2}-ta. 1. Silvered. [B, 38.] 2. In zoology, having silvery scales or hair. [A, 385.] 3. In botany, see ARGENTEUS.

ARGENTEOUS, adj. A^{3}r-je^{2}n'te^{2}-u^{3}s. See ARGENTEUS.

ARGENTER (Fr.), v. tr. A^{3}r-zha^{3}n-ta. To silver. [B, 52.]

ARGENTERIA (Lat.), n. f. A^{3}r-je^{2}n(ge^{2}n)-te(ta)'ri^{2}-a^{3}. See ARGENTARIA.

ARGENTEUS (Lat.), adj. A^{3}r-je^{2}n(ge^{2}n)'te^{2}-u^{3}s(u^{4}s). Silvery, argentine. In botany, having a silvery lustre (said of leaves). [B, 123.]

ARGENTEUX (Fr.), adj. A^{3}r-zha^{3}n-tu^{5}. See ARGENTOUS.

ARGENTIC, adj. A^{3}r-je^{2}n'ti^{2}k. Lat., *argenticus.* Fr., *argentique.* It., *argentico.* Of or containing silver (especially containing silver as a univalent radicle); produced by silver (*e. g.*, a. stomatitis). [B.]—**A. acid.** Lat., *acidum argenticum.* Fr., *acide argentique.* It., *acido argentico.* Silver monoxide considered as an oxygen acid. The compounds called argentates were regarded as salts of this acid. [B, 91.]—**A. oxide.** Fr., *oxyde argentique.* Ger., *Silberoxyd.* It., *ossido argentico.* Silver monoxide. [B.] See SILVER *oxide.*

ARGENTICO-AMMONIC, ARGENTICO-CALCIC, ARGENTICO-PLUMBIC, ARGENTICO-POTASSIC, ARGENTICO-SODIC, adj's. A[3]r-je[2]n″ti[2]-ko-a[2]m-mo′ni[2]k, -ka[2]l′-si[2]k, -plu[3]m′bi[2]k, -po[2]t-a[2]s′i[2]k, -so′di[2]k. Fr., *argentico-ammonique, argentico-calcique, argentico-plombique, argentico-potassique, argentico-sodique.* Containing at the same time silver and ammonium, calcium, lead, potassium, or sodium. [B, 38.]

ARGENTIÈRES (Fr.), n. A[3]r-zha[3]n[2]-ti[2]-e[2]r. A place in the department of Allier, France, where there are two mineral springs. [O. Henry (B, 137).]

ARGENTIFEROUS, adj. A[3]r″ge[2]n-ti[2]f′e[2]r-u[3]s. From *argentum* and Lat., *ferre*, to bear. Lat., *argentiferus.* Fr., *argentifère.* Producing, bearing, or containing silver. [B, 116.]

ARGENTIFIC, adj. A[3]r″je[2]n-ti[2]f′i[2]k. From *argentum* and Lat., *facere*, to make. Lat., *argentificus.* Fr., *argentifique.* Making silver; transforming into silver or into money. [B, 38.] Cf. SEL *argentifique.*

ARGENTILLA (Lat.), n. f. A[3]r-je[2]n(ge[2]n)-ti[2]l′la[3]. See ARGENTINA.—**A. vulgaris.** See POTENTILLA *anserina.*

ARGENTINA (Lat.), n., f. of adj. *argentinus* (*planta* understood). A[3]r-je[2]n(ge[2]n)-ti(te)′na[3]. Fr., *argentine.* Ger., *Silberkraut.* Silver-weed; the *Potentilla anserina.* As a generic name, the genus *Potentilla.* [Blackwell (B, 170).]—**A. rupestris** [Linnæus]. See POTENTILLA *fragarioides.*—**A. vulgaris** [Lamarck]. See POTENTILLA *anserina.*—**Radix argentinæ.** The root of *Potentilla anserina.* [B, 180.]

ARGENTINE, adj. A[3]r′je[2]n-ten(-tin). Lat., *argentinus, argenteus* Fr., *argentin.* It., *argentino.* Silvery; made of, or resembling, silver. [B.] See *A. flowers of* ANTIMONY.

ARGENTINE, n. A[3]r′je[2]n-ten(-tin). 1. A mineral, consisting of calcium carbonate combined with silica, of silvery-white color and pearly lustre. 2. Metal covered with silver. [B, 116.]

ARGENTINE (Fr.), n. A[3]r-zha[3]n[2]-ten. 1. Silver-weed; the *Potentilla anserina* (or *P. argentea*), official as a. in the Fr. Codex, which directs the flowering herb to be employed. [B, 113.] 2. See ARGENTINE (Eng. n.), 1st def.

ARGENTIREN (Ger.), v. tr. A[2]r-zha[3]n[2]-te′re[2]n. To silver; a word made from the Fr., *argenter.* [B, 48.]

ARGENTITE, n. A[3]r″je[2]n-tit. A black crystalline native sulphide of silver. [B, 159.]

ARGENTOACETONYLUREA, n. A[3]r-ge[2]n‴to-a[2]s-e[2]t″o[2]n-l[2]l-u[2]-re′a[3]. From *argentum, acetonyl*, and *urea.* Fr., *argento-acétonylurée.* Ger., *Silberacetonylharnstoff.* A substance, $C_4H_7AgN_2O_2$, formed by the action of silver oxide upon acetonylurea. [B, 2.]

ARGENTO-AZOTATE (Fr.), n. A[3]r-zha[3]n[2]-to-a[3]z-o-ta[3]t. See ARGENTO-NITRATE.

ARGENTO-CHLORIDE, n. A[3]r-je[2]n″to-klo′ri[2]d(id). From *argentum* and *chloride.* A chloride of silver and another element or a radicle. [B.]

ARGENTO-CYANIDE, n. A[3]r-je[2]nt″o-si′a[2]n-i[2]d(id). A compound of silver cyanide with the cyanide of another element or a radicle. [B, 98.]

ARGENTO-KALIUM (Lat.), n. n. A[2]r-je[2]n(ge[2]n)″to-kal(ka[3]l)′i[2]-u[3]m(u[4]m). From *argentum* and *kalium.* A radicle compounded of silver and potassium. [B.]—**A.-k. cyanatum.** See SILVER *and potassium cyanide.*

ARGENTOMETER, n. A[3]r″je[2]n-to[2]m′e[2]t-u[3]r. From *argentum*, silver, and *μέτρον*, a measure. An instrument for determining the amount of silver in a solution. It consists of a graduated tube, containing the solution to be tested, to which is added a solution of sodium chloride of known strength, and the amount of silver is then estimated by measuring the silver chloride precipitated. [B, 7.]

ARGENTON (Fr.), n. A[3]r-zha[3]n[2]-to[2]n[2]. See ARGENTAN.

ARGENTONA (Sp.), n. A[3]r-he[2]n-to′na[3]. A village near Mataró, Spain, where there is a spring containing carbonic acid, sulphate, chloride and carbonate of magnesium, carbonate of iron, organic matter, alumina, and silica; esteemed in the treatment of calculous affections. [A, 255.]

ARGENTO-NITRATE, n. A[3]r-je[2]n″to-ni′trat. Lat., *argento-nitras.* Fr., *argento-azotate.* A nitrate of silver and another element or a radicle. [B.] See UREA *a.-n.*

ARGENTOPROPARGYL, n. A[3]r-je[2]n″to-pro-pa[3]r′ji[2]l. A univalent radicle having the composition $CAg \equiv C - CH_2{}'$, or more probably $(CAg \equiv C - CH_2{}')_2$, being that of propargyl in which silver replaces hydrogen. [B, 2, 4.]—**A. ethylate.** Fr., *éthylate d'argentopropargyle.* Ger., *Argentopropargyläthylat.* See ETHYL *argentopropargylate.*

ARGENTOPROPARGYLATE, n. A[3]r-je[2]n″to-pro-pa[3]r′ji[2]l-at. A propargylate in which silver replaces hydrogen. [B.]

ARGENTOUS, adj. A[3]r-je[2]n′tu[3]s. Lat., *argentosus.* Fr., *argenteux.* It., *argentoso.* Containing silver; in chemistry, applied to compounds which contain a relatively greater amount of silver than the ordinary silver compounds (argentic compounds), *i. e.*, to those in which the silver atom has, at least apparently, a quantivalence less than one. [B.]—**A. oxide.** Fr., *oxyde argenteux.* Ger., *Silberoxydul.* It., *ossido argentoso.* See SILVER *tetrantoxide.*

ARGENTUM (Lat.), n. n. A[3]r-je[2]n(ge[2]n)′tu[3]m(tu[4]m). Allied to ἄργος, white, and this to Sanscr. *ardjuna*, white, and *radjata*, silver, both from the root *radj*, to shine. [B, 38.] Fr., *argent.* It., *argento.* Silver. [B.]—**Argenti ammonio-chloridum.** Silver ammonio-chloride. [L, 63.]—**Argenti ammonio-nitras.** Silver ammonio-nitrate. [L, 63.]—**Argenti chloridum.** Silver chloride. [B.]—**Argenti cyanidum** [U. S. Ph., Lond. Ph. (1836)], **Argenti cyanuretum.** Silver cyanide. [B, 5.]—**Argenti et potassii nitras** [Br. Ph. (1885)]. See *Argenti nitras dilutus.*—**Argenti hydragogum, Argenti hydragogum Boylii.** Ger., *Boyle's Silberarznei.* Silver nitrate, recommended by Robert Boyle as a remedy for dropsy. [B, 48.]—**Argenti iodidum** [U. S. Ph.]. Silver iodide. [B.]—**Argenti murias.** Silver chloride. [B, 98.]—**Argenti nitras** [U. S. Ph., Br. Ph., Lond. Ph. (1824)]. Nitrate of silver; in the U. S. Ph., the precipitated crystallized salt, corresponding to the *azotate d'argent cristallisé* of the Fr. Codex, the *A. nitricum* of the Swiss Ph., and the *A. nitricum crystallisatum* of other pharmacopœias; in the Br. Ph. and Lond. Ph., the fused nitrate, corresponding to the *a. nitricum* of the Ger. Ph., the *crayons d'azotate d'argent* of the Fr. Codex, and the *argenti nitras fusus* of the U. S. Ph. [B.]—**Argenti nitras dilutus** [U. S. Ph.]. Fr., *crayons d'azotate d'argent mitigé* [Fr. Cod.]. Ger., *salperhaltiges Silbernitrat* [Ger. Ph.]. It., *nitrato d'argento mitigato fuso* Syn.: *argenti et potassii nitras* [Br. Ph. (1885)], *a. nitricum cum kalio nitrico* [Ger. Ph., Austr. Ph., Hung. Ph., Swiss Ph.], *a. nitricum mitigatum* [Russ. Ph.], *nitras argenticus mitigatus* [Norweg. Ph., Swed. Ph.]. Diluted, or mitigated, nitrate of silver; the mitigated stick. A preparation consisting of nitrate of silver and potassium nitrate fused together and cast in molds. The proportion of silver nitrate in parts per cent. is 95 [Br. Ph. (1885)], 90 [Fr. Cod.], 75 [Rouman. Ph.], 50 [U. S. Ph., Norweg. Ph., Russ. Ph., Swed. Ph.], 33 [Ger. Ph., Swiss Ph., Austr. Ph., Hung. Ph.]. The several pharmacopœias also contain alternate weaker preparations; thus the *a. nitricum bis mitigatum* [Russ. Ph.] and the *nitras argenticus bis mitigatus* [Dan. Ph., Swed. Ph.] contain 33 per cent. of silver nitrate, and the Fr. Codex recognizes preparations of $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{4}$ strength, containing, respectively, 50, 33, and 25 per cent. of silver nitrate. It is used for the same purposes as the fused nitrate, but is less energetic in action. [B, 5, 95.]—**Argenti nitras fusum** [Dub. Ph. (1826, 1830)], **Argenti nitras fusus** [U. S. Ph.]. Fr., *crayons d'azotate d'argent* [Fr. Cod.], *nitrate d'argent fondu.* Ger., *Silbernitrat* [Ger. Ph.]. It., *nitrato d'argento fuso.* Sp., *nitrato argéntico fundido* [Sp. Ph.]. Syn.: *argenti nitras* [Br. Ph.], *a. nitricum* [Ger. Ph.], *a. nitricum fusum* [Austr. Ph., Hung. Ph., Greek Ph., Russ. Ph., Swiss Ph.], *nitras argenti fusus* [Belg. Ph.], *nitras argenticus* [Dan. Ph., Norweg. Ph., Swed. Ph.], *nitras argenticus fusus* [Fr. Cod., Finn. Ph., Netherl. Ph.]. Fused nitrate of silver: generally prepared in the form of sticks. [B, 5, 95, 113.]—**Argenti nitratis crystalli** [Dub. Ph. (1826)]. Silver nitrate obtained in the form of crystals by evaporation. [B, 5, 97.] Cf. *Argenti nitras* [U. S. Ph.].—**Argenti oxalas.** Silver oxalate. [B.]—**Argenti oxidum** [U. S. Ph.]. Silver oxide (monoxide). [B.]—**Argenti protoxydum.** Silver monoxide. [B, 98.]—**A. aceticum.** Silver acetate. [B, 165.]—**A. ammoniato-nitricum.** Silver ammonio-nitrate. [B, 48.]—**A. bromatum.** Silver bromide. [B.]—**A. chloratum.** Silver chloride. [B, 48.]—**A. chloratum ammoniacale, A. chloratum ammoniatum.** Silver ammonio-chloride. [B, 271; L, 63.]—**A. chromicum.** Silver chromate. [L, 63.]—**A. corneum.** Horn-silver; silver chloride. [B.]—**A. cyanatum, A. cyanogenatum.** Silver cyanide. [B, 5; L, 63.]—**A. divisum.** Metallic silver in a state of fine subdivision. [L, 63.]—**A. factum.** Wrought silver. [B, 134.]—**A. finum.** Fr., *argent fin.* See *A. regis.*—**A. foliatum** [Ger. Ph.]. Silver leaf. [B.]—**A. fugitivum.** Quicksilver, mercury. [B, 48.]—**A. fulminans, A. fulminicum.** Fulminating silver. [B, 48.]—**A. fusum.** 1. Mercury. [B, 180.] 2. Fused silver nitrate. [B, 48.]—**A. fusum mitigatum.** See *Argenti nitras dilutus.*—**A. hydrocyanicum.** Silver cyanide. [L, 63.]—**A. hyposulfurosum.** Silver hyposulphite. [L, 63.] See SILVER *thiosulphate.*—**A. in conchis.** See *Shell* SILVER.—**A. infectum.** Unwrought silver. [B, 134.]—**A. in musculis.** See *A. in conchis.*—**A. iodatum.** Silver iodide. [B, 48.]—**A. liquidum.** Mercury. [B, 180.]—**A. mercurii.** See under MERCURIUS.—**A. metallicum.** Metallic silver. [L, 63.]—**A. mobile.** Mercury. [B, 180.]—**A. mortuum.** Dead silver; *i. e.*, silver as opposed to mercury, or *a. vivum.* [B, 199.]—**A. mosaicum.** See *A. musivum.*—**A. muriatico-ammoniatum.** Silver ammonio-nitrate. [B, 165.]—**A. muriaticum.** Silver chloride. [L, 63.]—**A. muriaticum ammoniatum.** See *A. muriatico-ammoniatum.*—**A. musicum, A. musivum.** See *Mosaic* SILVER.—**A. nativum.** Silver occurring in nature. [B, 180.]—**A. natrico-hyposulfurosum, A. natrico-subsulfurosum.** Silver and sodium thiosulphate. [B, 108; L, 63.]—**A. nitratum, A. nitri.** Silver nitrate. [B, 98.]—**A. nitricum** [Ger. Ph., Swiss Ph.]. Fused silver nitrate [Ger. Ph.], crystallized silver nitrate [Swiss Ph.]. Also, in the Ger. Ph., a volumetric solution of silver nitrate, the liquor argenti nitrici volumetricus (*q. v.*). [B, 95, 205.]—**A. nitricum bis mitigatum** [Russ. Ph.]. See *Argenti nitras dilutus.*—**A. nitricum crystallisatum** [Ger. Ph. (1st ed.), Austr. Ph., Greek Ph., Hung. Ph., Russ. Ph.]. Crystallized silver nitrate, the argenti nitras of the U. S. Ph. [B, 95.]—**A. nitricum cum argento chlorato.** The argenti nitras fusus of the U. S. Ph. [B, 95.]—**A. nitricum cum kalio nitrico** [Ger. Ph.]. See *Argenti nitras dilutus.*—**A. nitricum fusum.** See *Argenti nitras fusus.*—**A. nitricum fusum mitigatum, A. nitricum mitigatum** [Russ. Ph.]. See *Argenti nitras dilutus.*—**A. nitricum oxydatum crystallisatum.** Crystallized silver nitrate. [L, 63.]—**A. oxydatum.** Silver oxide. [B.]—**A. oxydatum acetatum, A. oxydatum aceticum.** Silver acetate. [L, 63.]—**A. oxydatum fuscum.** Silver monoxide. [B, 98.]—**A. oxydatum nitricum.** Silver nitrate. [L, 63.]—**A. oxydatum nitricum fusum.** See *Argenti nitras fusus.*—**A. pictorium.** See *A. mosaicum.*—**A. populi.** Probably potassium carbonate or hydrate. "Sal amarum." [B, 50.] See SAL *amarum.*—**A. postulatum.** See *A. purificatum.*—**A. præcipitatum.** Metallic silver prepared by the reduction of silver chloride (precipitated from a solution of silver nitrate by the addition of hydrochloric acid or a chloride). [L, 63.]—**A. purificatum** [Br. Ph.], **A. purissimum** [Fr. Cod.], **A. purum** [Belg. Ph.]. Pure metallic silver, adapted for pharmaceutical and medicinal purposes. In classical Latin *a. purum* meant silver without figures or raised work upon it. [B, 95. 134.]—**A. purum divisum.** See *A. præcipitatum.*—**A. regis.** Fr., *argent du roi.* Coin-silver, con-

taining in 24 parts 23 of pure silver. [B, 48.]—**A. repurgatum.** Refined silver. [L, 63.]—**A. rude.** See *A. infectum.*—**A. salitum.** Silver chloride.—**A. sophisticum.** Copper arsenate; white copper ore. [B, 48.]—**A. subsulfurosum.** Silver hyposulphite. [L, 63.] See SILVER *thiosulphate.*—**A. sulfuratum.** Silver sulphide. [B.]—**A. sulfuricum.** Silver sulphate. [B.]—**A. sulphuratum, A. sulphuricum.** See *A. sulfuratum, A. sulfuricum.*—**A. vivum.** See the major list.—**A. zootinicum.** Silver cyanide. [B, 98.]—**Chloruretum argenti ammoniacale.** Silver ammonio-chloride. [B, 271.]—**Collyrium argenti nitrici.** See *Collyre à l'azotate d'*ARGENT.—**Crystalli argenti.** See *A. nitricum crystallisatum.*—**Cyanuretum argenti et potassii.** Silver and potassium cyanide. [B, 271.]—**Flores argenti.** A preparation, composed of an acetate of mercury, made by digesting yellow precipitate (præcipitatus luteus) in acetic acid and washing. [B, 59.]—**Lac argenti.** The curdy white precipitate of silver chloride produced by adding common salt to a solution of a silver compound. [B, 3.]—**Liquor argenti muriatico-ammoniati** [Kopp]. A solution of silver in an ammoniacal solution of ammonium chloride; used in chronic nervous affections. [B, 165.]—**Liquor argenti nitratis** [Lond. Ph. (1836)]. Solution of nitrate of silver; a solution of silver nitrate 1 drachm in distilled water 1 fl. oz. (imperial measure). [B, 5.] Cf. *Test-solution of nitrate of* SILVER.—**Liquor argenti nitrici volumetricus** [Ger. Ph.]. See *Volumetric solution of nitrate of* SILVER.—**Magisterium argenti.** A name given by Augustus Sala (1614) to a crystallized silver nitrate prepared by evaporating a solution of silver in nitric acid. [B, 3, 70.]—**Magisterium argenti dejectorium.** A name given by Augustus Sala to a mixture of the nitrates of silver and potassium made by evaporating a solution of silver and nitre in nitric acid. [B, 70.]—**Nitras argenti** [Ed. Ph. (1817, 1826)]. Fused silver nitrate. [B, 5, 97.]—**Nitras argenti crystallinus, Nitras argenti crystallisatus** [Belg. Ph.]. Crystalline silver nitrate. [B, 95, 97.]—**Nitras argenti fusus** [Belg. Ph.]. See *Argenti nitras fusus.*—**Scoria argenti.** See *Spuma argenti.*—**Solutio argenti ammoniati** [Ed. Ph., 1841]. Solution of ammonio-nitrate of silver, Hume's test for arsenious acid; made by dissolving 44 grains of silver nitrate in a fluidounce of distilled water, and adding aqua ammoniæ until the precipitate at first thrown down is almost completely re-dissolved. [B, 98.]—**Spuma argenti.** A name given by the ancients to litharge obtained by calcination of silver ores. It was employed under this title in medicine by Celsus. [B, 3, 45.]—**Sulphas argenti** [Bav. Ph. (1822)]. Silver sulphate. [B, 97.]—**Sulphas argenti liquidus** [Bav. Ph. (1822)]. A test-solution, corresponding to the test-solution of sulphate of silver (*q. v.*), made by dissolving silver sulphate 1 part in distilled water 100 parts. [B, 97.]

ARGENTUM VIVUM (Lat.), n. n. Vi(we)'vu^{3}m(wu^{4}m). From *vivus*, living. Gr., χυτὸς ἄργυρος. Fr., *argent vif.* Ger., *Quecksilber.* It., *argento vivo.* Living (or quick-) silver; mercury. A term used by Pliny and restricted by him to mercury occurring native. [B, 3.]—**A. v. purificatum.** Purified mercury. [L, 63.]—**Spiritus argenti vivi sublimati.** Spirit of sublimated quicksilver (*i. e.*, of corrosive sublimate). A name given by Libavius (1605) to tin tetrachloride because he prepared it by distilling tin with corrosive sublimate. [B, 3.]

ARGENTURE (Fr.), n. A^{3}r-zha^{3}n^2-tu^{6}r. The art or process of silvering. [B, 52.]

ARGEROLLE (Fr.), n. A^{3}r-zhe^{2}r-ol. The *Cratægus azarolus.* [B, 121.]

ARGHEL, n. A^{3}r'ge^{2}l. See SOLENOSTEMMA *argel.*

ARGIL, n. A^{3}r'ji^{2}l. Gr., ἄργιλλος, ἄργιλος. Lat., *argilla.* Fr., *argile, glaise.* Ger., *Thon, Thonerde, Alaunerde.* It., *argilla.* Sp., *arcilla.* Clay; a whitish earth, soft to the touch, composed chiefly of silica and alumina, but often containing calcium carbonate and frequently colored with oxide of iron. [A, 301.]

ARGILE (Fr.), n. A^{3}r-zhel. See ARGIL.—**A. factice.** See ALUMINA *depurata.*—**A. ferrugineuse, A. martiale.** See ARGILLA *ferruginea.*—**A's smectiques.** Hydrated aluminium silicates produced artificially. [L, 49.]—**Vitriol d'a.** See *Potash*-ALUM.

ARGILEUX (Fr.), adj. A^{3}r-zhe-lu^5. See ARGILLACEOUS.

ARGILLA (Lat.), n. f. A^{3}r-ji^{2}l(gi^{2}l)'la^3. Argil (*q. v.*); the bolus alba of the Ger. Ph. [L.]—**Argillæ acetas, A. acetica.** See ALUMINIUM *acetate.*—**A. alba.** White bole; pipe-clay. [L, 119.]—**A. bolus flava** [Linnæus]. Lemnian earth. [B.]—**A. bolus rubra** [Linnæus]. Armenian bole. [B.]—**A. candida.** See *A. alba.*—**A. cimolia.** Bolus alba. [B, 180.]—**A. ferruginea.** Armenian bole. [L, 85.]—**A. ferruginea pallidior.** Lemnian earth. [B, 180.]—**A. ferruginea rubra.** Armenian bole. [L, 85.]—**A. hydrata.** See ALUMINIUM *hydrate.*—**A. hydrochlorica.** See ALUMINIUM *chloride.*—**A. incarnata.** Armenian bole. [B, 180.]—**A. kalisulfurica.** See *Potash*-ALUM.—**A. muriatica.** See ALUMINIUM *chloride.*—**A. nitrica.** See ALUMINIUM *nitrate.*—**A. ochrea rubra.** Fr., *argile ocreuse rouge.* Armenian bole. [L.]—**A. pallida.** See *A. alba.*—**A. plumosa.** Flexible asbestos. [B, 180.]—**A. pumex.** See PUMEX.—**A. pura.** 1. A preparation formerly official in the Ger. Ph., now called bolus alba. [B.] 2. Burnt alum. [L, 63.] See ALUMEN *exsiccatum.* 3. Aluminium hydrate. [L, 65.]—**A. pura hydrata.** Aluminium hydrate. [L.]—**A. rubra.** Armenian bole. [L.]—**A. rubrica.** Creta rubra. [B, 180.]—**A. sulfurica.** See ALUMINIUM *sulphate.*—**Argillæ sulphas, A. sulphurica alcalisata.** See *Potash*-ALUM.—**A. sulphurica usta.** Burnt alum. [L, 85.] See ALUMEN *exsiccatum.*—**Argillæ supersulphas alcalisatum.** See *A. vitriolata.*—**A. tripolitana.** See TRIPOLI.—**A. vitriolata, Supersulphas argillæ alcalisatum** (seu **alcalisatus**). See *Potash*-ALUM.

ARGILLACEA (Lat.), n., f. of adj. *argillaceus* (*terra* understood). A^{3}r-ji^{2}l(gi^{2}l)-la(la^3)'se^2(ke^2)-a^3. See ARGIL.

ARGILLACEOUS, adj. A^{2}r-ji^{2}l-la'shu^{3}s. Lat., *argillaceus.* Fr., *argillacé, argileux.* Ger., *thonig, thonartig, thonähnlich.* Composed of or resembling clay. [B.]

ARGILLICOLOUS, adj. A^{3}r-ji^{2}l-li^{2}k'o-lu^{3}s. Lat., *argillicolus* (from *argilla*, argil, and *colere*, to inhabit). Fr., *argillicole.* Ger., *thonbewohnend.* Living in clay. [L, 116.]

ARGILLIFORM, adj. A^{3}r-ji^{2}l'li^2-fo^{2}rm. From *argilla*, clay, and *forma*, form. Fr., *argilliforme.* Ger., *thonförmig.* Resembling clay. [L, 41.]

ARGILLITIC, adj. A^{3}r-ji^{2}l-li^{2}t'i^{2}k. See ARGILLACEOUS.

ARGILLIUM (Lat.), n. n. A^{3}r-ji^{2}l(gi^{2}l)'li^2-u^{3}m(u^{4}m). See ALUMINIUM.

ARGILLOS (Lat.), n. f. A^{3}r-ji^{2}l(gi^{2}l)'lo^{2}s. See ARGILLA.

ARGILLOSUS (Lat.), adj. A^{3}r-ji^{2}l(gi^{2}l)-lo'su^{3}s(su^{4}s). Growing in clayey soils; in the f. pl., *argillosæ*, as a n., plants so growing. [B, 121.]

ARGILLOUS, adj. A^{3}r-ji^{2}l'lu^{3}s. Lat., *argillosus.* See ARGILLACEOUS.

ARGININE, n. A^{3}r'ji^{2}n-en. Fr., *arginine.* Ger., *Arginin.* A monacid base, $C_{16}H_{14}N_4O_2$, obtained from the embryos of lupin and the pumpkin, resembling creatinine in its chemical characters. [E. Schulze, E. Steiger, "Ztschr. f. physiol. Chem."; "Ctrlbl. f. d. med. Wssnsch.," Mar. 19, 1887, p. 213 (B).]—**A. nitrate.** Fr., *azotate d'a.* Ger., *salpetersaures Arginin.* A crystalline compound, $C_6H_{14}N_4O_2.HNO_3 + \frac{1}{2}H_2O$, of a. and nitric acid. [E. Schulze, E. Steiger, *l. c.* (B).]

ARGION (Lat.), n. n. A^{3}r'ji^2(gi^2)-o^{2}n. The plant maidenhair. [Dioscorides (L, 105).] See ADIANTUM *capillus Veneris.*

ARGISTATUS (Lat.), adj. A^{3}r-ji^{2}st(gi^{2}st)-a(a^3)'tu^{3}s(tu^{4}s). Smeared with wax. [Ruland, Johnson (L, 53).]

ARGLISSE SAUVAGE (Fr.), n. A^{3}rg-les. The *Polypodium vulgare.* [B, 121.]

ARGOL, n. A^{3}r'go^{2}l. 1. The impure tartar of wine. [L, 65.] 2. The dried dung of cattle, used in Tartary, the Alps, and elsewhere for fuel. [L, 41, 56.]—**Red a.** The brownish-red tartar deposited from red wine. [L, 65.]—**White a.** The gray or brownish-white tartar deposited from white wine. [L, 65.]

ARGONAUTIDÆ (Lat.), n. f. pl. A^{3}r-go^{2}n-a^{4}t'(a^3'ut)-i^{2}d-e-(a^3-e^2). A family of the section *Octopoda*, order *Dibranchiata*, class *Cephalopoda*, comprising the single genus *Argonauta* (the "paper sailor" or "paper nautilus"). [L, 147.]

ARGOOR, n. An East Indian name for a drug supposed to be cinnabar. [Waring (L, 63).]

ARGOPHYLLEÆ (Lat.), n. f. pl. A^{3}r-go-fi^{2}l(fu^{6}l)'le^2-e(a^3-e^2). From *Argophyllum*, the only genus. 1. Of Endlicher and Reichenbach, a division of the *Escalloneæ*, or a family akin to the latter. 2. Of Reichenbach, a subdivision of the *Vaccinieæ.* [B, 170.]

ARGOS (Lat.), adj. A^{3}r'go^{2}s. Gr., ἀργός, unwrought (1st def.), or bright or white (2d def.). 1. Crude, unprepared (said of horses' food). [Hippocrates (A, 311; L, 53).] 2. White, bright (said of argil, silver, etc.). [L, 50.]

ARGOUSIER (Fr.). **ARGOUSSIER** (Fr.), n's. A^{3}r-gu-zi^2-a. Popular names for the *Hippophae rhamnoides.* [L, 49.]

ARGUEL (Fr.), n. A^{3}r-ge^{2}l. See SOLENOSTEMMA *argel.*

ARGULIDÆ (Lat.), n. f. pl. A^{3}r-gu^2(gu)'li^{2}d-e(a^3-e^2). See ARGULINA.

ARGULINA (Lat.), n. n. pl. A^{3}r-gu^2(gu)-li(le)'na^3. From *Argulus*, one of the genera. Fr., *arguliens.* Ger., *Argulinen.* A tribe of the *Siphonostoma*, characterized by an oval, disc-shaped carapace, a rudimentary abdomen, a small post-abdomen, two aggregate eyes, two pairs of maxillipedes, the front pair provided with suckers or hooks, and a protrusible proboscis with poison-glands. They have been classed as a family of the *Branchiura.* [L, 204, 208.]

ARGULINIDÆ (Lat.), n. f. pl. A^{3}r-gu^2(gu)-li^{2}n'i^{2}d-e(a^3-e^2). See ARGULINA.

ARGUMENTUM INTEGRITATIS (Lat.), n. n. A^{3}r-gu^2(gu)-me^{2}nt'u^{3}m(u^{4}m) i^{2}n-te^{2}g-ri^2-ta(ta^3)'ti^{2}s. Lit., a proof of chastity; the hymen (*argumentum*, a proof, and *integritas*, chastity). [L, 45.]

ARGURITES (Lat.), adj. A^{3}r-gu^2(gu)-ri(re)'tez(te^{2}s). See ARGYRITES.

ARGUROS (Lat.), n. m. A^{3}r'gu^2(gu)-ro^{2}s. See ARGYROS.

ARGUTUS (Lat.), adj. A^{3}r-gu^2(gu)'tu^{3}s(tu^{4}s). Sharp, delicate (a botanical descriptive and specific term). (B, 74, 121.]

ARGUZIA (Lat.), n. f. A^{3}r-gu^2(gu)'zi^2-a^3. A section of the genus *Tournefortia.* [B, 121.]

ARGUZIÆ (Lat.), n. f. pl. A^{3}r-gu^2(gu)'zi^2-e(a^3-e^2). Of Link, a suborder of cordiaceous plants. [B, 170.]

ARGYLIEÆ (Lat.), n. f. pl. A^{3}r-ji^{2}l(gu^{6}l)-i(e)'e^2-e(a^3-e^2). From *Argylia*, the single genus. A tribe of the *Bignonieæ* made by Endlicher. [B, 170.]

ARGYRÆSCIN, n. A^{3}r-ji^2-re^{2}s'si^{2}n. An amorphous glucoside found in the cotyledons of the horse-chestnut; insoluble in ether, soluble in alcohol, and forming a frothy mixture with water. [Rochleder (L, 65).]

ARGYRANCHE (Lat.), n. f. A^{3}r-ji^2(gu^6)-ra^{2}n^2(ra^{3}n^2)'ke(ka). Gen., *argyran'ches.* From ἀργύρος, silver, and ἄγχειν, to strangle. An ancient name for quinsy. [A, 318.]

ARGYRANTHEMOUS, ARGYRANTHOUS, adj's. A^{3}r-ji^2-ra^{2}n'the^{2}m-u^{3}s, -ra^{2}n'thu^{3}s. Lat., *argyranthemus* (from ἀργύρεος, silvery, and ἄνθος, a flower). Fr., *argyranthème.* Ger., *silberblumig.* Having shining white flowers. [L, 41, 116.]

ARGYRE (Fr.), adj. A^{3}r-zher. Silvery. [L, 41.]

ARGYREIA (Lat.), n. f. A[3]r-ji[2](gu[6])-ri′(ra′i[2])-a[3]. Fr., *argyrée.* An Asiatic genus of convolvulaceous plants. [A, 385.]—**A. arborea** [Loureiro]. A small tree in China and Cochin-China, the leaves and root of which are made into poultices and used in thoracic affections. [B, 180.]—**A. bracteata** [Wallich]. A species the decoction of which is used for scrofulous swellings. [L, 49.]—**A. malabarica.** A Malabar species; used locally in erysipelas and abscesses. [B, 172.]—**A. obtusifolia** [Loureiro]. A climbing shrub of Cochin-China, employed as a mild astringent. [B, 180.]—**A. speciosa.** A species used in India for cataplasms and for the cure of chronic skin diseases. [H. Baillon (L, 87).]

ARGYRIA, ARGYRIASIS (Lat.), n's f. A[3]r-ji[2]r(gu[6]r)′i[2]-a[3], -ji[2]r(gu[6]r)-i[2]-a(a[3])′si[2]s. Gen., *argyr′iæ, -rias′eos (-sis).* From ἀργυρίζεσθαι, to be of a silvery color. Fr., *argyrie, argyriase.* 1. A discoloration of the skin, the mucous membranes, or certain internal organs, due to an accumulation of particles of silver in the corium. The surface varies in color from gray to dark-blue. Some authors make a distinction between these words and *argyrosis*, applying the former to the discoloration consequent on the prolonged internal administration of silver, and the latter to the effects of its local employment. [A, 301; G.] 2. An old term for a skin disease characterized by silvery spots, probably psoriasis. [L, 50.]

ARGYRIC, adj. A[3]r-ji[2]r′i[2]k. Fr., *argyrique.* Pertaining to silver or to its effects. [A, 385.]

ARGYRIDES (Fr.), n. pl. A[3]r-zhi[2]r-ed. A general term for a group of metals resembling silver, including silver, bismuth, mercury, and lead. [Ampère (L, 32).]

ARGYRIDISCH (Ger.), adj. A[3]r-gu[6]r-i[2]d′i[2]sh. Containing silver. [L, 40.]

ARGYRIEÆ (Lat.), n. f. pl. A[3]r-ji[2]r(gu[6]r)-i(e)′e[2]-e(a[3]-e[2]). Of Choisy and others, a section of the *Convolvulaceæ*, including *Argyreia* and three or four other genera with a cotyledonous embryo, the carpels united into a single ovary, and an indehiscent coriaceous or fleshy fruit. [B, 214.]

ARGYRIQUE (Fr.), adj. A[3]r-zhi[2]r-ek. See ARGYRIC.

ARGYRITES (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-i(e)′tez(te[2]s). Gen., *argyrit′idis.* Gr., ἀργυρίτης. Pertaining to silver; in the fem., *argyritis*, as a n. (*terra* [Gr., γῆ] understood), an old name for silver ore, also for litharge. [A, 311; L, 50, 53.]

ARGYROCEPHALUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o-se[2]f(ke[2]f)′-a[3]-lu[3]s(lu[4]s). From ἀργύρεος, silvery, and κεφαλή, the head. Fr., *argyrocéphale.* Having a silvery-white head. [L, 41, 116.]

ARGYROCHÆTA (Lat.), n. f. A[3]r-ji[2]r(gu[6]r)-o-ke′(ka[3]′e[2])-ta[3]. From ἀργύρεος, silvery, and χαίτη, loose, flowing hair. A genus of composite plants established by Cavanilles; now referred to *Parthenium.* [B, 42.]—**A. bipinnatifida** [Cavanilles]. See PARTHENIUM *hysterophorus.*

ARGYROCOMA, ARGYROCOME (Lat.), n's f. A[3]r-ji[2]r-(gu[6]r)-o[2]k′o-ma[3], -me(ma). From ἀργύρεος, silvery, and κόμη, foliage. Fr., *argyrocome.* Ger., *weichstachliches Ruhrkraut.* Of Schrank, a genus of plants now referred to *Helipterum;* of Gärtner, a genus now referred to *Helichrysum.* [B, 42, 121.]

ARGYRODAMAS (Lat.), n. m. A[3]r-ji[2]r(gu[6]r)-o[2]d′a[3]-ma[2]s-(ma[3]s). Gen., *argyrodamant′os (-tis).* Gr., ἀργυροδάμας (from ἀργύρεος, silvery, and ἀδάμας, adamant). 1. A precious stone mentioned by Pliny. [A, 311.] 2. An old name for a silvery mineral (perhaps mica) described as refractory to fire and as having very thin laminæ which, on being swallowed, were likely to wound the primæ viæ and give rise to inflammation. [Andreas Cæsalpinus (L, 53).]

ARGYRODENDROS, ARGYRODENDROS AFRICANA [Commelyn] (Lat.), n's f. (although properly n.). The *Protea argentea.* [B, 121, 211.]

ARGYROGONIA (Lat.), n. f. A[3]r-ji[2]r(gu[6]r)-o-go-ni(ne)′a[3]. Gr., ἀργυρογονία (from ἄργυρος, silver, and γονή, that which engenders). The *semen argentificum* of the alchemists; a liquid preparation with which base metals were made to appear like silver. [L, 53, 94.]

ARGYROID, n. A[3]r′ji[2]r-oid. From ἄργυρος, silver, and εἶδος, resemblance. Silver-plated German silver. [B.] See ARGENTAN.

ARGYROLIBANOS (Lat.), n. m. A[3]r-ji[2]r(gu[6]r)-o-li[2]b′a[3]-no[2]s. From ἀργύρεος, silvery, and λίβανος, the frankincense-tree.

ARGYROLITHOS, ARGYROLITHUS (Lat.), n's m. A[3]r-ji[2]r(gu[6]r)-o[2]l′i[2]th-o[2]s, -u[3]s(u[4]s). From ἀργύρεος, silvery, and λίθος, a stone. See ARGYRODAMAS.

ARGYROPÉE (Fr.), n. A[3]r-zhi[2]r-o-pa. See ARGYROPŒIA.

ARGYROPHÆNUS (Lat.), adj. A[3]r″ji[2]r(gu[6]r)-o-fe′(fa[3]′e[2])-nu[3]s(nu[4]s). From ἄργυρος, silver, and φαίνειν, to shine. Ger., *silberweissschimmernd.* In botany, having a silvery-white lustre. [B, 198.]

ARGYROPHAN, n. A[3]r-ji[2]r′o-fa[3]n. From ἄργυρος, silver, and φαίνεσθαι, to appear. See ARGYROID.

ARGYROPHORUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o[2]f′o-ru[3]s(ru[4]s). From ἄργυρος, money, and φορεῖν, to bring. Fr., *argyrophore.* Sp., *argiróforo.* Expensive. [L, 94.] See ANTIDOTUS *argyrophora.*

ARGYROPHTHALMUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o[2]p-tha[2]l-(tha[3]l)′mu[3]s(mu[4]s). From ἀργύρεος, silvery, and ὀφθαλμός, the eye. Fr., *argyrophthalme.* Ger., *silberaugig.* Having silvery-white eyes. [L, 116.]

ARGYROPHYLLOUS, adj. A[3]r-ji[2]r-o-fi[2]l′lu[3]s. Lat., *argyrophyllus* (from ἀργύρεος, silvery, and φύλλον, a leaf). Fr., *argyrophylle.* Ger., *silberblättrig.* Having silvery leaves. [B, 121.]

ARGYROPŒIA (Lat.), n. f. A[3]r-ji[2]r(gu[6]r)-o-pe′(po′e[2])-i[2]-a[3]. Gr., ἀργυροποιία (from ἄργυρος, silver, and ποιεῖν, to make). Fr., *argyropée.* Ger., *Argyropöe.* 1. The extraction of silver from ore. [L, 53.] 2. An alchemical term for the pretended transmutation of the baser metals into silver. [L, 53.] 3. A mercenary, money-making way of practising medicine. [A, 322.]

ARGYROPYGUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o-pi(pu[6])′gu[3]s(gu[4]s). From ἀργύρεος, silvery, and πυγή, the rump. Fr., *argyropyge.* Ger., *silberrumpfig.* Having the hinder part of the trunk white. [L, 41, 119.]

ARGYROS (Lat.), n. m. A[3]r′ji[2](gu[6])-ro[2]s. Gr., ἄργυρος. 1. Silver. [L, 50.] 2. An old name for the *Mercurialis annua.* [L, 105.]

ARGYROSIS (Lat.), n. f. A[3]r-ji[2]r(gu[6]r)-o′si[2]s. Gen., *argyro′seos (-sis).* Fr., *argyrose.* Ger., *Argyrose.* It., *argirosi.* See ARGYRIA (1st def.).

ARGYROSTIGMUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o-sti[2]g′mu[3]s-(mu[4]s). From ἀργύρεος, silvery, and στιγμή, a dot. Fr., *argyrostigme.* Ger., *silberfleckig.* In botany, spotted with white. [L, 41, 116.]

ARGYROSTOMUS (Lat.), adj. A[3]r-ji[2]r(gu[6]r)-o[2]st′o-mu[3]s(mu[4]s). From ἀργύρεος, silvery, and στόμα, the mouth. Fr., *argyrostome.* Ger., *silbermundig.* Having a silvery-white mouth. [L, 41, 116.]

ARGYROTROPHEMA (Lat.), n. n. A[3]r-ji[2]r(gu[6]r)-o-tro[2]f-e-(a)′ma[3]. Gen., *argyrotrophem′atos (-tis).* Gr., ἀργυροτρόφημα (from ἀργύρεος, silvery, and τρόφημα, food). An ancient article of food prepared from milk, reputed to be cooling and cleansing. [Galen (L, 53).]

ARGYRUS (Lat.), n. m. A[3]r′ji[2](gu[6])-ru[3]s(ru[4]s). See ARGYROS.

ARGYTHAMNEÆ (Lat.), n. f. pl. A[3]r-ji[2](gu[6])-tha[2]m(tha[3]m)′-ne[2]-e(a[3]-e[2]). From *Argythamnia*, the only genus. Of Reichenbach, a section of the *Crotoneæ.* [B, 170.]

ARHANTZE (Basque), n. The palm-tree. [B, 121.]

ARHEUMATISTOS (Lat.), adj. For this and other words in *Arh-*, see ARRHEUMATISTOS and the corresponding words in *Arrh-.*

ARHUKA, ARHUKEE, n's. See CAJANUS *indicus.*

ARIA (Lat.), n. f. A(a[3])′ri[2]-a[3]. Of Persoon, a section of the genus *Sorbus;* referred by De Candolle to *Pyrus*, and by Römer made a distinct genus. [B, 170.]—**A. vulgaris.** See PYRUS *aria.*

ARIA-BEPOU (Malay), n. The *Azadirachta indica.* [Rheede (B, 216).]

ARIAN GURON, n. A Gaulish name for the *Rhinanthus crista galli.* [B, 121.]

ARIANO (It.), n. A[3]-re-a[3]′no. A locality in Italy where there are cold sulphurous and saline springs. [A, 385.]

ARIA-VEELA (Malay), n. The *Polanisia felina.* [B, 177.]

ARIBE (Sp.), n. A[3]-re′ba. A village in the province of Navarre, Spain, where there is a mineral spring. [A, 385.]

ARIBINE, n. A[2]r′i[2]b-en. Fr., *aribine.* A crystallizable alkaloid, $C_{33}H_{20}N$, obtained by Rieth from arariba bark. [B, 23.]

ARICA BARK, n. A[3]-re′ka[3] ba[3]rk. See under BARK.

ARICÈLOUS (Fr.), n. A[3]r-i[2]-se[2]l-u. A popular name for the *Boletus edulis.* [Cordier (B, 121).]

ARICÉROCARDIOTOPIE [Piorry] (Fr.), n. A[3]-ri[2]-sa-ro-ka[3]r-di[2]-o-to-pe. See ARISTÉROCARDIOTROPIE.

ARICIA (Lat.), n. f. A[2]r(a[3]r)-i[2]s(i[2]k)′i[2]-a[3]. See ARICINE.

ARICIÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]s(i[2]k)′i[2]-e(a[3]-e[2]). See ARICIIDÆ.

ARICIEA (Lat.), n. n. pl. A[2]r(a[3]r)-i[2]-si(ke)′e[2]-a[3]. See ARICIIDÆ.

ARICIIDÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]-si(ke)′i[2]d-e(a[3]-e[2]). Fr., *ariciens.* A family of the *Annelida rapacia*, having two elongated tentacles or none, the proboscis short or wanting, without jaws. [L, 209.]

ARICINE, n. A[2]r′i[2]s-en. Lat., *aricina, aricinum, aricia.* Fr., *aricine.* Ger., *Aricin.* It., Sp., *aricina.* Syn.: *cinchovatine.* An alkaloid, $C_{23}H_{26}N_2O_4$, isomeric with cusconine, discovered by Pelletier and Coriol, in 1829, in the bark of an unknown tree growing near Arica, Peru, and since found by Hesse in cusco and cuprea bark. [B, 5, 23.]—**A. sulphate.** A compound of a. and sulphuric acid. The *acid* sulphate is crystalline; the *neutral* sulphate non-crystalline.

ARICOMA (Sp.), n. A[3]-ri[2]-ko′ma[3]. A Peruvian name for the *Polymnia edulis.* [B. 121.]

ARICYMON (Lat.), adj. A[2]r(a[3]r)-i[2]s(i[2]k)′i[2](u[6])-mo[2]n. Gr., ἀρικύμων (from ἀρι- [denoting excellence, goodness], and κύειν, to conceive). Prolific (said of women). [Hippocrates (L, 53).]

ARID, adj. A[2]r′i[2]d. Gr., καρφαλέος. Lat., *aridus.* Fr., *aride.* Ger., *dürr.* It., Sp., *arido.* Dry, especially dry and harsh to the touch. [A, 385.]

ARIDÆ (Lat.), n., f. pl. of *aridus* (*uvæ* understood). A[2]r(a[3]r)′-i[2]d-e(a[3]-e[2]). Raisins. [B, 180.]—**A. majores.** Ordinary raisins; uvæ passæ majores. [B, 180.]—**A. minores.** The Zante or Corinthian raisins. [B, 180.]

ARIDEÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]d′e[2]-e(a[3]-e[2]). Of Dumortier, a family of plants belonging to the *Glumacia* and divided into the tribes *Orontiaceæ* and *Arisareæ;* afterward referred to *Araricæ* and divided into the tribes *Areæ* and *Orontieæ.* [B, 170.]

ARIDIFOLIÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]d-i[2]-fo′li[2]-e(a[3]-e[2]). From *aridus*, dry, and *folium*, a leaf. Fr., *aridifoliées.* Of Agardh, a class of the *Phanerocotyledones completæ perigynæ*, comprising the orders *Epicrideæ, Ericeæ, Tremandreæ, Pittosporeæ, Myrsineæ, Sapoteæ, Ebenaceæ, Olacinæ, Ternstrœmiaceæ*, and *Aurantiaceæ.* [B, 170.]

ARIDIFOLIUS (Lat.), adj. A[2]r(a[3]r)-i[2]d-i[2]-fo′li[2]-u[3]s(u[4]s). Fr. *aridifolié.* Having leaves that feel dry to the touch. [L, 41, 116.]

ARIDITAS (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}d′i^{2}t-a^{2}s(a^{3}s). Gen., *aridita′tis.* Gr., ξηρασία. Fr., *aridité.* Ger., *Ariditāt, Austrocknung, Dürrheit.* It., *aridezza, aridità.* Sp., *aridez.* 1. Dryness. 2. Leanness, emaciation. [L, 46, 50, 53.]

ARIDO-SILIQUATUS (Lat.), adj. A^{2}r(a^{3}r)″i^{2}d-o-si^{2}l-i^2-kwa-(kwa^3)′tu^{3}s(tu^{4}s). Fr., *arido-siliqueux.* Dry and affecting the capsule (said of cataract). See CATARACTA *arido-siliquata.*

ARIDURA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}d-u^2(u)′ra^3. Fr., *aridure.* Ger., *Aridur, Darrsucht.* It., Sp., *aridura.* 1. Dryness. [A, 385.] 2. Emaciation, especially a withering of a particular part. [A, 332; Ettmüller (L, 132).] 3. Hectic fever. [Dolæus (L, 53).]—**A. bulbi.** Fr., *aridure du globe de l'œil.* Ger., *Darrsucht des Augapfels.* It., *a. del bulbo dell' occhio.* Sp., *a. del bulbo del ojo.* An old term for atrophy of the eyeball. [F.]—**A. hydropica.** Wasting of the upper parts of the body while the lower portion is œdematous. [L, 132.]—**A. paralytica.** A. consequent on paralysis. [L, 132.]—**A. rhachialgica.** Atrophy of one of the limbs, generally an arm, preceded by spinal pain, and formication, paralysis, etc., of the affected part. [Ettmüller (L, 132).]—**A. traumatica.** A. (2d def.) due to wounds, ulcers, fistulæ, caries, unreduced luxations, etc. [Ettmüller (L, 132).]

ARIDUS (Lat.), adj. A^{2}r(a^{3}r)′i^{2}d-u^{3}s(u^{4}s). See ARID.

ARIENA (Lat.), n. f. A^{2}r(a^{3}r)-i^2-e(a)′na^3. The *Musa paradisiaca.* [Pliny (B, 121).]

ARIES (Lat.), n. m. A(a^3)′ri^2-ez(e^{2}s). Gen., *ari′etis.* A ram. [B.]—**A. guineensis** [Jonst.]. See OVIS *a.*

ARIETARIA (Lat.), n. f. A^{2}r(a^{3}r)-i^2-e^{2}t-a(a^3)′ri^2-a^3. Of Sternberg, the genus *Saxifraga*; of Jaub. and Spach, a section of the genus *Cicer.* [B, 121.]

ARIGOS (Lat.), adj. See ARRHIGOS.

ARIKA, n. A spirituous beverage obtained by the fermentation of milk. [B, 7.]

ARIKELU, n. A Teloogoo name for the *Paspalum scrobiculatum.* [L, 63.]

ARIL, n. A^{2}r′i^{2}l. Lat., *arillus.* Fr., *arille.* Ger., *Samenmantel.* It., *arillo.* Sp., *arilo.* 1. In botany, a name formerly restricted to a formation developed from the placenta of the embryo, acting as an additional covering for the seed. Mace is the a. of the nutmeg. The term is now used in a more general sense to denote such an accessory investment from whatever part developed, and includes, besides the *true a.* (*arillus funicularis*) as above defined, a's springing from the umbilical depression about the insertion of the funiculus (*arillus umbilicalis*), or from a thickening of the seed-membrane in the vicinity of the micropyle (*caruncle, arillus micropylaris, arillode*), or from the rhaphe (*strophiolus*), or from other points. [B, 121.] 2. In the *Rhizocarpœ,* a special investment inclosing the spore. [B, 198.]

ARILLA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}l′la^3. See GIGARTON.

ARILLARY, adj. A^{2}r′i^{2}l-la-ri^2. Fr., *arillaire.* Pertaining to or shaped like an aril. [L, 41.]

ARILLATE, ARILLATED, adj's. A^{2}r′i^{2}l-lat, -lat-e^{2}d. Lat., *arillatus.* Fr., *arillé.* Provided with an aril; of the spores of the *Rhizocarpœ,* provided with a special investment. [B, 198.]

ARILLE (Fr.), n. A^3-re-y′. See ARIL.—**A. du micropyle.** See ARILLODE.—**A. faux.** See ARILLODE.—**A. funiculaire.** See ARILLUS *funicularis.*—**A. micropylaire.** See ARILLODE.—**A. ombilical.** See ARILLUS *umbilicalis.*—**A. vrai.** An aril (*q. v.*) in the more restricted sense. [Planchon (B, 121).]

ARILLED, adj. A^{2}r′i^{2}ld. See ARILLATE.

ARILLIFORM, adj. A^{2}r-i^{2}l′li^2-fo^{2}rm. From *arillus* (*q. v.*) and *forma,* form. Resembling an arillus. [A, 316.]

ARILLODE, n. A^{2}r′i^{2}l-lod. Fr., *arillode.* An investment of a seed resembling an aril, but springing from the surface of the seed itself and not from the placenta; now regarded as a variety of aril (*q. v.*). [B, 19, 121.]

ARILLUS (Lat.), n. m. A^{2}r(a^{3}r)-i^{2}l′lu^{3}s(lu^{4}s). See ARIL.—**A. funicularis.** Fr., *arille funiculaire.* An aril in the more restricted sense. [B, 121.] See ARIL.—**A. micropylaris.** Fr., *arille micropylaire.* See ARILLODE.—**A. myristicæ.** Mace (the aril of the nutmeg). [B, 5.]—**A. sporarum.** See ARIL (2d def.).—**A. umbilicalis.** Fr., *arille ombilical.* See ARIL.—**False a.** See ARILLODE.

ARIMATHEA, n. A place near Jerusalem where there is a mineral spring the water of which is used as a vermifuge. [L, 63.]

ARINÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i(e)′ne(na^3-e^2). Fr., *arinées.* Of Schott, a subtribe of the *Araceœ* belonging to the *Dracunculeœ,* comprising *Arum, Typhonium,* and three other genera. [B, 170.]

ARINCA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}n^2′ka^3. An ancient name for a species of rye or wheat. [Pliny (A, 312).]

ARINDRANTO, n. A Madagascar tree producing the gum arendrante. [B, 121.]

ARINEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}n′e^2-e(a^3-e^2). Fr., *arinées.* In Bentham and Hooker's classification, a tribe of araceous plants belonging to the series with monœcious aperianthous flowers. It includes acaulescent herbs with a spadix usually appendiculate, the upper flowers upon which are male, with free stamens and with the loculi of the anthers larger than the connectile, and the lower flowers female, having a unilocular ovary with orthotropal ovules. It comprises the subtribes *Alleluchieœ, Pistieœ, Arisareœ,* and *Euarineœ.* [B, 42.]

ARIÑO (Sp.), n. A^3-ren′yo. A place in Spain where there is a sulphurous spring. [A, 385.]

ARIOBARZANIOS, ARIOBARZANIUS (Lat.), n's m. A^{2}r-(a^{3}r)-i^2-o-ba^{3}r-za(za^3)′ni^2-o^{2}s, -u^{3}s(u^{4}s). Gr., ἀριοβαρζάνιος. An ancient plaster used for induration of the parotid glands. [P. Ægineta (L, 53).]

ARION (Lat.), n. m. A^{2}r(a^{3}r)-i(e)′o^{2}n. Gen., *ari′onis.* From ἀρείων (comparative of ἀγαθός or ἄριστος), better, more excellent. Fr., *arion.* 1. The *Gladiolus communis.* [Dioscorides (L, 105).] 2. A genus of snails belonging to the family *Limacina,* established by Férussac. [B, 180.]—**A. empiricorum** [Férussac]. Ger., *Erdschnecke.* Syn.: *Limax ater* [Sturm] (seu *rufus* [Linnæus], seu *succineus* [Müller], seu *marginellus* [Schrank]). A species common in Europe, which was formerly used in broths and jellies as a remedy for tuberculous, scrofulous, leprous, and syphilitic diseases. The slimy excretion which it gives off was used as an external application. [B, 180.]

ARIONA (Lat.), n. f. A^{2}r(a^{3}r)-i^2-o′na^3. Of Römer, the botanical genus *Arjona.* [B, 121.]

ARIOPSIDEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^2-o^{2}p-si^{2}d′e^2-e(a^3-e^2). A tribe of araceous plants of the sub-family *Aroideœ,* comprising the single genus *Ariopsis.* [Engler (B, 216).]

ARIOPSIS (Lat.), n. f. A^{2}r(a^{3}r)-i^2-o^{2}p′si^{2}s. A genus of araceous plants established by Graham. [B, 216.]

ARIPOUNCHOU, n. A Languedoc name for the *Campanula rapunculus,* the *Campanula patula,* and the *Trachelium.* [B, 121.]

ARIS (Lat.), n. f. A(a^3)′ri^{2}s. Gen., *ar′idos* (*-dis*). Gr., ἀρίς. 1. An ancient instrument, conjectured to have been a drill or a rasp. [Hippocrates (A, 311, 325).] 2. The *Arisarum vulgare.* [Pliny (B, 121).]

ARISÆMA (Lat.), n. n. A^{2}r(a^{3}r)-i^{2}s-e′(a^3′e^2)-ma^3. Gen., *arisœm′atos* (*-tis*). From ἆρον, *arum,* and σῆμα, a sign. Fr., *arisème.* A genus of araceous herbs established by Martius, having the inflorescence in the form of a spadix enveloped in a convolute spathe and covered with flowers only at its base, the apex being naked and prolonged. The flowers are diclinous and without a perianth. [B.]—**A. atrorubens** [Blume]. Jack-in-the-pulpit, wake-robin, Indian (or wild) turnip; a species found throughout the United States east of the Mississippi. It is acaulescent, the only vestige of a stem being a fleshy subterranean corm (the "turnip"), from which springs an erect scape from 8 to 12 inches high, bearing a green or purple spadix. The leaves are trifoliate. The corm contains an exceedingly acrid volatile principle, readily dissipated by heat or prolonged drying, soluble in ether; it also contains from 10 to 17 per cent. of pure starch, which may be used as a substitute for arrowroot, mucilage, sugar, and fatty matters. The corm, either fresh or partially dried, is sometimes used as a stimulant to the secretions, especially as an expectorant, and as an emetic. [A, 327; B, 33, 34, 216; L, 49, 75.] One variety, the *A. atrorubens,* var. *β viride,* is distinguished by the greenish lamina of the spathe. [B, 216.]—**A. Boscii** [Blume]. See *A. dracontium.*—**A. brasilianum** [Blume]. See *A. atrorubens.*—**A. cochinchinense** [Blume]. Perhaps the *Pinellia Wawrœ.* [B, 216.]—**A. costatum** [Martius]. Syn.: *Arum costatum* [Wallich]. A Himalaya and Nepal species. [B, 216.]—**A. dracontium** [Schott]. Syn.: *Arum dracontium* [Linnæus]. Green-dragon; an acaulescent species with a fleshy corm and a short, green spathe, growing along the banks of streams in North America. [B, 34, 216.]—**A. hastatum** [Blume]. See *A. atrorubens.*—**A. heterophyllum** [Blume]. A variety of *A. Thunbergii.* [B, 216.]—**A. japonicum** [Blume]. Syn.: *Arum dracunculus* [Thunberg]. A Japanese species, the root of which is acrid, purgative, and emmenagogue. [B, 210, 216.]—**A. latisectum** [Blume]. See *A. japonicum.*—**A. Loureiri** [Blume]. Probably the *Pinellia tuberifera.* [B, 216.]—**A. macrourum** [Bunge]. The *Pinellia tuberifera.* [B, 216.]—**A. pentaphyllum** [Schott]. Syn.: *Arum pentaphyllum* [Linnæus]. A species of very uncertain botanical characters, indigenous to the East Indies and to China, where it is used like *Arum maculatum.* [B, 180, 216, 266; L, 75.]—**A. Pluckenetii** [Blume]. See *A. dracontium.*—**A. præcox** [De Vries]. A variety of *A. ringens.* [B, 216.]—**A. ringens.** Syn.: *Arum ringens* [Thunberg], *Arum triphyllum* [Thunberg]. A Japanese species. Loureiro referred to Thunberg's *Arum triphyllum* (which is this plant) his own *Arum triphyllum,* which, however, is probably the *Pinellia tuberifera.* [B, 216, 266.]—**A. serratum.** A variety of *A. japonicum.* [B, 216.]—**A. Sieboldii** [De Vries]. A variety of *A. ringens.* [B, 216.]—**A. Thunbergii** [Blume]. Syn.: *Arum dracontium* [Thunberg]. A Japanese species, the root of which is acrid, purgative, and emmenagogue. [B, 210, 216.]—**A. triphyllum** [Torrey]. See *A. atrorubens.*

THE ARISÆMA ATRORUBENS. [A, 327.]

ARISAREÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}s-a(a^3)′re^2-e(a^3-e^2). Of Schott (1832), a subtribe of araceous plants belonging to the *Dra-*

cunculeæ, comprising the genera *Arisarum* and *Arisæma;* by Bentham and Hooker made a subtribe of the Arineæ. [B, 42, 121, 170.]

ARISARINÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]s-a[3]r-i(e)′ne(na[3]-e[2]). Of Schott (1856), a subtribe of araceous plants belonging to the *Alleluchieæ*, including the genus *Arisarum*. [B, 170, 216.]

ARISARUM (Lat.), n. n. A[2]r(a[3]r)-i[2]s′a[3]-ru[3]m(ru[4]m). From ἀρίσαρον, an ancient name for some araceous plant. [Dioscorides (A, 311).] A genus of araceous plants closely related to *Arisæma*, established by Tournefort. It is distinguished from *Arum* by the absence of glands on the spadix and by the distinctly marked filaments and style. [B, 19, 180.]—**A. amboinense** [Rumphius]. The *Typhonium divaricatum*, var. *robustum*. [B, 216.]—**A. australe** [Richard]. See *A. vulgare*.—**A. azoricum** [Schott]. A variety of *A. vulgare*. [B, 216.]—**A. balansanum** [Schott]. The *A. vulgare*, var. *typicum*. [B, 216.]—**A. Clusii** [Schott]. The *A. vulgare*, var. *Clusii*. [B, 216.]—**A. crassifolium** [Schott], **A. Forbesii** [Schott], **A. Jacquini** [Schott]. The *A. vulgare*, var. *typicum*. [B, 216.]—**A. Libani** [Schott]. The *A. vulgare*, var. *typicum* and var. *Veslingii*. [B, 216.]—**A. Sibthorpii** [Schott], **A. subalpinum** [Kotschy]. The *A. vulgare*, var. *typicum*. [B, 216.]—**A. subexsertum** [Webb], **A. tingitanum** [Schott]. The *A. vulgare*, var. *subexsertum*. [B, 216.]—**A. Veslingii** [Schott]. The *A. vulgare*, var. *Veslingii*. [B, 216.]—**A. vulgare** [Targioni-Tozz]. Syn.: *Arum a.* [Linnæus]. A species indigenous to southern Europe and northern Africa. Its tuberous root was formerly official as *radix arisari* and used for the same purposes as that of the *Arum maculatum*. Four varieties are distinguished: 1. Var. α *typicum*, in which the appendix of the spadix is slender and somewhat thickened toward its apex; found in Italy, Spain, Portugal, southern France, Corsica, Cyprus, Greece, and Asia Minor. 2. Var. β *Veslingii*, in which the lamina of the spathe about equals the tube in length, and is rather long-acuminate, the appendix being very slender and scarcely thickened at the apex; found in Morea, Cyprus, Egypt, Syria, and Palestine. 3. Var. γ *Clusii*, having the appendix of the spadix exserted a short distance beyond the spathe, and the apex decidedly thickened; found in Spain and Portugal. 4. Var. δ *subexsertum*, having the lamina of the spathe a little shorter than the tube, and the apex of the spadix dilated into a club-shape; found in Algeria, the Azores, and Teneriffe. [B, 188, 216.]—**Radix arisari**. The rhizome of *A. vulgare*. [B, 180.]

ARISCEMA (Lat.), n. n. A[2]r(a[3]r)-i[2]s-se(ka)′ma[3]. Gen., *ariscem′atos* (*-tis*). See ARISÆMA.

ARISÉE (Fr.), n. A[3]-re-sa. See ORYZA.

ARISÈME (Fr.), n. A[3]-re-se[2]m. See ARISÆMA.

ARISHTA (Hind.), n. The *Sapindus emarginatus*. [B, 172.]

ARISHTO (Bengal.), n. The *Azadirachta indica*. [B, 172.]

ARISI, ARISSEE (Tamul), n's. See ORYZA.

ARISTA (Lat.), n. f. A[2]r(a[3]r)-i[2]s′ta[3]. Perhaps for *acrista*, from the same root as *acris*, sharp, or allied to *arare*, to plow. Cf. Ger., *Aehre*, ear, *Ernle*, harvest [B, 114]. Fr., *arête*, *barbe d'épi*. Ger., *Granne*. It., *resta*. Sp., *arista*. 1. An awn or beard upon a flower; particularly the pointed filiform process tipping the pales of gramineous plants, as in barley. [B, 1.] 2. In classical Latin, also an ear of grain. [B, 134.]

ARISTÆ. (AFTER THOMÉ.)

ARISTALOOKHEEA (Ar.), n. The *Aristolochia longa*. [L.]

ARISTALTHÆA (Lat.), n. f. A[2]r(a[3]r)-i[2]s-ta[2]l(ta[3]l)-the′(tha[3]′e[2])-a[3]. Gr., ἀρισταλθαία. Althæa. [Pliny (B, 134).]

ARISTATE, adj. A[2]r-i[2]s′tat. Lat., *aristatus*. Fr., *aristé*. Ger., *begrannt*. Sp., *aristado*. Furnished with an arista or awn. [B, 34.]

ARISTE (Lat.), n. f. A[2]r(a[3]r)-i[2]s′te(ta). A sort of precious stone. [Pliny (B, 114).]

ARISTEREON (Lat.), n. n. A[2]r(a[3]r)-i[2]st-e(a)′re[2]-o[2]n. From ἀρι intens., and στερεοῦν, to make firm. The vervain (*Verbena*). [B, 121.]

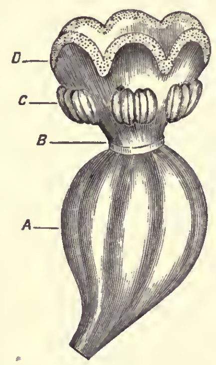
ARISTÉROCARDIOTROPIE (Fr.), n. A[3]r-i[2]s-te[2]r-o-ka[3]r-di[2]-ot-rop-e. From ἀριστερός, left, καρδία, the heart, and τρόπος, a turning. A deviation of the heart to the left. [B, 38.]

ARISTIDA (Lat.), n. f. A[2]r(a[3]r)-i[2]s′ti[2]d-a[3]. From *arista* (*q. v.*). 1. A name given by the ancients to the *Hordeum murinum* [Linnæus]. 2. Of Linnæus, beard-grass, poverty-grass; a genus of gramineous plants belonging to the tribe *Stipaceæ*. It is closely related to *Stipa*, from which it differs in having a triple awn. There are nine species known in the United States. [B, 34, 134.]—**A. cærulescens**. A species growing in Sicily and Spain. [B, 19.]—**A. hygrometrica**. A species growing in Queensland, where it occasions the death of sheep by its awns penetrating the skin and working their way into the different viscera. [B, 19.]

ARISTIFEROUS, adj. A[2]r″i[2]s-ti[2]f′e[2]r-u[3]s. Lat., *aristifer* (from *arista* [*q. v.*], and *ferre*, to bear). Fr., *aristifère*. 1. In classical Latin, bearing or producing ears of corn. 2. In botany, aristate. [B, 114; L.]

ARISTIFORM, adj. A[2]r-i[2]s′ti[2]-fo[3]rm. Lat., *aristiformis* (from *arista* [*q. v.*], and *forma*, form). Fr., *aristiforme*. Shaped like an awn or beard of grain. [B, 1.]

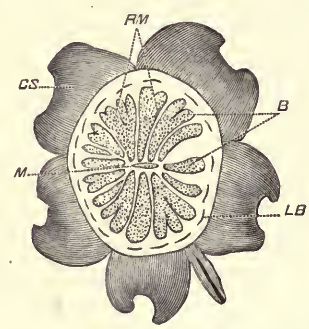
ARISTIGER (Lat.), adj. A[2]r(a[3]r)-i[2]s′ti[2]-ju[5]r(ge[2]r). From *arista* (*q. v.*), and *gerere*, to carry. Bearing awns or ears of corn. [B, 114.]



ARISTOBULIA (Lat.), n. f. A[2]r(a[3]r)-i[2]s-to-bu[2](bu)′li[2]-a[3]. A section of the genus *Andira* (*q. v.*), made by Bentham and Hooker. [B, 121.]

ARISTOFFE (Fr. slang), n. A[3]r-i[2]s-to[2]f. The venereal disease. [L, 41.]

ARISTOLARIEÆ (Lat.), n. f. pl. A[2]r(a[3]r)-i[2]st″o-la[3]r-i(e)′e[2]-e(a[3]-e[2]). Of Dumortier, an order of gynosepalous plants comprising the families *Asarineæ* and *Aristolochieæ*. [B, 170.]



ARISTOLOCHE (Fr.), n. A[3]r-i[2]s-to-losh. The *Aristolochia*; in the pl. *a's*, the *Aristolochiaceæ*. [B.]—**A. à racine longue.** See ARISTOLOCHIA *longa*.—**A. à racine ronde.** See ARISTOLOCHIA *rotunda*.—**A. à trois lobes.** See ARISTOLOCHIA *trilobata*.—**A. clématite.** See ARISTOLOCHIA *clematitis*.—**A. crénelée.** See ARISTOLOCHIA *pistolochia*.—**A. des vignes.** See ARISTOLOCHIA *clematitis*.—**A. de Virginie en arbre.** The *Aristolochia sipho*. [B, 173.]—**A. longue.** See ARISTOLOCHIA *longa*.—**A. menue.** See ARISTOLOCHIA *pistolochia*.—**A. ronde, A. rotunde.** See ARISTOLOCHIA *rotunda*.—**A. sarrasine.** See ARISTOLOCHIA *clematitis*.—**A. serpentaire** [Fr. Cod.]. See ARISTOLOCHIA *serpentaria*.—**A. siphon.** See ARISTOLOCHIA *siphon*.—**A. trilobée.** See ARISTOLOCHIA *trilobata*.—**A. vulgaire.** See ARISTOLOCHIA *clematitis*.—**Extrait d'a.** See *Extractum* ARISTOLOCHIÆ.—**Grande a.** The *Aristolochia grandiflora* [Swartz]. [B. 173.]—**Petite a.** See ARISTOLOCHIA *pistolochia*.—**Racine d'a., Racine d'a clématite**, etc. See *Radix* ARISTOLOCHIÆ, *Radix* ARISTOLOCHIÆ *clematitidis*, etc.

ARISTOLOCHIA (Lat.), n. f. A[2]r(a[3]r)-i[2]s-to(to[2])-lok(lo[2]ch[2])′i[2]-a[3]. Gr., ἀριστολόχεια or ἀριστολοχία, from ἄριστος, best, and λοχεῖα, the lochia, because believed to be useful in assisting parturition. Fr., *aristoloche*. Ger., *Osterluzei*. It., *aristolochia*. Sp., *aristolóquia*. Birthwort, heartwort; a genus of herbs and shrubs belonging to the natural order *Aristolochiaceæ*, having an irregularly tubular, corolliform, deciduous calyx, inflated below and adherent by its base to the ovary; 5 or 6 sub-sessile anthers adherent to the single style, which bears a 3- or 6-lobed stigma: and a septicidal 6-celled capsule containing many seeds. The structure of the stalk frequently

THE FLOWER OF AN ARISTOLOCHIA. (AFTER CAUVET.)

A, ovary; *B*, style; *C*, anthers, adherent to the style; *D*, six-lobed stigma. The perianth has been removed, to show the consolidation of the stamens with the pistil.

TRANSVERSE SECTION OF THE STALK OF AN ARISTOLOCHIA. (AFTER CAUVET.)

CS, cork; *LB*, liber; *B*, woody laminæ; *RM*, medullary rays; *M*, pith.

differs from that of other exogenous plants in that it presents no concentric rings, but a series of radiating woody laminæ surrounding a flattened pith and separated by large medullary rays. [B, 19, 34, 104, 180.]—**A. abbreviata** [Martius]. A variety of the *A. cymbifera*. [Duchartre (B, 214).]—**A. adulterina.** The *Corydalis cava*. [B. 200.]—**A. anguicida** [Linnæus]. Snake-killing birthwort; a shrub of Mexico and South America. The juice of the root placed in the mouth of snakes is said to stupefy them, and, if swallowed, to kill them; and it is also reputed to be an antidote to snake-bites. It is probably the *guaco* of the Colombians. [B, 180; Jacquin (B, 197); L, 84.]—**A. antihysterica** [Martius]. A perennial herbaceous species growing in Brazil, having a recumbent slender stem, petiolate, subcoriaceous, deltoid, auriculate leaves, and flowers with a short bent calyx-tube narrow at the base and ending broad above in an infundibuliform limb which is truncate anteriorly, emarginate posteriorly. It is used for the same purposes as *A. clematitis*. [B, 106; Duchartre (B, 214).]—**A. appendiculata** [Velloz]. The *A. macroura*. [B, 214.]—**A. arborescens.** 1. Of Linnæus, an American species with an erect fruticose stem and cordate-lanceolate leaves. Subsequent botanists have failed to identify this species, which by some is referred to the *A. grandiflora* of Swartz. 2. The *A. sipho*. [B, 173, 214.]—**A. bætica** [Linnæus]. A climbing shrub of Spain and Crete resembling in properties and uses *A. rotunda*. It is probably the ἀριστολοχία κληματῖτις of Dioscorides. [B, 180, 197.]—**A. barbata** [Jacquin]. A Venezuela species, having a stalk 6 feet in height, and bearing solitary axillary flowers having a dirty-white calyx-tube with ferruginous spots and the upper part of the lip barbate with long subulate processes. [Duchartre (B, 214).]—**A. biflora** [Willdenow]. The *A. maxima*, var. *geminiflora*. [B, 214.]—**A. bilobata** [Linnæus]. Fr., *fer à cavale*. A West Indian species. A decoction of the leaves is used as a remedy for the itch, and the root is considered emmenagogue and bechic. [B, 173.]—**A. bracteata** [Retzius]. An East Indian species, the root of which, termed *adatinapalé*, is much used as a vermifuge

and is reputed a powerful antidote to the venom of snakes [A, 321]. According to others, it is an infusion of the dried leaves which is used as a vermifuge and, mixed with castor-oil, as a remedy in scabies. The plant is bitter and nauseous and has stimulant and diaphoretic properties. [B, 180, 197.]—**A. brasiliensis** [Martius]. A large Brazilian shrub, identified by Martius with the *ambuya-embo* of the natives. It has cordate-ovate leaves and solitary flowers with a yellowish, reticulately spotted, purple-veined calyx, consisting of a saccate bent tube dividing above into two lips, the upper lanceolate, concave, and entire, the lower very broad and bilobed. The root has the same uses as that of *A. cymbifera* (*q. v.*). [B, 180.]—**A. caudata.** 1. Of Booth, the *A. macroura*. 2. Of Jacquin, the *A. bilobata*. 3. Of Linnæus, a species growing in San Domingo. [B, 173, 214.]—**A. cava.** See Corydalis *cava*.—**A. clematitis** [Linnæus]. Fr., *poirier*, *sarrasine*, *rateline*. Ger., *gemeine Osterluzei*, *Waldrebenhohlwurz*. It., *a. clematite*. Common birth-wort; a low European shrub, with erect green stems, cordate leaves, and yellow, trumpet-shaped, axillary flowers. The plant has a strong, unpleasant, camphoraceous odor, a bitter, acrid, and balsamic taste, and contains a yellow acid, a volatile oil, sugar, *aristolochic acid*, and yellow bitter principles (*a. yellow*, *aristolochin*, and *clematidin*). The root—*radix aristolochiæ clematitidis* (seu *creticæ*, seu *tenuis*, seu *vulgaris*), *radix saracenicæ*—as it occurs in commerce, is very long, of about the thickness of a goose-quill, cylindrical, covered with the remains of the radicles, grayish-brown exteriorly and yellowish within. It, as well as the less bitter and more feebly acting herb, was formerly much employed as a tonic, stimulant, and diaphoretic in atony of the abdominal viscera and of the nervous system, and in gout, hæmoptysis, and pulmonary phthisis. The leaves were also used externally as a vulnerary. *A. clematitis*, although identified by many with the ἀριστολοχία κληματῖτις of Dioscorides, is probably not the latter, which is described as a climbing plant and is perhaps the *A. bætica*. [B, 5, 33, 180; L.]—**A. clematitis bætica** [Clusius], **A. non vulgaris** [J. Bauhin]. The *A. bætica*. [B, 214.]—**A. clematitis recta** [C. Bauhin], **A. clematitis vulgaris** [Clusius]. The *A. clematitis*. [B, 214.]—**A. concava moschatellina.** See Adoxa *moschatellina*.—**A. contorta** [Bunge]. A species growing in northern China and along the Amoor River, the root of which is used by the Chinese as a purgative and vermifuge, and also as a remedy in scabies, and the fruit as a remedy in pulmonary affections. [B, 214; L, 75.]—**A. cordata.** An erroneous spelling for *A. cordiflora*. [B, 197.]—**A. cordiflora** [Mutis]. Sp., *contracapitana* (*ó flor de alcatras*) *de Monsox*. A species growing in New Granada, near the Magdalena River, distinguished by its purple flowers, some of which are 4 feet in circumference and are used by boys as caps. The root is used as a remedy for snake-bites. [B, 173, 197, 214, 218.]—**A. cordifolia.** An erroneous spelling of *A. cordiflora*. [B, 173.]—**A. cretica.** 1. A plant mentioned by Celsus as an ingredient in the malagma of Andreas, a remedy used for hastening suppuration and as an anodyne. It was probably the *A. cretica* of Linnæus. 2. Of Linnæus, Cretan birth-wort; a plant growing in Crete, probably the ἀριστολοχία μακρά of Dioscorides. Its root is about 6 inches long, 1 inch thick, reddish-brown externally, and yellowish within, and has a nauseous camphoraceous odor and a very bitter taste. It has been used as an emmenagogue and to promote the flow of the lochia. [B, 45, 180.]—**A. cretica sempervirens** [Morison]. The *A. sempervirens*. [B, 214.]—**A. cymbifera** [Martius]. Ger., *kahnförmige Osterluzei*. A Brazilian shrub with cordate reniform leaves and solitary flowers having a greenish-yellow, inflated, ovoid calyx with 2 lips, the upper lanceolate, acute, and sickle-shaped, the lower 2 to 3 times as long as the upper, hollowed out like a boat at its base, and terminating in a broad plate. The root, which is known in Brazil as *raiz de mil-homens* ("thousand-men's root") or *raiz jarinha*, and in Europe as *radix aristolochiæ cymbiferæ*, *radix mil-homens*, occurs in commerce under the form of dark-gray or brownish, rounded or flattened, often twisted or angular fragments, of peculiar odor compared to that of cats' urine or that of buchu, and of an aromatic and bitter camphoraceous taste. It is much used in Brazil both internally and locally as a remedy for snake-bites, and constitutes probably a large part of the *guaco* of commerce. It is also used in dyspepsia, dysentery, rheumatism, malignant fevers, paralysis, and impotence, and as an application to atonic ulcers. [Guibourt (B, 5), B, 180, 197; L, 49.]—**A. fabacea.** The *Corydalis solida*. [L, 84.]—**A. fœtida** [Kunth]. Sp., *yerba del indio* [Mex. Ph.]. A Mexican shrub, with a fruticose stem, reniform-cordate leaves, and flowers having a reddish reflexed calyx-tube, broad at the apex, where it is greenish-yellow, and terminating in a dark violaceous limb with an elongated lip. A decoction made from it, especially from the root, is used as a detergent and stimulant application to ulcers. [H. Trimble and S. S. Jones, "Am. Jour. of Pharm.," Mar., 1886, p. 113; J. M. Maisch, *ibid.*, p. 115; B, 92, 180, 214; L, 49.]—**A. fragrantissima** [Ruíz and Pavón]. Sp., *guaco* [Mex. Ph.], *contrayerba de bejuco*, *bejuco de la estrella*. A shrub growing in the woods upon the Andes of Peru and in Mexico. It has a very tall or procumbent stalk; broad ovate-cordate, long-acuminate, very pointed leaves on long petioles; and very fragrant dark rose-colored flowers, growing in axillary pairs, rarely in threes or singly, provided with a broad calyx-tube and a lanceolate recurved lip obtuse at the apex. The root, the bark, and the stalks, especially the latter, are used in intermittent fevers and all diseases dependent upon atony of the abdominal viscera, also for poisoned wounds and as an application in purulent ophthalmia, chronic ulcers, and elytritis. [J. M. Maisch, "Am. Jour. of Pharm.," Dec., 1885, p. 601; B, 180, 197, 214, 224.]—**A. frutescens** [Marsh]. The *A. sipho*. [B, 173.]—**A. galeata.** 1. Of Martius, a Brazilian species with a stalk and leaves like those of *A. cymbifera*, and flowers with an obovate globose tube and deflexed cylindrical limb, the upper lip of which is acute lanceolate and recurved-galeate, and the lower lip, springing from a linear base, is prolonged into an obcordate emarginate lamina. It has properties and uses similar to those of *A. cymbifera* and furnishes with the latter a part of the *raiz de jarinha* of commerce. 2. Of Moritzi, the *A. cymbifera*. [B, 180, 197, 214, 218.]—**A. geminiflora** [Kunth]. The *A. maxima*, var. *geminiflora*. [B, 214.]—**A. gigas** [Lindley]. The *A. grandiflora* of Swartz. [B, 214.]—**A. grandiflora.** 1. Of Swartz, the "poisoned-hogs'-meat"; a climbing shrub found in the mountainous parts of Jamaica, Porto Rico, and Guatemala, having long-petiolate, broad-cordate leaves, acute at the apex, auriculate at the base, and very large axillary solitary flowers having a pilose-hispid calyx, the tube of which is abruptly recurved, is dilated above into a broad throat, and terminates in a cordate limb produced into a very long tail. It is said to be poisonous to hogs and other animals and to emit very fœtid stupefying exhalations. The leaves are used in the form of baths and fomentations in gout and rheumatism, and the plant is said to be employed in Brazil in the treatment of dyspepsia, paralysis, and dropsy. 2. Of Gomez, the *A. cymbifera*. [B, 92, 180, 197, 214, 218.]—**A. guaco.** A name given by some to the variety of *A.* furnishing guaco. [B, 138.] See *A. cymbifera*, *A. anguicida*, and *A. maxima*.—**A. hastata** [Nuttall]. The *A. serpentaria*, var. *hastata*. [B, 34.]—**A. hirsuta** [Muhlenberg]. A small Virginian species with rounded-cordate pubescent leaves and solitary flowers, the peduncles, bracts, and perianth of which are all hairy. The root is like that of *A. serpentaria* and probably constitutes part of the serpentaria of commerce. [B, 5.]—**A. hyperborea** [Paxton]. The *A. cymbifera*. [B, 214.]—**A. indica** [Linnæus]. A shrub growing in India and New Holland, having short-petiolate obovate leaves, truncate or sub-cordate at

THE ARISTOLOCHIA CLEMATITIS. (AFTER THOMÉ.)

the base and obtuse at the apex, and flowers borne in cymose-racemulose clusters of 2 or 3, surrounded by ovate-lanceolate bracts and with an oblong-obtuse lip longer than the calyx-tube. The *A. indica*, var. β *oxyphylla*, has obovate sub-pandurate, abruptly acuminate leaves and a shorter ovate-oblong lip; and the *A. indica*, var. γ *lanceolata*, has oblong-lanceolate leaves. The root, which has a strong aromatic odor and a very bitter, acrid taste, is used as an antidote to snake-bites, and by snake-charmers as a means of stupefying snakes, and is also used in intermittent fever, gout, suppression of the menses, and torpor of the abdominal viscera. [B, 19, 172, 180, 214.]—**A. Kæmpferi** [Willdenow]. A climbing shrub with flowers yellowish externally, dark-purple within, growing in Japan, where it is called *san sakso*. The fruit is used by the Chinese in pulmonary disorders. [B, 214; L, 75.]—**A. labiosa.** 1. Of Ker, the *A. cymbifera*, var. *labiosa*. 2. Of Sims, the *A. cymbifera*. [B, 214.]—**A. lanceolata** [R. Wight]. The *A. indica*, var. *lanceolata*. [B, 214.]—**A. longa** [Linnæus]. Fr., *aristoloche longue* (ou *à racine longue*). Ger., *lange* (oder *langknollige*) *Osterluzei*. It., *a. lunga*. Sp., *aristoloquia larga* [Mex. Ph.]. A small herb growing in southern Europe, with prostrate stems, alternate reniform-cordate or ovate leaves, and pale-yellow purple-veined flowers inflated at the base and with a reflexed border covering in the throat. The rhizome, *radix aristolochiæ longæ* (seu *majoris*), is cylindrical or spindle-shaped, a foot in length and 3 inches in breadth, brown externally and yellowish-white within, has a feeble rather unpleasant odor and a taste sweetish at first, afterward nauseous, bitter, and acrid. It is said to possess the power of stupefying snakes, and has been used in atony of the abdominal viscera and nervous system, in suppression of the menses, in gout, and in other affec-

tions. [B, 180, 197.]—**A. longa, foliis angustis auriculatis** [Morison]. The *A. Maurorum* [Linnæus]. [B, 214.]—**A. longa vera Sabbati** [Martelli and Bonelli]. The *A. clematitis.* [B, 214.]—**A. lutea** [Desfontaines]. A species growing in the valley of Bergami, distinguished by only slight characters from *A. pallida*, to which it is generally referred. [B, 178, 214.]—**A. macrophylla.** 1. Of Lamarck, the *A. sipho.* 2. Of Duchartre, a species growing in French Guiana. [B, 214.]—**A. macroura, A. macrura** [Gomez]. A Brazilian species with a climbing fruticose stem ; 3-parted leaves with oblong obtuse lobes, borne upon longish twisted petioles ; and flowers with an infundibuliform calyx-tube and a broad lip terminating in a very long pendulous tail. It resembles in physical and therapeutic properties *A. cymbifera*, and furnishes with the latter a part of the *raiz de jarinha* of commerce. [B, 180, 197.]—**A. mascula.** See *A. longa.*—**A. Maurorum.** Ger., *syrische Osterluzei.* 1. Of Linnæus, a Syrian species having lanceolate leaves with rounded lobes and solitary brownish-yellow axillary flowers. The root, which has a strong odor of dung and a bitter taste, was formerly imported into Europe under the title of *radix aristolochiæ Maurorum*, and is said still to be employed in its native land for the same uses as that of *A. longa.* 2. Of Klotsch, the *A. bracteata.* [B, 180, 214.]—**A. maxima** [Duchartre]. A Brazilian species having a fruticose stem pubescent with deciduous hairs, variously shaped leaves, and flowers clustered in racemes, with a narrow recurved calyx-tube, broad throat, and very broad, acute or mucronate, ovate lip. The ordinary *A. maxima* (*A. maxima* of Linnæus, *A. maxima*, var. α *maxima* [Duchartre]) has very large oblong or ovate leaves ; the variety *A. maxima*, var. β *geminiflora*, has flowers in simple, frequently 2-flowered, racemes ; the *A. maxima*, var. *angustifolia*, has small and narrow leaves. The stalks, according to Guibourt, constitute a part of the guaco of commerce. [B, 5, 93.]—**A. mayorensis** [Fisch.]. The *A. indica*, var. *lanceolata.* [B, 214.]—**A. mexicana** [Flor. mex. ined.]. Sp., *tacopatle* [Mex. Ph.]. A species found in Guerrero and other hot districts of Mexico ; used as an antispasmodic. [J. M. Maisch, "Am. Jour. of Pharm.," March, 1886, p. 122 ; A, 447.]—**A. mexicana flore acutiore** [Morison]. The *A. anguicida.* [B, 214.]—**A. mil-homens.** See *A. grandiflora.*—**A. moschata** [Weddell], **A. odoratissima** [Linnæus]. A shrub growing in the woods of Mexico and West Indies, all the parts of which have a strong agreeable odor and a bitter taste. The herb and root have been employed as a bitter tonic and stimulant and as a sudorific. [B, 180.]—**A. officinalis** [Nees von Esenbeck]. The *A. serpentaria*, var. *oblongata.* [B, 180.]—**A. orbiculata** [Vell.]. The *A. cymbifera.* [B, 214.]—**A. orientalis foliis lanceolatis** [Tournefort]. The *A. Maurorum* of Linnæus. [B, 214.]—**A. ottonis** [Klotsch]. The *A. pandurata* of Jacquin. [B, 214.]—**A. pallida** [Waldstein and Kitaibel]. Syn.: *A. rotunda*, var. β [Linnæus]. A species growing in southern Europe, with ovate, almost triangular leaves borne on petioles which are fully as long as the flower-stalks, and with solitary greenish-yellow, purplish-striped flowers, the limb of which is ovate-lanceolate, cuspidate, and half as long as the tube. The root resembles greatly in appearance and medicinal properties that of *A. rotunda*, for which it is sometimes substituted. The *A. pallida* is probably the ἀριστολοχία στρογγύλη of Dioscorides. [B, 178, 180.]—**A. pandurata.** 1. Of Jacquin, a species growing in Venezuela, with pandurate-hastate lower leaves and violet-colored flowers. 2. Of Wallich, the *A. indica*, var. *oxyphylla.* [B, 214.]—**A. panduriformis** [Willdenow]. The *A. pandurata* of Jacquin. [B, 214.]—**A. pentandra** [Linnæus]. Sp., *guaco de San Cristóbal.* A Yucatan species. [B, 224.]—**A. peregrina foliis auriculatis** [Morison], **A. peregrina Rauwolfii** [Clusius]. The *A. Maurorum* of Linnæus. [B, 214.]—**A. picta** [Karsten]. The *A. pandurata* of Jacquin. [B, 214.]—**A. pistolochia.** Fr., *aristoloche crénelée.* Ger., *spanische Osterluzei.* 1. Of Linnæus, a species growing in southern Europe, with a stalk only 6 to 9 inches in length, cordate, obtuse, pubescent leaves, with a bristle-like apex, and erect solitary yellowish flowers having 2 lips, the upper short and reflected, the lower oblong, straight, and obtuse. The root, *radix aristolochiæ minoris* (seu *tenuis polyrrhizæ*), *radix pistolochiæ*, consists of long, tufted, yellowish-gray rootlets springing from a short slender rhizome, and has a pleasant aromatic odor and bitter acrid taste. It is used like that of *A. rotunda.* 2. Of Fuchs, the *Corydalis solida.* [B, 109, 180.]—**A. polyrrhizos auricularibus foliis.** See *A. serpentaria*, var. *hastata.* — **A. punctata** [Lamarck]. A San Domingo species with short-petiolate, hastate-cordate, auriculate leaves, and very long, solitary axillary flowers with a narrow base and an acute, long-lanceolate lip. [B, 214.]—**A. recurvilabra** [Hance]. The green putchuk (Chinese, *ch'ing muh hsiang*) ; a trailing shrub with small, fragrant, yellow roots, used in the treatment of burns and indigestion. The drug has been erroneously referred to *A. contorta* [Bunge]. ["Pharm. Jour. and Trans.," Mar. 15, 1873, p. 725 (B).]—**A. reticulata** [Nuttall]. 1. Of Nuttall, a species growing in Texas, Arkansas, and Louisiana, having an erect, bristly, very flexuous stem about 1 foot in height, sessile, amplexicaul, oval-cordate leaves, 3 to 4 inches long, with finely reticulated prominent venules, and small, purplish, very woolly flowers, sigmoid in shape. The rhizome, Red River or Texas snake-root, closely resembles that of *A. serpentaria*, but is somewhat thicker and coarser, and the rootlets are longer, thicker, and less interlaced. Its constitution and medicinal properties are similar to those of *A. serpentaria*, and it constitutes with the latter the *serpentaria* of the U. S. Ph. 2. Of J. P. Holton, the *A. maxima*, var. *geminiflora.* [B, 5, 34, 81, 214.]—**A. ringens** [Vahl]. Ger., *rachenförmige Osterluzei.* A Brazilian climbing shrub, with cordate-rounded leaves and solitary flowers, the inflated reticulate calyx of which divides into a spatulate upper lip and a lanceolate lower lip. The root resembles in physical properties and therapeutic uses that of *A. cymbifera*, and likewise constitutes part of the *raiz de jarinha* of commerce. [B, 180, 197.]—**A. rotunda** [Linnæus]. Fr., *aristoloche rotunde* (ou *à racine ronde*). Ger., *rundknollige Osterluzei.* It., *a. rotunda.* Sp., *aristoloquia redonda* [Mex. Ph.]. A species growing throughout southern Europe, with almost sessile, amplexicaul, ovate-cordate leaves and solitary axillary flowers, the perianth of which is inflated at the base and of a pale-yellow color streaked with dark-purple reticulate veins, and terminates in a dark-purple or yellowish-brown oblong-rounded lip, as long as the calyx-tube and reflected so as to cover in the throat of the calyx. The rhizome, *radix aristolochiæ rotundæ veræ* (seu *fœminæ*), is tuberous, almost spherical, 2 to 3 inches in diameter, and beset with delicate rootlets, brownish exteriorly, yellowish-white within, and has a strong repulsive odor and bitter nauseous taste. It contains starch, resin, and a bitter principle, and was formerly employed in congestions of the abdominal organs, suppressed menstruation, gout, and asthma. It was also reputed to have the power of stupefying snakes. [B, 178, 180, 197.]—**A. rotunda concava.** The *Adoxa moschatellina.* [B, 59.]—**A. Rumphii** [Kostel]. A lofty shrub growing in the island of Banda. The root and stalk, which have a strong aromatic odor and bitter, penetrating, somewhat terebinthaceous taste, are used in the form of decoction in intermittent fevers and torpor of the abdominal viscera. [B, 180.]—**A. sagittata** [Muhlenberg]. The *A. serpentaria*, var. *hastata.* [B, 81.]—**A'säure** (Ger.). Aristolochic acid. [B, 207.]—**A. sempervirens** [Linnæus]. A subfruticose or herbaceous species with a prostrate or subscandent stem, small subcoriaceous leaves, and yellowish solitary flowers, growing in Arabia and Crete. The leaves are used both internally and externally in the treatment of snake-bites. [Forskål (B, 5) ; B, 180, 214.]—**A. serpentaria** [Linnæus]. Fr., *aristoloche serpentaire* [Fr.

THE ARISTOLOCHIA ROTUNDA.
(AFTER CAUVET.)

THE ARISTOLOCHIA SERPENTARIA.
[B, 138.]

Cod.]. Ger., *Schlangen-Osterluzei, virginische Schlangenwurzel.* Virginia snake-root ; an herbaceous plant 8 to 12 inches in height growing through the middle and southern United States. It has an erect, flexuous, jointed stalk ; oblong or ovate, cordate, accuminate leaves, 2 to 4 inches in length, supported on short petioles ; and long radical peduncles bearing dull-purplish, leathery flowers, ½ to 1 inch in length, of a sigmoid shape, with the calyx-tube inflated at each end and the limb terminating in 3 short obtuse lobes. The fruit is a 6-angled, 6-celled obovate capsule. The *A. serpentaria*, var. *hastata* (*A. hastata* [Nuttall], *A. serpentaria*, var. γ *auriculata* [Hayne]), is distinguished by its oblong-linear or oblong-lanceolate leaves, auriculate at the base. The *A. serpentaria*, var. α *oblongata* [Hayne] (*A. officinalis* [Nees v. Esenbeck]) has oblong-cordate, long-cuspidate leaves with a slender, slightly villous stem ; and the *A. serpentaria*, var. β *ovata* [Hayne] (*A. serpentaria* [Nees v. Esenbeck]), has ovate-cordate short-cuspidate leaves with a low villous stem. The rhizome, *serpentaria* [U. S. Ph.], *serpentariæ rhizoma* [Br. Ph. (1885)] (seu *radix* [Br. Ph. (1867)], *radix serpentariæ* seu *aristolochiæ serpentariæ*, seu *aristolochiæ virginianæ*, seu *viperinæ*, seu *colubrinæ*), is about 1 inch in length, ¼ inch broad, bent, covered with the remnants of the stems and with thin branching rootlets about 4 inches long ; is of a yellowish-brown exteriorly, whitish within ; and has an aromatic, camphoraceous odor, and a bitter camphoraceous taste. It contains a fragrant volatile oil, a volatile resin, gum, sugar, and a bitter principle (*aristolochin* [Chevallier], *serpentarin*). It acts as an aromatic stimulant, diuretic, and diaphoretic, and is administered in typhoid conditions, in exanthematous fevers to develop the eruption, and in intermittent fevers, especially in connection with cinchona. [B, 5, 34, 92, 180.]—**A. sipho** [L'Héritier]. Ger., *Pfeifenstrauch.* Dutchman's pipe ; a large climbing shrub growing in the middle and southern United States, and cultivated in Europe, with broad, rounded-cordate, glabrous, petiolate leaves, 6 to 12 inches in diameter, and with solitary bracteate flowers having the dull-brown calyx-tube bent upon itself in the form of a tobacco-pipe. The leaves have been used as a diaphoretic in catarrhal disorders. [B, 34, 180.]—**A. solida.** The *Corydalis solida.* [L, 63.]—**A. surinamensis** [Willdenow]. A shrub of Surinam with trilobate leaves and solitary flowers with the bent calyx-tube ending in a cordate flat lip. All parts of the plant possess a penetrating and sharp taste, and have been used in malignant fevers and other diseases. [B, 180.]—**A. tapetotricha** [Ch. Lem.]. The *A. macroura.* [B, 214.]—**A. tenera** [Pohl]. A species called *matos* in New Granada, where it is used as a remedy for snake-bites. ["Pharm. Jour. and Trans.," Mar. 13, 1873, p. 725 (B).]—**A. tenuis.** See *A. clematitis.*—**A. tomentosa** [Sims]. A tall climbing shrub growing along the Mississippi River and in the

Gulf States. The rounded-cordate, petiolate leaves, 4 to 6 inches in length, are downy or hairy on their inferior surface, and the solitary bractless flowers have a greenish-yellow, downy, strongly reflexed calyx-tube and a dark-purple, reflexed, 3-cleft limb. The plant has a thick creeping root resembling in odor that of *A. serpentaria*. This species has been confounded with *A. hirsuta*, from which, however, it greatly differs. [B, 5, 34.]—**A. trifida** [Lamarck]. The *A. trilobata* of Linnæus. [B, 180.]—**A. trilobata.** Fr., *aristoloche trilobée*. 1. Of Linnæus, a climbing shrub of the West Indies with obtuse trilobate leaves and solitary inflated flowers with a cordiform, cuspidate, and caudate lip. All parts of the plant have a strong camphoraceous odor. The stalks, occurring in long, angular, cane-like pieces, formerly official as *stipites aristolochiæ trilobatæ*, and the root have a physiological action resembling that of *A. serpentaria*, and have been employed for the same purposes as the latter, and also as an antidote to snake-bites. 2. Of Jacquin, the *A. surinamensis*. 3. Of Lindley, the *A. macroura*. [B, 180, 197, 214 ; L, 85.]—**A. tripteris.** Fr., *aristoloche de la Louisiane*. A species said to occur in Louisiana, the botanical description of which is too imperfect for identification. [Duchartre (B, 214).]—**A. turbacensis** [Bonpland]. Sp., *capitana de corazon*. A climbing plant with ovate-cordate entire leaves, reticulately veined inferiorly, and flowers borne on bracteate peduncles, growing near Turbaco, in Mexico. A decoction of the root has been used as an antidote for snake-bites. [B, 173, 214 ; L, 105.]—**A. undata** [Mönch]. The *A. sempervirens*. [B, 214.]—**A. vulgaris.** See *A. clematitis*.—**A. vulgaris rotunda.** See CORYDALIS *solida*.—**A. yellow.** Ger., *Aristolochiengelb*. A yellow crystalline substance obtained from the root of *A. clematitis*. Probably identical with aristolochin and clematidin. [A, 1 ; B, 196.]—**Extractum aristolochiæ.** Fr., *extrait d'aristoloche*. An extract made by digesting 1 part of the root of *A. clematitis* with 5 or 6 parts of alcohol, filtering with expression, boiling the residue with 3 parts of water, clarifying the decoction with white of egg, mixing the alcoholic and aqueous liquors, and evaporating. [Brunsw. Disp. (1777), Würt. Ph. (1798) (L, 85).]—**Radix aristolochiæ bulbosæ.** The root of *Corydalis solida*. [B, 180.]—**Radix aristolochiæ cavæ.** The root of *Corydalis cava*. [B, 180.]—**Radix aristolochiæ clematitidis** (seu **clematitis**), **Radix aristolochiæ creticæ.** The root of *A. clematitis*. [B, 180.]—**Radix aristolochiæ cymbiferæ.** The root of *A. cymbifera*. [B, 180.]—**Radix aristolochiæ fabaceæ.** The root of *Corydalis solida*. [B, 180.]—**Radix aristolochiæ fœminæ.** The root of *A. rotunda*.—**Radix aristolochiæ longæ** (seu **longæ veræ**), **Radix aristolochiæ majoris.** The root of *A. longa*. [B, 180 ; L, 85.]—**Radix aristolochiæ Maurorum.** The root of *A. Maurorum*. [B, 180.]—**Radix aristolochiæ minoris.** The root of *A. pistolochia*. [B, 180.]—**Radix aristolochiæ non cavæ.** The root of *Corydalis solida*. [B, 180.]—**Radix aristolochiæ polyrrhizæ.** The root of *A. pistolochia*. [L, 85.]—**Radix aristolochiæ rotundæ veræ.** The root of *A. rotunda*. [L, 85.]—**Radix aristolochiæ rotundæ vulgaris.** The root of *Corydalis cava*. [B, 180.]—**Radix aristolochiæ serpentariæ.** The rhizome of *A. serpentaria*, the *serpentaria* of the U. S. Ph. [B, 180.]—**Radix aristolochiæ tenuis.** The root of *A. clematitis*. [B, 180.]—**Radix aristolochiæ tenuis polyrrhizæ.** The root of *A. pistolochia*. [B,180.]—**Radix aristolochiæ virginianæ.** The rhizome of *A. serpentaria*. [B, 180.]—**Radix aristolochiæ vulgaris.** The root of *A. clematitis*. [L, 85.]—**Stipites aristolochiæ trilobatæ.** The stalks of *A. trilobata*. [L, 85.]

ARISTOLOCHIACEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}s-to-lo^{2}k-(lo^{2}ch^2)-i^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *aristolochiacées*. Ger., *Aristolochiaceen, Osterluzeigewächse*. It., *aristolochiaceen*. Sp., *aristoloquiáceas*. Syn.: *Asarinæ* [Kunth], *Asarineæ* [Bartling], *Pistolochinæ* [Link]. Birthworts. An order of apetalous, dicotyledonous herbs and shrubs belonging to the asaral alliance of Lindley, the cohort *Asarales* of Bentham and Hooker, and the order *Serpentariæ*, series *Monochlamydeæ*, of Eichler. It comprises plants with alternate, exstipulate, simple leaves ; perfect flowers, with an irregularly tubular perianth, usually of a brownish or yellowish hue, valvate in æstivation ; 6 to 12 (rarely 18 or 36) epigynous stamens, a simple style tipped with a 6-parted stigma, and a 6-celled (rarely 3- or 4-celled) ovary; and a capsular fruit containing numerous albuminous seeds. By Duchartre it is divided into three suborders: 1. The *Asareæ*, herbaceous plants with the lower leaves squamiform, the upper reniform ; with solitary terminal flowers having a persistent trilobed calyx, 12 free stamens, 6 of which are exterior and placed opposite the styles, and have very short filaments, and short 6-celled ovary ; and with a capsule opening by an irregular dehiscence. This suborder has for its type the genus *Asarum*. 2. The *Bragantieæ*, shrubs with reniform, oblong, or ovate-lanceolate leaves ; with flowers disposed in spikes or racemes, having a caducous calyx dividing into 3 irregular lobes, 6 to 36 stamens, and an elongated, tetragonal, and 4-celled ovary with uniseriate ovules ; and with a siliquiform capsule dehiscing by 4 valves. This suborder has for its type the genus *Bragantia*. 3. The *Aristolochieæ*, shrubs with an irregularly tubular caducous calyx, 6 (sometimes 5) stamens with extrorse anthers sessile upon the style, an elongated hexagonal 6-celled (rarely 5-celled) ovary, and a globular or oblong hexagonal capsule, dehiscing from top to bottom by 6 valves. It includes the genus *Aristolochia*. [B, 34, 104.]

ARISTOLOCHIACEOUS, adj. A^{2}r-i^{2}s''to-lo^{2}k-i^2-a'shu^{3}s. Lat., *aristolochiaceus*. Fr., *aristolochiacé*. It., *aristolochiaceo*. Sp., *aristoloquiáceo*. Resembling *Aristolochia*; of or pertaining to the *Aristolochiaceæ*. [B.]

ARISTOLOCHIÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}s-to-lo^{2}k(lo^{2}ch^2)'-i^2-e(a^3-e^2). Fr., *aristolochées*. Ger., *Aristolochien*. 1. Of Adanson, an order of plants corresponding in part to the *Aristolochiaceæ*, but including also *Nymphœa*, *Nelumbo*, *Hydrocharis*, and other genera now placed in distinct orders. 2. Of Jussieu and others, the same as the *Aristolochiaceæ* with the addition of the genus *Cytinus*. [B, 104, 170, 197, 214.]

ARISTOLOCHIAL, adj. A^{2}r-i^{2}s'to-lo^{2}k'i^2-a^{2}l. Lat., *aristolochialis*. Of, pertaining to, or resembling the genus *Aristolochia*. [B.]—**A. alliance.** See ARISTOLOCHIALES.

ARISTOLOCHIALES (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}s-to(to^2)-lo^{2}k-(lo^{2}ch^2)-i^2-a(a^3)'lez(le^{2}s). Of Lindley, an alliance of plants belonging to the *Columniferæ*, including the single order *Aristolochiæ* (*Aristolochiaceæ*). [B, 170.]

ARISTOLOCHIC, adj. A^{2}r-i^{2}s''to-lo^{2}k'i^{2}k. For deriv., see ARISTOLOCHIA. Lat., *aristolochicus*. Fr., *aristolochique*. Ger., *aristolochisch*. It., *aristolochico*. Sp., *aristolóquico*. 1. Having power to expel the placenta and excite the lochia. 2. Of or pertaining to the genus *Aristolochia*. [B ; L, 41, 50.]—**A. acid.** Fr., *acide aristolochique*. Ger., *Aristolochiasäure*, *Aristolochinsäure*. It., *acido aristolochico*. Sp., *ácido aristolóquico*. A volatile acid, $C_8H_{12}O_{11}$, obtained from the root of the *Aristolochia clematitis*. It has not been obtained in a chemically pure state, and its existence as an independent chemical compound has been denied. [B, 2, 196, 207.]

ARISTOLOCHICA (Lat.), n., n. pl. of adj. *aristolochicus* (*remedia* understood). A^{2}r(a^{3}r)-i^{2}s-to(to^2)-lo^{2}k(lo^{2}ch^2)'i^{2}k-a^3. Remedies for expelling the placenta and bringing on the lochia. [L, 50.]

ARISTOLOCHIEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}s-to-lo^{2}k(lo^{2}ch^2)-i(i^2)'e^2-e(a^3-e^2). Fr., *aristolochiées*. Ger., *Aristolochieen*. Sp., *aristoloquíeas*. 1. Of Jussieu and others, the *Aristolochiaceæ*. 2. Of Bartling, a class of *Chlamydoblasti*, including the orders *Balanophoreæ*, *Cytineæ*, *Asarineæ*, and *Myristiceæ*. 3. Of Duchartre, a suborder of the *Aristolochiaceæ* (*q. v.*). [B, 35, 170, 214.]

ARISTOLOCHIENGELB (Ger.). A^{3}r-i^{2}s-to-lo^{2}ch^2'en-ge^{2}lb. See ARISTOLOCHIA *yellow*.

ARISTOLOCHIN, n. A^{2}r''i^{2}s-to^{2}l'o^{2}k-i^{2}n. Lat., *aristolochinum*. Fr., *aristolochine*. Ger., *Aristolochin*. It., *aristolochina*. A golden-yellow, bitter substance, obtained by Chevallier and Walz from the root of *Aristolochia serpentaria* and *Aristolochia clematitis*, and believed to constitute the active principle of those plants. It is identical in physical properties, and probably in chemical composition, with aristolochia yellow and clematidin. It has not yet been satisfactorily isolated. [B, 2, 196, 207.]—**A'säure** (Ger.). Aristolochic acid. [B, 196.]

ARISTOLOCHINÆ [Link] (Lat.), n. f. pl. A^{2}r(a^{3}r)-i^{2}st''o-lo^{2}k-(lo^{2}ch^2)-i(e)'ne(na^3-e^2). A suborder of the *Pistolochinæ*, comprising the single genus *Aristolochia*. [B, 170.]

ARISTOLOCHIOUS, adj. A^{3}r-i^{2}s''to-lo'ki^2-u^{3}s. See ARISTOLOCHIACEOUS..

ARISTOLOCHON (Lat.), n. n. A^{2}r(a^{3}r) - i^{2}s - to^{2}l'o(o^2) - ko^{2}n-(ch^{2}on). Gr., ἀριστολόχων. An ancient name for some plant of the genus *Aristolochia*. [Hippocrates (B, 115).]

ARISTON (Lat.), n. n. A^{2}r(a^{3}r)-i^{2}s'to^{2}n. Gr., ἄριστον. 1. In early Greek writings, breakfast : in later Greek, the noon-day meal. 2. Anything excellent (neut. of ἄριστος, the best), such as a remedy. [B.]—**A. magnum, A. parvum.** Ancient names for certain compounds used in the treatment of phthisis, abdominal pains, and fevers. [L, 53.]

ARISTOPHANEION (Lat.), n. n. A^{2}r(a^{3}r)-i^{2}s-to-fa^{2}n(fa^{3}n)-i'(a i^2)-o^{2}n. From Aristophanes, its inventor. The name of an emollient plaster composed of pitch 4 lbs., apochyma 2 lbs., wax 1 lb., opoponax 1 oz., and vinegar ½ pint. [Gorræus (L, 50).]

ARISTOSUS (Lat.), adj. A^{2}r(a^{3}r)-i^{2}s-to'su^{3}s(su^{4}s). For deriv., see ARISTA.. Sp., *aristoso*. Containing many awns or aristæ. [B, 114.]

ARISTOTELIA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}s-to-te(ta)'li^2-a^3. From Aristotle, the Greek philosopher. Fr., *aristotélie*. A genus of tiliaceous plants, belonging to the tribe *Elæocarpeæ*. [B, 104.]—**A. glandulosa** [Ruíz and Pavón], **A. macqui** [L'Héritier]. Syn.: *Cornus chilensis* [Molin.]. A shrub growing in Chili. The tough astringent bark contains a large amount of tannin and furnishes a fibre used in making the strings of musical instruments ; the leaves are used to make a detergent wash for ulcers, especially in the mouth ; and from the acid edible berries a sort of wine is made. The whole plant is said to have a febrifuge action. [B, 19, 180 ; H. Baillon (L, 87).]—**A. racemosa.** Mako-mako ; a New Zealand species with edible fruit. [B, 19.]

ARISTOTELIACEÆ [Endlicher], **ARISTOTELIEÆ** [Reichenbach] (Lat.), n's f. pl. A^{2}r(a^{3}r)-i^{2}s-to-te^{2}l-i^2-a(a^3)'se^2(ke^2)-e(a^3-e^2), -i(e)'e^2-e(a^3-e^2). Fr., *aristotéliacées*. Ger., *Aristoteliaceen*. The same as the *Tiliaceæ*. [B, 197.]

ARISTOUS, adj. A^{2}r-i^{2}s'tu^{3}s. See ARISTATE.

ARISTROCARDIE (Ger.), n. A^{3}r-i^{2}s-tro-ka^{3}r-de'. From ἀριστερός, left, and καρδία, heart. Deviation of the heart to the left. [M, 1.]

ARISTULATE, adj. A^{2}r-i^{2}s'tu^2-lat. Lat., *aristulatus*. Fr., *aristulé*. Having a small awn or arista. [B, 36.]

ARISTUM (Lat.), n. n. A^{2}r(a^{3}r)-i^{2}s'tu^{3}m(tu^{4}m). See ARISTON.

ARITHÉNOÏDIEN (Fr.), n. A^{3}r-i^{2}t-an-o-i^{2}d-i^2-a^{3}n^2. See ARYTÆNOIDEUS.—**A. oblique.** See ARYTÆNOIDEUS *obliquus*.—**A. transversal.** See ARYTÆNOIDEUS *transversus*.

ARITHMANTIA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}th-ma^{2}n(ma^{3}n)-ti(te)'-a^3. See ARITHMOMANCY.

ARITHMOMANCY, n. A^{2}r-i^{2}th'mo-ma^{2}n-si^2. From ἀριθμός, a number, and μαντεία, divination. Lat., *arithmomantia*, *arithmantia*. Fr., *arithmomancie*. Ger., *Arithmomancie*. Divination by means of numbers. [B, 38, 78.]

ARITIQUI, n. The fruit of the *Terminalia citrina*. [B, 121.]

ARITRILLIS (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}t-ri^{2}l'li^{2}s. The *Mercurialis*. [Dioscorides (L, 87).]

ARITTEE (Teloogoo), n. The *Musa paradisiaca*. [L.]

ARIZONA, n. A^{2}r-i^{2}z-o'na^3. One of the territories of the United States. It has been recommended as a health-resort. [B. G. McPhail, "Virg. Med. Month.," 1874, i, p. 543 (B, 137).]

ARJALAS, ARJÈLAS, ARJÈLO, n's. Languedoc names for the *Genista scorpius*. [B, 121.]

ARJONA (Lat.), n. f. A^{3}r-ho'na^3. Named after D. F. Arjona. A genus of plants, variously referred to the *Santalaceæ* or the *Olacaceæ*, established by Cavanilles. [B, 121, 197.]

ARJOON (Hind.), n. The *Terminalia arjuna*. [B, 172.]

ARK (Ar.), n. The *Salvadora persica*. [L, 105.]

ARK, ARKA (Hind.), n's. The *Calotropis gigantea*. [B, 172; L, 78.]

ARKAI, n. The *Oxytenanthera abyssinica*. [B, 19.]

ARKANSAS, n. A^{3}r-ka^{2}n'za^{2}s, a^{3}r'ka^{2}n-sa^4. One of the southwestern United States.—**A. hot springs.** Mineral springs in Garland County, A., having a temperature ranging from 93° to 150° F. They contain in the pint 1·069 grains of solid constituents distributed as follows:

Magnesium carbonate..	0·016	Iodine..................	trace
Calcium " ..	0·496	Bromine................	trace
Sodium chloride.......	0·001	Calcium silicate........	0·058
Sodium sulphate.......	0·047	Silica	0·233
Potassium "	0·029	Alumina................	0·056
Calcium "	0 014	Organic matter	0·088
Iron sesquioxide.......	0·013	Water.....	0·018

The springs are much used in rheumatism, gout, syphilis, cutaneous affections, chronic poisoning by lead or mercury, functional uterine disease, neuralgia, and paralysis. [B, 15; G. W. Galvin, "N. Y. Med. Jour.," June 11, 1887, p. 656.]

ARKBEIN, n. A^{3}rk'ben. A name given in Scotland to the os pubis. [L, 45.]

ARKEION (Lat.), n. n. A^{3}r-ki'(ka'i^2)-o^{2}n. Gr., ἄρκειον. The *Lappa major*. [L, 47.]

ARKENAS, n. A Youance name for the *Juniperus communis*. [L, 63.]

ARKEUTIS (Lat.), n. A^{3}r-ku^2'ti^{3}s. See ARCEUTHOS.

ARKI, n. See ARSA.

ARKUS (Lat.), n. m. See ARCUS.

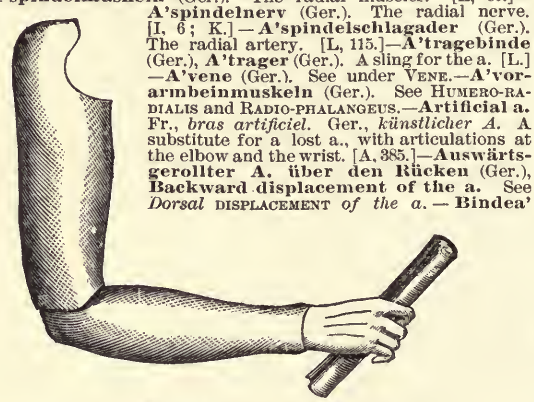
ARLADA, ARLADAR (Ar.), n's. Calcined realgar. [Paracelsus (L, 53).]

ARLANC (Fr.), **ARLANT** (Fr.), n's. A^{3}r-la^{3}n^2. A cold mineral spring in the department of Puy-de-Domes, France, containing sodium bicarbonate, calcium, and a small amount of iron. [L, 49.]

ARLEMASAIA (Pers.), n. The *Artemisia indica*. [L, 87.]

ARLEQUIN (Fr.), adj. A^{3}r-le^2-ka^{2}n^2. See HARLEQUIN.

ARLES-LES-BAINS (Fr.), **ARLES-SUR-TECH** (Fr.), n's. A^{2}rl-la-ba^{2}n^2, A^{3}rl-su^{6}r-te^{2}sh. See AMÉLIE-LES-BAINS.



ARLESBEERE (Ger.), n. A^{3}r'le^{2}s-bar-e^2. See ELSEBEERE.

ARLES CRUDUM (Lat.), n. n. A^{3}r''lez(le^{2}s) kru^2(kru)'du^{3}m-(du^{4}m). Drops (perhaps of dew) falling in June, extolled by Paracelsus as a remedy for ulcers. [L, 53.]

ARLSBEERE (Ger.), n. A^{3}rls'bar-e^2. See ELSEBEERE.

ARLU (Hind.), n. See ARALU.

ARM, n. A^{3}rm. A.-S., *arm*, *earm*. Gr., βραχίων. Lat., *brachium*. Fr., *bras*, *arme*. Ger., *Arm*. It., *braccio*. Sp., *brazo*. 1. In mechanics, that part of a lever which extends in either direction from the point that coincides with the centre of motion; also any arm-like part of an implement (*e. g.*, the blade of an obstetric forceps). [B.] 2. In zoology, the ray of a radiate animal, also a prehensile appendage; in the *Brachiopoda*, a process provided with dense ciliated cirri or tentacles and capable of reaching beyond the edge of the gaping shell—corresponding to the lophophore of the *Polyzoa* and supposed to subserve respiration; in the *Cephalopoda*, a long muscular process, generally provided with rows of suckers, really formed by an extension of the part corresponding to the foot in the other *Mollusca*. [A, 359; L, 204, 206.] 3. In man and the higher animals, the upper, or anterior, limb, from the shoulder to the wrist; more strictly, that portion of it which is included between the shoulder and the elbow. [C.] 4. An instrument that serves to reach to a deep-seated part, as for the removal of foreign bodies, tumors, etc. [A, 385.]—**Ablösung des A'es** (Ger.). See LIBERATION *of the a's* and BRACHIOTOMY.—**A'ader** (Ger.). The brachial vein or artery. [L, 46.]—**A'arterie** (Ger.). The brachial artery. [L.]—**A'bäder** (Ger.). Bathings or immersions of the a. in water, oil, etc. [L, 30.]—**A'band** (Ger.). 1. See ARMILLA. 2. A bracelet, worn as a charm against disease. [L, 80.]—**A'band des fünften Gehirnnerves** (Ger.). See *Gasserian* GANGLION.—**A'bein** (Ger.). See OS *brachii*.—**A'bein-Ellbogenmuskeln** (Ger.). See HUMERO-OLECRANIUS *externus*, *internus*, and *minor*, and ANCONÆUS.—**A'beinkopf.** The head of the os brachii. [A, 317.]—**A'beinröhre** (Ger.). See FOCILE.—**A'beuge** (Ger.), **A'beugung** (Ger.). See FLEXURA *cubitalis*.—**A'binde** (Ger.). A bandage or sling for the a. [A, 315.]—**A'blutader** (Ger.). See *A'ader*.—**A'bogen** (Ger.). See *Axillary* ARCHES.—**A'bug** (Ger.). The bend of the elbow. [L, 80.]—**A. centre.** See under CENTRE.—**A'e der Vierhügel** (Ger.). The brachia of the corpora quadrigemina. [I, 4; K.]—**A. des Corpus trapezoides** (Ger.). See TRAPEZIUM.—**A'e der hinteren Zweihügel** (Ger.). The posterior brachia of the corpora quadrigemina. [I, 17; K.]—**A'e des Kleinhirns** (Ger.). The peduncles of the cerebellum. [I, 11; K.]—**A'e der unteren Zweihügel** (Ger.). The posterior brachia of the corpora quadrigemina. [Forel (I, K).]—**A'förmig** (Ger.). 1. Having the form of an a.; brachiate. 2. Decussating. [A, 315.]—**A'füsser** (Ger.), **A'füssler** (Ger.). See BRACHIOPODA.—**A'geburt** (Ger.). See *A.* PRESENTATION.—**A'geflecht** (Ger.). See *Brachial* PLEXUS.—**A'geschmeide** (Ger.). See *A'band* (2d def.).—**A'geschwulst** (Ger.). See BRACHIONCUS.—**A'griffelbeinmuskel** (Ger.). See EPITROCHLEO-METACARPEUS.—**A'grube** (Ger.). The axilla. [A, 315.]—**A'hakenbeinmuskeln** (Ger.). See EPITROCHLEO-SUPERCARPEUS and EPICONDYLO-SUPERCARPEUS.—**A'heber** (Ger.). The deltoid muscle. [L, 46.]—**A'höcker** (Ger.). The olecranon. [L, 46.]—**A'höhle** (Ger.). The axilla. [L, 46.]—**A.-hole.** The axilla. [L. 56.]—**A'ig** (Ger.). 1. Having a's; brachiate. 2. Decussating; brachiatus. [B, 198; L, 46.]—**A'kiemener** (Ger.). See PALLIOBRANCHIATA.—**A'kiemenmuscheln** (Ger.). See BRACHIONACEPHALA.—**A'knochen** (Ger.). See OS *brachii*.—**A'kraftmesser** (Ger.). See DYNAMOMETER.—**A'kronbeinmuskel** (Ger.). See EPITROCHLEO-PHALANGEUS.—**A'lade** (Ger.). A sling for the a. [A, 315.]—**A'lage** (Ger.). See *A.* PRESENTATION.—**A'lähmung** (Ger.). Paralysis of the a. [D, 18.]—**A'loch** (Ger.). The axilla. [L, 46.]—**A'los** (Ger.). Destitute of a's. [L, 46.]—**A'lösung** (Ger.). See LIBERATION *of the a's*.—**A'messer** (Ger.). See BRACHIOMETRUM.—**A'muskeln** (Ger.). The brachial muscles. [A, 315.]—**A'nerven** (Ger.). The brachial nerves. [L, 46.]—**A'nervengeflecht** (Ger.). The brachial plexus. [L, 46.]—**A'nervenlähmung** (Ger.). See *A'lähmung*.—**A. presentation.** See under PRESENTATION.—**A'pulsader** (Ger.). The brachial artery. [A, 315.]—**A'ring** (Ger.). See *A'band*.—**A'röhre** (Ger.). The os brachii. [L, 46.]—**A'schiebenbeinmuskel** (Ger.). See EXTENSOR *metacarpi magnus*.—**A'schiene** (Ger.). 1. The radius. 2. A splint for the a. [L, 43, 46.]—**A'schlagader** (Ger.). The brachial artery. [A, 315.]—**A'schlinge** (Ger.). A bandage or sling for the a. [A, 315.]—**A'släuge** (Ger.). See BRACHIUM.—**A'speichenmuskel** (Ger.). See SUPINATOR *longus*.—**A'spindel.** The radius. [A, 315.]—**A'spindelmuskeln** (Ger.). The radial muscles. [L, 80.]—**A'spindelnerv** (Ger.). The radial nerve. [I, 6; K.]—**A'spindelschlagader** (Ger.). The radial artery. [L, 115.]—**A'tragebinde** (Ger.), **A'trager** (Ger.). A sling for the a. [L.]—**A'vene** (Ger.). See under VENE.—**A'vorarmbeinmuskeln** (Ger.). See HUMERO-RADIALIS and RADIO-PHALANGEUS.—**Artificial a.** Fr., *bras artificiel*. Ger., *künstlicher A.* A substitute for a lost a., with articulations at the elbow and the wrist. [A, 385.]—**Auswärtsgerollter A. über den Rücken** (Ger.), **Backward displacement of the a.** See *Dorsal* DISPLACEMENT *of the a.*—**Bindea'**

MARKS'S ARTIFICIAL ARM.

(Ger.). See BRACHIUM *conjunctivum*.—**Dorsal displacement of the a.** See under DISPLACEMENT.—**Einwärtsgerollter A. über den Rücken** (Ger.). See *Dorsal* DISPLACEMENT *of the a.*—**Hervorholen der A'e** (Ger.). See LIBERATION *of the a's*.—**Hinterer A.** (Ger.). See *Posterior* BRACHIUM.—**Junod's a.** A device for application to the a. for purposes of derivation, on the principle of Junod's boot (*q. v.*). [E.]—**Lawn-tennis a.** A sprain of the pronator radii teres muscle from playing lawn tennis. [Morris, "Lancet," July 29, 1882, p. 133.]—**Liberation of the a's, Lösen der Arme** (Ger.). See under LIBERATION.—**Obera'** (Ger.). See BRACHIUM.—**Seitena'** (Ger.). See *Anterior* and *Posterior* BRACHIUM.—**Untera'** (Ger.). See *Inferior* BRACHIUM.—**Vordera'** (Ger.). The forearm. [L.]—**Vorderen A'e der Vierhügel** (Ger.). The anterior brachia of the corpora quadrigemina. [I, 16; K.]—**Vorderer A.** (Ger.). See *Anterior* BRACHIUM.—**Zangenförmiger A.** (Ger.). The forceps of the corpus callosum. [I, 6; K.] See under FORCEPS.

ARM (Ger.), adj. A^{3}rm. Poor.—**A'blätterig.** Having few leaves; paucifolius. [B, 198.]—**A'blüthig.** Having few flowers; pauciflorus. [B, 198.]—**A'kernig.** Oligopyrenus. [B, 198.]—**A'samig.** Having few seeds. [B, 198.]—**A'strahlig.** Pauciradiatus. [B, 198.]—**A'striemig.** Paucivittatus. [B, 198.]

ARMA (Lat.), n. n. pl. A^{3}r'ma^3. Gen., *armo'rum*, *ar'mum*. From ἄρειν (a radical form of ἀραρίσκειν), to join, to fit together, to furnish with. Those appendages of an organism which serve a special purpose, especially organs of defense.—**A. ventris.** The male genitals.

ARMADILLIDIUM (Lat.), n. n. A^{3}r-ma^3-di^{2}l-li^{2}d'i^2-u^{3}m(u^{4}m). Fr., *armadillidie*. Ger., *Rollassel*. A genus of crustaceous animals of the order *Isopoda*, family *Oniscidæ*, established by Brandt. It differs from the related genus *Armadillo* in the presence of a semilunar process upon the anterior surface of the head, and in other characters. [B, 180.]—**A. commutatum** [Brandt]. Ger., *verwechselte Rollassel*. Syn.: *Armadillo officinarum* [Duméril], *Oniscus variegatus* [Vill.]. A species living in Asia Minor and Syria and formerly introduced into commerce with the *Armadillo* (*q. v.*) as *millepedes*. [B, 180.]—**A. depressum** [Brandt]. Ger., *niedergedrückte Rollassel*. A species resembling *A. commutatum* in habitat, general structure, and medicinal applications. [B, 180.]

ARMADILLIEN (Fr.), adj. A^{3}r-ma^3-di^{2}l-li^2-a^{3}n^2. Resembling an armadillo; as a n., in the pl., *a's*, a division of Milne-Edwards's tribe *Clopotes terrestres*, characterized by the hinder false feet being visible from above between the last two segments of the body, beyond which they are not prolonged. [L, 41, 208.]

ARMADILLO (Lat.), n. m. A^{3}r-ma^3-di^{2}l'lo. Of Brandt, a genus of crustaceous animals belonging to the order *Isopoda*, family *Oniscidæ*. [B, 180.]—**A. officinalis, A. officinarum.** Fr., *arma-*

dille des boutiques, cloporte préparé. Ger., *Kugelassel, Rollassel.* Syn.: *Oniscus asellus* [Linnæus] (1st def.). 1. Of Brandt, a species indigenous to Egypt and northern Asia, having a flat dark-green body from 1 to 2 ctm. long, which it is capable of rolling up into the form of a ball. It secretes an acrid juice which is irritant and diuretic and has been thought to be poisonous. It was formerly official in several European pharmacopœias, and was used, dried and powdered, in infusion, or in the form of the expressed juice, as a diuretic, anticteric, and aperitive. [A, 319; L, 43.] 2. Of Duméril, the *Armadillidium commutatum.* [B, 180.]—**A. vulgaris.** See *A. officinarum.*—**Voltaic a.** The trade name of an arrangement of metallic plates fastened to a strap, band, or other like device, to be worn on the person for its electrical effect.

ARMAGNAC (Fr.), n. A^{3}r-ma^{3}n-ya^{3}k. A variety of French brandy, esteemed next to cognac. [A, 308; L, 40.]

ARMAJOLO (It.). n. A^{3}r-ma^{3}-yo′lo. A place in Tuscany, where there are hot sulphurous springs. [L, 49.]

ARMALA (Lat.), n. f. A^{3}r′ma^{3}-la^{3}. Gr., ἅρμαλα. A Syrian name for the wild rue. [Dioscorides (A, 311).]

ARMALGAL, ARMALGOL, n's. Old names for coral. [L, 84.]

ARMAMENTARIUM (Lat.), n. n. A^{3}r-ma^{3}-me^{2}nt-a(a^{3})′ri^{2}-u^{3}m(u^{4}m). Gr., ὅπλισμα. Fr., *armement.* Ger., *Instrumentensammlung.* It., *armamentario.* Lit., an arsenal or armory; a collection of instruments or appliances. [D.]—**A. chirurgicum.** A collection of surgical instruments. [D, 130.]—**A. Lucinæ.** A collection of obstetrical appliances; also the title of a book on obstetrics, by Kilian.—**A. portabile.** A portable case of instruments. [D, 90.]

ARMARINTE (Fr.), n. A^{3}r-ma^{3}-ra^{2}nt. See CACHRYS.

ARMARIUM (Lat.), n. n. A^{3}r-ma(ma^{3})′ri^{2}-u^{3}m(u^{4}m). See ARMAMENTARIUM.

ARMARIUS (Lat.), adj. A^{3}r-ma(ma^{3})′ri^{2}-u^{3}s(u^{4}s). Pertaining to weapons.—**Unguentum armarium.** See HOPLOCHRISMA.

ARMATIUM (Lat.), n. n. A^{3}r-ma(ma^{3})′shi^{2}(ti^{2})-u^{3}m(u^{4}m). An old eye-water made with æs usta, ammoniac, etc. [L, 119.]

ARMATURA (Lat.), n. f. A^{3}r-ma^{3}-tu^{2}(tu)′ra^{3}. See ARMATURE.—**A. conceptus.** An old name for the amnion. [A, 325.]

ARMATURE, n. A^{3}r′ma^{3}-tu^{2}r. Lat., *armatura.* Fr., *armature.* Ger., *Armatur, Anker* (3d def.), *Bewaffnung.* It., *armatura.* Sp., *armadura.* 1. Any defensive equipment of a plant or an animal. [B.] 2. A condenser, especially the sheets of tin-foil with which the interior and exterior of a Leyden jar are coated. [L, 41.] 3. The keeper of a magnet; a piece of soft iron placed in contact with the poles of a magnet, to prevent the dissipation of its magnetic force. [B.]—**A. gastrique** (Fr.). See ARMURE *gastrique.*—**A. métallique** (Fr.). The pieces of metal used in metallo-therapy. [L, 41.]—**A. stomacale** (Fr.). See ARMURE *gastrique.*—**Gastric a.** An a. guarding the stomach or its analogue, as in the *Isopoda.* [B, 100.]—**Genital a.** An a. guarding the genital orifice, as in the cockroach. [B, 100.]

ARMATUS (Lat.), adj. A^{3}r-ma(ma^{3})′tu^{3}s(tu^{4}s). From *armare,* to arm. See ARMED.—**Armata manus.** See MANUS *armata.*

ARME (Lat.), n. f. A^{3}r′me(ma). Gr., ἁρμή (from ἄρειν [a radical form of ἀραρίσκειν]). 1. Any adaptation or joining of parts together, especially by the form of articulation termed suture. [A, 325; D, 100; L, 94.] 2. The approximation and adjustment of the lips of a wound. [D, 100.]

ARME (Fr.), n. A^{3}rm. See ARM (4th def.) and ARMATURE.

ARMED, adj. A^{3}rmd. Lat., *armatus.* Fr., *armé, garni* (2d def.). Ger., *armirt, bewaffnet* (1st def.). It., *armato.* Sp., *armado.* 1. Provided with means of defense (said of animals and plants). [B.] 2. Provided with an armature (said of magnets). [L, 42.] 3. Furnished with an accessory part suitable for some special purpose (said of instruments). [D, 142.]

ARNEL, n. An Oriental name for the *Peganum harmala.* [L, 105.]

ARMENA (Lat.), n. n. pl. A^{3}r′me^{2}n-a^{3}. Gr., ἅρμενα. See ARMAMENTARIUM.

ARMENIACA (Lat.), n., f. of adj. *armeniacus* (*arbor* understood), because held to be originally derived from Armenia. A^{3}r-me^{2}n-i(e)′a^{3}-ka^{3}. The apricot (*Prunus a.*); also a genus of amygdaleous trees, including the apricot, separated from the genus *Prunus.* [B, 19.]—**A. atropurpurea** [Lois.]. See PRUNUS *dasycarpa.*—**A. brigantiaca** [Persoon]. See PRUNUS *brigantiaca.*—**A. dasycarpa** [Persoon]. See PRUNUS *dasycarpa.*—**A. epirotica, A. malus, A. vulgaris** [Lamarck]. See PRUNUS *armeniaca.*—**Gummi armeniacæ.** The gum exuding from the stems of the apricot-tree (*Prunus a.*), used for the same purposes as cherry-tree gum. [B, 180.] See *Gummi* CERASORUM (under CERASUS).

ARMENIACUM (Lat.), n. n. A^{3}r-me^{2}n-i(e)′a^{3}-ku^{3}m(ku^{4}m). An old name for gum ammoniacum. [B.]

ARMENIACUS (Lat.), adj. A^{3}r-me^{2}n-i(e)′a^{3}-ku^{3}s(ku^{4}s). Gr., ἀρμενιακός. 1. Of or pertaining to Armenia. See ARMENIACA, ARMENIACUM, GUMMI *armeniacum,* and PRUNUS *armeniaca.* 2. Having the color of an apricot. [B, 19.]

ARMENITE, n. Ar^{3}′me^{2}n-it. Lat., *lapis armenius.* Fr., *arménite.* Ger., *armenischer Stein, Bergblau.* Native copper carbonate, formerly used as a purgative. [A, 322, 385.]

ARMENIUM (Lat.), n., n. of adj. *armenius* (*pigmentum* understood). A^{3}r-me(ma)′ni^{2}-u^{3}m(u^{4}m). See ARMENITE.

ARMENIUS (Lat.), adj. A^{3}r-me(ma)′ni^{2}-u^{3}s(u^{4}s). Armenian.—**Lapis a.** See ARMENITE.

ARMENTIA (Sp.), n. A^{3}r-me^{2}n′te-a^{3}. A place in Spain, where there is a chalybeate spring. [A, 385.]

ARMENTUM ALBUM (Lat.), n. n. A^{3}r-me^{2}nt′u^{3}m(u^{4}m). White lead; basic lead carbonate. [B, 196.]

ARMERIA (Lat.), n. f. A^{3}r-me(ma)′ri^{2}-a^{3}. Ger., *Grasnelke* (2d def.). 1. An ancient name for the *Lychnis flos cuculi.* [L, 105.] 2. A genus of plumbaginaceous plants separated by Willdenow from the genus *Statice,* including species with flowers having a tubular-infundibuliform calyx and a 5-parted corolla, borne in compact heads surrounded by bracts the outer of which are prolonged upon the scape in the form of a sheath. [B, 19, 180.]—**A. elongata** [Hoffmann]. See *A. vulgaris.*—**A. latifolia** [Willdenow]. Broad-leaved sweet-william. A species with very broad leaves and rose-red flowers, indigenous to southern Europe and cultivated in the United States. [B, 34.]—**A. maritima** [Willdenow]. The *A. vulgaris,* var. *maritima.* [B, 180.]—**A. purpurea** [Koch]. The *A. vulgaris,* var. *purpurea.* [B.]—**A. rubra latifolia.** See *A. latifolia.*—**A. scorzonerifolia** [Link]. See *A. latifolia.*—**A. vulgaris** [Willdenow]. Ger., *gemeine Grasnelke.* Syn.: *Statice a.* [Linnæus]. Sea-pink, thrift. A species growing in sandy regions throughout Great Britain and Continental Europe, distinguished by its linear, acute, ciliate, downy leaves, and ovate bracts, the exterior terminating in a bristle-shaped extremity. Three varieties are distinguished: 1. The *A. vulgaris,* var. *elongata,* the *Statice elongata* of Hoffmann, the most common variety. 2. A purple-flowered variety, *A. vulgaris,* var. *purpurea.* 3. *A. vulgaris,* var. *maritima,* the *A. maritima* of Willdenow and the *Statice pubescens* of Hayne, a maritime variety characterized by its obtuse leaves, short scapes covered with fine hairs, truncate bracts, and hairy calyx. The leaves (*folia statices*) have a mild astringent action and were formerly used in diarrhœa, in menorrhagia, and in the preparation of gargles for oral affections; and the flowers (*flores armeriæ*) were used as a styptic. [B, 180; L, 57.]—**Flores armeriæ.** The flowers of *A. vulgaris.* [L, 57.]

ARMERIACEÆ [Dumortier], **ARMERIEÆ** [Reichenbach] (Lat.), n's f. pl. A^{3}r-me^{2}r-i^{2}-a(a^{3})′se^{2}(ke^{2})-e(a^{3}-e^{2}), -i(e)′e^{2}-e(a^{3}-e^{2}). Subdivisions of the *Thalamisertia* or *Plumbagineæ,* including *Armeria,* or *Statice.* [B, 170.]

ARMERIASTRUM (Lat.), n. n. A^{3}r-me^{2}r-i^{2}-a^{2}st(a^{3}st)′ru^{3}m(ru^{4}m). See ACANTHOLIMON.

ARMERIUS (Lat.), n. m. A^{3}r-me(ma)′ri^{2}-u^{3}s(u^{4}s). See ARMERIA.

ARMETSWEIDE (Ger.), n. A^{3}r′me^{2}ts-vi-de^{2}. The *Salix viminalis.* [B, 180.]

ARMIAGRION (Lat.), n. n. A^{3}r-mi^{2}-a^{2}g(a^{3}g)′ri^{2}-o^{2}n. An old name for the *Arum dracunculus.* [Dioscorides (L, 105).]

ARMICEPS (Lat.), adj. A^{3}r′mi^{2}-se^{2}ps(ke^{2}ps). From *arma,* defenses, and *caput,* the head. Fr., *armiceps.* Having bony or calcareous defenses for the head; in the neut. pl., as a n., *Armicipita,* a tribe of the *Clupeidæ* (herrings) so provided. [Latreille (L, 208).]

ARMIFER (Lat.). adj. A^{3}r′mi^{2}-fu^{5}r(fe^{2}r). From *arma,* defenses, and *ferre,* to bear. See ARMIGER.

ARMIGENUS (Lat.), adj. A^{3}r-mi^{2}j(mi^{2}g)′e^{2}n-u^{3}s(u^{4}s). From *arma,* defenses, and *gena,* the cheek. Fr., *armigène.* Sp., *armijeno.* Having the cheeks shielded (said of fishes—the *Armigenæ*). [L, 208.]

ARMIGER (Lat.), adj. A^{3}r′mi^{2}-ju^{5}r(ge^{2}r). From *arma,* defenses, and *gerere,* to bear. Fr., *armigère.* Ger., *waffentragend.* Sp., *armijero.* See ARMED (1st def.).

ARMILLA (Lat.), n. f. A^{3}r-mi^{2}l′la^{3}. Fr., *armille.* Ger., *Armille, Armband.* Lit., a bracelet or ring; in ornithology, the colored circle of the distal naked end of the tibia; in mycology, the same as annulus superus. [B, 54; L, 108.]—**A. manus membranosa.** The annular ligament of the wrist. [P. Barbette (L, 53).]—**A. nervi trigemini.** Ger., *Armille des fünften Gehirnnerves.* The Gasserian ganglion. [L, 31.]

ARMILLARIA (Lat.), n. f. A^{3}r-mi^{2}l-la(la^{3})′ri^{2}-a^{3}. A subgenus of hymenomycetous *Fungi* belonging to the genus *Agaricus* (*q. v.*). [B, 69, 74.]

ARMILLARIS (Lat.), adj. A^{3}r-mi^{2}l-la(la^{3})′ri^{2}s. Fr., *armillaire.* Ger., *armbandig.* In botany, having the leaves arranged in circles around the stalk. [L, 41.]

ARMILLATE, adj. A^{3}r′mi^{2}l-lat. Lat., *armillatus.* Fr., *armillé.* Sp., *armilado.* 1. In botany, having an armilla, or velum. The Lat., *armillatus,* is used as a species-name. [B, 74.] 2. In zoology, having bracelet-like rings of a different color from that of the rest of the body. [L, 41, 109.]

ARMINIUSQUELLE (Ger.), n. A^{3}r-mi^{2}n′i^{2}-u^{4}s-kwe^{2}l″le^{2}. The most important of the mineral springs at Lippspringe, near Paderborn, in Westphalia, having a temperature of 20·2° C. (= 68·3° F.). One thousand parts of the water contain:

Calcium sulphate	0·824	Magnesium carbonate	0·034
Sodium sulphate	0·846	Magnesium bicarbonate	0·051
Calcium carbonate	0·416	Ferrous carbonate	0·019
Calcium bicarbonate	0·602	Sodium chloride	0·033

The gas escaping from the spring consists of

Carbonic acid. 149·0 | Nitrogen ..... 824·4 | Oxygen ...... 26·6

The waters are drank and used as baths and their vapor is inhaled, chiefly for pulmonary affections. [A, 319.]

ARMIPES (Lat.), adj. A^{3}r′mi^{2}-pez(pe^{2}s). From *arma,* defenses, and *pes,* the foot. Fr., *armipède.* Sp., *armípedo.* Having the feet provided with claws or spines. [L, 41, 116.]

ARMLEUCHTER (Ger.), n. A^{3}rm′loich^{2}-te^{2}r. The plant water-horsetail. [A, 315.] See CHARA.—**A′gewächse.** See CHARACEÆ.—**Gemeiner A.** See CHARA *vulgaris.*

ARMOISE (Fr.), n. A^{3}rm-wa^{3}z. 1. The genus *Artemisia.* 2. The *Artemisia vulgaris.* [Fr. Cod. (B).]—**A. absinthe, A. amère.**

See ARTEMISIA *absinthium.*—**A. à moxas.** See ARTEMISIA *moxa.*—**A. aurone.** See ARTEMISIA *abrotanum.*—**A. bâtarde.** A name given to several composite plants, especially the *Parthenium hysterophorum.* [B, 121.]—**A. blanche.** See CINERARIA *maritima.*—**A. commune.** See ARTEMISIA *vulgaris.*—**A. de Judée.** See ARTEMISIA *judaica.*—**A. de montagne.** See *A. bâtarde.*—**A. des champs.** See ARTEMISIA *campestris.*—**A. en épis.** See ARTEMISIA *spicata.*—**A. estragon.** See ARTEMISIA *dracunculus.*—**A. pontique.** See ARTEMISIA *pontica.*—**A. vulgaire.** See ARTEMISIA *vulgaris.*—**Eau d'a.** See *Aqua* ARTEMISIÆ.—**Extrait d'a.** (feuille) [Fr. Cod.]. An extract made from the leaves of mugwort by exhausting with boiling water and evaporating to the consistence of a soft extract. [B, 113.]—**Grande a.** See ARTEMISIA *absinthium.*—**Huile essentielle d'a.** See *Oleum* ARTEMISIÆ *æthereum.*—**Hydrolat d'a.** See *Aqua* ARTEMISIÆ.—**Oléule d'a.** See *Oleum* ARTEMISIÆ *æthereum.*—**Petite a.** See ARTEMISIA *pontica.*—**Sirop d'a. composé, Sirop d'a. et de sabine.** See *Syrupus* ARTEMISIÆ *compositus.*—**Sirop d'infusion d'a.** See *Syrupus* ARTEMISIÆ.—**Tisane d'a.** [Fr. Cod.]. An infusion of 1 part of *Artemisia vulgaris* in 100 parts of boiling water. [B, 113.]

ARMOL (Fr.), n. A^{3}r-mol. See ATRIPLEX *hortensis.*

ARMONIA (Lat.), n. f. A^{3}r-mo'ni^2-a^3. See HARMONIA.

ARMONIACUM (Lat.), n. n. A^{3}r-mo-ni(ne)'a^3-ku^{3}m(ku^{4}m). See AMMONIACUM.

ARMOON, n. A name given in Languedoc to different species of *Atriplex* and *Potentilla.* [B, 121.]

ARMORACIA (Lat.), n. f. A^{3}r-mo^{2}r-a(a^3)'si^2(ki^2)-a^3. Anciently written also *armoracea* and *armoracium.* Gr., ἀρμορακία. Fr., *raifort, radix de cheval.* Ger., *Meerrettig.* It., *rafano.* Sp., *rabano, marvisco.* The horseradish. A genus of cruciferous herbs separated by Rupp from the genus *Cochlearia* of Linnæus, from which it is distinguished chiefly by the absence of a middle nerve upon the valves of the silicle. It is usually referred to *Cochlearia,* of which, according to De Candolle, it is a section. [A, 259, 304; B, 42, 180, 214.]—**Acetum armoraciæ.** Fr., *vinaigre de raifort.* An infusion of 3 parts of horseradish-root in 50 of vinegar. [Swediaur (A, 362).]—**Aqua armoraciæ** [Fr. Cod., 1837]. Fr., *hydrolat de raifort.* A preparation made by distilling 4 parts from a mixture

THE ARMORACIA RUSTICANA. [A, 327.]

of 2 parts of horseradish-root and 10 of water. [A, 362.]—**Armoraciæ radix** [Br. Ph.]. The root of *A. rusticana.* [A, 247.]—**A. americana** [Arnott]. Syn.: *Nasturtium lacustre* [Gray] (et *natans,* var. β. *americanum* [Gray]). An aquatic species indigenous to America, distinguished by its ovoid silicle scarcely longer than the style. [B, 34.]—**A. macrocarpa** [Baumgarten]. A Hungarian species closely resembling *A. rusticana,* but having a somewhat less biting rhizome. [B, 180.]—**A. rusticana** [Gärtner]. Fr., *raifort sauvage, moutarde des moines* (ou *des Capucines,* ou *des Allemands*), *cran, cochléaria de Bretagne.* Ger., *gemeiner Meerrettig, Kren.* It., *rafano rusticano* (o *selvaggio*). Sp., *rabano, marvisco.* Syn.: *Cochlearia a.* [Linnæus] (seu *rusticana* [Lamarck], *Raphanis magna* [Mönch]). Horseradish; a European herb, naturalized in the United States, having a smooth, angular, branching stalk 2 to 3 feet high; large oblong crenate radical leaves and long lanceolate cauline leaves, the lower frequently pinnatisect, the upper dentate or entire; small white flowers; and ellipsoid roundish silicle much longer than the style. The rhizome—*a.* [Br. Ph. (1864)], *armoraciæ radix* [Br. Ph. (1867)], *radix armoraciæ, radix raphani rusticani* (seu *rustici,* seu *marini,* seu *silvestris*)—is large, white, and fleshy, of penetrating irritant odor and very acrid burning taste, and contains a very volatile, exceedingly irritant, corrosive, yellowish oil, believed to be identical with oil of mustard, *myronic acid,* and *myrosin,* with small quantities of resin, sugar, gum, starch, etc. It is used as a condiment, and medicinally as a remedy in scurvy, as a stomachic tonic, and, both externally and internally, in paretic conditions and chronic rheumatism. [B, 5, 34, 180.]—**A. sativa** [Heller]. Fr., *raifort cultivé, radis noir.* Cultivated horseradish. [A, 362.] See *A. rusticana.*—**Infusum armoraciæ.** Fr., *infusion* (ou *hydrolé*) *de raifort.* An old preparation made by infusing for 2 hours 31 parts each of horseradish-root and mustard in 473 of boiling water, straining, and adding 31 parts of spiritus cochleariæ compositus. [U. S. Ph., 1820, Batav. Ph., 1805, Dubl. Ph., 1826 (A, 362).]—**Mel armoraciæ.** Fr., *miel de raifort.* A mixture of 1 part of the juice of wild horseradish-root and 4 parts of honey. [Batav. Ph., 1805, Swed. Ph., 1817 (A, 362).]—**Radix armoraciæ.** Horseradish-root; the rhizome of *A. rusticana* (*q. v.*). [B, 180.]—**Radix armoraciæ rasa.** Scraped horseradish-root. [L, 57.]—**Spiritus armoraciæ compositus** [Br. Ph.]. Fr., *esprit de raifort composé, alcoolat antiscorbutique.* Compound spirit of horseradish; made by distilling a gallon from a mixture of 20 oz. (av.) each of horseradish-root and bitter-orange peel, ½ oz. of nutmeg, 1 gallon of proof spirit, and 2 pints (imp.) of water. [Br. Ph. (B).]—**Syrupus armoraciæ.** Fr., *sirop de raifort.* A syrup made by dissolving 2 parts of sugar in 1 part of the juice of horseradish-root. [Swed. Ph., 1817, Würt. Ph., 1798 (A, 362).]—**Syrupus armoraciæ compositus.** Fr., *sirop de raifort composé, sirop antiscorbutique.* Syn.: *syrupus antiscorbuticus.* A syrup made by macerating for 2 days a mixture of 1 lb. each of horseradish, scurvy-grass, watercress, *Menyanthes trifoliata,* and bitter oranges, ½ oz. of cinnamon, and 4 lb. of white wine, distilling 1 lb., adding 2 lb. of sugar, and mixing this syrup with another, clarified with white of egg, made by adding 2 lb. of sugar to the liquor expressed from the residue after the distillation. [Fr. Cod., 1837 (A, 362).] Somewhat different formulæ were given in several old pharmacopœias.—**Vinum armoraciæ.** Fr., *vin* (ou *œnolé*) *de raifort.* Wine of horseradish; made by infusing 18 parts of the root in 288 of white wine for 4 days, and filtering. [Swed. Ph., 1817 (A, 362).]—**Vinum armoraciæ compositum.** Fr., *vin de raifort composé, vin antiscorbutique.* Compound wine of horseradish; made by mixing 1 oz. of alcoolé de raifort composé [Fr. Cod., 1837] and 2 lb. of white wine. ["Form. pharm. à l'usage d. hôp. milit. de France," 1839 (A, 362).] Several other formulæ were given in a number of old formularies.

ARMORACIEÆ (Lat.), n. f. pl. A^{3}r-mo-ra^3-si(ke)'e^2-e(a^3-e^2). Of Reichenbach, a section of cruciferous plants belonging to the *Alysseæ,* comprising *Armoracia, Cochlearia,* and 2 other genera. [B, 170.]

ARMORARIA, ARMORATIA (Lat.), n's f. A^{3}r-mo-ra(ra^3)'ri^2-a^3, -shi^2(ti^2)-a^3. See ARMORACIA.

ARMOREIRA, n. A Persian name for the mulberry-tree (*Morus nigra*). [A, 259.]

ARMOSELLE (Fr.), n. A^{3}r-mo-se^{2}l. The genus *Seriphium.* [B, 121.]

ARMPIT, n. A^{3}rm'pi^{2}t. See AXILLA.

ARMUNGIA (It.), n. A^{3}r-mun'ji^2-a^3. A place in Sardinia, where there is a cold saline spring. [A, 385.]

ARMURE (Fr.), n. A^{3}rm-u^{6}r. See ARMA and ARMATURE.—**A. buccale.** The hard tissues or parts at the oral opening of the alimentary canal, including the teeth, etc., serving to protect the soft parts, to comminute the food, and to prevent its escape. [L, 158.]—**A. copulatrice.** Certain appendages of the penis in some animals, serving to protect it when flaccid or to retain it in the vagina during copulation. In many insects they consist of a circle of spines at the base of the organ. [L, 158.]—**A. des jambes.** See HIPPOCAMPUS *major.*—**A. gastrique.** The "gastric mill"; a collection of hard, bone-like papillæ found in the stomach in many of the lower animals, serving to triturate the food. [L, 158; Mocquard, "Ann. des sci. nat.," xvi, p. 1 (L).]—**A. génitale.** See *A. copulatrice.*—**A. pharyngienne.** Hard papillæ of the pharynx found in many insects, serving the same purpose as the *a. gastrique.* [L, 158.]

ARMUS (Lat.), n. m. A^{3}r'mu^{3}s(mu^{4}s). Gr., ἀρμός (see ARMA). 1. The shoulder, the fore quarter, or the whole side of an animal. [A, 312.] 2. The upper arm. [L, 50.] 3. See HARMONIA.—**Armi summus.** See ACROMION.

ARMUTHEUS (Lat.), adj. A^{3}r-mu^2(mu)'the^2-u^{3}s(u^{4}s). See ARMENIUS.

ARN, n. A^{3}rn. Fr., *aune.* See ALNUS *glutinosa.*

ARNABO, n. 1. Zedoary. [L, 84.] 2. Lead. [Quincy (L, 116).]

ARNALDIA (Lat.), n. f. A^{3}rn-a^{2}l(a^{3}l)'di^2-a^3. Fr., *arnaldie.* A word of uncertain origin (perhaps a corruption of *analdia* (*q. v.*), used in the middle ages to designate a disease prevalent in England, described as malignant and chronic and characterized by falling out of the hair; or, simply baldness. [A, 325, 385; L, 50.]

ARNATTA, ARNATTO, n's. A^{3}rn-a^{3}t'ta^3, -to. See ANNOTTO.

ARNEBIA (Lat.), n. f. A^{3}r-ne(na)'bi^2-a^3. From Ar., *araînet, al-arnet.* Fr., *arnébie.* A species of boraginaceous plants established by Forskål, allied to *Lithospermum,* but distinguished by the bifid style and the frequently 4-lobed stigma. [B, 19.]—**A. perennis** [De Candolle]. A species growing in the mountains of Siberia, having a red root, which contains a coloring matter allied to alkanna and similarly employed. [B. 121, 214.]—**A. tinctoria** [Forskål]. A species growing in Egypt, Arabia, and Syria, the root of which is used like that of *A. perennis.* [B, 214.]—**A. tingens** [De Candolle]. A species growing in Asia Minor, having a red root used like that of *A. perennis.* [B, 121, 214.]

ARNEDILLO (Sp.), n. A^{3}r-na-del'yo. A place in Spain, where there are hot springs containing sodium chloride, the waters of which are used in the treatment of syphilis. [A, 385; L, 49.]

ARNICA (Lat.), n. f. A^{3}r'ni^2-ka^3. Supposed to be a corruption of *ptarmica* (from πταρμικός), a plant that causes sneezing. Fr., *arnica, arnique.* Ger., *Arnica, Arnika, Wohlverleih.* It., *arnica.* Sp., *árnica.* A genus of composite herbs, established by Linnæus, belonging to the tribe *Senecionidæ.* It is distinguished by its entire opposite leaves and by its yellow flowers borne on a flat receptacle, surrounded by a single or double row of equal lanceolate scaly bracts. The florets of the rays are ligulate and female only, those of the disc are tubular and perfect; the corolla tube and the branched style are hairy. The fruit is ribbed, hairy, and sur-

mounted by a single-rowed, rigid, serrulate pappus. [B, 19, 34.]—**Alcoolature d'a.** [Fr. Cod.] (Fr.). A preparation made by macerating a. tops for 10 days in their own weight of alcohol, and filtering. [B.]—**A. angustifolia** [Vahl]. A species with lanceolate radical leaves growing in Lapland and about the Gulf of St. Lawrence. [B, 214.]—**A. Clusii** [All.], **A. doronicum** [Jacquin]. See DORONICUM *hirsutum*.—**A. de Suède** (Fr.). The *Inula dysenterica*, sometimes substituted for *A. montana*. [A, 301; L, 32.]—**Arnicæ flores** [U. S. Ph.], **A. flowers.** Fr., *fleurs d'a.* [Fr. Cod.]. Ger., *Arnikablüthen*. It., *fiori di arnica*. Sp., *flores de árnica*. The flower-heads of *A. montana*. [B.]—**Arnicæ radix** [U. S. Ph.; Br. Ph., 1867], **Arnicæ rhizoma** [Br. Ph., 1885]. See *A. root*.—**A. glacialis** [Wulf]. A variety of the DORONICUM *grandiflorum*. [B, 42, 214.]—**A. leaves.** Lat., *folia arnicæ*. Fr., *feuilles d'a.* [Fr. Cod.]. Ger., *Arnikablätter*. It., *foglie di arnica*. Sp., *hojas de árnica*. The leaves of *A. montana*. [B.]—**A. mollis** [Hooker]. A species growing in the White Mountains and Rocky Mountains of the United States, distinguished by the numerous sessile leaves upon its stem and the petiolate radical leaves and by the hairy achænia. [B, 34.]—**A. montana** [Linnæus]. Fr., *a.* (ou *arnique*, ou *bétoine*, ou *tabac*) *des montagnes*, *bétoine des Savoyards*, *plantain des Alpes* (ou *des Vosges*), *quinquina des pauvres* [Stahl], *panacée des chutes*, *herbe aux prêcheurs*, *tabac des Vosges* (ou *des Savoyards*), *doronic d'Allemagne*. Ger., *Bergwohlverleih*, *Fallkraut*, *Stichkraut*, *Engelkraut*, *Laugenkraut*, *Mönchswurz*, *Mutterwurz*, *Luzianskraut*. Sp., *árnica de las montañas*. Mountain a., ordinary a., leopard's-bane, panacea lapsorum, accident-plant [Stillé and Maisch]; indigenous to Siberia and northern Europe. A perennial herb with striated hairy stem, about a foot in height, bearing a couple of pairs of opposite lanceolate bright-green leaves and a few heads of orange-yellow flowers, about 14 lines in breadth. The radical leaves are bright-green, oblong-obovate and almost entire. The rhizome is 2 inches long, about 2 lines in breadth, brown and scarred externally, white within, with a layer of resin-cells underlying the thickish bark. All parts of the plant have a feeble aromatic odor and a pungent, bitter, acrid taste, and contain an alkaloid *arnicine* [Bastick], a bitter substance *arnicin* [Walz], *inulin*, isobutyric and other organic acids, and a volatile oil, of sp. gr. 0·999, consisting principally of *dimethylthymohydroquinone*. The flowers are official in the U. S. Ph., the Ger. Ph., and the Fr. Cod.; the root or rhizome is official in the U. S. Ph., the Br. Ph., and the Fr. Cod.; and the leaves are official in the Fr. Cod. The plant is considered a cerebro-spinal stimulant and an irritant to the intestinal tract. As a domestic remedy, a tincture of the flowers is extensively used as an application to bruises and other injuries; thus used, it sometimes gives rise to severe cutaneous irritation, said to be due to the fact that some specimens of the flowers are infested with an animal parasite of an irritating nature (*Musca arnicæ*). [A, 304, 362; B; L; *a*, 12.]—**A. nudicaulis** [Elliot]. A species growing in the southern United States, distinguished by its sessile leaves, those of the stem being small and few, and by its glabrous achænia. [B, 34.]—**A. opodeldoc.** A liniment made by heating together 4 parts of white soap, 10 of rectified spirit, 5 of tincture of a., and 1 part of camphor, and straining. [Squire (L, 63).]—**A. planensis.** See *A. montana*.—**A. plaster.** See *Emplastrum arnicæ*.—**A. root.** Lat., *arnicæ radix* [U. S. Ph.; Br. Ph., 1867]. Fr., *rhizome d'a.* [Fr. Cod.]. Ger., *Arnikawurzel*. It., *radice di a.* Sp., *raíz de árnica*. The rhizome of *A. montana*. [B.]—**A. scorploides** [Linnæus]. See DORONICUM *grandiflorum*.—**A. spuria.** See PULICARIA *dysenterica*.—**A. styriaca** [Vill.]. See DORONICUM *hirsutum*.—**A. suedensis.** See PULICARIA *dysenterica*.—**A'tinctur** [Ger. Ph.] (Ger.). See *Tinctura arnicæ*.—**Emplastrum arnicæ** [U. S. Ph.]. Fr., *emplâtre d'arnique*. Ger., *Arnikapflaster*. A plaster made by mixing 1 part of extract of a. root with 2 parts of resin plaster, over a water-bath. [B.]—**Essentia arnicæ.** See *Tinctura arnicæ*.—**Extract of a. root.** See *Extractum arnicæ radicis*.—**Extractum arnicæ alcoholicum.** Fr., *extrait alcoolique d'a.* An extract of a. flowers, official in several old pharmacopœias, different proportions of the ingredients being used. The Würzb. Ph. of 1796 directed 1 part of the flowers, 8 parts of water, and 1 part of alcohol to be digested at a gentle heat for 3 days, the expressed liquor then to be freed from the alcohol by distillation, and the residue evaporated. [L, 85.]—**Extractum arnicæ aquosum.** Fr., *extrait aqueux d'a.* An aqueous solid extract of a. flowers, official in several old pharmacopœias, made with cold or boiling water, by infusion or decoction, followed by clarification, expression or straining, and evaporation. [L, 85.]—**Extractum arnicæ radicis** [U. S. Ph.]. Fr., *extrait de racine d'arnique*. Ger., *Arnikaextract*. Extract of a. root; made by exhausting the root of *A. montana* with dilute alcohol, evaporating the liquid to the pilular consistence, and adding 5 per cent. of glycerin. [B.]—**Extractum arnicæ radicis fluidum** [U. S. Ph.]. Fluid extract of a. root; made by exhausting 100 parts (by weight) of powdered a. root with dilute alcohol, reserving the first 90 parts (by volume) of the percolate, evaporating the rest to the consistence of a soft extract, mixing this with the reserved portion, and adding enough dilute alcohol to bring the whole up to 100 parts by volume. [B.]—**Extrait alcoolique d'a.** (Fr.). See *Extractum arnicæ alcoholicum*.—**Extrait aqueux d'a.** (Fr.). See *Extractum arnicæ aquosum*.—**Feuilles d'a.** (Fr.). The leaves of *A. montana*. [B.]—**Fleurs d'a.** (Fr.), **Flores arnicæ** [Ger. Ph.]. See *Arnicæ flores*.—**Flores arnicæ cum pappis.** The entire flower-heads of *A. montana* with the involucre. [B, 180.]—**Flores arnicæ montanæ, Flores arnicæ pauensis.** The flowers of *A. montana*. [B, 180.]—**Flores arnicæ sine pappis.** The single florets of *A. montana*. [B, 180.]—**Fluid extract of a. root.** See *Extractum arnicæ radicis fluidum*.—**Folia arnicæ, Folia arnicæ montanæ, Folia arnicæ pauensis.** The leaves of *A. montana*. [B, 180.]—**Herba arnicæ spuriæ, Herba arnicæ suedensis.** The herb of *Pulicaria dysenterica*. [B, 180.]—**Hydrolé de fleurs d'a.** (Fr.). See *Infusum arnicæ florum*.—**Infusum arnicæ florum.** Fr., *infusion* (ou *hydrolé*) *de fleurs d'a.* An aqueous infusion of a. flowers in boiling water, official in a number of old pharmacopœias, different proportions being used. [L, 85.]—**Mountain a.** See *A. montana*.—**Oil of a.** There are two volatile oils contained in *A. montana*, one in the root, the other in the flower, both of a slightly acid reaction. [B, 2.]—**Racine d'a.** (Fr.), **Radix arnicæ planensis, Rhizome d'a.** [Fr. Cod.] (Fr.). See *Arnicæ radix*.—**Radix arnicæ, Radix arnicæ montanæ, Radix arnicæ pauensis.** The rhizome of *A. montana*. [B, 180.]—**Radix arnicæ spuriæ, Radix arnicæ suedensis.** The root of *Pulicaria dysenterica*. [B, 180.]—**Teinture alcoolique d'a.** (Fr.). See *Tinctura arnicæ*.—**Teinture aromatique de fleurs d'a.** (Fr.). A tincture of the flowers of *A. montana* containing cinnamon and anise. [A, 301.]—**Teinture d'a.** [Fr. Cod.] (Fr.). See *Tinctura arnicæ florum*.—**Teinture éthérée d'a.** (Fr.). See *Tinctura arnicæ ætherea*.—**Tinctura arnicæ** [U. S. Ph., 1870, Br. Ph., Ger. Ph.]. Fr., *teinture alcoolique d'a.* Ger., *Arnikatinctur*. Tincture of a. That of the Br. Ph. is the same as the *tinctura arnicæ radicis*, and that of the U. S. Ph. of 1870 and the Ger. Ph. is the same as the *tinctura arnicæ florum*. [B.]—**Tinctura arnicæ ætherea.** Fr., *teinture éthérée d'a.* Ethereal tincture of a.; made by macerating 1 part of the flowers in 4 parts of sulphuric ether, and decanting. [Fr. Cod., 1837 (L, 85).]—**Tinctura arnicæ florum** [U. S. Ph.]. Fr., *teinture d'a.* [Fr. Cod.]. Ger., *Arnikatinctur* [Ger. Ph.], *Wohlverleihblumentinctur*. Syn.: *tinctura arnicæ* [Ger. Ph.]. A tincture made by macerating a. flowers in dilute alcohol and filtering. The U. S. and Fr. preparations represent 20 parts of the flowers in 100, and the Ger. preparation represents 10 parts in 100. [B.]—**Tinctura arnicæ plantæ totius.** Ger., *Arnikatinctur aus der ganzen Pflanze*. An old preparation made by infusing for 3 days 6 oz. of the entire plant of *A. montana* in 1 lb. of alcohol, expressing, and filtering. [L, 129.]—**Tinctura arnicæ radicis** [U. S. Ph.]. Syn.: *tinctura arnicæ* [Br. Ph.]. Tincture of a. root; made by macerating in dilute alcohol and filtering; 100 parts represent 10 of the root in the U. S. preparation, and about 6 in the Br. [B.]—**Tincture of a.** See *Tinctura arnicæ*.—**Tincture of a. flowers.** See *Tinctura arnicæ florum*.—**Tincture of a. root.** See *Tinctura arnicæ radicis*.—**Tisane d'a.** [Fr. Cod.] (Fr.). A.-tea; made by infusing 5 parts of a. in 1,000 of water.

ARNICA MONTANA. (AFTER B. FRANCK [A, 304].)

ARNICIN, n. A^{3}r'ni^2-si^{2}n. Fr., *arnicine*. Ger., *Arnicin*. 1. Of Walz, an amorphous yellow substance, $C_{20}H_{30}O_4$, or $C_{35}H_{54}O_7$, probably a glucoside, of an acrid taste, obtained by him from the leaves and flowers of *Arnica montana*. [B, 5.] 2. Of Pavesi, a dark-yellow, sticky resin of a disagreeable bitter taste. [A, 247.]

ARNICINE, n. A^{3}r'ni^2-sen. Fr., *arnicine*. Ger., *Arnicin*. An alkaloid extracted by Bastick from the flowers of *Arnica montana*. [B, 5.]

ARNIKA (Ger.), n. A^{3}r'ni^2-ka^3. See ARNICA.

ARNIQUE (Fr.), n. A^{3}r-nek. See ARNICA.

ARNOGLOSSUM (Lat.), n. n. A^{3}r-no-glo^{2}s'su^{3}m(su^{4}m). Gr., **ἀρνόγλωσσον** (from **ἀρνός**, a lamb, and **γλῶσσα**, the tongue). Fr., *arnoglosse*. Ger., *Wegebreit*. See PLANTAGO.

ARNOPHYLLUM (Lat.), n. n. A^{3}r-no-fi^{2}l(fu^{6}l)'lu^{3}m(lu^{4}m). From **ἀρνός**, a lamb, and **φύλλον**, a leaf. An old name for the *Cytisus alpinus* (from lambs being fond of its leaves). [A, 387.]

ARNOPOGON (Lat.), n. m. A^{3}r-no-po'go^{2}n. Gen., *arnopogo'nos* (*-nis*). From **ἀρνός**, a lamb, and **πώγων**, a beard. See UROSPERMUM.

ARNOT, n. A^{3}r'no^{2}t. The tuber of the *Bunium bulbocastanum*. [L, 56.] Cf. ARNOTTS.

ARNOTTO, n. A^{3}r-no^{2}t'to. See ANNOTTO.

ARNOTTS, n. pl. A^{3}r'no^{2}tz. Perhaps a corruption of *earth-nuts*. Certain farinaceous roots resembling chestnuts when roasted; apparently, the roots of a species of *Bunium*. [L, 97.]

ARNSHALLER WASSER (Ger.), n. A^{3}rns'ha^{3}l-le^{2}r va^{3}s'se^{2}r. See under ARNSTADT.

ARNSTADT (Ger.), n. A^{3}rn'sta^{3}t. A health resort in the Thuringian Forest, where the climate is very equable, and said to be beneficial in cases of impoverishment of the blood, debility, nervous affections. It has a salt spring (*die A'er Soole*), the water of which is added to baths in the proportion of 8 per cent.; 1,000 parts of the water contain 237·3 of solid constituents, including 224·0 of sodium chloride, 6·450 of calcium chloride, 5·110 of magnesium chloride, 0·001 of magnesium iodide, 0·054 of magnesium

bromide, and 1·700 of calcium sulphate. The mother-liquor is noted for its richness in iodine and bromine. Diluted with carbonic-acid water, both the water of the spring and the mother-liquor are taken internally under the names of *Salzquelle*, *Arnshaller Wasser*, and *Jodbitterwasser*. There is another salt spring, the *Riedquelle*, in the neighborhood, the water of which, clear or mixed with milk or whey, is given to children with scrofula, catarrh, etc. There are two large bathing establishments at A. [A, 319.]

ARNUT, n. A^{3}r'nu^{3}t. See ARNOT and ARNOTTS.

AROE (Teloogoo), n. See BAUHINIA *parviflora*.

ARŒIRA, n. See SCHINUS *areira*.

AROERYTHRIN, n. A^{2}r-o-e^{2}r'i^{2}th-ri^{2}n. West Indian archill. [L, 52.]

AROHOT, n. An alchemical name for mercury. [B, 50.]

AROIDÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-o-i(e)'de(da^{3}-e^{2}). Fr., *aroïdes*. Jussieu's name for the *Araceæ*. [B, 170.]

AROIDEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-o-i^{2}d'e^{2}-e(a^{3}-e^{2}). From ἄρον (see *Arum*), and εἶδος, an appearance. Fr., *aroïdées*, *aroïdes*. 1. Of many authors, the *Araceæ*. 2. Of others, a division, tribe, or section of the *Araceæ*, including *Arum* and one or two related genera. 3. Of Engler, a suborder of araceous plants, corresponding to the tribes *Stilochitoneæ*, *Zomiocarpeæ*, *Spathicarpeæ*, and *Arineæ* (except the genus *Pistia*), and in part to the *Pythonieæ*, *Colocasieæ*, and *Dieffenbachieæ*, of Bentham and Hooker's classification. It is divided by Engler into the tribes *Stylochitoneæ*, *Zomiocarpeæ*, *Ariopsideæ*, *Spathicarpeæ*, *Areæ*, *Ambrosinieæ*, and *Cryptocoryneæ*. 4. Of Schott, a class of plants comprising the orders *Cyclantheæ*, *Pandaneæ*, *Araceæ*, and *Acoroideæ*. 5. Of Brongniart, a class of plants comprising the families *Araceæ* and *Typhaceæ*. 6. Of Bartling, a class of plants comprising the orders *Callaceæ*, *Orontiaceæ*, *Pandaneæ*, and *Typhaceæ*. [B, 1, 170, 216.] —**A. diclines** [Schott]. The diclinous *Araceæ*. [B, 170.] See ARACEÆ.—**A. genuinæ** [Reichenbach.] A section of araceous plants of the *Dracunculineæ*, comprising *Arum*, *Biarum*, *Dracunculus*, *Sauromatum*, *Typhonium*, and two other genera. [B, 170.]—**A. monoclines** [Schott]. The monoclinous *Araceæ*. [B, 170.] See ARACEÆ.—**A. veræ.** 1. Of R. Brown, a division of the *A.* (*Araceæ*) including *Arum* and *Caladium*. 2. Of Kunth, a suborder of the *A.* (*Araceæ*) including the tribes *Lemnaceæ*, *Pistiaceæ*, *Cryptocoryneæ*, *Dracunculineæ*, *Caladieæ*, *Anaporeæ*, and *Calleæ* (*i. e.*, all the *Araceæ* except the *Orontiaceæ*). 3. Of Richard, a tribe of the *A.* (*Araceæ*), including the genera not comprised under the *Orontiaceæ* and *Pistiaceæ*. [B, 170.]

AROIDEOUS, adj. A^{2}r-o-i^{2}d'e^{2}-u^{3}s. Lat., *aroideus*. Fr., *aroïde*. Resembling the *Arum*. [L, 116.]

AROÏDES (Fr.), n. pl. A^{3}-ro-ed. See AROIDEÆ.

AROIDS, n. pl. A'roidz. See AROIDEÆ.

AROLE, n. An alpine name for the *Pinus australis*. [B, 121.]

AROMA (Lat.), n. n. A^{2}r(a^{3}r)-o'ma^{3}. Gen., *aro'matos* (*-tis*). Gr., ἄρωμα. Fr., *arome*. Ger., *Gewürz*, *Geruchstoff*. It., Sp., *aroma*. 1. A spice, or any medicine of an agreeable odor and taste, especially myrrh. [L, 53.] 2. As now generally used, the characteristic odor of a substance, especially one of an agreeable character; also the odoriferous constituent of the substance. [A, 385; L.]—**A. germanicum.** The genus *Inula*. [L, 97.]—**A. philosophorum.** See IRON *and ammonium chloride*.

AROMADENDRON (Lat.). n. n. A^{2}r(a^{3}r)-o''ma^{3}-de^{2}n'dro^{2}n. From ἄρωμα, a spice, and δένδρον, a tree. Of Blume, a genus of magnoliaceous plants, referred by Bentham and Hooker to *Talauma*. [B, 42.]—**A. elegans** [Blume]. A Java species, a decoction of the leaves of which is used by the natives for hysteria, also as a stomachic tonic. [B, 121; L, 105.]

AROMAMETRICUS (Lat.), adj. A^{2}r(a^{3}r)-o''ma^{3}-me^{2}t'ri^{2}k-u^{3}s(u^{4}s). See AROMATOMETRICUS.

AROMATE (Fr.), n. A^{3}-ro-ma^{3}t. An aromatic part of a plant, used as a perfume or as a condiment. [B, 121.]—**A. germanique,** The *Inula helenium*. [B, 93.]

AROMATIC, adj. A^{2}r-o-ma^{2}t'i^{2}k. Gr., ἀρωματικός. Lat., *aromaticus*. Fr., *aromatique*. Ger., *aromatisch*, *würzig*. It., *aromatico*. Sp., *aromático*. Possessed of an agreeable odor; in chemistry, derived from benzene. See *A.* ACIDS, *A.* ALCOHOLS, *A.* ALDEHYDES, and *A.* COMPOUNDS.

AROMATICITÉ (Fr.), n. A^{3}-ro-ma^{3}-ti^{2}s-i^{2}-ta. An aromatic quality. [L, 41.]

AROMATICUM (Lat.), n., n. of adj. *aromaticus*. A^{2}r(a^{3}r)-o-ma^{2}t(ma^{3}t)'i^{2}k-u^{3}m(u^{4}m). Fr., *aromate*. Ger., *Gewürz*. An aromatic substance or preparation.—**A. rosatum.** An old aromatic powder consisting largely of roses. [L, 97.]

AROMATIQUE (Fr.), adj. A^{3}-ro-ma^{3}-tek. Aromatic; as a n., an aromatic substance or preparation.—**A's amers.** Substances containing both an aromatic and a bitter principle. [Fonssagrives (L, 87).]—**A's camphrés.** The camphors, natural and artificial. [Fonssagrives (L, 87).]—**A's éléopténiques.** Substances of which the aromatic principle is an essential oil. [Fonssagrives (L, 87).]—**A's cinnamiques.** See *A's résineux*.—**A's musqués.** A group of substances including musk, castor, amber, *Adoxa moschatellina*, *Malva moschata*, *Hibiscus abelmoschus*, and *Chenopodium ambrosioides*. [Fonssagrives (L, 87).]—**A's pyrogénés.** Substances produced by the action of heat or dry distillation, such as creasote, the tars, and the empyreumatic oils. [Fonssagrives (L, 87).]—**A's résineux.** Benzoin, myrrh, various solid resins obtained by the distillation of balsams, etc. [Fonssagrives (L, 87).]

AROMATISATUS (Lat.), adj. A^{2}r(a^{3}r)-o-ma^{2}t(ma^{3}t)-i^{2}-za(sa^{3})'-tu^{3}s(tu^{4}s). Fr., *aromatisé*. Ger., *aromatisirt*. Aromatized, rendered aromatic.

AROMATITES (Lat.), adj. A^{2}r(a^{3}r)-o-ma^{3}-ti(te)'tez(te^{2}s). Gr., ἀρωματίτης. Aromatic; as a n. (*vinum* [= οἶνος] understood; Ger., *Würzwein*, *Glühwein*), an ancient aromatic or spiced wine; also, according to Pliny (*saxum* [= λίθος] understood), a bituminous gem found in Arabia and Egypt, resembling myrrh in color and odor, in the fem., *aromatitis* (*potio* [= πόσις] understood; Ger., *Würztrank. aromatischer Thee*), an aromatic tea. [Dioscorides (A, 311); A, 322; Gorræus (A, 325).]

AROMATIZE, v. tr. A^{2}r-o'ma^{2}t-iz. Gr., ἀρωματίζειν. Lat., *aromatisare*. Fr., *aromatiser*. Ger., *aromatisiren*. To spice, to render aromatic.

AROMATIZED, adj. A^{2}r-o'ma^{2}t-izd. Lat., *aromatisatus*. Fr., *aromatisé*. Ger., *aromatisirt*. Rendered aromatic.—**A. fatty acids.** See *Aromatic* ACIDS.

AROMATIZER, n. A^{2}r-o'ma^{2}t-i-zu^{5}r. An agent or principle that renders a substance aromatic. [L, 56.]

AROMATOMETRICUS (Lat.), adj. A^{2}r(a^{3}r)-o''ma^{3}-to-me^{2}t'-ri^{2}k-u^{3}s(u^{4}s). From ἄρωμα (see AROMA), and μέτρον, a measure. Ger., *würzmessend*. Pertaining to the determination of the proportion of an aromatic present in a mixture. [E. Ader (A, 322).]

AROMATOUS, adj. A^{2}r-o'ma^{3}-tu^{3}s. See AROMATIC.

AROME (Fr.), n. A^{3}-rom. See AROMA.

AROMINE, n.—A^{2}r-o'men. An alkaloid of urine, found in the mother-liquor from which creatinine and parareducine have been precipitated; so called from the odor developed when it is heated on platinum foil. [B, 220.]

AROMITES (Fr.), n. pl. A^{3}-ro-met. A general term for neutral. non-nitrogenous aromatic liquids, except those containing a camphor. [L, 105.]

ARON (Lat.), n. n. A(a^{3})'ro^{2}n. Gen., *a'ri*, *aro'nis*. Gr., ἄρον. See ARUM.—**Barbæ aronis, Radix aronis, Tubera aronis.** The rhizome of *Arum maculatum*. [B, 180.]

ARON (Ger.), n. A^{3}'ron. See ARUM.—**Aegyptischer A.** See COLOCASIA *antiquorum*.—**A'gewächse.** See ARACEÆ.—**A'sbaum.** The *Montrichardia arborescens*. [B.]—**A'stab.** See ARUM *maculatum*.—**A'stärke.** Arum starch. [L, 30.] See *Arum* ARROW-ROOT. —**A'swurz.** See ARUM.—**A'swurzel.** The corm of *Arum maculatum*. [B, 180.]—**Drachena'.** See ARUM *dracontium*.—**Dreiblättriger A.** See ARUM *triphyllum*.—**Dreilappiger A.** See TYPHONIUM *trilobatum*.—**Essbarer A.** The *Colocasia antiquorum*, var. *esculentum*. [B.]—**Französische A'swurzel.** The root of *Arum italicum*. [B, 180.] See *Radix* ARI *gallici*.—**Fünfblättriger A.** See ARISÆMA *pentaphyllum*.—**Gefleckter A., Gemeiner A.** See ARUM *maculatum*.—**Gewöhnlicher A.** See ARUM *officinale*.—**Giftiger A.** See CALADIUM *seguinum*.—**Grosser A.** See ARUM *dracunculus*.—**Grosswurzeliger A.** See ARUM *macrorrhizum*.—**Italienischer A.** See ARUM *italicum*.—**Kappenförmiger A.** See ARISARUM *vulgare*.—**Punktirter A.** See ARUM *dracunculus*. —**Schildförmiger A.** See COLOCASIA *antiquorum*.—**Vielblättriger A.** See ARUM *dracontium*.—**Virginischer A.** See ARUM *virginicum*.

ARONDINACÉES (Fr.), n. pl. A^{3}-ro^{2}n^{2}-di^{2}n-a^{3}-sa. See ARUNDINACEÆ.

ARONDINÉ (Fr.), adj. A^{3}-ro^{2}n^{2}-di^{2}n-a. Shaped like a swallow's tail; narrower at the point of attachment than at the opposite end. [A, 385.]

ARONIA (Lat.), n. f. A^{2}r(a^{3}r)-o'ni^{2}-a^{3}. A genus of rosaceous plants of the suborder *Pomaceæ* made by Persoon. [B, 178.]—**A. rotundifolia.** See AMELANCHIER *vulgaris*.

ARONICUM (Lat.), n. n. A^{2}r(a^{3}r)-o^{2}n'i^{2}k-u^{3}m(u^{4}m). A genus of the *Compositæ* of the tribe *Senecionidæ*, made by Necker, differing from *Doronicum* in that all the achenes have a pilose pappus, and from *Arnica* in that the cauline leaves are sessile and alternate. [B, 19.]—**A. Clusii** [Koch], **A. doronicum** [De Candolle]. See DORONICUM *hirsutum*.—**A. glaciale** [Reichenbach]. Syn.: *Arnica glaciale* [Wulfenden]. A variety of *A. scorpioides* (*Doronicum grandiflorum*). [B, 42, 214.]—**A. latifolium** [Reichenbach], **A. scorpioides** [Koch]. Syn.: *Arnica scorpioides* [Linn.]. See DORONICUM *grandiflorum*.

ARONINE, n. A^{2}r'o^{2}n en. An alkaloid said to be present in *Arum maculatum*. [B, 270.]

ARONWA, n. See ARUM.

AROO (Pers.), n. The *Amygdalus persica*. [L, 63.]

AROODA, n. An Indian name for rue. [L, 77.]

AROONA (Hind.), n. See RUBIA *cordifolia*.

AROONA-CHITRACA (Sanscr.), n. The *Plumbago rosea*. [L, 63.]

AROOS, n. An Egyptian name for the *Oryza sativa*. [L, 63.]

AROOSUKPUS-PURDAH, n. A Fars name for the *Puneeria coagulans*. [L, 63.]

AROPH, n. An alchemical name for: (1) saffron or extract of saffron; (2) the *aroma philosophorum*, of which term it has been thought to be an abbreviation; (3) mandragora; (4) an ancient antilithic preparation. [L, 50; Dornæus, Ruland, Johnson (L, 53).] —**A. Helmontii.** A tincture of crocus made with Canary wine. [L, 50.]—**A. Paracelsi.** A preparation made by subliming equal parts of hæmatite and ammonium chloride. [L, 53.] Cf. IRON *and ammonium chloride*.

AROREIRA, n. See SCHINUS *areira*.

ARORNAS (Ar.), n. The *Juniperus communis*. [L, 105.]

ARORO, n. A Tahiti name for the *Cucurbita multiflora*. [B, 121.]

AROSSE (Fr.), n. A^{3}-ros. A variety of the pomegranate fruit. [L, 105.]

AROUAROU, n. A Galibi name for the *Icica heptaphylla*. [B. 88, 121.]

AROULE (Fr.), n. A^3-rul. See ARROUSSE.

ARP, n. A place in Switzerland, in the Valley of the Rhone, where there is a sulphur spring the waters of which are used in skin diseases. [L, 63.]

ARPAD, n. A Hungarian spring containing sodium and magnesium sulphates. [α, 13.]

ARPAS KALESSI, n. A place in Asia Minor, where there are sulphurous springs. [A, 385.]

ARPE (Fr.), n. A^{3}rp. See ARPION.

ARPEYS, n. An old name for a sort of resin made of tallow and tar. [B, 222.]

ARPIAN, ARPION (Fr.), n's. A^{3}rp-e-a^{3}n^2, -o^{2}n^2. A silk-worm affected with the disease termed *gattine*. [A, 385.]

ARPULI, n. An Indian name for the *Cassia sophora*. [L, 105.]

ARQUA (It.), n. A^{3}r'kwa^3. A cold sulphurous spring in Venetia. [A, 385; L, 49.]—**A. Petrarca.** An Italian spring containing sulphur and chlorides. [A, 385.]

ARQUATUS (Lat.), adj. A^{3}r-kwa(kwa^3)'tu^{3}s(tu^{4}s). From *arquus* (= *arcus*), a rainbow. Displaying various shades of color (*e. g.*, *morbus a.* [*q. v.*, under MORBUS]).

ARQUÉ (Fr.), adj. A^{3}r-ka. Affected with the infirmity of flexing the knees when in a state of rest (said of horses). [A, 301.] See also ARCUATE.

ARQUEBUSADE, n. A^{3}r-kwe^2-bu^{3}s-ad'. Fr., *arquebusade*. Ger., *Arquebusade*, *Schusswasser*. It., *archibugiata*. Sp., *arcabuzazo*. An old term for a lotion for gunshot wounds. [A, 385.] See AQUA *vulneraria*.—**Weisse A.** (Ger.). See AQUA *vulneraria spirituosa*.

ARQUIFOUX (Fr.), n. A^{3}r-ke-fu. See ALQUIFUZ.

ARQURE (Fr.), n. A^{3}r-ku^{6}r. See ARCATURA.

ARR (Scot.), n. A scar. [L, 45.]

ARRABAL, ARRABAL DE LA ENCOMIENDA (Sp.), n's. A^{3}r-ra^3-ba^{3}l' da la^3 e^{2}n-ko-mi^2-e^{2}n'da^3. A place in Spain, where there are sulphurous springs. [A, 385.]

ARRABIDÆA (Lat.), n. f. A^{3}r-ra^3-bi^{2}d-e'(a^3'e^2)-a^3. From *Arrabida*, a Spanish family name, a genus of bignoniaceous plants of the tribe *Bignonieæ*, established by De Candolle. [B, 42, 214.]—**A. rosea** [De Candolle]. Syn.: *Tenocydia carajura* [Martius]. The *carajuru* of the Brazilians; a Brazilian species with rose-red flowers, which furnishes a red dye which is exported. By Bentham and Hooper the species is referred to *Bignonia*. [B, 42, 214.]

ARRAC, n. A^{2}r'ra^{2}k. See ARRACK.

ARRACACIA (Lat.), n. f. A^{2}r(a^{3}r)-ra^3-ka(ka^3)'si^2(ki^2)-a^3. From *arracacha*, a South American name for several plants possessing tuberous roots or tubers. Fr., *arracache*. Syn.: *Pentacrypta* [Lehmann], *Velæa* [De Candolle]. *Deweya* [Torrey and Gray]. A genus of umbelliferous plants made by Jussieu closely allied to the *Conium* of Linnæus. [B, 42, 180.]—**A. esculenta** [Decaisne]. Sp., *arracacha de Santa Fé de Bogotá*. Syn.: *Conium a.* [Hooper]. A species having a tuberous, starchy root, which is eaten like the potato. On fermentation, it furnishes an alcoholic beverage. [B, 264.]—**A. moschata** [De Candolle]. Syn.: *Conium moschatum* [Humboldt, Bonpland, Kunth]. The *sacharachaca*, a South American perennial herb having the odor of musk. [B, 214.]—**A. xanthorrhiza** [Bancr.]. Syn.: *Conium arracacia* [Hooker]. A species growing in the West Indies and on the northern coast of South America. The rhizome is thick and tuberous, from 8 to 9 inches in diameter, and gives origin to a number of tubers. When boiled, the rhizomes resemble the carrot somewhat in taste, and are the staple article of diet for the inhabitants. [B, 180, 264.]

ARRACH, n. A^{2}r'ra^{2}k. 1. See ARRACK. 2. Orace (*Atriplex*). [B, 200.]

ARRACHEMENT (Fr.), n. A^{3}r-ra^{3}sh-ma^{3}n^2. 1. The violent tearing away of a part. [D, 96.] See AVULSION. 2. Eradication, extirpation, extraction (as of a tooth). [A, 385.]—**Castration par a.** See under CASTRATION.

ARRA CHITTA, n. An Indian plant the juice of which is used by the natives in acute dysentery. [Waring (L, 63).]

ARRACHO, n. The oat (*Avena sativa*). [L, 105.]

ARRACK, n. A^{2}r'ra^{2}k. From Ar., *ɔaraq*, or *ɔarqî*, sweat and milk (afterward applied to a fermented drink made from dates). Lat., *spiritus oryzæ* (1st def.). Fr., *arack*. Ger., *Arrak*, *Rak*, *Reisbranntwein* (1st def.). It., *aracca*. Sp., *arac*, *erraca*. Syn.: *toddy*, *saki*, *tsin*, *sam-shu*. 1. A liquor distilled from the yeasty liquid in which boiled rice has fermented for many days, and to which cocoa-nut juice is sometimes added. There are several varieties, differing in color, taste, alcoholic strength, etc., made from fermented date-juice, rice, cocoa-nut milk, the sap of the cocoa-nut tree, or sugar-cane juice. An official analysis of the a. sold to Chinamen in New York has shown the following constitution:

Alcohol, 45·70 per cent. by volume;	38·81	per cent. by weight.
Saccharose	5·39	" " "
Glucose	1·19	" " "
Other organic solids	2·80	" " "
Mineral constituents	0·06	" " "

[C. E. Munsell, "Jour. of the Am. Chem. Soc.," 1885, p. 243; "Am. Jour. of Pharm.," Feb., 1886, p. 94; B, 48, 52.] 2. Of the Toongooses, a brandy made from milk. [B.] 3. Of the Tartars, a brandy made from plums. [B.] 4. An Oriental name for distilled liquors in general. [L, 86.]—**A.-tuba.** An East Indian spirit made from palm wine. [L, 105.]—**Artificial a.** See *Factitious a.*—**Batavian a.** The most esteemed variety, made without cocoa-nut juice. [B, 48; L, 120.]—**British a.** See *Factitious a.*—**Colombo a.** See *Triple a.*—**Double a.** A. that has been twice distilled; the variety imported into Europe. [B, 48.]—**Factitious a., Mock a.** An imitation of a., made by digesting for a fortnight a mixture of Jamaica rum and water each 2 pints, and ¾ oz. of sliced pineapple or ½ teaspoonful of pineapple essence, adding a wineglassful of skimmed milk, shaking, and, after a few days, decanting the clear portion. [L, 120.] It has also been made by distilling benzoin with rum. [L, 73.]—**Pariah a.** 1. A name given to a. by the Brahmans, to express their detestation of it. [L, 105.] 2. An inferior variety of a., made more intoxicating by the addition of Indian hemp. [L, 120.]—**Parrino a., Quitone a.** See *Triple a.*—**Single a.** A. that has been distilled only once; used by the Chinese. [B. 48.]—**Triple a.** A. that has been distilled three times, of a bright-yellow color and agreeable taste, containing from 52 to 54 per cent. of alcohol. [B, 48.]

ARRADIABO, n. A Brazilian name for the *Cnidoscalus neglectus*. ["Proc. of the Am. Pharm. Assoc.," xxxiii, p. 102 (B).]

ARRAGONE, n. The *Hesperis matronalis*. [L, 105.]

ARRAGONITE, n. A^{2}r'ra^2-gon-it. See ARAGONITE.

ARRAK, n. A^{2}r'ra^{2}k. See ARRACK.

ARRAKATSCHA, n. See ARRACACHA.

ARRAPHON, ARRAPHUM (Lat.), n's n. A^{2}r(a^{3}r)'ra^3-fo^{2}n, -fu^{3}m(fu^{4}m). See ARRHAPHON.

ARRAR, n. The *Callitris articulata*. [A, 385.]

ARRAYAN, n. See ARAYAN.

ARRECTED, adj. A^{2}r-re^{2}k'te^{2}d. See ARRECTUS.

ARRECTIO (Lat.), n. f. A^{2}r(a^{3}r)-re^{2}k'shi^2(ti^2)-o. Gen., *arrectio'nis*. From *arrigere*, to erect. An erection. [L, 45.]

ARRECTOR (Lat.), n. m. A^{2}r(a^{3}r)-re^{2}k'to^{2}r. Gen., *arrecto'ris*. See ERECTOR.—**A'es pilorum.** Fr., *muscles pileux*. Ger., *Haarbalgmuskeln*. A name given by Eylandt to the minute single or multiple bundles of unstriped muscular fibres which extend obliquely from the surface of the corium, to be inserted into the hair follicles on the side toward which the hair slopes. Each muscle embraces the sebaceous gland of the follicle to some extent. By their contraction they cause the hairs to stand erect or give rise to the appearance of the skin known as *cutis anserina*. [J; L.]

ARRECTUS (Lat.), adj. A^{2}r(a^{3}r)-re^{2}k'tu^{3}s(tu^{4}s). From *arrigere* (= *adrigere*), to make erect. Fr., *dressé*. Ger., *aufstehend*. In botany, sometimes used in the sense of erect, but the latter means perpendicular to the horizon, while a. has reference to the part from which the structure to which it is applied springs, and with which it forms an angle of from 10° to 20°. [B, 198.]

ARRENOTOCIA (Lat.), n. f. A^{2}r(a^{3}r)-re^{2}n-o-to'si^2(ki^2)-a^3. See ARRHENOTOCIA.

ARRENOTOCOUS, adj. A^{2}r-re^{2}n-o^{2}t'o-ku^{3}s. See ARRHENOTOCOUS.

ARREST, n. A^{2}r-re^{2}st'. From *arrestare*, to check, stop. Fr., *arrêt*. Ger., *Arrest*, *Hemmung*, *Gräte* (2d def.). 1. The cessation of an action, process, or function. [A, 385.] 2. A disease of horses, of a mangy character, between the ham and the pastern of the hind leg. [A, 315.]—**Action of a.** See INHIBITION.

ARRESTA BOVIS (Lat.), n. f. A^{2}r(a^{3}r)-re^{2}st'a^3 bo'vi^{2}s(wi^{2}s). Fr., *arrête-bœuf*. Ger., *Hauhechel*. It., *ononide*, *bonagra*. The plant rest-harrow, cammock, or petty-whin (*Ononis procurrens*). [A, 315, 385; B.]

ARRESTATIF (Fr.), adj. A^{3}r-re^{2}st-a^3-tef. Producing an arrest; inhibitory. [A, 385.]

ARRESTERON, ARRESTEROU, n's. Names given in the Pyrenees to the *Hydnum sinuatum*. [B, 121.]

ARRÊT (Fr.), n. A^{3}r-re^2. 1. See ARREST. 2. A surgical instrument for holding or fastening certain parts. [A, 385.] See REMORA.

ARRÊTE-BŒUF (Fr.), n. A^{3}r-re^{2}t-bu^{5}f. See ARRESTA BOVIS.

ARRHAPHON, ARRHAPHUM (Lat.), n's n. A^{2}r(a^{3}r)'ra^3-fo^{2}n, -fu^{3}m(fu^{4}m). From ἄρραφος (from α priv., and ῥάπτειν, to sew). A cranium deficient in sutures, formerly thought to be the cause of incurable headaches. [D. Melchior Sebizius, Johannes de Muralto (L, 53).]

ARRHEN (Lat.), adj. A^{2}r(a^{3}r)'re^{2}n. Gr., ἄρρην (= ἄρσην). Male, masculine, manly, strong. [A, 322.]

ARRHENATHERUM (Lat.), n. n. A^{2}r(a^{3}r)-re^{2}n-a^3-the(tha)'-ru^{3}m(ru^{4}m). From ἄρρην, masculine, and ἀθήρ, a beard. A genus of gramineous plants of the tribe *Avenaceæ*, established by Palisot de Beauvois; differing from the genus *Avena* by its spikelets having three flowers—the lower male, the middle hermaphrodite, and the upper rudimentary. [B, 121.]—**A. avenaceum** [Beauvois]. Fr., *avenat*, *faux seigle*. Syn.: *A. elatius* [Mertens and Koch]. The oat-grass, Andes-grass, or French rug-grass; a tall, perennial species indigenous to Europe and found in California, having stoloniferous roots; a useful fodder plant. There are two varieties: one (the *Avena elatior* of Linnæus, the *Holcus avenaceus* of Scopoli) having glabrous nodes, and the other (the *Avena elatior β* of Schreber, the *Holcus bulbosus* of Schrader, the *Avena precatoria* of Thuillier, the *Avena bulbosa* of Willdenow, the *A. bulbosum* of Schlechtendahl, the *A. precatorium* of Diet.) having villose nodes. [B, 138, 173, 188; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 604 (B).]—**A. bulbosum, A. elatius.** See *A. avenaceum*.

ARRHENICUM (Lat.), n. n. A^{2}r(a^{3}r)-re^{2}n'i^{2}k-u^{3}m(u^{4}m). Gr., ἀρρενικόν. Arsenic. [Pliny (A, 318).]

ARRHENOCITIA, ARRHENOCOETIA (Lat.), n's f. A^{2}r-(a^{3}r)-re^{2}n-o-si^2(ki^2)'shi^2(ti^2)-a^3, -ko-e(a)'shi^2(ti^2)-a^3. From ἄρρην, male, and *coitus* (*q. v.*). See PÆDERASTY.

ARRHENOGONON (Lat.), n. n. A^{2}r(a^{3}r)-re^{2}n-o^{2}g′o^{2}n-o^{2}n. Gr., ἀρρενόγονον. An ancient name for the ragwort. [Pliny (A, 318).] See SENECIO.

ARRHENOTOCIA (Lat.), n. f. A^{2}r(a^{3}r)-re^{2}n-o-to′si^2(ki^2)-a^3. From ἄρρην, male, and τόκος, a bringing forth. Fr., *arrhénotocie, arrhénotokie.* Arrhenotoky; that form of parthenogenesis in which, as among bees, the female lays eggs which produce only males. [A, 385; D, 10.]

ARRHENOTOCOUS, ARRHENOTOKOUS, adj's. A^{2}r-re^{2}n-o^{2}t′o-ku^{3}s. Having the faculty of, or pertaining to, arrhenotocia (*q. v.*). [B, 100.]

ARRHENOTOKY, n. A^{2}r-re^{2}n-o^{2}t′o-ki^2. See ARRHENOTOCIA.

ARRHEPIS (Lat.), n. f. A^{2}r(a^{3}r)′re^{2}p-i^{2}s. From ἀρρεπής, not inclining to either side, motionless. An old name for the eleventh dorsal vertebra. [L, 50.]

ARRHEUMATIC, adj. A^{2}r-ru^2-ma^{2}t′i^{2}k. More commonly, but less properly, written *arheumatic.* From α priv., and ῥεῦμα, a flux or rheumatism. Free from rheumatism or from a discharge. [A, 316.]

ARRHEUMATISTUS (Lat.), adj. A^{2}r(a^{3}r)-ru^2-ma^3-ti^{2}st′u^{3}s-(u^{4}s). Gr., ἀρρευμάτιστος. Styptic, astringent. [Galen (A, 311).]

ARRHIGOS (Lat.), adj. A^{2}r(a^{3}r)-ri(re)′go^{2}s. Gr., ἄρριγος. Without chill or shivering. [Aretæus (A, 311).]

ARRHINENCEPHALIA (Lat.), n. f. A^{2}r(a^{3}r)-ri^{2}n-e^{2}n-se^{2}f-(ke^{2}f)-a^{2}l(a^{3}l)′i^2-a^3. From α priv., ῥίς, the nose, and ἐγκέφαλος, the brain. A monstrosity characterized by absence or lack of development of the nose and brain. [C. Schultze, "Ctrlbl. f. d. med. Wissensch.," 1884, p. 855 (B).]—**A. unilateralis.** One-sided a. [B.]

ARRHINUS (Lat.), adj. A^{2}r(a^{3}r)′ri^{2}n-u^{3}s(u^{4}s). From α priv., and ῥίς, the nose. Without a nose (or nose-like projection); a descriptive term applied to certain flowers. [B, 121.]

ARRHIZA (Lat.), n. f. A^{2}r(a^{3}r)-ri(re)′za^3. From ἄρριζος (from α priv., and ῥίζα, a root). Fr., *arrhize.* A plant that has no root (applied to parasitic plants like the mistletoe). [B, 121.]

ARRHIZÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)′ri^{2}z-e(a^3-e^2). Fr., *arrhizes.* Richard's term for the cryptogams. [B, 1, 121.]

ARRHIZÆA (Lat.), n. n. pl. A^{2}r(a^{3}r)-ri^{2}z-e′(a^3′e^2)-a^3. See ARRHIZA.

ARRHIZOBLASTÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-ri^{2}z-o-bla^{2}st-(bla^{3}st)′e(a^3-e^2). From α priv., ῥίζα, a root, and βλαστός, a sprout. Fr., *arrhizoblastees.* Ger., *Unwurzelkeimer.* Of Willdenow, a division of plants of the *Geoblastæ*, distinguished by the absence of roots and by their embryos remaining concealed in the ground during germination. [B, 121, 170.]

ARRHIZOBLASTOUS, adj. A^{2}r-ri^{2}z-o-bla^{2}st′u^{3}s. Fr., *arrhizoblasté.* Ger., *unwurzelkeimig.* Belonging to or resembling the *Arrhizoblastæ.* [B, 1.]

ARRHIZOUS, adj. A^{2}r-ri′zu^{3}s. Gr., ἄρριζος. Lat., *arrhizos, arrhizus.* Fr., *arrhize.* Ger., *wurzellos* It., *arrizo.* In botany, having no root or radicle. [A, 385; L, 50.]

ARRHŒA (Lat.), n. f. A^{2}r(a^{3}r)-re′(ro′e^2)-a^3. Gr., ἄρροια (from α priv., and ῥεῖν, to flow). Fr., *arrhée.* Ger., *Ausflussmangel.* Syn.: *defectus profluvii.* The suppression of any habitual discharge, normal or pathological. [Hippocrates (A, 311, 325); A, 322.]

ARRHOICUS (Lat.), adj. A^{2}r(a^{3}r)-ro′i^{2}k-u^{3}s(u^{4}s). Pertaining to, caused by, or affected with, arrhœa. [A, 322.]

ARRHOSTEMA, ARRHOSTIA (Lat.), n's n. and f. A^{2}r(a^{3}r)-ro^{2}s-te(ta)′ma^3, -ro^{2}s′ti^2-a^3. Gen., *arrhostem′atos (-tis), -rhos′tiæ.* Gr., ἀρρώστημα, ἀρρωστία. Sickness, sickliness, weakness, imbecility. [Hippocrates (A, 311); A, 322, 325; L, 97.]

ARRHOSTOS (Lat.), adj. A^{2}r(a^{3}r)-ro^{2}st′o^{2}s. Gr., ἄρρωστος (from α priv., and ῥώννυσθαι, to be strong). Weak, sickly. [M, 13.]

ARRHYNCHIA (Lat.), n. n. pl. A^{2}r(a^{3}r)-ri^{2}n^2(ru^{6}n^2)′ki^2(ch^{2}i^2)-a^3. From α priv., and ῥύγχος, a snout or beak. A term applied to the lowest forms of the *Protucha*, on account of their having no frontal proboscis. [L, 11.]

ARRHYNCHOTÆNIADÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-ri^{2}n^2-(ru^{6}n^2)″ko(ch^{2}o^2)-te^{2}n(ta^3-e^{2}n)-i(i^2)′a^3-de(da^3-e^2). For deriv., see ARRHYNCHA and TÆNIA. Tape-worms having no rostella. [L, 24.]

ARRHYTHMIA (Lat.), n. f. A^{2}r(a^{3}r)-ri^{2}th^2(ru^{6}th)′mi^2-a^3. Gr., ἀρρυθμία (from α priv., and ῥυθμός, rhythm). Fr., *arrhythmie.* Ger., *Arrhythmie.* Lack of rhythm. [M, 2.]—**A. cordis.** Irregularity of the heart's action. [M, 1.]

ARRHYTHMIC, ARRYTHMOUS, adj's. A^{2}r-ri^{2}th^2′mi^{2}k, -mu^{3}s. Gr., ἄρρυθμος. Lat., *arrhythmus, arrhythmicus.* Fr., *arrhythme, arrhythmique.* Ger., *arrhythmisch.* Lacking in rhythm or regularity. [L, 50.]

ARRIÉRÉ (Fr.), adj. A^{3}r-ri^2-a-ra. Stunted; backward in growth or development, physical or mental. [A, 385.]

ARRIÈRE-BOUCHE (Fr.), n. A^{3}r-ri^2-e^{2}r-bush. See ARRIÈRE-GORGE.

ARRIÈRE-CAVITÉ (Fr.), n. A^{3}r-ri^2-e^{2}r-ka^3-ve-ta. A posterior cavity.—**A.-c. des épiploons.** See *A.-c. péritonéale.*—**A.-c's. des fosses nasales.** The superior maxillary, sphenoidal, frontal, and ethmoidal sinuses. [A, 385.]—**A.-c. péritonéale.** A fold of the peritonæum at the level of the bile-ducts, between the portal vein in front and the vena cava behind. [A, 385.]

ARRIÈRE-CERVEAU (Fr.), n. A^{3}r-ri^2-e^{2}r-se^{2}r-vo. See METENCEPHALON.

ARRIÈRE-CHAMBRE (Fr.), n. A^{3}r-ri^2-e^{2}r-sha^{3}m-br′. See HINTERHOF.

ARRIÈRE-DENT (Fr.), n. A^{3}r-ri^2-e^{2}r-da^{3}n^2. The last molar tooth. [L, 43.]

ARRIÈRE-ÉCUSSON (Fr.), n. A^{3}r-ri^2-e^{2}r-a-ku^{6}s-so^{2}n^2. See POSTSCUTUM.

ARRIÈRE-FAIX (Fr.), n. A^{3}r-ri^2-e^{2}r-fe^2. The after-burden; an old term for the placenta and the fœtal membranes. [A, 44.]

ARRIÈRE-FLEUR (Fr.), n. A^{3}r-ri^2-e^{2}r-flu^{6}r. In botany, a second flowering. [L, 41.]

ARRIÈRE-GORGE (Fr.), n. A^{3}r-ri^2-e^{2}r-gorzh. The posterior wall of the pharynx. [A, 385.]

ARRIÈRE-GOUT (Fr.), n. A^{3}r-ri^2-e^{2}r-gu. An after-taste. [A, 300.]

ARRIÈRE-IMAGE (Fr.), n. A^{3}r-ri^2-e^{2}r-e-ma^{3}zh. See AFTER-IMAGE.—**A.-i's colorées.** See *Colored* AFTER-IMAGES.—**A.-i's négatives.** See *Negative* AFTER-IMAGES.—**A.-i's positives.** See *Positive* AFTER-IMAGES.—**A.-i. positive complémentaire.** See *Positive complementary* AFTER-IMAGE.

ARRIÈRE-MAIN (Fr.), n. A^{3}r-ri^2-e^{2}r-ma^{2}n^2. The back of the hand. [A, 300.]

ARRIÈRE-MÉSENTÉRIQUE (Fr.), adj. A^{3}r-ri^2-e^{2}r-ma-za^{3}n^2-ta-rek. Post-mesenteric (said of the nerves which connect the aortic and hypogastric plexuses). [L, 41.]

ARRIÈRE-MOLAIRE (Fr.), n. A^{3}r-ri^2-e^{2}r-mo-la^{2}r. See ARRIÈRE-DENT.

ARRIÈRE-NARINES (Fr.), n. pl. A^{3}r-ri^2-e^{2}r-na^3-ren. See *Posterior* NARES.

ARRIÈRE-NEZ (Fr.), n. A^{3}r-ri^2-e^{2}r-na. That part of an insect that is contiguous to the antennæ. [L, 41.]

ARRIÈRE-NOYAU (Fr.), n. A^{3}r-ri^2-e^{2}r-nwa^3-yo. The posterior nucleus. [K.]

ARRIÈRE-POITRINE (Fr.), n. A^{3}r-ri^2-e^{2}r-pwa^3-tren. The posterior thoracic segment of an insect. [L, 41.]

ARRIÈRE-STERNUM (Fr.), n. A^{3}r-ri^2-e^{2}r-ste^{2}rn-u^{3}n^2. Latreille's term for the median inferior portion of the third thoracic segment in insects. [L, 180.]

ARRIÈRE-TERGUM (Fr.), n. A^{3}r-ri^2-e^{2}r-te^{2}rg-u^{3}n^2. Audouin's term for the union of the terga of the mesothorax and metathorax in certain of the *Arthropoda.* [L, 180.]

ARRIÈRE-VIEILLESSE (Fr.), n. A^{3}r-ri^2-e^{2}r-ve-a-ye^{2}s. Extreme old age. [A, 300.]

ARRIGOS (Lat.), adj. A^{2}r(a^{3}r)-ri(re)′go^{2}s. See ARRHIGOS.

ARRIVOU-TAOU-VELOU, n. A Madagascar name for an undetermined species of *Exacum.* [L, 105.]

ARROCHE (Eng., Fr.), n. A^{2}r′ro^{2}k, a^{3}r-rosh. See ATRIPLEX.—**A. belle-dame** (Fr.), **A. blanche** (Fr.), **A. bonne-dame** (Fr.), **A. des jardins** (Fr.), **A. épinard** (Fr.), **A. follette** (Fr.). See ATRIPLEX *hortense.*—**A. fraise** (Fr.). See BLITUM *capitatum.*—**A. pourpier** (Fr.). See ATRIPLEX *portulacoides.*—**A. puante** (Fr.). See CHENOPODIUM *vulvaria.*

ARROCHES (Fr.), n. pl. A^{3}r-rosh. See ATRIPLICEÆ.

ARRODE (Fr.), n. A^{3}r-rod. The *Atriplex hortense.* [B, 121.]

ARROMANCHES (Sp.), n. A^{3}r-ro-ma^{3}n′che^{2}s. A sea-bathing resort in Calvados, Spain. [A, 385; L, 49.]

ARROMEHL (Ger.), n. A^{3}r′ro-mal. See ARROW-ROOT.

ARRONDI (Fr.), adj. A^{3}r-ro^{2}n^2-de. In botany, rounded, subrotund. [B.]

ARROPE (Sp.), n. A^{3}r-ro′pa. Must boiled down to the consistence of a syrup. [A, 334; α, 5.] See ROB.

ARROSEMENT (Fr.), n. A^{3}r-roz-ma^{3}n^2. Sprinkling; a method of applying either powders or liquids to a part. [Gosselin, Héret, "Progr. méd.," Sept. 19, 1885, p. 216.]

ARROSION, n. A^{2}r-ro′zhu^{3}n. Lat., *arrosio* (from *arrodere*, to gnaw). Ger., *Arrosion.* Erosion, especially of blood-vessels by an ulcerative process. [D, 84; L, 54.]

ARROUFLE (Fr.), n. A^{3}r-rufl. See ERVUM *hirsutum.*

ARROUSSE (Fr.), n. A^{3}r-rus. An Auvergne name for the lentil. [L, 105.] See ERVUM *hirsutum.*

ARROUY, n. A Madagascar name for the *Mimosa sensitiva.* [L, 105.]

ARROW-GRASS, n. A^{2}r′ro-gra^{3}s. A species of *Triglochin.* [L, 56.]

ARROWHEAD, n. A^{2}r′ro-he^{2}d. The name of certain hot springs in San Bernardino, California, where the winter climate is said to be beneficial to phthisical subjects. [A, 363.]

ARROW-HEAD, ARROW-LEAF, n's. A^{2}r′ro-he^{2}d, -lef. See SAGITTARIA *sagittifolia.*

ARROW-ROOT [Austr. Ph., Gr. Ph.], n. A^{2}r′ro-ru^{4}t. Said to be so called because it was used by the West Indian aborigines as a cure for the wounds inflicted with poisoned arrows; but, according to recent authorities, from the native name, *araruta*, meaning mealy root. [B, 15.] Lat., *amylum* (seu *fœcula*), *saggitariæ* (seu *marantæ*). Fr., *arrowroot de la Jamaïque* [Fr. Cod.], *racine fléchière, pivot.* Ger., *Pfeilwurz, Pfeilwurzmehl.* Syn.: *amylum arrow* [Dan. Ph., Norw. Ph., Swed. Ph.]. A form of starch obtained from the tubers of the *Maranta arundinacea, Maranta nobilis*, and *Maranta indica.* It occurs under the form of a light powder, or of pulverulent masses of a white color, and when pure is devoid of taste or smell. It is made up of oblong-ovate granules, from $\frac{1}{2000}$ to $\frac{1}{750}$ of an inch long, having very fine striations. It has the chemical properties of starch, and is distinguished by its bland quality as an article of food. [B, 2, 5; L, 65.]—**African a.-r.** Ger., *afrikanisches Arrowroot.* Ordinary a.-r. brought from Sierra

Leone, Natal, and the Cape of Good Hope. [B, 270.]—**American a.-r., Antilles a.-r.** See *West Indian a.-r.*—**A.-r. de la Jamaïque** [Fr. Cod.] (Fr.). See *A.-r.*—**A. de l'Inde** (Fr.). See *East Indian a.-r.*—**A. des Antilles** (Fr.). See *West Indian a.-r.*—**A. de Tolomane.** See CANNA *starch.*—**Arum a.-r.** A starchy substance prepared at the Isle of Portland from the *Arum maculatum.* [B.]—**Bahia a.-r.** Manihot. [B, 270.]—**Bermuda a.-r.** The variety most highly esteemed. The term is commonly applied to various West Indian varieties. [A, 377.]—**Bombay a.-r.** See

WEST INDIAN ARROW-ROOT. (AFTER ROSCOE AND SCHORLEMMER.)

Curcuma a.-r.—**Brazilian a.-r.** Ger., *brasilianisches Arrowroot.* 1. Ordinary a.-r. from Para and southern Brazil. 2. Cassava, manihot, or manioc; the *amylum brasiliense* (seu *cassavæ*) of the Netherl. Ph. [B, 270.]—**British a.-r.** See AMYLUM *solani.*—**Calcutta a.-r.** See *East Indian a.-r.*—**Canna a.-r.** See CANNA *starch.*—**Cassava a.-r.** See TAPIOCA *meal.*—**Chili a.-r.** A sort of starch derived from a species of *Bomarea.* [B, 270.]—**Chocolate of a.-r.** A French preparation containing 3 parts of a.-r. to 100 of chocolate. [B, 10.]—**Common a.-r.** See AMYLUM *solani.*—**Curcuma a.-r.** Lat., *amylum indicum.* Ger., *Curcumastärke, Tikmehl.* Syn.: *Bombay a.-r.* [Netherl. Ph.]. A variety brought from Tikor, Madras, and Benares, derived from *Curcuma angustifolia.* That brought from Travancore (Travancore a.-r.) is from *Curcuma rubescens.* [B, 270.]—**East Indian a.-r.** Ger., *ostindisches Arrowroot.* 1. Ordinary a.-r. imported from Madras and Ceylon. 2. See *Curcuma a.-r.* 3. A name applied to various starchy substances found in the East Indies (*e. g.*, canna starch, cassova, etc.). [B, 270.]—**English a.-r.** See AMYLUM *solani.*—**Florida a.-r.** See *Zamia a.-r.*—**Guiana a.-r.** 1. A starch obtained from the banana (*Musa paradisiaca*). See BANANA *starch.* 2. A starch obtained from the yam. [B, 270.] See DISCOREA *starch.*—**Jamaica a.-r.** Ordinary a.-r. [B, 270.]—**Maize a.-r.** See CORN *starch.*—**Malabar a.-r.** See *Curcuma a.-r.*—**Manihot a.-r.** See TAPIOCA *meal.*—**Maranta a.-r.** True a.-r. [B.]—**Morgenländisches Arrowroot** (Ger.). See *East Indian a.-r.*—**Natal a.-r.** A variety made in Natal from the *Maranta indica.* [L.]—**Otaheiti a.-r.** See *Tacca a.-r.*—**Para a.-r.** Manihot. [B, 270.]—**Portland a.-r.** See *Arum a.-r.*—**Potato a.-r.** See AMYLUM *solani.*—**Queensland a.-r.** See CANNA *starch.*—**Rice a.-r.** Rice flour, made from the *Oryza sativa.* [L, 63.]—**Rio a.-r.** Manihot. [B, 270.]—**Sierra Leone a.-r.** See *African a.-r.*—**Tellichery a.-r.** See *Curcuma a.-r.*—**St. Thomas a.-r., St. Vincent a.-r.** See *West Indian a.-r.*—**Tacca a.-r., Tahiti a.-r.** A variety made from the *Tacca oceanica,* having granules of about the same size as those of tapioca meal, but flattened and angular; rarely met with in commerce. [B, 2; L, 65.]—**Talcahuana a.-r.** A form of starch resembling ordinary a.-r., derived from the root of the *Alstroemeria ligtu,* a Chilian plant. [B, 5.]—**Tavoulou a.-r.** See *Tacca a.-r.*—**Travancore a.-r.** See *Curcuma a.-r.*—**West Indian a.-r.** Fr., *tous-les-mois.* Ger., *westindisches Arrowroot.* Ordinary a.-r. [B, 270.]—**Williams's a.-r.** See *Tahiti a.-r.*—**Zamia a.-r.** Florida a.-r.; a form of starch obtained from the root of the *Zamia integrifolia,* a native of Florida. It differs from true a.-r. in microscopic appearance. [B, 5.]

ARROW-WEED, n. A^{2}r'ro-wed. See SAGITTARIA *sagittifolia.*

ARROW-WOOD, n. A^{2}r'ro-wu^{4}d. A name applied to some species of *Viburnum.* [B, 19.]

ARRUDEA (Lat.), n. f. A^{2}r-ru'de^{2}-a^{3}. From the Brazilian botanist, *Arruda de Camara.* A genus of clusiaceous plants made by A. Saint-Hilaire, now referred to *Clusia.* [B, 42, 121.]—**A. clusioides** [Cambess.]. See CLUSIA *a.*—**A. rosea.** See CLUSIA *rosea.*

ARRUK, n. See ARRACK.

ARRYTHMIA (Lat.), n. f. See ARRHYTHMIA.

ARRYTHMIC, ARRYTHMOUS, adj's. See ARRHYTHMIC and ARRHYTHMOUS.

ARS (Lat.), n. f. A^{3}rz(a^{3}rs). Gen., *ar'tis.* Gr., τέχνη. Fr., *art.* Ger., *Kunst.* It, Sp., *arte.* 1. Skill, ability, or cunning in working; art, artfulness. 2. That at which one works; a science, profession, occupation, or pursuit. [B, 134.]—**A. angelica.** Magic. [B, 49.]—**A. atracia.** Magic; so called from Atrax, a city in Thessaly, the latter being regarded as the country of enchanters. [B, 49.]—**A. auxiliatrix in partu.** Obstetrics. [A, 88.]—**A. cabalistica.** See *A. signata.*—**A. chemiatrica, A. chymiatrica.** Chemistry in its relations to medicine; therapeutics founded on chemistry. [A, 322.]—**A. clysmatica nova.** Syn.: *chirurgia infusoria.* The transfusion of blood, also the infusion of a remedy into the circulation. [A, 322.] See TRANSFUSION and *Intravenous* INJECTION.—**A. cosmetica.** Fr., *art cosmétique.* Ger., *Verschönerungskunst, Kosmetik.* See COSMESIS.—**A. empirica.** Gr., τέχνη ἐμπειρική. See EMPIRICISM.—**A. formulas medicinæ concinnandi.** Fr., *art de formuler.* The art of writing prescriptions. [A. 316, 385.]—**A. hermetica.** Fr., *art sacré.* Alchemy. [A, 385.]—**A. hydriatrica.** See HYDRO-THERAPEUTICS.—**A. infusoria.** See *A. clysmatica nova.*—**A. machaonica.** Ger., *machaonische Kunst.* The healing art; so called from Machaon, a son of Æsculapius. [A, 322.]—**A. mæutica, A. maieutica.** Gr., τέχνη μαιευτική. Obstetrics. [A, 88.]—**A. medendi** [Pliny], **A. medica** [Sydenham]. The healing art: medicine. [B, 90, 134.]—**A. obstetricandi, A. obstetricans, A. obstetricaria, A. obstetricia.** Obstetrics. [A, 88.]—**A. philosophica.** Fr., *art sacré.* Alchemy. [A, 385.]—**A. sanandi.** See *A. medica.*—**A. signata.** Literally, the signed or sealed art; the art of understanding the signs which show the qualities of bodies. [Paracelsus (H).] See SIGNATURE.—**A. spagyrica.** Ger., *spagyrische Kunst.* See *A. chemiatrica.*—**A. sphygmica.** Ger., *Pulsuntersuchungskunst.* Syn.: *sphygmotechne.* The art of examining and interpreting the condition of the pulse. [A, 322.]—**A. spirituosa, A. spirituum.** Magic. [B. 48, 49.]—**A. veterinaria, A. zoiatrica.** Fr., *art vétérinaire.* Veterinary medicine. [A, 385.]—**Medicinalis a.** Medicine. [Celsus (B, 45).]

ARS (Fr.), n. A^{3}r(a^{3}rs). In veterinary parlance, the fold which marks the junction of a horse's fore leg with the chest. [A, 300, 385.]—**A. antérieure.** See *A.*—**A. postérieure.** The fold running from the body to the hind leg. [L, 180.]

ARSA, n. Also written *arki.* A rectified spirituous liquor prepared by the Tartars from kumyss (*q. v.*). In a weak state, before rectification, it is called *araca.* [A, 1.]

ARSACE (Lat.), n. f. A^{3}r'sa^{3}-se(ka). From Ἀρσάκης, the founder of the Parthian dominion. A section of the botanical genus *Erica,* made by Salisbury. [B, 121.]

ARSACUM, n. A sort of satyriasis or morbid sexual excitement; the same as *acrai.* [B, 200.]

ARSADINE, n. A^{3}r'sa^{2}d-i^{2}n. An obsolete term for arsenic or one of its compounds, especially orpiment. [B, 221.]

ARSAG, n. Arsenic. [B, 144.]

ARSALTOS, n. Asphalt. [B, 200.]

ARSAMMONIC, adj. A^{3}rs''a^{2}m-mo^{2}n'i^{2}k. Containing or pertaining to arsammonium. [B, 4.]

ARSAMMONIUM (Lat.), n. n. A^{3}rs-a^{2}m(a^{3}m)-mo'ni^{2}-u^{3}m-(u^{4}m). From *arsenic* and *ammonium.* A compound radicles made up of a substituted arsonium united with a substituted ammonium. Such compounds have the general constitution −RAs−NR'−, where R and R' are trivalent radicles or assemblages of radicles having a total quantivalence of three. [B, 4.]

ARSANECK, n. An alchemical term for sublimed arsenic. [Johnson (B, 200).]

ARSATUM, n. See ARSACUM.

ARSCH (Ger.), n. A^{3}rsh. The arse, or fundament. [B.]—**A'made.** The *Oxyuris vermicularis.* [L, 17.]

ARSEDINE, n. A^{3}r'se^{2}d-i^{2}n. See ARSADINE.

ARSELIN (Fr.), n. A^{3}r-se^{2}l-a^{2}n^{2}. See TROCHIMUS *vipera.*

ARSELLA (It.), n. A^{3}r-se^{2}l'la^{3}. From It., *arse,* fire, on account of the acrimony of the juice when instilled into the eye. The *Argemone.* [B, 121.]

ARSEN (Ger.). n. A^{3}r-se^{2}n'. Arsenic. [B.]—**A'äthyl.** Arsenethyl. [B, 196.]—**A'äthylsäure.** Ethylarsinic acid. [B, 4.]—**A'base.** See ARSENIC *base.*—**A'blende.** A native sulphide of arsenic. [B, 49.] See *Gelbe A'blende* and *Rothe A'blende.*—**A'bromid, A'bromür.** Arsenic tribromide. [B, 48, 196.]—**A'butter.** Butter of arsenic; arsenic trichloride. [B, 48.]—**A'chlordihydrat.** See ARSENIC *chlordihydrate.*—**A'chlorid, A'chlorür.** Arsenic trichloride. [B.]—**A'diäthyl.** See ARSENDIETHYL and DIARSENTETRETHYL.—**A'diäthylsäure.** Diethylarsinic acid. [B, 4.]—**A'dichlorid.** Arsenic dichloride. [B.]—**A'dihydrat.** Arsenic dihydrate; pyroarsenic acid. [B.]—**A'dimethyl.** Arsendimethyl; cacodyl. [B.]—**A'dimethylbromür.** See CACODYL *bromide.*—**A'dimethylchlordihydrat.** See CACODYL *chlorodihydrate.*—**A'dimethylchlorür.** See CACODYL *chloride.*—**A'dimethylcyanür.** See CACODYL *cyanide.*—**A'dimethyljodür.** See CACODYL *iodide.*—**A'dimethyloxyd.** See CACODYL *oxide.*—**A'dimethylpersulfid.** See CACODYL *persulphide.*—**A'dimethylsäure.** Dimethylarsinic acid. [B, 4.]—**A'dimethylsulfür.** See CACODYL *sulphide.*—**A'dimethyltrichlorür.** See CACODYL *trichloride.*—**A'diphenyl.** See ARSENDIPHENYL.—**A'diphenylchlorür.** See ARSENDIPHENYL *chtoride.*—**A'diphenyltrichlorür.** See ARSENDIPHENYL *trichloride.*—**A'disulfid.** Ar-

senic disulphide. [B, 196.]—**A'eisen.** A native arsenide of iron; lölingite. [B, 49.]—**A'fluorid, A'fluorür.** Arsenic fluoride. [B.]—**A'fluorwasserstoffsäure.** A substance having the properties of an acid, produced by the decomposition of arsenic trifluoride. [B, 196.]—**A'glas.** See *Gelbes A'glas, Rothes A'glas*, and *Weisses A'glas.*—**A'haltig.** Containing arsenic. [B, 49.]—**A'hydrat.** See ARSENIC *hydrate.*—**A'hydrür.** See HYDROGEN *arsenide.*—**A'jodid, A'jodür.** Arsenic triiodide. [B, 48, 196.]—**A'kies.** Mispickel. [B, 49.]—**A'kupfer.** A native compound of arsenic and copper. [B, 49.]—**A'methyl.** Arsenmethyl. [B, 196.]—**A'methylchlorür.** Arsenmethyl chloride. [B.]—**A'methyloxyd.** Arsenmethyl oxide. [B.]—**A'methylsäure.** Methylarsinic acid. [B, 4.]—**A'methylsulfid.** Arsenmethyl sulphide. [B.]—**A'molybdänsäure.** Arseniomolybdic acid. [B.]—**A'monäthyl.** Arsenethyl. [B, 196.]—**A'monäthylsäure.** See ETHYLARSINIC ACID.—**A'monomethyl.** Arsenmethyl. [B, 196.]—**A'monomethylsäure.** See METHYLARSINIC *acid.*—**A'nickel, A'nickelglanz.** Compounds of arsenic and nickel occurring in nature. [B, 49.]—**A'oxybromür.** Arsenic oxybromide. [B.]—**A'oxychlorür.** Arsenic oxychloride. [B.]—**A'oxyd.** Arsenic trioxide. [B.]—**A'oxyjodür.** Arsenic oxyiodide. [B.]—**A'oxysulfür.** Arsenic oxysulphide. [B.]—**A'pentafluorid.** Arsenic pentafluoride. [B.]—**A'pentasulfid.** Arsenic pentasulphide. [B.]—**A'phenyl.** Arsenphenyl. [B.]—**A'phenylchlorür.** Arsenphenyl chloride. [B.]—**A'phenyloxyd.** Arsenphenyl oxide. [B.]—**A'radical.** See ARSENIC *radical.*—**A'rubin.** Ruby of arsenic; arsenic disulphide. [B, 49.]—**A'sauer.** Of or pertaining to arsenic acid, arsenic; with the name of a base, the arsenate of that base. [B.]—**A'säure.** Arsenic acid. [B.]—**A'säureanhydrid.** Arsenic anhydride; arsenic pentoxide. [B, 49.]—**A'säurehydrat.** Arsenic acid. [B, 196.]—**A'säuresalze.** The arsenates. [B, 49.]—**A'sesquichlorür.** Arsenic trichloride. [B.]—**A'spiegel.** The arsenic mirror; the film of metallic arsenic deposited in applying Marsh's test. [B, 49.]—**A'suboxyd.** Arsenic suboxide. [B, 48.]—**A'sulfid, A'sulfür.** Arsenic disulphide. [B, 48, 49.]—**A'superfluorür.** Arsenic fluoride. [B, 48.]—**A'supersulfid.** Arsenic pentasulphide. [B, 48.]—**A'supersulfür.** Arsenic trisulphide. [B, 48.]—**A'thier.** An animal poisoned with arsenic. [Steinauer, "Ctrlbl. f. d. med. Wissnsch.," Jan. 21, 1882, p. 64 (B).]—**A'triäthyl.** Triethylarsine. [B, 196.]—**A'triäthylsäure.** Triethylarsinic acid. [B, 4.]—**A'tribromür.** Arsenic tribromide. [B.]—**A'trichlorür.** Arsenic trichloride. [B.]—**A'trifluorür.** Arsenic trifluoride. [B.]—**A'trihydrat.** Arsenic acid. [B.]—**A'trijodür.** Arsenic triiodide. [B.]—**A'trioxyd.** Arsenic trioxide. [B.]—**A'trisulfid.** Arsenic trisulphide. [B, 108.]—**A'vergiftung.** Poisoning by arsenic. [B, 18.]—**A'wasserstoff.** Arsenic hydride. [B.] See HYDROGEN *arsenide.*—**A'wolframsäure.** Arseniotungstic acid. [B.]—**Broma'.** Arsenic tribromide. [B, 48.]—**Chlora'.** Arsenic trichloride. [B, 49.]—**Farbiges A'glas.** Artificially prepared arsenic trisulphide. [B.]—**Fester A'wasserstoff.** Solid hydrogen arsenide. [B, 196.]—**Gelbe A'blende, Gelber A., Gelbes A'glas.** Arsenic trisulphide. [B, 49.]—**Grauer A.** Arsenic obtained under the form of a gray powder. [B, 49.]—**Joda'.** Arsenic triiodide. [B, 48.]—**Rothe A'blende, Rother Schwefela', Rothes A'glas.** Arsenic disulphide. [B, 49.]—**Wasserfreie A'säure.** Anhydrous arsenic acid; arsenic pentoxide. [B.]—**Weisser A., Weisses A'glas.** Arsenic trioxide. [B, 49.]

ARSENAL, n. A^{3}r'se^{2}n-a^{2}l. Through It. and Sp., *darsena*, from Ar., *dâr al-çinâ'ah*, an arsenal (literally, a house of works, from *dâr*, a house, and *çinâ'at*, an art, a trade). [B, 52, 223.] Fr., *arsenal.* Ger., *Zeughaus.* It., *arsenale.* Sp., *arsenal.* See ARMAMENTARIUM *chirurgicum.*

ARSENALLYLIUM (Lat.), n. n. A^{3}r-se^{2}n-a^{2}l(a^{3}l)-li^{2}l(lu^{6}l)'i^2-u^{3}m(u^{4}m). See TETRALLYLARSONIUM.—**A. iodide.** Fr., *iodure d'a.* Ger., *Arsenallyliumjodür.* See TETRALLYLARSONIUM *iodide.*

ARSENAMINE, n. A^{3}r-se^{2}n'a^{2}m-en. Hydrogen arsenide. [B, 9.]

ARSENATE, n. A^{3}r'se^{2}n-at. Written also *arseniate.* Lat., *arsenas, arsenias.* Fr., *arséniate.* Ger., *arsensaures Salz, Arsenat.* It., Sp., *arseniato.* A salt of arsenic (orthoarsenic) acid. The *normal a's* or *triarsenates* have the formula $R(AsO_4)$ where R is a trivalent radicle, or $R_3(AsO_4)_n$ where R is a radicle of the quantivalence of *n.* The *acid*, or *hydric, a's* include (1) the *dimetallic* or *monohydric a's*, of the general formula $R''HAsO_4$ or $R_2(HAsO_4)_n$, and (2) the *monometallic* or *dyhydric a's*, or *binarseniates*, of the general formula $R(H_2AsO_4)_n$, where R'' is a bivalent radicle and R a radicle of the quantivalence of *n. Basic a's*, composed of arsenic acid combined with the oxide or hydrate of a base, are also known. The term *basic a.* was formerly applied to the normal a's. [B.] See also METARSENATE and PYROARSENATE, and for the individual a's see under the names of the bases.—**Acid a.** Fr., *arséniate acide.* Ger., *saures Arseniat.* It., *arseniato acido.* Sp., *arseniato ácido.* A monohydric or dihydric a.; in the older chemical works more especially restricted to the latter. [B, 142.]—**Basic a.** Fr., *arséniate basique.* Ger., *basisches Arseniat.* It., *arseniato basico.* Sp., *arseniato básico.* See under *A.*—**Dihydric a.** 1. An acid a. containing 2 atoms of hydrogen. See *supra.* 2. Pyroarsenic acid. [B, 158.]—**Monohydric a.** 1. An acid a. containing 1 atom of hydrogen. See *supra.* 2. Metarsenic acid. [B, 158.]—**Neutral a.** Fr., *arséniate neutrale.* Ger., *neutrales Arseniat.* It., *arseniato neutro.* 1. A normal a. 2. In the older chemical works, a pyroarsenate. [B, 142.]—**Trihydric a.** Arsenic (orthoarsenic) acid. [B, 158.]

ARSENBIETHYL, n. A^{3}r''se^{2}n-bi-e^{2}th'i^{2}l. From *arsenic* and *ethyl* (see also *Bi-**). See ARSENDIETHYL.

ARSENCHLORODIMETHIDE, n. A^{3}r''se^{2}n-klo^{3}r-o-di-me^{2}th'i^{2}d(id). Diarsentetramethyl chloride. [B, 158.]

ARSENDIETHYL, n. A^{3}r''se^{2}n-di-e^{2}th'i^{2}l. From *arsenic* and *ethyl* (see also *Di-**). Fr., *arsén-diéthyle.* Ger., *Arsendiäthyl.* A univalent radicle, $As(C_2H_5)_2'$. It occurs in the free state with doubled molecule, constituting $As_2(C_2H_5)_4$, or *diarsentetrethyl* (*q. v.*). [B, 4.]—**A. iodide.** Fr., *iodure d'arsén-diéthyle.* Ger., *Arsendiäthyljodür.* A yellowish oily liquid, $As(C_2H_5)_2I$, insoluble in water. [B, 4.]

ARSENDIETHYLIC, adj. A^{3}r''se^{2}n-di-e^{2}th-i^{2}l'i^{2}k. Fr., *arsén-diéthylique.* Of, pertaining to, or derived from, arsendiethyl. [B.]—**A. acid.** Fr., *acide arsén-diéthylique.* Ger., *Arsendiäthylsäure.* See DIETHYL*arsinic acid.*

ARSENDIMETHYL, n. A^{3}r''se^{2}n-di-me^{2}th'i^{2}l. From *arsenic* and *methyl* (see also *Di-**). Fr., *arsén-diméthyle.* Ger., *Arsendimethyl.* See CACODYL.

ARSENDIMETHYLIC, adj. A^{3}r''se^{2}n-di-me^{2}th-i^{2}l'i^{2}k. Fr., *arsén-diméthylique.* Of, pertaining to, or derived from, arsendimethyl; cacodylic. [B.]—**A. acid.** Fr., *acide arsén-diméthylique.* Ger., *Arsendimethylsäure.* See DIMETHYL*arsinic acid.*

ARSENDIPHENYL, n. A^{3}r''se^{2}n-di-fe^{2}n'i^{2}l. Fr., *arsén-diphényle.* Ger., *Arsendiphenyl.* Syn.: *diphenylarsen.* A univalent or trivalent radicle, $As(C_6H_5)_2'$ or $As(C_6H_5)_2'''$. [B.]—**A. chloride.** Fr., *chlorure d'arsén-diphényle.* Ger., *Arsendiphenylchlorür.* An oily liquid of the composition $As(C_6H_5)_2Cl$. [B, 4.]—**A. trichloride.** Fr., *trichlorure d'arsén-diphényle.* Ger., *Arsendiphenyltrichlorür.* A solid substance, $As(C_6H_5)_2Cl_3$, decomposed by water into diphenylarsinic acid. [B, 4.]

ARSENDIPHENYLIC, adj. A^{3}r''se^{2}n-di-fe^{2}n-i^{2}l'i^{2}k. Fr., *arsén-diphénylique.* Of, pertaining to, or derived from, arsendiphenyl. [B.]

ARSENETHYL, n. A^{3}r''se^{2}n-e^{2}th'i^{2}l. Fr., *arsén-éthyle.* Ger., *Arsenäthyl.* A bivalent or quadrivalent radicle, $As(C_2H_5)''$ or $As(C_2H_5)''''$. [B.]—**A. diiodide.** Fr., *biiodure d'arsén-éthyle.* Ger., *Arsenäthyldijodür.* A substance, $As(C_2H_5)I_2$, formed by the action of iodine upon arsendiethyl iodide. [B, 2.]

ARSENETHYLIC, adj. A^{3}r''se^{2}n-e^{2}th-i^{2}l'i^{2}k. Fr., *arsénéthylique.* Of, pertaining to, or derived from, arsenethyl. [B.]

ARSENETHYLIUM (Lat.), n. n. A^{3}r-se^{2}n-e^{2}th-i^{2}l(u^{6}l)'i^2-u^{3}m(u^{4}m). Fr., *arsén-éthylium.* Ger., *Arsenäthylium.* See ETHYL*arsonium* and TETRETHYL*arsonium.*

ARSENETED, adj. A^{3}rs'e^{2}n-e^{2}t-e^{2}d. See ARSENIURETED.

ARSENIA (Lat.), n. f. A^{3}r-se^{2}n'i^2-a^3. Hydrogen arsenide. [B, 9.]

ARSENIAC, adj. A^{3}r-se^{2}n'i^2-a^{2}k. Of or pertaining to arsenic. [B.]—**A. acid.** Arsenic acid. [B, 91.]

ARSENIAS (Lat.), n. m. A^{3}r-se^{2}n'i^2-a^{2}s(a^{3}s). Gen., *arsenia'tis.* An arsenate. [B.]—**A. ammonicus.** See AMMONIUM *arsenate.*—**A. ammonicus solutus.** See *Liquor* AMMONII *arsenici.*—**A. bihydrico-kalicus.** Dihydric potassium arsenate. [A, 316.] See POTASSIUM *arsenate.*—**A. ferricus.** Ferric arsenate. [A, 316.] See IRON *arsenate.*—**A. ferrosus** [Fr. Cod.]. Ferrous arsenate. [B, 113.] See IRON *arsenate.*—**A. hydrico-binatricus.** Disodic arsenate. [A, 316.] See SODIUM *arsenate.*—**A. natricus.** Sodium arsenate. [B.]—**A. potassicus.** Potassium arsenate. [A, 316.]—**A. sodicus** [Fr. Cod.]. Disodic arsenate. [B, 113.] See SODIUM *arsenate.*—**A. sodicus aqua solutus** [Fr. Cod.]. See *Liquor* SODII *arseniatis.*

ARSENIASIS (Lat.), n. f. A^{3}r-se^{2}n-i^2-a(a^3)'si^{2}s. Gen., *arsenia'seos (-sis).* Fr., *arséniasie.* Poisoning by arsenic; arsenicalism. [B, 38.] See under ARSENIC *trioxide.*

ARSENIATE, n. A^{3}r-se^{2}n'i^2-at. Fr, *arséniate.* Ger., *Arseniat.* It., Sp., *arseniato.* See ARSENATE.

ARSÉNIATE (Fr.), n. A^{3}r-san-i^2-a^{3}t. An arsenate. [B.]—**A. ferreux** [Fr. Cod.]. Ferrous arsenate. [B, 113.] See IRON *arsenate.*

ARSENIATED, adj. A^{3}r-se^{2}n'i^2-at-e^{2}d. Lat., *arsenicatus.* Fr., *arséniaté, arsénié, arséniqué.* It., *arseniato.* Sp., *arseniado.* Arseniureted. [B.]

ARSENIC, n. A^{3}r'se^{2}n-i^{2}k. From ἀρσενικόν, ἀῤῥενικόν, orpiment, so called from ἀῤῥενικός, masculine, on account of its strength. Lat., *arsenicum, arsenum, arsenium* [U. S. Ph.]. Fr., *arsenic.* Ger., *Arsen, Arsenik.* It., *arsenico.* Sp., *arsénico.* 1. An element frequently ranked among the metals, but now usually regarded as non-metallic. It was known under the form of its sulphur compounds to the ancients, but was first isolated by the later alchemists (Schröder, 1694; Brandt, 1773). It occurs in nature in combination with iron as lölingite, with iron and sulphur as arsenical pyrites or mispickel, with sulphur as realgar and orpiment, and with nickel, cobalt, and other elements; and it is also found in the free state. A. is procured chiefly by subliming arsenical pyrites, when it is obtained under the form of a steel-gray, brittle, crystalline mass of metallic lustre. On resublimation, this is converted into lustrous rhombohedral crystals, isomorphous with those of tellurium and antimony, of a sp. gr. of 5·727. *Amorphous a.*, under the form of either a shining black mass or a grayish powder, and having a sp. gr. of 4·710, is obtained by subliming crystalline a. in a current of hydrogen and condensing in the colder portion of the sublimation-tube. On heating, this is converted into crystalline a. A. usually volatilizes directly, without fusion, giving off a lemon-colored vapor of garlicky odor, but under increased pressure can be melted, and then solidifies into a crystalline mass of a sp. gr. of 5·709. On exposure to moist air, a. readily oxidizes and becomes covered with a grayish film. In composition a. acts sometimes as a triad, sometimes as a pentad, forming compounds analogous to those of nitrogen, with which it is usually associated in systematic chemical treatises. It unites directly with hydrogen, forming arsine, which is the starting-point for the different a. bases (arsines, arsoniums, and their derivatives the arsinic and arsonic acids). It also forms compounds with the halogens and with phosphorus; and with oxygen and sulphur it unites to form oxides and sulphides, which in turn give rise to various oxyacids and sulphur acids, and to their salts, the arsenites, metarsenites, arsenates, pyroarsenates, metarsenates, thioarsenites, and thioarsenates. Atomic weight, 74·9; vapor density, 149·8 (the molecule containing 4 atoms of a. instead of 2 as in the case of most elements); symbol, As (occasion-

ally Ar). [B, 3, 158, 159, 196.] 2. In common parlance, a. is used for a. trioxide, and formerly designated also a. trisulphide. [B.]—**A. ammonio-chloride.** Fr., *ammonio chlorure d'a.* A white solid substance, $As_2H_{21}N_7Cl_6 = 2AsCl_3 + 7NH_3$ (Rose), or $2(NH.AsCl).4NH_4Cl.NH_3$ (Pasteur), or $AsCl_3 + 3NH_3$ (Roscoe and Schorlemmer), or $AsCl_3 + 2NH_3$ (Frankland and Japp), soluble in water and in alcohol, formed by the action of dry ammonia upon a. trichloride. [B, 2, 3, 159.]—**A. and calcium sulphide.** See CALCIUM *thioarsenite* and *Sulphuretum* ARSENICI *et calcis*.—**A. and selenium sulphide.** See *A. seleno-sulphide* and *A. thioselenide*.—**A. base.** Fr., *base arsénicale.* Ger., *Arsenbase.* It., *base arsenicale.* Sp., *base arsenical.* A bases containing a., as arsine and its substitution compounds and the arsoniums; a base having the same relation to a. that the ammonium bases have to nitrogen. [B.]—**A. bichloride.** Fr., *bichlorure d'a.* See *A. dichloride*.—**A. bisulphide, A. bisulphuret.** See *A. disulphide*.—**A. blanc** (Fr.). White a. [B.] See *A. trioxide*.—**A. bloom.** Ger., *Arsenikblüthe.* See ARSENOLITE.—**A. bromide.** Fr., *bromure d'a.* Ger., *Bromarsen, Arsenbromür.* It., *bromuro di arsenico.* Sp., *bromuro de arsénico.* A compound of a. and bromine. [B.] See *A. tribromide*.—**A. chlordihydrate.** Fr., *chlordihydrate d'a.* Ger., *Arsenchlordihydrat.* See under *A. oxychloride*.—**A. chloride.** Lat., *arsenici chloridum.* Fr., *chlorure d'a.* Ger., *Arsenchlorür, Arsenchlorid, Chlorarsen.* It., *cloruro di arsenico.* Sp., *cloruro de arsénico.* A compound of a. and chlorine. [B.] See *A. trichloride*.—**A. chlorophosphide.** A compound of a. with chlorine and phosphorus, prepared by heating together on a water-bath arsenic acid 1 part, phosphorus 2 parts, dilute hydrochloric acid 180 parts, and water up to 270 parts. ["Drugg. Circ. and Chem. Gaz.," Nov., 1881, p. 171, and Jan., 1884, p. 9 (B).]—**A. des philosophes** (Fr.). An alchemical term for mercury or the substance from which mercury or sulphur is obtained. [B, 38.]—**A. dichloride.** Fr., *bichlorure d'a.* Ger., *Arsendichlorid.* A substance, $AsCl_2$, obtained, according to Gmelin and Dumas, by distilling a. trioxide and sulphuric acid and adding common salt during the operation. [B, 142.]—**A. dihydrate.** Fr., *bihydrate d'a.* Ger., *Arsendihydrat.* It., *diidrato di arsenico.* Pyroarsenic acid. [B, 2.]—**A. dihydride.** Fr., *bihydrure d'a.* Ger., *Arsendihydrür.* Solid hydrogen arsenide. See HYDROGEN *arsenide*.—**A. disulphide.** Gr., *σανδαράκη* [Theophrastus and Dioscorides]. Lat., *sandaraca* [Pliny and Vitruvius], *arsenicum rubrum* (seu *sulfuratum rubrum*), *sulphuretum arsenici rubrum* [Belg. Ph.]. Fr., *bisulfure d'a., sulfure rouge d'a.* [Fr. Cod.], *a. sulfure rouge.* Ger., *Arsensulfür, Arsendisulfid, Zweifach-Schwefelarsen, rothes Rauschgelb.* It., *bisolfuro di arsenico.* Sp., *bisulfuro de arsénico, arsénico rojo* [Sp. Ph.], *rejalgar* [Sp. Ph.]. Syn.: *realgar, red orpiment.* A substance, As_2S_2, occurring native as resinous-looking translucent prismatic crystals, orange-yellow in color, streaked with yellow or red. A substance of similar, although somewhat variable, composition, called *ruby sulphur* or *red a. glass, arsenicum rubrum factitium*, is prepared by heating arsenical pyrites with iron pyrites or other sulphurous ore. It is a red vitreous mass translucent at the edges, containing from 66 to 75 per cent. of a. A disulphide combines with basic sulphides to form compounds known as *hypothioarsenites* (*q. v.*), and is hence improperly called *hyposulpharsenious acid.* It is used in tanning and in pyrotechnics, and has been occasionally used in medicine as a remedy for intermittent fevers. [B, 3, 119.]—**A. flour.** Ger., *Giftmehl.* See under *A. trioxide*.—**A. fluoride.** Fr., *fluorure d'a.* Ger., *Arsenfluorür.* It., *fluoruro di arsenico.* A compound of a. and fluorine. [B.] See *A. trifluoride* and *A. pentafluoride*.—**A. glass.** Fr., *verre d'a.* Ger., *Arsenglas.* See *A. disulphide* and *A. trioxide*.—**A. hydrate.** Fr., *hydrate d'a.* Ger., *Arsenhydrat.* It., *idrato di arsenico.* Sp., *hidrato de arsénico.* See *A. monohydrate, A. dihydrate*, and *A. trihydrate*.—**A. hydride.** Fr., *hydrure d'a.* Ger., *Arsenwasserstoff.* It., *idruro di arsenico.* Sp., *hidruro de arsénico.* See HYDROGEN *arsenide*.—**A. hydriodate.** See *A. triiodide*.—**A. hypersulphuret.** Ger., *Arsenikübersulfid* [Berzelius]. A. persulphide. [B, 142.]—**A. iodide, A. ioduret.** Lat., *arsenicum iodatum* (seu *ioduretum* [Gr. Ph.], *arsenii iodidum* [U. S. Ph., Br. Ph.]). Fr., *iodure d'a.* Ger., *Jodarsen, Arsenjodür.* It., *ioduro di arsenico.* Sp., *ioduro de arsénico.* A compound of a. and iodine. [B.] See *A. triiodide*.—**A. monohydrate.** Fr., *monohydrate d'a.* Ger., *Arsenmonohydrat.* It., *monoidrato di arsenico.* See METARSENIC ACID.—**A. noir** (Fr.). Metallic a. [A, 301.]—**A. normal** (Fr.). The a. which, according to some, is invariably present in all dead bodies and which is always to be found on making the appropriate tests. [Raspail (B, 38).]—**A. octadeca-sulphide.** A. persulphide. [B, 140.]—**A. oxide.** Lat., *arsenicum oxydatum, arsenici oxidum.* Fr., *oxyde d'a.* Ger., *Arsenoxyd.* It., *ossido di arsenico.* Sp., *óxido de arsénico.* A compound of a. and oxygen. [B.] See *A. trioxide, A. pentoxide*, and *A. suboxide*.—**A. oxybromide.** Fr., *oxybromure d'a.* Ger., *Arsenoxybromür.* It., *ossibromuro di arsenico.* A soft dark-colored mass of the composition AsBrO, forming the lower of two layers into which a solution of a. trioxide in a fused a. tribromide separates after distillation and cooling. A hydrated oxybromide, $2AsBrO.3H_2O$, consisting of thin, white, pearly crystals, is formed by evaporating in the cold over sulphuric acid a solution of a. tribromide in water containing hydrobromic acid. [A, 1.]—**A. oxychloride.** Fr., *oxychlorure d'a.* Ger., *Arsenoxychlorür.* It., *ossicloruro di arsenico.* A viscid, translucent brownish mass of the composition $AsClO(= AsCl_3.As_2O_3)$, obtained by distilling a solution of a. trioxide in a. trichloride, also by treating a. trichloride with a quantity of water insufficient to dissolve it. Combined with water, this body constitutes *A. chlordihydrate*, $AsCl(OH)_2 = AsOCl + H_2O$, a substance deposited as acicular crystals when a. trichloride is decomposed with water. [A, 1; B, 159.]—**A. oxydé** (Fr.). A. oxide. [B, 132.]—**A. oxyiodide.** Fr., *oxyiodure d'a.* Ger., *Arsenoxyjodür.* It., *ossiioduro di arsenico.* A substance forming thin pearly laminar crystals of the composition $As_8I_2O_{11}(= 2AsIO.3As_2O_3) + 6H_2O$, deposited from a slowly cooled aqueous solution of a. triiodide. [A, 1.]—**A. oxysulphide.** Fr., *oxysulfure d'a.* Ger., *Arsenoxysulfür.* It., *ossisolfuro di arsenico.* Sp., *óxisulfuro de arsénico.* A substance, $As_2O_3S_2$, improperly called *sulphoxiarsenic acid*, known only in solution and through its compounds with basic oxides, called sulphoxarsenates. [B, 140.]—**A. pentafluoride.** Fr., *pentafluorure d'a.* Ger., *Arsenpentafluorid.* A substance, AsF_5, known only in composition with other fluorides. [B, 3.]—**A. pentamethylide.** See PENTAMETHYL*arsine*—**A. pentasulphide.** Fr., *pentasulfure d'a., quintisulfure d'a.* Ger., *Arsenpentasulfid, Arsensupersulfid.* It., *pentasolfuro di arsenico.* Sp., *pentasulfuro de arsénico.* Syn.: *arsenic sulphide, sulpharsenic anhydride.* A substance, As_2S_5, obtained as a yellow precipitate by decomposing a thioarsenate with hydrochloric acid, and also prepared by fusing together a. trisulphide and sulphur. In combination with basic sulphides it forms the class of salts called thioarsenates, and is hence frequently (although improperly) called *sulpharsenic acid.* [B, 2, 3, 159.]—**A. pentoxide.** Fr., *pentoxyde d'a.* Ger., *Arsenpentoxyd.* It., *pentossido di arsenico.* Sp., *pentóxido de arsénico.* Syn.: *arsenic oxide* (or *anhydride*), *anhydrous arsenic acid.* A substance, As_2O_5, occurring as a white porous mass when arsenic acid is heated to just below a red heat. It is soluble in water, deliquesces in moist air, forming arsenic acid, and by reducing agents is converted into metallic a. By combining with water in various proportions it forms arsenic, metarsenic, and pyroarsenic acids, and is itself often erroneously designated as arsenic acid. [B, 3.]—**A. persulphide.** Fr., *persulfure d'a.* Ger., *Arsenpersulfid.* It., *persolfuro di arsenico.* Sp., *persulfuro de arsénico.* A substance having, according to Berzelius, the composition As_2S_{18}, obtained as yellow crystalline scales by mixing a solution of dipotassic or disodic thioarsenate with alcohol and evaporating to about two thirds. The name a. persulphide is also applied to a sulphide of a. containing a higher proportion of sulphur, made by fusing a. trioxide with sulphur. [B, 2, 140.]—**A. phosphide.** Fr., *phosphure d'a.* Ger., *Phosphorarsen.* It., *fosfuro di arsenico.* A brownish-red substance, AsP, compounded of a. and phosphorus. [B, 3.]—**A. radicle.** A radicle containing a., especially one compounded of a. and a hydrocarbon. [B.] See ARSINE and ARSONIUM.—**A. seleno-sulphide.** Fr., *sélénio-sulfure d'a.* A reddish-colored translucent substance of the composition $AsSeS_2$. [B, 3.] Cf. *A. thioselenide*.—**A. sesquichloride.** Fr., *sesquichlorure d'a.* Ger., *Arsensesquichlorür.* A. trichloride. [B, 142.]—**A. suboxide.** Fr., *sous-oxyde d'a.* Ger., *Arsensuboxyd.* It., *sotto-ossido di arsenico.* Sp., *subóxido de arsénico.* The blackish-gray oxide of a. deposited upon metallic a. when exposed to moist air. It is probably a mixture of a. and a. trioxide. According to some, the garlicky odor of metallic a. is due to a suboxide of a. [B, 140, 196.]—**A. subsulphide.** Fr., *sous-sulfure d'a.* Ger., *Arsensubsulfür.* It., *sotto-solfuro di arsenico.* Sp., *subsulfuro de arsénico.* A brown powder, $As_{12}S$, which remains when a. disulphide is digested with caustic alkalies. [A, 1.]—**A. sulfuré** (Fr.). A. sulphide. [B.]—**A. sulfuré jaune** (Fr.). A. trisulphide. [B, 119.]—**A. sulfuré rouge** (Fr.). A. disulphide. [B, 119.]—**A. sulphate.** Fr., *sulfate d'a.* Ger., *schwefelsaures Arsenoxyd.* It., *solfato di arsenico.* Sp., *sulfato de arsénico.* A compound supposed to be obtained when a. is heated with sulphuric acid. [B, 140.]—**A. sulphide.** Lat., *arsenicum sulfuratum, arsenici sulphidum.* Fr., *sulfure d'a., a. sulfuré.* Ger., *Schwefelarsen, Arsensulfid.* It., *solfuro di arsenico.* Sp., *sulfuro de arsénico.* A compound of a. and sulphur. [B.] See *A. subsulphide, A. disulphide, A. trisulphide, A. pentasulphide*, and *A. persulphide*.—**A. superiodide.** Lat., *arsenici superioduretum.* An iodide of a. (apparently the triiodide) occurring in the liquor arsenici superiodureti. [B, 98.]—**A. terbromide, A. terchloride, A. terfluoride, A. teriodide, A. teroxide, A. tersulphide** (or **tersulphuret**). See *A. tribromide, A. trichloride, A. trifluoride, A. triiodide, A. trioxide*, and *A. trisulphide*.—**A. thioselenide.** Fr., *thiosélénîure d'a.* Ger., *Arsenthioseleniür.* A crystalline substance of the composition $AsSSe_2$. [B, 3.] Cf. *A. seleno-sulphide*.—**A. tribromide.** Lat., *arsenici terbromidum.* Fr., *tribromure d'a., bromure arsénieux.* Ger., *Arsenbromür, Arsentribromür.* It., *tribromuro di arsenico.* Sp., *tribromuro de arsénico.* Syn.: *arsenious bromide, bromide of a.* A substance, $AsBr_3$, occurring as colorless deliquescent prismatic crystals of strong arsenical odor, formed by the action of pulverized a. upon a solution of bromine in carbon disulphide. [B, 3, 159.]—**A. trichloride.** Lat., *arsenici* (seu *arsenii*) *chloridum, arsenicum chloratum.* Fr., *trichlorure d'a., chlorure arsénieux.* Ger., *Chlorarsen, Arsenchlorid, Arsenchlorür, Arsentrichlorür.* It., *tricloruro di arsenico, cloruro arsenioso.* Sp., *tricloruro de arsénico.* Syn.: *butter of a., caustic oil of a., arsenious chloride.* A very heavy, colorless, oily liquid, $AsCl_3$, obtained by the action of dry chlorine upon a., by distilling a. with corrosive sublimate or a. trioxide with sodium chloride and sulphuric acid, or by boiling a solution of a. trioxide in hydrochloric acid. It gives off white fumes of a. trioxide on exposure to the air and on contact with a small quantity of water, decomposes with the formation of a. chlordihydrate, while by an excess of water it is decomposed into a. trioxide and hydrochloric acid. Contact with dry ammonia converts it into a. ammonio-chloride. It is very poisonous. [B, 2, 3, 159.]—**A. trifluoride.** Fr., *trifluorure d'a.* Ger., *Arsentrifluorür.* A transparent, colorless liquid, AsF_3, very volatile and fuming on exposure to the air. A drop of it applied to the skin produces a painful ulcer which suppurates a long time like a burn. [A, 1; B, 3.]—**A. trihydrate.** Fr., *trihydrate d'a.* Ger., *Arsentrihydrat.* It., *triidrato di arsenico.* Sp., *trihidrato de arsénico.* Arsenic acid. [B, 2.]—**A. trihydride.** Fr., *trihydrure d'a.* Ger., *Arsentrihydrür.* It., *triidruro di arsenico.* Sp., *trihidruro de arsénico.* Arsenuretted hydrogen gas. [B.] See HYDROGEN *arsenide*.—**A. triiodide.** Lat., *arsenici iodidum* (seu *teriodidum*), *arsenii iodidum* [U. S. Ph., Br. Ph.], *arsenicum iodatum* (seu *ioduretum* [Greek Ph.]). Fr., *triiodure d'a., iodure arsénieux.* Ger., *Jodarsen, Arsenjodür, Arsentrijodür.* It., *triioduro di arsenico, ioduro arsenioso.* Sp., *triioduro de arsénico.* Syn.: *iodide of a., arsenious iodide.* An unstable compound, AsI_3, formed by melting together a mixture of a. and iodine. It occurs as orange-red crystalline masses of iodine-

like odor and taste, soluble in water, in alcohol, and in ether. From the alcoholic solution it crystallizes in brick-red laminæ. It has been used as an application in ulcerating tubercular skin diseases and internally in impetigo, lepra, and affections resembling cancer. It is also used in the preparation of the liquor arsenii et hydrargyri iodidi. [B, 2, 5.] Cf. *Liquor superiodureti* ARSENICI.—**A. trioxide.** Lat., *acidum arseniosum* [U. S. Ph., Br. Ph., Belg. Ph., Swiss Ph.], *acidum arsenicosum* [Ger. Ph., Aust. Ph., Hung. Ph., Russ. Ph., Norweg. Ph., Swed. Ph., Dan. Ph., Fenn. Ph.], *arsenicum album* [Greek Ph.]. Fr., *acide arsénieux* [Fr. Cod.], *trioxyde d'a., oxyde blanc d'a., a. blanc.* Ger., *arsenige Säure, Arsenoxyd, Arsentrioxyd, weisses Arsen.* It., *acido arsenioso, arsenico bianco, triossido di arsenico.* Sp., *arsénico blanco* [Sp. Ph.], *trióxido de arsénico, ácido arsenioso.* Syn.: *arsenious acid, white a., white oxide of a., common a.* A substance, As_2O_3, obtained by volatilizing a. in the presence of oxygen. It is commonly prepared by subliming arsenical pyrites, the product of the sublimation being called *poison-flour* or *flowers of a.* On resublimation this latter product furnishes amorphous a. trioxide (*a. glass, vitreous arsenious acid*), a colorless translucent, vitreous mass of sp. gr. of 3·738, soluble in 25 parts of cold water and 94 of absolute alcohol. This amorphous form on standing is gradually converted into an opaque porcelain-like mass of crystalline structure (*opaque* or *enamel-like arsenious acid*). Crystalline a. trioxide, under the form of octahedral crystals (*octahedral arsenious acid*) of sp. gr. of 3·689 soluble in 80 parts of cold water and 400 of absolute alcohol, occurs native as arsenolite, and may be obtained artificially by crystallization of either vitreous or opaque arsenious acid from a solution in hydrochloric acid; and, under the form of rhombic crystals (*right rhombic arsenious acid*), it occurs as claudetite, and is also found among the products of sublimation of arsenical pyrites. A. trioxide is odorless, has a faint sweetish metallic taste, and is volatile, emitting a colorless and odorless vapor. Chemically it is an acid-forming oxide, uniting with water to form true arsenious acid, and also metarsenious acid. It is much used in the preparation of other arsenical compounds, in the manufacture of pigments, and in glass-making. In doses of $^1/_{30}$-$^1/_{20}$ grain, it appears to act as a digestive tonic and cardiac and respiratory stimulant, and is much employed as a nerve-tonic in chorea and other nervous affections, as a remedy in chronic skin-disease, and as an adjuvant to or substitute for quinine in the treatment of malarial poisoning, and especially of its non-febrile manifestations. By the a. eaters of Styria, a. trioxide is used habitually in much larger doses without apparent ill-effects. In ordinary cases in doses of 1 grain or upward it is an acrid poison, producing violent gastro-enteritis with ulceration of the stomach and intestines, and fatty or parenchymatous degeneration of the liver, heart, and kidneys. The symptoms of acute arsenical poisoning are burning pain in the epigastrium, marked gastric irritability, vomiting, and purging, the vomited matters being brownish or bloody and the stools black and fœtid, great thirst, suppression of urine, and extreme prostration. If the patient survives this inflammatory stage, nervous symptoms (paresis, convulsions, tetanus, mania, etc.) frequently ensue. This acute form of arsenical poisoning is usually fatal unless the poison is evacuated or rendered inert by combination with some substance which renders it insoluble in the liquids of the stomach. The former is effected by the use of warm water, the sulphates of zinc and copper, and the use of the stomach-pump; the latter is accomplished by the use of the hydrated oxide of iron, magnesia, and sulphureted hydrogen, the first being by far the most efficacious. In addition, demulcents are to be given to reduce the inflammation, stimulants to combat the depression, and narcotics to relieve the pain. Besides this acute form of poisoning by a. trioxide or its salts, a chronic form is observed in those who work with arsenical compounds, or who in other ways take into the system small repeated doses of a soluble a. compound. The symptoms of this chronic arsenical poisoning are gastric disturbance, cutaneous irritation, conjunctival redness and itching, and œdema of the eyelids. In its topical action, a. trioxide is an escharotic and is frequently applied, especially by irregular practitioners, to cancerous and other malignant ulcers. A. trioxide enters into the composition of the liquor potassii arsenitis, liquor acidi arseniosi, and other official and unofficial solutions and pastes. [B, 3, 5, 159.]—**A. trisulphide.** Gr., ἀρσένικον (Dioscorides), ἀῤῥένικον (Theophrastus). Lat., *sulphuretum arsenici flavum* [Belg. Ph.], *arsenicum sulfuratum citrinum, arsenici tersulphuretum, arsenicum* (Pliny), *auripigmentum* (Vitruvius). Fr., *sulfure jaune d'a.* [Fr. Cod.], *trisulfure d'a.* Ger., *Arsensupersulfür, Arsentrisulfid, gelbes Rauschgelb.* It., *trisolfuro di arsenico, orpimento.* Sp., *arsénico amarillo* [Sp. Ph.], *oropimente* [Sp. Ph.], *trisulfuro de arsénico.* Syn.: *arsenious sulphide, yellow sulphide of a., sulpharsenious anhydride.* A substance, As_2S_3, occurring native, under the form of lemon-yellow rhombic prismatic crystals, as the mineral *orpiment*, and obtainable artificially as an orange-yellow powder by precipitating an acidulated solution of a. trioxide or of an arsenite with hydrogen sulphide. It is ordinarily insoluble in water, but may be obtained in solution by passing hydrogen sulphide into a pure aqueous solution of a. trioxide and separating the unaltered a. trioxide by dialysis. This variety of a. trisulphide, called *colloidal arsenious sulphide*, forms a yellowish solution with reddish fluorescence, which on evaporation yields a yellowish or reddish, amphorous, translucent substance. *Commercial a. trisulphide* is prepared by heating together a. trioxide and sulphur, and is really a mixture of the trioxide and trisulphide. It is highly poisonous, while the pure trisulphide is comparatively inert. In composition with basic sulphides, a. trisulphide forms sulphur salts (thioarsenites), analogous to the arsenites, and is hence often improperly called sulpharsenious acid. A. trisulphide is used as a pigment (*king's yellow*) in the printing of indigo-colors, and in the manufacture of fire-works; and it has been employed in medicine chiefly as a depilatory, but also formerly by way of fumigation in the treatment of asthma and venereal ulcers. See MIXTURE *cathérétique.* The Fr. Codex distinguishes native orpiment (*sulfure jaune d'a. naturel*) from the trisulphide artificially prepared by precipitation (*sulfure jaune d'a. officinal*). Fr., *a. blanc, oxyde d'a. blanc.* Ger., *weisser Arsenik.* It., *arsenico bianco, ossido bianco di arsenico.* Sp., *arsénico blanco* [Sp. Ph.]. See *A. trioxide.*—**Yellow a., Yellow sulphide of a., Yellow sulphuret of a., Yellow sulphurized a.** Lat., *arsenicum sulfuratum citrinum, sulphuretum arsenici flavum* [Belg. Ph.]. Fr., *sulfure jaune d'a.* [Fr. Cod.]. Ger., *gelber Arsenik.* It., *solfuro giallo di arsenico.* Sp., *arsénico amarillo* [Sp. Ph.]. See *A. trisulphide.*

ARSENIC, adj. A³r-se²n'i²k. Lat., *arsenicus, arsenicicus.* Fr., *arsénique.* It., *arsenico.* Sp., *arsénico.* Of, pertaining to, or containing, arsenic; in chemical nomenclature, containing arsenic as a quinquivalent radicle. [B.]—**Anhydrous a. acid.** Fr., *acide arsénique anhydre.* Ger., *wasserfreie Arsensäure.* It., *acido arsenico anidro.* Sp., *ácido arsénico.* Arsenic pentoxide. [B.]—**A. acid.** Lat., *acidum arsenicum* [Fr. Cod.] (seu *arsenicicum* [Swiss Ph.]). Fr., *acide arsénique* [Fr. Cod.]. Ger., *Arsensäure.* It., *acido arsenico.* Sp., *ácido arsénico.* A name often given improperly to arsenic pentoxide, but properly applied to the hydrate of this substance, $H_3AsO_4(As_2O_5 + 3H_2O = 2H_3AsO_4)$, which acts as a tribasic acid forming salts called arsenates. A. acid usually occurs in the

form of a very concentrated aqueous solution of syrupy consistence, metallic taste, strongly acid reaction, and corrosive properties. From this solution the pure acid (the a. acid of the Fr. Cod. and Swiss Ph.) separates in the form of acicular crystals having the constitution $2(H_3AsO_4) + H_2O$. At 100° C. these crystals melt, lose their water of crystallization, and are reduced to a white pulverulent mass. At 140°-160° C. a. acid is converted into pyroarsenic acid, and at 260° C. into metarsenic acid. A. acid and the arsenates are poisonous, but not as much so as arsenic trioxide and the arsenites. [B, 2, 3.] See also METARSENIC ACID and PYROARSENIC ACID. —**A. anhydride.** Fr., *anhydride arsenique.* Ger., *Arsensäureanhydrid.* It., *anidride arsenica.* See ARSENIC *pentoxide.*—**A. oxide.** Fr., *oxyde arsénique.* It., *ossido arsenico.* Sp., *óxido arsénico.* See ARSENIC *pentoxide.*—**A. sulphide.** Fr., *sulfure arsénique.* It., *solfuro arsenico.* Sp., *sulfuro arsénico.* See ARSENIC *pentasulphide.*—**Monobasic a. acid.** See METARSENIC ACID.—**Tetrabasic a. acid.** See PYROARSENIC ACID.—**Tribasic a. acid.** See *A. acid.*

ARSENICAL, adj. A^{3}r-se^{2}n'i^{2}k-a^{2}l. Lat., *arsenicalis.* Fr., *arsénical.* Ger., *arsenikalisch.* It., *arsenicale.* Sp., *arsenical.* Of, pertaining to, or containing, arsenic; derived from arsenic. [B.] See *A.* CAUSTIC, *A.* ŒDEMA, *A.* PASTE, *A.* PYRITES, *A.* INTOXICATION, *A.* POISONING, *A.* RASH, *A.* SALT, and *A.* SOLUTION.

ARSENICALIS (Lat.), adj. A^{3}r-se^{2}n-i^{2}k-a(a^3)'li^{2}s. Arsenical. [B.] For special uses of the word see under ŒDEMA, SOLUTIO, and ULCUS.

ARSENICALISM, n. A^{3}r-se^{2}n'-i^{2}k-a^{2}l-i^{2}zm. Fr., *arsenicisme.* Chronic arsenical poisoning. [A, 301.] See ARSENIC *trioxide.*

ARSENICATE, v. tr. A^{3}r-se^{2}n'i^{2}k-at. Lat., *arsenicare.* To impregnate with arsenic. [A, 316.]

ARSENICATUS (Lat.), adj. A^{3}r-se^{2}n-i^{2}k-a(a^3)'tu^{3}s(tu^{4}s). Fr., *arséniqué.* Arsenicated; combined with or containing arsenic. [B, 119.]

ARSENICHT (Ger.), adj. A^{3}r-se^{2}n'i^{2}ch^{2}t. Arsenious.—**A'e Säure.** Arsenious acid.

ARSENICIASIS (Lat.), n. f. A^{3}r-se^{2}n-i^2-si^2(ki^2)-a(a^3)'si^{2}s. Gen., *arsenicia'seos (-is).* Fr., *arséniciase.* Ger., *Arsenikdarre.* See ARSENICALISM.

ARSENICICUS (Lat.), adj. A^{3}r-se^{2}n-i^{2}s(i^{2}k)'i^{2}k-u^{3}s(u^{4}s). Fr., *arsénicique.* Arsenical; agreeing with the name of a base, the arsenate of that base. [B.] See ACIDUM *arsenicicum,* FERRUM *arsenicicum,* etc.

ARSENICISM, n. A^{3}r-se^{2}n'i^{2}s-i^{2}zm. Fr., *arsénicisme.* See ARSENICALISM. [D, 34.]

ARSENICK, n. A^{3}r'se^{2}n-i^{2}k. 1. An archaic spelling of arsenic. 2. The *Polygonum hydropiper.* [B, 222.]

ARSÉNICO-FERRIFÈRE (Fr.), adj. A^{3}r-san-i^{2}k-o-fe^{2}r-ri^2-fe^{2}r. Containing or producing arsenic and iron. [B, 132.]

ARSENICOPHAGUS (Lat.), n. A^{3}r-se^{2}n-i^{2}k-o^{2}f'a^3-gu^{3}s(gu^{4}s). From ἀρσενικόν, arsenic, and φαγεῖν, to eat. Fr., *arsénicophage.* Ger., *Arsenikesser.* An arsenic-eater. [L, 46.]

ARSENICOPHAGY, n. A^{3}r-se^{2}n-i^{2}k-o^{2}f'a^3-ji^2. Fr., *arsénicophagie.* Ger., *Arsenikessen.* The practice of eating arsenic. [A, 385.]

ARSENICO-SULFURATUS (Lat.), adj. A^{3}r-se^{2}n-i^{2}k-o-su^{3}l-(su^{4}l)-fu^2(fu)-ra(ra^3)'tu^{3}s(tu^{4}s). From *arsenicum,* arsenic, and *sulfur,* sulphur. Combined with or containing both arsenic and sulphur. [B, 78.] See HYDRARGYRUM *arsenico-sulfuratum.*

ARSÉNICO-SULFURIDE (Fr.), n. A^{3}r-san-i^{2}k-o-su^{6}l-fu^{6}r-ed. A compound containing both sulphur and arsenic; a thioarsenite or thioarsenate. [B, 132.]

ARSENICOSUS (Lat.), adj. A^{3}r-se^{2}n-i^{2}k-o'su^{3}s(su^{4}s). Arsenious; with the name of a base, the arsenite of that base. [B.] See ACIDUM *arsenicosum.*

ARSENICUM (Lat.), n. n. A^{3}r-se^{2}n'i^{2}k-u^{3}m(u^{4}m). From Gr., ἀρσενικόν. See ARSENIC. 1. Orpiment or native arsenic trisulphide (Pliny). 2. Common arsenic; arsenic trioxide. 3. Metallic arsenic. In this sense now superseded by arsenium in the U. S. Ph. and Br. Ph. [B, 2, 5.]—**Antidotum arsenici** [Ger. Ph.]. See FERRI *oxidum hydratum cum magnesia.*—**Aqua arsenici.** See *Liquor* POTASSII *arsenitis* and *Liquor arsenici albi.*—**Arsenici bisulphuretum.** Arsenic disulphide. [B, 98.]—**Arsenici chloridum.** Arsenic trichloride. [B.] **Arsenici hydriodas, Arsenici iodidum** [U. S. Ph., 1870], **Arsenici ioduretum.** Arsenic triiodide. [B.]—**Arsenici oxydum album** [Dub. Ph., 1826]. Arsenic trioxide. [B, 5.]—**Arsenici oxydum album sublimatum** [Dub. Ph., 1826], **Arsenici oxydum præparatum, Arsenici oxydum sublimatum.** Sublimed white oxide of arsenic; arsenic trioxide purified by sublimation. [B, 5, 59.]—**Arsenici superiodidum.** Arsenic superiodide. [B, 98.]—**Arsenici terbromidum.** Arsenic tribromide. [B.]—**Arsenici terchloridum.** Arsenic trichloride. [B.]—**Arsenici teriodidum.** Arsenic triiodide. [B, 98.]—**Arsenici tersulphuretum.** Arsenic trisulphide. [B, 98.]—**A. album** [Greek Ph.]. Arsenic trioxide. [B, 95.]—**A. album calcinatum Bergmanni, A. album pulveratum.** Arsenic trioxide. [B.]—**A. album sublimatum.** Sublimed arsenic trioxide. [A, 316.]—**A. album venale pulveratum.** An impure trioxide of arsenic, used as a poison for rats and other vermin. [B, 270.]—**A. antimoniatum.** See CAUSTICUM *arsenicale.*—**A. bromatum.** Arsenic tribromide. [A, 316.]—**A. chloratum.** Arsenic trichloride. [B, 48.]—**A. citrinum.** Arsenic trisulphide. [B.]—**A. citrinum factitium.** Artificially prepared arsenic trisulphide. [A, 316.]—**A. citrinum nativum.** Native arsenic trisulphide (orpiment). [B, 180.]—**A. croceum.** Arsenic trisulphide. [B, 59.]—**A. crudum.** Arsenic trioxide. [B, 119.]—**A. crystallinum** [Schroder]. Arsenic trioxide. [B, 200.]—**A. cum antimonio.** See CAUSTICUM *antimoniale.*—**A. factitium album** [Aldrov.]. Arsenic trioxide. [B, 200.]—**A. factitium flavum** [Aldrov.]. Artificially prepared arsenic trisulphide. [B, 200.]—**A. flavum.** Yellow sulphide of arsenic; arsenic trisulphide. [B, 119.]—**A. Grenii.** Arsenic trioxide. [A, 316.]—**A. griseum.** Ger., *grauer Arsen.* Arsenic obtained under the form of a gray powder. [B, 180.]—**A. iodatum, A. ioduretum** [Greek Ph.]. Arsenic triiodide. [B, 108, 180.]—**A. luteum.** It., *arsenico giallo.* Golden sulphide of arsenic. [A, 314.] See ARSENIC *trisulphide.*—**A. mineralisatum risigallum.** Arsenic trisulphide. [B, 180.]—**A. nativum porosum.** Native metallic arsenic. [B, 180.]—**A. nigrum.** Metallic arsenic. [A, 314.]—**A. oxydatum, A. oxydatum album.** Arsenic trioxide. [B, 98.]—**A. persulphuratum.** Arsenic trisulphide. [B, 180.] See, however, ARSENIC *persulphide.*—**A. potassicum.** Potassium arsenite. [A, 316.]—**A. pulverisatum.** See *A. album venale pulveratum.*—**A. rex.** An alchemical name for metallic arsenic. [B, 3.]—**A. rubrum.** Red arsenic; arsenic disulphide. [B, 119.]—**A. rubrum crudum.** Realgar; native arsenic disulphide. [B, 180.]—**A. rubrum factitium.** Artificially prepared arsenic disulphide. [B, 200.]—**A. rubrum nativum.** Realgar; native arsenic trisulphide. [B, 180.]—**A. sandaracha.** Sandaracha; arsenic disulphide. [A, 316.]—**A. sulfuratum.** Arsenic sulphide. [B.]—**A. sulfuratum citrinum.** Arsenic trisulphide, especially the native trisulphide or orpiment. [B, 95.]—**A. sulfuratum citrinum purum.** Purified arsenic trisulphide; arsenic trisulphide prepared by precipitation, the *sulfure jaune d'arsenic officinal* of the Fr. Cod. [B, 95.]—**A. sulfuratum flavum.** See *A. sulfuratum citrinum.*—**A. sulfuratum rubrum.** Red sulphide of arsenic; arsenic disulphide. [B, 95.]—**A. testaceum.** A commercial name for one of the varieties of arsenic ore. [B, 180.]—**A. veterum.** Arsenic trioxide. [A, 316.]—**Butyrum arsenici.** Butter of arsenic; arsenic trisulphide. [B, 48.]—**Calx arsenici alba.** Arsenic trioxide. [B, 119.]—**Ceratum arsenici** [U. S. Ph., 1820, 1830]. Fr., *cérat d'arsenic* (ou *arsénical*). Ger., *Arseniksalbe.* It., *cerato di arsenico.* Cerate of arsenic; a preparation, used as an application to cancerous ulcers, consisting of arsenic trioxide, 20 grains, mixed with simple cerate, 1 oz. Various preparations of similar composition are mentioned in several of the older pharmacopœias and dispensatories. [B, 5 (4th ed.), 119.]—**Chloruretum arsenici.** Arsenic trichloride. [B, 119.]—**Deutosulphuretum citrinum arsenici nativum.** Native arsenic trisulphide; orpiment. [B, 180.]—**Ioduretum arsenici.** Arsenic triiodide. [B, 119.]—**Liquor arsenici albi.** A liquid obtained by the deflagration of 2 parts each of nitre and arsenic (arsenic trioxide) with, in some cases, 1 part of sulphur. [B, 59.] This preparation, as well as that known as *aqua arsenici,* seems to be mainly impure arsenic acid produced by the deliquescence of the a. pentoxide produced by the oxidation of the arsenic. [B.]—**Liquor arsenici chloridi** [U. S. Ph., 1870]. See *Liquor* ACIDI ARSENIOSI.—**Liquor arsenici et hydrargyri iodati, Liquor arsenici et hydrargyri iodidi** [U. S. Ph., 1870]. See *Liquor* ARSENII *et hydrargyri iodidi.*—**Liquor arsenici hydrochloricus** [Br. Ph.]. Hydrochloric solution of arsenic. [B.] See *Liquor* ACIDI ARSENIOSI.—**Liquor superioduréti arsenici.** Arsenic triiodide in aqueous solution, used as an external application in cancer. [B, 48.]—**Oleum arsenici.** Caustic oil of arsenic; arsenic trichloride. [B, 48.]—**Oxidum arsenici** [Ed. Ph., 1817], **Oxydum arsenici album.** Arsenic trioxide. [B, 5 (4th ed.), 119.]—**Oxydum arsenici album cum sulphureto stibii.** See CAUSTICUM *arsenicale.*—**Oxydum citrinum arsenici nativum.** Native arsenic trisulphide. [B, 180.]—**Protosulphuretum arsenici.** Arsenic disulphide. [B, 180.]—**Regulus arsenici.** Metallic arsenic. [B, 196.]—**Rubinus arsenici.** Arsenic disulphide. [B, 180.]—**Solutio arsenici.** See *Liquor* ACIDI ARSENIOSI.—**Sulphuretum arsenici flavum** [Belg. Ph.]. Arsenic trisulphide. [B, 95.]—**Sulphuretum arsenici nativum.** Native trisulphide of arsenic. [B, 180.]—**Sulphuretum arsenici rubrum** [Belg. Ph.]. Arsenic disulphide. [B, 95.]—**Sulphuretum citrinum arsenici nativum.** Native trisulphide of arsenic. [B, 180.]—**Unguentum arsenici.** See *Ceratum arsenici.*

ARSENICUS (Lat.), adj. A^{3}r-se^{2}n'i^{2}k-u^{3}s(u^{4}s). Arsenical, arsenic; with the name of a. base, the arsenate of that base. [B.] See ACIDUM ARSENICUM.

ARSENIDE, n. A^{3}r'se^{2}n-i^{2}d(id). Lat., *arsenidum, arseniuretum.* Fr., *arséniure* (1st def.), *arsénide.* Ger., *Arseniür* (1st def.). It., Sp., *arseniuro* (1st def.). 1. A compound made up of arsenic united directly with another element or a radicle. 2. In mineralogy, a mineral composed of arsenic or of an arsenical compound. [B, 2, 132.]

ARSÉNIÉ (Fr.), adj. A^{3}r-sa-ni^2-a. Arseniated, arseniureted. [B, 132.]

ARSENIET, n. A^{3}r-se^{2}n'i^2-e^{2}t. An arsenide. [B, 142.]

ARSÉNIEUX (Fr.), adj. A^{3}r-sa-ni^2-u^5. Arsenious. [B.]

ARSENIFEROUS, adj. A^{3}r''se^{2}n-i^{2}f'e^{2}r-u^{3}s. Lat., *arseniferus* (from *arsenicum,* arsenic, and *ferre,* to bear). Fr., *arsénifère.* Ger., *Arsenhaltig.* It., *arsenifero.* Sp., *arsenifero.* Producing or containing arsenic, as a. compounds. [B, 3, 98.]

ARSENIG (Ger.), adj. A^{3}r-se^{2}n'i^{2}g. Arsenious.—**A'e säure, A'säure.** Arsenious acid. [B.]—**Wasserfreie A'säure.** Anhydrous arsenious acid; arsenic trioxide. [B.]

ARSENIK (Ger.), n. A^{3}r-san'i^{2}k. Arsenic, or arsenic trioxide. —**Aetzendes A'öl.** Caustic oil of arsenic; arsenic trichloride. [B, 196.]—**A'bauer.** A peasant addicted to arsenic-eating. [A, 301.]—**A'blumen.** Flowers of arsenic. [L.] See ARSENIC *trioxide.*—**A'blüte.** Arsenic bloom; native octahedral arsenic trioxide. [B.]—**A'bromür.** See ARSENIC *tribromide.*—**A'butter.** Butter of arsenic; arsenic trichloride. [B, 196.]—**A'chlorür.** See ARSENIC *trichloride.*—**A'darre.** See ARSENICALISM.—**A'essen.** Arsenic-eating. [B, 49.]—**A'esser.** An arsenic-eater. [B.] See under ARSENIC *trioxide.*—**A'jodür.** See ARSENIC *triiodide.*—**A'kies.** See ARSEN*kies.*—**A'kobaltkies.** A native arsenide of cobalt. [B,

49.]—**A'kupfer.** See ARSEN*kupfer*.—**A'lähmung.** Arsenical paralysis.—**A'leber.** See *Liver of* ARSENIC.—**A'mohr.** See ÆTHIOPS *auripigmentalis*.—**A'salbe.** See *Ceratum* ARSENICI.—**A'salz.** An arsenate. [A, 301.]—**A'säure.** Arsenic acid. [B, 196.]—**A'seife.** See *Arsenical* SOAP.—**A'stein.** Metallic arsenic. [B, 180.]—**A'superchlorür** [Berzelius]. Arsenic trichloride. [B, 142.]—**A'übersulfid** [Berzelius]. Arsenic persulphide. [B, 142.]—**A'vergiftung.** Arsenical poisoning. See under ARSENIC *trioxide*.—**A'wasserstoff, A'wasserstoffgas.** Hydrogen arsenide. [B, 142.]—**Fowler's A'auflösung.** See *Liquor* POTASSII *arsenitis*.—**Gelbe A'blende** [Naumann]. Native arsenic trisulphide; orpiment. [B, 180.]—**Gelber A.** Arsenic trisulphide. [B, 49.]—**Gelber natürlicher A.** Native arsenic trisulphide. [B, 180.]—**Gemeiner A.** Arsenic trioxide. [B, 48.]—**Geschwefelter A.** Arsenic sulphide. [B, 124.]—**Grauer A.** See *Graues* ARSEN.—**Rothe A'blende** [Naumann]. Native arsenic disulphide; realgar. [B, 180.]—**Rother A.** Red arsenic; arsenic disulphide. [B, 49.]—**Schwefela'.** Arsenic sulphide. [B, 180.]—**Weisser A.** White arsenic; arsenic trioxide. [B.]

ARSENIKALIEN (Ger.), n. pl. A^{3}r-se^{2}n-i^{2}k-a^{3}l'en. Arsenical preparations; preparations of arsenic and its compounds. [B, 49.]

ARSENIKALISCH (Ger.), adj. A^{3}r-se^{2}n-i^{2}k-a^{3}l'i^{2}sh. Arsenical. [B.]

ARSENIKALKIES (Ger.), n. A^{3}r-se^{2}n-i^{2}k-a^{2}l'kes. Lölingite. [B, 49.]

ARSENIKANTON (Lat.), n. n. A^{3}r-se^{2}n-i^{2}k-a^{2}n(a^{3}n)'to^{2}n. The *Mentha pulegium*. [Dioscorides (B, 121).]

ARSÉNIO-ANTIMONIAL (Fr.), adj. A^{3}r-sa-ni^2-o-a^{3}n-ti^2-mo-ni^2-a^{3}l. Containing both arsenic and antimony. [B, 137.]

ARSÉNIO-BIÉTHYLE (Fr.), n. A^{3}r-sa-ni^2-o-bi^2-at-i^{2}l. Arsendiethyl. [B, 38.]

ARSÉNIO-BIMÉTHYLE (Fr.), n. A^{3}r-sa-ni^2-o-bi^2-mat-i^{2}l. Arsendimethyl. [B.]

ARSÉNIO-CHLORURE (Fr.), n. A^{3}r-sa-ni^2-o-klo-ru^{6}r. See ARSENOCHLORIDE.

ARSENIODIETHYL, ARSENIODIMETHYL, ARSENIODIPHENYL, n's. A^{3}r-se^{2}n''i^2-o-di-e^{2}th'i^{2}l, -me^{2}th'i^{2}l, -fe^{2}n'i^{2}l. Fr., *arsénio-diéthyle, arsénio-diméthyle, arséniq-diphényle*. See ARSENDIETHYL, ARSENDIMETHYL, and ARSENDIPHENYL.

ARSÉNIO-FLUORURE (Fr.), n. A^{3}r-sa-ni^2-o-flu^6-o-ru^{6}r. See ARSENOFLUORIDE.

ARSÉNIO-MÉTHYLATE (Fr.), n. A^{3}r-sa-ni^2-o-mat-i^{2}l-a^{3}t. See ARSENMETHYLATE.

ARSENIO-MOLYBDATE, n. A^{3}r-se^{2}n''i^2-o-mo^{2}l-i^{2}b'dat. Fr., *arsénio-molybdate*. It., *arsenio-molibdato*. A salt of arseniomolybdic acid. [B.]

ARSENIOMOLYBDIC ACID, n. A^{3}r-se^{2}n''i^2-o-mo^{2}l-i^{2}b'di^{2}k. From *arsenic* and *molybdic*. Fr., *acide arsénio-molybdique*. Ger., *Arsenmolybdänsäure*. It., *acido arsenio-molibdico*. An acid substance prepared under the form of orange-red acicular crystals by dissolving a metallic molybdate in an aqueous solution of arsenic acid and decomposing the double salt thus produced with sulphuric acid. [O. Pufahl, "Ber. d. dtsch. chem. Gsllsch.," 1884, 213; "Jour. of the Am. Chem. Soc.," Nov., 1884, p. 286 (B).]

ARSENIOPHENYL, n. A^{3}r-se^{2}n''i^2-o-fe^{2}n'i^{2}l. Fr., *arséniophényle*. See ARSENPHENYL.

ARSENIO-PHOSPHATE, n. A^{3}r-se^{2}n''i^2-o-fo^{2}s'fat. From *arsenic* and *phosphate*. Fr., *arsénio-phosphate*. It., Sp., *arseniofosfato*. A compound of a base with both arsenic and phosphoric acids. [B, 142.]

ARSENIO-PHTHISIS (Lat.), n. f. A^{3}r-se^{2}n''i^2-o-ti(te)'si^{2}s. Gen., *arsenio-phthis'eos* (*-sis*). For deriv, see ARSENIC and PHTHISIS. Fr., *arséniophthisie*. See ARSENICALISM.

ARSÉNIO-SULFURE (Fr.), n. A^{3}r-sa-ni^2-o-su^{6}l-fu^{6}r. A mineral containing arsenic and sulphur. [B, 38.]

ARSENIO-SULPHATE, n. A^{3}r-se^{2}n''i^2-o-su^{3}l'fat. From *arsenic* and *sulphate*. Fr., *arsénio-sulfate*. It., *arsenio-solfato*. Sp., *arsenio-sulfato*. A compound of a base with both arsenic and sulphuric acids. [B, 140.]

ARSENIOSUS (Lat.), adj. A^{3}r-se^{2}n-i^2-o'su^{3}s(su^{4}s). Arsenious; in agreement with the name of a base, the arsenite of that base. [B.] See ACIDUM ARSENIOSUM.

ARSENIOTRIETHYL, ARSENIOTRIMETHYL, n's. A^{3}r-se^{2}n''i^2-o-tri-e^{2}th'i^{2}l, -me^{2}th'i^{2}l. Fr., *arsénio-triéthyle, arsénio-triméthyle*. See TRIETHYLARSINE and TRIMETHYLARSINE.

ARSENIOTUNGSTATE, n. A^{3}r-se^{2}n''i^2-o-tu^{3}n^{2}g'stat. Fr., *arsénio-tungstate*. Ger., *arsenwolframsaures Salz*. It., *arseniotungstato*. A salt of arseniotungstic acid. [B.]

ARSENIOTUNGSTIC ACID, n. A^{3}r-se^{2}n''i^2-o-tun^{2}g'sti^{2}k. Fr., *acide arsénio-tungstique*. Ger., *Arsenwolframsäure*. It., *acido arsenio-tungstico*. An acid formed by dissolving a metallic tungstate in an aqueous solution of arsenic acid and decomposing the double salt so produced with sulphuric acid. [M. Fremery, "Ber. d. dtsch. chem. Gesellsch.," 1884, p. 296; "Jour. of the Am. Chem. Soc.," Dec., 1884, p. 306 (B).]

ARSENIOUS, adj. A^{3}r-se^{2}n'i^2-u^{3}s. Lat., *arseniosus, arsenicosus*. Fr., *arsénieux*. Ger., *arsenig*. It., Sp., *arsenioso*. Containing arsenic; in chemistry, containing arsenic as a trivalent radicle. [B.]—**A. acid.** See the major list.—**A. anhydride.** Fr., *anhydride arsénieux*. Ger., *Arsenigsäureanhydrid*. It., *anidride arseniosa*. See ARSENIC *trioxide*.—**A. bromide, A. chloride, A. fluoride, A. iodide, A. oxide, A. sulphide.** See ARSENIC *tribromide*, ARSENIC *trichloride*, ARSENIC *trifluoride*, ARSENIC *triiodide*, ARSENIC *trioxide*, ARSENIC *trisulphide*.

ARSENIOUS ACID, n. Lat., *acidum arseniosum* (seu *arsenicosum*). Fr., *acide arsénieux, arsenic blanc, mort-aux-rats*. Ger., *Arsenigsäure, arsenige Säure*. It., *acido arsenioso*. Sp., *ácido arsenioso*. A name often given to arsenic trioxide (*q. v.*), but properly applied to the hydrate of this substance, H_3AsO_3(= As_2O_3 + $3H_2O$), a body known only in aqueous solution and prepared by dissolving the trioxide in water. It acts as a tribasic acid forming salts called *arsenites*. [B, 3.] Cf. METARSENIOUS ACID and PYROARSENIOUS ACID.—**Amorphous a. a.** The amorphous variety of arsenic trioxide. [B, 98.]—**Anhydrous a. a.** Fr., *acide arsénieux anhydre*. Ger., *wasserfreie Arsenigsäure*. It., *acido arsenioso anidro*. Arsenic trioxide. [B.]—**A. a. hydriodate.** See *A. a. terhydriodate*.—**A. a. sulphate.** See ARSENIC *sulphate*.—**A. a. terhydriodate.** The hydrated oxyiodide of arsenic. [B, 98.]—**A. a. terhydrochlorate.** The chlordihydrate (or hydrated oxychloride) of arsenic. [B, 98.]—**Crystallized a. a.** The crystalline variety of arsenic trioxide. [B, 98.]—**Enamel-like a. a.** Fr., *acide arsénieux porcellanique*. See under ARSENIC *trioxide*.—**Glacial a. a.** See *Vitreous a. a.*—**Octahedral a. a.** The variety of arsenic trioxide crystallizing in octahedra. [B, 98.]—**Opaque a. a.** See *Enamel-like a. a.*—**Right-rhombic a. a.** The variety of arsenic trioxide crystallizing in rhombic prisms. [B, 98.]—**Rough a. a.** (more properly *crude* or *raw a. a.*). Crude arsenic trioxide obtained by sublimation of arsenical ore; flowers of arsenic. [B, 98.]—**Solution of a. a.** See *Liquor* ACIDI ARSENIOSI, and Cf. *Liquor* ARSENICI *albi*.—**Vitreous a. a.** Fr., *acide arsénieux vitreux*. Ger., *weisses Arsenglas*. See under ARSENIC *trioxide*.

ARSENIOVINIC ACID, n. A^{3}r-se^{2}n''i^2-o-vi'ni^{2}k. Fr., *acide arsénio-vinique*. An acid, said to have the composition of dihydric ethyl arsenate, $H^2As(C_2H_5)O_4$, obtained, according to F. d'Arcet, by the action of alcohol upon arsenic acid. [B, 118, 140.] See ETHYL *arsenate*.

ARSÉNIOXYDE (Fr.), n. A^{3}r-sa-ni^2-o^{2}x-ed. A mineral composed of arsenic and oxygen. [B, 132.]

ARSÉNIQUE (Fr.), adj. A^{3}r-sa-nek. Arsenic. [B.]

ARSÉNIQUÉ (Fr.), adj. A^{3}r-sa-ni^2-ka. Arseniated. [B, 132.]

ARSENIS (Lat.), n. m. A^{3}r'se^{2}n-i^{2}s. Gen., *arseni'tis*. An arsenite. [B.]—**A. potassicus aqua solutus** [Fr. Cod.]. See *Liquor* POTASSII *arsenitis*.

ARSENITE, n. A^{3}r'se^{2}n-it. Lat., *arsenis*. Fr., *arsénite*. Ger., *Arsenit*. It., Sp., *arsenito*. A salt of arsenious acid. The true a's (*orthoarsenites*), or salts of ordinary arsenious acid, are divided into: 1. *Neutral* or *normal a's*, of the composition $R'''AsO_3$ or $M_3(AsO_3)_n$. 2. *Acid a's*, including *monohydric a's* or *dimetallic a's*, of the composition $HR''AsO_3$ or $M_2(HAsO_3)_n$, and *dihydric a's* or *monometallic a's*, of the composition $M(H_2AsO_3)_n$, where R'' and R''' are bivalent and trivalent radicles and M is a radicle of the quantivalence of *n*. [B.] See also METARSENITE and PYROARSENITE.

ARSENIUM (Lat.), n. n. A^{3}rs-e^{2}n'i^2-u^{3}m(u^{4}m). Arsenic; the name adopted in the present U. S. Ph. [B.]—**Arsenii chloridum.** See ARSENIC *trichloride*.—**Arsenii iodidum** [U. S. Ph.]. See ARSENIC *triiodide*.—**Liquor arsenii et hydrargyri iodidi** [U. S. Ph.]. Fr., *soluté d'iodo-arsénite de mercure de Donovan*. Ger., *Jodquecksilberarseniklösung, Donovanische Tropfen*. Syn.: *liquor arsenici et hydrargyri iodidi* [U. S. Ph., 1870]. Solution of iodide of arsenic and mercury; Donovan's solution. A solution containing 1 part of arsenic triiodide and 1 part of mercury biniodide (mercuric iodide) in 100 parts of distilled water [U. S. Ph.]. The solution made by Donovan was supposed by him to contain the so-called hydriodates of arsenious oxide and of mercuric oxide (the oxyiodides of arsenic and mercury). [A; B, 5.]

ARSÉNIURE (Fr.), n. A^{3}r-san-i^2-u^{6}r. An arsenide. [B, 132.]

ARSENIURET, n. A^{3}r-se^{2}n'i^2-u^2-re^{2}t. Lat., *arseniuretum*. Fr., *arséniure*. Ger., *Arseniür*. It., Sp., *arseniuro*. See ARSENIDE.

ARSENIURETED, adj. A^{3}r-se^{2}n'i^2-u^2-re^{2}t-e^{2}d. Lat., *arseniatus*. Fr., *arsénié, arséniuré*. It., *arseniato*. Compounded with or containing arsenic. [B.] See *A.* HYDROGEN.

ARSENIZATION, n. A^{3}r-se^{2}n''i^2-za'-shu^{3}n. It., *arsenizzazione*. Medication with arsenic. [B.]

ARSENMETHYL, n. A^{3}r''se^{2}n-me^{2}th'i^{2}l. Fr., *arsén-méthyle*. Ger., *Arsenmethyl*. It., *arsenio-metile*. Syn.: *methylarsen, arsenmonomethyl*. A bivalent or quadrivalent radicle $As(CH_3)''$ or $As(CH_3)''''$. It is not known in the free state. [B, 2.]—**A. chloride.** Fr., *chlorure d'arsén-méthyle*. Ger., *Arsenmethylchlorür*. See *A. dichloride* and *A. tetrachloride*.—**A. chlorobromide.** Fr., *chloro-bromure d'arsén-méthyle*. Ger., *Arsenmethylchlorbromür*. A substance, $As(CH_3)ClBr$, apparently produced by the spontaneous decomposition of the chlorodibromide of cacodyl. [B, 2.]—**A. dichloride.** Fr., *bichlorure d'arsén-méthyle*. Ger., *Arsenmethyldichlorür*. A colorless, heavy, highly refractive liquid, $As(CH_3)Cl_2$, the vapor of which is a powerful irritant to the mucous membranes. [B, 2.]—**A. diiodide.** Fr., *biiodure d'arsén-méthyle*. Ger., *Arsenmethyldijodür*. A substance, $As(CH_3)I_2$, forming yellow acicular crystals melting at 20°–25° C. [B, 3.]—**A. iodide.** See *A. diiodide*.—**A. oxide.** Fr., *oxyde d'arsén-méthyle*. Ger., *Arsenmethyloxyd*. A substance, $As(CH_3)O$, occurring as crystals having the odor of asafœtida and melting at 95° C. [B, 3.]—**A. sulphide.** Fr., *sulfure d'arsén-méthyle*. Ger., *Arsenmethylsulfid*. A crystalline substance, $As(CH_3)S$, melting at 110° C. and having a faint odor of asafœtida. [B.]—**A. tetrachloride.** Fr., *tétrachlorure d'arsén-méthyle*. Ger., *Arsenmethyltetrachlorür*. A crystalline compound, $As(CH_3)Cl_4$. [B, 2.]

ARSENMETHYLATE, n. A^{3}r''se^{2}n-me^{2}th'i^{2}l-at. Fr., *arsénio-méthylate*. Ger., *Arsenmethylat*. A salt of arsenmethylic (methylarsinic) acid; a methylarsinate. [B.]

ARSENMETHYLIC, adj. A^{3}r''se^{2}n-me^{2}th-i^{2}l'i^{2}k. Fr., *arsén-méthylique*. Of or pertaining to arsenmethyl. [B.]—**A. acid.** Fr.,

acide arsénio-monométhylique. Ger., *Arsenmethylsäure.* See Methylarsinic *acid.*

ARSENMETHYLIUM (Lat.), n. n. A^{3}r″se^{2}n-me^{2}th-i^{2}l(u^{6}l)′-i^2-u^{3}m(u^{4}m). Fr., *arsén-méthylium.* Ger., *Arsenmethylium.* See Tetramethylarsonium.

ARSENMETHYLTRIETHYLIUM (Lat.), n. n. A^{3}r‴se^{2}n-me^{2}th″i^{2}l-tri(tre)-e^{2}th-i^{2}l(u^{6}l)′i^2-u^{3}m(u^{4}m). Fr., *arsén-méthyl-triéthylium.* Ger., *Arsenmethyltriäthylium.* See Methyltriethylarsonium.

ARSENMONETHYL, n. A^{3}r″se^{2}n-mo^{2}n-e^{2}th′i^{2}l. Fr., *arsén-monoéthyle.* Ger., *Arsenmonäthyl.* See Arsenethyl.

ARSENMONETHYLIC, adj. A^{3}r″se^{2}n-mo^{2}n-e^{2}th-i^{2}l′i^{2}k. Fr., *arsén-monéthylique.* Of or pertaining to arsenmonethyl. [B.]—**A. acid.** Fr., *acide arsén-monéthylique.* Ger., *Arsenmonäthylsäure.* See Ethylarsinic *acid.*

ARSENMONOMETHYL, n. A^{3}r″se^{2}n-mo^{2}n-o-me^{2}th′i^{2}l. Fr., *arsén-monométhyle.* Ger., *Arsenmonomethyl.* See Arsenmethyl.

ARSENMONOMETHYLIC, adj. A^{3}r″se^{2}n-mo^{2}n-o-me^{2}th-i^{2}l′-i^{2}k. Fr., *arsén-monométhylique.* Of or pertaining to arsenmonomethyl. [B.]—**A. acid.** Fr., *acide arsén-monométhylique.* Ger., *Arsenmonomethylsäure.* See Methylarsinic *acid.*

ARSENO-CHLORIDE, n. A^{3}r″se^{2}n-o-klo′ri^{2}d(rid). Fr., *arsénio-chlorure.* Ger., *Arseniochlorür.* It., Sp., *arsenio-cloruro.* A compound of chlorine with arsenic and another element or radicle. [B.]

ARSENO-FLUORIDE, n. A^{3}r″se^{2}n-o-flu^2′o^{2}r-i^{2}d(id). Fr., *arsénio-fluorure.* Ger., *Arseniofluorür.* It., Sp., *arsenio-fluoruro.* A compound of fluorine with arsenic and another element or radicle. [B.]

ARSENOGONON (Lat.), n. n. A^{3}r-se^{2}n-o^{2}g′o^{2}n-o^{2}n. See Arrhenogonon.

ARSENOLITE, n. A^{3}r-se^{2}n′o-lit. Ger., *Arsenit, Arsenikblüthe.* Syn.: *arsenite, arsenic bloom.* A native trioxide of arsenic occurring under the form of octahedral crystals. [B, 159.]

ARSENOMOLYBDATE, ARSENOMOLYBDIC ACID, n's. A^{3}r″se^{2}n-o-mo^{2}l-i^{2}b′dat, -i^{2}b′di^{2}k. See Arseniomolybdate and Arseniomolybdic acid.

ARSENOPHOSPHATE, n. A^{3}r″se^{2}n-o-fo^{2}s′fat. See Arsenio-phosphate.

ARSENOPTERIS (Lat.), n. f. A^{3}r-se^{2}n-o^{2}p′te^{2}r-i^{2}s. A subgenus of *Aspidium*, made by Webb and Berthelot, including species with a reniform indusium. It corresponds to the genus *Nephrodium* of others, and includes the subsections *Lastræa* and *Nephrodium.* [B, 121.]

ARSENOPYRIT (Ger.), n. A^{3}r-se^{2}n-o-pu^6-ret′. Arsenical pyrites; mispickel. [B, 49.]

ARSENOSULPHATE, n. A^{3}r″se^{2}n-o-sul′fat. See Arsenio. sulphate.

ARSENOTA (Lat.), n. f. A^{3}r-se^{2}n-o′ta^3. A name for *Staphisagria* in Dioscorides. [Bory (B, 121).]

ARSENOTUNGSTATE, ARSENOTUNGSTIC ACID, n's. A^{3}r″se^{2}n-o-tu^{3}ng′stat, -sti^{2}k. See Arseniotungstate and Arseniotungstic acid.

ARSENPHENYL, n. A^{3}r″se^{2}n-fe^{2}n′i^{2}l. From *arsenic* and *phenyl.* Fr., *arsén-phényle.* Ger., *Arsenphenyl.* A bivalent or quadrivalent radicle, $As(C_6H_5)''$ or $As(C_6H_5)''''$. [B, 4.]—**A. chloride.** Fr., *chlorure d'arsén-phényle.* Ger., *Arsenphenylchlorür.* See *A. dichloride, A. tetrachloride,* and *A. oxychloride.*—**A. dichloride.** Fr., *bichlorure d'arsén-phényle.* Ger., *Arsenphenyldichlorür.* A colorless liquid, $As(C_6H_5)Cl_2$. [B, 4.]—**A. oxide.** Fr., *oxyde d'arsén-phényle.* Ger., *Arsenphenyloxyd.* A solid substance, $As(C_6H_5)O$, having an odor resembling that of anise. [B, 4.]—**A. oxychloride.** Fr., *oxychlorure d'arsén-phényle.* Ger., *Arsenphenyloxychlorür.* A substance, $As(C_6H_5)OCl_2$, readily soluble in water, melting at 100° C. [B, 4.]—**A. tetrachloride.** Fr., *tétrachlorure d'arsén-phényle.* Ger., *Arsenphenyltetrachlorür.* A yellow liquid, $As(C_6H_5)Cl_4$. [B, 4.]

ARSENTRIETHYL, n. A^{3}r″se^{2}n-tri-e^{2}th′i^{2}l. From *arsenic* and *ethyl* (see also *Tri-**). Fr., *arsén-triéthyle.* Ger., *Arsentriäthyl.* See Triethylarsine.

ARSENTRIETHYLIC, adj. A^{3}r″se^{2}n-tri-e^{2}th-i^{2}l′i^{2}k. Fr., *arsén-triéthylique.* Of or pertaining to arsentriethyl. [B.]—**A. acid.** Fr., *acide arsén-triéthylique.* Ger., *Arsentriäthylsäure.* See Triethylarsinic *acid.*

ARSENTRIMETHYL, n. A^{3}r″se^{2}n-tri-me^{2}th′i^{2}l. From *arsenic* and *methyl* (see also *Tri-**). Fr., *arsén-triméthyle.* Ger., *Arsentrimethyl.* See Trimethylarsine.

ARSENTRIMETHYLIC, adj. A^{3}r″se^{2}n-tri-me^{2}th-i^{2}l′i^{2}k. Fr., *arsén-triméthylique.* Of or pertaining to arsentrimethyl. [B.]

ARSENUM (Lat.), n. n. A^{3}r′se^{2}n-u^{3}m(u^{4}m). Arsenic. [B.] See Arsenium and Arsenicum.

ARSICCIA (It.), n. A^{3}r-si^{2}t′chi^2-a^3. See *Black*-tongue.

ARSIDE, n. A^{3}r′si^{2}d(id). Ger., *Arsid.* Arsidogen. [B, 140, 196.] Cf. Amide and Amidogen.

ARSIDOGEN, n. A^{3}r-si^{2}d′o^{2}j-e^{2}n. From arsenic and γεννᾶν, to beget. Cf. Amidogen. The name given by Gmelin to a hypothetical compound, AsH_2, of arsenic and hydrogen, formerly supposed to exist in cacodyl and its derivatives. The symbol An was sometimes given to it. [B, 140, 196.]

ARSIN (Ger.), n. A^{3}r-sen′. See Arsine.—**A'säuren.** See *Arsinic* acids.

ARSINA (Lat.), n. f. A^{3}r-si(se)′na^3. The botanical genus *Curcuma.* [B, 121.]

ARSINE, n. A^{3}r′sen. Fr., *arsine.* Ger., *Arsin.* Arseniureted hydrogen, AsH_3. Also, generically, any substitution compound of this substance in which 1, 2, or 3 atoms of hydrogen are replaced by elements or radicles. The a's in this sense are analogous in structure to the amines and are similarly classed as primary, secondary, and tertiary a's. The primary a's, of the general formula $AsR'H_2$, exist only in combination; the secondary a's, $AsR''H$, exist by themselves with a doubled molecular formula, $As_2R''_2H_2$, constituting the class of compounds known as *cacodyls;* and the tertiary a's, AsR''', are known in the free state. [B.] See also Triethylarsine, Trimethylarsine, and Cacodyl.

ARSINIC, adj. A^{3}r-si^{2}n′i^{2}k. Fr., *arsinique.* Of, pertaining to, or derived from, an arsine. [B.] See *A.* acids.

ARSIORA, n. Cerussa. [Johnson (B, 200).]

ARSIS (Lat.), n. f. A^{3}r′si^{2}s. Gen., *ar′seos* (-*sis*). Gr., ἄρσις, a raising, from αἴρειν, to lift up, because of the berry being elevated from the receptacle. A name given by Loureiro to the genus *Grewia.* [B, 121.]

ARSMART, n. A^{3}rs′ma^{3}rt. A name given to several species of *Polygonum.* [B.]—**Biting a.** The *Polygonum hydropiper.* [B, 59.]—**Dead a., Spotted a.** The *Polygonum persicaria.* [B, 59.]

ARSONIC, adj. A^{3}r-so^{2}n′i^{2}k. Fr., *arsonique.* Of, pertaining to, or derived from, arsonium. [B.] See *A.* acids.

ARSONIUM (Lat.), n. n. A^{3}r-so′ni^2-u^{3}m(u^{4}m). Fr., *arsonium.* Ger., *Arsonium.* A univalent radicle, AsH_4, bearing the same relation to arsenic that ammonium does to nitrogen; also, generically, any substitution compound of this body. [B, 4.] See Tetrethylarsonium, etc.

ARSURE (Fr.), n. A^{3}r-su^{6}r. 1. A disease of plants produced by dryness of the soil. 2. An old name for gonorrhœa. [B, 38.]

ART, n. A^{3}rt. See Ars.—**A. de formuler** (Fr.). See Ars *formulas medicinæ concinnandi.*—**A. sacré** (Fr.). Alchemy. [A, 385.]

ART (Ger.), n. A^{3}rt. A species. [B.]—**Aba'.** A subspecies or variety. [B, 49.]—**A'name.** A specific name. [B.]—**Spiela'.** See Abart.

ARTA (It.), n. A^{3}r′ta^3. A place in Venetia where there is a spring containing hydrogen sulphide. [A, 385.]

ARTABA (Lat.), n. f. A^{3}r′ta^3-ba^3. Gr., ἀρτάβη. An ancient Egyptian measure. [B, 200.]

ARTABOTRYS (Lat.), n. f. A^{3}r-ta^3-bo^{2}t′ri^{2}s(ru^{6}s). Gen., *artabot′ryos* (-*ryis*). From ἀρτᾶν, to hang, and βότρυς, a cluster of grapes. A genus of anonaceous shrubs, established by R. Brown. [B, 93.]—**A. intermedia** [Husskarl]. A species furnishing a fragrant oil used as a perfume in Java, under the name of *minjack-kenangan.* [B, 121.]—**A. suaveolens** [Blume]. A species the aromatic leaves of which have been used in infusion as a remedy for cholera. [B, 121.]

ARTANECH, ARTANECK, n's. Arsenic. [Ruland (B, 200).]

ARTANEMA [Don] (Lat.), n. n. A^{3}r-ta^3-ne(na)′ma^3. Gen., *artanem′atos* (-*tis*). From ἀρτᾶν, to hang, and νῆμα, a thread. The genus *Achimenes.* [B, 121.]

ARTANITA (Lat.), n. f. A^{3}r-ta^3-ni(ne)′ta^3. From Sp., *a.*, the *Cyclamen europæum.* Of Mésné, the genus *Cyclamen.* [Adanson (B, 121).]

ARTANITIN, n. A^{3}r-ta^{2}n′i^{2}t-i^{2}n. See Arthanitin.

ARTANTHE (Lat.), n. f. A^{3}r-ta^{2}n(ta^{3}n)′the(tha). A genus of piperaceous plants, established by Miquel, with a woody, jointed stem, and bearing spikes of perfect flowers with an involucre of peltate or cucullate bracts. [B, 19.]—**A. adunca.** A species growing in the West Indies, Brazil, and various parts of South America, possessed of aromatic properties and a pungent taste, used as a substitute for pepper and employed in gonorrhœa like cubebs. The leaves, which are distinguished from those of *A. elongata* by not being tessellated, rough, or hairy, and the spikes and branches, constitute, according to Bentley, a variety of matico imported from Central America, and identical in medicinal properties with the matico derived from *A. elongata.* [B, 5, 33, 197.]—**A. crocata.** Syn.: *Piper crocatum* [Ruíz and Pavón]. A Peruvian shrub, the leaves and spikes of which are employed as a substitute for pepper and the mature spikes as the source of a yellow dye. [B, 180, 197.]—**A. elongata** [Miquel]. Syn.: *Piper elongatum* [Vahl] (seu *angustifolium* [Ruíz and Pavón]). A shrub, 12 feet in height, growing in the forests of Peru. The leaves are sessile or short-petiolate, oval-lanceolate, acuminate at the apex, cordate at the base, from 2 to 6 inches long and about 1 inch broad, bright-green and tessellated on the upper surface, paler on the lower surface, which is roughly reticulate and downy, of an agreeable spicy odor, and a pungent aromatic taste. They contain a dark-green resin, coloring matters, a light-green volatile oil, and, according to Hodges, a bitter principle called *maticin,* which, according to Wiegand, is the potassium salt of an acid. Marcotte found in it a crystalline acid, *artanthic acid.* The leaves constitute the *matico* of the U. S. Ph., and are used as a styptic and hæmostatic. The matico of commerce always contains the spikes and stalks of the plant intermixed with the leaves. A decoction of the plant is used as a remedy for syphilitic affections in Peru. [B, 5, 180.]—**A. eucalyptifolia.** A Brazilian species, employed as a carminative in colic and flatulence, and as a remedy for arthritic pains. [B, 197.]—**A. lanceæfolia** [Miquel]. Syn.: *Piper lanceæfolium.* A New Granada species furnishing one of the varieties of matico. ["Proc. of the Am. Pharm. Assoc.," xxiii, p. 646 (L).]—**A. mollicoma** [Miquel]. A Brazilian species the leaves of which are used for the same purposes as jaborandi. ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 162 (L).]—**A. trichostachya.** A species employed as a substitute for pepper. [B, 197.]

ARTANTHIC, adj. A^{3}r-ta^{2}n′thi^{2}k. Of or derived from the genus *Artanthe.* [B.]—**A. acid.** Fr., *acide artanthique.* A crys-

talline acid found by Marcotte in matico (the leaves of *Artanthe elongata*. [B, 5.]

ARTAR ROOT, n. A root, of unknown origin, which contains 3 per cent. of a resin capable of exerting an effect like that of aconitine. [B, 270.]

ARTATE, adj. A^{3}rt'at. Written also *arctate*. Lat., *artatus* (from *artare*, to compress). Fr., *rétréci*. Ger., *verengert*. Compressed, constricted. [A, 316.]

ARTEDIA (Lat.), n. f. A^{3}r-ta'di^2-a^3. From *Artedi*, a Swedish botanist. A genus of umbelliferous plants established by Linnæus. [B, 48.]—**A. squamata** [Linnæus]. A species growing in Greece, Asia Minor, and Lebanon. [B, 48.]

ARTEFACT, n. A^{3}r'te^2-fa^{2}kt. From *ars*, art, and *facere*, to make. Ger., *Artefact, Kunstproduct*. A term used in histology to designate an apparent structure produced by the chemical or the mechanical means employed in investigation; an apparent, but not a real, structure. [Kollmann, "Ztschr. d. wissen. Zool.," 1873; Elsberg, "Ann. of the N. Y. Acad. of Sci.," 1879 (J).]

ARTEFI, n. The *Tragopogon porrifolius*. [B, 121.]

ARTEJO (Sp.), n. A^{3}r-ta'ho. A village in the province of Corunna, Spain, where there is a spring containing hydrogen sulphide and sodium and magnesium chlorides. The water, drank and used as baths, is considered laxative, aperitive, resolvent, diuretic, antiseptic, and detergent, and is advised in scrofula, gout, erysipelas, and catarrh. [A, 255.]

ARTEMIA (Lat.), n. f. A^{3}r-te^{2}m'i^2-a^3. Gr., ἀρτεμία, from ἀρτεμής, safe. Health, soundness. [M, 13.]

ARTEMIDION, ARTEMIDIUM (Lat.), n's n. A^{3}r-te^{2}m-i^{2}d'-i^2-o^{2}n, -u^{3}m(u^{4}m). The *Origanum dictamnus*. [Bory (B, 121).]

ARTEMISIA (Lat.), n. f. A^{3}r-te^{2}m-i^{2}s'i^2-a^3. Gr., ἀρτεμισία (from Ἄρτεμις, the goddess Diana). Fr., *artémise, armoise*. Ger., *Beifuss, Abrandkraut*. It., *artemisia*. Sp., *artemisa*. Wormwood. A genus of erect leafy herbs or shrubs belonging to the order *Compositæ*, tribe *Senecionideæ* (or, according to more recent classifications, the *Anthemideæ*), established by Tournefort, with alternate, often much-divided, grayish leaves; panicles of yellowish, greenish, or purplish flowers, surrounded by an ovoid or hemispherical involucre of imbricate bracts, and placed upon a receptacle devoid of pales or bristles; and an obovate fruit without pappus. It is divided into 4 subgenera: 1. *Absinthium*, with the outer florets female, the central florets hermaphrodite, and the receptacle hairy; 2. *Abrotanum*, like No. 1, but with a naked receptacle; 3. *Seriphida* (*Seriphidium*), with all the florets hermaphrodite and the receptacle naked; 4. *Oligosporus* (*Dracunculus*), with the outer florets female, the rest hermaphrodite and with abortive fruit, and with a naked receptacle. [B, 19, 34, 180.]—**Aqua artemisiæ.** Fr., *eau d'armoise*. A preparation made by distilling the leaves of *A. vulgaris* 1 part and water 3 parts until 1 part of distillate is obtained. [Palat. Disp., 1764; Sard. Ph., 1773; Port. Cod., 1836; Fr. Cod., 1837 (L, 85).]—**A. abrotanum** [Linnæus]. Gr., ἀβρότονον ἄρρεν [Dioscorides]. Lat., *abrotanum*. Fr., *aurone mâle* [Fr. Cod.], *citronelle*. Ger., *Stabwurz, Ebberraute, Eberreis*. It., *abrotano maschio*. Sp., *abrotano*. Southernwood. A perennial shrubby plant, belonging to the subgenus *Abrotanum*, indigenous to southern Europe, Asia Minor, and China, and frequently cultivated in gardens in Europe and America. It stands about 3 feet in height and bears grayish-green much-divided leaves and axillary racemes of nodding yellowish flowers. The leaves and flowering tops, *herba* et *summitates abrotani* (seu *abrotani maris*, seu *abrotani hortensis*, seu *artemisiæ abrotani*), have a penetrating aromatic odor and a somewhat bitter, spicy taste. They have been official in various pharmacopœias and are used for the same purposes as those of *A. absinthium*, from which they differ in being more stimulant and less tonic. [B, 34, 180.]—**A. absinthium** [Linnæus]. Lat., *absinthium*. Fr., *grande absinthe* [Fr. Cod.], *aluyne, absinthe commune, armoise amère*. Ger., *Wermut*. It., *assenzio maggiore*. Sp., *ajenjo*. Syn.: *Absinthium vulgare* [Lamarck] (seu *officinale* [Richard]). Wormwood. A perennial herb, belonging to the subgenus *Absinthium*, growing in Europe, New England, and Canada. It bears multifid leaves with lanceolate segments pubescent on both sides, and nodding yellow flowers disposed in erect racemes. (See illustration under ABSINTHIUM.) The whole plant has a strong, disagreeable aromatic odor, and a penetrating, very bitter taste, and contains a volatile oil, and, according to Braconnot, an insipid and a very bitter nitrogenous principle, a bitter resin, and several organic acids, including an *absinthic acid*, which is probably identical with succinic acid. Caventou found in wormwood a bitter crystalline principle, *absinthin*, which, according to Kromayer, is an aldehyde of the composition $C_{40}H_{56}O_8 + H_2O$. The volatile oil (*oleum essentiale absinthii*) is dark-green, sometimes yellow or brownish, has the peculiar odor of the plant, an acrid taste, and a sp. gr. of 0·972, and consists chiefly of *absinthol* (*q. v.*). The flowering tops, the ἀψίνθιον of Hippocrates, the *absinthium* of the U. S. Ph., the *herba* et *summitates absinthii* (seu *absynthii*, seu *absinthii majoris*, seu *absinthii rusticani*, seu *absinthii vulgaris*), are used as a tonic and aromatic stimulant, especially in atony of the digestive organs, in diarrhœa, muscular debility, and remittent fevers, as an anthelminthic, and in the preparation of the liqueur called *absinthe*. [B, 5, 34, 180.]—**A. abyssinica** [Olivier]. An African species supposed to be the source of an Abyssinian drug called *tschunking* or *zerechtit*, which, mixed with soap, is applied to the calves of the legs to relieve cramps in the later stages of a malarial disease called the "kolla" sickness. The infusion is mildly antispasmodic, tonic, and diaphoretic. [B, 81; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 176 (L).]—**A. acetica.** A Persian species having a strong odor of vinegar. [B, 197.]—**A. afra.** 1. Of Jacquin, the *A. pontica*. [B, 49.] 2. Of Linnæus, a species used at the Cape of Good Hope as a vermifuge and in the treatment of jaundice. [B, 93.]—**A. alba** [Tabernæmontanus]. A variety of the *A. vulgaris* with a whitish stem. It is said to be used by the Calmucks and Kirghese as a forage plant. [B, 180, 197.]—**A. annua** [Linnæus]. A species, belonging to the subgenus *Abrotanum*, growing throughout Central Asia and China, and used in the latter country as a remedy for wasting fever, dysenteries, and putrid ulcers. [B, 180.]—**A. arborescens** [Linnæus]. Syn.: *Absinthium arborescens* [Mönch]. An herbaceous plant, 4 to 6 feet high, belonging to the subgenus *Absinthium*, growing along the coast of the Mediterranean. It is probably one of the varieties of the ἀρτεμισία of Dioscorides. It is a tonic, stomachic, and emmenagogue, and is used for similar purposes as the *A. absinthium*. [B, 173, 180.]—**A. arbuscula** [Nuttall]. A dwarf species growing on the high mountains and elevated plains of the western United States. It has similar properties to those of *A. tridentata*. [B, 81, 215.]—**A. argentea** [Aiton]. A species with silvery-white leaves, cultivated as an ornament in gardens. [B, 49.]—**A. argonensis.** An Algerian plant, called by the natives *el chikh*, and used by them as a tonic, aperient, and vermifuge. [A, 316.]—**A. austriaca** [Jacquin]. See *A. alba*.—**A. balsamita.** See *A. pontica*.—**A. biennis** [Willdenow]. An Asiatic and North American species having bipinnatipartite leaves with pinnatifid or toothed segments, and suberect sessile heads of flowers borne in leafy panicles or racemes and surrounded by an involucre of green pubescent bracts. [B, 34, 212.]—**A. boccone** [Allioni]. See *A. spicata*.—**A. botrys.** See CHENOPODIUM *ambrosioides*.—**A. cærulescens** [Linnæus]. A shrubby plant, of the subgenus *Seriphida*, growing on the sea-shore in southern and western Europe, distinguished by its gray, lanceolate, entire leaves and its oblong flower-heads. The latter, called *semen seriphii*, have been used as a febrifuge and anthelminthic. [B, 93, 178, 180.]—**A. californica.** A species, 4 to 5 feet high, indigenous to the western United States, bearing singly or doubly pinnately-parted leaves and many-flowered heads in leafy panicles surrounded by a hemispherical involucre. [B, 212.]—**A. campestris** [Linnæus]. Fr., *aurone des champs* (ou *sauvage*), *armoise bâtarde*. A species, belonging to the subgenus *Oligosporus*, growing on old ruins and in dry places in Europe and North America. It is perhaps the ἀρτεμισία λεπτόφυλλος of Dioscorides. The leaves and flowering tops, *herba artemisiæ rubræ*, were formerly employed in medicine as a stimulant, tonic, and antispasmodic, and the flowering tops to adulterate worm-seed, and the root was sometimes collected instead of that of *A. vulgaris*, but the plant appears to be medicinally inert, and is now rarely employed. [B, 173, 180.]—**A. camphorata** [Vill.]. A species growing in rocky, uncultivated places in central Europe, used as an anthelminthic under the name of *sanguénié*. [B, 93, 178.]—**A. canadensis** [Michaux]. Sea wormwood. A perennial species having pinnatifid leaves with linear segments and subglobose flowers in sessile heads borne in racemose panicles, growing along the shores of lakes and rivers in the northern United States, Canada, and northwestern Asia. [B, 34, 215.]—**A. caudata** [Michaux]. A biennial species growing in the Atlantic United States, glabrous, with pinnately, bipinnately, or tripinnately divided leaves, having filiform or setaceous segments, and with ovoid-globose pedicellate heads of flowers borne in dense panicles. [B, 34, 215.]—**A. chamæmelifolia** [Vill.]. A south European species, cultivated on account of the pleasant odor of its leaves. [B, 49.]—**A. chenopodium.** See CHENOPODIUM *botrys*.—**A. chiageana** [Kunze]. An Oriental species the botanical characters of which are imperfectly known. The flower-heads have been used, according to Della Chiaje, to adulterate the Levant worm-seed (semen contra), which they resemble in odor and taste. [B, 180.]—**A. chinensis** [Linnæus]. China mugwort. An Asiatic species, belonging to the subgenus *Abrotanum*, the down upon the leaves of which is used by the Chinese in the preparation of moxa (*q. v.*), and the plant itself is employed as a stomachic, tonic, antispasmodic, and emmenagogue. [B, 180.]—**A. cina** [Bergmann]. See *A. maritima*, var. *stechmanniana*.—**A. contra.** 1. Of Linnæus, a species closely resembling, if not identical with, *A. glomerata*. 2. Of Vahl, the *A. vahliana*. [B, 180.]—**A. dracunculus** [Linnæus]. Fr., *estragon, armoise estragon*. Ger., *Estragon, Dragunbeifuss*. It., *draconcello*. Syn.: *Oligosporus condimentarius* [Cassini]. Tarragon. An herbaceous species, belonging to the subgenus *Oligosporus*, growing in Siberia, Tartary, and southern Europe, and frequently cultivated as a condiment. The leaves are glabrous, shining, lanceolate, and entire; the flowers are borne in ovoid-globose heads on short peduncles. The plant has an aromatic odor and a pungent taste. The flowering-tops, *herba* seu *summitates dracunculi* (seu *dracunculi esculenti*, seu *dracunculi hortensis*, seu *acetariæ*), have been official, and are employed as an antiscorbutic, but more particularly as a condiment. [B, 19, 180.]—**A. eriantha.** See *A. spicata*.—**A. filifolia** [Torrey]. A North American species with slender, filiform, revolute, tomentose leaves and small heads of flowers borne in elongated leafy panicles. [B, 81, 215.]—**A. frigida** [Willdenow]. A species, belonging to the subgenus *Absinthium*, growing in the rocky hills of the northwestern United States. The stems, 6 to 12 inches in height, are simple or branched from the base; the leaves are silky-canescent, pinnately divided or parted, with linear segments; the nodding globose flower-heads, borne in racemose panicles, have an involucre of canescent rounded or oblong scales and glabrous corollas. The plant is said to be used as a substitute for quinine, also as an anthelminthic, under the name of *sierra salvia*. [Evans, quoted in "Nouv. remèdes," Feb. 1, 1886, p. 72; B, 34, 215; Tschisch (B, 270).]—**A. gallica** [Willdenow]. See *A. maritima*, var. *gallica*.—**A. glacialis.** Fr., *génipi vrai*. Ger., *Gletscher-Beifuss*. 1. Of Jacquin and Wulfenden, the *A. mutellina*. 2. Of Linnæus, a species, belonging to the subgenus *Absinthium*, growing upon the highest points of the Alps. The flower-bearing stalk is simple, the leaves are palmately parted and covered with snow-white silky hairs; the globose flower-heads are erect and terminal. It is one of the herbs used in the preparation of the liqueur *absinthe* and of the *vulnéraire suisse*. [B, 93, 178, 180.]—**A. glomerata** [Siebold]. Ger., *geknäuelter Beifuss*. A shrubby species, belonging to the subgenus *Abrotanum*, growing in Palestine. The stalk is erect, 1 to 2 feet high, and lanuginous; the leaves are very small, palmately divided, hairy or tomentose; the flowers are disposed in panicles made up of clusters of 2 or 3 closely set, almost sessile,

ovoid, tomentose heads. The immature unopened heads constitute the Barbary wormseed, *semen cinæ barbaricum* (seu *indicum*, seu *africanum*), *semen santonici*, *semen contra*, etc. They contain an acrid volatile oil, a bitter principle, tannin, and santonin, have the odor and taste of Levant wormseed (santonica), and are a powerful stomachic, tonic, stimulant, and anthelminthic. They have the same medicinal uses as Levant wormseed, but, although more powerful than the latter, are more rarely employed. [B, 5, 180.]—**A. grandiflora.** See *A. rupestris.*—**A. helvetica** [Schleich.]. See *A. nana.*—**A. inculta.** A small Egyptian shrub with tomatose branches, grayish bipinnatifid leaves, and glabrous flower-heads. The latter constitute, according to some, the Indian wormseed, which, however, is probably identical with the Barbary wormseed derived from *A. glomerata* and other species. [B, 180.]—**A. indica** [Willdenow]. An herbaceous species, belonging to the subgenus *Abrotanum*, indigenous to the East Indies, China, and Japan. It differs but little in botanical characters from *A. vulgaris*, to which it is referred by Thunberg and others. It is used as a bitter stomachic tonic, antispasmodic, and emmenagogue, and the downy covering upon the leaves is said to be employed in the preparation of moxa. [B, 5, 180; Dymock, "Phar. Jour. and Trans.," Aug. 10, 1879 (L).]—**A. judaica** [Linnæus]. Fr., *barbotine*, *armoise de Judée*. A shrubby species, belonging to the subgenus *Abrotanum*, growing in Egypt, Arabia, Palestine, China, and Cochin-China. The leaves are very small, obovate, pinnatifid, and tomentose; the hemispherical flower-heads are borne in terminal racemes. These flower-heads have a strong aromatic odor and have powerful anthelminthic properties resembling those of Levant wormseed, but are said not to occur in commerce. Some, however, assert that a variety of Barbary wormseed is furnished by them. The variety of *A. judaica* observed by Loureiro in China and Cochin-China is, according to Kosteletzky, a distinct species, the *A. Loureiri*. [B, 5, 180.]—**A. lanata** [Linnæus]. A species belonging to the subgenus *Absinthium*, growing in Africa and the Tyrol. The down upon it is used for the preparation of moxa. [B, 173, 178.]—**A. latifolia vulgaris major.** The *A. vulgaris*. [B, 200.]—**A. leptophylla.** See *A. prescottiana*. The ἀρτεμισία λεπτόφυλλος of Dioscorides was probably the *A. campestris*. [B, 180; L.]—**A. lercheana** [Stechmann]. A species growing along the Volga, the flower-heads of which are used in Russia as a substitute for santonica. It is now believed to be identical with the *A. maritima*, var. *stechmanniana*. [B, 81, 180.]—**A. Loureiri** [Kosteletzky]. The variety of *A. judaica* occurring in China and Cochin-China; regarded by Kosteletzky as a distinct species. [B, 180.]—**A. ludoviciana** [Nuttall]. A perennial herb, belonging to the subgenus *Abrotanum*, growing in the Mississippi valley and on the shores of the Great Lakes. It has a stem 3 to 5 feet high, lanceolate leaves, the lower serrate or subpinnatifid, the upper entire, and ovoid subsessile flower-heads disposed in a simple leafy panicle. The whole plant is canescently tomentose. An infusion of it is used as a hair-tonic. [B, 5, 34.]—**A. maderaspatana** [Roxburgh]. See GRANGEA *maderaspatana*.—**A. maritima** [Linnæus]. Ger., *Meerstrands-Beifuss*. A perennial herb or shrub, belonging to the subgenus *Seriphida*, growing along the entire seacoast of Europe and of western Asia. The non-flowering stems are cæspitose, bearing numerous bipinnatifid or multipinnatifid canescently tomentose leaves about 1 inch in length, with linear segments; the flowering stems are erect and bear very small leaves, the upper ones entire; the flower-heads are small, oblong, and sessile. The common European variety, *A. maritima*, var. α *maritima* (*A. maritima* [Willdenow]), has erect heads borne on nodding branches. This variety has a strong aromatic, somewhat camphoraceous odor and a bitter taste, and the herb (*herba*, seu *summitates absinthii maritimi*) has been employed like that of *A. absinthium*, although it is less energetic in action than the latter. It was known to the ancients as ἀψίνθιον θαλάσσιον [Dioscorides]. The *A. maritima*, var. β *gallica* (*A. gallica* [Willdenow]), distinguished by its erect heads and rigid branches, occurs commonly in France, where it is employed as an anthelminthic under the name of *sanguénié*, and in England. This variety was analyzed by Heckel and Schlagdenhauffen and found to contain santonin, an essential oil, a yellow coloring matter, glucose, and tannin. The *A. maritima*, var. γ *salina* (*A. salina* [Willdenow]), distinguished by its dependent heads, occurs in England. It is sometimes collected for the ordinary variety, but appears to be of little medicinal value. The *A. maritima*, var. δ *vallesiaca* (*A. vallesiaca* [Allioni]), having erect heads and branches, and covered all over with white hairs, occurs in dry sunny spots in southern Europe. It is highly aromatic and the herb is used, under the name of *genippi nigri herba*, in the preparation of *absinthe* and the *vulnéraire suisse*. The *A. maritima*, var. *stechmannia* [Besser], or *A. maritima*, var. *pauciflora* [Ledebour], with which the *A. cina* of Berg and Schmidt and the *A. pauciflora* of Weber are probably identical, is an Oriental variety, the unexpanded flower-heads of which, according to the U. S. Ph., constitute the Levant wormseed, or santonica. This drug is also said to be produced by the *A. vahliana* (*q. v.*). See SANTONICA. [B, 5, 178, 180; "Ann. di chim. medico-farm. e di farmacol.," June, 1885, p. 368 (B).]—**A. mater herbarum.** The *A. vulgaris*. [B, 200.]—**A. mexicana** [Willdenow]. A species, 2 to 4 feet high, growing in portions of the United States and Mexico. The narrow, lanceolate or linear leaves are said to have stimulant, emmenagogue, and anthelminthic properties. [B, 215; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 774 (L).]—**A. minima.** A species growing in Asia, resembling *A. sternutatoria*, from which it is distinguished by the leaves not being sessile or downy, and by the fewer florets in each flower-head. [W. Dymock, "Proc. of the Am. Pharm. Assoc.," xxviii, p. 144 (L).]—**A. monogyna** [Linnæus]. A species indigenous to Hungary, distinguished by there being no more than a single female floret in each flower-head. [B, 71.]—**A. moxa** [Bessey]. An Asiatic species said to be the source of the moxa of the Chinese and Japanese. [B, 5.]—**A. mutellina** [Vill.]. Ger., *Alpen-Beifuss*. Syn.: *Absinthium lapsum* [Lamarck] (seu *mutellinum* [Rochleder], seu *petrosum* [Baumgarten]). A perennial herb, belonging to the subgenus *Absinthium*, growing in meadows upon the Alps. It has palmate multifid leaves, and oblong erect axillary flower-heads, the lower pedunculate, the upper sessile. Its herb has an aromatic taste, pleasanter than that of *A. absinthium*, which it frequently replaces in the preparation of *absinthe* and of the *vulnéraire suisse*. It is a very powerful aromatic tonic. [B, 173, 180.]—**A. nana** [Gaudin]. A perennial species belonging to the subgenus *Abrotanum*, growing in central Europe and the East. It has properties resembling those of *A. mutellina*. [B, 173, 178.]—**A. orientalis vulgaris facie.** The *A. chinensis*. [B, 200.]—**A. palmata** [Lamarck]. A shrubby species growing in southern France and in Spain. It is probably the ἀρτεμισία σαντόνιον of Dioscorides. It has an aromatic odor like that of santonica, and, according to some, furnishes a variety of the latter. [B, 180.]—**A. paniculata** [Lamarck]. A species said to be used as a substitute for *A. abrotanum*. [A, 316.]—**A. pauciflora** [Weber]. An Oriental species said to furnish Levant wormseed: probably identical with *A. maritima*, var. *stechmanniana*. [B, 5, 49.]—**A. pedemontana** [Balb.]. See *A. lanata*.—**A. pontica** [Linnæus]. Fr., *petite absinthe*, *armoise pontique*. Ger., *römischer Beifuss* (oder *Wermuth*). It., *assenzio romano*, *piccolo assenzio*. Sp., *ajenjo póntico* (ó *romano*). Roman wormwood. A perennial herbaceous species belonging to the subgenus *Abrotanum*, growing in central and southern Europe and in the East. The leaves are covered with hairs, gray on the upper surface, whitish on the lower surface, the lower ones doubly pinnatipartite and petiolate, the upper ones singly pinnatipartite or entire, and sessile. The flower-heads are grayish, globose, and nodding, and borne in erect, leafy, paniculate racemes. The flowering tops, *herba* vel *summitates absinthii pontici* (seu *hortensis*, seu *incani*, seu *minoris*, seu *nobilis*, seu *romani*, seu *tenuifolii*), have a pleasant aromatic odor and a bitter taste, and are used as a tonic and stimulant like *A. absinthium*. In the East they are employed as a cosmetic and in Egypt are burned to avert contagion during the plague. [B, 173, 178, 180.]—**A. prescottiana** [Bess.]. A North American species. [B, 215.]—**A. procera.** A species said to be used as a substitute for *A. abrotanum*. [A, 316.]—**A. pyromacha** [Viviani]. A species employed by the Arabs in the manufacture of a sort of amadou. [B, 173.]—**A. ramosa** [Smith]. A species found in northern Africa, the unexpanded flower-heads of which are said to furnish a part of the Barbary wormseed. [B, 81.] Cf. *A. glomerata*.—**A. rubra** [Tabernæmontanus]. A variety of *A. vulgaris* with a purplish stem. [B, 180.] See also *A. campestris*.—**A. rupestris** [Linnæus]. A perennial species, belonging to the subgenus *Absinthium*, growing in rocky and waste ground in the Alps. It has glabrous bipinnate leaves, the upper leaves and those upon the flower-stalks being entire and pectiniform-pinnate. The flower-heads are globose and nodding. The herb, *herba genippi albi* (seu *absinthii alpini*), has medicinal properties and uses similar to those of the herb of *A. mutellina* and *A. dracunculus*. By Allioni the *A. mutellina*, and by Vill. the *A. spicata* were referred to *A. rupestris*. [B, 97, 180.]—**A. salina** [Willdenow]. See *A. maritima*, var. *salina*.—**A. santonica** [Linnæus]. Ger., *tartarischer Beifuss*. A shrubby species, belonging to the subgenus *Abrotanum*, growing in Persia and Tartary. It has grayish leaves, the lower bipinnately incised, the upper pinnately incised, the uppermost linear in shape. The cylindrical flower-heads are borne in racemes. The unexpanded flower-heads constitute a variety of wormseed occasionally imported from Russia, and were at one time thought to be the source of the Levant wormseed, or santonica. [B, 81, 180.]—**A. saxatilis** [Willdenow]. A variety of *A. campestris*. [B, 178.]—**A. scoparia** [Waldstein and Kitaibel]. A species belonging to the subgenus *Abrotanum*, growing in sandy places in central Europe. The stalks are used for making brooms. [B, 173, 178.]—**A. Sieberi.** See *A. glomerata*.—**A. sinensis.** See *A. chinensis*.—**A. spicata** [Jacquin]. Fr., *armoise en épis*. Ger., *ähriger Beifuss*. A small perennial herb, belonging to the subgenus *Abrotanum*, growing upon the tops of the Alps. It has strong aromatic qualities, and is used for the same purposes as *A. mutellina* and *A. glacialis*. It is believed to be the ἀρτεμισία μονόκλωνος of Dioscorides. [B, 180.]—**A. stelleriana** [Bess.]. A species with grayish-white leaves cultivated as an ornamental plant. [B, 49.]—**A. sternutatoria.** An Asiatic species, the *wakh-chiknee* of the Hindoos, having numerous sessile wedge-shaped, deeply dentate villous leaves, and subglobular, sessile axillary flower-heads with 10 to 12 central florets. The seeds and powdered herb are used as a sternutatory. [W. Dymock, "Phar. Jour. and Trans.," Aug. 16, 1879 (L).]—**A. tenuifolia.** The *A. campestris*. [B, 200.] See also *A. pontica*.—**A. tridentata** [Nuttall]. The sage-brush; a shrub 5 to 6 feet high growing through the elevated regions of western North America, with canescent cuneate and truncate 3-toothed leaves and spicate clusters of obovold or oblong flower-heads disposed in narrow panicles. It contains a pungent volatile oil. An infusion of the plant is used by the Indians as a remedy for colds and headaches and as a vermifuge. [B, 81; "Am. Jour. of Pharm.," Feb., 1880, p. 69 (L).]—**A. trifida** [Nuttall]. A variety of sage-brush growing in the plains and valleys of Wyoming and Utah. A plant 1 to 2 feet high with 3-cleft or 3-parted leaves, and numerous flower-

THE ARTEMISIA MARITIMA.
[A, 327.]

heads in contracted leafy panicles or spikes. It has properties similar to those of *A. tridentata.* [B, 81 ; "Am. Jour. of Pharm.," Feb., 1880, p. 69 (L).]—**A. umbelliformis** [Lamarck]. A species possessed of tonic and stimulant properties. [B, 173.]—**A. vahliana** [Kostel]. A shrub belonging to the subgenus *Abratanum*, indigenous to Persia. The leaves are very small, palmately pinnate, and almost glabrous ; the flower-heads are very small, sessile, agglomerated in tufts, and oblong-ovoid. The unexpanded flower-heads were formerly believed to constitute the Levant wormseed, which is now referred to *A. maritima*, var. *stechmanniana (q. v.)*. [B, 180.] See also SANTONICA.—**A. vallesiaca** [Allioni]. See *A. maritima*, var. *vallesiaca.*—**A. vulgaris** [Linnæus]. Fr., *armoise commune.* Ger., *gemeiner Beifuss*, *Mutterkraut.* It., *assenzio selvatico.* Mugwort. A perennial herb belonging to the subgenus *Abrotanum*, growing wild in waste spots in Europe, northern Asia, and North America. It is 2 to 3 feet high, bears simply or doubly pinnatifid leaves with lanceolate segments, canescently tomentose inferiorly, green superiorly, and oblong-ovoid, sessile, purplish flower-heads disposed in a series of short, leafy, racemose spikes forming long panicles. Two varieties, *A. alba* and *A. rubra*, having respectively a white and a purplish stem, are described. It has a feeble, rather pleasant, aromatic odor and a bitter taste, and contains a volatile oil, a bitter principle, and tannic acid. The leaves and flowering tops, *herba et summitates artemisiæ albæ* (seu *rubræ*, seu *vulgaris*), *herba regia*, are used in infusion especially in uterine diseases. The root (derived especially from the variety *A. rubra*), *radix artemisiæ albæ* (seu *rubræ*, seu *vulgaris*), *radix parthenii*, *radix regia*, is woody, about 8 inches long and 1 inch thick, and is beset with numerous rootlets. The latter (*fibrillæ radicis artemisiæ vulgaris*) have been highly recommended in all convulsive affections, especially epilepsy, chorea, and infantile eclampsia, and in other morbid nervous states. The black coal-like rhizome of the dead plant was sometimes collected under the name of *carbones artemisiæ rubræ*, but is inert. The down of the leaves is sometimes employed as a source of moxa. [B, 33, 34, 180.]—**A. vulgaris major** [Bauhin]. See *A. vulgaris.*—**A. Wulfeni** [Schleich]. The *A. mutellina.* [B. 180.]—**Carbones artemisiæ rubræ.** See under *A. vulgaris.*—**Extractum artemisiæ absinthii aquosum.** An aqueous extract of the herb of wormwood (*A. absinthium*), formerly official in several pharmacopœias. [B, 97.] Cf. *Extractum* ABSINTHII and *Extrait d'*ABSINTHE.—**Extractum foliorum artemisiæ.** An aqueous extract of the leaves of *A. campestris* and *A. vulgaris*, the *extrait d'armoise* of the Fr. Cod. [B, 108.]—**Essentia artemisiæ absinthii.** See *Tinctura artemisiæ absinthii.*—**Fibrillæ radicis artemisiæ vulgaris.** See under *A. vulgaris.*—**Herba artemisiæ abrotani.** The herb of *A. abrotanum.* [B, 180.]—**Herba artemisiæ albæ, Herba artemisiæ florida, Herba artemisiæ rubræ, Herba artemisiæ vulgaris, Herba cum floribus artemisiæ.** The leaves and flowering tops of *A. vulgaris.* [B, 180, 270.]—**Oleum artemisiæ æthereum.** The volatile oil of *A. vulgaris.* [L, 85.]—**Radix artemisiæ, Radix artemisiæ albæ.** The root of *A. vulgaris.* [B, 108, 180.]—**Radix artemisiæ rubræ.** The root of *A. vulgaris* and *A. campestris.* [B. 180.]—**Radix artemisiæ vulgaris.** The root of *A. vulgaris.* [B, 180.]—**Summitates artemisiæ abrotani.** The flowering tops of *A. abrotanum.* [B, 180.]—**Summitates artemisiæ albæ (seu rubræ, seu vulgaris).** The flowering tops of *A. vulgaris.* [B, 180.]—**Syrupus artemisiæ.** Syrup of mugwort ; made by infusing the dry leaves of *A. vulgaris* in an equal quantity of boiling water for six hours, straining, adding to the liquid twice its weight of white sugar, and straining again ; official in several old pharmacopœias. [A, 353.]—**Syrupus artemisiæ compositus.** Compound syrup of mugwort, official in several old formularies. The Fr. Cod. directed 6 oz. of the flowering tops of *A. vulgaris*, ½ oz. each of elecampane, lovage, and fennel roots, 6 oz. each of pennyroyal, catmint, and flowers of savin, 3¼ oz. each of marjoram, hyssop, feverfew, rue, and sweet basil flowers, and 9 drachms each of aniseed and cinnamon to be bruised and macerated for three days in 18 lbs. of hydromel, ¼ lb. of liquid to be distilled off over a water-bath, and 1 lb. of white sugar added ; the residuum to be strained with slight expression, boiled with 4 lbs. of sugar, and added to the syrup first prepared, when it had become half-cold. [A, 353.]—**Tinctura artemisiæ absinthii.** A preparation made by infusing *A. absinthium* in alcohol. [B, 97.]

ARTEMISIÆ (Lat.), n. f. pl. A^{3}r-te^{2}m-i^{2}s′i^2-e(a^3-e^2). A division of the *Compositæ* made by Rüling. [B, 170.]

ARTEMISIÆFOLIUS (Lat.), adj. A^{3}r-te^{2}m-i^{2}s-i^2-e(a^3-e^2)-fo′li^2-u^{3}s(u^{4}s). See ARTEMISIFOLIUS.

ARTEMISIEÆ (Lat.), n. f. pl. A^{3}r-te^{2}m-i^{2}s-i(e)′e^2-e(a^3-e^2). Fr., *artemisiées.* Ger., *Artemesieen.* A division or subtribe of composite plants belonging to the tribe *Senecionideæ* and including *Artemisia*, *Tanacetum*, and 1 or 2 other genera. As made by De Candolle, it comprised genera with discoid heterogamous or homogamous heads, the ray florets of which are usually female and are either uniseriate or multiseriate, and the disc florets hermaphrodite with a cylindroid corolla and a bifid style. The achænia are non-alate and are rarely or never (?) flat ob-compressed, and the receptacle is devoid of pales. The *A.* of Lessing was a much larger division of plants and comprised the sections *Santolineæ*, *Cotuleæ*, *Athanasieæ*, *Artemisieæ* (= nearly the *A.* of De Candolle), *Hippieæ*, and *Eriocephaleæ.* [B, 170, 197, 214.]

ARTEMISIFOLIUS, ARTEMISIIFOLIUS (Lat.), adj's. A^{3}r-te^{2}m-i^{2}s-i^2-fo′li^2-u^{3}s(u^{4}s), -i(e)-i^2-fo′li^2-u^{3}s(u^{4}s). From *Artemisia*, and *folium*, a leaf. Having leaves like those of the *Artemisia* ; a botanical species-name. [B.]

ARTEMONIUM (Lat.), n. n. A^{3}r-te^{2}m-o′ni^2-u^{3}m(u^{4}m). Gr., ἀρτεμώνιον (from Ἀρτεμον, its inventor). A collyrium described by Galen. [A, 325 ; B, 59.]

ARTEN (Ger.), n. A^{3}rt′e^{2}n. A common name for herba marrubii (horehound). [B, 270.]

ARTÈRE (Fr.), n. A^{3}r-te^{2}r. ARTEREURYSMA (Lat.), n. n. A^{3}r-te^{2}r-u^2-ri^{2}z(ru^{6}s)'ma^3. Gen., *artereurys'matos* (*-tis*). From ἀρτηρία, an artery, and εὔρυσμα, dilatation. Fr., *artérévrysme.* Sp., *artereurisma.* See ANEURYSM.

ARTERIA (Lat.), n. f. A^{3}r-te(ta)'ri^2-a^3. See ARTERY.—**A. abdominalis.** See *Deep circumflex* ARTERY.—**A. abdominalis externa** (seu **subcutanea**). See *Superficial epigastric* ARTERY.—**A. acetabuli.** A branch of the internal circumflex artery distributed to the hip joint. [L, 31.]—**A. acromialis.** See *Acromial* ARTERY.—**A. ad cutem abdominis.** See *Superficial epigastric* ARTERY.—**A. ad fenestram ovalem.** A branch of the stylo-mastoid artery running to the fenestra ovalis. [L, 7.]—**A. ad humiliorem mesenterii sedem.** See *Inferior mesenteric* ARTERY.—**Arteriæ adiposæ.** See *Adipose* ARTERIES.—**A. adiposa ima.** A branch of the internal spermatic artery distributed to the panniculus adiposus. [L, 31.]—**A. alaris.** See *Lateral nasal* ARTERY and *Axillary* ARTERY.—**A. alveolaris inferior.** See *Inferior dental* ARTERY.—**A. alveolaris posterior.** See *Posterior dental* ARTERY.—**A. alveolaris superior.** See *Superior dental* ARTERY.—**A. anastomotica genu magna.** See *Anastomotica magna* ARTERY *of the thigh.*—**A. anastomotica magna.** See *Anastomotica magna* ARTERY *of the thigh* and *Anastomotic* ARTERY *of the arm.*—**A. anastomotica magna femoris.** See *Anastomica magna* ARTERY *of the thigh.*—**A. anastomotica pedis.** See *Deep plantar* ARTERY.—**A. anastomotica transversa.** Ger., *quere Verbindungsarterie.* A branch of the anterior peroneal artery anastomosing with a branch of the posterior tibial artery. [L, 117.]—**A. angularis.** See *Angular* ARTERY.—**A. angularis externa.** See *A. facialis anterior* and *Facial* ARTERY.—**A. angularis narium** (seu **nasi**). See *Angular* ARTERY.—**A. anonyma.** See *Innominate* ARTERY.—**A. anonyma brachio-cephalica.** See *Innominate* ARTERY.—**A. anonyma iliaca.** See *Common iliac* ARTERY.—**A. anterior communicans.** See *Anterior communicating* ARTERY *of the brain.*—**A. antibrachii communis.** See *Common interosseous* ARTERY *of the forearm.*—**A. aorta.** See AORTA.—**A. aorta abdominalis.** See *Abdominal* AORTA.—**A. aorta ascendens.** See *Ascending* AORTA.—**A. aorta descendens abdominalis.** See *Abdominal* AORTA.—**A. aorta descendens thoracica, A. aorta thoracica.** See *Thoracic* AORTA.—**A. apoplectica.** See *Carotid* ARTERY.—**A. appendicalis, A. appendicularis.** See *Appendicular* ARTERY.—**A. articularis capituli fibulæ.** Fr., *artère articulaire du la tête de péroné.* Ger., *obere Wadenbeinarterie.* A branch of the anterior tibial artery running beneath the fibula, covered by the origins of the peroneus longus and extensor digitorum muscles, to the tibio-fibular articulation. [L, 7.]—**A. articularis azygos.** See *Middle articular* ARTERY *of the knee.*—**A. articularis cubiti media.** A small branch of the ulnar artery, occasionally of the radial, to the radio-ulnar orbicular ligament. [L, 31.]—**A. articularis genu azygos.** See *Middle articular* ARTERY *of the knee.*—**A. articularis genu inferior externa.** See *External inferior articular* ARTERY *of the knee.*—**A. articularis genu inferior interna** (seu **lateralis**). See *Internal inferior articular* ARTERY *of the knee.*—**A. articularis genu inferior medialis.** See *External inferior articular* ARTERY *of the knee.*—**A. articularis genu interna secunda.** See *Internal superior articular* ARTERY *of the knee.*—**A. articularis genu lateralis.** See *Superior external articular* ARTERY *of the knee.*—**A. articularis genu media, A. articularis genu medialis.** See *Middle articular* ARTERY *of the knee.*—**A. articularis genu media inferior.** Fr., *artère articulaire moyenne inférieure du genou.* Ger., *mittlere unpaare Kniegelenkarterie.* An occasional branch of the popliteal or of the inferior articular artery of the knee. [L, 7.]—**A. articularis genu superficialis.** See *Anastomotica magna* ARTERY *of the thigh.*—**A. articularis genu superior externa.** See *External superior articular* ARTERY *of the knee.*—**A. articularis genu superior interna.** See *Internal superior articular* ARTERY *of the knee.*—**A. articularis genu superior interna profunda.** Ger., *obere innere tiefe Gelenkpulsader des Knies.* A deep branch of the internal superior articular artery of the knee. [L, 174.]—**A. articularis genu superior interna superficialis.** Ger., *oberflächliche obere innere Gelenkpulsader des Knies.* A superficial branch of the internal superior articular artery of the knee. [L. 174.]—**A. genu articularis superior lateralis.** See *External superior articular* ARTERY *of the knee.*—**A. articularis genu superior medialis.** See *Internal superior articular* ARTERY *of the knee.*—**A. articularis genu superior profunda.** See *Internal superior articular* ARTERY *of the knee.*—**A. articularis genu suprema.** See *Anastomotica magna* ARTERY *of the knee.*—**A. articularis genu suprema medialis.** See *Internal superior articular* ARTERY *of the knee.*—**A. articularis genu recurrens.** See *Anterior tibial recurrent* ARTERY.—**A. articularis humeri anterior.** See *Anterior circumflex* ARTERY *of the arm.*—**A. articularis humeri posterior.** See *Posterior circumflex* ARTERY *of the arm.*—**A. articularis interna secunda.** See *Internal superior articular* ARTERY *of the knee.*—**A. aspera.** See TRACHEA.—**A. atloido-muscularis.** Fr., *artère atloïdo-musculaire.* In the solipeds, a branch of the occipital, which anastomoses with the vertebral. [Girard (L, 43).]—**A. atrabiliaria.** See *Capsular* ARTERY.—**A. auditiva.** See *Auditory* ARTERY.—**A. auditiva externa.** See *External auditory* ARTERY.—**A. auditiva interna.** See *Internal auditory* ARTERY.—**Arteriæ auriculares.** See *Auricular* ARTERIES.—**Arteriæ auriculares anteriores.** See *Anterior auricular* ARTERIES.—**Arteriæ auriculares anteriores inferiores.** See *Anterior inferior auricular* ARTERIES.—**Arteriæ auriculares genu accessoriæ.** Ger., *Nebengelenkpulsadern des Knies.* Branches of the popliteal artery distributed to the knee joint. [L, 175.]—**A. auricularis anterior superior.** See *Anterior superior auricular* ARTERY.—**A. auricularis cordis dextra.** A branch of the right coronary artery of the heart distributed to the right auricle. [L, 117.]—**A. auricularis cordis sinistra.** A branch of the left coronary artery of the heart distributed to the left auricle. [L, 117.]—**A. auricularis posterior.** See *Posterior auricular* ARTERY.—**A. auricularis profunda.** See *Deep auricular* ARTERY.—**A. auricularis superior.** Fr., *artère auriculaire supérieure.* A term applied to the auricular branch (when there is only one) of the superficial temporal a., distributed to the upper part of the external ear. [L, 31.]—**A. axillaris.** See *Axillary* ARTERY.—**A. azygos linguæ** [Hyrtl]. A small artery in the median line of the dorsum of the tongue, formed by the union of branches of the dorsal arteries of the tongue. [L, 115.]—**A. basilaris.** See *Basilar* ARTERY.—**A. brachialis.** See *Brachial* ARTERY.—**A. brachialis communis.** See *Subclavian* ARTERY.—**A. brachialis profunda.** See *Posterior circumflex* ARTERY *of the arm.*—**A. brachio-cephalica.** See *Innominate* ARTERY.—**Arteriæ bronchiales anteriores.** Branches of the internal mammary artery distributed to the bronchi. [L, 31.]—**Arteriæ bronchiales inferiores posteriores.** Branches of the thoracic aorta distributed to the bronchi. [L, 175.]—**Arteriæ bronchiales superiores.** See ARTERIÆ *bronchiales anteriores.*—**A. bronchialis communis.** The common trunk which occasionally gives origin to the right and one left bronchial artery. [L, 31.]—**A. bronchialis dextra.** See *Right bronchial* ARTERY.—**A. bronchialis posterior, A. bronchialis sinistra inferior.** See *Inferior bronchial* ARTERY.—**A. bronchialis sinistra prima.** The uppermost of the left bronchial arteries. [L, 117.]—**A. bronchialis sinistra secunda.** See *Inferior bronchial* ARTERY.—**A. bronchialis sinistra superior.** See *A. bronchialis sinistra prima.*—**Arteriæ bronchicæ.** The bronchial arteries. [L.]—**Arteriæ bronchicæ superiores.** See ARTERIÆ *bronchiales anteriores.*—**A. buccalis, A. buccinatoria.** See *Buccal* ARTERY.—**A. bulbina, A. bulbo-cavernosa, A. bulbosa.** See ARTERY *of the bulb of the urethra.*—**A. bulbo-urethralis.** Fr., *artère bulbo-urétrale.* A branch of the artery of the penis, or of the artery of the corpus cavernosum, distributed to the bulb of the urethra. [L, 31.]—**Arteriæ cæcales.** See *Cæcal* ARTERIES.—**A. cæcalis.** Fr., *artère cæcale.* Ger., *Blinddarmpulsader.* A branch of the ileo-colic artery, distributed to the cæcum. [L, 7.]—**A. cæcalis anterior.** A branch of the a. cæcalis to the anterior surface of the cæcum. [L, 7.]—**A. cæcalis posterior.** A branch of the a. cæcalis to the posterior surface of the cæcum. [L, 7.]—**Arteriæ calcaneæ externæ.** See *External calcaneal* ARTERIES.—**Arteriæ calcaneæ mediales.** See *Middle calcaneal* ARTERIES.—**A. callosa.** See *Anterior cerebral* ARTERY.—**A. capitalis.** See *Carotid* ARTERY.—**Arteriæ capsulares mediæ.** The capsular arteries.—**A. cardiaca dextra.** See *Right coronary* ARTERY *of the heart* and *Right coronary* ARTERY *of the stomach.*—**A. cardiaca sinistra.** See *Left coronary* ARTERY *of the heart* and *Pyloric* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**). See *Carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **cerebralis.** See *Internal carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **communis.** See *Common carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **externa.** See *External carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **facialis.** See *External carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **interna.** See *Internal carotid* ARTERY.—**A. carotica** (seu **carotida**, seu **carotis**) **primitiva.** See *Common carotid* ARTERY.—**A. carpea anterior.** See *Anterior carpal* ARTERY.—**Arteriæ carpeæ dorsales.** See *Dorsal carpal* ARTERIES.—**Arteriæ carpeæ dorsales ulnares.** Branches of the ulnar artery to the posterior surface of the carpus, which assist in forming the rete carpeum dorsale. [L, 31.]—**A. carpea dorsalis radialis.** See *Posterior radio-carpal* ARTERY.—**Arteriæ carpeæ ulnares volares.** Branches of the ulnar artery to the anterior surface of the carpus, which assist in forming the rete carpeum volare. [L, 31.]—**A. carpea volaris anterior** (seu **radialis**), **A. carpi transversa anterior.** See *Anterior radio-carpal* ARTERY.—**A. cavernosa.** See ARTERY *of the corpus cavernosum.*—**A. cavernosa urethræ.** See ARTERY *of the bulb of the urethra.*—**A. cavi tympani.** See *External auditory* ARTERY.—**A. centralis modioli.** The artery which is situated in the tubulus centralis modioli. [L, 172.]—**A. centralis retinæ.** See *Central retinal* ARTERY.—**A. cerebelli inferior, A. cerebelli inferior anterior.** See *Anterior inferior cerebellar* ARTERY.—**A. cerebelli inferior posterior, A. cerebelli magna.** See *Posterior inferior cerebellar* ARTERY.—**A.**

cerebelli superior. See *Superior cerebellar* ARTERY.—**A. cerebelli superior anterior.** A branch of the vertebral artery distributed to the anterior portion of the cerebellum. [Weber (L, 31).]—**A. cerebelli superior posterior.** A branch of the vertebral artery distributed to the posterior portion of the cerebellum. [Weber (L, 31).]—**A. cerebralis.** See *Internal carotid* ARTERY.—**A. cerebralis anterior.** See *Anterior cerebral* ARTERY.—**A. cerebralis media.** See *Middle cerebral* ARTERY.—**A. cerebralis posterior.** See *Posterior cerebral* ARTERY.—**A. cerebri anterior.** See *Anterior cerebral* ARTERY.—**A. cerebri anterior communis.** An artery formed by the union of the internal carotids; the analogue of the two anterior cerebrals. [Barkow (L, 31).]—**A. cerebri media.** See *Middle cerebral* ARTERY.—**A. cerebri posterior** (seu **profunda**). See *Posterior cerebral* ARTERY.—**A. cerebri transversa.** See *Middle cerebral* ARTERY.—**Arteriæ cervicales descendentes profundæ.** Branches of the occipital artery to the deep cervical muscles. [Arnold (L, 31).]—**Arteriæ cervicales descendentes superficiales.** Branches of the occipital artery (1st def.) to the superficial cervical muscles. [Arnold (L, 31).]—**Arteriæ cervicales descendentes profundæ.** Branches of the occipital artery (1st def.) to the deep muscles of the neck. [L, 31.]—**A. cervicalis.** See *Basilar* ARTERY.—**A. cervicalis ascendens.** See *Ascending cervical* ARTERY.—**A. cervicalis descendens.** See *Descending cervical* ARTERY.—**A. cervicalis posterior.** See *Posterior cervical* ARTERY.—**A. cervicalis princeps.** See *Descending cervical* ARTERY.—**A. cervicalis profunda.** See *Deep cervical* ARTERY.—**A. cervicalis suprema.** One of the terminal branches of the posterior scapular artery [L, 175.]—**A. cervicalis superficialis.** See *Superficial cervical* ARTERY.—**A. cervicalis transversa.** See *Transverse cervical* ARTERY.—**Arteriæ chorioideæ anteriores.** See *Anterior chorioid* ARTERIES.—**Arteriæ chorioideæ posteriores.** See *Posterior chorioid* ARTERIES.—**A. chorioidea posterior superior.** Fr., *artère choroïdienne supérieure postérieure.* Ger., *hintere obere Adernetzpulsader.* A branch of the superior cerebellar artery distributed to the valve of Vieussens, the pineal gland, and the corpora quadrigemina, and anastomosing with the anterior chorioid arteries. [L, 7.]—**Arteriæ chorioideæ superiores anteriores.** Fr., *artères choroïdiennes antérieures.* Ger., *vordere Adernetzpulsadern.* Branches of the posterior cerebral artery to the chorioid plexus. [L, 7.]—**Arteriæ ciliares anteriores** (seu **anticæ**). See *Anterior ciliary* ARTERIES.—**Arteriæ ciliares mediæ.** See *Long ciliary* ARTERIES.—**Arteriæ ciliares posteriores breves.** See *Short ciliary* ARTERIES.—**Arteriæ ciliares posteriores longæ.** See *Long ciliary* ARTERIES.—**Arteriæ ciliares posticæ.** See *Posterior ciliary* ARTERIES.—**A. circumflexa abdominis.** See *Deep circumflex iliac* ARTERY.—**A. circumflexa cordis.** Fr., *artère circonflexe du cœur.* The posterior branch of the left coronary artery of the heart, distributed to its posterior surface. [L, 7.]—**A. circumflexa femoris anterior** (seu **externa**). See *External circumflex* ARTERY *of the thigh.*—**A. circumflexa femoris interna.** See *Internal circumflex* ARTERY *of the thigh.*—**A. circumflexa femoris lateralis.** See *External circumflex* ARTERY *of the thigh.*—**A. circumflexa femoris medialis** (seu **posterior**). See *Internal circumflex* ARTERY *of the thigh.*—**Arteriæ circumflexæ genu.** See *Articular* ARTERIES *of the knee.*—**A. circumflexa genu inferior interna.** See *Internal inferior articular* ARTERY *of the knee.*—**A. circumflexa humeri anterior.** See *Anterior circumflex* ARTERY *of the arm.*—**A. circumflexa humeri major.** See *Posterior circumflex* ARTERY *of the arm.*—**A. circumflexa humeri minor.** See *Anterior circumflex* ARTERY *of the arm.*—**A. circumflexa humeri posterior.** See *Posterior circumflex* ARTERY *of the arm.*—**A. circumflexa ilii.** A term applied to the deep and external circumflex iliac arteries, but more properly to the latter. [L.]—**A. circumflexa ilii externa.** See *External circumflex iliac* ARTERY.—**A. circumflexa ilii interna.** See *Deep circumflex iliac* ARTERY.—**A. circumflexa ilii superficialis.** See *External circumflex iliac* ARTERY.—**A. circumflexa musculi sterno-cleido-mastoidei inferior.** A branch of the external carotid artery, distributed to the lower portion of the sterno cleido-mastoid muscle. [L, 31.]—**A. circumflexa musculi sterno-cleido-mastoidei superior.** A branch of the external carotid artery, distributed to the upper portion of the sterno-cleido-mastoid muscle. [L, 31.]—**A. circumflexa scapulæ.** See *Circumflex* ARTERY *of the scapula.*—**A. clitoridea, A. clitoridis.** Fr., *artère clitoridienne.* The artery of the clitoris; the analogue in the female of the artery of the penis of the male. [L, 7.]—**A. coccygea.** See *Coccygeal* ARTERY.—**A. cochleæ.** See *Cochlear* ARTERY.—**A. cœliaca.** See *Cœliac* ARTERY.—**A. colica dextra.** See *Right colic* ARTERY.—**A. colica dextra inferior.** See *Ileocolic* ARTERY.—**A. colica media.** See *Middle colic* ARTERY.—**A. colica sinistra.** See *Left colic* ARTERY.—**A. colica sinistra inferior.** Fr., *artère colique gauche inférieure.* Ger., *untere linke Grimmdarmpulsader.* A branch of the inferior mesenteric artery to the mesocolon of the sigmoid flexure of the colon. [L, 31.]—**A. colica sinistra media.** Fr., *artère colique moyenne gauche.* Ger., *mittlere linke Grimmdarmpulsader.* A branch of the inferior mesenteric artery uniting the a. colica sinistra and the a. colica superior. [L, 31.]—**A. colica sinistra superior.** Fr., *artère colique gauche supérieure.* Ger., *obere linke Grimmdarmpulsader.* A branch of the inferior mesenteric artery supplying the left portion of the colon as far as the sigmoid flexure. [L, 31.]—**Arteriæ collaterales colli.** Rathke's term for the vertebral arteries of birds. [L, 63.]—**Arteriæ collaterales genu.** See *Articular* ARTERIES *of the knee.*—**A. collateralis brachii externa.** See *Superior profunda* ARTERY *of the arm.*—**A. collateralis externa.** See *Profunda radial* ARTERY.—**A. collateralis genu superior externa.** See *External superior articular* ARTERY *of the knee.*—**A. collateralis interna.** See *Inferior profunda* ARTERY *of the arm.*—**A. collateralis magna.** See *Superior profunda* ARTERY *of the arm.*—**A. collateralis media.** Fr., *artère collatérale médiane.* Ger., *mittlere Nebenpulsader.* A branch of the superior profunda artery of the arm distributed to the triceps muscle. [L, 117.]—**A. collateralis profunda.** See *A. collateralis radialis superior posterior.*—**A. collateralis radialis anterior** [Weber]. A branch of the profunda radial artery which accompanies the upper portion of the radial nerve for a short distance and is distributed to the back part of the arm. [L, 31.]—**A. collateralis radialis inferior.** See *Profunda radial* ARTERY.—**A. collateralis radialis posterior** (seu **primaria, seu superior**). A branch of the superior profunda artery of the arm, or of one of its branches, distributed to the outer and back part of the olecranon. [L, 31.]—**A. collateralis ulnaris anterior** (seu **inferior**). See *Anastomotic* ARTERY *of the arm.*—**A. collateralis ulnaris posterior.** See *Inferior profunda* ARTERY *of the arm.*—**A. collateralis ulnaris prima.** See *Superior profunda* ARTERY *of the arm.*—**A. collateralis ulnaris secunda.** See *Anastomotic* ARTERY *of the arm.*—**A. collateralis ulnaris superior.** See *Superior profunda* ARTERY *of the arm.*—**A. colli transversa.** See *Transverse cervical* ARTERY.—**A. comes nervi ischiadici.** A branch of the inferior gluteal artery which accompanies the sciatic nerve to the middle of the thigh. [L, 117.]—**A. comes nervi mediani.** See *Median* ARTERY.—**A. comes nervi phrenici.** See *Superior phrenic* ARTERY.—**A. communicans anterior, A. communicans cerebri anterior.** See *Anterior communicating* ARTERY *of the brain.*—**A. communicans cerebri posterior.** See *Posterior communicating* ARTERY *of the brain.*—**A. communicans cerebri superior.** See *Anterior communicating* ARTERY *of the brain.*—**A. communicans Willisii.** See *Posterior communicating* ARTERY *of the brain.*—**A. concharum nasi.** See *Spheno-palatine* ARTERY.—**A. coronaria cordis anterior** (seu **interna**). See *Right coronary* ARTERY *of the heart.*—**Arteriæ conjunctivales anteriores.** Branches of the naso-frontal artery distributed to the conjunctiva. [L, 31.]—**Arteriæ conjunctivales posteriores.** Branches of the palpebral or lacrymal arteries distributed to the conjunctiva. [L, 31.]—**A. coronaria cordis dextra.** See *Right coronary* ARTERY *of the heart.*—**A. coronaria cordis externa.** See *Left coronary* ARTERY *of the heart.*—**A. coronaria cordis media.** A branch of the left coronary artery of the heart which supplies the apex of the organ. [L, 175.]—**A. coronaria cordis posterior** (seu **sinistra**). See *Left coronary* ARTERY *of the heart.*—**A. coronaria labii inferioris.** See *Coronary* ARTERY *of the lower lip.*—**A. coronaria labii superioris.** See *Coronary* ARTERY *of the upper lip.*—**A. coronaria malleolaris.** See *A. anastomotica transversa.*—**A. coronaria ventriculi dextra.** See *Pyloric* ARTERY.—**A. coronaria ventriculi dextra inferior.** See *Right gastro-epiploic* ARTERY.—**A. coronaria ventriculi dextra superior.** See *Pyloric* ARTERY.—**A. coronaria ventriculi major.** See *Coronary* ARTERY *of the stomach.*—**A. coronaria ventriculi minor.** See *Pyloric* ARTERY.—**A. coronaria ventriculi sinistra.** See *Coronary* ARTERY *of the stomach.*—**A. coronaria ventriculi sinistra inferior.** See *Left gastro-epiploic* ARTERY.—**A. coronaria ventriculi sinistra superior.** See *Coronary* ARTERY *of the stomach.*—**A. coronaria ventriculi superior dextra.** See *Pyloric* ARTERY.—**A. coronaria ventriculi superior sinistra.** See *Coronary* ARTERY *of the stomach.*—**A. carpea dorsalis ulnaris.** See *Posterior ulno-carpal* ARTERY.—**A. corporis callosi.** See *Anterior cerebral* ARTERY.—**A. corporis cavernosi urethræ.** See ARTERY *of the bulb of the urethra.*—**Arteriæ costales posteriores.** See *Aortic intercostal* ARTERIES.—**A. costalis anterior.** An intercostal branch of the internal mammary a. [L, 63.]—**A. costalis inferior.** The anterior branch of an aortic intercostal a. [L, 31.]—**A. costalis prima.** See *Superior intercostal* ARTERY.—**A. costalis superior, A. costalis suprema.** See *Superior intercostal a.*—**A. costo-cervicalis.** See *Costo-cervical* ARTERY.—**A. costo-lumbaris.** According to some authorities, the lowest of the intercostal arteries, and according to others, the uppermost of the lumbar arteries. [L, 31.]—**A. crassa.** See AORTA.—**A. cremasterica.** See *External spermatic* ARTERY.—**A. crico-thyreoidea.** See *Crico-thyreoid* ARTERY.—**A. cristæ pubis.** See *A. pubica.*—**A. cruralis.** See *Femoral* ARTERY.—**A. cruralis communis.** See *Common femoral* ARTERY.—**A. cruralis externa.** See *External femoral* ARTERY.—**A. cruralis iliaca.** See *External iliac* ARTERY.—**A. cruralis interna.** See *Internal iliac* ARTERY.—**A. cruralis profunda.** See *deep femoral* ARTERY.—**A. cruralis superficialis.** See *Superficial femoral* ARTERY.—**A. cruris et pedis.** See *Popliteal* ARTERY.—**A. cubitalis.** See *Ulnar* ARTERY.—**A. cubitalis recurrens anterior.** See *Anterior ulnar recurrent* ARTERY.—**A. cubitalis recurrens posterior.** See *Posterior ulnar recurrent* ARTERY.—**A. cubitalis volaris profunda.** See *A. metacarpea volaris profunda ulnaris.*—**A. cubiti externa.** See *Radial a.*—**A. cutanea abdominis.** See *Superficial epigastric* ARTERY.—**A. cystica.** See *Cystic* ARTERY.—**A. deferentialis.** See ARTERY *of the vas deferens.*—**A. deltoidea.** Fr., *artère deltoïdienne.* A branch of the acromio-thoracic artery running in the groove between the pectoralis major and deltoid muscles and distributed to the latter. [L, 7.]—**A. dentalis inferior.** See *Inferior dental* ARTERY.—**A. dentalis posterior.** See *Posterior dental* ARTERY.—**A. dentalis superior.** See *Superior dental* ARTERY.—**A. diaphragmatica superior, A. diaphragmatica superior anterior.** See *Superior phrenic* ARTERY.—**Arteriæ diaphragmaticæ.** See *Inferior phrenic* ARTERIES.—**Arteriæ digitales communes.** The interosseous arteries of the foot and hand. [L.]—**Arteriæ digitales communes plantares.** See *Plantar interosseous* ARTERIES.—**Arteriæ digitales communes volares.** See *Palmar interosseous* ARTERIES.—**Arteriæ digitales dorsales manus.** See *Dorsal digital* ARTERIES *of the hand.*—**Arteriæ digitales dorsales pedis.** See *Dorsal digital* ARTERIES *of the foot.*—**Arteriæ digitales manus dorsales.** See *Dorsal digital* ARTERIES *of the hand.*—**Arteriæ digitales manus volares.** See *Palmar digital* ARTERIES.—**Arteriæ digitales pedis dorsales.** See *Dorsal digital* ARTERIES *of the foot.*—**Arteriæ digitales pedis plantares.** See *Plantar digital* ARTERIES.—**Arteriæ digitales volares communes.** See *Palmar interosseous* ARTERIES.—**Arteriæ digitales volares**

radiales. The palmar digital arteries on the radial side of the fingers. [L, 117.]—**Arteriæ digitales volares ulnares.** The palmar digital arteries on the ulnar side of the fingers. [L, 117.]—**A. digitalis communis prima, A. digitalis communis volaris prima.** See *A. princeps pollicis et indicis.*—**A. digitalis dorsalis hallucis interna.** The dorsal digital artery of the tibial side of the great toe. [L, 175.]—**A. digitalis medialis hallucis.** The continuation of the external plantar artery on the plantar and external surfaces of the great toe. [L, 117.]—**A. digitalis volaris prima.** Ger., *erste Fingerarterie der Hohlenhand.* The first palmar digital artery. [L, 31.]—**A. digitalis volaris quarta.** Ger., *vierte Fingerarterie der Hohlenhand.* The fourth palmar digital artery. [L, 31.]—**A. digitalis plantaris propria lateralis digiti quinti.** The plantar digital artery to the fibular side of the little toe. [L, 31.]—**A. digitalis volaris secunda.** Ger., *zweite Fingerarterie der Hohlenhand.* The second palmar digital artery. [L, 174.]—**A. digitalis volaris tertia.** Ger., *dritte Fingerarterie der Hohlenhand.* The third palmar digital artery. [L, 174.]—**A. digiti minimi plantaris externa.** See *A. plantaris lateralis digiti quinti.*—**Arteriæ dorsales carpi.** See *Dorsal carpal* ARTERIES.—**Arteriæ dorsales digitales** (seu digitorum). See *Dorsal digital* ARTERIES *of the hand.*—**A. dorsalis clitoridis.** See *Dorsal* ARTERY *of the clitoris.*—**A. dorsalis digitalis minima.** See *A. dorsalis digiti minimi externa.*—**A. dorsalis digiti medii externa.** Ger., *äussere Rückenpulsader der zweiten Zehe.* The dorsal digital artery on the fibular side of the second toe. [L, 174.]—**A. dorsalis digiti minimi.** The dorsal artery of the little toe. [L.]—**A. dorsalis digiti minimi externa.** Ger., *äussere Rückenpulsader der kleinen Zehe.* The dorsal digital artery on the fibular side of the little toe. [L, 174.]—**A. dorsalis digiti quarti externa.** Ger., *äussere Rückenpulsader der vierten Zehe.* The dorsal digital artery on the fibular side of the fourth toe. [L, 174.]—**A. dorsalis digiti quarti interna.** Ger., *innere Rückenpulsader der vierten Zehe.* The dorsal digital artery on the tibial side of the fourth toe. [L, 174.]—**A. dorsalis digiti quinti externa.** Ger., *äussere Rückenpulsader der fünften Zehe.* The dorsal digital artery on the fibular side of the little toe. [L, 174.]—**A. dorsalis digiti quinti interna.** Ger., *innere Rückenpulsader der fünften Zehe.* The dorsal digital artery on the tibial side of the little toe. [L, 174.]—**A. dorsalis digiti secundi externa.** Ger., *äussere Rückenpulsader der zweiten Zehe.* The dorsal digital artery on the fibular side of the second toe. [L, 174.]—**A. dorsalis digiti secundi interna.** Ger., *innere Rückenpulsader der zweiten Zehe.* The dorsal digital artery on the tibial side of the second toe. [L, 174.]—**A. dorsalis digiti tertii externa.** Ger., *äussere Rückenpulsader der dritten Zehe.* The dorsal digital artery on the fibular side of the third toe. [L, 174.]—**A. dorsalis digiti tertii interna.** Ger., *innere Rückenpulsader der dritten Zehe.* The dorsal digital artery on the tibial side of the third toe. [L, 174.]—**A. dorsalis hallucis.** The first dorsal interosseous artery of the foot. [L.]—**A. dorsalis hallucis externa.** Ger., *äussere Rückenpulsader der grossen Zehe.* The dorsal digital artery on the fibular side of the great toe. [L, 174.]—**A. dorsalis hallucis interna.** Ger., *innere Rückenpulsader der grossen Zehe.* The dorsal digital artery on the tibial side of the great toe. [L, 174.]—**A. dorsalis indicis radialis.** See *Dorsal* ARTERY *of the index finger.*—**A. dorsalis linguæ.** See *Dorsal* ARTERY *of the tongue.*—**A. dorsalis metacarpi.** See *Posterior radio-carpal* ARTERY.—**A. dorsalis nasi.** The nasal branch of the ophthalmic artery. [L, 31.]—**A. dorsalis pedis.** See *Dorsal* ARTERY *of the foot.*—**A. dorsalis penis.** See *Dorsal* ARTERY *of the penis.*—**A. dorsalis pollicis.** See *Dorsal* ARTERY *of the thumb.*—**A. dorsalis radialis digiti medii.** The dorsal digital artery on the radial side of the middle finger. [L, 174.]—**A. dorsalis radialis digiti minimi.** The dorsal digital artery on the radial side of the little finger. [L, 174.]—**A. dorsalis radialis digiti quarti.** The dorsal digital artery on the radial side of the ring finger. [L, 174.]—**A. dorsalis radialis indicis.** The dorsal digital artery on the radial side of the index finger. [L, 174.]—**A. dorsalis radialis pollicis.** A branch of the dorsal carpal branch of the radial artery to the radial side of the thumb. [L, 174.]—**A. dorsalis scapulæ.** See *Posterior scapular* ARTERY.—**A. dorsalis scapulæ inferior.** The inferior branch of the posterior scapular artery. [L. 31.]—**A. dorso-spinalis.** Fr., *artère dorso-spinale.* A branch of the superior intercostal artery to the posterior cervical muscles. [L, 7.]—**A. dorsalis suprema.** See *Ascending cervical* ARTERY.—**A. dorsalis ulnaris.** See *A. carpea dorsalis ulnaris.*—**A. dorsalis ulnaris indicis.** The dorsal digital artery on the ulnar side of the index finger. [L, 174.]—**A. dorsalis ulnaris pollicis.** A branch of the dorsal metacarpal branch of the radial artery on the ulnar side of the thumb. [L, 174.]—**A. duodenalis inferior.** See *Inferior pancreatico-duodenal* ARTERY.—**A. duræ matris media maxima.** See *Middle meningeal* ARTERY.—**A. emulgens.** See *Renal* ARTERY.—**A. encephalica.** See *Internal carotid* ARTERY.—**A. epigastrica.** See *Epigastric* ARTERY.—**A. epigastrica abdominalis, A. epigastrica externa.** See *Superficial epigastric* ARTERY.—**A. epigastrica inferior.** See *Deep epigastric* ARTERY.—**A. epigastrica inferior externa.** See *Superficial epigastric* ARTERY and *External circumflex iliac* ARTERY.—**A. epigastrica inferior interna** (seu profunda). See *Deep epigastric* ARTERY.—**A. epigastrica inferior superficialis.** See *Superficial epigastric* ARTERY.—**A. epigastrica interna.** See *Deep epigastric* ARTERY.—**A. epigastrica subcutanea, A. epigastrica superficialis.** See *Superficial epigastric* ARTERY.—**A. epigastrica superior.** See *Superior epigastric* ARTERY.—**A. epiploica sinistra.** Fr., *artère épiploïque gauche.* The largest of the branches of the left gastro-epiploic artery, which is distributed to the mesentery. [L, 7.]—**A. ethmoidalis anterior.** See *Anterior ethmoidal* ARTERY.—**A. ethmoidalis posterior.** See *Posterior ethmoidal* ARTERY.—**A. facialis.** See *Facial* ARTERY.—**A. facialis anterior.** See *Angular* ARTERY and *Facial* ARTERY.—**A. facialis externa.** See *Facial* ARTERY.—**A. facialis posterior.** See *Transverse facial* ARTERY.—**A. facialis profunda.** See *Internal maxillary* ARTERY.—**A. facialis** (seu faciei) **transversa** (seu transversa posterior). See *Transverse facial* ARTERY.—**A. femoralis.** See *Femoral* ARTERY.—**A. femoralis communis.** See *Common femoral* ARTERY.—**A. femoralis profunda.** See *Deep femoral* ARTERY.—**A. femoralis superficialis.** See *Superficial femoral* ARTERY.—**A. femoris profunda.** See *Deep femoral* ARTERY.—**A. fibularis, A. fibularis communis.** See *Peroneal* ARTERY.—**A. fibularis superior.** See *A. articularis capituli fibulæ.*—**A. fossæ Sylvii.** See *Middle cerebral* ARTERY.—**A. frontalis.** See *Frontal* ARTERY.—**A. frontalis externa.** See *Supra-orbital* ARTERY.—**A. frontalis interna.** See *A. naso-frontalis.*—**A. funicularis, A. funiculi spermatici.** See *External spermatic* ARTERY.—**Arteriæ gastricæ breves.** Fr., *artères gastriques courtes.* The short branches to the walls of the stomach from the coronary, splenic, pyloric, and right and left gastro-epiploic arteries. [L, 115.]—**A. gastrica coronaria ventriculi inferior dextra.** See *Right gastro-epiploic* ARTERY.—**A. gastrica coronaria ventriculi inferior sinistra.** See *Left gastro-epiploic* ARTERY.—**A. gastrica dextra inferior.** See *Right gastro-epiploic* ARTERY.—**A. gastrica dextra superior.** See *Pyloric* ARTERY.—**A. gastrica inferior sinistra.** See *Left gastro-epiploic* ARTERY.—**A. gastrica major.** See *Coronary* ARTERY *of the stomach.*—**A. gastrica sinistra inferior.** See *Left gastro-epiploic* ARTERY.—**A. gastrica** (sinistra) **superior.** See *Coronary* ARTERY *of the stomach.*—**A. gastrica superior dextra.** See *Pyloric* ARTERY.—**A. gastrica sinistra.** See *Coronary* ARTERY *of the stomach.*—**Arteriæ gastrocnemiæ.** See *Deep sural* ARTERIES.—**A. gastro-duodenalis.** See *Gastro-duodenal* ARTERY.—**A. gastro-epiploica dextra.** See *Right gastro-epiploic* ARTERY.—**A. gastro-epiploica sinistra.** See *Left gastro-epiploic* ARTERY.—**A. gastro-hepatica sinistra.** Fr., *artère gastro-hépatique gauche.* An occasional branch of the coronary artery of the stomach distributed to the left lobe of the liver. [L, 7.]—**Arteriæ gemellæ.** See *Sural* ARTERIES.—**Arteriæ gemellæ cutaneæ.** See *Superficial sural* ARTERIES.—**Arteriæ gemellæ musculares, Arteriæ gemellæ profundæ.** See *Deep sural* ARTERIES.—**Arteriæ gemellæ superficiales.** See *Superficial sural* ARTERIES.—**Arteriæ gemellæ suræ.** See *Sural* ARTERIES.—**A. glandulosa axillaris.** A branch of the axillary artery distributed to the axillary glands. [L, 31.]—**Arteriæ glomeruli.** The arteries of a glomerulus of the kidney. [L, 117.]—**A. glutæa.** See *Gluteal* ARTERY.—**A. glutæa inferior.** See *Inferior gluteal* ARTERY.—**A. glutæa superior.** See *Superior gluteal* ARTERY.—**Arteriæ hæmorrhoidales externæ.** See *External hæmorrhoidal* ARTERIES.—**A. hæmorrhoidalis interna.** See *Internal hæmorrhoidal* ARTERY.—**A. hæmorrhoidalis media.** See *Middle hæmorrhoidal* ARTERY.—**A. hæmorrhoidalis superior.** See *Superior hæmorrhoidal* ARTERY.—**Arteriæ helicinæ.** See *Helicine* ARTERIES.—**A. hepatica.** See *Hepatic* ARTERY.—**A. hepatica communis.** See *Common hepatic* ARTERY.—**A. hepatica dextra.** See *Right hepatic* ARTERY.—**A. hepatica propria.** See *Hepatic* ARTERY.—**A. hepatica sinistra.** See *Left hepatic* ARTERY.—**A. humeraria.** See *Brachial* ARTERY.—**A. humeri profunda.** See *Superior profunda* ARTERY *of the arm.*—**A. hyaloidea.** See *Hyaloid* ARTERY.—**A. hyoidea.** See *Hyoid* ARTERY.—**A. hypogastrica.** See *Internal iliac* ARTERY.—**A. ileo-cæcalis.** See *Ileo-cæcal* ARTERY.—**A. ileo-colica.** See *Ileo-colic* ARTERY.—**A. ileo-colica dextra media.** See *Right colic* ARTERY.—**Arteriæ iliacæ.** See *Iliac* ARTERIES.—**A. iliaca anterior.** See *Internal iliac* ARTERY.—**A. iliaca communis.** See *Common iliac* ARTERY.—**A. iliaca cruralis.** See *External iliac* ARTERY.—**A. iliaca externa.** See *External iliac* ARTERY.—**A. iliaca femoris.** See *Superficial femoral* ARTERY.—**A. iliaca hypogastrica** (seu interna). See *Internal iliac* ARTERY.—**A. iliaca parva.** See *Ilio-lumbar* ARTERY.—**A. iliaca posterior.** See *Gluteal* ARTERY.—**A. iliaca primitiva.** See *Common iliac* ARTERY.—**A. ilio-lumbaris.** See *Ilio-lumbar* ARTERY.—**A. ilii profundissima.** A branch of the gluteal artery to the hip joint. [L, 7.]—**A. incisiva.** Fr., *artère incisive.* One of the terminal branches of the inferior dental artery, which supplies the lower incisor teeth. [L, 31.]—**A. indicis radialis dorsalis.** See *A. dorsalis radialis indicis.*—**A. indicis radialis volaris.** See *A. volaris radialis indicis.*—**A. inferior linguæ.** See *Ranine* ARTERY.—**A. infra-orbitalis.** See *Infra-orbital* ARTERY.—**A. infrascapularis.** See *Infrascapular* ARTERY.—**Arteriæ inguinales.** Fr., *artères inguinales.* Branches of the common femoral artery to the inguinal region. [L, 7.]—**A. innominata.** See *Innominate* ARTERY.—**Arteriæ intercostales anteriores.** See *Anterior intercostal* ARTERIES.—**Arteriæ intercostales aorticæ** (seu inferiores, seu posteriores). See *Aortic intercostal* ARTERIES.—**A. intercostalis prima.** See *Superior intercostal* ARTERY.—**A. intercostalis secunda.** The second intercostal artery. [L, 115.]—**A. intercostalis superior** (seu suprema). See *Superior intercostal* ARTERY.—**Arteriæ intermetacarpeæ dorsales.** See *Dorsal interosseous* ARTERIES *of the hand.*—**Arteriæ intermetacarpeæ volares.** See *Palmar interosseous* ARTERIES.—**Arteriæ intermetatarseæ dorsales.** See *Dorsal interosseous* ARTERIES *of the foot.*—**A. interossea accessoria.** An anomalous branch of the interosseous artery of the forearm which descends into the palm of the hand, gives off branches to the index-finger and the thumb, and assists in forming the superficial palmar arch. [L, 31.]—**A. interossea anterior.** See *Anterior interosseous* ARTERY *of the forearm.*—**A. interossea anterior dorsalis.** A branch of the anterior interosseous artery of the forearm which pierces the interosseous membrane and assists in forming the rete carpeum dorsale. [L, 31.]—**A. interossea anterior volaris.** A branch of the anterior interosseous artery of the arm which descends to assist in forming the rete carpeum volare. [L, 31.]—**A. interossea antibrachii communis.** See *Common interosseous* ARTERY *of the forearm.*—**A. interossea antibrachii externa.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. interossea antibrachii interna.** See *Anterior interosseous* ARTERY *of the forearm.*—**A. interossea antibrachii posterior.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. interossea antibrachii**

superficialis. See *Median* ARTERY.—**A. interossea communis.** See *Common interosseous* ARTERY *of the forearm.*—**A. interossea digitalis plantaris quarta.** Ger., *vierte Sohlenmittelfussschlagader.* The fourth plantar interosseous artery. [L, 174.]—**A. interossea digitalis plantaris secunda.** Ger., *zweite Sohlenmittelfussschlagader.* The second plantar interosseous artery. [L, 174.]—**A. interossea digitalis plantaris tertia.** Ger., *dritte Sohlenmittelfussschlagader.* The third plantar interosseous artery. [L, 174.]—**A. interossea dorsalis hallucis, A. interossea dorsalis interna, A. interossea dorsalis pedis prima.** The first dorsal interosseous artery of the foot. [L.]—**A. interossea dorsalis pedis secunda.** The second dorsal interosseous artery of the foot. [L, 174.]—**A. interossea dorsalis pedis tertia.** The third dorsal interosseous artery of the foot. [L, 174.]—**A. interossea externa.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. interossea hallucis.** The first dorsal interosseous artery of the foot. [L, 175.]—**A. interossea interna.** See *Anterior interosseous* ARTERY *of the forearm.*—**A. interossea interna metacarpi dorsalis.** The first dorsal interosseous artery of the hand. [L, 175.]—**Arteriæ interosseæ metacarpi dorsales.** See *Dorsal interosseous* ARTERIES *of the hand.*—**Arteriæ interosseæ metatarsi dorsales.** See *Dorsal interosseous* ARTERIES *of the foot.*—**A. interossea palmaris.** See *Anterior interosseous* ARTERY *of the forearm.*—**A. interossea perforans inferior.** 1. A branch of the anterior interosseous artery of the forearm which runs backward through the interosseous membrane and aids in forming the rete carpeum. 2. See *Anterior interosseous* ARTERY *of the forearm.* [L, 31, 115.]—**A. interossea perforans major.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. interossea perforans prima.** See *Posterior interosseous* ARTERY *of the forearm* and *A. interossea anterior dorsalis.*—**A. interossea perforans superior.** See *Posterior interosseous* ARTERY *of the forearm.*—**Arteriæ interosseæ plantares.** See *Plantar interosseous* ARTERIES.—**A. interossea plantaris prima.** Ger., *erste Sohlenmittelfussschlagader.* The first plantar interosseous artery. [L, 174.]—**A. interossea plantaris quarta.** Ger., *vierte Sohlenmittelfussschlagader.* The fourth plantar interosseous artery. [L, 174.]—**A. interossea plantaris secunda.** See *A. interossea digitalis plantaris secunda.*—**A. interossea plantaris tertia.** See *A. interossea digitalis plantaris tertia.*—**A. interossea posterior.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. interossea primitiva.** See *Common interosseous* ARTERY *of the forearm.*—**A. interossea recurrens.** Fr., *artère interosseuse récurrente.* Ger., *zurücklaufende Zwischenknochenpulsader.* A branch of the posterior interosseous artery of the forearm, distributed to the anconæus quartus muscle. [L, 31.]—**A. interossea secunda metacarpi dorsalis.** The second dorsal interosseous artery of the hand. [L, 174.]—**A. interossea superficialis.** See *Median* ARTERY.—**Arteriæ interosseæ volares.** See *Palmar interosseous* ARTERIES.—**A. interossea volaris.** See *Anterior interosseous* ARTERY *of the forearm.*—**A. interossea volaris prima.** Ger., *erste Hohlhandzwischenknochenpulsader.* The first palmar interosseous artery.—**A. interossea volaris secunda.** Ger., *zweite Hohlhandzwischenknochenpulsader.* The second palmar interosseous artery. [L, 174.]—**A. interossea volaris tertia.** Ger., *dritte Hohlhandzwischenknochenpulsader.* The third palmar interosseous artery. [L, 174.]—**Arteriæ intestinales.** See *Intestinal* ARTERIES.—**A. ischiadica.** See *Ischiadic* ARTERY.—**Arteriæ jejunales.** Branches of the superior mesenteric artery to the small intestine. [L, 31.]—**A. jugularis.** See *Carotid* ARTERY.—**A. labialis anterior.** Fr., *artère labiale antérieure.* The analogue in the female of the anterior scrotal artery of the male; distributed to the vulva. [L, 7.]—**Arteriæ labiales posteriores, Arteriæ labiales pudendi inferiores (seu posteriores).** Fr., *artères labiales postérieures.* Ger., *hintere Schamlippenpulsadern.* The analogues in the female of the posterior scrotal arteries of the male; distributed to the vulva. [L, 7.]—**A. labialis inferior.** See *Inferior labial* ARTERY.—**A. labialis superficialis.** Ger., *flache Lippenarterie.* A name applied to that portion of the facial artery situated between the point where it gives off the submental artery and that of its bifurcation into the coronary arteries of the upper and lower lips. [L, 174.]—**A. labialis superior.** See *Coronary* ARTERY *of the upper lip.*—**A. lacrimalis.** See *Lacrymal* ARTERY.—**A. laryngea ascendens** (seu **inferior**). See *Crico-thyreoid* ARTERY.—**A. laryngea interna.** See *Internal laryngeal* ARTERY.—**A. laryngea superior.** See *Superior laryngeal* ARTERY.—**A. lethargica.** See *Carotid* ARTERY.—**A. lienalis.** See *Splenic* ARTERY.—**A. linguæ dorsalis.** See *Dorsal* ARTERY *of the tongue.*—**A. linguæ profunda.** See *Ranine* ARTERY.—**A. lingualis.** See *Lingual* ARTERY.—**A. lingualis profunda.** See *Ranine* ARTERY.—**Arteriæ lumbales.** See *Lumbar* ARTERIES.—**A. lumbalis (seu lumbaris) ima** (seu **infima**). Fr., *artère lombaire inférieure.* A branch of the middle sacral artery given off on the level of the fifth lumbar vertebra and distributed to the psoas muscles. [L, 7.]—**Arteriæ lumbares.** See *Lumbar* ARTERIES.—**A. lumbaris quinta.** See *A. lumbalis ima.*—**Arteriæ maculares inferiores.** The lowermost of the retinal arteries on the nasal side of the optic nerve which run in a horizontal direction. [L, 31.]—**Arteriæ maculares superiores.** The uppermost of the retinal arteries on the nasal side of the optic nerve which run in a horizontal direction. [L, 31.]—**A. magna.** See AORTA.—**A. magna pollicis.** See *Large* ARTERY *of the thumb.*—**Arteriæ malleolares anteriores.** See *A. malleolaris anterior externa* and *A. malleolaris anterior interna.*—**A. malleolaris anterior externa.** Ger., *vordere äussere Knöchelschlagader.* A branch of the anterior tibial artery to the external malleolus. [L, 115.]—**A. malleolaris anterior interna.** Ger., *vordere innere Knöchelschlagader.* A branch of the anterior tibial artery to the internal malleolus. [L, 115.]—**A. malleolaris anterior lateralis.** A branch of the anterior tibial artery which runs transversely across the dorsum of the foot beneath the tendons of the extensor digitorum communis and peroneus tertius muscles and is distributed to the inner side of the foot and ankle. [L, 31.]—**A. malleolaris anterior medialis.** A branch of the anterior tibial artery which runs across the foot beneath the tendon of the tibialis anticus muscle and is distributed to the front and the outer side of the ankle. [L, 31.]—**A. malleolaris externa.** See *External malleolar* ARTERY.—**A. malleolaris interna.** See *Internal malleolar* ARTERY.—**A. malleolaris interna posterior.** Fr., *artère malléolaire interne.* Ger., *hintere innere Knöchelpulsader.* A branch of the posterior tibial artery distributed to the parts behind the internal malleolus. [L, 7.]—**A. malleolaris posterior externa.** Ger., *hintere äussere Knöchelpulsader.* A branch of the anterior peroneal artery to the external malleolus. [L, 175.]—**A. malleolaris posterior medialis.** A branch of the posterior tibial artery to the back and outer side of the ankle joint. [L, 31.]—**A. mammaria externa.** See *External mammary* ARTERY.—**A. mammaria interna.** See *Internal mammary* ARTERY.—**A. mammaria interna lateralis.** An anomalous branch of the internal mammary artery which descends upon the inner surfaces of the ribs at a point about midway between the costal cartilages and the vertebræ. [L, 31.]—**A. mandibularis.** See *Inferior dental* ARTERY.—**A. marginalis hepatis.** A branch of the hepatic artery distributed to the upper margin of the left lobe of the liver. [L, 31.]—**Arteriæ marginales scroti.** See *Posterior scrotal* ARTERIES.—**A. masseterica.** See *Masseteric* ARTERY.—**Arteriæ massetericæ posteriores.** Fr., *artères massétérines postérieures.* Branches of the external carotid artery in the neighborhood of the parotid gland to the masseter muscle. [L, 7.]—**A. mastoidea, A. mastoidea posterior.** See *Mastoid* ARTERY.—**A. maxillaris, A. maxillaris externa.** See *Facial* ARTERY.—**A. maxillaris inferior.** See *Inferior dental* ARTERY.—**A. maxillaris interna.** See *Internal maxillary* ARTERY.—**A. maxima.** See AORTA.—**A. media.** See *Median* ARTERY.—**A. media anastomotica.** See *Middle colic* ARTERY.—**A. mediana.** See *Median* ARTERY.—**A. mediana menti.** An anomalous artery in the median line of the chin, derived from one or both coronary arteries of the lower lip. [L, 31.]—**A. mediana retinæ.** The middle horizontal branch of the central retinal artery. [L, 31.]—**A. mediana superficialis.** A small branch of the a. plicæ cubiti superficialis. [L, 115.]—**Arteriæ mediastinales anteriores.** See *Anterior mediastinal* ARTERIES.—**Arteriæ mediastinales posteriores.** See *Posterior mediastinal* ARTERIES.—**A. medicerebellaris** [Wilder]. See *Anterior inferior cerebellar* ARTERY.—**A. medicerebralis** [Wilder]. See *Middle cerebral* ARTERY.—**A. medullæ spinalis anterior.** See *Anterior spinal* ARTERY.—**A. medullæ spinalis posterior.** See *Posterior spinal* ARTERY.—**A. meningea accessoria.** See *Small meningeal* ARTERY.—**A. meningea accessoria externa.** See *Posterior meningeal* ARTERY.—**Arteriæ meningeæ anteriores** (seu **anticæ**). See *Anterior meningeal* ARTERIES.—**A. meningea magna** (seu **media**). See *Middle meningeal* ARTERY.—**A. meningea parva.** See *Small meningeal* ARTERY.—**A. meningea posterior.** See *Posterior meningeal* ARTERY.—**A. meningea posterior externa.** A branch of the occipital artery which passes through the mastoid foramen to the dura mater. [L, 115.]—**A. meningea posterior inferior.** See *Posterior meningeal* ARTERY (1st def.).—**A. meningea posterior interna.** See *Posterior meningeal* ARTERY.—**A. meningea posterior mastoidea.** See *A. meningea posterior externa.*—**A. meningea postica.** See *Posterior meningeal* ARTERY.—**A. mentalis.** See *Mental* ARTERY.—**A. meseraica inferior.** See *Inferior mesenteric* ARTERY.—**A. meseraica superior.** See *Superior mesenteric* ARTERY.—**A. mesenterica inferior.** See *Inferior mesenteric* ARTERY.—**A. mesenterica media.** See *Middle mesenteric* ARTERY.—**A. mesenterica superior.** See *Superior mesenteric* ARTERY.—**A. mesolobaris, A. mesolobica.** See *Anterior cerebral* ARTERY.—**A. metacarpea.** See *Metacarpal* ARTERY.—**Arteriæ metacarpeæ dorsales radiales.** The dorsal arteries of the index finger and the thumb. [L, 31.]—**A. metacarpea dorsalis ulnaris.** See *Posterior ulnocarpal* ARTERY.—**A. metacarpea volaris radialis profunda.** The branch of the radial artery which, uniting with a branch of the ulnar artery, forms the deep palmar arch. [L, 31.]—**A. metacarpea volaris radialis sublimis.** See *Superficial volar* ARTERY.—**A. metacarpea volaris ulnaris.** See *A. volaris digiti quinti ulnaris.*—**A. metacarpea volaris ulnaris profunda.** The termination of the ulnar artery on the palm of the hand, which, uniting with a branch of the radial artery, forms the deep palmar arch. [L, 31.]—**A. metacarpea volaris ulnaris sublimis.** A branch of the ulnar artery on the palm of the hand, which, uniting with a branch of the radial artery, forms the superficial palmar arch. [L, 31.]—**Arteriæ metacarpi volares.** See *Palmar interosseous* ARTERIES.—**A. metatarsea.** See *Metatarsal* ARTERY.—**Arteriæ metatarseæ dorsales.** See *Dorsal interosseous* ARTERIES *of the foot.*—**A. metatarsea dorsalis fibularis.** The dorsal artery of the little toe on the fibular side. [L, 31.]—**A. metatarsea dorsalis prima.** Fr., *artère dorsale du gros orteil.* Ger., *erste Rückenmittelfusspulsader.* The first dorsal interosseous artery of the foot.—**A. metatarsea dorsalis tertia.** Ger., *dritte Rückenmittelfusspulsader.* The third dorsal interosseous artery of the foot. [L, 174.]—**A. metatarsea dorsalis secunda.** Ger., *zweite Rückenmittelfusspulsader.* The second dorsal interosseous artery of the foot. [L, 174.]—**A. minima.** See ARTERIOLE.—**A. muscularis femoris.** See *Deep femoral* ARTERY.—**Arteriæ musculares inferiores.** See *Deep sural* ARTERIES.—**A. muscularis magna.** See *A. muscularis superficialis.*—**A. muscularis profunda, A. muscularis profunda femoris.** See *Deep femoral* ARTERY.—**A. muscularis superficialis, A. muscularis tricipitis.** A branch of the common femoral artery to the triceps muscle. [L, 31.]—**A. musculo-articularis.** A branch of the anastomotica magna artery of the thigh to the vastus medius muscle. [L, 31.]—**A. musculo-phrenica.** See *Musculo-phrenic* ARTERY.—**A. mylo-hyoidea.** See *Mylo-hyoid* ARTERY.—**Arteriæ nasales retinæ inferiores.** The lower retinal arteries on the nasal side of the optic nerve. [L, 31.]—**Arteriæ nasales superiores.** The upper retinal arteries on the nasal side of the optic nerve. [L, 31.]—**A. nasalis.** See *Nasal* ARTERY.—**A. nasalis anterior.** See *Anterior*

nasal ARTERY.—**A. nasalis externa.** See *A. nasalis lateralis posterior* and *Lateral nasal* ARTERY.—**A. nasalis lateralis.** See *Lateral nasal* ARTERY.—**A. nasalis lateralis posterior.** A branch of the spheno-palatine artery to the mucous membrane of the upper part of the nose. [L, 117.]—**A. nasalis media.** See *Middle nasal* ARTERY.—**A. nasalis posterior, A. nasalis posterior communis, A. nasalis posterior externa.** See *Spheno-palatine* ARTERY.—**A. naso-frontalis.** A name applied to the ophthalmic artery beyond the point at which it gives off the supra-orbital artery. [L, 31.]—**A. naso-palatina.** See *Naso-palatine* ARTERY.—**A. nervi acustici.** See *Internal auditory* ARTERY.—**A. nervi mediani.** See *Median* ARTERY.—**A. nutritia brachii (magna).** See *Nutrient* ARTERY *of the os brachii.*—**Arteriæ nutritiæ pelvis.** Small branches of the renal artery to the pelvis of the kidney. [Hyrtl (L, 31).]—**A. nutritia femoris.** See *Nutrient* ARTERY *of the femur.*—**A. nutritia femoris inferior (seu magna).** See *First perforating* ARTERY *of the thigh.*—**A. nutritia femoris superior.** See *Superior nutrient* ARTERY *of the femur.*—**A. nutritia fibulæ (seu fibularis).** See *Nutrient* ARTERY *of the fibula.*—**A. nutritia humeri.** See *Nutrient* ARTERY *of the os brachii.*—**A. nutritia ilii.** A branch of the gluteal artery to the ilium. [L, 31.]—**A. nutritia magna humeri.** See *Nutrient* ARTERY *of the os brachii.*—**A. nutritia radii.** See *Nutrient* ARTERY *of the radius.*—**A. nutritia magna tibiæ, A. nutritia tibiæ.** See *Nutrient* ARTERY *of the tibia.*—**A. nutritia tibiæ inferior.** A branch of the posterior tibial artery entering the tibia through the nutrient foramen. [L, 174.]—**A. nutritia tibiæ magna.** See *Nutrient* ARTERY *of the tibia.*—**A. nutritia tibiæ posterior.** See *Posterior tibial recurrent* ARTERY.—**A. nutritia tibiæ superior.** A branch of the posterior tibial artery to the tibia. [L, 175.]—**A. nutritia ulnæ.** See *Nutrient* ARTERY *of the ulna.*—**A. nutriens radii.** See *Nutrient* ARTERY *of the radius.*—**A. obturatoria, A. obturatrix.** See *Obturator* ARTERY.—**A. occipitalis.** See *Occipital* ARTERY.—**Arteriæ œsophageæ.** See *Œsophageal* ARTERIES.—**Arteriæ œsophageæ inferiores.** Branches of the coronary artery of the stomach to the œsophagus. [L, 31.]—**Arteriæ omphalo-mesentericæ.** See *Omphalo-mesenteric* ARTERIES.—**A. ophthalmica.** See *Ophthalmic* ARTERY.—**A. ovarii.** See *Ovarian* ARTERY.—**A. palatina anterior.** See *Anterior palatine* ARTERY.—**A. palatina ascendens.** See *Inferior palatine* ARTERY.—**A. palatina descendens.** See *Descending palatine* ARTERY.—**A. palatina inferior.** See *Inferior palatine* ARTERY.—**A. palatina major.** See *Anterior palatine* ARTERY.—**Arteriæ palatinæ minores.** See *Arteriæ veli palati.*—**A. palatina superior.** See *Superior palatine* ARTERY.—**A. palmaris.** See *Palmar* ARTERY.—**Arteriæ palpebrales externæ.** See *External palpebral* ARTERIES.—**Arteriæ palpebrales internæ.** See *Internal palpebral* ARTERIES.—**A. palpebralis inferior.** See *Inferior palpebral* ARTERY.—**A. palpebralis lateralis inferior.** See *Inferior palpebral* ARTERY.—**A. palpebralis superior.** See *Superior palpebral* ARTERY.—**A. palpebralis medialis inferior.** The branch of the naso-frontal artery to the lower lid. [L, 31.]—**A. palpebralis medialis superior.** The branch of the naso-frontal artery to the upper lid. [L, 31.]—**A. palpebralis superior.** See *Superior palpebral* ARTERY.—**Arteriæ pancreaticæ mediæ.** Branches of the hepatic artery to the pancreas. [L, 31.]—**Arteriæ pancreaticæ parvæ.** Small branches of the splenic artery distributed to the pancreas. [L, 172.]—**A. pancreatica magna (seu suprema).** Fr., *artère pancréatique supérieure.* A branch of the splenic artery which runs along the posterior surface of the pancreas following the course of the pancreatic duct. [L, 35, 172.]—**A. pancreatico-duodenalis inferior.** See *Inferior pancreatico-duodenal* ARTERY.—**A. pancreatico-duodenalis superior.** See *Superior pancreatico-duodenal* ARTERY.—**Arteriæ parotideæ.** Fr., *artères parotidiennes.* Branches of the external carotid artery to the parotid gland. [L, 31.]—**A. pediaca, A. pediaca interna.** See *Dorsal* ARTERY *of the foot.*—**A. pelvica.** See *Internal iliac* ARTERY.—**A. penis profunda.** See ARTERY *of the corpus cavernosum.*—**A. perforans antibrachii inferior.** See *A. interossea perforans inferior.*—**A. perforans antibrachii superior.** See *Posterior interosseous* ARTERY *of the forearm.*—**A. perforans femoris prima.** See *First perforating* ARTERY *of the thigh.*—**A. perforans femoris secunda.** See *Second perforating* ARTERY *of the thigh.*—**A. perforans femoris tertia (seu ultima).** See *Third perforating* ARTERY *of the thigh.*—**A. perforans pedis posterior prima.** See *Deep plantar* ARTERY.—**Arteriæ perforantes arcus plantaris.** See *Anterior* and *Posterior perforating* ARTERIES *of the foot.*—**Arteriæ perforantes pedis anteriores.** See *Anterior perforating* ARTERIES *of the foot.*—**Arteriæ perforantes pedis posteriores.** See *Posterior perforating* ARTERIES *of the foot.*—**A. pericardiaca ascendens, A. pericardiaca descendens (seu inferior).** See *Superior phrenic* ARTERY.—**Arteriæ pericardiacæ posteriores.** Branches of the thoracic aorta to the posterior surface of the pericardium. [L, 31.]—**A. pericardiaca phrenica (seu superior).** See *Superior phrenic* ARTERY.—**A. perinæalis inferior.** See *Superficial perineal* ARTERY.—**A. perinæi superficialis.** See *Superficial perineal* ARTERY.—**A. perinæi transversa.** See *Transverse perineal* ARTERY.—**A. peronea.** See *Peroneal* ARTERY.—**A. peronea anterior.** See *Anterior peroneal* ARTERY.—**A. peronea communis (seu descendens).** See *Peroneal* ARTERY.—**A. peronea perforans.** See *Anterior peroneal* ARTERY.—**A. peronea posterior.** See *Posterior peroneal* ARTERY.—**A. peronea superior.** See *A. articularis capituli fibulæ.*—**A. petrosa.** Fr., *artère pétreuse.* Ger., *Felsenbeinpulsader.* A branch of the internal maxillary artery to the tensor tympani muscle, which anastomoses with the stylo-mastoid artery. [L, 7.]—**A. pharyngea ascendens.** See *Ascending pharyngeal* ARTERY.—**A. pharyngea descendens.** See *Pterygo-palatine* ARTERY.—**A. pharyngea inferior.** See *Ascending pharyngeal* ARTERY.—**A. pharyngea suprema.** See *Pterygo-palatine* ARTERY.—**A. pharyngo-basilaris, A. pharyngo-meningea.** See *Ascending pharyngeal* ARTERY.—**A. pharyngo-palatina.** See *Inferior palatine* ARTERY.—**Arteriæ phrenicæ inferiores (seu magnæ).** See *Inferior phrenic* ARTERIES.—**Arteriæ phrenicæ posteriores.** See *Posterior phrenic* ARTERIES.—**Arteriæ phrenicæ principes.** See *Inferior phrenic* ARTERIES.—**A. phrenico-costalis.** See *Musculo-phrenic* ARTERY.—**A. phrenico-pericardiaca.** See *Superior phrenic* ARTERY.—**Arteriæ pinnales.** Branches of the coronary artery of the upper lip to the ala of the nose. [L, 175.]—**A. plantaris.** See *Plantar* ARTERY.—**A. plantaris externa.** See *External plantar* ARTERY.—**A. plantaris externa digiti medii.** Ger., *äussere Fussohlenschlagader der dritten Zehe.* The plantar digital artery on the fibular side of the third toe. [L, 174.]—**A. plantaris externa digiti minimi.** Ger., *äussere Fusssohlenpulsader der kleinen Zehe.* See *A. plantaris lateralis digiti quinti.*—**A. plantaris externa digiti quarti.** Ger., *äussere Fusssohlenpulsader der vierten Zehe.* The plantar digital artery on the fibular side of the fourth toe. [L, 174.]—**A. plantaris externa digiti secundi.** Ger., *äussere Fusssohlenpulsader der zweiten Zehe.* The plantar digital artery on the fibular side of the second toe. [L, 175.]—**A. plantaris externa hallucis.** Ger., *äussere Fusssohlenpulsader der grossen Zehe.* The plantar digital artery on the fibular side of the great toe. [L, 174.]—**A. plantaris externa parva.** See *A. plantaris medialis.*—**A. plantaris interna.** See *Internal plantar* ARTERY.—**A. plantaris interna digiti medii.** Ger., *innere Fussohlenpulsader der dritten Zehe.* The plantar digital artery on the tibial side of the third toe. [L, 174.]—**A. plantaris interna digiti quarti.** Ger., *innere Fusssohlenpulsader der vierten Zehe.* The plantar digital artery on the tibial side of the fourth toe. [L, 174.]—**A. plantaris interna digiti quinti.** Ger., *innere Fusssohlenpulsader der kleinen Zehe.* The plantar digital artery on the tibial side of the little toe. [L, 174.]—**A. plantaris interna digiti secundi.** Ger., *innere Fusssohlenpulsader der zweiten Zehe.* The plantar digital artery on the tibial side of the second toe. [L, 174.]—**A. plantaris interna digiti tertii.** Ger., *innere Fusssohlenpulsader der dritten Zehe.* The plantar digital artery on the tibial side of the third toe. [L, 174.]—**A. plantaris interna hallucis.** See *A. digitalis medialis hallucis.*—**A. plantaris lateralis.** See *External plantar* ARTERY.—**A. plantaris lateralis digiti quinti.** A branch of the external plantar artery to the outer side of the little toe. [L, 117.]—**A. plantaris medialis.** See *Internal plantar* ARTERY.—**A. plantaris profunda.** See *A. anastomotica pedis.*—**A. plicæ cubiti superficialis.** Ger., *oberflächliche Ellenbogenschlagader.* A branch of the radial artery running beneath the bicipital aponeurosis and distributed to the pronator radii teres, the palmaris longus, and the flexor muscles of the forearm. [L, 115.]—**A. pollicis magna (seu princeps).** See *Large* ARTERY *of the thumb.*—**A. pollicis radialis dorsalis.** See *Inner dorsal* ARTERY *of the thumb.*—**A. pollicis radialis volaris.** Fr., *artère radio-palmaire du pouce.* Ger., *Speichenhohlhandpulsader des Daumens.* The branch of the large artery of the thumb running on the radial side of its palmar surface. [L, 7.]—**A. pollicis ulnaris dorsalis.** See *Outer dorsal* ARTERY *of the thumb.*—**A. pollicis ulnaris volaris.** Fr., *artère cubito-palmaire du pouce.* Ger., *Ellenbogenhohlhandpulsader des Daumens.* The branch of the large artery of the thumb running on the ulnar side of its palmar surface. [L, 7.]—**A. poplitæa (seu poplitea).** See *Popliteal* ARTERY.—**A. postcerebellaris** [Wilder]. See *Anterior inferior cerebellar* ARTERY.—**A. postcerebralis** [Wilder]. See *Posterior cerebral* ARTERY.—**A. postcommunicans.** [Wilder]. See *Posterior communicating* ARTERY.—**A. posterior cerebri.** See *Posterior cerebral* ARTERY.—**A. præcerebellaris** [Wilder]. See *Superior cerebellar* ARTERY.—**A. præcerebralis** [Wilder]. See *Anterior cerebral* ARTERY.—**Arteriæ præchorioideæ** [Wilder]. See *Anterior chorioid* ARTERIES.—**A. præcommunicans** [Wilder]. See *Anterior communicating* ARTERY —**Arteriæ præparantes.** See *Internal spermatic* ARTERIES.—**A. princeps pollicis.** See *Large* ARTERY *of the thumb.*—**A. processus appendicalis (seu vermiformis).** See *Appendicular* ARTERY.—**A. processus xiphoidei.** A branch of the internal mammary artery which, with its fellow of the opposite side, forms a plexus behind the lower part of the sternum. [L, 31.]—**A. profunda brachii inferior.** See *Inferior profunda* ARTERY *of the arm.*—**A. profunda brachii superior.** See *Superior profunda* ARTERY *of the arm.*—**A. profunda cerebri.** See *Posterior cerebral* ARTERY.—**A. profunda cervicis.** 1. A branch of the superior intercostal artery to the deep cervical muscles. [L, 173.] 2. See *Posterior cervical* ARTERY.—**A. profunda clitoridis.** See *Cavernous* ARTERY *of the clitoris.*—**A. profunda femoris.** See *Deep femoral* ARTERY.—**A. profunda humeri.** See *Superior profunda* ARTERY *of the arm.*—**A. profunda linguæ.** See *Ranine* ARTERY.—**A. profunda penis.** See ARTERY *of the corpus cavernosum.*—**A. profunda volæ.** The termination of the radial artery in the palm of the hand. [L, 31.]—**A. profundissima ilii.** A branch of the lateral sacral artery to the periosteum of the acetabulum. [L, 31.]—**Arteriæ propriæ renales.** Branches of the renal artery which enter the kidney in the columns of Bertin. Two run on each side of each pyramid of Malpighi for its whole length, and divide at its base into the interlobular arteries and the true arteriæ rectæ. [L, 172.]—**A. pro stapedio.** See *A. stapedii.*—**A. prostatica.** See *Vesico-prostatic* ARTERY.—**Arteriæ pterygoideæ.** Fr., *artères ptérygoïdiennes.* Ger., *Flügelmuskelpulsadern.* Branches of the internal maxillary artery to the pterygoid muscles. [L, 31.]—**A. pterygo-meningea.** See *Small meningeal* ARTERY.—**A. pterygo-palatina.** See *Pterygo-palatine* ARTERY.—**A. pubica.** Fr., *artère pubienne.* Ger., *Schambeinpulsader.* A branch of the deep epigastric artery which anastomoses behind the pubes with its fellow of the opposite side. [L, 31.]—**A. pudenda accessoria.** See *Accessory pudic* ARTERY.—**A. pudenda communis.** See *Internal pudic* ARTERY.—**A. pudenda externa prima.** See *Superior external pudic* ARTERY.—**A. pudenda externa secunda.** See *Inferior external pudic* ARTERY.—**A. pudenda externa subaponeurotica.** See *Superior external pudic* ARTERY.—**A. pudenda externa subcutanea.** See *Deep external pudic* ARTERY.—**A. pudenda externa tertia.** Ger., *dritte äussere Schampulsader.* An occasional branch of the

superficial femoral artery distributed to the lower part of the abdomen and to the genital organs. [L, 174.]—**A. pudenda interna.** See *Internal pudic* ARTERY.—**A. pulmonalis.** See *Pulmonary* ARTERY.—**A. pylorica, A. pylorica superior.** See *Pyloric* ARTERY (1st def.).—**A. radialis.** See *Radial* ARTERY.—**A. radialis indicis.** See *Radialis indicis* ARTERY.—**A. radialis recurrens.** See *Radial recurrent* ARTERY.—**A. radialis volaris indicis.** See *A. indicis radialis volaris.*—**A. radica.** See *Radial* ARTERY.—**Arteriæ radiculares.** Lateral branches of the vertebral artery to the medulla spinalis. [L, 31.]—**A. radio-palmaris.** See *Radio-palmar* ARTERY.—**A. ramulus ductus pterygoidei.** See *Pterygoid* ARTERY.—**A. ranina.** See *Ranine* ARTERY.—**A. receptaculi anterior.** See *Anterior* ARTERY *of the receptacle.* —**A. receptaculi posterior.** See *Posterior* ARTERY *of the receptacle.*—**Arteriæ rectæ.** The straight arteries of the kidney. The *true arteriæ rectæ* are branches of the arteriæ propriæ renales which enter at the bases of the medullary pyramids, and terminate at their apices in venous plexuses. The *false arteriæ rectæ* are straight branches of the efferent vessels of the lowermost glomeruli which pass into the medulla and supply the downward continuations of the medullary rays into the pyramids. [L, 142, 172.]—**A. recurrens radialis.** See *Recurrent radial* ARTERY.—**A. recurrens tibialis.** See *Tibial recurrent* ARTERY.—**A. recurrens tibialis anterior.** See *Anterior tibial recurrent* ARTERY.—**A. recurrens tibialis posterior.** See *Posterior tibial recurrent* ARTERY. —**A. recurrens ulnaris anterior.** See *Anterior ulnar recurrent* ARTERY.—**A. recurrens ulnaris inferior** (seu **posterior**). See *Posterior ulnar recurrent* ARTERY.—**A. recurrens ulnaris superior.** See *Anterior ulnar recurrent* ARTERY.—**A. renalis.** See *Renal* ARTERY.—**A. renocapsularis.** See *Capsular* ARTERY.—**A. retinæ centralis.** See *Central retinal* ARTERY.—**A. retrocostalis.** See *A. mammaria interna lateralis.*—**Arteriarum omnium mater.** See AORTA.—**Arteriæ sacrales laterales.** See *Lateral sacral* ARTERIES.—**A. sacralis media.** See *Middle sacral* ARTERY.—**A. saphena magna.** An occasional branch of the deep femoral artery which passes down between the adductor magnus and the vastus medius to the ankle, in company with the vena saphena magna. [L, 31.]—**A. saphena parva.** An occasional branch of the popliteal artery which passes to the middle of the calf of the leg, in company with the small saphenus nerve. [L, 31.] —**A. scapulæ dorsalis.** See *Posterior scapular* ARTERY.—**A. scapulæ transversa.** See *Suprascapular* ARTERY.—**A. scapularis communis.** See *Subscapular* ARTERY.—**A. scapularis externa.** See *Acromial* ARTERY.—**A. scapularis inferior.** See *Subscapular* ARTERY.—**A. scapularis posterior.** See *Posterior scapular* ARTERY.—**A. scapularis propria.** See *Circumflex* ARTERY *of the scapula.*—**A. scapularis superior.** See *Suprascapular* ARTERY.—**A. scrotalis anterior.** See *Anterior scrotal* ARTERY.—**Arteriæ scrotales posteriores.** See *Posterior scrotal* ARTERIES.—**Arteriæ scrotales posteriores majores.** Branches of the internal pudic artery to the scrotum. [L, 31.]—**Arteriæ scrotales posteriores minores.** Branches of the transverse perineal artery to the scrotum. [L, 31.]—**A. scrotalis anterior secunda.** See *Inferior external pudic* ARTERY.—**Arteriæ seminales.** See *External* and *Internal spermatic* ARTERIES.—**Arteriæ septales scroti.** Branches of the transverse perineal artery to the septum of the scrotum. [L, 31.]—**A. septi mobilii, A. septi narium.** See ARTERY *of the septum narium.* [L, 115.]—**A. septi narium posterior.** See *Naso-palatine* ARTERY.—**A. septi scroti.** A branch of the internal pudic artery to the septum of the scrotum. [L, 175.]—**A. sigmoidea.** See *Sigmoid* ARTERY.—**Arteriæ sinus cavernosi.** Branches of the vidian artery to the cavernous sinus. [L, 31.] Cf. *Anterior* and *Posterior* ARTERIES *of the receptacle.*—**Arteriæ somniferæ** (seu **soporales,** seu **soporariæ**). The carotid arteries. [L, 35.]—**A. spermatica deferentialis.** See ARTERY *of the vas deferens.*—**A. spermatica externa.** See *External spermatic* ARTERY.—**A. spermatica interna.** 1. See *Internal spermatic* ARTERY. 2. A branch of the umbilical artery observed by F. Faesebeck in a double monster. [A, 43.]—**A. spheno-palatina.** See *Sphenopalatine* ARTERY.—**A. spheno-spinosa.** See *Middle meningeal* ARTERY.—**Arteriæ spinales posteriores.** See *Posterior spinal* ARTERIES.—**Arteriæ spinales.** The arteries of the spinal cord. [L.]—**A. spinalis.** See *Superior profunda* ARTERY *of the arm.* —**A. spinalis anterior.** See *Anterior spinal* ARTERY.—**A. spinosa.** See *Middle meningeal* ARTERY.—**Arteriæ spirales.** See *Utero-placental* ARTERIES.—**A. splenica.** See *Splenic* ARTERY.—**A. stapedii.** Fr., *artère stapédienne.* Ger., *Steigbügelarterie.* It., *arteria stapediana.* Sp., *arteria estapedia.* A branch of the stylo-mastoid artery which enters the tympanum just above the fenestra ovalis. [F.]—**Arteriæ sternales anteriores.** The terminations of the perforating branches of the internal mammary artery which are distributed to the anterior surface of the sternum. [L, 31.]—**Arteriæ sternales posteriores.** Branches of the internal mammary artery distributed to the posterior surface of the sternum. [L, 32.]—**A. sternalis.** See *Internal mammary* ARTERY.—**A. sterno-cleido-mastoidea.** A branch of the external carotid artery to the sterno-cleido-mastoid muscle. [L, 31.]— —**A. stylo-mastoidea.** See *Stylo-mastoid* ARTERY.—**A. subclavia.** See *Subclavian* ARTERY.—**A. subcostalis.** See *A. mammaria interna lateralis.*—**A. subcutanea malæ.** Fr., *artère malaire.* A branch of the deep anterior temporal or internal maxillary artery, which accompanies the malar cutaneous nerve and is distributed to the upper portion of the face. [L, 7.]—**A. sublingualis.** See *Sublingual* ARTERY.—**A. submentalis.** See *Submental* ARTERY.—**A. subscapularis.** See *Subscapular* ARTERY.—**A. superciliaris.** Fr., *artère sourcilière.* A branch of the frontal artery distributed to the superciliary region. [L, 7.]—**A. superficialis pedis interna.** A branch of the internal plantar artery which anastomoses with the internal tarsal artery and is distributed to the tibial side of the great toe. [L, 175.]—**A. superficialis pedis medialis.** A branch of the internal plantar artery distributed to the fibular side of the great toe. [L, 31.]—**A. superficialis volæ.** See *Superficial volar* ARTERY.—**A. supracostalis.** See *Collateral intercostal* ARTERY.—**A. supramaxillaris.** See *Superior dental* ARTERY.—**A. suprametatarsea.** See *Metatarsal* ARTERY.—**A. supra-orbitalis.** See *Supra-orbital* ARTERY.—**A. supra-orbitalis externa.** Fr., *artère sus-orbitaire externe.* A branch of the superficial temporal artery distributed to the region of the zygoma. [L, 31.]—**A. suprarenalis aortica.** See *Capsular* ARTERY.—**Arteriæ suprarenales inferiores.** See *Inferior suprarenal* ARTERIES.—**A. suprarenalis media.** See *Capsular* ARTERY.—**A. suprarenalis superior.** See *Superior suprarenal* ARTERY.—**A. suprascapularis.**—See *Suprascapular* ARTERY.—**A. supraspinata.** See *Supraspinous* ARTERY.—**A. supratarsea.** See *Metatarsal* ARTERY.—**A. supratarsea externa.** See *External tarsal* ARTERY.—**A. supratarsea interna.** A branch of the dorsal artery of the foot distributed to the tibial side of the great toe. [L, 31.]—**A. supratrochlearis.** A branch of the ophthalmic artery distributed to the upper eyelid. [L, 31.]—**Arteriæ surales.** See *Sural* ARTERIES.—**Arteriæ surales laterales.** See *Superficial sural* ARTERIES.—**Arteriæ surales mediales.** Branches of the popliteal artery to the upper part of the sural muscles. [L, 31.]—**Arteriæ surales profundæ.** See *Deep sural* ARTERIES.—**Arteriæ surales superficiales.** See *Superficial sural* ARTERIES.—**A. sylviana.** See *Middle cerebral* ARTERY.—**A. tarsea externa.** See *External tarsal* ARTERY.—**A. tarsea externa anterior.** See *Metatarsal* ARTERY.—**A. tarsea externa posterior.** See *Tarsal* ARTERY.—**A. tarsea interna.** See *Internal tarsal* ARTERY.—**A. tarsea lateralis anterior.** See *Metatarsal* ARTERY.—**A. tarsea lateralis posterior.** See *External tarsal* ARTERY.—**Arteriæ temporales retinæ inferiores.** The lower retinal arteries on the temporal side of the optic nerve. [L, 31.]—**Arteriæ temporales retinæ superiores.** The upper retinal arteries on the temporal side of the optic nerve. [L, 31.]—**A. temporalis anterior.** See *Anterior temporal* ARTERY.—**A. temporalis externa.** See *Posterior temporal* ARTERY.—**A. temporalis frontalis** (seu **interna**). See *Anterior temporal* ARTERY.—**A. temporalis media.** See *Middle temporal* ARTERY.—**A. temporalis occipitalis.** See *Posterior temporal* ARTERY.—**A. temporalis profunda anterior.** See *Deep anterior temporal* ARTERY.—**A. temporalis profunda posterior** (seu **prima**). See *Posterior temporal* ARTERY.—**A. temporalis secunda.** See *Deep anterior temporal* ARTERY.—**A. temporalis superficialis, A. temporalis superficialis anterior** (seu **frontalis**). See *Anterior temporal* ARTERY.—**A. temporalis superficialis occipitalis** (seu **posterior**). A branch of the occipital artery distributed to the occipital region. [L, 31.]—**A. temporalis superior.** See *Posterior temporal* ARTERY.—**A. ternatica.** See *Ternatic* ARTERY.—**A. testicularis.** See *Internal spermatic* ARTERY.—**A. testis externa.** See *External spermatic* ARTERY.— **A. thoracica acromialis.** See *Acromio-thoracic* ARTERY.—**A. thoracica alaris.** See *Alar thoracic* ARTERY and *Subscapular* ARTERY.—**A. thoracica anterior.** Fr., *artère thoracique antérieure.* The external branch of the acromio-thoracic artery. [L, 114.]—**A. thoracica axillaris.** See *Alar thoracic* ARTERY and *Subscapular* ARTERY.—**A. thoracica externa, A. thoracica externa inferior.** See *External mammary* ARTERY.—**A. thoracica externa secunda.** See *Acromio-thoracic* ARTERY.—**A. thoracica externa tertia.** See *External mammary* ARTERY.—**A. thoracica humeralis** (seu **humeraria**). See *Acromio-thoracic* ARTERY.—**A. thoracica inferior.** See *External mammary* ARTERY.—**A. thoracica interna, A. thoracica interna longa.** See *Internal mammary* ARTERY.—**A. thoracica longa.** See *External mammary* ARTERY and *A. thoracico-dorsalis.*—**A. thoracica major.** See *External mammary* ARTERY.—**A. thoracica mammaria.** See *Internal mammary* ARTERY.—**A. thoracica media.** See *Acromio-thoracic* ARTERY.—**A. thoracica minor.** See *Superior thoracic* ARTERY.—**A. thoracica posterior.** See *A. thoracico-dorsalis.* —**A. thoracica prima.** See *Superior thoracic* ARTERY.—**A. thoracica quarta.** See *External mammary* ARTERY.—**A. thoracica suprema.** See *Superior thoracic* ARTERY.—**A. thoracico-acromialis.** See *Acromio-thoracic* ARTERY.—**A. thoracico-dorsalis.** Fr., *artère thoracique dorsale.* A branch of the subscapular artery distributed to the side and front of the chest. [Krause (L, 31).] —**A. thoracico-humeraria.** See *Acromio-thoracic* ARTERY.— **Arteriæ thymicæ.** See *Anterior mediastinal* ARTERIES.—**A. thyreoidea ascendens.** See *Inferior thyreoid* ARTERY.—**A. thyreoidea descendens.** See *Superior thyreoid* ARTERY.—**A. thyreoidea ima.** See *Deep thyreoid* ARTERY.—**A. thyreoidea inferior** (seu **infima**). See *Inferior thyreoid* ARTERY.—**A. thyreoidea Neubaueri.** See *Deep thyreoid* ARTERY.—**A. thyreoidea superior.** See *Superior thyreoid* ARTERY.—**A. thyreoidea superior altera.** Ger., *zweite obere Schilddrüsenarterie.* An occasional branch of the external carotid artery which furnishes a common origin for the lingual and superior thyreoid arteries. [L, 31.]—**A. thyreo-cervicalis.** See *Thyreoid* AXIS.—**A. tibialis antica.** See *Anterior tibial* ARTERY.—**A. tibialis postica.** See *Posterior tibial* ARTERY.—**A. tibialis recurrens anterior.** See *Anterior tibial recurrent* ARTERY.—**A. tibialis recurrens posterior.** See *Posterior tibial recurrent* ARTERY.—**A. tonsillaris.** See *Tonsillar* ARTERY.—**Arteriæ tracheales superiores.** Branches of the internal mammary, inferior thyreoid, or subclavian artery to the trachea. [L, 175.]—**A. transversa carpi anterior.** See *A. carpea volaris.*—**A. transversa carpi dorsalis.** See *A. carpea dorsalis radialis.*—**A. transversa carpi posterior.** See *A. carpea dorsalis radialis.*—**A. transversa carpi volaris.** See *A. carpea volaris radialis.*—**A. transversa colli.** See *Posterior scapular* ARTERY.—**A. transversa faciei.** See *Transverse facial* ARTERY.—**A. transversalis cervicis** (seu **colli**). See *Transverse cervical* ARTERY.—**A. transversalis humeri** (seu **scapulæ**). See *Suprascapular* ARTERY.—**A. transversa perinæi.** See ARTERY *of the bulb* and *Transverse perineal* ARTERY.—**A. transversa scapulæ.** See *Suprascapular* ARTERY.—**A. transversa superficialis perinæi.** See *Superficial perineal* ARTERY.—**A. trochanterica, A. trochanterica ante-**

rior. Fr., *artère trochantérienne.* A branch of the internal circumflex artery of the thigh distributed to the muscles in the neighborhood of the great trochanter. [L, 7.]—**A. tubaria.** Fr., *artère tubaire.* Ger., *Trompetenpulsader.* A branch of the uterine artery to the oviduct. [L, 31.]—**A. tunicæ vaginalis communis.** See *External spermatic* ARTERY.—**A. tympanica.** See *Tympanic* ARTERY.—**A. tympanica inferior.** Fr., *artère tympanique inférieure.* Ger., *untere Trommelfellpulsader.* A branch of the internal maxillary or of the deep auricular artery which enters the tympanum through the Glaserian fissure. [L, 7.]—**A. tympanica superior.** Fr., *artère tympanique supérieure.* Ger., *obere Trommelfellpulsader.* A branch of the stylo-mastoid artery which enters the cavity of the ear in company with the chorda tympani and is distributed to the tympanum. [L, 7.]—**A. ulnaris.** See *Ulnar* ARTERY.—**A. ulnaris accessoria.** An anomalous artery formed by the bifurcation of the ulnar artery at a high point in the forearm. [L, 31.]—**A. ulnaris digiti minimi.** See *A. volaris digiti quinti ulnaris.*—**A. ulnaris superficialis.** See *A. ulnaris accessoria.*—**A. ulnaris volaris digiti minimi.** See *A. volaris digiti quinti ulnaris.*—**Arteriæ umbilicales.** See *Umbilical* ARTERIES.—**A. umbilicalis accessoria.** A term applied by Krause to a delicate filament observed by Osiander in a case where there was only one umbilical artery, which filament appeared to be an artery running, free from the mesentery, to that part of the peritonæum where the umbilical artery was lacking. [A, 43.]—**A. urethralis.** A branch of the artery of the penis distributed to the urethra. [L, 31.]—**A. ureterica superior.** A branch of the abdominal aorta to the upper part of the ureter. [L, 31.]—**Arteriæ uterinæ.** See *Uterine* ARTERIES.—**A. uterina aortica.** See *Aortic uterine* ARTERY.—**A. uterina hypogastrica.** See *Hypogastric uterine* ARTERY.—**A. utero-ovarica.** See *Utero-ovarian* ARTERY.—**A. vaginalis.** See *Vaginal* ARTERY.—**A. vasis deferentis, A. vasis deferentialis.** See ARTERY *of the vas deferens.*—**A. vasta posterior, A. vasta posterior profunda.** See *Deep femoral* ARTERY.—**Arteriæ veli palati (seu palatini).** Branches of the pterygo-palatine artery to the upper part of the pharynx and to the palate. [L, 31.]—**A. venosa.** A term applied to the pulmonary vein by Harvey. [H, 12.]—**Arteriæ ventriculi breves.** Branches of the splenic artery to the stomach. [L, 175.]—**Arteriæ vertebrales posteriores.** See *Primitive* AORTÆ.—**A. vertebralis.** See *Vertebral* ARTERY.—**A. vertebralis ascendens.** See *Ascending cervical* ARTERY.—**A. vertebralis impar.** A forward continuation of the subvertebral aorta in certain of the lower *Vertebrata.* [L, 176.]—**A. vesicalis media.** See *Middle vesical* ARTERY.—**Arteriæ vesicales superiores (seu supremæ).** See *Superior vesical* ARTERIES.—**A. vesicalis inferior (seu infima).** See *Inferior vesical* ARTERY. —**A. vesicalis superior.** See *Superior vesical* ARTERY.—**A. vesico-prostatica.** See *Vesico-prostatic* ARTERY.—**A. vesico-vaginalis.** See *Vesico-vaginal* ARTERY.—**A. vestibuli.** A branch of the internal auditory artery to the labyrinth. [L, 31.]—**A. vidiana.** See *Vidian* ARTERY.—**A. vitrea.** See *Hyaloid* ARTERY.—**A. volæ superficialis.** See *Superficial volar* ARTERY.—**Arteriæ volares carpi.** See *Anterior carpal* ARTERIES.—**A. volaris digiti quinti ulnaris.** A branch of the deep palmar arch or of the ulnar artery to the ulnar side of the palmar surface of the little finger. [L, 117.]—**A. volaris indicis.** See *A. radialis indicis.*—**A. volaris manus ulnaris.** See *A. metacarpea volaris ulnaris.*—**A. volaris profunda pollicis ulnaris.** The termination of the large artery of the thumb on the ulnar side. [L, 174.]—**A. volaris pollicis radialis.** One of the terminal branches of the large artery of the thumb on the radial side. [L, 175.]—**A. volaris profunda radialis.** See *A. metacarpea volaris radialis profunda.*—**A. volaris profunda ulnaris.** See *Ulnar profunda* ARTERY *of the hand.*—**A. volaris radialis digiti annularis.** The palmar digital artery on the radial side of the ring finger. [L, 174.]—**A. volaris radialis digiti medii.** The palmar digital artery on the radial side of the middle finger. [L, 174.]—**A. volaris radialis digiti minimi.** The palmar digital artery on the radial side of the little finger. [L, 174.]—**A. volaris digiti quarti.** See *A. volaris radialis digiti annularis.*—**A. volaris radialis digiti quinti.** See *A. volaris radialis digiti minimi.*—**A. volaris radialis digiti secundi.** See *A. volaris radialis digiti secundi.*—**A. volaris radialis indicis.** The palmar digital artery on the radial side of the index finger. [L, 174.]—**A. volaris superficialis.** See *Superficial volar* ARTERY.—**A. volaris ulnaris digiti medii.** The palmar digital artery on the ulnar side of the middle finger. [L, 174.]—**A. volaris ulnaris digiti minimi.** See *A. volaris digiti quinti ulnaris.*—**A. volaris ulnaris digiti quarti.** The palmar digital artery on the ulnar side of the fourth finger. [L, 174.]—**A. volaris ulnaris digiti tertii.** The palmar digital artery on the ulnar side of the third finger. [L, 174.]—**A. volaris ulnaris indicis.** The palmar digital artery on the ulnar side of the index finger. [L, 174.]—**A. volaris ulnaris pollicis.** See *A. volaris pollicis ulnaris.*—**A. Willisii.** See *Posterior communicating* ARTERY *of the brain.*—**A. zygomatico-orbitalis.** See *A. supra-orbitalis externa.*—**Aspera a.** See TRACHEA.

ARTERIAC, adj. A^{3}r-te'ri^2-a^{2}k. Gr., ἀρτηριακός. Lat., *arteriacus.* Fr., *artériaque.* Relating to or affecting the arteries or the trachea; as a n. pl., remedies which are used in diseases of the arteries or trachea. [L, 43, 50, 105.]

ARTERIACA, ARTERIACE (Lat.), n's. A^{3}r-te^{2}r-i(e)'a^{3}ka^3, -se(ka). See TR CHEA.

ARTERN (Ger.), n. A^{3}rt'e^{2}rn. A village in Prussia, where there is a weak mineral spring. [L, 105.]

ARTERIACAL, adj. A^{3}r-te^2-ri'a^3-ka^{2}l. See ARTERIAC.

ARTERIAGRA (Lat.), n. f. A^{3}rt-e^{2}r-i(e)'a^3-gra^3. From ἀρτηρία, an artery, and ἄγρα, a seizure. Fr., *artériagre.* Ger., *Schlagaderschmerz.* 1. Pain in an artery. [M, 13.] 2. Alteration in an artery due to the gouty diathesis. [D, 142.]

ARTERIAL, adj. A^{3}r-te'ri^2-a^{2}l. Lat., *arterialis.* Fr., *artériel.* Ger., *arteriell, arteriös.* It., *arterioso.* Sp., *arterial.* 1. Pertaining to the arteries or their contents. 2. Pertaining to blood containing a relatively large amount of oxygen and a relatively small amount of carbon dioxide. [I.]

ARTÉRIALITÉ (Fr.), n. A^{3}r-ta-ri^2-a^{3}l-i^2-ta. See ARTERIOSITY.

ARTERIALIZATION, n. A^{3}r-te-ri^2-a^{2}l-i^{2}z-a'shu^{3}n. Lat., *arterialisatio.* Fr., *artérialisation.* Ger., *Arterielisirung.* The transformation of dark-red venous into bright-red arterial blood during its passage through the lungs, gills, or any respiratory apparatus. This transformation consists in the removal of carbon dioxide from the blood and the addition of oxygen. [I.]

ARTÉRIARCTIE (Fr.), n. A^{3}r-ta-re-a^{3}rk-te. The condition of contraction in an artery. [L.]

ARTERIASIS (Lat.), n. f. A^{3}r-te^{2}r-i^2-a(a)'si^{2}s. Gen., *arteria'-seos (-sis).* It., *arteriasi.* A term applied by Zannini to atheromatous and calcareous degeneration of an artery, sometimes falsely termed ossification. [D, 76.]

ARTERIE (Ger.), n. A^{3}r-ta-re'. See ARTERY, and, for subheadings not given here, see under PULSADER and SCHLAGADER.—**Absteigende Gaumena'.** See *Descending palatine* ARTERY.—**Achsela'.** See *Axillary* ARTERY.—**Alara'.** See *Alar thoracic* ARTERY.—**Antlitza'.** See *Facial* ARTERY.—**Aortena'.** See AORTA.—**Aortenintercostala'n, Aortenzwischenrippena'n.** See *Aortic intercostal* ARTERIES.—**Arma'.** See *Brachial* ARTERY.—**A. der Scheidenhaut.** See *External spermatic* ARTERY.—**A. des eirunden Beckenlochs.** See *Obturator* ARTERY.—**A. des Glaskörpers.** See *Hyaloid* ARTERY.—**A. des oberen Augenlids.** See *Superior palpebral* ARTERY.—**A. des unteren Augenlids.** See *Inferior palpebral* ARTERY.—**A. des Zungenrückens.** See *Dorsal* ARTERY *of the tongue.*—**A'ectasie, A'ektasie.** See ARTERIECTASIS.—**A'nblut.** Arterial blood. [L.]—**A'ndruck.** See *Arterial* PRESSURE.—**A'ndrücker.** See *Arterial* COMPRESSOR.—**A'nentzündung.** See ARTERITIS.—**A'neröffnung.** See ARTERIOTOMY.—**A'nerweiterung.** See ANEURYSM.—**A'ngeräusch.** See *Arterial* MURMUR.—**A'ngeschwulst.** See ANEURYSM.—**A'nhaken.** An artery tenaculum. [L, 135.]—**A'nnadel.** See *Artery* NEEDLE.—**A'nnerven.** Nerves distributed to the coats of the arteries. [L, 30.]—**A'npincette.** See *Artery* FORCEPS.—**A'npresse.** See ARTERIOPIESTER.—**A'npresser.** See *Artery* COMPRESSOR.—**A'npuls.** See *Arterial* PULSE.—**A'npulsation.** See *Arterial* PULSATION.—**A'nschlinge.** A ligature for tying arteries. [L, 135.]—**A'nsystem.** See *Arterial* SYSTEM.—**A'nton.** See *Arterial* MURMUR.—**A'nunterbindung.** The ligation of arteries. [L, 135.]—**A'nverengerung.** See ARTERIOSTENOSIS—**A'nverkalkung.** Arterial calcification. [M, 1.]—**A'nzange.** See *Artery* FORCEPS.—**A'nzerreissung.** See ARTERIORRHEXIS.—**Aufsteigende Schlundkopfsa'.** See *Ascending pharyngeal* ARTERY.—**Augena'.** See *Ophthalmic* ARTERY.—**Augenlidera'n.** See *Palpebral* ARTERIES.—**Aeussere A. des Ohres.** See *External auditory* ARTERY.—**Aeussere Brusta'.** See *External mammary* ARTERY.—**Aeussere Fusssohlena'.** See *External plantar* ARTERY.—**Aeussere Fusswurzela'.** See *External tarsal* ARTERY.—**Aeussere Kranza' des Schenkels.** See *External circumflex* ARTERY *of the thigh.*—**Aeussere Schama'n.** See *External pudic* ARTERIES.—**Aeussere Thoraxa'.** See *External mammary* ARTERY.—**Aeussere Zwischenknochena'.** See *Anterior interosseous* ARTERY *of the forearm.*—**Backena'.** See *Buccal* ARTERY.—**Balkena'.** See *Anterior cerebral* ARTERY.—**Basila', Basilara'.** See *Basilar* ARTERY.—**Baucha'.** See *Abdominal* ARTERY and *Cœliac* ARTERY.—**Bauchdecdena'.** See *Superficial epigastric* ARTERY.—**Bauchspeicheldrüsen-Zwölffingerdarma'.** See *Pancreatico-duodenal* ARTERY.—**Beckena'.** See *Internal iliac* ARTERY.—**Blinddarma'.** See *Cœcal* ARTERY.—**Brustdrüsena'n.** See *Anterior mediastinal* ARTERIES and *External* and *Internal mammary a.*—**Centrala' der Netzhaut.** See *Central retinal* ARTERY.—**Ciliara'n.** See *Ciliary* ARTERIES.—**Damma'.** See *Perineal* ARTERY.—**Daumena'.** See *Large* ARTERY *of the thumb.*—**Dickdarma'.** See *Colic* ARTERY.—**Dritte Fingera' der Hohlenhand.** See ARTERIA *digitalis volaris tertia.*—**Ellenbogena'.** See *Ulnar* ARTERY.—**Ernährende A. des Oberarmknochens.** See *Nutrient* ARTERY *of the os brachii.*—**Erste äussere Brusta'.** See *Superior thoracic* ARTERY.—**Erste Fingera' der Hohlenhand.** See ARTERIA *digitalis volaris prima.*—**Erste Zwischenknochena' des Fussrückens.** The first dorsal interosseous artery of the foot. ARTERIECTASIS (Lat.), n. f. A^{3}r-te(ta)-ri^2 e^{2}k'ta^3-si^{2}s. Gen., *arteriecta'seos* (*-ec'tasis*). From ἀρτηρία, an artery, and ἔκτασις, dilatation. Fr., *artériectasie.* Ger., *Arterienausdehnung.* Dilatation of an artery, as by aneurysm, or of a number of arteries. [A, 322.]

ARTERIECTOPIA (Lat.), n. f. A^{3}r-te(ta)-ri^2-e^{2}k-to'pi^2-a^3. From ἀρτηρία, an artery, and ἐκτόπιος, out of the way. Fr., *artériectopie.* 1. An abnormal course of an artery. [L, 50.] 2. The displacement of an artery from its original situation. [L, 50.]

ARTERIECTOPICUS (Lat.), adj. A^{3}r-te(ta)-ri^2-e^{2}k-to^{2}p'i^{2}k-u^{3}s(u^{4}s). Pertaining to arteriectopia. [D, 80.]

ARTERIEURYSMA (Lat.), n. n. A^{3}r-te(ta)-ri-u^2-ri^{2}z(ru^{6}s)'-ma^3. Gen., *arterieurys'matos* (*-tis*). From ἀρτηρία, an artery, and εὔρυσμα, dilatation. Fr., *artérévrysme.* See ANEURYSM.

ARTERIEURYSMATICUS (Lat.), adj. A^{3}r-te(ta)-ri^2-u^2-ri^{2}z-(ru^{6}s)-ma^{2}t(ma^{3}t)'i^{2}k-u^{3}s(u^{4}s). See ANEURYSMAL.

ARTERIITIS (Lat.), n. f. A^{3}r-te(ta)-ri^2-i(e)'ti^{2}s. Gen., *arteriit'idis.* See ARTERITIS.

ARTERIOARCTIA (Lat.), n. f. A^{3}r-te(ta)-ri^2-o-a^{3}rk'shi^2(ti^2)-a^3. From *arteria*, an artery, and *arctare*, to compress. Fr., *artérioarctie* [Piorry]. See ARTERIOSTENOSIS.

ARTERIO-CAPILLARY, adj. A^{3}r-te''ri^2-o-ka^{2}p'i^{2}l-la-ri^2. Pertaining to the arterioles and the capillaries. See *A.-c.* FIBROSIS.

ARTERIOCHALASIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o(o^2)-ka^{2}l-(ch^{2}a^{3}l)'a^3-si^{3}s. Gen., *arteriochala'seos* (*-sis*). From ἀρτηρία, an artery, and χάλασις (from χαλᾶν), relaxation. Fr., *arteriochatasie.* Atony of the arteries. [D, 112.]

ARTERIOCHALASTICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o(o^2)-ka^{2}l-(ch^{2}a^{3}l)-a^{2}s(a^{3}s)'ti^{2}k-u^{3}s(u^{4}s). Pertaining to arteriochalasis. [D, 80.]

ARTERIODES (Lat.), adj. A^{3}r-te(ta)-ri^2-o'dez(de^{2}s). Gr., ἀρτηριώδης (from ἀρτηρία, an artery, and εἶδος, resemblance). Resembling an artery. [D, 80.]

ARTERIODIALYSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-di(de)-a^{2}l-(a^{3}l)'i^2(u^6)-si^{2}s. Gen., *arteriodialys'eos* (*-al'ysis*). From ἀρτηρία, an artery, and διάλυσις, dissolution. Fr., *artériodialyse.* Attenuation of the walls of an artery, with or without rupture. [A, 322.]

ARTERIODIALYTICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o-di(de)-a^3-li^{2}t(lu^{6}t)'i^{2}k-u^{3}s(u^{4}s). Pertaining to arteriodialysis. [L, 50.]

ARTERIODIASTASIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-di(de)-a^{2}st-(a^{3}st)'a^3-si^{2}s. Gen., *arteriodiasta'seos* (*-ast'asis*). From ἀρτηρία, an artery, and διάστασις, a separation. Fr., *arteriodiastase.* 1. The retraction of the two ends of a divided artery. [L, 50.] 2. A divergence of two arteries that normally lie near each other. [L, 50.] 3. Arteriectopia. [Ludwig (L, 50).]

ARTERIODIASTATICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o-di(de)-a^{2}s(a^{3}s)-ta^{2}t(ta^{3}t)'i^{2}k-u^{3}s(u^{4}s). Pertaining to arteriodiastasis. [D, 80.]

ARTERIODIPLOPIESMUS (Lat.), n. m. A^{3}r-te(ta)''ri^2-o-di^{2}p-lo-pi^2-e^{2}z(e^{2}s)'mu^{3}s(mu^{4}s). From ἀρτηρία, an artery, διπλόος, twofold, and πιεσμός (from πιέζειν), pressure. Fr., *artériodiplopiesme.* A procedure recommended by Leroy d'Étiolles for securing rapid coagulation of the blood in a portion of an artery situated between two different points at which pressure is made simultaneously. [D, 80.]

ARTERIODOMUM (Lat.), n. n. A^{3}r-te(ta)-ri^2-o^{2}d'o-mu^{3}m-(mu^{4}m). From ἀρτηρία, an artery, and δαμᾶν, to subdue. Fr., *artériodème.* Ger., *Arteriodom.* E. Graefe's name for an artery-forceps devised by him. [A, 322 ; D, 130.]

ARTERIOGRAM, n. A^{3}r-te'ri^2-o-gra^{3}m. From ἀρτηρία, an artery, and γράμμα (from γράφειν), a drawing. Syn.: *sphygmogram.* A graphic delineation of the variations of the pulse ; a pulse-curve. [K.]

ARTERIOGRAPH, n. A^{3}r-te'ri^2-o-gra^{3}f. Fr., *artériographe.* See ANGEIOGRAPH.

ARTERIOGRAPHIC, adj. A^{3}r-te-ri^2-o-gra^{2}f'i^{2}k. Fr., *artériographique.* Pertaining to arteriography or to the arteriograph.

ARTERIOGRAPHY, n. A^{3}r-te-ri^2-o^{2}g'ra^{2}f-i^2. Lat., *arteriographia* (from ἀρτηρία, an artery, and γράφειν, to write). Fr., *artériographie.* Ger., *Arteriographie.* It., *arteriografia.* Sp., *arteriografía.* 1. Arteriology (*q. v.*). 2. The practice of producing graphic representations of the state of the pulse.

ARTERIOID, adj. A^{3}r-te'ri^2-oid. Lat., *arterioides* (from ἀρτηρια, an artery, and εἶδος, resemblance). Fr., *artérioïde.* Ger., *schlagaderähnlich.* Resembling an artery. [A, 380.]

ARTERIOLA (Lat.), n. f. A^{3}r-te^{2}r-i(e)'o-la^3. Dim. of *arteria.* See ARTERIOLE.—**A. auricularis cordis dextra.** See ARTERIA *auricularis cordis dextra.*—**A. auricularis cordis sinistra.** See ARTERIA *auricularis cordis sinistra.*—**A. circumflexa dextra.** A branch of the right coronary artery of the heart running to the auriculo-ventricular groove. [L, 117.]—**A. circumflexa sinistra.** A branch of the left coronary artery of the heart running to the aorta and the pulmonary artery. [L, 117.]—**Arteriolæ interlobulares, Arteriolæ radiolatæ.** The interlobular arteries of the kidney. [L.] See under ARTERY.—**Arteriolæ lymphaticæ.** The minute lymphatic vessels. [L, 128.]—**Arteriolæ rectæ.** The true arteriæ rectæ of the kidney. [L.] See under ARTERIÆ *rectæ.*

ARTERIOLE, n. A^{3}r-te'ri^2-ol. Lat., *arteriola.* Fr., *artériole.* Ger., *Schlagäderchen.* It., *arteriola.* Sp., *arteriola.* A minute artery. [A, 385.]

ARTERIOLOGY, n. A^{3}r-te-ri^2-o^{2}l'o-ji^2. Lat., *arteriologia* (from ἀρτηρία, an artery, and λόγος, understanding). Fr., *artériologie.* Ger., *Arteriologie.* It., *arteriologia.* Sp., *arteriología.* That department of anatomy which relates to the arteries.

ARTERIOMALACIA (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-ma^{2}l(ma^{3}l)-a(a^3)'si^2(ki^2)-a^3. From ἀρτηρία, an artery, and μαλακία, softness. Fr., *artériomalacie.* Ger., *Arteriomalacie.* Softening of the coats of an artery. [D, 130.]

ARTERIOMALACOSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-ma^{2}l-(ma^{3}l)-a^3-ko'si^{2}s. Gen., *arteriomalaco'seos* (*-sis*). See ARTERIOMALACIA.

ARTERIOPALMUS (Lat.), n. m. A^{3}r-te(ta)''ri^2-o-pa^{2}l(pa^{3}l)'-mu^{3}s(mu^{4}s). From ἀρτηρία, an artery, and παλμός, a throbbing. Fr., *artériopalme.* Ger., *Schlagaderklopfen.* Syn.: *pulsatio arteriarum vehementior.* Throbbing of the arteries. [M, 13.]

ARTERIOPATHY, n. A^{3}r-te-ri^2-o^{2}p'a^{2}th-i^2. From ἀρτηρία, an artery, and πάθος, disease. Fr., *artériopathie* [Piorry]. Any disease of an artery. [D, 10.]

ARTERIOPERISSIA, ARTERIOPERITTIA (Lat.), n's f. A^{3}r-te(ta)''ri^2-o-pe^{2}r-i^{2}s'si^2-a^3, -i^{2}t'ti^2-a^3. From ἀρτηρία, an artery, and περισσός, extraordinary. Fr., *artériopérissie.* Ger., *Schlagaderüberwucherung.* An extraordinary development of arteries (as in morbid erectile tissue). [M, 13.]

ARTERIO-PHLEBOTOMY, n. A^{3}r-te''ri^2-o-fle^{2}b-o^{2}t'o-mi^2. From ἀρτηρία, an artery, φλέψ, a vein, and τέμνειν, to cut. Fr., *artério-phlébotomie.* Bloodletting from the capillaries by means of scarification. [D, 10.]

ARTÉRIOPHTHORIE (Fr.), n. A^{3}r-ta-ri^2-o^{2}p-to-re. See ARTERIOCHALASIS.

ARTERIOPIESTER (Lat.), n. m. A^{3}r-te(ta)''ri^2-o-pi^2-e^{2}st'e^{2}r. From ἀρτηρία, an artery, and πιεστήρ, a squeezer. Fr., *artériopiestère, presse-artère.* Ger., *Arteriendrücker.* An artery-compressor. [D, 130.]

ARTERIO-PITUITOUS, adj. A^{3}r-te''ri^2-o-pi^{2}t-u^2'i^{2}t-u^{3}s. From *arteria*, an artery, and *pituita*, mucus. Fr., *artério-pituiteux.* Arterial and pertaining to the nares (said of the blood-vessels of the nasal passages). [L, 41.]

ARTERIOPLANIA (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-pla(pla^3)'-ni^2-a^3. From ἀρτηρία, an artery, and πλανᾶσθαι, to wander. Fr., *artérioplanie.* Ger., *Arterioplanie.* 1. An excessive elongation and tortuousness of an artery. ["Maryland Med. Recorder," i, p. 155 (L, 50).] 2. A deviation of an artery from its usual course. [D, 12.]

ARTERIOPLANICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o-pla^{2}n-(pla^{3}n)'i^{2}k-u^{3}s(u^{4}s). Pertaining to or affected with arterioplania. [D, 80.]

ARTERIOPLEGMUS, ARTERIOPLOCE (Lat.), n's m. and f. A^{3}r-te(ta)''ri^2-o-ple^{2}g'mu^{3}s(mu^{4}s), -o^{2}p'lo-se(ka). See ANGEIOPLOCE.

ARTERIORRHAGIA (Lat.), n. f. A^{3}r-te(ta)''ri^2-o^{2}r-ra(ra^3)'-ji^2(gi^2)-a^3. From ἀρτηρ΄α, an artery, and ῥήγνυσθαι, to burst forth. Fr., *artériorrhagie.* Hæmorrhage from rupture of an artery. [D, 10.]

ARTERIORRHECTICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o^{2}r-re^{2}k'-ti^{2}k-u^{3}s(u^{4}s). Pertaining to, caused by, or affected with, arteriorrhexis. [D, 80.]

ARTERIORRHEXIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o^{2}r-re^{2}x'i^{2}s. Gen., *arteriorrhex'eos* (*-is*). From ἀρτηρία, an artery, and ῥῆξις (from ῥήγνυσθαι), a bursting. Fr., *artériorrhexie.* Ger., *Arteriorrhexie, Schlagaderzerreissung.* Rupture of an artery. [D, 130.]

ARTERIOSCENOGRAPHIA (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-se^{2}n(ske^{2}n)-o-gra^{2}f(gra^{3}f)'i^2-a^3. From ἀρτηρία, an artery, and σκηνογραφία, scene-painting. Fr., *artérioscénographie.* Ger., *Arterioscenographie.* A portrayal of arteries. [A, 322.]

ARTERIOSCLEROSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-skle^{2}r-o'-si^{2}s. Gen., *arteriosclero'seos* (*-sis*). From ἀρτηρία, an artery, and σκληρύνειν, to harden. Fr., *artériosclérose.* Ger., *Arteriosclerose, Schlagaderverhärtung.* Induration of the walls of an artery, or of the arteries, especially in the musculo-elastic coat. [A, 385; J. B. Duplaix, "Arch. gén. de méd.," Feb., March, 1885; "Rev. des sci. méd.," April, 1886, p. 449.] See also ENDARTERITIS *deformans.*

ARTERIOSITY, n. A^{3}r-te-ri^2-o^{2}s'i^{2}t-i^2. Lat., *arteriositas.* Fr., *arteriosité.* Ger., *Arteriosität.* A condition in which the blood in the systemic veins possesses the characters of arterial blood; the opposite of venosity. It may be induced artificially by superaeration of the blood. [J, 16; K.]

ARTERIOSTENOSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-ste^{2}n-o'si^{2}s. Gen., *arteriosteno'seos* (*-sis*). From ἀρτηρία, an artery, and στένωσις, a narrowing. Fr., *artériosténose.* Ger., *Arteriostenose, Schlagaderverengerung.* A narrowing of the lumen of an artery. [D, 130.]

ARTERIOSTEOGENESIS, ARTERIOSTEOSIS, ARTERIOSTOSIS (Lat.), n's f. A^{3}r-te(ta)-ri^2-o^{2}s''te^2-o-je^{2}n(ge^{2}n)'e^{2}s-i^{2}s, -o^{2}s-te^2-o'si^{2}s, -o^{2}s-to'si^{2}s. Gen., *arteriosteogene'seos* (*-gen'esis*), *-teo'seos* (*-sis*), *-to'seos* (*-sis*). From ἀρτηρία, an artery, ὀστέον, a bone, and γένεσις, production, or ὀστέωσις, a formation of bone. Fr., *artériostéose.* Ger., *Arteriosteose, Schlagaderverknöcherung.* Calcification of an artery or of the arteries. [D, 130, 142.]

ARTERIOSTREPSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-stre^{2}p'si^{2}s. Gen., *arteriostrep'seos* (*-sis*). From ἀρτηρία, an artery, and στρέψις, a twisting. Fr., *torsion d'une artére.* Ger., *Schlagaderdrehung.* The operation of twisting an artery to obliterate its lumen. [Amussat (A, 322).] See TORSION.

ARTERIOSUS (Lat.), adj. A^{3}r-te(ta)-ri^2-o'su^{3}s(su^{4}s). Fr., *artérieux.* Ger., *arteriös.* Arterial; conveying arterial blood.

ARTERIOTHLIMMA, ARTERIOTHLIPSIS (Lat.), n's n. and f. A^{3}r-te(ta)''ri^2-o-thli^{2}m'ma^3, -thli^{2}p'si^{2}s. Gen., *arteriothlim'matos* (*-tis*), *-thlip'seos* (*-sis*). From ἀρτηρία, an artery, and θλῖψις (from θλίβειν, to gall). Injury to an artery by pressure. [A, 322.]

ARTERIOTHLIPTICUS (Lat.), adj. A^{3}r-te(ta)''ri^2-o-thli^{2}p'-ti^{2}k-u^{3}s(u^{4}s). Pertaining to arteriothlipsis. [A, 322.]

ARTERIOTOME, n. A^{3}r-te'ri^2-o-tom. From ἀρτηρία, an artery, and τέμνειν, to cut. Fr., *artériotome.* Ger., *Arteriotom, Schlagaderöffner.* A knife for performing arteriotomy. [D, 12.]

ARTERIOTOMICUS, ARTERIOTOMUS (Lat.), adj's. A^{3}r-te(ta)''ri^2-o-to^{2}m'i^{2}k-u^{3}s(u^{4}s), -o^{2}t'o-mu^{3}s(mu^{4}s). Fr., *artériotomique.* Pertaining to arteriotomy. [L, 50.]

ARTERIOTOMY, n. A^{3}r-te-ri^2-o^{2}t'o-mi^2. Lat., *arteriotomia.* Fr., *artériotomie.* Ger., *Schlagaderzerlegung* (1st def.), *Schlagaderöffnung* (2d def.). It., *arteriotomia.* Sp., *arteriotomia.* 1. The dissection of arteries. [C.] 2. The operation of opening an artery for the purpose of depletion. [D, 100.]

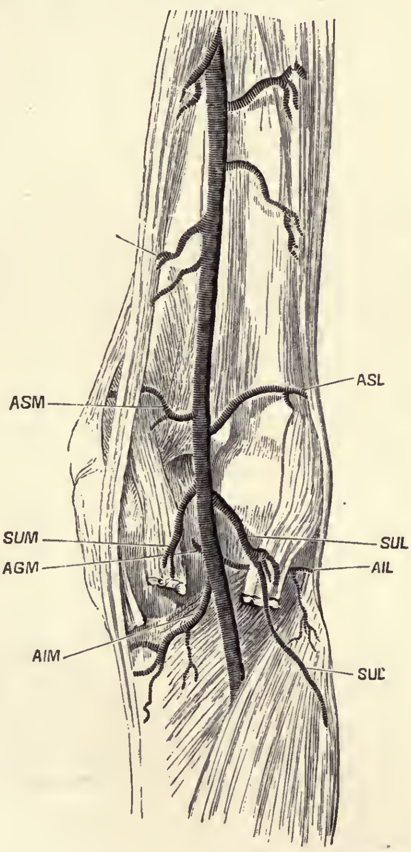
ARTERIOTREPSIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-o-tre^{2}p'si^{2}s. Gen., *arteriotrep'seos* (*-sis*). From ἀρτηρία, an artery, and τρέψις, torsion. Fr., *artériotrepsie.* See ARTERIOSTREPSIS.

ARTERIO-VENOUS, adj. A^{3}r-te''ri^2-o-ve'nu^{3}s. Lat., *arteriovenosus* (from *arteria*, an artery, and *vena*, a vein). Fr., *arterioveineux, artérioso-veineux.* Ger., *arterio-venös.* Pertaining to both an artery and a vein. [A, 385.]—**A.-v. aneurysm.** See *Varicose* ANEURYSM and *Aneurysmal* VARIX.

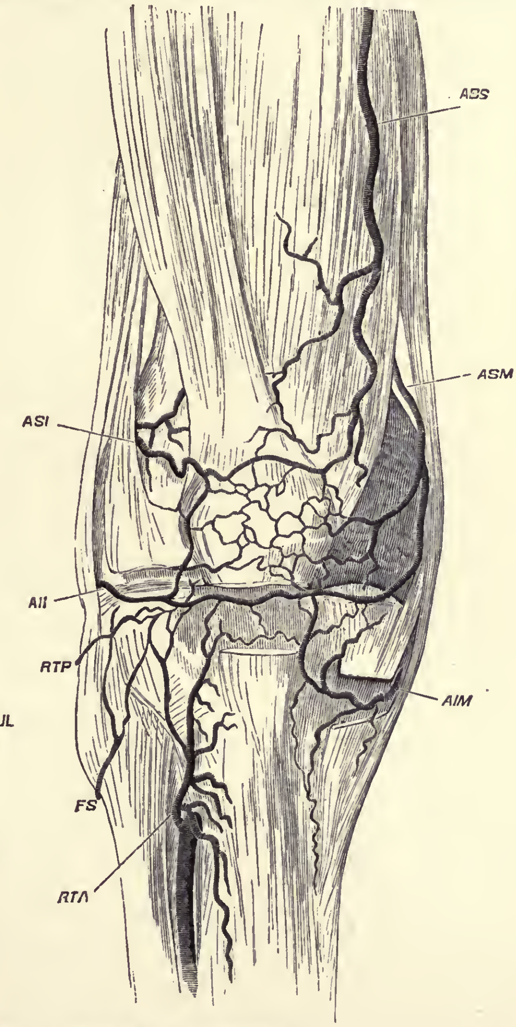
ARTÉRITE (Fr.), n. A^{3}r-ta-ret. See ARTERITIS.—**A. dothiénentérique.** See *A. typhoïdique.*—**A. obturante.** See ENDARTERITIS *obliterans.*—**A. ossifiante.** An arteritis in which there is calcification of the artery. [Siredey (D, 87).]—**A. rhumatismale.** A rare form of arteritis involving the inner tunic, occurring in the course of an attack of rheumatism. [D, 72.]—**A. typhoïdique.** A form of arteritis occurring in the course of typhoid fever. [L. Landouzy, A. Siredey, "Rev. de méd.," Oct., 1885, p. 843.]

ARTERITIS (Lat.), n. f. A^{3}r-te^{2}r-i(e)'ti^{2}s. Gen., *arterit'idis.* Written also (more correctly but less euphoniously) *arteriitis.* From ἀρτηρία, an artery (see also *-itis**). Fr., *artérite.* Ger., *Schlagaderentzündung.* It., *arterite, arteritide.* Sp., *arterítis.* Inflammation of an artery. See ENDARTERITIS, MESARTERITIS, and PERIARTERITIS. According to some authors, the term should be limited to inflammation of the external coat. [A, 385.]—**A. deformans.** See ENDARTERITIS *deformans.*—**A. obliterans, A. obliterativa.** See ENDARTERITIS *obliterans.*—**A. syphilitica.** Endarteritis deformans due to syphilis. [Marchand (A, 319).]—**A. umbilicalis.** Inflammation and thrombosis of the umbilical arteries in the newborn. [C. Hennig (A, 416).]—**Cerebral a.** Inflammation of the cerebral arteries. [J. M. Da Costa (D, 87).]—**Obliterating a.** See ENDARTERITIS *obliterans.*

ARTERIVERSION, n. A^{3}r''te^{2}r-i^2-vu^{5}r'zhu^{3}n. Lat., *arteriversio* (from *arteria*, an artery, and *vertere*, to turn). The correct spelling of *aerteriversion* (*q. v.*).



ARTERIVERTER, n. A^{3}r''te^{2}r-i^2-vu^{5}rt'u^{5}r. See AERTERIVERTER.

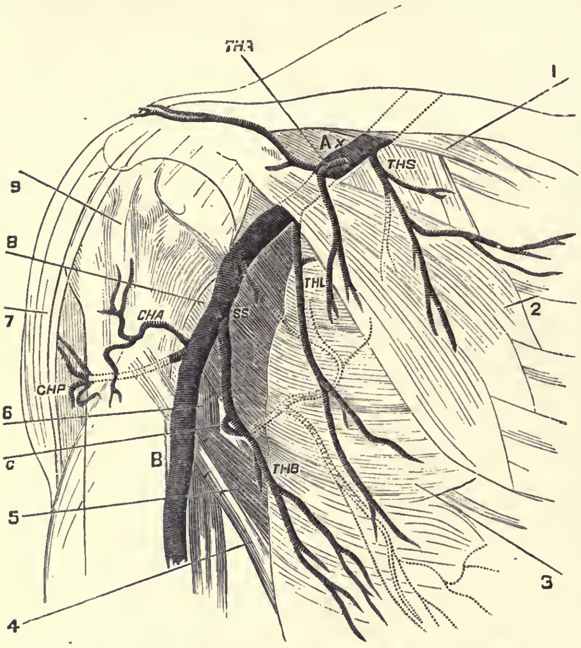


ARTERIYPERECTASIS (Lat.), n. f. A^{3}r-te(ta)''ri^2-i(u^6)-pe^{2}r-e^{2}k'ta^3-si^{2}s. Gen., *arteriyperecta'seos* (*-ec'tasis*). From ἀρτηρία, an artery, ὑπέρ, to excess, and ἔκτασις, distension. Extreme dilatation of an artery. [D, 80.]

ARTERY, n. A^{3}r'te^{2}r-i^2. Gr., ἀρτηρία. Lat., *arteria.* Fr., *artère.* Ger., *Arterie, Pulsader, Schlagader.* It., Sp., *arteria.* A vessel which conveys blood from the heart.—**Abdominal a.** Lat., *arteria abdominalis.* Fr., *artère abdominale.* 1. See *Deep circumflex iliac a., deep epigastric a., superficial epigastric a., superior abdominal a.,* and *superior external pudic a.* 2. In osseous fishes, a branch of the dorsal aorta which pierces the anterior portion of the kidneys, runs along above the œsophagus, and is distributed to the abdominal organs. [L, 158.]—**Aberrant a.** See VAS *aberrans.*—**Accessory pudic a.** Lat., *arteria pudenda accessoria.* An occasional branch of the internal iliac a. distributed to the same parts as the internal pudic a. [L, 142.]—**Accessory thyreoid a.** A name applied, in the domesticated animals, to the analogue of the middle thyreoid a. of man. [L, 13.]—**Acromial a.** Lat., *arteria acromialis.* Fr., *artère acromiale.* Ger., *Schulterhöhenarterie.* Sp., *arteria acromial.* The external branch of the acromio-thoracic a.; in the pl., the branches of the acromio-thoracic a. distributed to the deltoid muscle and to the structures above the acromion. [L, 114, 142.]—**Acromial thoracic a., Acromio-thoracic a.** Lat., *arteria thoracica acromialis.* Fr., *artère acromio-thoracique.* Ger., *Brustschulterpulsader.* Sp., *arteria acromio-torácica.* A branch of the axillary a. given off at the upper border of the pectoralis minor muscle, giving origin to the acromial arteries, the arteria deltoidea, and branches to the side of the thorax, the subclavius muscle, and the internal surface of the arm. [L, 31, 142.]—**Adipose arteries.** Lat., *arteriæ adiposæ.* Fr., *artères adipeuses.* The capsular arteries, and also the small branches of the thoracic aorta distributed to the adipose tissue of the heart. [L, 32.]—**Afferent arteries of the kidney.** The branches of the interlobular arteries of the kidneys, which pass into the glomeruli. [L, 142.]—**Alar a.** See *Alar thoracic a.* and *Axillary a.*—**Alar thoracic a.** Ger., *Alararterie.* An inconstant branch of the axillary a. distributed to the glands and adipose tissue of the axilla. [L, 142.]—**Allantoic arteries** [Balfour]. See *Umbilical arteries.*—**Alveolar a.** Lat., *arteria alveolaris.* Fr., *artère alvéolaire.* See *Posterior dental a.*—**Anal a.** Fr., *artère anale.* A branch of the posterior aorta in many molluscs, which descends on the inferior surface of the intestinal canal to the anus. [L, 158.]—**Anastomotic arteries.** Fr., *artères anastomotiques.* Arteries which unite those more or less remote from each other. [Nunn (L, 31).]—**Anastomotic a. of the arm.** Lat., *arteria collateralis ulnaris inferior.* Fr., *artère collatérale interne inférieure.* Ger., *untere Ellenbogenne-benpulsader.* Sp., *arteria colateral interna.* A branch of the brachial a., arising about two inches above the elbow, which runs backward and inward on the brachialis anticus muscle above the inner condyle of the os brachii, and, after perforating the inter-muscular septum, turns outward behind the os brachii and forms an arch with the superior profunda a. just above the olecranon fossa. [L, 142.]—**Anastomotic a. of the sciatic a.** A branch of the sciatic a. distributed to the external rotator muscles of the thigh and the hip joint and anastomosing with branches of the gluteal a. [L, 142.]—**Anastomotic a. of the thigh.** See *Anastomotica magna a. of the thigh.*—**Anastomotica magna a. of the thigh.** Lat., *arteria anastomotica magna femoris.* Fr., *artère grande anastomotique de la cuisse.* Ger., *oberste Kniegelenkschlagader.* A branch of the femoral a. arising close to the opening in the adductor magnus muscle (Hunter's canal), which divides into two branches, the superficial and deep. The superficial branch accompanies the internal saphenous nerve to the inner side of the knee, and ends by supplying the upper part of the inner side of the leg; the deep branch descends to the inner condyle of the femur, where it anastomoses with the internal articular arteries of the knee. [L, 142.]—**Angular a.** Lat., *arteria angularis.* Fr., *artère angulaire.* Ger., *Winkelpulsader.* 1. The termination of the facial a., which inosculates at the inner side of the orbit with the nasal branch of the ophthalmic. [L, 142.] 2. See *Facial a.*—**Antennary arteries.** Fr., *artères antennaires.* In certain crustaceans, branches from the anterior surface of the heart distributed to the antennæ. [L, 158.]—**Anterior abdominal a.** A branch, in many of the lower animals, of the internal mammary a., distributed to the rectus abdominis muscle and in its neighborhood. [L, 13.]—**Anterior and internal frontal arteries.** Fr., *artères frontales internes et antérieures.* Branches of the anterior cerebral a. distributed to the inferior frontal convolutions. [L, 189.]—**Anterior and internal peduncular arteries.** Fr., *artères pédonculaires antérieures et internes.* Branches of the posterior cerebral a. distributed to the internal surface of the peduncle. [H. Duret, "Arch. de physiol. norm. et path.," 1874, p. 72 (L).]—**Anterior a. of the corpora quadrigemina.** Fr., *artère antérieure des tubercules quadrijumeaux.* A branch of the posterior cerebral a., or of one of its branches, distributed to the anterior portion of the tubercula quadrigemina. [H. Duret, *l. c.* (L).]—**Anterior a. of the receptacle.** A branch of the internal carotid a. to the dura mater of the cavernous sinus and adjacent parts. [L, 179.]—**Anterior auricular arteries.** Lat., *arteriæ auriculares anteriores.* Fr., *artères auriculaires antérieures.* Branches of the temporal a., varying in number, distributed to the anterior portion of the auricle, the lobule, and part of the external meatus, anastomosing with branches of the posterior auricular. [F.]—**Anterior cæcal a.** A branch of the inferior mesenteric a. distributed to the anterior surface of the cæcum. [L, 179.]—**Anterior cardiac a.** See *Left coronary a. of the heart.*—**Anterior carpal arteries.** Lat., *arteriæ volares carpi.* See *Anterior radio-*

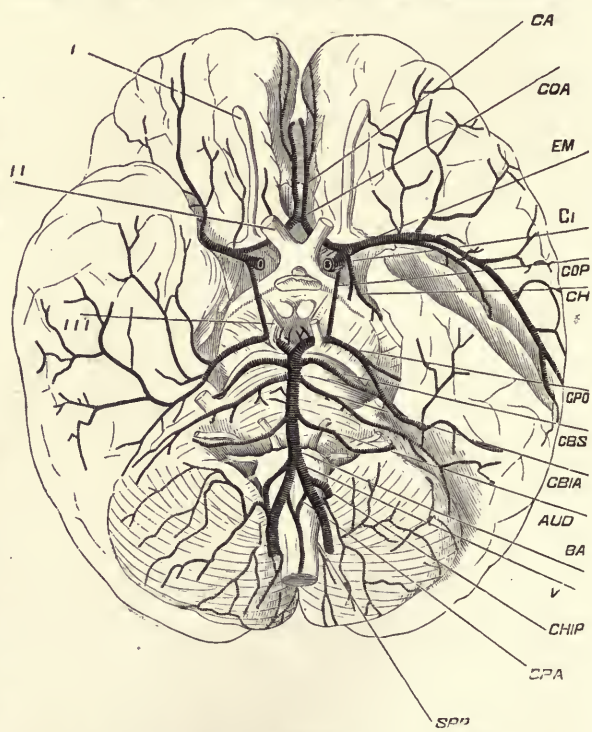
carpal a. and *Anterior ulno-carpal a.*—**Anterior cerebral a.** Lat., *arteria cerebralis anterior.* Fr., *artère cérébrale antérieure.* Ger., *vordere Gehirnpulsader.* One of the ultimate branches of the internal carotid a., arising at the inner end of the fissure of Sylvius, which runs forward and inward between the cerebral hemispheres to the anterior border of the corpus callosum, where it breaks up into branches mainly distributed to the frontal lobe of the brain. At the point where it enters the longitudinal fissure it is connected with its fellow of the opposite side by the anterior communicating a. of the brain. [L, 142.]—**Anterior cervical a.** See *Anterior thyreoid a.*—**Anterior chorioid arteries.** Lat., *arteriæ chorioideæ anteriores.* Fr., *artères choroïdiennes antérieures.* Ger., *vordere Adernetzpulsadern.* Branches of the internal carotid a., or of the middle cerebral a., which pass through the fissure between the temporo-sphenoidal lobe and the crus cerebri to the descending cornu of the lateral ventricle, in which they are distributed to the chorioid plexus. [L, 142.]—**Anterior ciliary arteries.** Lat., *arteriæ ciliares anteriores.* Fr., *artères ciliaires antérieures.* Ger., *vordere Blendungspulsadern.* Sp., *arterias ciliares anteriores.* Branches of the lacrymal or of the muscular branches of the ophthalmic artery which pierce the sclerotic, and are distributed to the ciliary processes, and form a vascular ring beneath the conjunctiva close to the cornea. [L, 142.]—**Anterior circumflex a. of the arm.** Lat., *arteria circumflexa humeri anterior.* Fr., *artère circonflexe antérieure de l'humérus.* Ger., *vordere Kranzarterie des Armes.* Sp., *arteria circunfleja anterior.* A branch of the axillary a., arising just below the subscapular a., which passes outward beneath the inner head of the biceps and coraco-brachialis muscles until it reaches the bicipital groove, where it divides into two branches, one of which ascends with the tendon of the long head of the biceps to the head of the os brachii and the capsule of the joint, and the other runs backward to anastomose with the posterior circumflex a. of the arm. [L, 142, 172.]—**Anterior communicating a. of the brain.** Lat., *arteria anterior communicans.* Fr., *artère antérieure communicante.* Ger., *vordere Verbindungspulsader.* Sp., *arteria comunicante anterior.* An a. which unites the anterior cerebral arteries as they enter the longitudinal fissure of the brain. [L, 142.]—**Anterior cubital recurrent a.** See *Anterior ulnar recurrent a.*—**Anterior dental a.** A branch of the infra-orbital a., which descends in the anterior dental canal, and is distributed to the mucous membrane of the maxillary antrum and to the upper front teeth. [L, 142.]—**Anterior dorsal a. of the penis.** The analogue of the dorsal a. of the penis of man in some of the lower animals. [L, 13.]—**Anterior ethmoidal a.** Lat., *arteria ethmoidalis anterior.* Fr., *artère ethmoïdale antérieure.* Ger., *vordere Riechbeinpulsader.* Sp., *arteria etmoidal anterior.* A branch of the ophthalmic a. which accompanies the nasal nerve through the anterior ethmoidal foramen, and is distributed to the adjacent dura mater and to the upper portion of the nasal cavities. [L, 172.]—**Anterior inferior auricular arteries.** Lat., *arteriæ auriculares anteriores inferiores.* Fr., *artères auriculaires antérieures inférieures.* Ger., *vordere untere Arterien des äusseren Ohres.* It., *arterie auriculari anteriori inferiori.* Sp., *arterias auriculares anteriores inferiores.* Branches of the superficial temporal a. which supply the anterior surface of the auricle and the external portion of the meatus auditorius. [L, 31.]—**Anterior inferior cerebellar a.** Lat., *arteria cerebelli inferior anterior.* Fr., *artère cérébelleuse inférieure antérieure.* Ger., *vordere untere Hirnleinpulsader.* Sp., *arteria cerebelosa inferior y anterior.* A branch of the basilar a. which supplies the anterior portion of the lower surface of the cerebellum and anastomoses with the cerebellar branches of the vertebral arteries. [L, 142.]—**Anterior intercostal arteries.** Lat., *arteriæ intercostales anteriores.* Fr., *artères intercostales antérieures.* Ger., *vordere Zwischenrippenpulsadern.* Branches of the internal mammary a., two in each of the six upper intercostal spaces, which arise separately or from a common trunk in each space and pass outward between the pleura and the internal intercostal muscles, and afterward between the two layers of the intercostal muscles. They lie at the margins of the ribs, and are distributed to the intercostal and pectoral muscles and inosculate with corresponding branches of the aortic intercostal arteries. [L, 142.]—**Anterior interosseous a. of the forearm.** Lat., *arteria interossea anterior.* Fr., *artère interosseuse antérieure.* Ger., *vordere Zwischenknochenpulsader.* Sp., *arteria interosea anterior.* A branch of the common interosseous a. of the forearm which arises at the upper border of the interosseous membrane, upon the front of which it descends, accompanied by the interosseous branch of the median nerve, to the upper border of the pronator quadratus muscle, where it divides into the median a., muscular branches to the pronator quadratus, flexor profundus, and flexor longus pollicis, the nutrient arteries of the radius and ulna, and a communicating branch which anastomoses with the anterior carpal arteries. [L, 142.]—**Anterior laminal arteries.** Branches of the plantar arch in the horse, which ascend into the laminal tissue. [L, 13.]—**Anterior median a. of the spinal cord.** An a., formed by the union of the anterior spinal arteries, which runs in the anterior median fissure of the spinal cord, receiving branches from the cervical and intercostal arteries, and terminating at the cauda equina. [L, 142.]—**Anterior mediastinal arteries.** Lat., *arteriæ mediastinales anteriores.* Fr., *artères médiastines antérieures.* Ger., *vordere Mittelfellpulsadern.* Branches of the internal mammary a. to the connective tissue of the mediastinum and the thymus gland. [L, 35.]—**Anterior meningeal arteries.** Lat., *arteriæ meningeæ anteriores.* Fr., *artères meningées antérieures.* Ger., *vordere Hirnhautpulsadern.* Branches of the anterior ethmoidal a. to the dura mater of the anterior fossa of the skull. [L, 142.]—**Anterior metacarpal interosseous arteries.** Two branches of the radio-palmar artery, in many of the lower animals, supplying the structures lying in front of the metacarpus. [L, 13.]—**Anterior nasal a.** Lat., *arteria nasalis anterior.* Fr., *artère nasale antérieure.* Ger., *vordere Nasenarterie.* Sp., *arteria nasal anterior.* The termination of the anterior ethmoidal a. in the nose. [L, 35.]—**Anterior palatine a.** Lat., *arteria palatina anterior.* Fr., *artère palatine antérieure.* Ger., *vordere Gaumenpulsader.* The continuation of the pterygo-palatine a., distributed to the anterior pillars of the fauces and the adjacent gums. [L, 7.]—**Anterior parietal a.** Fr., *artère pariétale antérieure.* A branch of the middle cerebral a. distributed to the second frontal convolution as far as the perpendicular frontal sulcus and the anterior convolution of the fissure of Rolando. [H. Duret, *l. c.* (L).]—**Anterior perforating arteries of the foot.** Lat., *arteriæ perforantes pedis anteriores.* Inconstant branches of communication between the dorsal digital arteries of the foot and the plantar arch. [L, 142.]—**Anterior peroneal a.** Lat., *arteria peronea antica.* Fr., *artère péronière antérieure.* Ger., *vordere Madenbeinpulsader.* Sp., *arteria peronea anterior.* A branch of the peroneal a., arising about an inch and a half above the ankle joint, which descends in front of the articulation between the fibula and tibia to the outer side of the tarsus; it supplies the peroneus tertius muscle and the ankle joint in part, and anastomoses with the posterior peroneal and tarsal arteries. [L, 142.]—**Anterior radial recurrent a.** Lat., *arteria radialis recurrens anterior.* Fr., *artère récurrente radiale antérieure.* Ger., *vordere zurücklaufende Speichenpulsader.* Sp., *arteria recurrente anterior.* A branch from the posterior surface of the radial a., just below its origin, which arches upward between the branches of the musculo-spiral nerve, lying upon the supinator brevis and brachialis anticus muscles and beneath the supinator longus. It gives off branches to the adjacent muscles and anastomoses with the superior profunda and posterior interosseous recurrent arteries. [L, 35, 142.]—**Anterior radial carpal (or radio-carpal) a.** Lat., *arteria carpea volaris radialis.* Fr., *artère transverse antérieure du carpe.* Ger., *vordere Handwurzelpulsader.* Sp., *arteria transversal del carpo.* A branch of the radial a., which arises near the inferior border of the pronator quadratus muscle and runs inward to unite with the anterior ulno-carpal a. to form the anterior rete carpeum. [L, 7.]—**Anterior sacral a.** See *Middle sacral a.*—**Anterior scrotal a.** Lat., *arteria scrotalis anterior.* Fr., *artère scrotale antérieure.* Ger., *vordere Hodensackpulsader.* 1. See *Inferior external pudic a.* 2. The termination of the inferior external pudic a. on the anterior portion of the scrotum. [L, 7.]—**Anterior spinal a.** Lat., *arteria spinalis anterior.* Fr., *artère spinale antérieure.* Ger., *vordere Rückenmarksarterie.* Sp., *arteria spinal anterior.* A branch of the vertebral a., near its termination, which descends obliquely in front of the medulla and unites with its fellow to form the anterior median a. of the spinal cord. [L, 142.]—**Anterior superior auricular a.** Lat., *arteria auricularis superior anterior.* Fr., *artère auriculaire antérieure supérieure.* Ger., *vordere obere Arterie des äusseren Ohres.* It., *arteria auriculare anteriore superiore.* Sp., *arteria auricular anterior superior.* A branch of the superficial temporal a. which, with the anterior inferior auricular a., supplies the anterior portion of the auricle and the external auditory meatus. [L, 140.]—**Anterior temporal a.** Lat., *arteria temporalis anterior.* Fr., *artère temporale antérieure.* Ger., *vordere Schläfenpulsader.* Sp., *arteria temporal anterior.* 1. The anterior terminal branch of the superficial temporal a., which runs upward and forward upon the fore part of the head and supplies the orbicular and occipito-frontal muscles, the pericranium, and the integument of the forehead, and inosculates with branches of the ophthalmic and posterior temporal arteries. It is often selected for the operation of arteriotomy. [L, 142.] 2. A branch of the posterior cerebral a. distributed to the gyrus uncinatus as far as the second temporal sulcus. [H. Duret, *l. c.* (L).]—**Anterior tibial a.** Lat., *arteria tibialis antica.* Fr., *artère tibiale antérieure.* Ger., *vordere Schienbeinarterie.* Sp., *arteria tibial anterior.* The smaller of the two divisions of the popliteal a., extending from the lower border of the poplitæus muscle to the bend of the ankle, beyond which point it is termed the dorsal a. of the foot. It passes forward between the heads of the tibialis posticus muscle, through the aperture in the interosseous membrane, to the inner side of the neck of the fibula, and descends upon the anterior surface of the interosseous membrane to the lower part of the leg, where it lies in front of the tibia. A line drawn from a point midway between the head of the fibula and the external tuberosity of the tibia to the centre of the front of the ankle joint will indicate the position of this vessel. Before perforating the interosseous membrane it gives off the posterior tibial recurrent a. and unnamed branches to the fibular region, and on the front of the leg the anterior tibial recurrent a., branches to the muscles of the front of the leg, and the external and internal malleolar arteries. [L, 142.]—**Anterior tibial recurrent a.** Lat., *arteria tibialis recurrens anterior.* Fr., *artère tibiale récurrente antérieure.* Ger., *vordere zurücklaufende Schienbeinpulsader.* Sp., *arteria recurrente tibial anterior.* A branch of the anterior tibial a., immediately after its passage through the interosseous membrane, which ascends through the upper end of the tibialis anticus muscle to the outer tuberosity of the tibia. It furnishes branches to the tibialis anticus muscle and anastomoses with the articular arteries of the knee. [L, 142.]—**Anterior tympanic a.** See *External auditory a.*—**Anterior ulnar recurrent a.** Lat., *arteria recurrens anterior.* Fr., *artère récurrente antérieure.* Ger., *vordere zurücklaufende Ellenbogenpulsader.* Sp., *arteria recurrente cubital anterior.* A branch of the ulnar a. running upward and inward from the upper part of the ulnar a., in front of the inner condyle, lying upon the brachialis anticus and covered by the pronator radii teres muscles, which muscles it supplies in part, anastomosing with the anastomotic a. of the arm. [L, 142.]—**Anterior ulno-carpal a.** Lat., *arteria ulnaris volaris.* Fr., *artère transverse antérieure du carpe.* Sp., *arteria transversal anterior del carpo.* A branch of the ulnar a. running beneath the tendons of the fingers at the level of the lower border of the pronator quadratus muscle and uniting with the anterior radio-carpal a. [L, 142.]—**Aortic intercostal arteries.** Fr., *artères intercostales aortiques.* Ger., *Aortenzwischenrippenarterien.* Branches from the back portion of the thoracic aorta, usually

ten on each side, the upper two spaces being supplied by branches of the superior intercostal a. They pass outward across the bodies of the vertebræ to the intercostal spaces, where they divide into an anterior and posterior branch. The anterior branch passes outward, lying at first upon the external intercostal muscle, but farther along placed between the two layers, to the lower border of the rib above, where it divides into two branches. The larger of these lies in the groove in the lower border of the rib above, and the smaller on the upper border of the rib below. They are distributed to the intercostal muscles and anastomose with the anterior intercostal arteries and branches of the thoracic branches of the axillary a. The posterior branch passes backward to the inner side of the anterior costo-transverse ligament, and divides into branches distributed to the vertebræ and to the muscles and integument of the back. [L, 142, 172.]—**Aortic œsophageal arteries.** Branches of the thoracic aorta distributed to the œsophagus, pericardium, and pleura. [L, 7.]—**Aortic suprarenal a.** See *Capsular a.*—**Aortic uterine a.** Lat., Sp., *arteria uterine aortica.* The internal spermatic a. of the female. It is distributed to the ovary, the oviduct, and the side of the uterus, and anastomoses with the hypogastric uterine a. [L.] Cf. *Internal spermatic a.*—**Appendicular a.** Lat., *arteria appendicularis.* Fr., *artère de l'appendice cœcale.* Ger., *Wurmfortsatzpulsader.* A branch of the ileo-colic a. distributed to the mesentery of the vermiform appendix. [L, 31.]—**A. of Broca's convolution.** See *External and inferior frontal a.*—**A. of Neubauer.** See *Deep thyreoid a.*—**A. of the bulb of the penis** (or **of the urethra**). Lat., *arteria bulbina.* Fr., *artère du bulbe.* Ger., *Harnrohrenzwiebelpulsader.* A branch of the internal pudic, or of one of the perineal arteries, distributed to the erectile tissue of the corpus spongiosum, Cowper's gland, and the membranous portion of the urethra. [L, 142.]—**A. of the corpus callosum.** Fr., *artère du corps calleux.* 1. See *Anterior cerebral a.* 2. A branch of the anterior cerebral a. distributed to the corpus callosum. [H. Duret, *l. c.* (L).]—**A. of the corpus cavernosum.** Lat., *arteria profunda penis.* Fr., *artère profonde de la verge.* Ger., *tiefe Ruthenpulsader.* A branch of the internal pudic, or of the a. of the penis, which runs forward in the centre of the corpus cavernosum, to which it is distributed. [L, 172.]—**A. of the penis.** Fr., *artère pénienne.* Ger., *Ruthenschlagader.* The superior of the two terminal branches of the internal pudic a., which, after giving off the a. of the bulb of the urethra, divides into the dorsal a. of the penis and the a. of the corpus cavernosum. [L, 31.]—**A. of the septum narium.** Fr., *artère de la cloison.* A term applied to the naso-palatine a. or to a branch of the coronary a. of the upper lip distributed to the nasal septum. [L, 135, 172.]—**A. of the vas deferens.** Lat *arteria deferentialis.* Fr., *artère déférentielle.* Ger., *Samengangpulsader.* Sp., *arteria del conducto deferente.* A branch of the superior or inferior vesical a., which sends twigs to the vas deferens and the seminal vesicles and continues along the spermatic cord to the testicle, where it anastomoses with the internal spermatic a. [L, 142.]—**Articular arteries of the arm.** See *Anterior* and *Posterior circumflex arteries of the arm.*—**Articular arteries of the knee.** See *Inferior external articular, Inferior internal articular, Middle articular, Superior external articular,* and *Superior internal articular a. of the knee.*—**Articular a. of the maxilla.** A branch of the superficial temporal a., which sends a twig to the temporo-maxillary articulation and others which enter the ear with the portio dura. [L, 179.]—**Ascending cervical a.** Fr., *artère cervicale ascendante.* Ger., *aufsteigende Nackenpulsader.* Sp., *arteria cervical ascendente.* A branch of the inferior thyreoid a., occasionally of the subclavian, which runs upward in the groove between the scalenus anticus and rectus anticus major muscles, to which it furnishes branches. It sends branches through the intervertebral foramina to the spinal cord, and terminates by anastomosing with the vertebral a. [L, 142.]—**Ascending frontal a.** A branch of the middle cerebral a. distributed mainly to the second frontal convolution. [L, 189.]—**Ascending palatine a.** Lat., *arteria palatina ascendens.* Fr., *artère palatine ascendente.* See *Inferior palatine a.*—**Ascending parietal a.** A branch of the middle cerebral a. distributed to the ascending parietal convolution and the superior parietal lobule. [L, 189.]—**Ascending pharyngeal a.** Lat., *arteria pharyngea ascendens.* Fr., *artère pharyngienne ascendante.* Ger., *aufsteigende Schlundkopfarterie.* Sp., *arteria faringea inferior.* A branch of the external carotid a., arising about an inch above its origin, which runs upward to the base of the skull between the internal carotid a. and the pharynx. It furnishes branches to the pharynx, the Eustachian tube, and the structures in front of the spine, and twigs which enter the skull through the foramen lacerum posterius and the anterior condyloid and jugular foramina. [L, 142.]—**Ascending thyreoid a.** See *Inferior thyreoid a.*—**Asternal a.** Fr., *artère asternale.* 1. One of the terminal branches, in some of the domesticated animals, of the internal mammary a., at the level of the xiphoid cartilage, to the muscles, etc., as far as the thirteenth intercostal space. [L, 13.] 2. A branch of the internal mammary a. of man, which is distributed to the inner surface of the costal cartilages. [L, 41.]—**Atloido-muscular a.** An inconstant branch of the occipital a., in many of the domesticated animals, given off beneath the transverse process of the atlas and distributed to the adjacent parts. [L, 13.]—**Atrabiliary a.** See *Capsular a.*—**Auditory a.** A term applied to the internal and external auditory arteries, but more commonly to the former. [L.]—**Auricular arteries.** Lat., *arteriæ auriculares.* Fr., *artères auriculaires.* Ger., *Arterien des äusseren Ohres.* It., *arterie auricolari.* Sp., *arterias auriculares.* See *Anterior inferior auricular arteries. Anterior superior auricular arteries, Deep auricular a.,* and *Posterior auricular a.*—**Axillary a.** Lat., *arteria axillaris.* Fr., *artère axillaire.* Ger., *Achselarterie.*



THE ARTICULAR ARTERIES OF THE KNEE. (AFTER HENLE.)

SUL, SUM, the sural arteries; *SUL',* one of the superficial sural arteries; *ASM,* the superior internal articular; *ASL,* the superior external articular; *AIM,* the inferior internal articular; *AIL,* the inferior external articular; *AGM,* the middle articular; *AGS,* the anastomotica magna; *RTP,* the posterior tibial recurrent; *RTA,* the anterior tibial recurrent; *FS,* the superior fibular.

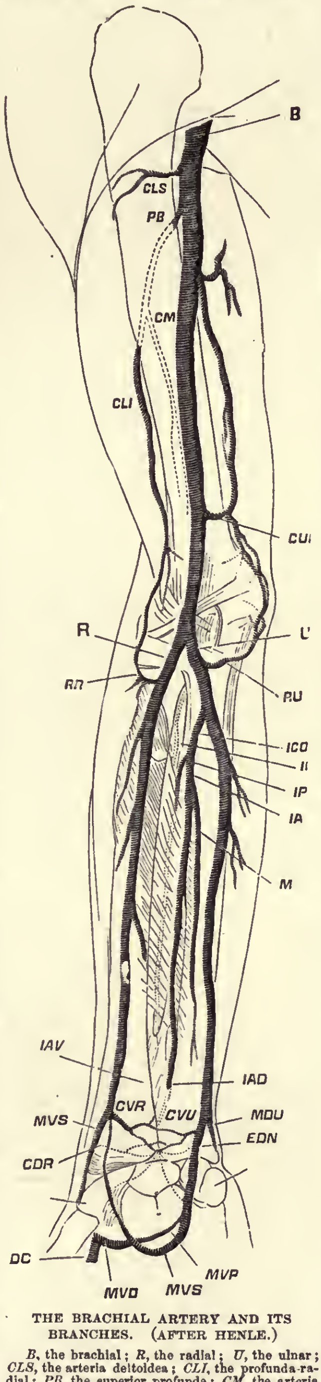


Sp., *arteria axilar.* 1. The continuation of the subclavian a. It extends from the outer border of the first rib to the lower margin of the teres major muscle, lying upon the inner side of the shoulder joint and the upper part of the os brachii. With the arm raised to the level of the shoulder, its position will be indicated by a line drawn from the most prominent part of the clavicle to the inner side of the elevation formed by the biceps and

THE AXILLARY ARTERY AND ITS BRANCHES. (AFTER HENLE.)

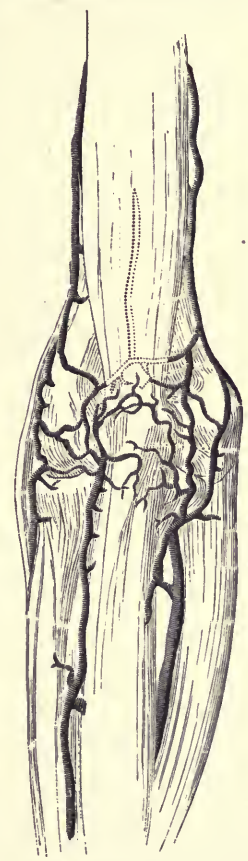
Ax, the axillary; *B*, the brachial; *THS*, the superior thoracic; *THA*, the acromio-thoracic; *THL*, the external mammary; *CHA*, the anterior circumflex; *CHP*, the posterior circumflex; *SS*, the subscapular; *CSC*, the circumflex of the scapula; 1, the subclavius muscle; 2, the pectoralis minor; 3, the serratus magnus; 4, the latissimus dorsi; 5, the teres major; 6, the long head of the triceps; 7, the deltoid; 8, the subscapularis, 9, the bicipital groove.

coraco-brachialis muscles. By the pectoralis minor muscle it is divided into three parts, the first lying between the upper border of that muscle and the first rib, the second behind it, and the third between the lower border of the muscle and the lower margin of the teres major. In the first part of its course it is placed deep beneath the pectoralis major muscle, a prolongation of the costo-coracoid membrane, and a considerable quantity of fat and connective tissue, and rests upon the first intercostal space and the first digitations of the serratus magnus muscle; in the second part it is covered by the pectoralis major and minor muscles; in the third part it is at first covered by the pectoralis major muscle, but in the lower half is placed immediately beneath the deep fascia of the arm, resting upon the subscapularis muscle and the tendons of the latissimus dorsi and teres major muscles. From the first part are given off the superior thoracic and acromio-thoracic, from the second the external mammary and alar thoracic, and from the third the anterior and posterior circumflex arteries, besides a number of unnamed branches to the adjacent parts. [L, 142, 172.] Cf. *Brachial* PLEXUS and *Axillary* VEIN. 2. See *Clavicular a.* (2d def.).—**Azygos articular a.** See *Middle articular a. of the knee.*—**Basilar a.** Lat., *arteria basilaris.* Fr., *artère basilaire.* Ger., *Zapfenarterie.* Sp., *arteria basilar.* An a. formed by the union of the vertebral arteries of the two sides, extending from the posterior to the anterior border of the pons Varolii, where it divides into two terminal branches, the posterior cerebral arteries. It gives off the anterior inferior cerebellar, the superior cerebellar, and the internal auditory arteries, and numerous transverse branches to the pons and adjacent parts. [L, 172.]—**Biliary hepatic a.** See *Right hepatic a.*—**Brachial a.** Lat., *arteria brachialis.* Fr., *artère brachiale.* Ger., *Armpulsader.* Sp., *arteria braquial.* The continuation of the axillary a., extending from the lower margin of the teres major muscle to about a finger's breadth below the bend of the elbow, where it divides into the radial and ulnar arteries. It runs along the inner side and forepart of the arm, in the depression on the inner border of the biceps and coraco-brachialis muscles, lying beneath the integument and fascia of the arm, as far as the bend of the elbow, where it sinks into the space between the supinator longus and pronator radii teres muscles. The median nerve lies on the outer side in the upper part, in front in the lower portion of the a., and on the inner side at the elbow joint. From it are given off the superior and inferior profunda, and anastomotic arteries of the arm, the nutrient a. of the os brachii, and a number of unnamed branches to the muscles and integument. [L, 142, 172.]—**Branchial arteries.** Lat., *arteriæ branchiales.* Fr., *artères branchiales.* The arteries which, in the *Branchiata*, run in the grooves on the convex side of the branchial arches, and ramify upon the leaflets of the branchiæ. [L, 158.] See also *Common branchial a.* and *Nutrient branchial arteries.*—**Bronchial arteries.** Lat., *arteriæ bronchiales.* Fr., *artères bronchiales.* See *Inferior, Superior, Left,* and *Right bronchial a.*—**Brachio-cephalic a.** Lat., *arteria brachiocephalica.* Fr., *artère brachio-céphalique.* See *Innominate a.*—**Broncho-œsophageal a.** A branch of the posterior aorta in some of the quadrupeds, given off to the right of the first intercostal arteries, which runs forward between the aorta and the œsophagus to the bifurcation of the trachea, where it divides into two branches, the bronchial arteries. It also gives off branches to the œsophagus, the trachea, and adjacent parts. [L, 13.]—**Buccal a.** Lat., *arteria buccalis.* Fr., *artère buccale.* Ger., *Backenpulsader.* Sp., *arteria bucal.* A branch of the second part of the internal maxillary a., which runs obliquely downward and forward, in company with the buccal nerve, upon the buccinator muscle, and is distributed to the muscles and integument of the cheek. [L, 142.]—**Bulb a.** See *A. of the bulb of the urethra.*—**Cæcal arteries.** Lat., *arteriæ cæcales.* Branches of the great mesenteric a. distributed to the walls of the cæcum. [L, 13.]—**Calcaneal arteries.** See *External, Internal,* and *Middle calcaneal arteries,* and *Inferior calcaneal a.*—**Capsular a.** Lat., *arteria capsularis.* Fr., *artère capsulaire.* Ger., *mittlere Nebenpulsader.* Sp., *arteria capsular media.* A branch of the abdominal aorta, arising at the level of the superior mesenteric a., which passes obliquely outward upon the crus of the diaphragm to the suprarenal capsule, anastomosing with the inferior and superior suprarenal arteries. [L, 142.]—**Cardiac arteries.** See *Right* and *Left coronary a. of the heart.*—**Carotid a.** See *Common, External,* and *Internal carotid a.* Used without qualification, the term is most commonly understood to apply to the former.—**Cavernous a. of the clitoris.** Lat., *arteria profunda clitoridis.* Fr., *artère caverneuse* (ou *clitoridienne*). One of the terminal branches of the internal pudic a. of the female, distributed to the corpus cavernosum of the clitoris. [L, 142.]—**Central system of arteries.** A term applied by Heubner and Duret to the primary or secondary branches of the circle of Willis, distributed to the central ganglia of the brain. [L, 142.]—**Central a. of the retina, Central a. of Zinn, Central retinal a.** Lat., *arteria centralis retinæ.* Fr., *artère centrale de la rétine.* Ger., *centrale Netzhautarterie.* It., *arteria centrale della retina.* Sp., *arteria central de la retina.* A branch of the ophthalmic a., given off in the orbital cavity near the optic foramen, which pierces the optic nerve obliquely and runs forward in or near the central axis of the nerve to the porus opticus, where it divides into from two to five branches, which run forward in the nerve-fibre or ganglion-cell layers of the retina as far as the ora serrata, forming a dense capillary network. [L.]—**Cerebellar arteries.** See *Anterior in-*



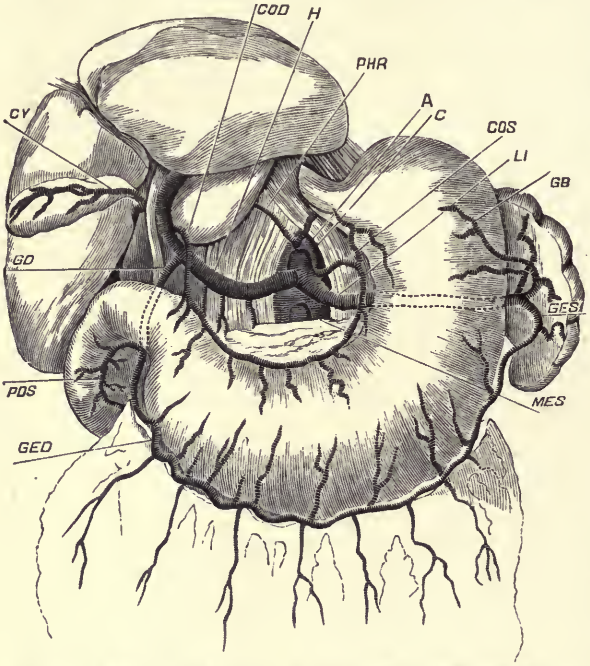
THE ARTERIES OF THE BASE OF THE BRAIN. (AFTER HENLE.)

CA, the anterior cerebral; *COA*, the anterior communicating; *CM*, the middle cerebral; *CI*, the internal carotid; *COP*, the posterior communicating; *CH*, the anterior chorioid; *CPO*, the posterior cerebral; *CBS*, the superior cerebral; *CBIA*, the anterior inferior cerebellar; *AUD*, the internal auditory; *BA*, the basilar; *V*, the vertebral; *CHIP*, the posterior inferior cerebellar; *SPA*, the anterior spinal; *SPP*, the posterior spinal.



ferior, Posterior, and *Superior cerebellar a.*—**Cerebral a.** See *Internal carotid a.*—**Cerebral arteries.** See *Anterior, Middle,* and *Posterior cerebral a.*—**Cerebro-spinal a.** One of the terminal branches of the occipital a. of the horse, which enters the spinal canal by the anterior foramen of the atlas, where it divides into

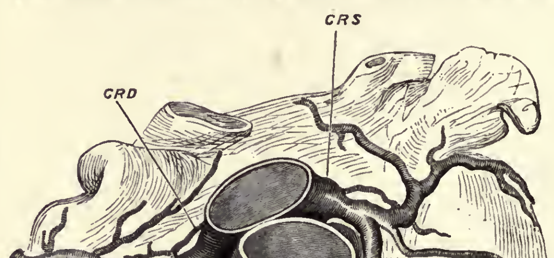
two branches. The anterior of these unites with its fellow of the opposite side to form the basilar a., and the other, uniting in a similar manner, forms the anterior median spinal a. [L, 13.]—**Cervical arteries.** See *Ascending, Descending, Superficial, Deep, Inferior, Posterior*, and *Transverse cervical a., Superficial descending a. of the neck, Anterior thyreoid a.*, and *Cervico-muscular a.*—**Cervico-muscular a.** A branch of the axillary a., in many of the domesticated animals, which supplies the first intercostal space and the lower cervical muscles. [L, 13.]—**Cervico-pulmonary a.** Fr., *artère pulmo-cervicale.* A vessel of certain batrachians, which divides into the pulmonary and the occipito-dorsal arteries. [L, 158.]—**Cervico-scapular a.** Fr., *artère cervico-scapulaire.* See *Transverse cervical a.*—**Chorioid arteries.** See *Anterior* and *Posterior choriod arteries.*—**Ciliary arteries.** See *Anterior, Posterior, Long*, and *Short ciliary arteries.*—**Circular a. of the uterus.** A circular loop situated at the junction of the cervix with the body of the uterus, formed by an anastomosis of two vessels (on each side a special branch of the hypogastric uterine a.), so as to encircle the organ. [A, 225.]—**Circumflex a. of the coronary cushion.** A superficial vascular arch around the coronet of the hoof of the horse, formed by the anterior branches of the coronary circle. [L, 13.]—**Circumflex a. of the scapula.** Lat., *arteria circumflexa scapulæ.* Fr., *artère circonflexe de l'omoplate.* A branch of the subscapular a., which passes through between the subscapularis and teres muscles to the infraspinous fossa of the scapula. [L, 7.]—**Circumflex iliac a.** Lat., *arteria circumflexa iliaca.* Fr., *artère circonflexe iliaque.* A term applied to the deep circumflex and superficial circumflex iliac arteries, but more properly restricted to the former. [L.]—**Clavicular a.** Fr., *artère claviculaire.* 1. A branch of the acromio-thoracic a. distributed to the subclavian muscle. 2. In the pl., the arteries distributed to the pectoral fins in fishes. [L, 142, 158.]—**Coccygeal a.** Lat., *arteria coccygea.* A branch of the sciatic a. supplying the glutæus maximus muscle and the integument and other structures behind the coccyx. [L, 172.]—**Coccygeal arteries.** See *Coccygeal a., Lateral coccygeal a.*, and *Middle coccygeal a.*—**Cochlear a.** Lat., *arteria cochleæ.* One of the terminal branches of the internal auditory a. distributed to the cochlea. [L, 172.]—**Cœliac a.** Lat., *arteria cœliaca.* Fr., *artère cœliaque.* Ger., *Eingeweidepulsader.* Sp., *arteria celiaca.* Syn.: *cœliac axis.* A short vessel arising from the front of the abdominal aorta, close to the margin of the opening in the diaphragm for the passage of the aorta. It lies behind the lesser omentum and to the left side of the Spigelian lobe of the liver, and divides into the coronary a. of the stomach and the hepatic and splenic arteries. [L, 142.]—**Colic arteries.** See *Right, Left, Middle, Posterior, Transverse, Direct*, and *Retrograde colic a.*—**Collateral a. of the cannon.** See *Metatarso-pedal a.*—**Collateral digital arteries.** Fr., *artères collatérales des doigts.* A term applied to the arteries running along the margins of the fingers and toes. They are four in number for each digit and anastomose freely with each other. [L.] See *Dorsal digital arteries of the hand* and *foot, Palmar digital*, and *Plantar digital arteries.*—**Collateral intercostal arteries.** Lat., *arteriæ supracostales.* The branches of the aortic intercostal arteries which lie on the upper margins of the ribs. [L, 31.]—**Comes nervi ischiadici a.** Lat., *arteria comes nervi ischiadici.* A branch of the ischiadic a. which enters the sciatic nerve and anastomoses with the perforating arteries of the thigh. [L, 142.]—**Common branchial a.** Fr., *artère branchiale commune.* The single trunk from which, in certain of the *Branchiata*, the branchial arteries arise. [L, 158.]—**Common carotid a.** Lat., *arteria carotis communis.* Fr., *artère carotide commune.* Ger., *gemeinschaftlicher Stamm für beide Carotiden.* Sp., *arteria carótida primitiva.* The large a. of the neck which extends from the sterno-clavicular articulation to the level of the upper border of the thyreoid cartilage, where it divides into the external and internal carotid arteries. On the right side it arises from the innominate a., on the left from the middle part of the arch of the aorta, lying behind the remains of the thymus gland and the left innominate vein and upon the trachea, the œsophagus, and the thoracic duct. It is inclosed within a common sheath with the internal jugular vein and the pneumogastric nerve, which is continuous with the deep cervical fascia. It is covered, as far up as the lower margin of the crico-thyreoid cartilage, by the sterno-mastoid, sterno-hyoid, sterno-thyreoid, and platysma muscles; above that point, where it is crossed by the omo-hyoid muscle, it is covered only by the integument and the sterno-mastoid and platysma muscles. Its position is indicated by a line drawn between the sterno-clavicular articulation and a point midway between the angle of the jaw and the mastoid portion of the temporal bone. As a rule it gives off no branches, but occasionally the middle thyreoid. [L, 142.]—**Common femoral a.** Lat., *arteria femoralis communis.* Fr., *artère fémorale commune.* Ger., *Oberschenkelpulsader.* The continuation of the external iliac a.; that portion of the femoral a. which extends from its origin to the point at which it gives off the deep femoral a. [L, 142.]—**Common hepatic a.** Lat., *arteria hepatica communis.* Fr., *artère hépatique commune.* The term applied to the hepatic a. before it gives off the gastro-duodenal a. [L, 31.]—**Common iliac a.** Lat., *arteria iliaca communis.* Fr., *artère iliaque commune.* Ger., *gemeinschaftliche Hüftpulsader.* Sp., *arteria iliaca comune.* An a., on each side of the body, the two arising from the bifurcation of the abdominal aorta. They diverge from each other at an angle which is slightly greater in the female than in the male, and divide opposite the lumbo-sacral articulation into the external and internal iliac arteries. The left a. lies close to the border of the psoas muscle, resting upon the bodies of the fourth and fifth lumbar vertebræ and behind the superior hæmorrhoidal vessels. The right is separated from the bones by the two common iliac veins, and touches the psoas muscle only at its lower end. Both vessels measure about two inches in length and are covered by the peritonæum and small intestine. [L, 142.]—**Common interosseous a. of the forearm.** Lat., *arteria interossea communis antibrachii.* Fr., *artère interosseuse commune de l'avant-bras.* Ger., *gemeinschaftliche Zwischenpulsader des Vorderarmes.* A branch of the ulnar a. which arises about an inch from its commencement and runs backward to the upper border of the interosseous membrane of the forearm, where it divides into the anterior and posterior interosseous arteries of the forearm. [L, 142.]—**Common scapular a.** See *Subscapular a.*—**Communicating arteries.** Those which establish a direct communication between two arteries. [L.]—**Coraco-radial a.** A branch of the humeral a. to the biceps muscle of many quadrupeds. [L, 13.]—**Coronary arteries of the heart.** See *Right* and *Left coronary a. of the heart.*—**Coronary a. of the lower lip.** Lat., *arteria coronaria labii inferioris.* Fr., *artère coronaire de la lèvre inférieure.* Ger., *Kranzarterie der Unterlippe.* Sp., *arteria labial inferior.* A branch of the facial a., arising at the outer border of the depressor anguli oris muscle, which runs beneath that muscle and between the orbicularis oris and the mucous membrane on the free margin of the upper lip and



THE BRACHIAL ARTERY AND ITS BRANCHES. (AFTER HENLE.)

B, the brachial; *R*, the radial; *U*, the ulnar; *CLS*, the arteria deltoidea; *CLI*, the profunda-radial; *PB*, the superior profunda; *CM*, the arteria collateralis media; *CUI*, the anastomotic a. of the arm; *RR*, the anterior radial recurrent; *RU*, the anterior ulnar recurrent; *ICO*, the common interosseous; *IA*, the anterior interosseous; *IP*, the posterior interosseous; *IR*, the posterior interosseous recurrent; *IAV*, the arteria interossea anterior volaris; *IAD*, the arteria interossea anterior dorsalis; *M*, the median; *CVR*, the anterior radio-carpal; *CVU*, the anterior ulno-carpal; *CDR*, the posterior radio-carpal; *CDU*, the posterior ulno-carpal; *MDU*, the posterior ulno-carpal; *MVS*, the superficial volar; *MVP*, the ulnar portion of the deep palmar arch; *DC*, the first palmar digital.

THE RETE CUBITALE. (AFTER HENLE.)

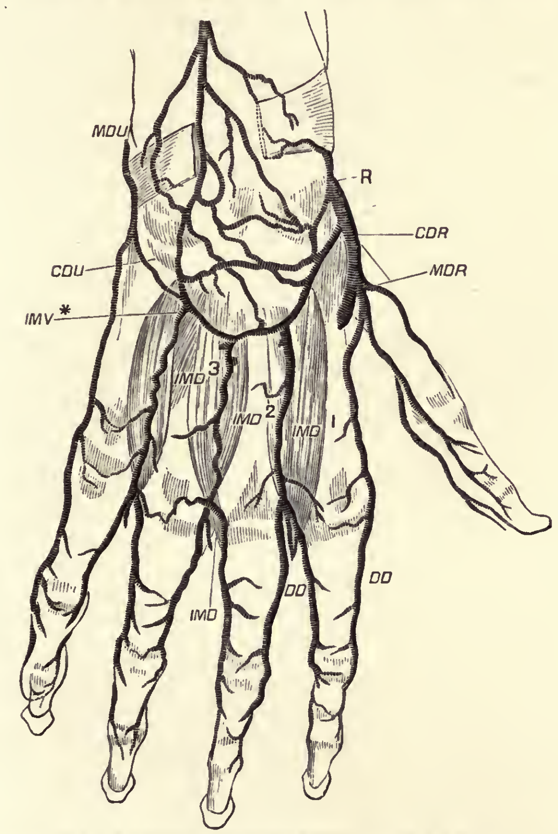


anastomoses with its fellow of the opposite side. It furnishes branches to the structures of the lower lip, and others which anastomose with the vessels distributed to the chin. [L, 142.]—**Coronary a. of the stomach.** Lat., *arteria coronaria ventriculi.* Fr., *artère coronaire stomachique.* Ger., *Kranzarterie des Magens.* Sp., *arteria coronaria estomáquica.* The smallest of the branches

THE CŒLIAC ARTERY AND ITS BRANCHES. (AFTER HENLE.)

A, the aorta; *PHR*, the inferior phrenic; *C*, the cœliac; *COD*, the pyloric; *COS*, the coronary; *H*, the hepatic; *CY*, the cystic; *GD*, the gastro-duodenal; *PDS*, the superior pancreatico-duodenal; *GED*, the right gastro-epiploic; *LI*, the splenic.

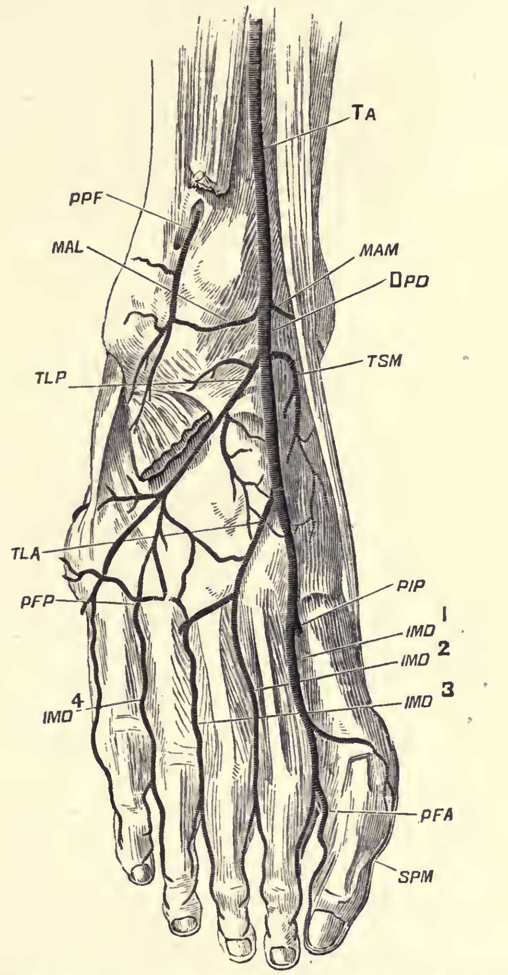
of the cœliac a. It runs at first upward and to the left side to the cardial orifice of the stomach, where it turns forward and downward and is continued along the lesser curvature of the stomach. It gives off branches to the œsophagus and to both surfaces of the stomach and inosculates with the pyloric a. [L, 142.]—**Coronary a. of the upper lip.** Lat., *arteria coronaria labii superioris.* Fr., *artère coronaire de la lèvre supérieure.* Ger., *Kranzarterie der Oberlippe.* Sp., *arteria labial superior.* A branch of the facial a. which arises beneath the zygomaticus major muscle, between which and the mucous membrane of the cheek it runs across to the upper lip, where it anastomoses with its fellow of the opposite side. It supplies the tissue of the upper lip and gives off the a. of the nasal septum and certain unnamed branches to the nose. [L, 142.]—**Cortical system of arteries.** Fr., *artères corticales.* A term applied by Heubner and Duret to the arteries distributed to the cortical substance of the brain and the parts immediately beneath it. [L, 142.]—**Costo-cervical a.** Lat., *arteria costo-cervicalis.* Fr., *artère costo-cervicale.* Ger., *Rippennackenpulsader.* A term applied to the superior intercostal a. between its origin and the point at which it gives off the deep cervical a. [L, 7.]—**Cremasteric a.** Lat., *arteria cremasterica.* Fr., *artère crémastérique.* See *External spermatic a.*—**Crico-thyreoid a.** Lat., *arteria crico-thyreoidea.* Fr., *artère crico-thyréoïdienne.* Ger., *untere Kehlkopfarterie.* Sp., *arteria crico-tiroidea.* A branch of the superior thyreoid a. which runs across the crico-thyreoid membrane, anastomosing with its fellow of the opposite side. When of large size it may be the source of considerable hæmorrhage in the performance of laryngotomy. [L, 142.]—**Crotaphite a.** See *Temporal a.*—**Crural a.** Lat., *arteria cruralis.* Fr., *artère crurale.* See *Femoral a.*—**Cubital a.** See *Ulnar a.*—**Curling arteries of the placenta.** Twisted branches of the umbilical arteries distributed to the substance of the placenta.. [J. Hunter (L, 171).]—**Cystic a.** Lat., *arteria cystica.* Fr., *artère cystique.* Ger., *Gallenblasenpulsader.* Sp., *arteria cistica.* A branch of the right hepatic a. which turns forward upon the neck of the gall-bladder and divides into two branches, one of which goes to the coats of the gall-bladder on the inferior surface, and the other to the tissues between the liver and the gall-bladder. [L, 142.]—**Deep anterior temporal a.** Lat., *arteria temporalis profunda anterior.* Fr., *artère temporale profonde antérieure.* Ger., *vordere tiefe Schläfenpulsader.* Sp., *arteria temporal profunda anterior.* A branch of the pterygoid portion of the internal maxillary a. which ascends between the temporal muscle and the cranium, is distributed to the structures in the anterior portion of the temporal fossa, and anastomoses with the middle temporal a. and small branches of the lacrymal arteries. [L, 142.]—**Deep auricular a.** Lat., *arteria auricularis profunda.* Fr., *artère auriculaire profonde.* Ger., *tiefe Arterie des äusseren Ohres.* It., *arteria profunda auricolare.* Sp., *arteria profunda auricular.* A branch of the first portion of the internal maxillary a. which perforates the walls of the external auditory meatus, to which and to the outer part of the tympanum it is distributed. [L, 142.]—**Deep cervical a.** Lat., *arteria cervicalis profunda.* Fr., *artère cervicale profonde.* Ger., *tiefe Nackenarterie.* Sp., *arteria cervical profunda.* 1. A branch of the costo-cervical a., sometimes of the subclavian, which passes backward between the transverse process of the last cervical vertebra and the first rib to the posterior aspect of the neck, where it ascends beneath the complexus muscle and resting upon the semispinalis colli to the level of the axis. It gives off branches to the posterior and deep muscles of the neck, and others which anastomose with branches of the vertebral, occipital, and ascending cervical arteries. [L, 142.] 2. See *Posterior scapular a.*—**Deep circumflex iliac a.** Lat., *arteria circumflexa ilii interna.* Fr., *artère circonflexe iliaque profonde.* Ger., *tiefe umgeschlagene Hüftpulsader.* A branch of the external iliac a. arising at about the level of Poupart's ligament, behind which it runs upward and outward, resting upon the iliacus muscle, as far as the anterior superior spine of the ilium, where it turns backward along the inner margin of the iliac crest and ends by anastomosing with the iliac branch of the ilio-lumbar a. It gives off branches to the upper part of the sartorius, the tensor vaginæ femoris, the iliacus, and the lateral abdominal muscles. [L, 142.]—**Deep epigastric a.** Lat., *arteria epigastrica profunda.* Fr., *artère épigastrique profonde.* Ger., *Bauchdeckenpulsader.* Sp., *arteria epigástrica ascendente.* A branch arising from the inner and fore part of the external iliac a., usually a little above Poupart's ligament. It runs inward for a short distance between Poupart's ligament and the internal abdominal ring, and then ascends along the inner side of the ring beneath the vas deferens and the spermatic vessels, and about at the umbilicus anastomoses with a branch of the internal mammary a. It gives off the external spermatic a., the arteria pubica, and branches to the muscles and integument of the abdomen. [L, 142.]—**Deep external pudic a.** See *Inferior external pudic a.*—**Deep external temporal a.** See *Deep anterior temporal a.*—**Deep femoral a.** Lat., *arteria profunda femoris.* Fr., *artère fémorale profonde.* Ger., *tiefe Oberschenkelpulsader.* Sp., *arteria femoral profunda.* An a. arising from the outer and back part of the femoral a., about 1½ inch below Poupart's ligament. It is directed outward in front of the iliacus muscle and then inward and backward behind the superficial femoral a. and between the adductor longus and magnus muscles. It terminates at the junction of the middle and lower thirds of the thigh as the fourth perforating a. of the thigh. It gives off the external and internal circumflex arteries and the four perforating arteries of the thigh. [L, 142.]—**Deep gluteal a.** Ger., *tiefe Gesässpulsader.* A branch of the gluteal a. distributed to the deep muscles of the posterior gluteal region. [L, 142.]—**Deep humeral a.** Fr., *artère musculaire grande du bras.* A branch of the brachial a. of many quadrupeds, supplying the extensor muscles of the arm and the parts around the olecranon. [L, 13.]—**Deep internal temporal a.** See *Deep posterior temporal a.*—**Deep muscular a.** See *Deep femoral a.*—**Deep perineal a.** See *Artery of the penis.*—**Deep plantar a.** Lat., *arteria plantaris profunda.* Ger., *tiefe Sohlenarterie.* A branch of the metatarsal a. running between the heads of the first dorsal interosseous muscle of the foot; distributed in the first interosseous space and assisting in the formation of the plantar arch.



THE CORONARY ARTERIES OF THE HEART. (AFTER HENLE.)

CRD, the right coronary; *CRS*, the left coronary.

[L, 117.]—**Deep posterior temporal a.** Lat., *arteria temporalis profunda posterior.* Fr., *artère temporale profonde postérieure.* Ger., *hintere tiefe Schläfenpulsader.* Sp., *arteria temporal profunda posterior.* A branch of the pterygoid portion of the internal maxillary a. which ascends between the temporal muscle and the cranium and is distributed to the temporal fossa. [L, 142.]—**Deep external pudic a.** Lat., *arteria pudenda externa.* See *Inferior*

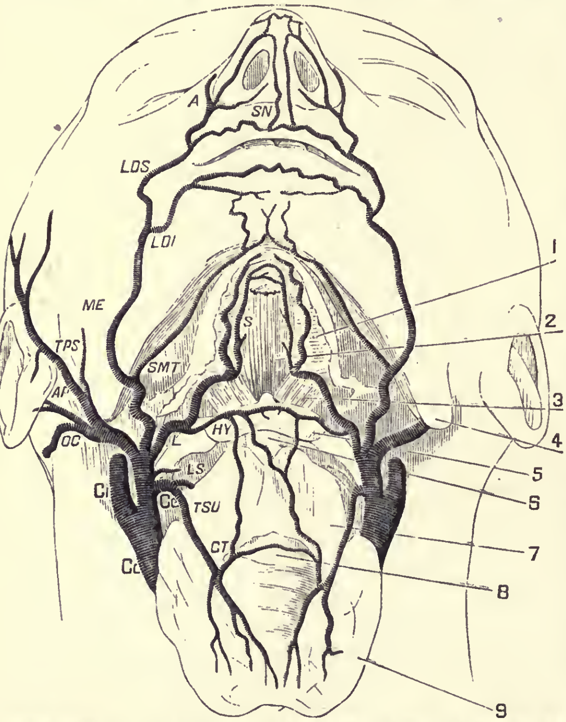


external pudic a.—**Deep sural arteries.** Lat., *arteriæ surales profundæ.* Ger., *tiefe Wadenpulsadern.* Branches of the popliteal a. to the upper part of the muscles of the calf of the leg. [L, 31, 75.]—**Deep thyreoid a.** Lat., *arteria thyreoida ima.* Fr., *artère thyréoïdienne de Neubauer.* Ger., *unterste Schilddrüsenarterie.* An occasional branch of the arch of the aorta, or of the innominate a., distributed to the same parts as the inferior thyreoid a. and often taking its place. [L, 7.]—**Deferent a. of the testis.** See *A. of the vas deferens.*—**Dental arteries.** See *Anterior, Posterior, Superior,* and *Inferior dental a.*—**Descending cervical a.** Lat., *arteria cervicis descendens.* A descending branch of the deep cervical a. (1st def.). [L, 31.]—**Descending palatine a.** Lat., *arteria palatina descendens.* Fr., *artère palatine descendente.* See *Superior palatine a.*—**Descending thyreoid a.** See *Superior thyreoid a.*—**Diaphragmatic arteries.** Fr., *artères diaphragmatiques.* Branches of the aorta distributed to the diaphragm. [L, 142.]—**Digital arteries.** See *Palmar, Plantar, Ulnar,* and *Collateral digital arteries, Dorsal digital arteries of the hand,* and *Dorsal digital arteries of the foot.*—**Digito-fibular arteries.** The digital arteries on the fibular side of the toes. [L. 179.]—**Digito-radial arteries.** The digital arteries on the radial side of

THE DORSAL ARTERIES OF THE HAND. (AFTER HENLE.)

CDR, the posterior radio-carpal; *CDU*, one of the arteriæ carpeæ dorsales ulnares; *MDR*, the arteriæ metacarpeæ dorsales radiales: *MDU*, the posterior ulno-carpal; *IMD*, IMD^1, IMD^2, IMD^3, the dorsal interosseous arteries; *IMV**, one of the posterior perforating arteries; *DD*, the dorsal digital arteries.

the fingers. [L, 179.]—**Digito-tibial arteries.** The digital arteries on the tibial side of the toes. [L, 179.]—**Digito-ulnar arteries.** The digital arteries on the ulnar side of the fingers. [L, 179.]—**Direct colic a.** A branch of the superior mesenteric a. in some quadrupeds, running along the colon in the same direction as the food and uniting with the retrograde colic a. to form an arterial arch. [L, 13.]—**Dorsal a. of the clitoris.** Lat., *arteria dorsalis clitoridis.* Fr., *artère dorsale du clitoris.* Ger., *Rückenpulsader des Kitzlers.* Sp., *arteria dorsal del clitoris.* One of the terminal branches of the internal pudic a. of the female, distributed to the glans and prepuce of the clitoris. [L, 142.]—**Dorsal a. of the foot.** Lat., *arteria dorsalis pedis.* Fr., *artère dorsale pédieuse.* Sp., *arteria pedia.* The continuation of the anterior tibial a. in the foot. It extends from the bend of the ankle to the posterior end of the first intermetatarsal space, where it turns downward and passes between the heads of the first dorsal interosseous muscle to the sole of the foot and aids in forming the plantar arch. It gives off the tarsal, metatarsal, and first dorsal interosseous arteries and a plantar digital branch distributed to the adjacent sides of the first and second toes. [L, 142.]—**Dorsal a. of the great toe.** Lat., *arteria dorsalis hallucis.* Fr., *artère dorsale du gros orteil.* Ger., *Rückenarterie der grossen Zehe.* The first dorsal interosseous a. of the foot, which furnishes branches to the dorsum of the great toe and an occasional branch to the tibial side of the second toe. [L, 117.]—**Dorsal a. of the index finger.** Lat., *arteria dorsalis indicis radialis.* Fr., *artère radio-dorsale de l'index.* Ger., *Speichenrückenpulsader des Zeigefingers.* The dorsal digital a. on the radial side of the index finger. It is a branch of the radial a. given off just below the base of the metacarpal bone, and furnishes a small branch to the abductor indicis muscle. [L, 31.]—**Dorsal a. of the little toe.** Lat., *arteria dorsalis digiti minimi.* Ger., *Rückenarterie der kleinen Zehe.* A branch of the dorsal a. of the foot, or of the metatarsal a., to the fibular side of the



THE DORSAL ARTERIES OF THE FOOT. (AFTER HENLE.)

TA, the anterior tibial; *DPD*, the dorsal; *PPF*, the anterior peroneal; *MAM*, the arteria malleolaris anterior medialis; *MAL*, the internal malleolar; *TSM*, the arteria supratarsea interna; *TLP*, the external tarsal; *TLA*, the metatarsal; *PLP*, the deep plantar; IMD^1, IMD^2, IMD^3, IMD^4, the dorsal interosseous arteries; *PFP*, one of the posterior perforating arteries; *PFA*, the anterior perforating a.; *SPM*, the arteria superficialis pedis medialis.

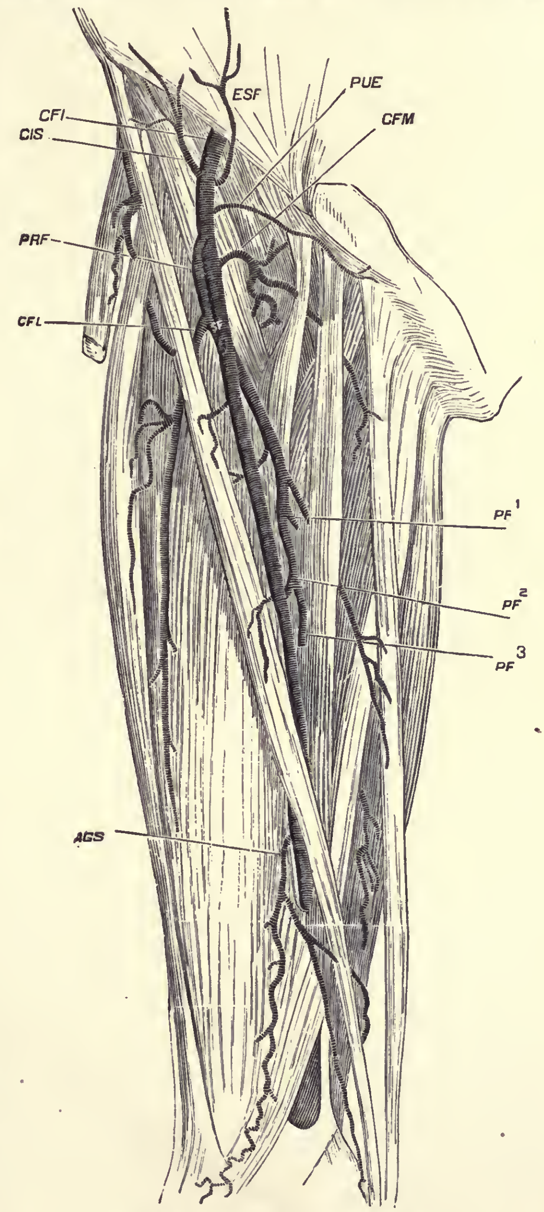
dorsal aspect of the little toe. [L, 117.]—**Dorsal a. of the nose.** Lat., *arteria dorsalis nasi.* Fr., *artère dorsale du nez.* Ger., *Nasenrückenarterie.* A branch of the internal maxillary or of the ophthalmic a. which runs down from the internal angle of the eye on the dorsum of the nose. [L, 7.]—**Dorsal a. of the penis.** Lat., *arteria dorsalis penis.* Fr., *artère dorsale de la verge.* Ger., *Rückenarterie der Ruthe.* Sp., *arteria dorsal del pene.* A branch of the a. of the penis which ascends to the dorsum between the crus and the pubic symphysis and terminates at the neck of the organ in small branches to the glans and prepuce. It also sends branches to the integument and the corpus cavernosum. [L, 142.]—**Dorsal a. of the thumb.** Lat., *arteria dorsalis pollicis.* A term applied indifferently to the inner and outer dorsal arteries of the thumb. [L.]—**Dorsal a. of the tongue.** Lat., *arteria dorsalis linguæ.* Fr., *artère dorsale de la langue.* Ger., *Arterie des Zungenrücken.* Sp., *arteria dorsal de la lengua.* A branch of the lingual a., arising beneath the hyo-glossus muscle, which is distributed to the mucous membrane of the dorsum of the tongue and to its substance, the tonsils, and the epiglottis. [L, 142.]—**Dorsal carpal arteries.** Lat., *arteriæ dorsales carpi.* See *Posterior radio-carpal* and *Posterior ulno-carpal a.*—**Dorsal digital arteries of the foot.** Lat., *arteriæ digitales dorsales pedis.* Fr., *artères dorsales des orteils.* Ger., *Zehenrückenpulsadern.* Branches of the dorsal

interosseous arteries of the foot which are distributed to the sides of the dorsal aspect of the toes. By the anterior and posterior perforating arteries they connect with the plantar arch and the plantar digital artęries. [L, 142.]—**Dorsal digital arteries of the hand.** Lat., *arteriæ digitales manus dorsales.* Fr., *artères digitales dorsales de la main.* Ger., *Fingerrückenpulsadern.* A term applied to the dorsal arteries of the thumb, the dorsal a. of the index finger, and the branches of the interosseous arteries of the hand, distributed to the sides of the dorsal aspect of the digits. [L, 142.]—**Dorsal interosseous arteries of the foot.** Lat., *arteriæ interosseæ metatarsi dorsales.* Fr., *artères dorsales interosseuses du pied.* Ger., *Mittelfussrückenpulsadern.* The arteries running over the dorsal interosseous muscles of the foot, which divide into the dorsal digital arteries of the foot. The first is the continuation of the dorsal a. of the foot, and the three inner arteries arise from the convexity of the arch. [L, 142.]—**Dorsal interosseous arteries of the hand.** Lat., *arteriæ interosseæ dorsales manus.* Fr., *artères métacarpiennes dorsales.* The arteries lying upon the dorsal interosseous muscles of the hand, which divide into the collateral digital arteries. The first is usually termed the dorsal a. of the index finger, the second and third arise from the posterior carpal arch, and the fourth is ordinarily a branch of the posterior ulno-carpal a. [L, 7.]—**Dorsal interosseous arteries of the metatarsal a.** See *Dorsal interosseous arteries of the foot.*—**Dorso-carpal arteries.** See *Dorsal carpal arteries.*—

THE EXTERNAL CAROTID ARTERY AND ITS BRANCHES. (AFTER HENLE.)

CC, the common carotid; *CE*, the external carotid; *CI*, the internal carotid; *TSV*, the snperior thyreoid; *LS*, the superior laryngeal and the crico-thyreoid; *HY*, the hyoid branch of the lingual; *S*, the sublingual; *ME*, the facial; *SMT*, the submental; *LBI*, the inferior labial; *LBS*, the coronary of the upper lip; *SN*, the a. of the septum narium; *A*, the angular; *OC*, the occipital; *AP*, the posterior auricular; *TPS*, the superficial temporal; 1, the tongue; 2, the genio-glossus muscle; 3, the hyo-glossus; 4, the angle of the lower jaw; 5, the hyoid bone; 6, the thyreo-hyoid ligament; 7, the thyreoid cartilage; 8, the crico-thyreoid membrane.

Dorso-interosseal arteries. A term applied to the dorsal interosseous arteries of the hand and of the foot. [L.]—**Dorso-metatarsal arteries.** See *Dorsal interosseous arteries of the foot.*—**Dorso-radial arteries.** The dorsal digital arteries of the hand on the radial side of the fingers. [L, 179.]—**Dorso-scapular a.** See *Superior scapular a.*—**Dorso-ulnar arteries.** The dorsal digital arteries on the ulnar side of the fingers. [L, 179.]—**Duodenal a.** A branch of the right gastro-epiploic a. of quadrupeds, distributed to the duodenum. [L, 13.] See also *Superior pancreatico-duodenal a.*—**Duodeno-gastric a.** See *Gastro-duodenal a.*—**Emulgent arteries.** Lat., *arteriæ emulgentes.* Fr., *artères émulgentes.* The renal arteries. [L, 31.]—**Epibranchial arteries.** Fr., *artères épibranchiales.* See *Epibranchial* VEINS.—**Epicondyloid a.** See *Ulnar a.*—**Epigastric arteries.** See *Deep*, *Superficial*, and *Superior epigastric a.*—**Ethmoidal arteries.** See *Anterior* and *Posterior ethmoidal a.*—**External and inferior frontal a.** Fr., *artère frontale externe et inférieure.* A branch of the middle cerebral a. distributed to the outer third of the lower surface of the frontal lobe of the cerebrum (the third frontal convolution). [H. Duret, *l. c.* (L); L, 189.]—**External arteries of the corpus striatum.** See *Lenticulo-striate arteries.*—**External auditory a.** Lat., *arteria auditiva externa.* Fr., *artère auditive externe.* Ger., *äussere Arterie des Ohres.* It., *arteria auditiva externa.* Sp., *arteria auditiva externa.* A branch of the first portion of the internal maxillary a. which enters the tympanum by the fissure of Glasser, is distributed to the tympanum, and anastomoses with branches of the stylo-mastoid. [L, 31.]—**External calcaneal arteries.** Lat., *arteriæ calcaneæ externæ.* Fr., *artères calcanéennes externes.* Ger., *äussere Fersenbeinpulsadern.* The terminal branches of the posterior peroneal artery, distributed to the outer side of the foot and heel and anastomosing with the external malleolar, the external plantar, and the tarsal arteries. [L, 142.]—**External carotid a.** Lat., *arteria carotis externa.* Fr., *artère carotide externe.* Ger., *äussere Kopfschlagader.* Sp., *arteria carótida externa.* One of the terminal branches of the common carotid a. arising at a point opposite the upper border of the thyreoid cartilage and terminating at the neck of the jaw by dividing into the internal maxillary and superficial temporal arteries. In the lower portion of its course it is covered by the platysma myoides muscle and the fascia, and is slightly overlapped by the sterno-cleido-mastoid muscle; in its upper part it is placed beneath the stylo-hyoid and digastric muscles, and finally is imbedded in the substance of the parotid gland. At its commencement it lies upon the pharynx and the hyoid bone; above, it is separated from the ramus of the jaw and the stylo-maxillary ligament by a portion of the parotid gland and rests upon the stylo-pharyngeus muscle and the styloid process of the temporal bone. At about the lower border of the digastric muscle it is crossed by the hypoglossal nerve, and in the parotid gland by the facial nerve. Between it and the internal carotid a. lies the glosso-pharyngeal nerve and on its inner side the superior laryngeal nerve. It gives off the superior thyreoid, lingual, facial, occipital, posterior auricular, ascending pharyngeal, superficial temporal, and internal maxillary arteries, in the order mentioned from below upward, and numerous small branches to the parts it traverses. [L, 31, 142, 172.]—**External circumflex a. of the thigh.** Lat., *arteria circumflexa femoris externa.* Fr., *artère circonflexe externe de la cuisse.* Ger., *äussere Kranzpulsader des Oberschenkels.* Sp., *arteria circunfleja externa.* A branch arising from the outer side of the deep femoral a. near its origin. It divides into an ascending branch, which runs upward beneath the tensor vaginæ femoris muscle, and is distributed to the muscles on the upper lateral aspect of the thigh and to the hip joint; a transverse branch, which runs outward to be distributed to the deep surface of the vastus externus muscle; and a descending branch, which is distributed to the muscles on the outer side and front of the thigh. [L, 142.]—**External circumflex iliac a.** Lat., *arteria circumflexa ilii externa.* See *Superficial circumflex iliac a.*—**External collateral elbow a.** See *Deep humeral a.*—**External hæmorrhoidal arteries.** Lat., *arteriæ hæmorrhoidales externæ.* Fr., *artères hémorrhoïdales externes.* Ger., *äussere Mastdarmpulsadern.* Branches of the internal pudic a., which arise as it enters the perinæum, and are distributed to the lower part of the rectum, the anus, and the adjacent skin. [L, 172.]—**External iliac a.** Lat., *arteria iliaca externa.* Fr., *artère iliaque externe.* Ger., *äussere Hüftpulsader.* Sp., *arteria iliaca externa.* The external of the two terminal branches of the common iliac a., which extends from the lumbo-sacral articulation to the lower border of Poupart's ligament, where it becomes the femoral. It is from 3 to 4 inches in length, and its course is indicated by a line drawn from a point about a finger's breadth to the left of and below the umbilicus to a point midway between the anterior superior spine of the ilium and the crest of the pubes. It lies a little above the brim of the pelvis, and near its termination is placed upon the psoas muscle. On the left side the a. is covered by the peritonæum and by the sigmoid flexure of the colon, and on the right by the peritonæum and the termination of the ileum. It gives off the deep epigastric and deep circumflex iliac arteries. [L, 142.]—**External malleolar a.** Lat., *arteria malleolaris externa.* Fr., *artère malléolaire externe.* Ger., *äussere Knöchelpulsader.* Sp., *arteria maleolar externa.* A branch of the anterior tibial a. which arises near the ankle joint and runs outward beneath the extensor longus digitorum and the peroneus tertius muscles to be distributed to the external malleolar region. [L, 142.]—**External mammary a.** Lat., *arteria mammaria externa.* Fr., *artère mammaire externe.* Ger., *äussere Brustarterie.* Sp., *arteria mamaria externa.* An a. which arises from the second portion of the axillary a. and runs downward and inward along the lower border of the pectoralis minor muscle to the side of the chest. It supplies the serratus magnus, subscapularis, and pectoral muscles and the mammary and axillary glands, and gives off branches which anastomose with the internal mammary and intercostal arteries. [L, 142, 172.]—**External maxillary a.** Lat., *arteria maxillaris externa.* Fr., *artère maxillaire externe.* See *Facial a.*—**External obturator a.** Lat., *arteria obturatoria externa.* Fr., *artère obturatrice externe.* One of the terminal branches of the obturator a., distributed to the muscles in the neighborhood of the obturator foramen and anastomosing with the internal obturator a. [L, 172.]—**External ophthalmic a.** Fr., *artère ophthalmique externe.* An a. which is the analogue in birds of the anterior cerebral of man, and is distributed to the temporal rete mirabile and adjacent parts. [L, 158.]—**External palpebral arteries.** Lat., *arteriæ palpebrales externæ.* The palpebral branches of the ophthalmic a.—**External peduncular arteries.** Fr., *artères pédonculaires externes.* Branches of the posterior communicating a. distributed to the peduncles of the cerebellum. [H. Duret, *l. c.* (L).]—**External plantar a.** Lat., *arteria plantaris externa.* Fr., *artère plantaire externe.* Ger., *äussere Fusssohlenpulsader.* Sp., *arteria plantar externa.* One of the terminal branches of the posterior tibial a., which runs outward and forward to the base of the fifth metatarsal bone, where it turns obliquely inward to the interval between the bases of the first and second metatarsal bones to unite with the termination of the dorsal a. of the foot, forming the plantar arch. It gives off small branches to the outer side of the heel and foot. [L, 142.]—**External posterior optic a.** Fr., *artère optique externe postérieure.* A branch of the posterior cerebral, given off

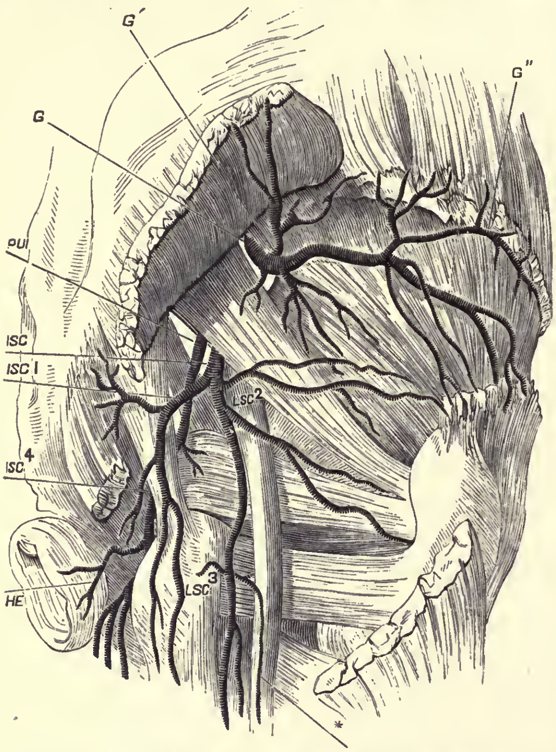


after the latter has passed around the crus cerebri, which ascends through the substance of the crus, and is distributed to the contiguous posterior portion of the optic thalamus. [L, 189.]—**External pudic arteries.** See *Inferior* and *Superior external pudic arteries.*—**External scapular a.** See *Acromial a.*—**External spermatic a.** Lat., *arteria spermatica externa.* Fr., *artère spermatique externe.* Sp., *arteria funicular.* A branch of the deep epigastric a. which descends upon the spermatic cord and supplies the cremaster muscle and other structures of the spermatic cord and anastomoses with the internal spermatic and external pudic arteries. [L, 142.]—**External tarsal a.** Lat., *arteria tarsea externa.* Fr., *artère tarsienne externe.* Ger., *hintere äussere Fusswurzelarterie.* A branch of the dorsal a. of the foot, given off at the head of the astragalus, which runs obliquely across the foot to the tuberosity of the fifth metatarsal bone. [L, 31.]—**External thoracic a.** Lat., *arteria thoracica externa.* Fr., *artère thoracique externe.* See *External mammary a.*—**Facial a.** Lat., *arteria facialis.* Fr., *artère faciale.* Ger., *Antlitzarterie.* Sp., *arteria facial.* A branch of the external cartoid a. which arises a little above the great cornu of the hyoid bone and runs at first outward beneath the digastric and stylo-hyoid muscles to the hinder part of the submaxillary triangle, where it takes a horizontal course beneath the base of the lower jaw, resting upon the mylo-hyoid muscle and lying in a groove on the deep surface of the submaxillary gland. After leaving the gland, it runs upward, crossing the jaw in front of the masseter muscle, covered only by the integument and

THE FACIAL AND TEMPORAL ARTERIES. (AFTER HENLE.)

CE, the external carotid; *TSU*, the superior thyreoid; *LS*, the superior laryngeal; *CT*, the crico-thyreoid; *HY*, the hyoid branch of the lingual; *DL*, the dorsal a. of the tongue; *S*, the sublingual; *ME*, the facial; *SMT*, the submental; *A*, the angular; *LBI*, the inferior labial; *LBS*, the coronary of the upper lip; *SN*, the a. of the septum narium; *SC*, *SC′*, the sterno-mastoids; *AP*, the posterior auricular; *ST*, the stylo-mastoid; *PAA*, the ascending pharyngeal; *MI*, the internal maxillary; *TPS*, the superficial temporal; *TF*, the transverse facial; *TM*, the middle temporal; *Z′*, the arteria supra-orbitalis externa; *F*, the frontal; *SO*, the supra-orbital; *LA*, the lacrymal; *N*, the nasal; *, the parotid branches of the external carotid; 1, the submaxillary gland.

the platysma muscle. On the side of the face it runs obliquely near the angle of the mouth and the side of the nose to the inner canthus of the eye, where it ends in an anastomosis with the nasal branches of the ophthalmic a. It gives off the inferior palatine, tonsillar, submental, and inferior labial arteries, the coronary arteries of the lower and upper lip, the lateral nasal and angular arteries, and numerous small branches to the structures in its neighborhood. [L, 142.] See also *Transverse facial a.*—**Femoral a.** Lat., *arteria femoralis.* Fr., *artère fémorale.* Sp., *arteria femoral.* See *Deep* and *Superficial femoral a.* (the former of which is commonly meant when the other is not specified), also *Common femoral a.*, *Internal circumflex a. of the thigh*, and *Superficial muscular a. of the thigh.*—**Femoro-popliteal a.** Fr., *artère femoro-poplitée.* A branch of the popliteal a. of some of the quadrupeds, given off at the level of the opening in the adductor magnus muscle for the passage of the popliteal a. and distributed to the back of the leg and thigh. [L, 13.]—**Fibular arteries.** See *Superior fibular a.*, *Peroneal a.*, *Anterior peroneal a.*, and *External calcaneal arteries.*—**First dorsal interosseous a. of the foot.** Lat., *arteria intermetatarsea dorsalis prima.* See *Dorsal a. of the great toe.*—**First intercostal a.** Lat., *arteria intercostalis prima.* See *Superior intercostal a.*—**First perforating a. of the profunda femoris a., First perforating a. of the thigh.** Lat., *arteria perforans femoris prima.* Fr., *artère perforante première de la cuisse.* A branch of the deep femoral a. given off at the lower border of the pectinæus muscle, which runs backward through the adductor brevis and magnus muscles, to which it furnishes branches, and is distributed to the hamstring and glutæus maximus muscles. [L, 142.]—**Fourth perforating a. of the thigh.** A branch of the deep femoral a. distributed to the short head of the biceps femoris muscle. [L, 142.]—**Frontal a.** Lat., *arteria frontalis.*

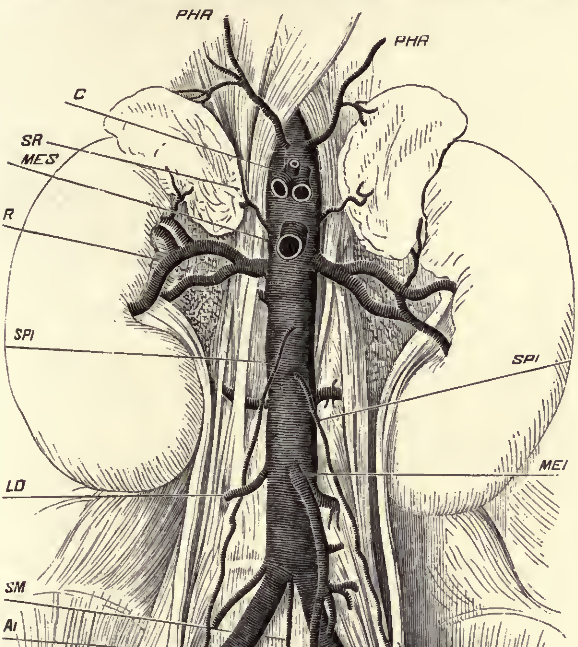


THE FEMORAL ARTERY. (AFTER HENLE.)

CFI, the common femoral; *ESF*, the superficial epigastric; *CIS*, the superficial circumflex iliac; *PUE*, the external pudic; *PRF*, the deep femoral; *CFL*, the external circumflex of the thigh; *CFM*, the internal circumflex of the thigh; *PF1*, the first perforating a. of the thigh; *PF2*, the second perforating a.; *PF3*, the third perforating a.; *AGS*, the arteria anastomotica magna; *SF*, the superficial femoral.

Fr., *artère frontale.* Ger., *Stirnschlagader.* Sp., *arteria frontal.* A branch of the ophthalmic a. which runs upward around the inner end of the orbital arch and is distributed to the integument, muscles, and periosteum of the mesial portion of the forehead. [L, 142.]—**Funicular a.** See *A. of the vas deferens* and *External spermatic a.*—**Gastric a.** Lat., *arteria gastrica.* Fr., *artère gastrique.* See *Coronary a. of the stomach*, *Right gastro-epiploic a.*, and *Left gastro-epiploic a.*—**Gastro-duodenal a.** Lat., *arteria gastro-duodenalis.* Fr., *artère gastro-duodénale.* Ger., *Magenzwölffingerpulsader.* A branch of the hepatic a., given off near the pyloric orifice of the stomach, which divides shortly after its

origin into the superior pancreatico-duodenal and right gastro-epiploic arteries. [L, 142.]—**Gastro-epiploic arteries.** See *Right gastro-epiploic a.* and *Left gastro-epiploic a.*—**Gastro-hepatic a.** Lat., *arteria gastro-hepatica.* Fr., *artère gastro-hépatique.* A term applied to the coronary a. of the stomach when, as is sometimes the case, it gives off the hepatic a. [L, 35.]—**Gastro-omental arteries.** See *Right gastro-epiploic a.* and *Left gastro-epiploic a.*—**Genital a.** See *Internal pudic a.*—**Gill-arch arteries.** See *Aortic* ARCHES.—**Glandular arteries.** Branches

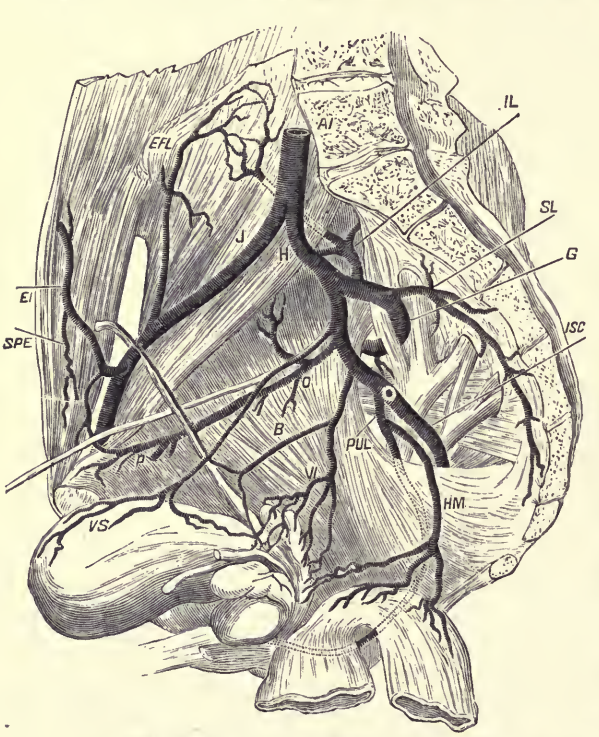


THE ARTERIES OF THE GLUTEAL REGION. (AFTER HENLE.)

G, the gluteal; *ISC*, the ischiadic; *PUI*, the internal pudic; *HE*, the external hæmorrhoidal; *G′*, the superficial gluteal; *G″*, the deep gluteal; *ISC*[1], *ISC*[2], *ISC*[3], unnamed branches.

of the facial a. to the submaxillary gland. [L, 142.]—**Glosso-facial a.** See *Facial a.*—**Gluteal a.** Lat., *arteria glutœa.* Fr., *artère fessière.* Ger., *Gesässpulsader.* Sp., *arteria glutea.* A branch of the internal iliac a. which runs backward between the lumbo-sacral cord and the first sacral nerve, turns round the upper margin of the great sacro-sciatic foramen, and divides, opposite the interval between the glutæus medius and pyriformis muscles, into the deep and superficial gluteal arteries. [L, 142.] See also *Deep*, *Superficial*, *Superior*, and *Inferior gluteal a.*—**Great anterior muscular a. of the thigh.** See *Superficial a. of the thigh.*—**Great left gastric a.** See *Coronary a. of the stomach.*—**Great meningeal a.** Lat., *arteria meningea magna.* See *Middle meningeal a.*—**Great mesenteric a.** The analogue, in some of the quadrupeds, of the superior mesenteric a. of man. [L, 13.]—**Great nutritious a. of the femur.** See *Superior nutrient a. of the femur.*—**Great posterior muscular a. of the thigh.** See *Deep femoral a.*—**Great saphenous a.** An a., normal in rabbits and many other mammals, which is occasionally found in man. It arises from the femoral a., close to the point at which the deep femoral is given off, and runs down the leg in company with the internal saphenous vein. [L, 142.]—**Great testicular a.** See *Internal spermatic a.*—**Gutturo-maxillary a.** Fr., *artère gutturo-maxillaire.* See *Internal maxillary a.*—**Hæmorrhoidal arteries.** See *Middle hæmorrhoidal a.*, *Superior hæmorrhoidal a.*, and *External hæmorrhoidal arteries.*—**Helicine arteries.** Fr., *artères hélicines.* A term applied to the highly convoluted and tendril-like arteries found in cavernous tissue, in the body of the uterus, and in the hilum of the ovary. [L, 142.]—**Hepatic a.** Lat., *arteria hepatica.* Fr., *artère hépatique.* Ger., *Leberpulsader.* Sp., *arteria hepática.* A branch of the cœliac a. which at first runs forward and to the right, over the upper border of the pancreas and below the foramen of Winslow to the upper margin of the stomach, where it turns upward between the layers of the lesser omentum toward the transverse fissure of the liver, lying upon the portal vein and to the left of the common bile-duct. Near the liver it divides into the left and right hepatic arteries. It gives off, besides its terminal branches, the gastro-duodenal and pyloric arteries. [L, 142.] See also *Right*, *Left*, and *Common hepatic a.*—**Humeral a.** See *Brachial a.*, *Deep humeral a.*, and *Suprascapular a.*—**Humeral thoracic a.** See *Acromio-thoracic a.*—**Hyaloid a.** Lat., *arteria hyaloidea.* Fr., *artère hyaloïde.* Ger., *Arterie des Glaskörpers.* It., *arteria vitrea.* Sp., *arteria vítrea.* A branch of the central retinal a., existing as a rule only in the fœtus, which runs forward in the hyaloid canal, near the centre of the vitreous humor, to the posterior surface of the crystalline lens, on which it forms a fine network. During fœtal life it supplies the vitreous and lens. Occasionally it is seen ophthalmoscopically in the adult as a solid cord running from the optic disc toward the lens, but only in a few instances has it been observed to be pervious. [F.]—**Hyoid a.** Lat., *arteria hyoidea.* Fr., *artère hyoïdienne.* Ger., *Zungenbeinpulsader.* 1. A term applied to a branch of either the external carotid or the superior thyreoid a., distributed to the parts in the neighborhood of the hyoid bone, also to a branch of the lingual a. of similar distribution. 2. In the pl., branches of the anterior epibranchial a. in certain crustaceans, distributed to the lower portion of the head. [L, 158.]—**Hypogastric a.** Lat., *arteria hypogastrica.* Fr., *artère hypogastrique.* Sp., *arteria hipogástrica.* See *Internal iliac a.*—**Hypogastric uterine a.** Lat., *arteria hypogastrica uterina.* Sp., *arteria hipogástrica uterina.* A branch of the internal iliac a. distributed to the uterus and the upper part of the vagina.—**Ileo-colic a.** Lat., *arteria ileo-colica.* Fr., *artère iléo-colique.* Sp., *arteria ileo-cólica.* The lowermost of the branches of the superior mesenteric a. distributed to the lower portion of the colon. [L, 142.]—**Iliac arteries.** See *Common iliac a.*, *External iliac a.*, *Internal iliac a.*, *Deep circumflex iliac a.*, and *Superficial circumflex iliac a.*—**Iliaco-femoral a.** A branch, in some quadrupeds, of the internal iliac a., distributed to the muscles of the posterior portion of the thigh ; in the pl., a term applied to some unimportant branches of the obturator a. of man. [L, 13.]—**Ilio-lumbar a.** Lat., *arteria ilio-lumbalis.* Fr., *artère ilio-lombaire.* Ger., *Hüftlendenpulsader.* Sp., *arteria ilio-lumbar.* A branch of the internal iliac a. which passes outward between the obturator nerve and the lumbo-sacral cord to the upper margin of the ilio-pectineal line, where it divides into branches distributed to the lumbar region and to the iliac fossa. [L, 142.]—**Ilio-muscular a.** See *Ilio-lumbar a.*—**Inferior abdominal a.** Fr., *artère abdominale inférieure.* In certain crustaceans, a branch of the sternal a. distributed to the lower part of the abdomen. [L, 158.]—**Inferior articular arteries of the knee.** See *Internal* and *External articular arteries of the knee.*—**Inferior bronchial a.** The lower of the bronchial arteries on the left side. [L, 172.]—**Inferior calcaneal a.** Fr., *artère calcanéenne inférieure.* A branch of the external plantar a. arising in front of the tuberosity of the calcaneum and distributed to the external plantar muscles. [L, 35.]—**Inferior cerebellar a.** See *Anterior inferior cerebellar a.*—**Inferior cervical a.** A branch of the axillary a. of some quadrupeds, which gives off two branches, the one analogous to the ascending cervical a. and the other to the acromio-thoracic a. of man. [L, 13.]—**Inferior circumflex a. of the foot.** A curved vessel following the contour of the inferior face of the os pedis of the horse and united at its extremities to the preplantar a., which sends off from its concavity numerous small branches to the villous tissue of the foot. [L, 13.]—**Inferior communicating arteries of the foot.** Branches of the plantar arch of the horse, which assist in forming the arterial network of the laminal tissue. [L, 13.]—**Inferior coronary a.** See *Coronary a. of the lower lip* and *Right gastro-epiploic a.*—**Inferior coronary a. of the stomach.** See *Right gastro-epiploic a.*—**Inferior dental a.** Lat., *arteria dentalis inferior.* Fr., *artère dentaire inférieure.* Ger., *untere Zahnpulsader.* Sp., *arteria dentaria inferior.* A branch of the internal maxillary a. which passes into the dental canal with the inferior dental nerve and escapes on to the face through the mental foramen. It gives off the mylo-hyoid a. and branches to the teeth, and terminates on the face as the mental a. [L, 142.]—**Inferior epigastric a.** Lat., *arteria epigastrica inferior.* Fr., *artère épigastrique inférieure.* See *Deep epigastric a.*—**Inferior external articular a. of the knee.** Lat., *arteria articularis genu inferior externa.* Fr., *artère articulaire inférieure externe du genou.* Ger., *äussere untere Kniegelenkpulsader.* Sp., *arteria articular inferior externa.* A branch of the popliteal a. which runs outward beneath the outer head of the gastrocnemius muscle and afterward beneath the external lateral ligament of the knee and the tendon of the biceps femoris muscle, resting upon the external semilunar cartilage, to the forepart of the joint, where it anastomoses with the other articular arteries. [L, 142.]—**Inferior external pudic a.** Lat., *arteria pudenda externa subcutanea.* Fr., *artère honteuse externe inférieure.* Sp., *arteria pudenda externa inferior.* An a. arising, separately or in common with the superior external pudic a., from the common femoral a., which runs inward upon the pectinæus and adductor longus muscles, to which it gives off branches, to be distributed to the scrotum in the male and the labia in the female. [L, 142.]—**Inferior gluteal a.** Lat., *arteria glutœa inferior.* Fr., *artère fessière inférieure.* Ger., *Sitzbeinpulsader.* A branch of the gluteal a. distributed to the structures in the neighborhood of the hip joint. [L, 115.]—**Inferior guttural a.** See *Inferior thyreoid a.*—**Inferior hæmorrhoidal a.** Lat., *arteria hæmorrhoidalis inferior.* Fr., *artère hémorrhoïdale inférieure.* See *External hæmorrhoidal a.*—**Inferior intercostal arteries.** See *Aortic intercostal arteries.*—**Inferior internal articular a. of the knee.** Lat., *arteria articularis genu inferior interna.* Fr., *artère articulaire inférieure interne du genou.* Ger., *innere untere Kniegelenkpulsader.* Sp., *arteria articular inferior interna.* A branch of the popliteal a. which runs downward and inward along the upper margin of the poplitæus muscle and then forward below the outer tuberosity of the tibia, and is distributed to the outer and forepart of the joint, anastomosing with the other articular arteries of the knee. [L, 142.]—**Inferior labial a.** Lat., *arteria labialis inferior.* Fr., *artère labiale inférieure.* A branch of the facial a., given off at about the inferior border of the maxilla, which runs forward beneath the depressor anguli oris muscle, and is distributed to the muscles and skin of the lower lip, anastomosing with the coronary a. of the lower lip and the mental and submental arteries. [L, 142.]—**Inferior laryngeal a.** Lat., *ar-*

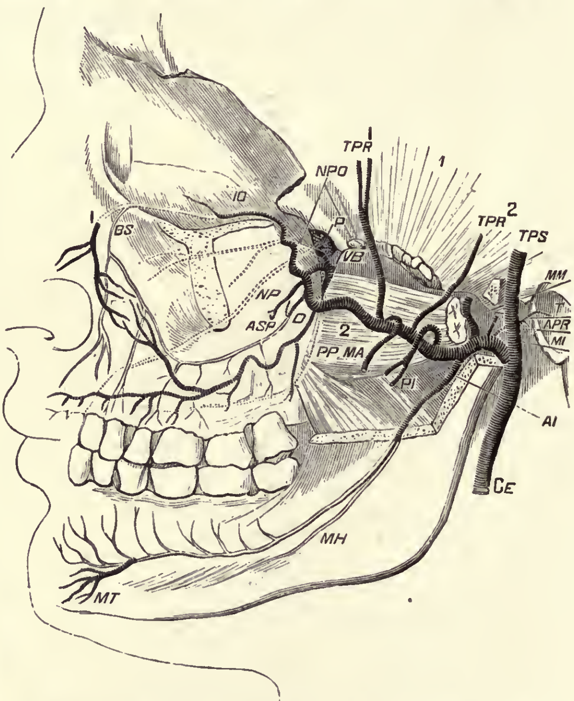
teria laryngea inferior. Fr., *artère laryngée inférieure.* See *Crico-thyreoid a.*—**Inferior maxillary a.** Lat., *arteria maxillaris inferior.* See *Inferior dental a.*—**Inferior meningeal arteries.** Branches of the occipital a. distributed to the dura mater of the posterior fossa of the skull. [L, 179.]—**Inferior mesenteric a.** Lat., *arteria mesenterica inferior.* Fr., *artère mésentérique inférieure.* Ger., *untere Gekröspulsader.* Sp., *arteria mesentérica inferior.* A branch of the abdominal aorta arising from one to two inches above its bifurcation. It inclines slightly to the left, passes downward close to the aorta, and, after giving off the left colic and sigmoid arteries, terminates as the superior hæmorrhoidal artery. [L, 142.]—**Inferior mesenterico-duodenal a.** See *Inferior pancreatico-duodenal a.*—**Inferior nutrient a. of the femur.** Lat., *arteria nutritia femoris inferior.* Fr., *artère nourricière inférieure du fémur.* Ger., *untere Ernährungspulsader des Oberschenkels.* A branch of the third perforating a. of the thigh which enters the femur just above its middle.



THE ABDOMINAL AORTA. (AFTER HENLE.)

AI, the common iliac artery; *I*, the external iliac; *H*, the internal iliac; *SM*, the middle sacral; *PHR*, the inferior phrenic arteries; *LB*, one of the lumbar arteries; *C*, the cœliac; *MES*, the superior mesenteric; *MEI*, the inferior mesenteric; *SR*, the capsular; *R*, the renal; *SPI*, the internal spermatic; *HI*, the internal hæmorrhoidal.

[L, 177.]—**Inferior œsophageal arteries.** Lat., *arteriæ œsophageæ inferiores.* Fr., *artères œsophagiennes inférieures.* Ger., *untere Speiseröhrepulsadern.* The œsophageal branches of the coronary a. of the stomach. [L, 7.]—**Inferior palatine a.** Lat., *arteria palatina inferior.* Fr., *artère palatine inférieure.* Ger., *aufsteigende Gaumenschlagader.* Sp., *arteria palatina inferior.* A branch of the facial a. which ascends between the stylo-glossus and stylo-pharyngeus muscles and then between the internal pterygoid muscle and the wall of the pharynx to the base of the skull. It is distributed to the muscles in its neighborhood, the tonsil, the Eustachian tube, and the soft palate. [L, 142.]—**Inferior palpebral a.** Lat., *arteria palpebralis inferior.* Fr., *artère palpébrale inférieure.* Ger., *Arterie des unteren Augenlids.* Sp., *arteria palpebral inferior.* A branch of the ophthalmic a. which arises near the front of the orbit and, lying below the internal tarsal ligament, gives off small branches to the conjunctiva, the lacrymal sac, and the caruncle, and, after passing outward between the orbicularis muscle and the tarsus, forms an arterial arch on the free margin of the lower lid with a branch of the lacrymal a. [L, 142.]—**Inferior pancreatico-duodenal a.** Lat., *arteria pancreatico-duodenalis inferior.* Fr., *artère pancréatico-duodénale inférieure.* Ger., *untere Bauchspeicheldrüsenzwölffingerpulsader.* A branch of the superior mesenteric a. distributed to the concavity of the duodenum and anastomosing with the superior pancreatico-duodenal a. [L, 17.]—**Inferior perforating arteries of the hand.** Branches of the dorsal interosseous arteries of the hand which unite them with the palmar digital arteries. [L, 179.]—**Inferior perforating a.** See *Third perforating a. of the thigh.*—**Inferior pharyngeal a.** See *Ascending pharyngeal a.*—**Inferior phrenic arteries.** Lat., *arteriæ phrenicæ inferiores.* Fr., *artères phréniques inférieures.* Ger., *untere Zwerchfellpulsadern.* Sp., *arterias diafragmáticas inferiores.* A term applied to branches of the cœliac a., or of the abdominal aorta, distributed to the inferior surface of the diaphragm and anastomosing with the superior phrenic, the musculo-phrenic, and the arteries of the lower intercostal spaces. [L, 7.]—**Inferior profunda a. of the arm.** Lat., *arteria profunda brachii inferior.* Fr., *artère collatérale supérieure du bras.* Ger., *untere tiefe Armpulsader.* A branch of the brachial a. which arises about the middle of the arm and runs downward in company with the ulnar nerve to the back part of the inner condyle of the os brachii, where it anastomoses with the posterior ulnar recurrent a. and anastomotic arteries of the arm. It supplies branches to the inner head of the triceps muscle and to the parts it traverses. [L, 142.]—**Inferior scapular a.** See *Subscapular a.*—**Inferior suprarenal arteries.** Lat., *arteriæ suprarenales inferiores.* Fr., *artères surrénales inférieures.* Ger., *untere Nebennierenpulsadern.* One or two small branches of the renal a. distributed to the suprarenal capsules. [L, 142.]—**Inferior thoracic a.** Fr., *artère thoracique inférieure.* See *External thoracic a.*—**Inferior thyreoid a.** Lat., *arteria thyreoidea inferior.* Fr., *artère thyréoïdienne inférieure.* Ger., *untere Schilddrüsenarterie.* A branch of the thyreoid axis which runs directly upward in front of the vertebral a., a short distance beyond which it bends inward and downward behind the large cervical vessels and the sympathetic nerve, and then curves in the opposite direction and terminates in branches to the thyreoid gland. It gives off the ascending cervical and crico-thyreoid arteries and numerous branches to the trachea, the œsophagus, and the cervical muscles. [L, 142.]—**Inferior ureteric a.** A branch of the superior vesical or uterine artery, distributed to the lower part of the ureter and the adjacent part of the bladder. [L, 179.]—**Inferior vertebral arteries.** The aortic arches of the embryo. [L, 171.]—**Inferior vesical a.** Lat., *arteria vesicalis inferior.* Fr., *artère vésicale inférieure.* Ger., *untere Blasenpulsader.* Sp., *arteria vesical inferior.* A branch, usually of the anterior division of the internal iliac a., which runs directly toward the base of the bladder. It is distributed to the lower part of the bladder, the prostate gland, and the vesiculæ seminales. [L, 142.]—**Inferior volar perforant arteries.** See *Inferior perforating arteries of the hand.*—**Infra-orbital a.** Lat., *arteria infra-orbitalis.* Fr., *artère sous-orbitaire.* Ger., *untere Augenhöhlenpulsader.* Sp., *arteria suborbitaria.* A branch of the internal carotid a., which passes out upon the face through the infra-orbital foramen in company with the superior maxillary nerve. It gives off the posterior dental a. and branches to the orbital muscles, the lacrymal sac, and the structures around the inner angle of the eye. [L, 142.]—**Infrascapular a.** See *Subscapular a.*—**Inner dorsal a. of the thumb.** Lat., *arteria pollicis radialis dorsalis.* Fr., *artère radio-dorsale du pouce.* Ger., *Speichenrückenpulsader des Daumens.* A branch of the radial a. arising opposite the base of the metacarpal bone of the thumb, and distributed to the radial side of the dorsal aspect of the thumb. [L, 142.]—**Innominate a.** Lat., *arteria innominata* (seu *anonyma*). Fr., *artère anonyme.* Ger., *ungenannte Pulsader.* Sp., *arteria inominada.* 1. An a. arising from the upper surface of the transverse portion of the arch of the aorta. It ascends obliquely toward the right sterno-clavicular articulation, opposite which it divides into the right subclavian and common carotid arteries. It lies in front of the trachea and pleura and behind the sternum, from which it is separated by the sterno-hyoid and sterno-thyreoid muscles, the remains of the thymus gland, and the right innominate vein. It occasionally gives off the deep thyreoid a. [L, 142.] 2. See *Clavicular a.*—**Intercostal arteries.** See *Anterior intercostal arteries*, *Aortic intercostal arteries*, and *Superior intercostal a.*—**Interlobular arteries of the kidney.** Lat., *arteriæ interlobulares.* Branches of the arterial arches formed at the bases of the pyramids, which run outward through the cortical substance, and are finally distributed to the Malpighian corpuscles and to a capillary network around the uriniferous tubules. [L, 142, 172.]—**Internal and anterior optic a.** Fr., *artère optique interne et antérieure.* A branch of the posterior communicating a. of the brain which ramifies on the anterior portion of the third ventricle, on the walls of the infundibulum, and is distributed to the optic thalamus. [H. Duret, *l. c.* (L).]—**Internal auditory a.** Lat., *arteria auditiva interna.* Fr., *artère auditive interne.* Ger., *innere Arterie des Ohres.* Sp., *arteria auditiva interna.* A branch either of one of the transverse branches of the basilar or of the superior cerebellar a., which accompanies the auditory nerve into the inner ear, and is distributed to the labyrinth. [L, 142.]—**Internal calcaneal arteries.** Fr., *artères calcanéennes internes.* A term applied to branches of the posterior tibial and peroneal arteries distributed to the parts on the inner side of the heel and sole of the foot. [L, 142, 172.]—**Internal carotid a.** Lat., *arteria carotis interna.* Fr., *artère carotide interne.* Ger., *innere Kopfschlagader.* Sp., *arteria carótida interna.* One of the two terminal branches of the common carotid a. given off at the level of the upper border of the thyreoid cartilage. It runs directly upward to the carotid canal in the temporal bone, which it traverses to enter the cranium by the foramen lacerum anticum; it then runs in the carotid groove of the sphenoid bone, at the end of which it bends upward on the inner side of the anterior clinoid process to the inner side of the fissure of Sylvius,

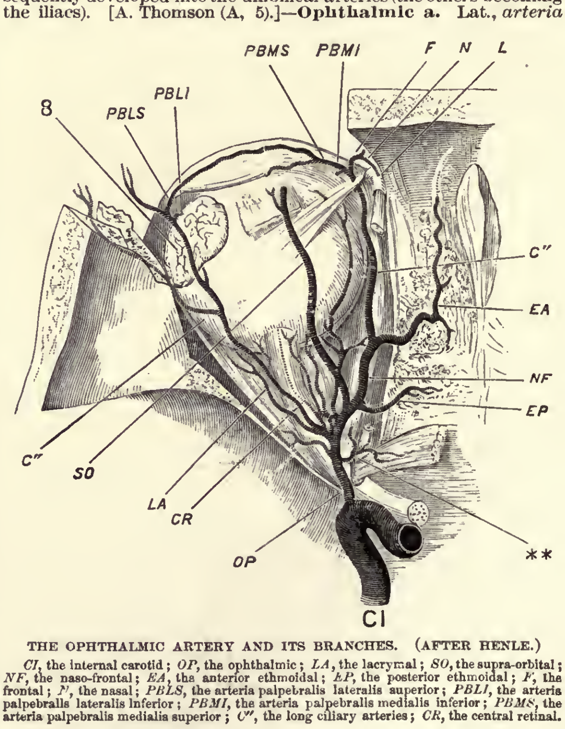


where it divides into the anterior and middle cerebral arteries. In the neck it lies at first behind the external carotid a., covered by the platysma myoides muscle and fascia; higher up it passes beneath the digastric and stylo-hyoid muscles, lying to the inner side of the external carotid a.; above these muscles it lies under the parotid gland, the styloid process of the temporal bone, and the stylo-pharyngeus muscle. Within the head it lies upon the floor of the cavernous sinus, which it perforates on the inner side of the anterior clinoid process. From the point at which it perforates the sinus to its termination it lies between the second and third cranial nerves. The internal jugular vein and the pneumogastric nerve are included with it in a prolongation of the carotid sheath during its passage through the neck. In addition to its terminal branches, it gives off the ophthalmic a. and numerous small branches to its vicinity. [L, 142.] See ARTÈRE *encéphalo-palatine.*—**Internal circumflex a. of the thigh.** Lat., *arteria circumflexa femoris interna.* Fr., *artère circonflexe interne de la cuisse.* Ger., *innere Kranzpulsader des Oberschenkels.* Sp., *arteria circonfleja interna.* An a. which arises from the inner and posterior part of the deep femoral a. just below its origin, and passes backward between the psoas and pectinæus muscles toward the lesser trochanter of the femur, near which it divides into branches distributed to the hip joint and the muscles in that region. [L, 142.]—**Internal collateral elbow a.** See *Ulnar a.*—**Internal hæmorrhoidal a.** Lat., *arteria hæmorrhoidalis interna.* Fr., *artère hémorrhoïdale interne.* Ger., *innere Mastdarmpulsader.* See *Superior hæmorrhoidal a.*—**Internal iliac a.** Lat., *arteria iliaca interna.* Fr.,

THE INTERNAL ILIAC ARTERY. (AFTER HENLE.)

AI, the common iliac; *H*, the internal iliac; *J*, the external iliac; *VS*, the superior vesical; *IL*, the ilio-lumbar; *O*, the obturator; *SL*, a lateral sacral; *G*, the gluteal; *ISC*, the ischiadic; *D*, the a. of the vas deferens; *VI*, the inferior vesical; *HM*, the middle hæmorrhoidal.

artère iliaque interne. Ger., *innere Hüftpulsader.* Sp., *arteria iliaca interna.* A branch of the common iliac a. which extends from its bifurcation to the upper border of the great sacro-sciatic notch, where it divides into two branches, the anterior and posterior. At its origin it lies near the border of the psoas muscle, but lower down it rests against the sacrum and the lumbo-sacral cord, and is in its whole course covered by the peritonæum. From its anterior division it gives off the superior vesical, inferior vesical (vaginal in the female), middle hæmorrhoidal, obturator, internal pudic, sciatic, and in the female the uterine, arteries. From the posterior division are given off the ilio-lumbar and lateral sacral and gluteal arteries. [L, 142.]—**Internal laryngeal a.** Lat., *arteria laryngea interna.* Ger., *innere Kehlkopfarterie.* See *Superior laryngeal a.*—**Internal malleolar a.** Lat., *arteria malleolaris interna.* Fr., *artère malléolaire interne.* Ger., *innere Knöchelpulsader.* Sp., *arteria maleolar interna.* A branch of the anterior tibial a. which runs inward beneath the tendon of the tibialis anticus muscle to the inner malleolus, in the vicinity of which it is distributed. [L, 142.]—**Internal mammary a.** Lat., *arteria mammaria interna.* Fr., *artère mammaire interne.* Ger., *innere Brustpulsader.* Sp., *arteria mammaria interna.* A branch of the subclavian a. arising opposite the thyreoid axis. It runs downward and forward to the posterior surface of the cartilage of the first rib, from which point it descends vertically behind the costal cartilages, about an inch from the border of the sternum, to the interval between the sixth and seventh cartilages, where it divides into its terminal branches, the musculo-phrenic and superior epigastric arteries. In the upper part of its course it lies upon the pleura, but at its lower end it is separated from it by the triangularis sterni muscle. At its origin it is covered by the subclavian vein and is crossed from within outward by the phrenic nerve. Besides its terminal branches, it gives off the anterior intercostal arteries. [L, 142.]—**Internal maxillary a.** Lat., *arteria maxillaris interna.* Fr., *artère maxillaire interne.* Ger., *innere Kieferschlagader.* Sp., *arteria maxi-*



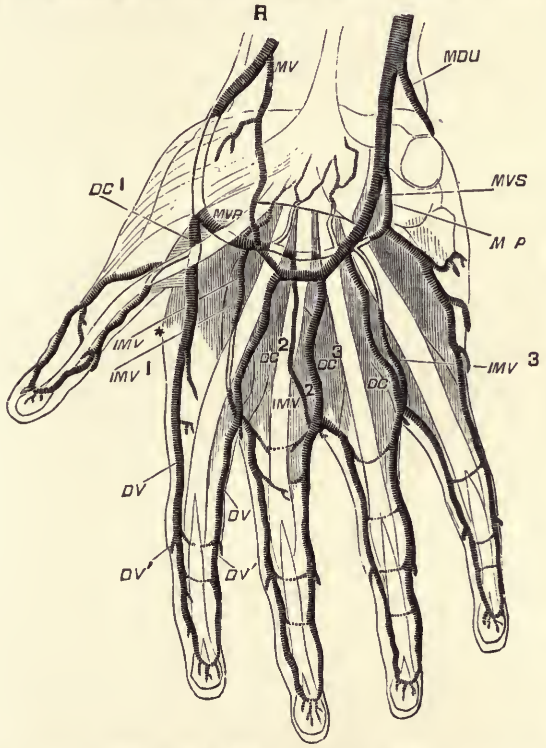
THE INTERNAL MAXILLARY ARTERY AND ITS BRANCHES. (AFTER HENLE.)

MI, the internal maxillary; *CE*, the external carotid; *TPS*, the superficial temporal; *APR*, the deep auricular; *T*, the anterior tympanic; *MM*, the middle meningeal; *AI*, the inferior dental; *MH*, the mylo-hyoid; *MT*, the mental; *TPR*1, the deep anterior temporal; *PT*, the pterygoid branch; *MA*, the masseteric; *B*, the buccinator; *ASP*, the posterior branch of the superior alveolar; *IO*, the infra-orbital; *ASA*, the anterior branch of the superior alveolar; *VD*, the vidian; *SP*, the spheno-palatine; *PP*, the pterygo-palatine; *NPO*, the posterior nasal; *NP*, the naso-palatine; *TPR*2, the deep posterior temporal; 1, the temporal muscle; 2, the external pterygoid muscle.

lar interna. One of the terminal branches of the external carotid a., which runs horizontally forward between the jaw and the internal lateral ligament of the temporo-maxillary articulation, and then passes obliquely forward and upward on either the inner or outer surface of the external pterygoid muscle to the spheno-maxillary fossa, where it breaks up into a number of branches. It is divided into the maxillary portion, or that part between the jaw and the internal lateral ligament; the pterygoid, or that portion lying upon the pterygoid muscle; and the spheno-maxillary, or that portion just outside of and within the spheno-maxillary fossa. From the first part are given off the deep auricular, anterior tympanic, middle and small meningeal, and inferior dental arteries; from the second the anterior and posterior temporal, buccal, and masseteric arteries, and branches to the pterygoid muscles; and from the third the posterior dental, infra-orbital, superior palatine, vidian, pterygo-palatine, and spheno-palatine arteries. [L, 142.]—**Internal obturator a.** Lat., *arteria obturatoria interna.* Fr., *artère obturatrice interne.* Ger., *innere Hüftbeinpulsader.* A branch of the obturator a. given off just external to the pelvis, which curves around the inner side of the obturator foramen, furnishes branches to the adjoining muscles, and anastomoses with the external obturator and internal circumflex arteries. [L, 172.]—**Internal ophthalmic a.** Fr., *artère ophthalmique interne.* A branch of the common carotid, in birds, distributed to the masseter muscle, the maxillary articulation, the lower eyelid, and the eye. [L, 158.]—**Internal palpebral arteries.** Lat., *arteriæ palpebrales inferiores.* The palpebral branches of the ophthalmic a. [L, 175.]—**Internal plantar a.** Lat., *arteria plantaris interna.* Fr., *artère plantaire interne.* Ger., *innere Fussohlenpulsader.* Sp., *arteria plantar interna.* One of the terminal branches of the posterior tibial a., which runs outward in the groove between the abductor hallucis and flexor brevis muscles to the head of the first metatarsal bone, where it terminates by joining the plantar digital a. on the tibial side of the great toe. It furnishes branches to the structures through which it passes. [L, 142.]—**Internal posterior optic a.** See *Posterior internal optic a.*—**Internal pudic a.** Lat., *arteria pudenda interna.* Fr., *artère honteuse interne.* Ger., *innere Schampulsader.* Sp., *arteria pudenda interna.* The

terminal branch of the anterior division of the internal iliac a., distributed to the perinæum and the external organs of generation. It arises in front of the pyriformis muscle, leaves the pelvis by the lower part of the great sacro-sciatic foramen, then curves forward over the spine of the ischium, enters the posterior portion of the perineal space by the lesser sacro-sciatic foramen, and runs along the outer wall of the ischio-rectal fossa about an inch above the tuberosity of the ischium. Running forward, it pierces the base of the triangular ligament, passes forward in its folds to about the apex of the pubic arch, and terminates under the crus penis in the arteries of the bulb and of the penis. It gives off the external hæmorrhoidal and superficial and transverse perineal arteries and the arteries of the bulb of the urethra and of the penis. [L, 31, 142.]—**Internal scapular a.** See *Subscapular a.*—**Internal spermatic a.** Lat., *arteria spermatica interna.* Fr., *artère spermatique interne.* A branch of the abdominal aorta which arises a little below the renal a., and runs down upon the psoas muscle to reach the internal abdominal ring, where it enters the inguinal canal. It passes down the canal with the other constituents of the spermatic cord and is distributed to the testicle. [L, 142.]—**Internal tarsal a.** Fr., *artère tarsienne interne.* A branch of the dorsal a. of the foot running forward and inward to the level of the bases of the metatarsal bones, and, anastomosing with the internal plantar, continued on to the great toe. [L, 35.]—**Internal thoracic a.** Lat., *arteria thoracica interna.* Fr., *artère thoracique interne.* See *Internal mammary a.*—**Interpeduncular arteries.** Fr., *artères interpédonculaires.* Branches of the posterior cerebral a. distributed to the posterior perforated space and the lower portion of the peduncles. [H. Duret, *l. c.* (L).]—**Intestinal arteries.** Lat., *arteriæ intestinales.* Ger., *Dünndarmpulsadern.* A term applied to the small branches of the mesenteric arteries distributed to the intestines. [L, 175.]—**Ischiadic a.** Lat., *arteria ischiadica.* Fr., *artère ischiatique.* 1. See *Inferior gluteal a.* 2. A branch, in some quadrupeds, of the lateral sacral a. which passes under the upper portion of the vastus longus muscle and is distributed to the ischio-tibial muscles.—**Ischio-clitorian a.** See Arteria *clitoridis.*—**Lacrymal a.** Lat., *arteria lacrimalis.* Fr., *artère lachrymale.* Ger., *Thränenschlagader.* It., *arteria lagrimale.* Sp., *arteria lagrimal.* A branch of the ophthalmic a. which arises close to the optic foramen and runs along the upper border of the external rectus muscle to the lacrymal gland, to which it is principally distributed. It also gives off branches which pierce the malar bone and others distributed to the upper eyelid and the conjunctiva. [L, 142.]—**Large anastomotic a. of the arm.** See *Anastomotic a. of the arm.*—**Large a. of the thumb.** Lat., *arteria princeps pollicis.* Fr., *grande artère du pouce.* Ger., *grosse Daumenpulsader.* A branch of the radial a. which passes down between the metacarpal bone of the thumb and the muscles covering it to the space between the heads of the flexor brevis pollicis muscle, where it divides into the palmar collateral arteries. [L, 142.]—**Large collateral a. of the arm.** See *Profunda a. of the arm.*—**Large communicating radial a.** See *Profunda radial a.*—**Large lateral nasal a.** See *Spheno-palatine a.*—**Laryngeal arteries.** See *Superior laryngeal a.* and *Crico-thyreoid a.*—**Lateral arteries of the sacrum.** See *Lateral sacral arteries.*—**Lateral coccygeal a.** The continuation of the lateral sacral a. of some quadrupeds, which runs along on each side of the sacrum. [L, 13.]—**Lateral nasal a.** Lat., *arteria nasalis lateralis.* Fr., *artère de l'aile du nez.* Ger., *seitliche Nasenarterie.* A branch of the facial a. which runs inward to the side of the nose, over which it ramifies, sending branches to the ala and dorsum. [L, 142.]—**Lateral sacral arteries.** Lat., *arteriæ sacrales laterales.* Fr., *artères sacrées latérales.* Ger., *seitliche Heiligbeinpulsadern.* Branches of the internal iliac a. which run down on the anterior surface of the sacrum. They are distributed to the sacrum and its neighborhood. In man sometimes, in quadrupeds as a rule, they are united into one trunk. [L, 13, 142.]—**Lateral spinal arteries.** Lat., *arteriæ spinales laterales.* Ger., *vordere Rückenmarkspulsadern.* Branches of the vertebral arteries which enter the spinal canal through the intervertebral foramina. [L, 172.]—**Left bronchial arteries.** Lat., *arteriæ bronchiales sinistræ.* Fr., *artères bronchiales gauches.* Ger., *linke Luftröhrenpulsadern.* Branches from the left side of the thoracic aorta, distributed to the posterior surface of the corresponding bronchus and the tissue of the left lung. The lower of the two is sometimes termed the inferior bronchial a. [L, 142.]—**Left cardiac a.** See *Left coronary a. of the heart.*—**Left colic a.** Lat., *arteria colica sinistra.* Fr., *artère colique gauche.* Ger., *linke Grimmdarmpulsader.* A branch of the inferior mesenteric a. which runs across the left kidney behind the peritonæum to the descending colon, where it divides into an ascending and a descending portion, which run upward and downward along the colon. This term is sometimes applied to the inferior mesenteric a. itself. [L, 142.]—**Left coronary a. of the heart.** Lat., *arteria coronaria cordis sinistra.* Fr., *artère coronaire gauche du cœur.* Ger., *linke Kranzpulsader des Herzens.* An a. arising from the left posterior sinus of Valsalva, which runs behind and to the left side of the pulmonary a. and divides into two branches, one of which runs in the groove between the left auricle and ventricle, and the other along the line of the interventricular septum, and is distributed to the tissue of the heart. [L, 142.]—**Left gastric a., Left gastro-epiploic a.** Lat., *arteria gastro-epiploica sinistra.* Fr., *artère gastro-epiploïque gauche.* Ger., *linke Magennetzpulsader.* Sp., *arteria gastro-epiplóica izquierda.* A branch of the splenic a. which runs along the greater curvature of the stomach from left to right, supplying branches to the stomach and the omentum on the left side and anastomosing with the right gastro-epiploic a. [L, 31, 142.]—**Left gastro-hepatic a.** See *Coronary a. of the stomach.*—**Left gastro-omental a.** See *Left gastro-epiploic a.*—**Left hepatic a.** Lat., *arteria hepatica sinistra.* Fr., *artère hépatique gauche.* Ger., *linke Leberpulsader.* An a. arising at a right angle from the hepatic a., which enters the liver at the left end of the transverse fissure. It also furnishes branches to the Spigelian lobe. [L, 142.]—**Lenticulo-optic arteries.** Basal branches of the middle cerebral, distributed to the posterior portion of the internal capsule and the anterior part of the optic thalamus. [L, 189.]—**Lenticulo-striate arteries.** Branches of the middle cerebral a. distributed to the lenticular and caudate nuclei. [L, 189.]—**Lesser profunda a. of the arm.** See *Inferior profunda a. of the arm.*—**Lingual a.** Lat., *arteria lingualis.* Fr., *artère linguale.* Ger., *Zungenpulsader.* Sp., *arteria lingual.* A branch of the external carotid a. which is given off between the superior thyreoid and facial arteries, usually opposite the great cornu of the hyoid bone. It ascends for a short distance and then curves downward, forming a loop crossed by the hypoglossal nerve, after which it runs beneath the digastric and stylo-hyoid muscles and passes forward along the upper border of the great cornu of the hyo d to the anterior border of the hyo-glossus muscle, whence it ascends to the lower surface of the tongue, along which it is continued as the ranine a. It gives off the hyoid, sublingual, and ranine arteries, and the dorsal a. of the tongue. [L, 142.]—**Long ciliary arteries.** Lat., *arteriæ ciliares longæ.* Fr., *artères ciliaires longues.* Ger., *vordere Blendungspulsadern.* Sp., *arterias ciliares largas.* Two branches of the posterior ciliary arteries, one on each side, which are distributed to the ciliary muscle and the iris. [L, 142.]—**Long thoracic a.** Lat., *arteria thoracica longa.* Fr., *artère thoracique longue.* See *External mammary a.*—**Lumbar arteries.** Lat., *arteriæ lumbales.* Ger., *Lendenpulsadern.* Branches, usually five in number, of the abdominal aorta, which pass backward to the interval between the transverse processes of the vertebræ and divide into abdominal and dorsal branches. The abdominal branches are distributed to the lateral wall of the abdomen and the dorsal to the muscles and integument of the back, also sending branches through the intervertebral foramina to the spinal canal. [L, 142.]—**Malar arteries.** Branches of the lacrymal a. which pierce the malar bone to reach the temporal fossa, to which they are distributed. [L, 172.]—**Malleolar arteries.** See *External* and *Internal malleolar a.*—**Mammary arteries.** See *External* and *Internal mammary a.*—**Masseteric a.** Lat., *arteria masseterica.* Fr., *artère massétérine.* Ger., *Kaumuskelpulsader.* A branch of the pterygoid portion of the internal maxillary a. which passes outward through the sigmoid notch of the inferior maxilla to the deep surface of the masseter muscle, to which it is distributed. [L, 142.]—**Mastoid a.** Lat., *arteria mastoidea.* Fr., *artère mastoïdienne.* 1. A branch of the occipital a. which enters the skull through the mastoid foramen and is distributed to the dura mater and the diploe. 2. A branch of the posterior auricular a. running over the insertion of the sterno-cleido-mastoid muscle to the occipitalis muscle and the overlying integument, and anastomosing with the occipital a. [L, 142.]—**Maxillo-muscular a.** A branch, in some quadrupeds, of the external carotid a. distributed to the internal pterygoid and masseter muscles. [L, 13.]—**Median a.** Lat., *arteria media.* Fr., *artère du nerf médian.* Sp., *arteria del nervio medio.* A branch of the anterior interosseous a. of the arm which accompanies the median nerve and is distributed to its substance and to the flexor sublimis digitorum muscle. [L, 142.]—**Median sacral a.** See *Middle sacral a.*—**Medicerebellar a.** [Wilder]. See *Anterior inferior cerebellar a.*—**Medicerebral a.** [Wilder]. See *Middle cerebral a.*—**Medio-colic a.** See *Middle colic a.*—**Medullary arteries.** Fr., *artères médullaires.* 1. See *Nutrient arteries.* 2. The arteries of the medullary substance of the brain. [L.]—**Meningeal arteries.** See *Anterior meningeal arteries, Posterior meningeal a., Inferior meningeal arteries, Middle meningeal a.*, and *Small meningeal a.*—**Mental a.** Lat., *arteria mentalis.* Fr., *artère mentale.* Ger., *Kinnpulsader.* The terminal branch of the inferior dental a., which passes out on to the face through the mental foramen and is distributed to the side of the chin and face. [L, 142.]—**Mesenteric arteries.** See *Great, Small, Superior, Inferior*, and *Middle mesenteric a.*—**Meso-lobar a.** Lat., *arteria meso-lobaris.* See *Anterior cerebral a.*—**Metacarpal a.** Lat., *arteria metacarpea.* The first dorsal interosseous a. of the hand. It arises from the radial a. beneath the extensor tendons of the thumb, frequently in common with the posterior radio-carpal a., and descends upon the second dorsal interosseous muscle to the level of the metacarpo-phalangeal articulation, where it divides into the dorsal digital arteries to the adjacent sides of the index and middle fingers. It communicates with the deep palmar arch. In the pl., the dorsal and palmar interosseous arteries. [L, 7, 142, 172.]—**Metatarsal a.** Lat., *arteria metatarsea.* Fr., *artère métatarsienne.* Ger., *erste Mittelfussrückenpulsader.* A branch of the dorsal a. of the foot, which arises near the bases of the metatarsal bones and runs outward beneath the extensor brevis muscle to anastomose with branches of the tarsal and external plantar arteries, forming the plantar arch. In the pl., the dorsal and plantar interosseous arteries. [L, 7, 142, 172.]—**Metatarso-pedal a.** One of the two terminal branches of the pedal a. of the horse and some other solipeds, which runs down the side of the metatarsus and divides into the collateral arteries of the digits. [L, 13.]—**Middle and internal frontal arteries.** Fr., *artères frontales moyenne et interne.* Branches of the anterior cerebral a. distributed to the convolution of the corpus callosum, the corpus callosum itself, the first and second frontal convolutions, and the upper part of the ascending frontal convolution. [L, 189.]—**Middle a. of the corpora quadrigemina.** Fr., *artère moyenne des tubercules quadrijumeaux.* A branch of the posterior cerebral a. which terminates in fine ramifications in the space between the corpora quadrigemina. [H. Duret, *l. c.* (L).]—**Middle articular a. of the knee.** Lat., *arteria articularis genu media.* Fr., *artère articulaire moyenne du genou.* Ger., *mittlere Kniegelenkpulsader.* Sp., *arteria articular media.* A branch of the popliteal a. which arises opposite the flexure of the knee joint, pierces the posterior ligament, and is distributed to the crucial ligaments and the structures within the joint. [L, 142.]—**Middle calcaneal arteries.** Lat., *arteriæ calcaneæ mediæ.* Several small branches of the posterior tibial a. distributed to the

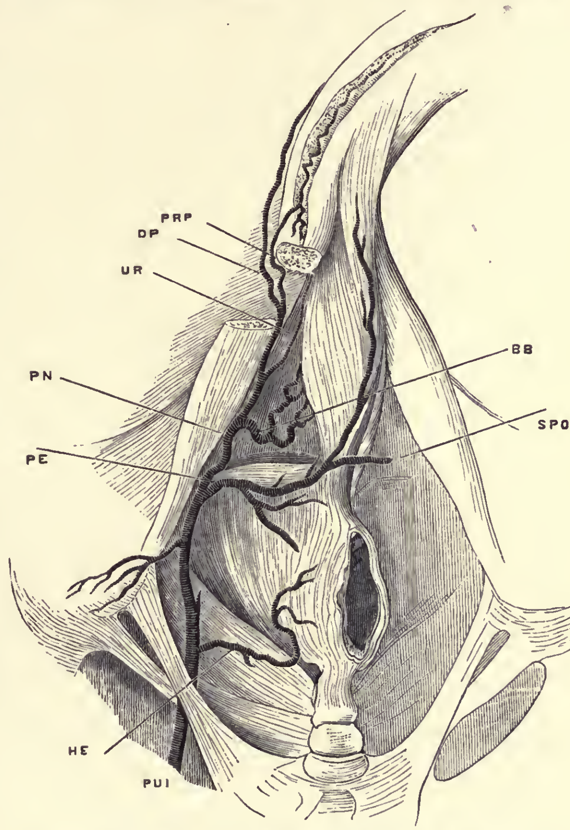
outer and back surface of the os calcis. [L, 31.]—**Middle cerebral a.** Lat., *arteria cerebralis media.* Fr., *artère cérébrale moyenne.* Ger., *mittlere Gehirnpulsader.* Sp., *arteria cerebral media.* One of the two terminal branches of the internal carotid a. which runs obliquely outward and upward in the fissure of Sylvius to the surface of the island of Reil, where it divides into branches distributed to the pia mater covering the outer surface of the cerebrum. It also gives off the anterior chorioid and lenticulo-nuclear arteries. [L, 31, 142.]—**Middle coccygeal a.** A branch of one of the sacral arteries of some of the lower animals, which runs down on the inferior surface of the caudal vertebræ, between the two depressor muscles of the tail, to its extremity. [L, 13.]—**Middle colic a.** Lat., *arteria colica media.* Fr., *artère colique moyenne.* Ger., *mittlere Dickdarmpulsader.* A branch of the superior mesenteric a. which runs forward between the layers of the transverse mesocolon toward the transverse colon, where it divides into two branches, one of which anastomoses with the right colic a. and the other with the left colic and a number of small branches distributed to the coats of the colon. [L, 142.]—**Middle external pudic a.** An occasional branch of the superficial epigastric a. distributed to the parts supplied by the inferior and superior external pudic arteries. [L, 179.]—**Middle hæmorrhoidal a.** Lat., *arteria hæmorrhoidalis media.* Fr., *artère hémorrhoïdale moyenne.* Ger., *mittlere Mastdarmpulsader.* Sp., *arteria hemorroidal media.* An a. arising most commonly from the internal iliac, but occasionally from the inferior vesical or the internal pudic, which is distributed to the lower part of the rectum and anastomoses with the superior and inferior hæmorrhoidal and inferior vesical arteries. [L, 142.]—**Middle meningeal a.** Lat., *arteria meningealis media.* Fr., *artère méningée moyenne.* Ger., *mittlere Hirnhautpulsader.* A branch of the internal maxillary a. which enters the cranium by the foramen spinosum and is distributed to the dura mater from the frontal bone in front to the occipital behind and as high as the vertex. [L, 142.]—**Middle mesenteric a.** Lat., *arteria mesenterica media.* An occasional branch of the common iliac a., furnishing branches to the transverse and descending colon. [L, 142.]—**Middle nasal a.** Lat., *arteria nasalis media.* Fr., *artère nasale moyenne.* See *Anterior nasal a.*—**Middle parietal a.** Fr., *artère pariétale moyenne.* A branch of the middle cerebral a. which ascends in the fissure of Rolando and is distributed to its convolutions and often to the anterior portion of the first parietal convolution. [H. Duret, *l. c.* (L).]—**Middle perforating a. of the thigh.** See *Second perforating a. of the thigh.*—**Middle sacral a.** Lat., *arteria sacralis media.* Fr., *artère sacrée moyenne.* Ger., *mittlere Heiligbeinpulsader.* A single a., arising from the abdominal aorta just above its bifurcation into the common iliac arteries, which runs downward upon the last lumbar vertebra and along the middle of the sacrum to the front of the coccyx, where it anastomoses with branches of the lateral sacral arteries and is continued onward through the median aponeurosis of the levator ani muscles to the coccygeal gland. It sends small branches to the sacrum and the parts between it and the rectum and to the rectum itself. [L, 142.]—**Middle suprarenal a.** See *Capsular a.*—**Middle temporal a.** Lat., *arteria temporalis media.* Fr., *artère temporale moyenne.* Ger., *mittlere Schläfenbeinpulsader.* Sp., *arteria temporal media.* A branch of the superficial temporal a. which arises close above the zygoma, ascends in a groove upon the squamous portion of the temporal bone, and is distributed to the temporal fossa. [L, 142.]—**Middle thyreoid a.** Fr., *artère thyréoïdienne moyenne.* An occasional branch of the common carotid a. distributed to the thyreoid body. [L, 35.]—**Middle ureteric arteries.** Small branches of the aorta, or of the common iliac or internal spermatic a., distributed to the middle portion of the ureter. [L, 179.]—**Middle vesical (or vesicular) arteries.** Lat., *arteriæ vesicales mediæ.* The posterior branches of the superior vesical. [C ; L, 142.]—**Musculo-phrenic a.** Lat., *arteria musculo-phrenica.* Fr., *artère musculo-phrénique.* Ger., *Muskelzwerchfellpulsader.* The outer of the two terminal branches of the internal mammary a., which runs downward and outward behind the cartilages of the floating ribs. It gives off branches to the diaphragm, the lower intercostal spaces, and the abdominal muscles. [L, 142.]—**Mylo-hyoid a.** Lat., *arteria mylo-hyoidea.* Fr., *artère mylo-hyoïdienne.* Ger., *Kieferzungenbeinpulsader.* A branch of the inferior dental a. which runs downward in the mylo-hyoid groove and is distributed to the mylo-hyoid muscle. [L, 172.]—**Nasal a.** Lat., *arteria nasalis.* Fr., *artère nasale.* Ger., *Nasenarterie.* Sp., *arteria nasal.* A term applied to the anterior nasal and to the spheno-palatine arteries, but more properly to the latter. [L.] See also *Lateral nasal a.*—**Naso-palatine a.** Lat., *arteria naso-palatina.* Fr., *artère naso-palatine.* A branch of the spheno-palatine a. which runs down in the groove in the vomer and connects with the descending palatine through the incisor foramen. [L, 142.]—**Navel arteries.** See *Umbilical arteries.*—**Nutrient a. of the fibula.** Lat., *arteria nutriens fibulæ.* A small branch of the peroneal a. which supplies the fibula. [L, 172.]—**Nutrient a. of the humerus.** See *Nutrient a. of the os brachii.*—**Nutrient a. of the ilium.** Lat., *arteria nutriens ilii.* A branch of the gluteal a., which enters the lower part of the ilium. [L, 7.]—**Nutrient a. of the os brachii.** Lat., *arteria nutriens ossis brachii.* Fr., *artère nourricière de l'humérus.* Ger., *Ernährungspulsader des Oberarmes.* A branch of the brachial a. which arises about the middle of the arm and enters the os brachii near the insertion of the coraco-brachialis muscle. [L, 172.]—**Nutrient a. of the radius.** Lat., *arteria nutriens radii.* Fr., *artère nourricière du radius.* Ger., *Ernährungspulsader der Speiche.* A branch of the anterior interosseous a. of the forearm, which supplies the radius. [L, 172.]—**Nutrient a. of the tibia.** Lat., *arteria nutriens tibiæ.* Fr., *artère nourricière du tibia.* Ger., *Ernährungspulsader des Schienbeins.* A branch of the posterior tibial a. which descends upon the external and posterior surface of the tibia, which it enters through the nutrient foramen. It gives off branches to the adjacent muscles in its course. [L, 7.]—**Nutrient a. of the ulna.** Lat., *arteria nutriens ulnæ.* Fr., *artère nourricière du cubitus.* Ger., *Ernährungspulsader der Ellenbogenröhre.* A branch of the anterior interosseous a. of the forearm supplying the ulna. [L, 7.]—**Nutrient branchial arteries.** Fr., *artères nourricières des branchies.* Branches of the efferent arterioles of the branchial capillary network of the *Branchiata*, distributed to the substance of the gills. [L, 158.]—**Obturator a.** Lat., *arteria obturatoria.* Fr., *artère obturatrice.* Ger., *Hüftbeinlochpulsader.* A branch of the internal iliac a., most commonly of its anterior division, resting upon the obturator portion of the pelvic fascia, which passes out of the pelvis through the upper part of the thyreoid foramen, and upon the surface of the obturator membrane divides into an external and internal branch. The internal branch curves around the inner margin of the foramen and is distributed to the obturator, pectinæus, gracilis, and adductor muscles, and anastomoses with the internal circumflex a. The external branch passes around the outer margin of the foramen to the space between the gemellus inferior and quadratus femoris muscles, where it anastomoses with the sciatic a. It supplies the obturator muscles and sends a branch to the hip joint. This vessel occasionally arises from the internal epigastric a., in which case it may curve along the free margin of Gimbernat's ligament and be wounded in the operation for femoral hernia. [L, 142, 172.]—**Occipital a.** Lat., *arteria occipitalis.* Fr., *artère occipitale.* Ger., *Hinterhauptspulsader.* Sp., *arteria occipital.* 1. A branch of the external carotid a. which arises from its posterior surface near the lower border of the digastric muscle. It runs upward to the interval between the transverse process of the atlas and the mastoid process of the temporal bone, whence it runs horizontally to the occipital bone, upon which it turns upward to divide near the occiput into branches. It gives off the mastoid a., the arteria princeps cervicis, and branches to the occiput and the muscles of the neck. [L, 7, 142, 172.] 2. A branch of the posterior cerebral a. distributed to the occipital convolutions and adjacent parts. [H. Duret, *l. c.* (L).]—**Occipito-dorsal a.** Fr., *artère occipito-dorsale.* A branch of the cervico-pulmonary a., distributed to the dorsal pectoral and the lateral cranial regions in the toad. [L, 158.]—**Occipito-meningeal a.** A branch of the vertebral a. distributed to the dura mater. [L, 115.]—**Occipito-muscular a.** One of the terminal branches of the occipital a. of many of the lower animals, distributed to the occiput. [L, 13.]—**Œsophageal arteries.** Lat., *arteriæ œsophageæ.* Fr., *artères œsophagiennes.* Ger., *Speiseröhrenpulsadern.* See *Aortic* and *Inferior œsophageal arteries.*—**Omphalo-mesenteric arteries.** Lat., *arteriæ omphalo-mesentericæ.* Fr., *artères omphalo-mésentériques.* Ger., *Nabelgekröspulsadern.* Sp., *arterias omfalo-mesentéricas.* The larger of the branches into which the primitive aortæ of the embryo divide, subsequently developed into the umbilical arteries (the others becoming the iliacs). [A. Thomson (A, 5).]—**Ophthalmic a.** Lat., *arteria*



THE OPHTHALMIC ARTERY AND ITS BRANCHES. (AFTER HENLE.)

CI, the internal carotid; *OP*, the ophthalmic; *LA*, the lacrymal; *SO*, the supra-orbital; *NF*, the naso-frontal; *EA*, the anterior ethmoidal; *EP*, the posterior ethmoidal; *F*, the frontal; *N*, the nasal; *PBLS*, the arteria palpebralis lateralis superior; *PBLI*, the arteria palpebralis lateralis inferior; *PBMI*, the arteria palpebralis medialis inferior; *PBMS*, the arteria palpebralis medialis superior; *C″*, the long ciliary arteries; *CR*, the central retinal.

ophthalmica. Fr., *artère ophthalmique.* Ger., *Augenarterie.* Sp., *arteria oftálmica.* A branch from the internal carotid a. on the inner side of the anterior clinoid process, which enters the orbit through the optic foramen, below and on the outer side of the optic nerve. It passes across the optic nerve and then forward, beneath the lower border of the superior oblique muscle, to the inner angle of the eye, where it divides into the frontal and the nasal arteries. Its branches are divided into those distributed to the orbit and surrounding parts and those which supply the muscles and globe of the eye. Its orbital branches are the lacrymal, supra-orbital, anterior

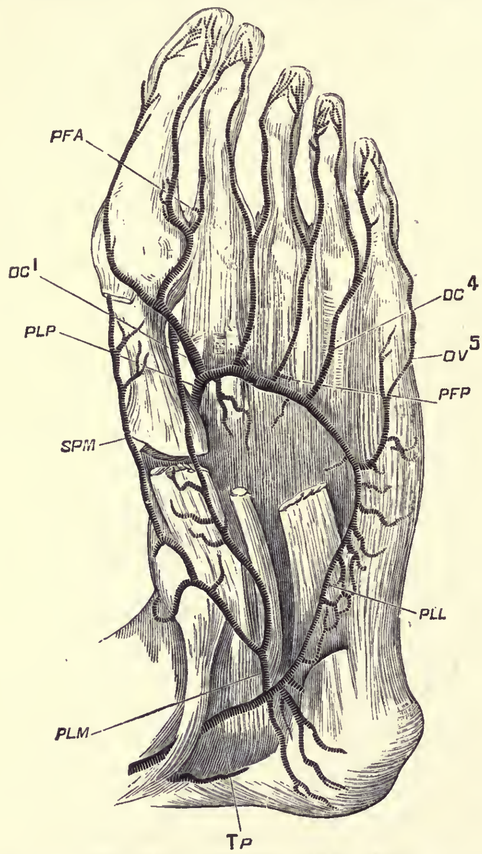


and posterior ethmoidal, inferior and superior palpebral, frontal, and nasal arteries. The ocular branches are the anterior short and long ciliary arteries, the central retinal a., and branches to the ocular muscles. [L, 142, 172.]—**Orbital a.** A small a. arising from either the superficial or middle temporal a., which runs forward across the zygoma to supply the outer portion of the orbicularis palpebrarum muscle and the integument. [L, 142.]—**Outer dorsal a. of the thumb.** Lat., *arteria pollicis ulnaris dorsalis.* Fr., *artère cubito-dorsale du pouce.* A branch of the radial a. running on the radial side of the dorsal aspect of the thumb. [L, 7, 142.]—**Ovarian a.** Lat., *arteria ovarii.* Fr., *artère ovarienne.* A branch of the abdominal aorta of the female which corresponds to the internal spermatic a. of the male. It runs downward upon the psoas muscle as far as the margin of the pelvis, where it inclines inward between the layers of the broad ligament to the attached margin of the ovary, which it supplies. It sends off a branch which accompanies the round ligament into the inguinal canal, a second along the oviduct, and a third which anastomoses with the uterine a. [L, 142.]—**Palatine arteries.** See *Anterior, Superior,* and *Inferior palatine a.*—**Palato-labial a.** See *Facial a.* and *Superior palatine a.*—**Palato-maxillary a.** See *Superior palatine a.*—**Palmar digital arteries.** Lat., *arteriæ digitales volares.*

THE PALMAR ARCHES. (AFTER HENLE.)

R, the radial artery; *U*, the ulnar; *MV*, the superficial volar; *MVS*, the arteria metacarpea volaris ulnaris sublimis; *MVP*, the arteria metacarpea volaris radialis profunda; *MP*, the arteria metacarpea volaris ulnaris profunda; *DC*, *DC*², *DC*³, the palmar digital arteries; *IMV* 1, *IMV* 2, *IMV* 3, the palmar interosseous arteries; *IMV* *, one of the posterior perforating arteries; *DV*, the collateral digital arteries.

Fr., *artères digitales palmaires.* Ger., *Hohlhandfingerpulsadern.* Branches, usually four in number, from the convex surface of the superficial palmar arch, which are distributed to both sides of the three inner fingers and the ulnar side of the index finger. The first is distributed to the ulnar side of the little finger; the three others run down in the intermetacarpal spaces to the roots of the fingers, where they divide into the collateral digital arteries. [L, 142.]—**Palmar interosseous arteries.** Lat., *arteriæ interosseæ volares.* Fr., *artères métacarpiennes paimaires.* Ger., *Hohlhandmittelhandpulsadern.* Branches, usually three in number, which arise from the deep palmar arch, run down upon the interosseous muscles, and at the roots of the fingers inosculate with the palmar digital arteries. They also supply branches to the deep structures of the palm of the hand. [L, 142.]—**Palpebral arteries.** See *Superior* and *Inferior palpebral a.* and *External* and *Internal palpebral arteries.*—**Pancreatico-duodenal a.** Lat., *arteria duodenalis inferior.* A branch of the hepatic a., distributed to the adjacent margins of the pancreas and the duodenum. [L, 172.] See also *Superior pancreatico-duodenal a.*—**Parietal a.** A branch of the occipital a. (1st def.) which pierces the parietal bone and ramifies over the superior longitudinal sinus. [L, 45.]—**Parieto-sphenoidal a.** A branch of the middle cerebral a. distributed to the inferior parietal lobule, the angular gyrus, and the upper part of the cortex of the sphenoidal lobe. [L, 189.]—**Pedal a.** Lat., *arteria pediaca.* Fr., *artère pédieuse.* See *Dorsal a. of the foot.*—**Perforating arteries of the hand.** Branches of the deep palmar arch which pass backward between the heads of the last three dorsal interosseous muscles to inosculate with the dorsal interosseous arteries. [L, 172.]—**Pericephalic a.** See *External carotid a.*—**Perineal a.** Lat., *arteria perinæalis.* A term used by some anatomists for the superficial perineal a. or for the trunk from which the superficial and transverse perineal arteries arise. [L.] See also *A. of the penis.*



THE PERINEAL ARTERIES. (AFTER HENLE.)

PUI, the internal pudic; *HE*, the external hæmorrhoidal; *PE*, the perineal; *SPO*, the posterior scrotal; *PN*, the a. of the penis; *BB*, the a. of the bulb of the urethra; *UR*, the arteria urethralis; *DP*, the dorsal a. of the penis; *PRP*, the a. of the corpus cavernosum.

—**Peroneal a.** Lat., *arteria peronea.* Fr., *artère péronière.* Ger., *Madenbeinpulsader.* Sp., *arteria peronéa.* A branch of the posterior tibial a., which arises about an inch below the lower border of the poplitæus muscle and descends along the inner border of the fibula to the lower end of the interosseous space, where it divides into the anterior and posterior peroneal arteries. It gives off branches to the muscles of the calf, the nutrient a. of the fibula, and a branch of communication with the posterior tibial a. [L, 142.] See also *Anterior peroneal a.* and *External calcaneal arteries.*—**Perpendicular a.** A vessel which arises at right angles from the digital a of the hind leg of the horse and some other animals, and is distributed to the neighborhood of the fetlock. [L, 13.]—**Pharyngeal a.** A branch of the facial a. in some quadrupeds, analogous to the superior pharyngeal a. of man. [L, 13.] See also *Ascending pharyngeal a.* and *Pterygo-palatine a.*—**Phrenic arteries.** See *Superior phrenic a.* and *Inferior phrenic arteries.*—**Placental a.** A name suggested by B. Ridge for the umbilical vein. [A, 79.]—**Plantar a.** Lat., *arteria plantaris.* Ger., *Fusssohlenpulsader.* A term applied to the posterior tibial a. on the sole of the foot, before it divides into the external and internal plantar arteries. [L, 174.] See also *Deep plantar a.*—**Plantar digital arteries.** Lat., *arteriæ digitales plantares.* Fr., *artères digitales plantaires.* Ger., *Sohlenzehenpulsadern.* The branches of the plantar interosseous arteries which are distributed to the sides of the plantar aspect of the toes. They pass down to the distal phalanx, where they form an arch from the convexity of which small branches pass to the extremity of the toe and to the matrix of the nail. [L, 142, 172.]—**Plantar interosseous arteries, Plantar metatarsal arteries.** Lat., *arteriæ interosseæ plantares.* Fr., *artères interosseuses plantaires.* Ger., *Sohlenmittelfusspulsadern.* Sp., *arterias interóseas plantares.* Branches from the convexity of the plantar arch, which run downward in the interosseous spaces to the bases of the second phalanges, where they divide into the plantar digital arteries. They also give off the anterior and posterior perforating arteries of the foot. [L, 142.]—**Plantar-pollicar a.** A branch of either the anterior tibial or the external plantar a., which runs downward in the first interosseous space and divides into the dorsal digital arteries of the great toe. [L, 179.]—**Pollicar a.** See *Large a. of the thumb.*—**Popliteal a.** Lat., *arteria poplitæa.* Fr., *artère poplitée.* Ger., *Kniekehlpulsader.* Sp., *arteria poplítea.* The

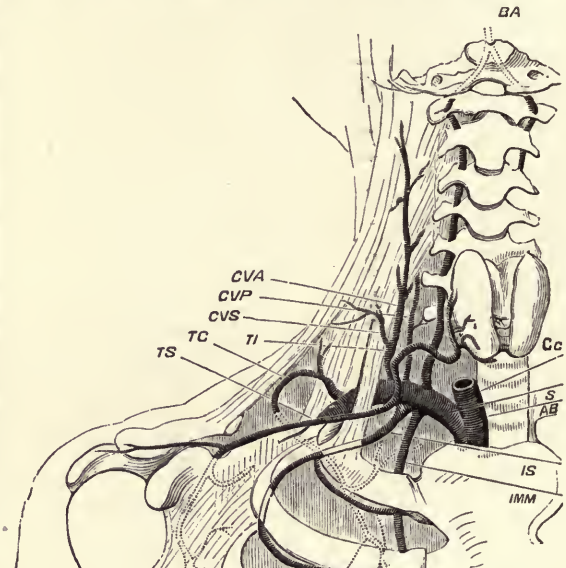
continuation of the femoral a. which extends from the opening in the adductor magnus muscle to the lower border of the poplitæus muscle, where it divides into the anterior and posterior tibial arteries. It lies deep in the popliteal space, being covered at its upper end by the semimembranosus muscle, and lower

THE PLANTAR ARTERIES. (AFTER HENLE.)

TP, the posterior tibial; *PLM*, the internal plantar; *PLL*, the external plantar; *PLP*, the deep plantar; *SPM*, the arteria superficialis pedis medialis: DC^1, DC^2, DC^3, DC^4, the plantar interosseous arteries; DV^5, the arteria digitalis plantaris propria lateralis quinti digiti; *PFP*, one of the posterior perforating arteries; *PFA*, one of the anterior perforating arteries.

down by the gastrocnemius, the plantaris, and the upper part of the solæus. It furnishes muscular branches to the lower part of the muscles of the thigh, the superior and inferior, internal and external, and middle articular arteries of the knee, and the sural arteries. [L, 142.]—**Popliteal articular arteries.** See *Articular arteries of the knee.*—**Postcerebellar a.** [Wilder]. See *Posterior inferior cerebellar a.*—**Postcerebral a.** [Wilder]. See *Posterior cerebral a.*—**Postchorioid arteries** [Wilder]. See *Posterior chorioid arteries.*—**Postcommunicant a.** [Wilder]. See *Posterior communicating a. of the brain.*—**Posterior abdominal a.** Fr., *artère abdominale postérieure.* See *Deep epigastric a.*—**Posterior and internal frontal arteries.** Fr., *artères frontales postérieures et internes.* Branches of the anterior cerebral a. distributed over the quadrate lobe. [L, 189.]—**Posterior a. of the cavernous sinus** (or **of the receptacle**). A branch given off from the internal carotid a. in the carotid canal, distributed to the posterior clinoid process, the fourth, fifth, and sixth cranial nerves, and the dura mater in its vicinity. [L, 179.]—**Posterior auricular a.** Lat., *arteria auricularis posterior.* Fr., *artère auriculaire postérieure.* Ger., *hintere Ohrarterie.* Sp., *arteria auricular posterior.* A branch of the external carotid a. which runs upward under the parotid gland to the groove between the cartilage of the ear and the mastoid process of the temporal bone, where it divides into the auricular and mastoid branches. It also gives off the stylo-mastoid a. [L, 142.]—**Posterior cæcal a.** A branch of the superior mesenteric distributed to the posterior surface of the cæcum. [L, 179.]—**Posterior cerebral a.** Lat., *arteria cerebralis posterior.* Fr., *artère cérébrale postérieure.* Ger., *hintere Gehirnpulsader.* Sp., *arteria cerebral posterior.* One of the two terminal branches of the basilar a., which passes upward from the upper border of the pons Varolii to the lower surface of the posterior part of the cerebrum. It gives off the posterior communicating and posterior chorioid arteries and branches to the occipital lobe and to the inner and lower parts of the temporo-sphenoidal lobe. [L, 142.] See also *Vertebral a.*—**Posterior cervical a.** Lat., *arteria cervicalis posterior.* Fr., *artère cervicale.* Ger., *hintere Nackenpulsader.* 1. A branch of the transverse cervical a. which runs upward between the levator anguli scapulæ and splenius colli muscles, to which it is principally distributed, and ends by anastomosing with the superficial cervical a. 2. See *Deep cervical a.*—**Posterior chorioid arteries.** Lat., *arteriæ chorioideæ posteriores.* Ger., *hintere Adernetzpulsadern.* Branches of the posterior cerebral a. distributed to the upper portion of the chorioid plexus. [L, 142.]—**Posterior ciliary arteries.** Lat., *arteriæ ciliares posteriores.* Fr., *artères ciliaires postérieures.* Ger., *hintere Blendungspulsadern.* Sp., *arterias ciliares posteriores.* Branches of the ophthalmic a. which pass forward, surrounding the optic nerve, to the sclerotic, which they pierce near the optic nerve, and divide in the chorioid coat into the long and short ciliary arteries. [L, 142.]—**Posterior circumflex a. of the arm.** Lat., *arteria circumflexa humeri posterior.* Fr., *artère circonflexe postérieure de l'humérus.* Ger., *hintere Kranzarterie des Armes.* A branch of the axillary a. which arises just below the lower border of the subscapularis muscle and runs backward in company with the circumflex nerve through the space formed by the teres major muscle, the tendon of the long head of the triceps, and the os brachii. It winds around the bone and terminates in the substance of the deltoid muscle, giving off branches to the structures in its neighborhood. [L, 142.]—**Posterior circumflex a. of the shoulder.** See *Prehumeral a.*—**Posterior circumflex a. of the thigh.** See *Internal circumflex a. of the thigh.*—**Posterior colic a.** Fr., *artère colique postérieure.* An a. which runs along the free margin of the colon in the horse. [L, 158.]—**Posterior communicating a. of the brain.** Lat., *arteria communicans posterior.* Fr., *artère communicante postérieure.* Ger., *hintere Verbindungspulsader.* A short vessel connecting the posterior cerebral and internal carotid arteries on each side. [L.] Cf. Circle *of Willis.*—**Posterior cubital recurrent a.** See *Posterior ulnar recurrent a.*—**Posterior dental a.** Lat., *arteria dentalis posterior.* Fr., *artère dentaire postérieure.* Ger., *hintere Zahnpulsader.* A branch of the sphenomaxillary portion of the internal maxillary a., distributed to the molar and bicuspid teeth and the mucous membrane of the maxillary sinus. [L, 142.]—**Posterior dorsal a. of the penis.** An analogue of the dorsal a. of the penis of man, in some quadrupeds. [L, 13.]—**Posterior dorso-interosseous a. of the arm.** See *Posterior interosseous a. of the arm.*—**Posterior ethmoidal a.** Lat., *arteria ethmoidalis posterior.* Fr., *artère ethmoïdale postérieure.* Ger., *hintere Riechbeinpulsader.* Sp., *arteria etmoidal posterior.* A branch of the ophthalmic a., which passes through the internal orbital canal and is distributed to the mucous membrane of the posterior ethmoidal cells and of the upper part of the nose. [L, 142.]—**Posterior iliac a.** See *Gluteal a.*—**Posterior inferior cerebellar a.** Lat., *arteria cerebelli inferior posterior.* Fr., *artère cérébelleuse inférieure posterieure.* Ger., *hintere und untere Hirnleinpulsader.* A branch either of the vertebral or of the basilar artery, which arises near the pons Varolii and runs backward and outward to the forepart of the vallecula, where it divides into two branches, which are distributed to the lower and back portion of the cerebellum. [L, 142.]—**Posterior internal optic a.** Fr., *artère optique interne postérieure* A branch of the posterior communicating a. of the brain, or of the posterior cerebral a., which is distributed to the optic thalmus. [H. Duret, *l. c.* (L).]—**Posterior interosseous a. of the forearm.** Lat., *arteria interossea antibrachii posterior.* Fr., *artère interosseuse postérieure de l'avant-bras.* Ger., *hintere Zwischenknochenpulsader.* A branch of the common interosseous a. of the forearm, which passes to the posterior surface of the forearm through the interval between the oblique ligament and the upper border of the interosseous membrane. It runs downward between the superficial and deep extensor muscles and ends near the wrist by anastomosing with the rete carpeum dorsale. It gives off the posterior interosseous recurrent a. and numerous branches to the muscles of the back of the forearm.—**Posterior interosseous recurrent a. of the arm.** See *Posterior radial recurrent a.*—**Posterior mediastinal arteries.** Lat., *arteriæ mediastinæ posteriores.* Fr., *artères médiastinées postérieures.* Ger., *hintere Mittelfellpulsadern.* Branches of the thoracic aorta distributed to the glands and areolar tissue of the posterior mediastinum. [L, 172.]—**Posterior meningeal a.** Lat., *arteria meningea posterior.* Fr., *artère méningée postérieure.* Ger., *hintere Hirnhautpulsader.* Sp., *arteria meningea posterior.* 1. A branch of the vertebral a. given off opposite the foramen magnum, distributed to the dura mater of the lower occipital fossa and to the falx cerebelli. [L, 142.] 2. A branch of the inferior pharyngeal a. distributed to the dura mater. [L.]—**Posterior metacarpal interosseous arteries.** Two branches, in some quadrupeds, of the radio-palmar a., distributed to the lateral and posterior portions of the metacarpus. [L, 13.]—**Posterior palatine a.** See *Superior palatine a.*—**Posterior parietal a.** Fr., *artère pariétale postérieure.* A branch of the middle cerebral a. distributed to the inferior parietal and the first temporal convolutions. [H. Duret, *l. c.* (L).]—**Posterior perforating arteries of the foot.** Lat., *arteriæ perforantes posteriores.* Three branches of the plantar arch which pass backward through the back part of the three outer interosseous spaces to inosculate with the dorsal interosseous arteries of the foot. [L, 142.]—**Posterior peroneal arteries.** Fr., *artères péronières postérieures.* Sp., *arterias peróneas posteriores.* See *External calcaneal arteries.*—**Posterior radial carpal a.** See *Posterior radio-carpal a.*—**Posterior radial recurrent a.** Lat., *arteria radialis recurrens posterior.* Fr., *artère récurrente radiale postérieure.* Sp., *arteria recurrente radial posterior.* A branch of the posterior interosseous a. of the forearm, which passes up beneath the anconæus muscle to the interval between the olecranon and the external condyle, and terminates by anastomosing with the superior profunda and posterior ulnar recurrent arteries. [L, 142.]—**Posterior radio-carpal a.** Lat., *arteria carpea dorsalis radialis.* Fr., *artère dorsale du carpe.* A branch of the radial a., which runs transversely across the back of the carpus and, uniting with a similar branch of the ulnar a., assists

in forming the rete carpeum dorsale. [L, 7.]—**Posterior scapular a.** Lat., *arteria dorsalis scapulæ*. Fr., *artère scapulaire postérieure*. Ger., *Rückenschlagader des Schulterblatts*. Sp., *arteria escapular posterior*. A branch of either the transverse cervical or the subclavian a., which runs backward to the upper angle of the scapula, where it turns and passes downward to the inferior angle of the bone. Close to the upper angle of the scapula it gives off the supraspinous a., and during its course numerous branches to the adjoining muscles. [L, 142.]—**Posterior scrotal arteries.** Lat., *arteriæ scrotales posteriores*. Fr., *artères scrotales postérieures*. Branches of the internal pudic a. distributed to the posterior portion of the scrotum. [L, 31.]—**Posterior spinal a.** Lat., *arteria spinalis posterior*. Fr., *artère spinale postérieure*. Ger., *hintere Rückenmarkspulsader*. Sp., *arteria spinal posterior*. A branch of the vertebral a., given off at the side of the medulla oblongata, which descends behind the posterior roots of the spinal nerves as far as the cauda equina. It is distributed to the contents of the spinal canal and receives branches through the intervertebral foramina from the intercostal and lumbar arteries. [L, 172.]—**Posterior temporal a.** Lat., *arteria temporalis posterior*. Fr., *artère temporale postérieure*. 1. A branch of the superficial temporal a., which runs upward upon the temporal fascia and is distributed to the side of the head and to the vertex. [L, 142.] 2. A branch of the posterior cerebral a. distributed to the hippocampal convolution, the third temporal convolution, and the lobulus fusiformis, terminating at the inferior occipito-temporal sulcus. [H. Duret, *l. c.* (L); L, 189.]—**Posterior tibial a.** Lat., *arteria tibialis posterior*. Fr., *artère tibiale postérieure*. Ger., *hintere Schienbeinpulsader*. Sp., *arteria tibial posterior*. The larger of the two terminal branches of the popliteal a., which extends from the lower border of the poplitæus muscle to the lower border of the internal annular ligament of the ankle, where it divides into the external and internal plantar arteries. It gives off numerous unnamed branches to the integument and muscles of the posterior portion of the calf, the nutrient a. of the tibia, and the peroneal and internal malleolar

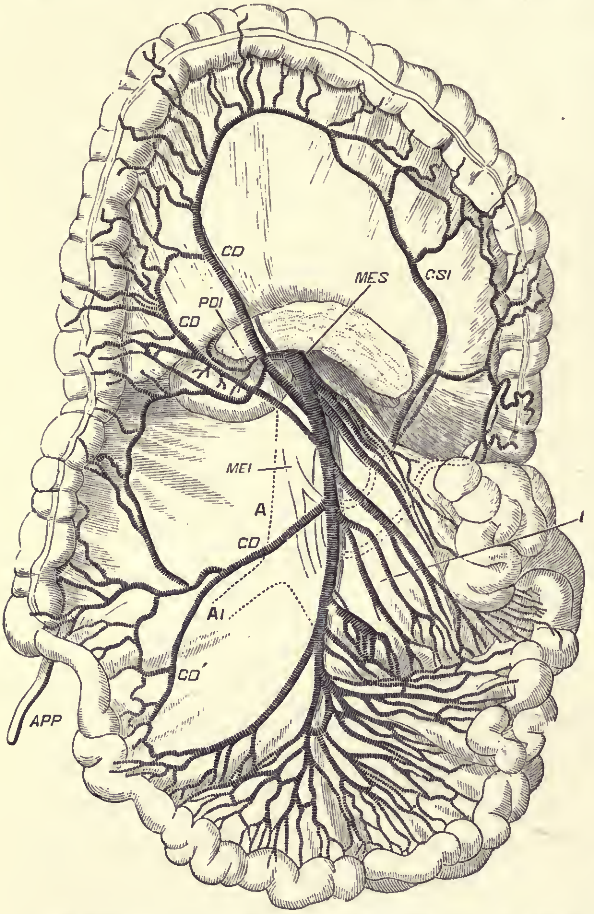


POSTERIOR TIBIAL ARTERY. (AFTER HENLE.)

PO, the popliteal; *TA*, the anterior tibial; *TP*, the posterior tibial; *PC*, the peroneal; *RTA*, the anterior tibial recurrent; *RTP*, the posterior tibial recurrent; *FS*, the superior fibular; *NUF*, the nutrient a. of the fibula; *NUT*, the nutrient a. of the tibia; *PPF*, the anterior peroneal; *COM*, the arteria anastomotica transversa; *MAM*, the arteria malleolaris anterior medialis; *MAL*, the internal malleolar; *MPM*, the arteria malleolaris posterior medialis; *CAM*, the middle calcaneal; *PLM*, the internal plantar; *PLL*, the external plantar.

arteries. [L, 142.]—**Posterior tibial recurrent a.** Lat., *arteria tibialis recurrens posterior*. Fr., *artère tibiale récurrente postérieure*. Ger., *hintere zurücklaufende Schienbeinpulsader*. A branch of the anterior tibial a., which runs up beneath the poplitæus muscle to the back of the knee joint where it anastomoses with the inferior articular arteries of the knee. [L, 13, 142.]—**Posterior ulnar carpal a.** See *Posterior ulno-carpal a.*—**Posterior ulnar recurrent a.** Lat., *arteria recurrens ulnaris posterior*. Fr., *artère récurrente cubitale postérieure*. Ger., *hintere zurücklaufende Ellenbogenpulsader*. A branch of the upper part of the ulnar a., sometimes arising with the anterior recurrent from a common trunk, which runs upward and backward beneath the flexor sublimis muscle to the inner condyle of the os brachii. It gives off branches to the ulnar nerve, the elbow joint, and the muscles in its vicinity, and anastomoses with the inferior profunda, anastomotic, and posterior radial recurrent arteries. [L, 142.]—**Posterior ulno-carpal a.** Lat., *arteria carpea dorsalis ulnaris*. Fr., *artère dorsale du carpe*. A branch of the ulnar a., which passes across the dorsal surface of the carpus and, uniting with a similar branch of the radial a., assists in forming the rete carpeum dorsale. [L, A.]—**Posterior vertebral arteries.** See *Primitive* AORTÆ.—**Præcipua mesentericum accedens a.** See *Superior mesenteric a.*—**Precerebellar a.** [Wilder]. See *Superior cerebellar a.*—**Precerebral a.** [Wilder]. See *Anterior cerebral a.*—**Prechorioid arteries** [Wilder]. See *Anterior chorioid arteries.*—**Precommunicant a.** [Wilder]. See *Anterior communicating a. of the brain.*—**Prehumeral a.** A branch of the brachial a. of some quadrupeds, which passes down between the two heads of the coraco-humeralis muscle and terminates in the substance of the mastoido-humeral muscle. It supplies the shoulder joint and the adjacent muscles. [L, 13.]—**Preplantar a., Preplantar ungual a.** One of the terminal branches of the digital a. of the horse and some other animals, which passes down through the preplantar fissure and is distributed to the bulb of the heel and to the villous and laminal tissues of the foot. [L, 13.]—**Prepubic a.** A branch, in the solipeds, of the external iliac or femoral a., which passes through the crural ring and divides into two branches, which are the analogues of the superficial epigastric, the epigastric, and the external pudic arteries of man. [L, 13.]—**Prevertebral a.** Fr., *artère prévertébrale*. A branch, in some quadrupeds, of the occipital a., which is distributed to the meninges and to the rotator muscles of the head. [L, 13.] See also *Posterior meningeal a.*—**Primary iliac a.** See *Common iliac a.*—**Primitive a.** See *Primitive* AORTA.—**Primitive carotid a.** See *Common carotid a.*—**Primitive iliac a.** See *Common iliac a.*—**Profunda a. of the clitoris.** See *Cavernous a. of the clitoris.*—**Profunda a. of the thigh.** See *Deep femoral a.*—**Profunda femoris a.** See *Deep femoral a.*—**Profunda penis a.** See *A. of the corpus cavernosum.*—**Profunda radial a.** Lat., *arteria collateralis radialis inferior*. Fr., *artère collatérale externe*. The termination of the superior profunda a. of the arm at the back of the elbow. [L, 1796.]—**Profunda tibial a. of the foot.** The innermost branch of the internal plantar a., which runs down on the border of the abductor pollicis muscle and unites with the plantar pollicar a. [L, 179.]—**Pterygo-palatine a.** Lat., *arteria pterygo-palatina*. Fr., *artère ptérygo-palatine*. Ger., *Flügelpulsader*. A branch of the spheno-maxillary a., which passes through the pterygo-palatine canal, and is distributed to the Eustachian tube and the upper part of the pharynx. [L, 172.]—**Pudic arteries.** See *Accessory pudic*, *Inferior external pudic*, *Internal pudic*, *Middle external pudic*, and *Superior external pudic a.*—**Pulmonary a.** Lat., *arteria pulmonalis*. Fr., *artère pulmonaire*. Ger., *Lungenarterie*. Sp., *arteria pulmonal*. The vessel which arises from the left side of the base of the right ventricle of the heart and terminates by dividing into the right and left pulmonary arteries close to the lower side of the arch of the aorta. The right a. runs outward behind the ascending aorta and the superior vena cava to the root of the lung, where it divides into two branches. The left a. passes in front of the descending aorta and the left bronchus, where it also divides into two branches. They divide into branches which accompany the bronchial tubes and terminate in the pulmonary capillaries. [L, 172.]—**Pyloric a.** Lat., *arteria pylorica*. Fr., *artère pylorique*. Sp., *arteria pilórica*. 1. A branch of the hepatic a., which reaches the stomach at the pylorus and runs from right to left, along the smaller curvature, to anastomose with the coronary a. of the stomach. 2. A branch of the gastro-duodenal a. distributed to the pylorus. [L, 172.]—**Radial a.** Lat., *arteria radialis*. Fr., *artère radiale*. Ger., *Speichenpulsader*. Sp., *arteria radial*. The smaller of the two terminal branches of the brachial a. It commences at a point opposite the neck of the radius, and runs along the outer part of the forearm to the styloid process of the radius, where it turns around the outer border of the wrist to the upper border of the space between the metacarpal bones of the thumb and index finger, and passes into the palm of the hand, terminating in the deep palmar arch. Its position in the forearm is indicated by a line extending between the middle of the bend of the elbow and the space between the scaphoid bone and the extensor tendons of the thumb. It gives off the anterior radial recurrent, anterior radio-carpal, superficial volar, posterior radio-carpal, and first dorsal interosseous arteries, the dorsal arteries of the thumb and index finger, the large a. of the thumb, and the arteria radialis indicis. [L, 142, 172.]—**Radial recurrent a.** Lat., *arteria radialis recurrens*. Fr., *artère radiale récurrente*. A term applied to the anterior and posterior radial recurrent arteries, but more properly restricted to the former. [L.]—**Radialis indicis a.** Lat., *arteria radialis indicis*. Fr., *artère radio-dorsale de l'index*. A branch of the radial a., which descends between the abductor indicis and the adductor pollicis muscles, and runs along the radial side of the index finger to its extremity. [L, 172.]—**Radio-carpal transverse palmar a.** See *Anterior radio-carpal a.*—**Radio-palmar a.** Lat., *arteria radio-palmaris*. Fr., *artère radio-palmaire*. See *Superficial volar a.*—**Ranine a.** Lat., *arteria ranina*. Fr., *artère ranine*. Ger., *Seitenzungenarterie*. The continuation

of the lingual a., which passes forward from the lower surface of the tongue to its tip, where it anastomoses with its fellow, forming a small loop. In the last part of its course it lies close to the frænum and may be wounded in the operation for tongue-tie. It is distributed to the substance of the tongue. [L, 172.]—**Renal a.** Lat., *arteria renalis.* Fr., *artère rénale.* Ger., *Nierenpulsader.* A branch of the abdominal aorta, which arises a little below the superior mesenteric a., that of the left side being usually a little the lower. It runs at nearly a right angle to the hilum of the kidney, where it divides into several branches distributed to the substance of that organ. It also gives off the inferior suprarenal and the superior ureteric arteries. [L, 31, 142.]—**Retinal arteries.** See *Central retinal a.*, ARTERIÆ *nasales retinæ superiores* and *inferiores*, ARTERIÆ *temporales retinæ superiores* and *inferiores*, ARTERIÆ *maculares retinæ superiores* and *inferiores*, and ARTERIA *mediana retinæ.*—**Retrograde colic a.** A term applied, in some quadrupeds, to a branch of the superior mesenteric a., which runs along the colon in a direction opposite to that taken by the food, and anastomoses with the direct colic a. [L, 13.]—**Retrograde occipital a.** See *Atloido-muscular a.*—**Rhachidian arteries.** See ARTERIÆ *spinales.*—**Right bronchial a.** Lat., *arteria bronchialis dextra.* Fr., *artère bronchique droite.* The vessel which is distributed to the tissue of the right lung. It arises from the first aortic intercostal a. or, by a common trunk with the upper left bronchial, from the thoracic aorta. [L, 142.]—**Right cardiac a.** See *Right coronary a. of the heart.*—**Right colic a.** Lat., *arteria colica dextra.* Fr., *artère colique droite.* Ger., *rechte Dickdarmpulsader.* A branch of the superior mesenteric a., which runs transversely across to the right side, lying beneath the peritonæum, to the middle of the ascending colon, where it divides into two branches, one of which communicates with the ileo-colic and the other with the middle colic a. [L, 142.] See also *Direct colic a.*—**Right coronary a. of the heart.** Lat., *arteria coronaria cordis dextra.* Fr., *artère coronaire droite du cœur.* An a. arising from the anterior sinus of Valsalva, which runs forward between the pulmonary a. and the right auricular appendix to the right auriculo-ventricular groove, which it follows for a certain distance and then divides into two branches, one of which runs in the left auriculo-ventricular groove and the other in the posterior interventricular groove. [L, 142.]—**Right coronary a. of the stomach.** See *Pyloric a.*—**Right gastric a., Right gastro-epiploic a.** Lat., *arteria gastro-epiploica dextra.* Fr., *artère gastro-épiploïque droite.* Ger., *rechte Magennetzpulsader.* Sp., *arteria gastro-epiplóica derecha.* The continuation of the gastro-duodenal a., which runs from right to left along the great curvature of the stomach, between the layers of the great omentum, and anastomoses with the left gastro-epiploic a. [L, 31.]—**Right hepatic a.** Lat., *arteria hepatica dextra.* Fr., *artère hepatique droite.* Ger., *rechte Leberarterie.* A branch of the hepatic a., which runs outward to the transverse fissure, where it divides into several small branches distributed to the substance of the liver. It also gives off the cystic a. [L, 142.]—**Right subclavian a.** A term sometimes applied to the innominate a. [L.]—**Right superior duodenal a.** See *Superior pancreatico-duodenal a.*—**Sacral arteries.** See *Middle sacral a.* and *Lateral sacral arteries.*—**Sacra media a.** See *Middle sacral a.*—**Sacro-lateral arteries.** See *Lateral sacral arteries.*—**Sacro-median a.** See *Middle sacral a.*—**Saphena a.** An a. arising at an acute angle from the femoral a. of the horse and some other quadrupeds, which runs down the leg in company with the saphenous vein, and is distributed to the hollow of the hock and the anterior surface of the lower third of the leg. [L, 13.]—**Scapular arteries.** See *Clavicular a.*, *Subscapular a.*, *Acromial a.*, *Posterior scapular a.*, *Circumflex a. of the scapula*, and *Suprascapular a.*—**Scapular circumflex a.** See *Circumflex a. of the scapula.*—**Scapulo-humeral a.** See *Posterior circumflex a. of the arm.*—**Sciatic a.** Lat., *arteria ischiadica.* The larger of the two terminal branches of the internal iliac a., which descends upon the anterior surface of the pyriformis muscle and the sacral plexus to the lower part of the great sacro-sciatic foramen, where it passes out of the pelvis in company with the internal pudic a. and the sciatic nerve. It then turns downward beneath the glutæus maximus muscle and ends in a small branch distributed to the integument of the back of the thigh. It gives off the comes nervi ischiadici a. and branches to the coccyx and to the parts it traverses.—**Scrotal arteries.** See *Anterior scrotal a.* and *Posterior scrotal arteries.*—**Second perforating a. of the thigh.** Lat., *arteria perforans secunda.* Fr., *artère perforante seconde de la cuisse.* Ger., *zweite durchbohrende Pulsader.* A branch of the deep femoral a., given off a little below the lower border of the pectinæus muscle, sometimes in common with the first perforating a., which pierces the adductor magnus and longus muscles, and is distributed to the muscles of the posterior aspect of the thigh. [L, 142.]—**Short ciliary arteries.** Lat., *arteriæ ciliares breves.* Fr., *artères ciliaires courtes.* Ger., *kurze Blendungspulsadern.* Sp., *arterias ciliares cortes.* Branches of the posterior ciliary arteries distributed to the chorioid coat of the eye. [L, 31.]—**Short thoracic a.** See *Superior thoracic a.*—**Sigmoid a.** Lat., *arteria sigmoidea.* Fr., *artère colique gauche inférieure.* A branch of the inferior mesenteric a., which runs down to the sigmoid flexure of the colon, where it divides into branches which are distributed to the colon, and anastomoses with the left colic and superior hæmorrhoidal arteries. [L, 142.]—**Small external iliac a.** See *External circumflex iliac a.*—**Small meningeal a.** Lat., *arteria meningea parva.* Fr., *artère méningée petite.* Ger., *kleine Hirnhautpulsader.* A branch of either the middle meningeal or the internal maxillary a., which enters the cranium through the foramen ovale and is distributed to the Gasserian ganglion and the dura mater of the middle fossa of the skull. [L, 7.]—**Small mesenteric a.** A term applied, in some quadrupeds, to a branch of the abdominal aorta distributed to the lower portion of the colon and the rectum. [L, 13.]—**Small saphenous a.** An occasional branch of the popliteal a., which runs down to the external malleolus, to the neighborhood of which it is distributed. [L, 142.]—**Small testicular a.** See *External spermatic a.*—**Spermatic a.** Fr., *artère spermatique.* A term applied to the external and internal spermatic arteries, but more properly restricted to the latter. [L.]—**Sphenoidal a.** A branch of the middle cerebral a. distributed to the lower portion of the cortex of the sphenoidal lobe. [L, 189.]—**Spheno-palatine a.** Lat., *arteria spheno-palatina.* Fr., *artère sphéno-palatine.* Ger., *Keilbeingaumenpulsader.* A small branch of the internal maxillary a., which passes through the spheno-palatine foramen and is distributed to the ethmoidal cells, the antrum, and the frontal sinus. [L, 142.]—**Spheno-spinous a.** Lat., *arteria spheno-spinosa.* Fr., *artère sphéno-épineuse.* See *Middle meningeal a.*—**Spinal arteries.** See ARTERIÆ *spinales.*—**Spiral arteries.** See *Utero-placental arteries.*—**Splenic a.** Lat., *arteria splenica.* Fr., *artère splénique.* Ger., *Milzpulsader.* Sp., *arteria esplénica.* The largest branch of the cœliac a., which runs along the upper border of the pancreas and divides into branches distributed to the stomach and the spleen. It gives off the arteria pancreatica magna and the left gastro-epiploic a. [L, 31, 172.]—**Splenico-pancreatic arteries.** Branches of the splenic a. distributed to the spleen. [L, 179.]—**Staphyline a.** See *Posterior palatine a.*—**Sternal a.** Fr., *artère sternale.* 1. An a., in certain of the crustaceans, which passes down at right angles to the heart to the sternum, where it divides into two branches, which run beneath and parallel to the nervous cord. [L, 158.] 2. In the pl., the branches of the internal mammary a. distributed to the sternum and the triangularis sterni muscle. [L, 7.]—**Sterno-mastoid arteries.** Lat., *arteriæ sterno-mastoideæ.* Fr., *artères sterno-mastoïdiennes.* A term applied to branches of the external carotid, occipital, and superior thyreoid arteries distributed to the sterno-cleido-mastoid muscle. [L, 7, 142.]—**Straight arteries of the kidney.** See ARTERIÆ *rectæ.*—**Stylo-mastoid a.** Lat., *arteria stylo-mastoidea.* Fr., *artère stylo-mastoïdienne.* Ger., *Griffelzitzenarterie.* A branch of the posterior auricular a., which enters the ear through the aqueduct of Fallopius. It gives off branches to the mastoid cells, also the anterior tympanic a. [L, 115, 142.]—**Subaponeurotic external pudic a.** See *Inferior external pudic a.*—**Subcerebellar a.** Lat., *arteria cerebelli inferior anterior.* A branch of the basilar a., distributed to the inferior and anterior portion of the cerebellum. [Weber (L, 31).]—**Subclavian a.** Lat., *arteria subclavia.* Fr., *artère sous-clavière.* Ger., *Schlüsselbeinarterie.* Sp., *arteria subclávia.* An a. which on the right side of the body arises from the innominate a. and on the left from the upper aspect of the arch of the aorta. Each a. is divided into three parts, the first extending from its commencement to the inner border of the scalenus anticus muscle, the second being that portion lying behind the muscle, and the third that part between the outer margin of the muscle and the external border of the first rib, where it becomes the axillary a. Both vessels are deeply situated in the upper part of the neck, the thorax, and the lower cervical region, the a. on the right side, however, rising a little above the clavicle. From the first portion of the a. are given off the vertebral and internal mammary arteries and the thyreoid axis, and from the second the superior intercostal a. [L, 142, 172.]—**Subcostal a.** See *Superior intercostal a.*—**Sub-**

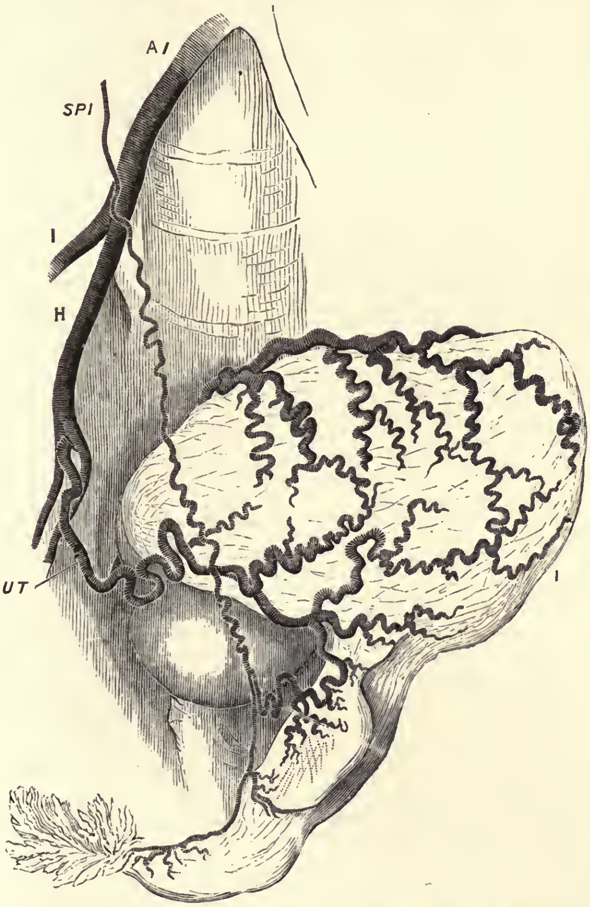


THE SUBCLAVIAN ARTERY. (AFTER HENLE.)

AB, the innominate; *CC*, the common carotid; *SA*, the subclavian; *V*, the vertebral; *BA*, the basilar; *MMI*, the internal mammary; *ES*, the superior epigastric; *MP*, the musculophrenic; *IS*, the superior intercostal; *CVP*, the deep cervical; *TI*, the inferior thyreoid; *CVA*, the ascending cervical; *CVS*, the superficial cervical; *TS*, the suprascapular; *TC*, the posterior scapular.

cutaneous abdominal a. See *Superior external pudic a.* and *Superficial epigastric a.*—**Subcutaneous external pudic a.** See *Superior external pudic a.*—**Sublingual a.** Lat., *arteria sublingualis.* Fr., *artère sous-linguale.* Ger., *Unterzungenpulsader.* Sp., *arteria sublingual.* A branch of the lingual a., which arises at the anterior margin of the hyo-glossus muscle and runs forward and outward to the sublingual gland, to which and the structures in its neighborhood it is distributed. [L, 172.]—**Submaxillary arteries.** Lat., *arteriæ submaxillares.* Branches of the facial a. distributed to the submaxillary glands. [L, 172.]—**Submental a.** Lat., *arteria submentalis.* Fr., *artère sous-mentale.* Ger., *Unterkinnarterie.* A branch of the facial a., given off close to the submaxillary gland, which runs forward beneath the body of the jaw to the symphysis, where it divides into two branches. It is distributed to the muscles and integument of the lower and front parts of the lower jaw. [L, 172.]—**Suborbital a.** Lat., *arteria suborbitalis.* Fr., *artère sous-orbitaire.* See *Infra-orbital a.*—**Subsacral arteries.** See *Lateral sacral arteries.*—**Subscapular a.** Lat., *arteria subscapularis.* Fr., *artère sous-scapulaire.* Ger., *Unterschulterblattspulsader.* Sp., *arteria subescapular.* A branch of the axillary a., which arises near the lower border of the subscapularis muscle, along which it runs toward the inferior angle of the scapula. It gives off the dorsal scapular a. and terminates in branches to the scapular muscles. [L, 142, 172.]—**Subzygomatic a.** A branch of the external carotid a. of the horse and some other quadrupeds, distributed to the masseter muscle. [L, 13.]—**Superficial a. of the abdomen.** See *Superior external pudic a.*—**Superficial carotid a.** See *External carotid a.*—**Superficial cervical a.** Lat., *arteria cervicalis superficialis.* Fr., *artère cervicale superficielle.* Ger., *oberflächliche Nackenpulsader.* Sp., *arteria cervical superficial.* A branch of the transverse cervical a., which ascends beneath the trapezius muscle, to which it furnishes branches. It also sends branches to the levator anguli scapulæ and splenius colli muscles, the cervical glands, and the integument. [L, 142.]—**Superficial circumflex iliac a.** Lat., *arteria circumflexa ilii superficialis.* Fr., *artère circonflexe iliaque superficielle.* A branch of the superficial femoral a., or of the superficial epigastric, which runs upward toward the anterior superior spine of the ilium and is distributed to the iliacus and sartorius muscles and the structures of the lower part of the abdomen. [L, 7.]—**Superficial descending a. of the neck.** That one of the sterno-mastoid arteries which arises from the external carotid a. [L.]—**Superficial epigastric a.** Lat., *arteria epigastrica externa.* Fr., *artère épigastrique superficielle.* Ger., *oberflächliche Bauchdeckenpulsader.* An a. which arises from the anterior surface of the superficial femoral a., about an inch below Poupart's ligament, runs upward to be distributed to the lower part of the abdomen, and anastomoses with branches of the deep epigastric a. [L, 7.]—**Superficial external pudic a.** See *Superior external pudic a.*—**Superficial femoral a.** Lat., *arteria femoralis superficialis.* Fr., *artère fémorale superficielle.* Ger., *oberflächliche Oberschenkelpulsader.* The continuation of the trunk of the common femoral a. upon the thigh. Its course is indicated by a line drawn from a point midway between the anterior iliac spine and the symphysis pubis to the prominent tuberosity on the inner condyle of the femur, the thigh being somewhat flexed and rotated outward. In the first part of its course it lies in the middle of Scarpa's triangle, and is covered by the sartorius muscle, except in the upper two or three inches of its course; below Scarpa's triangle it lies in Hunter's canal, and its lower boundary is the opening in the adductor magnus muscle for the passage of the fourth perforating a. of the thigh. Its principal branches are the deep and inferior external pudic, superficial iliac, and circumflex iliac arteries, and an anastomotic branch given off close to the opening in the adductor magnus muscle. [L, 142, 172.]—**Superficial gluteal a.** A superficial branch of the gluteal a., which is distributed to the glutæus maximus muscle and the integument on the posterior aspect of the sacrum. [L, 172.]—**Superficial muscular a. of the thigh.** Fr., *artère grande musculaire superficielle de la cuisse.* A branch of the femoral a., distributed to the muscles of the back of the thigh. [L, 13.]—**Superficial perineal a.** Lat., *arteria perinæalis superficialis.* Fr., *artère superficielle du périnée.* Ger., *oberflächliche Dammarterie.* A branch of the internal pudic a., which arises at the forepart of the ischio-rectal fossa and runs forward beneath the superficial perineal fascia to the posterior part of the scrotum, where it divides into the posterior scrotal arteries. It also gives off branches to the structures situated in the perinæum. By some anatomists, particularly when it arises by a common trunk with the transverse perineal a., this a. is termed the perineal a. [L, 31, 142.]—**Superficial plantar a.** See *Metatarso-pedal a.*—**Superficial pudic a.** See *Superior external pudic a.*—**Superficial scapular a.** [Sömmerring]. See *Suprascapular a.*—**Superficial sural arteries.** Lat., *arteriæ surales superficiales.* Fr., *artères surales superficielles.* Branches of the sural arteries, distributed to the integument of the calf of the leg. [L, 142.]—**Superficial temporal a.** Lat., *arteria temporalis superficialis.* Fr., *artère temporale superficielle.* Ger., *oberflächliche Schläfenarterie.* One of the two terminal branches of the external carotid a., which runs upward from a little below the condyle of the lower jaw over the posterior root of the zygoma, above which it divides into the anterior and posterior temporal arteries. It gives off unnamed branches to the parts in its vicinity, also the transverse facial, inferior and superior auricular, and orbital arteries. [L, 31, 142.]—**Superficial volar a.** Lat., *arteria superficialis volæ.* Fr., *artère radio-palmaire.* Ger., *oberflächliche Hohlhandpulsader.* A branch of the radial a., which arises a little below the styloid process of the radius and is distributed to the muscles of the thumb. When it is of considerable size it anastomoses with the superficial palmar arch. [L, 31, 142.]—**Superior abdominal a.** An a. which arises from the posterior part of the heart, in some of the crustaceans, and runs along the middle line of the abdomen above the intestines, to which it gives off branches. [L, 158, 168.]—**Superior articular arteries of the knee.** See *Superior external* and *Superior internal articular arteries of the knee.*—**Superior bronchial arteries.** Lat., *arteriæ bronchiales superiores.* Fr., *artères bronchiques supérieures.* Branches of the arch of the aorta running to the bronchi. [L, 7.]—**Superior cerebellar a.** Lat., *arteria cerebelli superior.* Fr., *artère cérébelleuse supérieure.* Ger., *obere Pulsader des Hirnleins.* Sp., *arteria cerebelosa superior.* A branch of the basilar a., which passes outward to the groove between the crus cerebri and the pons Varolii, through which it runs to the upper surface of the cerebellum. It gives off branches distributed to the cerebellum, the vermiform process, the valve of Vieussens, and the velum interpositum. [L, 152.]—**Superior cervical a.** See *Cervico-muscular a.*—**Superior colic a.** See *Middle colic a.*—**Superior coronary a.** See *Coronary a. of the upper lip.*—**Superior dental a.** Lat., *arteria dentalis superior.* Fr., *artère dentaire supérieure.* 1. A branch of the posterior dental a., which supplies the molar and bicuspid teeth of the superior maxilla. [L, 172.] 2. See *Posterior dental a.*—**Superior epigastric a.** Lat., *arteria epigastrica superior.* Fr., *artère épigastrique supérieure.* Ger., *obere Bauchdeckenpulsader.* One of the terminal branches of the internal mammary a., which descends between the costal and sternal portions of the diaphragm to the substance of the rectus abdominis muscle and anastomoses with the superficial epigastric a. It gives off branches to the diaphragm and the muscles and integument of the anterior abdominal wall. [L, 172.]—**Superior external articular a. of the knee.** Lat., *arteria articularis genu superior externa.* Fr., *artère articulaire supérieure externe du genou.* Ger., *obere äussere Kniegelenkpulsader.* A branch of the popliteal a., which runs outward above the outer head of the gastrocnemius muscle to the lower part of the cruræus. It gives off a number of branches, which anastomose with the other articular arteries of the knee. [L, 142.]—**Superior external pudic a.** Lat., *arteria pudenda externa superior.* Fr., *artère honteuse externe supérieure.* A branch of the external pudic, or of the femoral a., which runs upward and is distributed to the integument of the lower part of the abdomen and to the external genitals. [L, 142.]—**Superior externo-articular a. of the knee.** See *Superior external articular a. of the knee.*—**Superior fibular a.** An a. which may arise from the anterior or posterior tibial or the popliteal a., which runs across the neck of the fibula and is distributed to the solæus and peroneus tertius muscles and to the integument. [L, 142.]—**Superior gastro-hepatic a.** See *Coronary a. of the stomach.*—**Superior gluteal a.** Lat., *arteria glutœa superior.* Fr., *artère fessière supérieure.* Ger., *obere Gesässpulsader.* A branch of the deep gluteal a., which runs across toward the anterior superior spine of the ilium and, after furnishing branches to the muscles through which it runs, anastomoses with the deep and external circumflex iliac arteries. [L, 31.] The term is also applied to the gluteal a. itself. [L.]—**Superior guttural a.** See *Superior thyreoid a.*—**Superior hæmorrhoidal a.** Lat., *arteria hœmorrhoidalis superior.* Fr., *artère hémorrhoïdale supérieure.* Ger., *obere Mastdarmpulsader.* Sp., *arteria hemoroidal superior.* A continuation of the inferior mesenteric a., which passes down into the pelvis behind the rectum, where it divides into two branches, which lie one upon each side of the gut. It gives off branches which are distributed to the coats of the intestine and anastomose with the inferior and middle hæmorrhoidal arteries. [L, 142.]—**Superior intercostal a.** Lat., *arteria intercostalis superior.* Fr., *artère intercostale supérieure.* Ger., *obere Rippenarterie.* Sp., *arteria intercostal superior.* A branch from the second portion of the subclavian a., which runs at first backward and a little upward and then turns downward in front of the neck of the first rib. It gives off the deep cervical a. and branches to the first and second intercostal spaces, which are distributed in the same manner as the aortic intercostal arteries. [L, 142.]—**Superior internal articular (or interno-articular) a. of the knee.** Lat., *arteria articularis genu superior interna.* Fr., *artère articulaire supérieure interne du genou.* Ger., *innere obere Kniegelenkpulsader.* Sp., *arteria articular superior interna.* A branch of the popliteal a., which runs inward under the inner head of the gastrocnemius muscle to the inner side of the femur, around which it winds and divides beneath the vastus internus into branches which anastomose with the other articular arteries of the knee. [L, 31, 142.]—**Superior labial a.** Lat., *arteria labialis superior.* Fr., *artère labiale supérieure.* See *Coronary a. of the upper lip.*—**Superior laryngeal a.** Lat., *arteria laryngea superior.* Fr., *artère laryngée supérieure.* Ger., *obere Kehlkopfpulsader.* 1. A branch of the superior thyreoid a., which pierces the thyreo-hyoid membrane and is distributed to the mucous membrane, glands, and intrinsic muscles of the larynx. [L, 172.] 2. See *Superior thyreoid a.*—**Superior mesenteric a.** Lat., *arteria mesenterica superior.* Fr., *artère mésentérique supérieure.* Ger., *obere Gekröspulsader.* A branch from the forepart of the abdominal aorta, a little below the cœliac a., which supplies the larger part of the small intestine and half of the colon. It runs between the layers of the mesentery and gives off the inferior pancreatico-duodenal, ileo-colic, and right and middle colic arteries, and numerous unnamed branches to the walls of the intestines. [L, 142.]—**Superior nutrient a. of the femur.** Lat., *arteria nutriens femoris superior.* Fr., *artère nourricière supérieure du fémur.* Ger., *obere Ernährungspulsader des Oberschenkels.* A branch of the first perforating a. of the thigh, which enters the femur a little above its middle. [L, 7.]—**Superior palatine a.** Lat., *arteria palatina superior.* Fr., *artère palatine supérieure.* Ger., *obere Gaumenpulsader.* A branch of the spheno-maxillary portion of the internal maxillary a., which passes through the posterior palatine canal, runs along the inner side of the alveolar border of the hard palate, and is distributed to the palatine glands, the gums, and the mucous membrane of the hard palate. [L, 142.]—**Superior palpebral a.** Lat., *arteria palpebralis superior.* Fr., *artère palpébrale supérieure.* Ger., *Arterie des oberen Augenlids.* Sp., *arteria palpebral superior.* A branch of the ophthalmic a., sometimes arising from a common trunk with the inferior palpebral a., which

is distributed to the upper eyelid above the internal tarsal ligaments. [L, 142.]—**Superior pancreatico-duodenal a.** Lat., *arteria pancreatico-duodenalis superior.* Fr., *artère pancréatico-duodénale supérieure.* Ger., *obere Bauchspeichelzwölffingerdarmpulsader.* A branch of the gastro-duodenal a., which runs along the inner margin of the duodenum. It gives off branches to the pancreas and to the duodenum, and anastomoses with the inferior



THE MESENTERIC ARTERIES AND THEIR BRANCHES. (AFTER HENLE.)

A, the aorta; *AI*, the common iliac; *MEI*, the inferior mesenteric; *MES*, the superior mesenteric; *I*, the intestinal arteries; *CD*, *CD*, *CD*, the right colic arteries (which usually arise by a common trunk termed the right colic); *CSI*, the left colic; *PDI*, the inferior pancreatico-duodenal; *APP*, the appendicular.

pancreatico-duodenal a. [L, 142.]—**Superior perforating arteries of the hand.** Three branches of the deep palmar arch, which pass through the upper extremities of the three inner interosseous spaces of the hand to inosculate with the dorsal interosseous arteries of the hand. [L, 142.]—**Superior perforating a. of the thigh.** See *First perforating a. of the thigh.*—**Superior pharyngeal a.** Lat., *arteria pharyngea suprema.* Fr., *artère pharyngienne supérieure.* See *Pterygo-palatine a.*—**Superior phrenic a.** Lat., *arteria phrenica superior.* Fr., *artère diaphragmatique supérieurê.* Ger., *obere Zwerchfellpulsader.* A branch of the internal mammary a., which runs down through the thorax with the phrenic nerve and is distributed to the diaphragm. [L, 31.] —**Superior profunda a. of the arm.** Lat., *arteria humeri profunda superior.* Fr., *artère humérale supérieure profonde.* A branch of the brachial a., given off just below the border of the teres major muscle, which accompanies the musculo-spiral nerve in the groove in the os brachii to the outer side of the bone, where it divides into two branches, one of which passes through the external intermuscular septum to the interval between the supinator longus and brachialis anticus muscles to anastomose with the anterior radial recurrent a., and the other descends along the back of the external intermuscular septum to the lower and back part of the os brachii, where it anastomoses with the posterior interosseous recurrent, inferior profunda, and anastomotic arteries. It gives off a number of small branches distributed to the muscles and integument of the arm. [L, 31, 142.]—**Superior right colic a.** See *Right colic a.*—**Superior pudic a.** See *Superior external pudic a.*—**Superior scapular a.** See *Suprascapular a.*—**Superior suprarenal a.** Lat., *arteria suprarenalis superior.* Fr., *artère surrénale supérieure.* Ger., *obere Nebennierenpulsader.* A branch of the inferior phrenic a., distributed to the suprarenal capsule. [L, 31.]—**Superior thoracic a.** Lat., *arteria thoracica superior.* Fr., *artère thoracique supérieure.* Ger., *oberste Brustpulsader.* Sp., *arteria torácica superior.* A branch of the axillary a., which arises near the lower border of the subclavian muscle, runs downward and inward across the first intercostal space, and terminates in branches distributed to the pectoralis major and minor, serratus magnus, and intercostal muscles. [L, 31.]—**Superior thyreoid a.** Lat., *arteria thyreoidea superior.* Fr., *artère thyréoïdienne supérieure.* Ger., *obere Schilddrüsenpulsader.* Sp., *arteria tiroidea superior.* The lowermost of the branches of the external carotid a., which arises a little below the great cornu of the hyoid bone and runs forward and upward to the upper margin of the thyreoid cartilage, where it turns downward and divides, at the upper border of the thyreoid gland, into a number of small branches. It gives off the hyoid, superior laryngeal, sterno-mastoid, and crico-thyreoid arteries, and branches to the thyreoid gland and to the structures in its vicinity. [L, 31, 172.]—**Superior ureteric a.** Lat., *arteria ureterica superior.* A small branch of the renal a., distributed to the upper part of the ureter. [L.]—**Superior vesical (or vesicular) arteries.** Lat., *arteriæ vesicales superiores.* Fr., *artères vésicales supérieures.* Ger., *obere Blasenpulsadern.* Branches, two to four in number, of the internal iliac a., or umbilical arteries, which are distributed to the bladder as far as the urachus. By some anatomists the middle vesical arteries are included under this term. [L, 71.]—**Superior volar a.** See *Superficial volar a.*—**Supermaxillodental a.** See *Superior dental a.*—**Superscapular a.** See *Suprascapular a.*—**Supra-acromial a.** A branch of the suprascapular a., distributed to the neighborhood of the acromion. [L, 173.]—**Supramaxillary a.** Fr., *artère sus-maxillaire.* See *Superior dental a.*—**Supra-orbital a.** Lat., *arteria supra-orbitalis.* Fr., *artère sus-orbitaire.* Ger., *Oberaugenhöhlenpulsader.* Sp., *arteria supra-orbitaria.* A branch of the ophthalmic a., given off at the point where it crosses the optic nerve, which passes out of the orbit through the supra-orbital notch and is distributed to the eyelids and the forehead. [L, 142.]—**Suprarenal arteries.** See *Capsular a.*, *Superior suprarenal a.*, and *Inferior suprarenal arteries.*—**Suprascapular a.** Lat., *arteria suprascapularis.* Fr., *artère sus-scapulaire.* Ger., *obere Schulterblattsarterie.* Sp., *arteria supra-escapular.* A branch of the thyreoid axis, which runs across the subclavian and behind the clavicle to the upper border of the scapula in the neighborhood of the suprascapular notch, where it passes down into the supraspinous fossa. It gives off the supra-acromial and suprasternal arteries and numerous branches to the lower cervical muscles and those of the scapula. [L, 142.]—**Supraspinous a.** Lat., *arteria supraspinata.* A branch of the transverse cervical a., distributed to the supraspinatus muscle and the integument covering it. [L, 142.]—**Suprasternal a.** A branch of the suprascapular a., which passes over the inner end of the clavicle and is distributed to the anterior pectoral region. [L, 142.]—**Sural arteries.** Lat., *arteriæ gemellæ.* See *Deep* and *Superficial sural arteries.*—**Tarsal arteries.** Lat., *arteriæ tarseæ.* Fr., *artères tarsiennes.* See *External* and *Internal tarsal a.*—**Temporal a.** Lat., *arteria temporalis.* Fr., *artère temporale.* A term usually applied to the superficial temporal a. (*q. v.*). [L.] See also *Anterior temporal a.*, *Deep anterior temporal a.*, *Posterior temporal a.*, *Deep posterior temporal a.*, and *Middle temporal a.*—**Temporo-frontal a.** See *Anterior temporal a.*—**Temporo-occipital a.** See *Posterior temporal a.* —**Termatic a.** [Wilder]. Lat., *arteria termatica.* Fr., *artère termatique.* An a. which arises at the junction of the anterior cerebral arteries, or (when that exists) from the anterior communicating a., and is distributed to the lamina terminalis (the terma of Wilder), the adjacent cerebral cortex, and the genu. [B. G. Wilder, "N. Y. Med. Jour.," March 21, 1885, p. 325; "Jour. of Nerv. and Ment. Dis.," July, 1885.]—**Testicular arteries.** See *Internal* and *External spermatic a.*—**Third perforating a.** Lat., *arteria perforans femoris tertia.* A branch of the deep femoral a., distributed to the adductor magnus muscle. [L, 142.]—**Thoracic arteries.** Fr., *artères thoraciques.* Branches of the subclavian a. distributed, in birds, to the pectoral region. [L, 158.] See also *Internal* and *Superior thoracic a.* and *External mammary a.*—**Thymic arteries.** Fr., *artères thymiques.* See *Anterior mediastinal arteries.*—**Thyreoid arteries.** See *Accessory*, *Superior*, *Middle*, *Inferior*, and *Deep thyreoid a.*—**Thyreo-laryngeal a.** See *Superior thyreoid a.*—**Tibial arteries.** See *Anterior* and *Posterior tibial a.*, *Anterior* and *Posterior tibial recurrent a.*, and *Profunda tibial a. of the foot.*—**Tonsillar a.** Lat., *arteria tonsillaris.* Fr., *artère tonsillaire.* Ger., *Mandelpulsader.* A branch of the facial a., distributed to the tonsil and the side of the tongue. [L, 31.]—**Trachelo-muscular a.** See *Inferior cervical a.*—**Transversalis colli a.** See *Transverse cervical a.*—**Transverse arteries.** A term applied to the lateral branches of the basilar a., distributed to the pons Varolii. [L, 172.]—**Transverse cervical a.** Lat., *arteria cervicalis transversa.* Fr., *artère cervicale transverse.* Ger., *quere Nackenarterie.* Sp., *arteria cervical transversa.* A branch of the thyreoid axis, which runs outward to a point near the lower border of the levator anguli scapulæ muscle, where it divides into the posterior and superficial cervical arteries. [L, 172.]—**Transverse colic a.** A branch of the middle colic a., distributed to the concave side of the transverse colon. [L, 179.]—**Transverse facial a.** Lat., *arteria transversa facialis.* Fr., *artère transverse faciale.* Ger., *quere Antlitzarterie.* A branch of the superficial temporal a., which arises within the parotid gland and runs across the face, lying above the parotid duct and upon the masseter muscle. It gives off branches to the parotid gland, the masseter muscle, and the side of the face. [L, 142.]—**Transverse humeral a.** See *Suprascapular a.*—**Transverse perineal a.** Lat., *arteria transversa perinœi.* Fr., *artère transverse du périnée.* Ger., *quere Dammpulsader.* Sp., *arteria transversal del periné.* A branch of the perineal or internal pudic a., which passes inward to the central point of the perinæum and is distributed to the parts between the anus and the urethra. By some anatomists this term is applied to what is more commonly described as the superficial perineal a.

[L, 31, 115, 142.]—**Transverse scapular a.** Lat., *arteria transversa scapulæ.* See *Suprascapular a.* and *Transverse cervical a.*—**Transverse tarsal a.** See *Tarsal a.*—**Tympanic a.** Lat., *arteria tympanica.* Fr., *artère tympanique.* Ger., *Paukenfellsarterie.* The anterior tympanic a., or the arteria tympanica inferior, or the external auditory a., especially the former. [L.]—**Ulnar a.** Lat., *arteria ulnaris.* Fr., *artère cubitale.* Ger., *Ellenbogenpulsader.* Sp., *arteria cubital.* The larger of the two terminal branches of the brachial a., which runs along the inner side of the forearm to the palm of the hand, where it terminates as the superficial palmar arch. It begins a little below the bend of the elbow and runs downward and inward to about the middle of the inner border of the forearm, along which it runs to the wrist and crosses the annular ligament on the radial side of the pisiform bone to reach the palm of the hand, where it is termed the superficial palmar arch. In the forearm it gives off the anterior and posterior ulnar recurrent and the common interosseous arteries, and on the wrist the anterior and posterior ulno-carpal arteries. It also furnishes branches to the structures it traverses. [L, 142, 172.]—**Ulnar digital arteries.** The palmar and dorsal digital arteries on the ulnar border of the fingers. [L.]—**Ulnar profunda a. of the hand.** Lat., *arteria volaris profunda ulnaris.* The termination of the ulnar a. in the palm of the hand. [L, 179.]

THE UTERINE AND OVARIAN ARTERIES. (AFTER HENLE.)

AI, the common iliac; *H*, the internal iliac; *I*, the external iliac; *SPI*, the aortic uterine; *UT*, the hypogastric uterine.

—**Ulnar recurrent a.** Lat., *arteria recurrens ulnaris.* Ger., *zurücklaufende Ellenbogenarterie.* A term sometimes applied to the anterior ulnar recurrent a. (*q. v.*). [L.]—**Umbilical arteries, Umbilico-fœtal arteries** [B. Ridge]. Lat., *arteriæ umbilicales.* Fr., *artères ombilicales.* Ger., *Nabelpulsadern.* It., *arterie ombellicali.* Sp., *arterias umbilicales.* The arteries of the fœtus which arise from the hypogastric arteries and proceed to the umbilicus and thence through the umbilical cord to the placenta, where they divide into numerous branches distributed to the chorionic villi, to which they convey venous blood to be aerated.—**Ureteric arteries.** See *Superior* and *Inferior ureteric a.* and *Middle ureteric arteries.*—**Urethral a.** See *A. of the bulb of the urethra.*—**Urethro-bulbar a.** See *A. of the bulb of the urethra* and *Transverse perineal a.*—**Uterine arteries.** Lat., *arteriæ uterinæ.* Fr., *artères utérines.* See *Aortic* and *Hypogastric uterine a.* and *Circular a. of the uterus.*—**Utero-ovarian a.** Lat., *arteria utero-ovarica.* Fr., *artère utéro-ovarienne.* Sp., *arteria utero-ovárica.* See *Aortic uterine a.*—**Utero-placental arteries.** Fr., *artères utéro-placentaires* (ou *spirales*). Numerous small spiral arteries of the gravid uterus, formerly imagined to open directly into the placental lacunæ, but now known to lose their distinctive character when they penetrate into the placenta. [Kölliker (A, 127).]—**Uveal arteries.** See *Posterior* and *Short ciliary arteries.*—**Vaginal a.** Lat., *arteria vaginalis.* Fr., *artère vaginale.* Ger., *Scheidenpulsader.* A branch of the internal iliac a. of the female, corresponding to the inferior vesical a. of the male, which is distributed to the vagina, the bulb of the vestibule, the lower part of the bladder, and the contiguous part of the rectum. [L, 142, 172.]—**Vertebral a.** Lat., *arteria vertebralis.* Fr., *artère vertébrale.* Ger., *Wirbelpulsader.* Sp., *arteria vertebral.* A branch of the first part of the subclavian a., which passes backward and enters the foramen in the transverse process of the sixth cervical vertebra, ascends in the corresponding foramina of the other cervical vertebræ, and enters the cranium through the foramen magnum; passing upward and forward to the front of the medulla, it unites with its fellow to form the basilar a. It gives off branches, some of which are distributed to the muscles of the neck and others of which enter the spinal canal through the intervertebral foramina. [L, 142, 172.] See also *Inferior vertebral arteries* and *Primitive* AORTÆ.—**Vesical** (or **Vesicular**) **arteries.** See *Superior* and *Inferior vesical a.* and *Middle vesical arteries.*—**Vesico-vaginal a.** Lat., *arteria vesico-vaginalis.* 1. See *Vaginal a.* 2. The analogue in the female of the vesico-prostatic arteries of the male. [L.]—**Vesico-prostatic arteries.** Lat., *arteriæ vesico-prostaticæ.* Branches of the middle hæmorrhoidal a., distributed to the prostate gland and the vesiculæ seminales. [L, 31.]—**Vestibular arteries.** Branches of the internal auditory a., distributed to the membranous labyrinth. [L, 172.]—**Vidian a.** Lat., *arteria vidiana.* Fr., *artère vidienne.* Ger., *vidische Pulsader.* A branch of the internal maxillary a., which passes through the vidian canal to be distributed to the Eustachian tube and the upper part of the pharynx. [L, 115.]—**Vitelline arteries.** Lat., *arteriæ vitellinæ.* Fr., *artères vitellines.* Sp., *arterias vitelinas.* See *Omphalo-mesenteric arteries.*—**Volar a. of the little finger.** See ARTERIA *volaris digiti minimi.*—**Volar digital arteries.** See *Palmar digital arteries.*—**Volar interosseal arteries.** See *Palmar interosseous arteries.*—**Volar radial arteries.** The digital arteries on the radial side of the palmar aspect of the fingers. [L, 179.]—**Volar ulnar a. of the little finger.** See ARTERIA *volaris digiti minimi.*

ARTETISCOS, ARTETISCUS (Lat.), n's m. A³rt-e²t-i²sk′o²s, -u³s(u⁴s). Fr., *artétisque.* One who has lost a limb. [Dornæus, Ruland, Johnson (L, 53).]

ARTETYKES, n. A³r′te-tix. Probably related to *Arthritis.* An obsolete term for a sort of gout or other arthritic trouble. [B, 222.]

ARTHANITA (Lat.), n. f. A³r-tha³-ni(ne)′ta³. Fr., *arthanite.* 1. The *Cyclamen europæum.* [L, 105.] 2. An ointment made from the same. [A, 385.]

ARTHANITIC ACID, ARTHANITIN, n's. A³r-tha²n-i²t′-i²k, -tha²n′i²t-i²n. Fr., *acide arthanitique, arthanitine.* Ger., *Arthanitinsäure, Arthanitin.* See CYCLAMIN.

ARTHEMISIA (Lat.), n. f. A³r-the²m-i²s′i²-a³. See ARTEMISIA.

ARTHERETICUS (Lat.), adj. A³r-the²r-e²t′i²k-u³s(u⁴s). See ARTHRITIC.

ARTHETICA (Lat.), n., f. and n. pl. of adj. *artheticus* (*gutta, planta,* or *remedia* understood). A³r-the²t′i²k-a³. Fr., *arthétique* ou *arthétiques.* 1. Arthritis. [A, 322.] 2. The ground-pine (*Ajuga chamæpitys*). [B, 121.] 3. Antarthritic remedies. [A, 322.]

ARTHETICUS (Lat.), adj. A³r-the²t′i²k-u³s(u⁴s). Fr., *arthétique.* See ARTHRITIC.

ARTHO [Basque], n. Related to ἄρτος, bread. Maize. [B. 121.]

ARTHOICUM (Lat.), n. n. A³r-tho(o²)′i²k-u³m(u⁴m). See ARTOICUM.

ARTHONARIÆ (Lat.), n. f. pl. A³r-tho²n-a(a³)′ri²-e(a³-e²). From *Arthonaria* the typical genus. A section of lichens (*Blastopsoræ*), made by Reichenbach. [B, 170.]

ARTHONIA (Lat.), n. f. A³r-tho(tho²)′ni²-a³. From ἄρθειν (or ἄρδειν), to sprinkle, because the thallus is sprinkled with minute apothecia. A genus of lichens, established by Acharius. [B, 170.]—**A. crocea** [Acharius]. See PELTIGERA *crocea.*—**A. esculenta** [Acharius]. See URCEOLARIA *esculenta.*—**A. marginata** [Duf.]. See GRAPHIS *marginata.*—**A. polymorpha** [Acharius]. See GRAPHIS *polymorpha.*—**A. sinensigrapha** [Fée]. See LECANACTIS *sinensigrapha.*

ARTHONIACEÆ [Reichenbach] (Lat.), n. f. pl. A³r-tho²n-i²-a(a³)′se²(ke²)-e(a³-e²). A family of lichens (*Coniopsoræ*), including *Arthonia* and four other genera. [B, 170.]

ARTHONIEÆ [Körber], **ARTHONIEI** (Lat.), n's f. and m. pl. A³r-tho²n-i(e)′e²-e(a³-e²), -i(e). A subfamily of lichens (*Graphideæ* or *Graphidiacei*), including *Arthonia* and other genera. [B, 75, 170.]

ARTHONIOIDES (Lat.), adj. A³r-tho²n-i²-o-i(e)′dez(das). From ἄρθειν (see ARTHONIA), and εἶδος, resemblance. Resembling the *Arthonia;* a species-name applied to lichens. [B, 252.]

ARTHRÆMIA (Lat.), n. f. A³r-thre′(thra³′e²)-mi²-a³. From ἄρθρον, a joint, and αἷμα, blood. Fr., *arthrémie.* Congestion of a joint. [L, 41, 50.]

ARTHRAGRA (Lat.), n. f. A³r′thra³g-ra³. From ἄρθρον, a joint, and ἄγρα, a seizure. Gout. [M, 13.]

ARTHRAGROSIS (Lat.), n. f. A³r-thra³-gro′si²s. Gen., *arthragro′seos* (*-sis*). Fr., *arthragrose.* Ger., *Gichtkrankheit.* Gout; in the pl., *arthragroses,* gouty affections, especially those of the skin. [G, 5; L, 50.] Cf. ARTHRITIDES.

O, no; O², not; O³, whole; Th, thin; Th², the; U, like oo in too; U², blue; U³, lull; U⁴, full; U⁵, urn; U⁶, like ü (German).

ARTHRALGIA (Lat.), n. f. A^{3}r-thra^{2}l(thra^{3}l)′ji^2(gi^2)-a^3. From ἄρθρον, a joint, and ἄλγος, pain. Fr., *arthralgie.* Ger., *Arthralgie, Gliederschmerz.* Articular pain or neuralgia. [A, 301, 385.]—**A. hysterica.** Fr., *arthralgie hystérique.* A. due to hysteria. [M, 2.]—**A. saturnina.** Fr., *arthralgie saturnine.* Ger., *Bleiarthralgie.* One of the manifestations of lead poisoning, characterized by severe pain in the joints, with rigidity and cramps of the neighboring muscles. [M, 2.]

ARTHRALGIC, adj. A^{3}r-thra^{2}l′ji^{2}k. Lat., *arthralgicus.* Fr., *arthralgique.* Pertaining to arthralgia. [A, 385.]

ARTHRAPOBROCHISMUS (Lat.), n. m. A^{3}rth-ra^{2}p(ra^{3}p)-o-bro-ki^{2}z(ch^{2}i^{2}s)′mu^{3}s(mu^{4}s). From ἄρθρον, a limb, and ἀποβροχισμός, strangulation. Syn.: *articuli subligatio.* Firm bandaging of a limb, or strangulation with a bandage. [L, 50.]

ARTHRAPOSPHINXIS (Lat.), n. f. A^{3}rth-ra^{2}p(ra^{3}p)-o-sfi^{2}n^{2}x′i^{2}s. Gen., *arthraposphinx′eos* (*-is*). From ἄρθρον, a limb, and ἀπόσφιγξις, a squeezing tight. See ARTHRAPOBROCHISMUS.

ARTHRAPOSTEMA (Lat.), n. n. A^{3}rth-ra^{2}p(ra^{3}p)-o-ste(sta)′-ma^3. Gen., *arthrapostem′atos* (*-tis*). From ἄρθρον, a joint, and ἀπόστημα, an abscess. Fr., *arthrapostème.* Ger., *Gelenkabscess.* Abscess of a joint. [M, 13.]

ARTHRECTASIA, ARTHRECTASIS (Lat.), n's f. A^{3}rth-re^{2}k-ta(ta^3)′zi^2(si^2)-a^3, -re^{2}k′ta^3-si^{2}s. Gen., *arthrecta′siæ, -ta′seos* (*-ec′tasis*). From ἄρθρον, a joint, and ἔκτασις, dilatation. Fr., *arthrectasie.* Ger., *Arthrectasie, Gelenkausdehnung.* Distension of the cavity of a joint. [A, 385.]

ARTHRECTOMY, n. A^{3}rth-re^{2}k′to-mi^2. From ἄρθρον, a joint, and ἐκτομή (from ἐκτέμνειν), a cutting away. Fr., *arthrectomie.* Ger., *Arthrectomie.* It., *artrectomia.* The operation of opening a joint and removing diseased structures by a process of scraping, gouging, or cutting; also excision of a joint. [G. A. Wright, "Med. Chron.," July, 1885, p. 271.]

ARTHRELCOSIS (Lat.), n. f. A^{3}rth-re^{2}l-ko′si^{2}s. Gen., *arthrelco′seos* (*-sis*). From ἄρθρον, a joint, and ἕλκωσις, ulceration. Fr., *arthrelcose.* Ger., *Gelenkverschwärung* (1st def.), *Gichtgeschwür* (2d def.). 1. Ulceration of a joint. [E; L, 50.] 2. Ulceration in the vicinity of gouty joints; the discharge is said to contain chalky matter. [G, 5.]

ARTHREMBOLA (Lat.), n. f. sing. or n. pl. of adj. *arthrembolus* (*machina* [=μηχανή] or *instrumenta* [=ὄργανα] understood). A^{3}rth-re^{2}m′bo-la^3. From ἄρθρον, a joint or a limb, and ἐμβάλλειν, to set, put into place. Fr., *arthrembole* (sing.). Ger., *Einrenkungsmaschine* (sing.), *Gliedzieher* (sing.), *Marterwerkzeuge* (pl.). An ancient appliance for reducing fractures or dislocations; in the pl., a set of appliances for the same purpose. [L, 50.]

ARTHREMBOLESIS (Lat.), n. f. A^{3}rth-re^{2}m-bo-le(la)′si^{2}s. Gen., *arthrembole′seos* (*-sis*). Gr., ἀρθρεμβόλησις. The reduction of a broken or dislocated bone. [L, 50.]

ARTHREMBOLICUS (Lat.), adj. A^{3}rth-re^{2}m-bo^{2}l′i^{2}k-u^{3}s(u^{4}s). Pertaining to arthrembolesis. [L, 50.]

ARTHREMBOLON, ARTHREMBOLUM (Lat.), n's n. A^{3}rth-re^{2}m′bo(bo^2)-lo^{2}n, -lu^{3}m(lu^{4}m). 1. Arthrembolesis. [Galen (L, 50).] 2. See ARTHREMBOLA.

ARTHREMBOLUS (Lat.), adj. A^{3}rth-re^{2}m′bo(bo^2)-lu^{3}s(lu^{4}s). Gr., ἀρθρέμβολος. Pertaining to arthrembolesis; as a n., an arthrembola, also a person who has had a fracture or dislocation reduced. [L, 50.]

ARTHREMPYEMA, ARTHREMPYESIS (Lat.), n's n. and f. A^{3}rth-re^{2}m-pi(pu^6)-e(a)′ma^3, -e(a)′si^{2}s. Gen., *arthrempyem′atos* (*-tis*), *-e′seos* (*-sis*). From ἄρθρον, a joint, and ἐμπύημα or ἐμπύησις, suppuration. Fr., *arthrempyème, arthrempyèse.* Ger., *Gelenkeiterung.* Suppuration of a joint. [A, 322, 385.]

ARTHRENTASIS (Lat.), n. f. A^{3}rth-re^{2}n′ta^3-si^{2}s. Gen., *arthrenta′seos* (*-en′tasis*). From ἄρθρον, a limb, and ἔντασις, distortion. Fr., *arthrentase.* Gouty distortion of the limbs. [L, 50.]

ARTHRETICUS (Lat.), adj. A^{3}rth-re^{2}t′i^{2}k-u^{3}s(u^{4}s). See ARTHRITIC.

ARTHRIC, adj. A^{3}rth′ri^{2}k. Gr., ἀρθρικός. Lat., *arthricus.* Fr., *arthrique.* See ARTICULAR.

ARTHRIDIUM (Lat.), n. n. A^{3}rth-ri^{2}d′i^2-u^{3}m(u^{4}m). Gr., ἀρθρίδιον (dim. of ἄρθρον). Fr., *arthridie.* A little joint. [A, 385; L, 50.]

ARTHRIE [Piorry] (Fr.), n. A^{3}r-tre. See ARTHROPATHY.

ARTHRIFLUENT (Fr.), adj. A^{3}r-tre-flu^6-a^{3}n^2. Proceeding from a diseased joint (said of abscesses). [Nicaise, "Rev. de chir.," June, 1885, p. 486.]

ARTHRIFUGUS (Lat.), adj. A^{3}rth-ri^{2}f′u^2(u^4)-gu^{3}s(gu^{4}s). See ARTHRITIFUGUS.

ARTHRION (Lat.), n. n. A^{3}rth′ri^2-o^{2}n. See ARTHRIUM.

ARTHRIQUE (Fr.), adj. A^{3}r-trek. See ARTICULAR.

ARTHRITE (Fr.), n. A^{3}r-tret. See ARTHRITIS.—**A. aiguë primitive.** Acute synovitis. [L.]—**A. aiguë pseudo-membraneuse.** Acute synovitis with lymphy exudation. [L.]—**A. des jeunes animaux.** See ARTHROCACE *agniculorum.*—**A. génitale.** See *Gonorrhœal* ARTHRITIS.—**A. herpétique** [Bazin]. Arthritis attended with herpetic eruptions. [Jaccoud (M).]—**A. noueuse.** See *Rheumatoid* ARTHRITIS.—**A. par propagation.** An arthritis arising by extension of inflammation from another part. [Ollier (L, 87).]—**A. plastique ankylosante.** A destructive form of arthritis followed by ankylosis. [Guelliot, "Gaz. méd. de Paris," 1882, p. 458 (L).]—**A. rhumatismale** (ou **rhumatoïde**) **chronique.** See *Rheumatoid* ARTHRITIS.—**A. sèche aiguë, A. sèche chronique** [Deville]. See *Rheumatoid* ARTHRITIS.—**A. secondaire.** See *A. par propagation.*—**A. sous-diarthrodiale.** A form of fungous arthritis in which the inflamed medulla gives rise to fleshy granulations between the bone and the articular cartilage. [E, 24.]—**A. suppurée.** Purulent arthritis. [L.]

ARTHRITES (Lat.), adj. A^{3}rth-ri(re)′tez(tas). Gr., ἀρθρίτης. See ARTHRITIC and ARTICULAR.

ARTHRITIA (Lat.), n. f. A^{3}rth-ri^2′shi^2(ti^2)-a^3. Fr., *arthritie.* Gout. [A, 385.]

ARTHRITIC, adj. A^{3}rth-ri^{2}t′i^{2}k. Gr., ἀρθριτικός, ἀρθρίτης (1st def.). Lat., *arthricus* (1st def.), *arthriticus* (2d def.). Fr., *arthritique.* Ger., *arthritisch.* It., *artritico.* Sp., *artritico.* 1. Pertaining to a joint or the joints; articular. [L, 50.] 2. Pertaining to, caused by, or affected with, arthritis or arthritism. [A, 322; B.] 3. Antarthritic. [A, 301.]

ARTHRITICA (Lat.), n., f. of adj. *arthriticus.* A^{3}r-thri^{2}t′i^{2}k-a^3. A section of the genus *Primula,* made by Duby. Also the *Ajuga chamæpitys* [B, 121.] Cf. ARTHETICA.

ARTHRITICUS (Lat.), adj. A^{3}rth-ri^{2}t′i^{2}k-u^{3}s(u^{4}s). Arthritic; as a n. (*morbus* understood), gout.

ARTHRITIDE (Fr.), n. A^{3}r-tre-ted. Bazin's term for any cutaneous disease due to arthritism (*q. v.*). According to that author the a's are specially characterized by a multiplicity of the primary lesions; by a deep-red color, due to intense congestion that not infrequently leads to cutaneous hæmorrhages (petechiæ, etc.); by the absence of decided itching; and by a scanty discharge from eroded surfaces. They are usually confined to certain limited regions (such as the hands, feet, face, or genitals), or, when more widely distributed, assume the form of isolated, circumscribed, asymmetrical patches, which have little tendency to spread and do not become confluent. Moreover, they show a disposition to develop under the influence of changes of weather or of exposure to cold, and are usually associated with other manifestations of arthritism, either in the individual or in his family. [G, 26.] Cf. HERPÉTIDE.—**A's boutonneuses.** A division comprising arthritic prurigo and acne. [Bazin (M, 69).]—**A's bullo-lamelleuses.** A division comprising arthritic pemphigus. [Bazin (M, 69).]—**A's circonscrites.** See *A's communes.*—**A's communes.** The common, or secondary, a's; including rosacea, intertrigo, acne, sycosis, *eczéma circonscrit, herpès successif* et *chronique, hydroa vacciniforme,* and arthritic forms of pityriasis, psoriasis, prurigo, and lichen. [G, 26.]—**A's graves.** See *A's tardives.*—**A's intermédiaires.** See *A's communes.*—**A's primitives.** See *A's pseudo-exanthématiques.*—**A's primitives érythémateuses.** A division of the *a's pseudo-exanthématiques* embracing erythema nodosum, papulo-tubercular erythema, urticaria, and pityriasis rubra acuta. [Bazin (L, 87).]—**A's primitives vésiculeuses.** A division of the *a's pseudo-exanthématiques* embracing herpes circinatus (1st def.) and hydroa vesiculosa. [Bazin (L, 87).]—**A's pseudo-exanthématiques.** Syn.: *pseudo-exanthèmes arthritiques.* The arthritic pseudo-exanthemata; including erythema nodosum, papulo-tubercular erythema (*érythème papulo-tuberculeux*), urticaria hæmorrhagica, herpes circinatus (1st def.), vesicular hydroa (*hydroa vésiculeux*), and *pityriasis rubra aiguë.* [G, 26.]—**A's pseudo-exanthématiques bulleuses.** A division comprising acute pemphigus. [Bazin (M, 69).]—**A's pseudo-exanthématiques érythémateuses.** A division including rheumatic erythema, urticaria, and acute disseminated pityriasis. [Bazin (M, 69).]—**A's pseudo-exanthématiques vesiculeuses.** A division comprising phlyctenular herpes and zoster. [Bazin (M, 69).]—**A's puro-crustacées.** A division comprising arthritic sycosis, ecthyma, and furuncle. [Bazin (M, 69).]—**A's sèches érythémateuses.** A division comprising arthritic intertrigo, papulo-tubercular erythema, and chronic arthritic urticaria. [Bazin (M, 69).]—**A's secondaires.** See *A's communes.*—**A's squameuses.** A division comprising arthritic pityriasis and psoriasis. [Bazin (L, 87).]—**A's sub-aiguës.** See *A's pseudo-exanthématiques.*—**A's tardives et graves.** Late a's of a severe character; including the arthritic form of chronic urticaria (cnidosis), *eczéma nummulaire* (ou *suintant généralisé*), *hydroa bulleux,* chronic pemphigus (the arthritic form), and hidrosadenitis. [G, 26.]—**A's vésico-squameuses.** A division comprising circumscribed dry eczema and vacciniform hydroa. [Bazin (L, 87).]

ARTHRITIDOLITHUS (Lat.), n. m. A^{3}rth-ri^{2}t-i^{2}d-o^{2}l′i^{2}th-u^{3}s(u^{4}s). See ARTHRITOLITH.

ARTHRITIE (Fr.), n. A^{3}r-tre-te. Gout. [A, 385.]

ARTHRITIFUGUS (Lat.), adj. A^{3}rth-ri^{2}t-i^{2}f′u^2(u^4)-gu^{3}s(gu^{4}s). From *arthritis* (=ἀρθρῖτις), gout, and *fugare,* to put to flight. Fr., *arthrifuge.* Efficacious against gout. [L, 41.]—**Arthritifugum magnum.** Cold water, from its supposed efficacy in gouty disorders. [Heyden (L, 130).]

ARTHRITIKER (Ger.), n. A^{3}r-tri^{2}t′i^{2}k-e^{2}r. A person affected with arthritic disease.

ARTHRITIQUE (Fr.), adj. A^{3}r-tre-tek. Arthritic; as a n., the *Ajuga chamæpitys.* [L, 105.]

ARTHRITIS (Lat.), n. f. A^{3}rth-ri(re)′ti^{2}s. Gen., *arthrit′idis.* Gr., ἀρθρῖτις (fem. of adj. ἀρθρίτης [νόσος understood]). Fr., *arthrite, goutte* (2d def.). Ger., *Gelenkentzündung* (1st def.), *Gicht* (2d def.). It., *artrite.* Sp., *artritis.* 1. Inflammation of a joint. [E.] 2. Gout. [A, 322.]—**Acute a.** Lat., *a. acuta.* Fr., *arthrite aiguë.* Ger., *regelmässige acute Gicht.* Any acute inflammation of a joint, but especially one due to gout. [L, 44.]—**Acute rheumatic a.** See *Acute articular* RHEUMATISM.—**Acute serous a.** Acute synovitis. [L, 44.]—**A. aberrans.** Ger., *herumschweifende Gicht.* Metastatic gout. [L, 84.]—**A. a colica** [Musgrave.]. Gouty pains in the back from eating unripe fruit. [L, 132.]—**A. acuta.** See *Acute a.*—**A. æstiva.** Fr., *goutte chaude.* A mild form of gout described by Sauvages (who was himself subject to it) as not attended with the formation of swellings and not severe enough to compel the patient to remain indoors. [L, 132.]—**A. alba.** See *A. chlorotica.*—**A. americana.** See FRAMBŒSIA.—**A. anomala.**

Fr., *goute anomale.* Ger., *unregelmässige Gicht.* Gout which pursues an irregular or anomalous course. [A, 305.].—**A. arthrodynia.** See *A.* (2d def.).—**A. asthenica.** Fr., *goutte asthénique.* Atonic gout. [A, 385.]—**A. asthmatica** [Musgrave]. A form of gout occurring in elderly asthmatic persons, which is mitigated by an attack of asthma. [L, 132.]—**A. atonica.** See *Atonic* GOUT. —**A. atypica.** See *A. anomala.*—**A. bahamensis.** An affection met with in the Bahamas, characterized by atrocious pains in the joints and terminating in itching; attributed to eating a certain kind of fish. [L, 132.]—**A. blennorrhagica.** Fr., *arthrite blennorrhagique.* See *Gonorrhœal* RHEUMATISM.—**A. calida.** See *Acute a.* **A. cheiragra, A. chiragra.** Gout in the hands. [L, 119.]—**A. chlorotica.** A form seen in women who, being gouty by inheritance, are chlorotic or subject to menstrual disorders. [L, 132.]—**A. chronica.** Fr., *goutte chronique.* Ger., *chronische Gicht.* A form of gout in which the joint manifestations are not so prominent as those affecting other parts of the body. [M, 2.]—**A. deformans.** See *Rheumatoid a.*—**A. diaphragmatica.** Angina pectoris. [A, 316.]—**A. erratica.** See *A. aberrans.*—**A. exanthematica.** Gout occurring in persons affected with hæmorrhoids or any form of cutaneous disease. [L, 132.]—**A. febricosa** [Werlhof]. A mild form of gout or rheumatic gout, not well marked, with remittent fever. [L, 132.]—**A. febrisequa.** A form of gout following fevers. [L, 132.]—**A. fixa.** Gout that remains confined to the joint first attacked. [L, 51.] **A. frigida.** See *A. chronica.*—**A. genuina.** See *A. regularis.*—**A. gonagra.** Gout in the knees. [L, 119.]—**A. gonorrhoica.** Ger., *Trippergicht.* A severe rheumatoid affection, especially of the knee, which sometimes occurs in connection with gonorrhœa. [A, 305.] Cf. *Gonorrhœal* RHEUMATISM.—**A. hiemalis.** Winter gout; gout that occurs more frequently at other seasons than in summer. [L, 132.]—**A. hydrarthros.** See HYDRARTHROSIS.—**A. irregularis.** See *A. anomala.*—**A. inflammatoria.** See *Acute a.*—**A. interna.** See *A. visceralis.*—**A. ischias.** Gout in the region of the hip. [A, 325; L, 119.]—**A. larvata** [Stoll]. Fr., *goutte larvée.* Ger., *verlarvte Gicht.* Masked gout; gout which does not show itself by the usual symptoms. [L, 136.]—**A. maxillaris.** Rheumatoid a. of the temporo-maxillary articulation. [M, 60.]—**A. melancholica** [Musgrave] A mild form of gout attacking persons debilitated by grief, overstudy, hysteria, hypochondriasis, etc. [L, 132.]—**A. metastatica retrograda.** Retrocedent gout. [D, 1.]—**A. morbis cuticularibus subjecta.** See *A. exanthematica.*—**A. neurotica.** Ger., *neurotische A.* An articular inflammation caused by injury or disease of the nervous system; characterized by absence of fever; occurring only in paralyzed limbs, and accompanied by doughy œdema and cutaneous and muscular atrophy, etc. [J. M'Ardle, "Dublin Jour. of Med. Sci.," June, 1885, p. 490.]—**A. nodosa.** Fr., *goutte nouée* (ou *noueuse*). Gout attended with the formation of lumps of chalky deposit about the joints. [A, 385.]— —**A. pauperum.** See *Rheumatoid a.*—**A. planetica.** See *A. aberrans.*—**A. podagra.** Gout in the feet. [L, 132.]—**A. regularis.** Fr., *goutte régulière.* Well-marked acute or chronic gout. [A, 305.]—**A. retrograda.** Fr., *goutte remontée* (ou *rétrocedée*). Ger., *zurückgetretene Gicht.* Suppressed gout. [A, 385.]—**A. rhachialgica.** See *A. a colica.*—**A. rhachitica.** A term applied by Sauvages to pains in the bones in cases of rickets. [L, 132.]—**A. rheumatica.** 1. Rheumatoid a. 2. Acute rheumatism. [L, 132.]—**A. rheumatica chronica.** See *Rheumatoid a.*—**A. rheumatismo superveniens** [Musgrave]. See *Rheumatoid a.*—**A. rheumatismus.** Acute rheumatism. [L, 63.]—**A. rheumatoides.** See *Rheumatoid a.*—**A. scarlatinosa.** See *Scarlatinal* RHEUMATISM.—**A. scorbutica** [Musgrave]. Gout occurring in scorbutic persons or accompanied with bleeding gums, as in scurvy. [L, 132.]—**A. scorbutica vaga.** An old term for a disease described as a grave and malignant form of gout, rapidly undermining the vital powers. [L, 53.]—**A. sicca.** Fr., *arthrite sèche.* See *Rheumatoid a.*—**A. spuria.** 1. An old term for vague pains in any part of the body. [L, 128.] 2. A periodical swelling of one or more joints, closely resembling ordinary rheumatism or gout, but depending on an idiopathic or a traumatic affection of the nerves of the part. [Remak (E, 12).]—**A. syphilitica** [Musgrave]. The nocturnal pains of syphilis, also gonorrhœal rheumatism. [L, 132.]—**A. typica.** See *Acute a.*—**A. uratica.** Gout due to an excessive formation of uric acid. [D, 4.]—**A. urethralis.** See *Gonorrhœal* RHEUMATISM.—**A. urica.** See *A. uratica.*—**A. vaga.** See *A. aberrans.*—**A. venerea.** See *A. syphilitica.*—**A. vera.** See *Acute a.*—**A. visceralis.** A gouty affection of some internal organ alternating with articular manifestations of gout. [M, 2.]—**Asthenic a.** Lat., *a. asthenica.* Fr., *goutte asthénique.* Atonic gout. [A, 385.]—**Blennorrhagic a.** See *Gonorrhœal* RHEUMATISM.—**Chronic a.** See *A. chronica.*—**Chronic rheumatic** (or **rheumatoid**) **a.** See *Rheumatoid a.*—**Chronic strumous a.** See *Fungous a.*—**Dry a.** Lat., *a. sicca.* Fr., *arthrite sèche.* See *Rheumatoid a.* —**Fungous a.** Fr., *arthrite fongueuse.* Ger., *fungöse Gelenkentzündung* [Volkmann]. White swelling; a chronic strumous inflammation of a joint, characterized by the formation of granulation tissue with subsequent fibrous, fatty, or purulent degeneration. [R. Barwell (A, 277).]—**Gelatinous a.** See *Fungous a.*—**Gonorrhœal a.** See *Gonorrhœal* RHEUMATISM.—**Gouty a.** Fr., *arthrite goutteuse.* Articular inflammation due to gout.—**Intervertebral a.** See SPONDYLARTHRITIS.—**Osteo-a.** See the major list. —**Proliferating a.** See *Chronic* OSTEO-A.—**Rheumatic a., Rheumatoid a.** [Garrod]. Fr., *arthrite rhumatismale* (ou *rhumatoïde*), *rhumatisme noueux* [Trousseau], *usure des cartilages articulaires* [Cruveilhier]. Ger., *rheumatische A.* Syn.: *osteo-a., rheumatic gout.* A form of a., usually chronic, occurring in persons who are out of health, but not necessarily rheumatic or gouty; distinguished by invading the various joints in succession and leading to permanent deformities similar to those of chronic gout (osseous nodes and stiffness of the joints with distortion). Sometimes only the fingers and toes are affected. [A. B. Garrod (A, 438).]—**Strumous a.** See *Fungous a.*—**Subdiarthrodial a.** See ARTHRITE *sous-diarthrodiale.*

ARTHRITISM, n. A^{3}rth'ri^{2}t-i^{2}zm. Fr., *arthritisme.* The gouty or rheumatic diathesis. [A, 385.]

ARTHRITISME (Fr.), n. A^{3}r-tri^{2}t-i^{2}zm. See ARTHRITISM.—**A. abarticulaire.** An arthritic tendency without involvement of the joints (manifested by such phenomena as localized œdema and cutaneous and subcutaneous nodosities). [Chauvet, "Gaz. hebdom. de méd. et de chir.," Feb. 15, 1884, p. 112 (D).]

ARTHRITOLITH, n. A^{3}rth-ri^{2}t'o-li^{2}th. Lat., *arthritolithus* (from ἀρθρίτης, arthritic, and λίθος, a stone). Fr., *arthritolithe.* Ger., *Gichtstein, arthritisches Concrement.* Syn.: *tophus arthriticus.* A gouty cretaceous deposit in or near a joint. [A, 301.]

ARTHRIUM (Lat.), n. n. A^{3}rth'ri^2-u^{3}m(u^{4}m). From ἄρθρον, a joint. Fr., *arthrion.* Lit., a little joint; Kirby's name for a small joint at the base of the last segment of the foot in certain *Coleoptera.* [L, 41, 119.]

ARTHRO-ARCTIA (Lat.), n. f. A^{3}rth"ro-a^{3}rk'shi^2(ti^2)-a^3. Fr., *arthro-arctie* [Piorry]. See ARTHROSTENOSIS.

ARTHROBACTERIACEÆ (Lat.), n. f. pl. A^{3}rth"ro-ba^{2}k-(ba^{3}k)-te(ta)-ri^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *arthrobactériacées.* Ger., *Arthrobacteriaceen.* Of De Bary and others, a division (genus) of arthrosporous *Schizomycetes* (*Arthrosporeæ*), comprising those forms which occur characteristically as rods, either solitary or united into pseudo-filaments. It includes the subdivisions (subgenera) *Arthrobacterium* and *Spirulina.* [H. M. Ward (B, 77); B, 270.]

ARTHROBACTERIUM (Lat.), n. n. A^{3}rth"ro-ba^{2}k(ba^{3}k)-te(ta)'ri^2-u^{3}m(u^{4}m). De Bary's name for those members of the genus *Bacterium* in which endogenous spore-formation has not been observed. [B, 54.] See BACTERIUM.—**A. aceti** [De Bary]. See BACTERIUM *aceti.*—**A. chlorinum.** See BACTERIUM *chlorinum.*—**A. merismopœdioides.** See BACTERIUM *merismopœdioides.*—**A. pastorianum** [De Bary]. See BACTERIUM *pastorianum.*—**A. viride.** See BACTERIUM *viride.*—**A. Zopfii.** See BACTERIUM *Zopfii.*

ARTHROBOTRYDEÆ (Lat.), n. f. pl. A^{3}r-thro(thro^2)-bo^{2}t-ri^{2}d(ru^{6}d)'e^2-e(a^3-e^2). Of Corda, a family of *Fungi* including genera, such as *Arthrobotrys,* which have bilocular spores. [B, 121.]

ARTHROBOTRYS (Lat.), n. f. A^{3}r-thro-bo^{2}t'ri^{2}s(ru^{6}s). Gen., *arthrobot'ryos* (*-is*). From ἄρθρον, a joint, and βότρυς, a cluster of grapes. 1. Of Corda, a genus of *Fungi.* 2. Of Wallich a genus of ferns. [B, 170.]

ARTHROBRANCHIÆ (Lat.), n. f. pl. A^{3}rth-ro-bra^{2}n^2-(bra^{3}n^2)'ki^2(ch^{2}i^2)-e(a^3-e^2). From ἄρθρον, a joint, and βράγχιον, a gill. Arthrobranchs; the branchiæ which, in many of the *Crustacea,* are attached to the interarticular membranes connecting the basal joints of the limbs and the thorax. [L, 168.]

ARTHROCACE (Lat.), n. f. A^{3}rth-ro^{2}k'a^3-se(ka). From ἄρθρον, a joint, and κακός, evil, pernicious. Fr., *arthrocace.* Ger., *Arthrokake.* An old term for various severe inflammatory diseases of joints, especially fungous arthritis. [A, 385.]—**A. agniculorum.** Fr., *arthrite des jeunes animaux.* Ger., *Lämmerlähme, Kälberlähme, Füllenlähme, Fohlenlähme, Gelenkfluss der Säuglinge, ungarische Gelenkseuche.* It., *artrite dei giovanni animali.* A disease occurring sporadically or enzootically in colts, calves, lambs, and pigs, soon after birth, supposed to depend on blood poisoning arising from inflammation of the umbilical vein. It may take the form of rhachitis, arthritis, rapidly progressing gout, a simple rheumatic or scrofulous affection, or a general morbid condition. [Bollinger (L, 44).]—**A. coxarum.** See MORBUS *coxarius.* —**A. pullorum equinorum.** See *A. agniculorum.*—**A. sénile** (Fr.). A term applied to various senile changes in the joints, either of the synovial membrane or of the articular cartilage. [Gosselin, "Bull. de la soc. de chir.," 1851, p. 611 (L).]—**A. vitulorum.** See *A. agniculorum.*

ARTHROCACIA (Lat.), n. f. A^{3}rth-ro-ka(ka^3)'si^2(ki^2)-a^3. Fr., *arthrocacie.* Ger., *Arthrokakie.* A chronic joint disease, especially one characterized by dislocation not dependent on violence. [Rust (L, 50).]

ARTHROCACOLOGIA (Lat.), n. f. A^{3}rth"ro-ka^{2}k(ka^{3}k)-o-lo(lo^2)'ji^2(gi^2)-a^3. From ἄρθρον, a joint, κακός, evil, and λόγος, understanding. Fr., *arthrocacologie.* Ger., *Arthrokakologie.* It., *artrocacologia.* That branch of pathology which deals with diseases of the joints. [Rust (L, 50).]

ARTHROCARCINOMA (Lat.), n. n. A^{3}rth"ro-ka^{3}r-si^{2}n(ki^{2}n)-o'ma^3. Gen., *arthrocarcinom'atos* (*-tis*). From ἄρθρον, a joint, and καρκίνωμα, a cancer. Fr., *arthrocarcinome.* Ger., *Arthrocarcinom, Gelenkkrebs.* Cancerous disease of a joint. [A, 322; E.]

ARTHROCARPÆA (Lat.), n. f. A^{3}r-thro-ka^{3}r-pe'(pa^3'e^2)-a^3. From ἄρθρον, a joint, and καρπός, a fruit. A section of the genus *Glycyrrhiza,* made by C. A. Meyer. [B, 121.]

ARTHROCELE (Lat.), n. f. A^{3}rth-ro-se(ka)'le(la); as an English word, a^{3}rth'ro-sel. From ἄρθρον, a joint, and κήλη, a tumor. Fr., *arthrocèle.* Ger., *Gelenkgeschwulst.* A tumor of a joint. [A, 322.]

ARTHROCENCHRIASIS (Lat.), n. f. A^{3}rth"ro-se^{2}n^2(ke^{2}n^2)-kri(ch^{2}re)'a^3-si^{2}s. Gen., *arthrocenchria'seos* (*-i'asis*). From ἄρθρον, a joint, and κεγχρίας, miliary. Fr., *arthrocenchriase.* A miliary eruption over a joint. [A, 322.]

ARTHROCEPHALUS (Lat.), adj. A^{3}rth-ro-se^{2}f(ke^{2}f)'a^3-lu^{3}s-(lu^{4}s). From ἄρθρον, a joint, and κεφαλή, the head. Fr., *arthrocéphale.* Having the head distinct from the body (said of certain *Crustacea*). [L, 41.]

ARTHROCERALIS (Lat.), adj. A^{3}rth-ro-se^{2}r(ke^{2}r)-a(a^3)'li^{2}s. From ἄρθρον, a joint, and κέρας, a horn. Fr., *arthrocéral.* Having two of the vertebral segments developed superiorly into appendages (said of the *Arthropoda*). [L, 41.]

ARTHROCHONDRITIS (Lat.), n. f. A^{3}rth-ro(ro^2)-ko^{2}n-(ch^{2}o^{2}n)-dri(dre)'ti^{2}s. Gen., *arthrochondrit'idis.* From ἄρθρον, a

joint, and χόνδρος, cartilage. Fr., *arthrochondrite.* Ger., *Gelenkknorpelentzündung.* Inflammation of the cartilages of a joint. [L, 30.]

ARTHROCLADIEÆ (Lat.), n. f. pl. A^{3}r-thro-kla^{2}d(kla^{3}d)-i(i^2)'e^2-e(a^3-e^2). A tribe of plants belonging to the *Antheridieæ*, made by Zanardini. [B, 170.]

ARTHROCLASIS (Lat.), n. f. A^{3}rth-ro^{2}k'la^3-si^{2}s. Gen., *arthroclas'eos (-thro'clasis).* From ἄρθρον, a joint, and κλάσις, a breaking. Fr., *arthroclasie.* Arthroclasy; the operation of breaking up an ankylosed joint. [A, 385.]

ARTHROCOCCACEÆ (Lat.), n. f. pl. A^{3}rth''ro-ko^{2}k-ka(ka^3)'-se^2(ke^2)-e(a^3-e^2). From ἄρθρον, a joint, and κόκκος (see COCCUS). Fr., *arthrococcacées.* Ger., *Arthrokokkaceen.* A section (genus) of the *Arthrosporeæ* [De Bary]. comprising those forms which occur only as cocci. It includes the sections (subgenera) *Arthrostreptococcus, Leuconostoc, Merista, Sarcina, Micrococcus,* and *Ascococcus.* [Weichselbaum (B, 270).]

ARTHROCOCCUS (Lat.), n. m. A^{3}rth-ro-ko^{2}k'ku^{3}s(ku^{4}s). A micrococcus which, in the lacteous fermentation, has become elongated and assumed the form of jointed staff-like cells. [A, 327.] See BACILLUS *acidi lactici.*

THE ARTHROCOCCUS. (AFTER HALLIER [A, 327].)

ARTHRODACTYLOUS, adj. A^{3}rth-ro-da^{2}k'ti^{2}l-u^{3}s. From ἄρθρον, a joint, and δάκτυλος, a finger. Fr., *arthrodactyle.* Having the digits articulated. [A, 385.]

ARTHRÖDEM (Ger.), n. A^{3}rt-ru^{6}d-e^{2}m'. See ARTHRŒDEMA.

ARTHRODERM, n. A^{3}rth'ro-du^{6}rm. From ἄρθρον, a joint, and δέρμα, the skin. The outer crust, or body-wall, of the *Arthropoda.* [L, 196.]

ARTHRODES (Lat.), adj. A^{3}rth-ro'dez(das). From ἄρθρον, a joint, and εἶδος, resemblance. Fr., *arthroïde.* Ger., *gelenkartig, gelenkförmig.* Resembling a joint, of the nature of a joint. [L, 50.]

ARTHRODHYAL (Fr.), adj. A^{3}r-trod-i^2-a^{3}l. See STYLO-HYAL.

ARTHRODIA (Lat.), n. f. A^{3}rth-ro'di^2-a^3. Gr., ἀρθρωδία. Fr., *arthrodie.* O. Fr., *enfonceuse, enfonçure.* Ger., *Arthrodie, Kugelgelenk.* It., *artrodia.* Sp., *artrodia.* 1. That variety of diarthrosis in which an articular head plays upon a shallow cavity, as in the temporo-maxillary articulation; differing from enarthrosis in that both the convexity and the concavity of the opposed surfaces are less marked, so as to admit of some gliding motion. [A, 322, 385; C.] 2. A name given by Rafinesque to a vegetable substance found floating upon the surface of fresh waters in Sicily; perhaps a species of *Palmella.* [B, 121.]

ARTHRODIAL, ARTHRODIC, adj's. A^{3}rth-ro'di^2-a^{2}l, -ro^{2}d'i^{2}k. Lat., *arthrodialis.* Fr., *arthrodial.* Ger., *arthrodisch.* It., *artrodiale.* Sp., *artrodial.* Pertaining to a joint of the variety termed arthrodia. [C.]

ARTHRODIÉ (Fr.), adj. A^{3}r-tro-di^2-a. Articulated by arthrodia. [A, 385.]

ARTHRODIEÆ (Lat.), n. f. pl. A^{3}rth-ro-di(de)'e^2-e(a^3-e^2). Fr., *arthrodiées.* Bory de St. Vincent's name for a family of fresh-water *Hydrophyta* (*Algæ* and *Protophyta*), including organisms composed of filaments each made up of an outer homogeneous transparent tube inclosing an inner jointed tube filled with coloring matter. These organisms, which were regarded as forming a connecting link between the animal and vegetable kingdom, were divided into the tribes *Frigillariæ, Oscillarieæ, Conjugatæ,* and *Zoocarpæ,* and included genera now chiefly referable to the *Zygosporeæ.* [B, 1, 121.]

ARTHRODION, ARTHRODIUM (Lat.), n's n. A^{3}rth-ro'-di^2-o^{2}n, -u^{3}m(u^{4}m). See ARTHRIDIUM.

ARTHRODYNIA (Lat.), n. f. A^{3}rth-ro-di^{2}n(du^{6}n)'i^2-a^3. From ἄρθρον, a joint, and ὀδύνη, pain. Fr., *arthrodynie.* Ger., *Arthrodynie, Gelenkschmerz.* It., *artrodinia.* 1. Pain in a joint. [E.] 2. Chronic rheumatism. [Cullen (L, 32).]—**A. podagrica.** See PODAGRA.—**Exanthesis rosalia a.** See DENGUE.

ARTHRODYNIC, adj. A^{3}rth-ro-di^{2}n'i^{2}k. Pertaining to, caused by, or affected with, arthrodynia. [L, 73.]

ARTHRO-ECTASIA (Lat.), n. f. A^{3}rth-ro-e^{2}k-ta(ta^3)'zi^2(si^2)-a^3. See ARTHRECTASIS.

ARTHRŒDEMA (Lat.), n. n. A^{3}rth-re^{2}d(ro-e^{2}d)-e(a)'ma^3. Gen., *arthrœdem'atos (-tis).* From ἄρθρον, a joint, and οἴδημα (see ŒDEMA). Fr., *arthrœdème.* Ger., *Arthrödem, Gelenkwassersucht.* Œdema of a joint. [A, 322.]

ARTHRO-EMPYESIS (Lat.), n. f. A^{3}rth-ro-e^{2}m-pi(pu^6)-e(a)'si^{2}s. Gen., *arthro-empye'seos (-sis).* See ARTHREMPYESIS.

ARTHROGASTERES (Lat.), n. m. pl. A^{3}r-thro-ga^{2}s(ga^{3}s)'te^{2}r-ez(e^{2}s). See ARTHROGASTRA.

ARTHROGASTRA (Lat.), n. n. pl. A^{3}rth-ro-ga^{2}s(ga^{3}s)'tra^3. From ἄρθρον, a joint, and γαστήρ, the belly. Fr., *arthrogastres.* Ger., *Gliedleibige.* An order of the *Arachnida.*, distinguished by having the abdomen segmented. It includes the *Pedipalpi* and *Adelarthrosomata.* [L, 147.]

ARTHROGELURE (Fr.), n. A^{3}r-tro-zhe^{2}l-u^{6}r. An inflamed state of a joint, especially the first metatarso-phalangeal joint, attributed to exposure to cold. [Beau, "Gaz. d. hôp.," xxxi, 1858, p. 369 (L).]

ARTHROGRAPHY, n. A^{3}rth-ro^{2}g'ra^3-fi^2. Lat., *arthrographia* (from ἄρθρον, a joint, and γράφειν, to write). Fr., *arthrographie.* Ger., *Arthrographie, Gelenklehre.* See ARTHROLOGY.

ARTHROGRYPOSIS (Lat.), n. f. A^{3}rth-ro-gri^{2}p(gru^{6}p)-o'si^{2}s. Gen., *arthrogrypo'seos (-sis).* From ἄρθρον, a joint, and γρύπωσις, a crooking. Fr., *arthrogrypose.* Ger., *Arthrogrypose, Gelenkverkrümmung.* It., *artrogriposi.* Sp., *artrogripósis.* A permanent flexion of a joint. [L, 44.]

ARTHRO-HÉMIE [Piorry] (Fr.), n. A^{3}r-tro-a-me. See ARTHRÆMIA.

ARTHRO-HYAL, adj. A^{3}rth''ro-hi'a^{2}l. See STYLO-HYAL.

ARTHRO-HYDRIN, n. A^{3}rth''ro-hi'dri^{2}n. From ἄρθρον, a joint, and ὕδωρ, water. Fr., *arthro-hydrine.* Syn.: *synovin.* A coagulable substance found in synovia. [L, 49.]

ARTHROKOKKACEEN (Ger.), n. pl. A^{3}rt-ro-ko^{2}k-ka^3-tsa'-e^{2}n. See ARTHROCOCCACEÆ.

ARTHROLEPIS (Lat.), n. f. A^{3}rth-ro^{2}l'e^{2}p-i^{2}s. A section of the Linnæan genus *Achillea*, made by Boissier, characterized by having numerous large ligulæ and by the scales of the involucre being deciduous. [B, 63.] See ANACYCLUS.

ARTHROLEPROSIS (Lat.), n. f. A^{3}rth-ro-le^{2}p-ro'si^{2}s. Gen., *arthrolepro'seos (-sis).* From ἄρθρον, a limb, and λέπρωσις, the process of becoming leprous. Fr., *arthrolèprose.* Ger., *Gelenkleprose.* A form of leprosy observed in India, described as characterized by the gradual ulceration and partial separation of the fingers and toes. [A, 322.] Cf. AINHUM.

ARTHROLITH, n. A^{3}rth'ro-li^{2}th. See ARTHRITOLITH.

ARTHROLOBIUM (Lat.), n. n. A^{3}rth-ro-lo'bi^2-u^{3}m(u^{4}m). A genus of leguminous plants. [L, 87.]—**A. scorpioides** [De Candolle]. A species indigenous to southern Europe and probably one of the drugs included under the σκορπιοειδής of Dioscorides, believed, from the resemblance of their pods to a scorpion's tail, to be a cure for the wound inflicted by the latter. The leaves have been used as a vesicant. [B, 180, 197.] Cf. SCORPIURUS.

ARTHROLOGY, n. A^{3}rth-ro^{2}l'o-ji^2. Lat., *arthrologia* (from ἄρθρον, a joint, and λόγος, understanding). Fr., *arthrologie.* Ger., *Arthrologie, Gelenklehre.* The anatomy of the joints. [L, 31.]

ARTHROMBOLE (Lat.), n. f. A^{3}rth-ro^{2}m'bo-le(la). See ARTHREMBOLA.

ARTHROMÉNINGE (Fr.), n. A^{3}r-tro-ma-na^{2}n^{2}zh. From ἄρθρον, a joint, and μῆνιγξ, a membrane. The synovial membrane of a joint. [L, 41.]

ARTHROMÉNINGÉ, ARTHROMÉNINGIEN (Fr.), adj's. A^{3}r-tro-ma-na^{2}n^2-zha, -zhi^2-a^{3}n^2. Pertaining to the synovial membrane of a joint. [L, 41.]

ARTHROMENINGITIS (Lat.), n. f. A^{3}rth''ro-me^{2}n-i^{2}n(i^{2}n^2)-ji(ge)'ti^{2}s. Gen., *arthromeningit'idis.* Fr., *arthroméningite.* Ger., *Gelenkhautentzündung.* Synovitis. [D, 18.]—**A. acuta serosa.** Acute synovitis. [L, 44.]—**A. chronica.** Hydrarthrosis. [L, 44.]—**A. crouposa.** A rare joint affection described by Bonnet, consisting of synovitis with a membranous exudation. [Busch (M, 1).]—**A. gonorrhoica.** See *Gonorrhœal* RHEUMATISM.—**A. prolifera.** See *Fungous* ARTHRITIS.—**A. purulenta.** Synovitis with purulent effusion. [Busch (M, 1).]—**A. serosa.** Synovitis with serous effusion. [Busch (M, 1).]—**A. tuberculosa.** Tubercular synovitis. [Busch (M, 1).]

ARTHROMERE, n. A^{3}rth'ro-mer. From ἄρθρον, a joint, and μέρος, a part. See SOMITE.

ARTHROMITUS (Lat.), n. m. A^{3}r-thro^{2}m'i^{2}t-u^{3}s(u^{4}s). From ἄρθρον, a joint, and μίτος, thread. A genus of low vegetable organisms, made by Leidy and related, according to him, to the *Mycodermata*; by Robin, assigned to the *Leptotricheæ.* They consist of simple, non-branching, cylindrical, jointed filaments, fixed in the midst of a nuclear body, without well-defined structure. [B, 239.]—**A. cristatus** [Leidy]. A species found upon the mucous membrane of the small intestine and upon the intestinal parasites of the *Iulus marginatus.* It consists of fine filaments crossing each other so as to form moderately thick tufts upon small rounded, fixed, yellowish bodies. The total length of the filaments is from 65 to 540 μ and the thickness 1 μ, and each internode is about 2 μ long. The interior of the filament is structureless. [B, 239.]—**A. nitidus** [Leidy]. A species found in the rectum of the *Iulus marginatus,* consisting of 3 or 4 crossing hyaline filaments 213 μ long and 5 μ broad. The articulations are very distinct and the internodes are about 5 μ in length and contain in their interior oval spores 3 μ long and 2 μ broad. [B, 239.]

ARTHRON (Lat.), n. n. A^{3}rth'ro^{2}n. Gr., ἄρθρον. A joint. [A, 322.]

ARTHRONALGIA (Lat.), n. f. A^{3}rth-ro^{2}n-a^{2}l(a^{3}l)'ji^2(gi^2)-a^3. From ἄρθρον, a joint, and ἄλγος, pain. Fr., *arthronalgie.* See ARTHRALGIA.

ARTHRONCUS (Lat.), n. m. A^{3}rth-ro^{2}n^2'ku^{3}s(ku^{4}s). From ἄρθρον, a joint, and ὄγκος, a mass. Ger., *Gelenkgeschwulst.* Syn.: *arthrophyma.* Swelling of a joint. [E; L, 128.]

ARTHRONEMA (Lat.), n. n. A^{3}rth-ro^{2}n-e(a)'ma^3. Gen., *arthronem'atos (-tis).* From ἄρθρον, a joint, and νῆμα, a thread. Fr., *arthronème.* Ger., *Gliederfaden* (2d def.). 1. A genus of *Annelida*, of the family of leeches. [A, 306.] 2. Wallroth's name for a jointed filament making up part of the thallus of an *Alga.* 3. In the pl., *Arthronemata*, a subdivision of low vegetable organisms belonging to the *Dermatonemata*, made by Wallroth, including the genera *Conferva* and *Bulbochæte.* [B, 121, 198.]

ARTHRONEMPYESIS (Lat.), n. f. A^{3}rth''ro^{2}n-e^{2}m-pi(pu^6)-e(a)'si^{2}s. Gen., *arthronempye'seos (-sis).* See ARTHREMPYESIS.

ARTHRONEURALGIA (Lat.), n. f. A^{3}rth''ro-nu^2-ra^{2}l(ra^{3}l)'-ji^2(gi^2)-a^3. From ἄρθρον, a joint, νεῦρον, a nerve, and ἄλγος, pain. Ger., *Arthroneuralgie.* See ARTHRALGIA.

ARTHRONIA (Lat.), n. f. A^{3}r-thro'ni^2-a^3. See ARTHONIA.

ARTHROPARALYSIS (Lat.), n. f. A^{3}rth″ro-pa^{2}r(pa^{3}r)-a^{2}l(a^{3}l)′i^{2}s(u^{6}s)-i^{2}s. Gen., *arthroparalys′eos* (*-al′ysis*). From ἄρθρον, a limb, and παράλυσις, paralysis. Ger., *Gliederlähmung.* Paralysis of a limb. [L, 50.]

ARTHROPATHIA (Lat.), n. f. A^{3}rth″ro-pa^{2}th(pa^{3}th)′i^2-a^3. See ARTHROPATHY.—**A. hysterica.** See *Hysterical* ARTHROPATHY.—**A. progressiva.** A symmetrical articular affection of nervous origin, of a slow, progressive course, independent of rheumatism, characterized by puffy swelling of the thumbs, enlargement of the first joint of the fingers, and some impediment to the flexion of the latter. [A. McL. Hamilton, "N. Y. Med. Jour.," Jan. 24, 1885, p. 97.]—**A. tabetica, A. tabidorum.** See *Tabetic* ARTHROPATHY.

ARTHROPATHOLOGY, n. A^{3}rth″ro pa^{2}th-o^{2}l′o-ji^2. From ἄρθρον, a joint (see also PATHOLOGY). That department of pathology which deals with diseases of the joints.

ARTHROPATHY, n. A^{3}rth-ro^{2}p′a^{2}th-i^2. Lat., *arthropathia* (from ἄρθρον, a joint, and πάθος, disease). Fr., *arthropathie.* Ger., *Arthropathie, Gelenkleiden.* It., *artropatia.* Sp., *artropatia.* A general term for diseases of the joints, usually applied to those which depend on some general disease. [A, 322.]—**Ataxic a.** Fr., *arthropathie ataxique.* See *Tabetic a.*—**Hysterical a.** Lat., *arthropathia hysterica.* Fr., *arthropathie hystérique.* An articular affection occurring as a manifestation of hysteria.—**Tabetic a.** Lat., *arthropathia tabetica* (vel *tabidorum*). Fr., *arthropathie tabétique* (ou *des ataxiques* [Charcot]). Ger., *tabetische Arthropathie.* Syn.: *Charcot's joint disease.* A disease of one or more of the joints, occurring as a manifestation of tabes dorsalis. "Without any premonitory symptoms or appreciable cause, a particular joint suddenly becomes swollen, always to a considerable and sometimes to an enormous extent. The swelling is not attended with pain, fever, or redness, but the tissues surrounding the joint become œdematous and doughy. In a week or two the swelling disappears, and it is then noticed that serious injury has resulted to the joint, destruction of the cartilages and ligaments having occurred, so that the ends of the bones are in contact with each other. A creaking sound is heard on moving the joint, and luxations may readily take place. The destructive process does not expend itself on the cartilages, but extends to the ends of the bones, which become atrophied and eroded. There is very little tendency to exostosis, but the bones become fragile, and fractures may occur on the slightest injury, what is known as 'spontaneous fracture' being also met with." ["N. Y. Med. Jour.," Feb. 5, 1887, p. 153.]—**Vertebral a.** Fr., *arthropathie vertébrale.* A term applied by a writer in the "Jour. de méd. de Bordeaux" to a case of tabetic a. in which there were depressions and rugosities of the vertebræ, many of which were much flattened, with their upper and lower borders decidedly projecting. ["Lancet," Jan. 23, 1886, p. 167.]

ARTHROPERISPHINXIS (Lat.), n. f. A^{3}rth″ro-pe^{2}r-i^2-sfi^{2}n^{2}x′i^{2}s. Gen., *arthroperisphinx′eos* (*-xis*). From ἄρθρον, a limb, and περισφιγξις, a tight constriction. See ARTHRAPOBROCHISMUS.

ARTHROPERISSIA (Lat.), n. f. A^{3}rth″ro-pe^{2}r-i^{2}s-si(se)′a^3. From ἄρθρον, a joint or a limb, and περισσεία, an abundance. Fr., *arthropérissie.* Ger., *Ueberzähligkeit der Glieder.* A superfluity of limbs or joints. [A, 322.]

ARTHROPERISSUS (Lat.), adj. A^{3}rth″ro-pe^{2}r-i^{2}s′su^{3}s(su^{4}s). From ἄρθρον, a joint, and περισσός, extraordinary. Pertaining to or affected with arthroperissia. [A, 322.]

ARTHROPERITTIA (Lat.), n. f. A^{3}rth″ro-pe^{2}r-i^{2}t-ti(te)′a^3. See ARTHROPERISSIA.

ARTHROPERITTUS (Lat.), adj. A^{3}rth″ro-pe^{2}r-i^{2}t′tu^{3}s(tu^{4}s). See ARTHROPERISSUS.

ARTHROPHLOGOSIS (Lat.), n. f. A^{3}rth″ro-flo(flo^2)-go′si^{2}s. Gen., *arthrophlogo′seos* (*-sis*). From ἄρθρον, a joint, and φλόγωσις, inflammatory heat. Fr., *arthrophlogose.* Ger., *Arthrophlogose, Gelenkentzündung.* It., *artroflogosi.* Sp., *artroflogósis.* Inflammation of a joint. [L, 43.]—**A. deformans.** See *Chronic* OSTEO-ARTHRITIS.—**A. externa.** Inflammation around but not in a joint. [L, 128.]—**A. fibrosa.** See *Fungous* ARTHRITIS.—**A. interna.** Inflammation of the proper structure of a joint. [L, 128.]—**A. synovialis.** See SYNOVITIS.

ARTHROPHLYSIS (Lat.), n. f. A^{3}rth-ro^{2}f′li^{2}s(lu^{6}s)-i^{2}s. Gen., *arthrophlys′eos* (*-throph′lysis*). From ἄρθρον, a joint, and φλύσις, an eruption. Ger., *Gichtausschlag.* A gouty cutaneous eruption. [G, 5.]—**A. cardiaca.** Ger., *Gichtfriesel.* Syn.: *miliaria arthritica.* A miliary eczematous eruption said to occur only in connection with gouty or rheumatic cardiac disease. [G, 5.]—**A. vulgaris.** Syn.: *eczema arthriticum.* A vesicular eczema that is said to occur about gouty joints. [G, 5.]

ARTHROPHRAGM, n. A^{3}rth′ro-fra^{2}m. From ἄρθρον, a joint, and φράγμα, a screen. The partition between the articular cavities for the limbs in many of the *Arthropoda.* [L, 168.]

ARTHROPHYMA (Lat.), n. n. A^{3}rth″ro-fi(fu^6)′ma^3. Gen., *arthrophym′atos* (*-tis*). From ἄρθρον, a joint, and φῦμα, a swelling. A tumor or swelling of a joint. [L, 128.]—**A. adenochondrium.** See *Fungous* ARTHRITIS and ADENOCHONDRIUS.—**A. bursale.** Ger., *Bohnengeschwulst.* An enlargement of a bursa. [L, 128.]—**A. externum.** A swelling in the neighborhood of a joint, but not affecting its proper structure. [L, 128.]—**A. internum.** A swelling or tumor of the proper structure of a joint. [L, 128.]—**A. saccatum.** See HYDRARTHROSIS.

ARTHROPHYTE, n. A^{3}rth′ro-fit. From ἄρθρον, a joint, and φυτόν, a growth. Fr., *arthrophyte.* 1. A free body within a joint, originating in the synovial membrane. [Panas, quoted by Poncet, "Rev. de chir.," Oct., 1882, p. 797.] Cf. *Floating* CARTILAGE. 2. Any outgrowth from the proper structure of a joint projecting into its cavity. [A, 385.]

ARTHROPLASTIC, adj. A^{3}rth-ro-pla^{2}st′i^{2}k. Lat., *arthroplasticus.* Fr., *arthroplastique.* Ger., *arthroplastisch, gelenkbildend.* Pertaining to arthroplasty. [J. R. Barton (E).]

ARTHROPLASTY, n. A^{3}rth′ro-pla^{2}st-i^2. Lat., *arthroplastice* (from ἄρθρον, a joint, and πλάσσειν, to form). Fr., *arthroplastique.* Ger., *Arthroplastik, künstliche Gelenkbildung.* It., *artroplastica.* The formation of an artificial joint for the correction of ankylosis. [J. R. Barton, "N. Am. Med. and Surg. Jour.," April, 1827, p. 279 (L, 50).]

ARTHROPLEURAL, adj. A^{3}rth-ro-plu^2′ra^{2}l. Pertaining to the arthropleure (*q. v.*). [L, 196.]

ARTHROPLEURE, n. A^{3}rth′ro-plu^{2}r. From ἄρθρον, a joint, and πλευρά, the side. In the *Arthropoda*, the limb-bearing region of the body (the part between the tergite and the sternite). [L, 196.]

ARTHROPODS, n. pl. A^{3}rth′ro-po^{2}dz. See ARTHROPODA.—**Branchiate a.** The crustaceans. [L.]

ARTHROPODA (Lat.), n. n. pl. A^{3}rth-ro^{2}p′o^{2}d-a^3. From ἄρθρον, a joint, and πούς, a foot. Fr., *arthropodes, arthropodaires.* Ger., *Arthropoden, Gliederfüssler.* Syn.: *Articulata* (in part). Articulate animals; one of the two primary divisions of the *Annulosa*, comprising the classes *Crustacea, Arachnida, Myriapoda*, and *Insecta.* The body is composed of a series of segments arranged along a longitudinal axis, each occasionally, and some always, provided with articulated locomotor appendages. Both the body and the appendages are provided with a chitinous exoskeleton; the appendages are hollow, with muscles prolonged into their interior. The nervous system consists of a double chain of ganglia on the ventral surface of the body, united by longitudinal commissures and traversed anteriorly by the œsophagus. The hæmal system, when differentiated, is dorsal, and consists of a valvular heart communicating with a circumvisceral cavity. Respiration is effected at the surface, by gills, pulmonary sacs, or tracheæ. Typically, the head is composed of six segments, and never has fewer than four. [B; L, 147.]—**A. branchiata.** See CRUSTACEA.—**A. hexapoda.** See INSECTA.

ARTHROPODAL, adj. A^{3}rth-ro^{2}p′o^{2}d-a^{2}l. Fr., *arthropodaire.* Pertaining to the *Arthropoda.* [A, 385; B, 100.]

ARTHROPOMATA (Lat.), n. n. pl. A^{3}rth″ro-po^{2}m(pom)′a^3-ta^3. From ἄρθρον, a joint, and πῶμα, a cover. See CLISTENTERATA.

ARTHROPYOSIS (Lat.), n. f. A^{3}rth″ro(ro^2)-pi(pu^6)-o′si^{2}s. Gen., *arthropyo′seos* (*-sis*). From ἄρθρον, a joint, and πύωσις, suppuration. Fr., *arthropyose.* Ger., *Arthropyose, Gelenkvereiterung.* The formation of pus within a joint. [L, 50.]

ARTHRORRHAGIA (Lat.), n. f. A^{3}rth′ro^{2}r-ra(ra^3)′ji^2(gi^2)-a^3. From ἄρθρον, a joint, and ῥήγνυσθαι, to break forth. Fr., *arthrorrhagie.* Ger., *Gelenkblutfluss.* Sudden hæmorrhage into a joint. [L, 50, 116.]

ARTHRORRHEUMA, ARTHRORRHEUMATISMUS (Lat.), n's n. and m. A^{3}rth″ro^{2}r-ru^2′ma^3, -ru^2-ma^3-ti^{2}z(ti^{2}s)′mu^{3}s-(mu^{4}s). Gen., *arthrorheu′matos* (*-tis*), *-rheumatis′mi.* From ἄρθρον, a joint, and ῥεῦμα, or ῥευματισμός, a flux. Old terms for articular rheumatism. [L, 50.]

ARTHROSIA (Lat.), n. f. A^{3}rth-ro′zi^2(si^2)-a^3. Fr., *arthrosie.* A general name for severely painful inflammations mostly confined to the joints, but occasionally extending to adjoining parts. [L, 83.]—**A. acuta.** Acute rheumatism. [L, 83.]—**A. artuum.** Pain chiefly in the joints and muscles of the limbs. [L, 83.]—**A. chronica.** Chronic rheumatism. [L, 83.]—**A. coxendicis.** Sciatica. [L, 83.]—**A. hydarthrus.** White swelling. [L, 83.] See *Fungous* ARTHRITIS.—**A. lumborum.** Lumbago. [L, 83.]—**A. podagra.** Gout. [L, 83.]—**A. podagra complicata.** Retrocedent gout. [L, 83.]—**A. podagrica.** See *A. podagra.*—**A. podagra larvata.** Atonic gout. [L, 83.]—**A. podagra regularis.** Typical gout. [L, 83.]—**A. thoracis.** Pleurodynia. [L, 83.]—**Exanthesis a.** See DENGUE.

ARTHROSIS (Lat.), n. f. A^{3}rth-ro′si^{2}s. Gen., *arthro′seos* (*-sis*). Gr., ἄρθρωσις (from ἀρθροῦν, to articulate). Fr., *arthrose.* Ger., *Einlenkung.* See ARTICULATION.

ARTHROSPIROBACTERIACEÆ (Lat.), n. f. pl. A^{3}rth-ro^{2}s″pi^{2}r-o-ba^{2}k(ba^{3}k)-te(ta)-ri^2-a(a^3)′se^2(ke^2)-e(a^3-e^2). From ἄρθρον, a joint, σπεῖρα, a coil, and βακτήριον (see BACTERIUM). Fr., *arthrospirobactériacées.* A subdivision (genus) of the *Arthrosporeæ* (arthrosporous *Schizomycetes*), comprising those forms in which the cells are screw-shaped spirals and are united into spiral filaments. It includes the single section *Spirochæte*, and differs from the *Spirobacteriaceæ* only in the fact of its arthrosporous reproduction. [Weichselbaum (B, 270).]

ARTHROSPONGICUS (Lat.), adj. A^{3}rth″ro-spo^{2}n(spo^{2}n^2)′-ji^2(gi^2)-ku^{3}s(ku^{4}s). Pertaining to, caused by, or affected with, fungous arthritis. [A, 322.]

ARTHROSPONGOSIS, ARTHROSPONGUS (Lat.), n's f. and m. A^{3}rth″ro-spo^{2}n^2-go′si^{2}s, -spo^{2}n^2′gu^{3}s(gu^{4}s). Gen., *arthrospongo′seos* (*-sis*), *-spon′gi.* From ἄρθρον, a joint, and σπόγγος, a spongy substance. Fr., *arthrospongose.* Ger., *Gliedschwamm.* Old terms for fungous arthritis. [L, 50.]

ARTHROSPORÆ (Lat.), n. f. pl. A^{3}r-thro^{2}s′po^{2}r-e(a^3-e^2). For deriv., see ARTHROSPORE. Of Schulz, an order of cryptogamous plants (*Algæ*) comprising the divisions *Batrachospermeæ, Confervaceæ*, and *Ulvaceæ* (*q. v.*). [B, 121.]

ARTHROSPORE, n. A^{3}rth′ro-spor. From ἄρθρον, a joint, and σπόρος, a seed. Lat., *arthrospora.* Fr., *arthrospore.* Ger., *Arthrospore.* 1. One of a series of spores united in the form of a chain or rosary. [B, 121.] 2. A spore which is produced by the segmentation of a parent cell (as opposed to one produced by endogenous development within the latter). [B, 238.] 3. In the pl., *a's.* See ARTHROSPORÆ and ARTHROSPOREI.

ARTHROSPOREÆ [De Bary] (Lat.), n. f. pl. A^{3}rth-ro-spor-(spo^{2}r)′e^2-e(a^3-e^2). The arthrosporous *Schizomycetes*; a group comprising all those which reproduce by the formation of arthrospores (*i. e.*, by segmentation only). It includes the subdivisions (genera)

Arthrococcaceæ, *Arthrobacteriaceæ*, *Arthrospirobacteriaceæ*, and, according to Hueppe, also the *Leptotricheæ* and *Cladotricheæ*. [H. M. Ward (B, 77); Weichselbaum (B, 270).]

ARTHROSPOREI, ARTHROSPORI (Lat.), n's m. pl. A^{3}r-thro-spor(spo^{2}r)'e^2-i(e), -o^{2}s'po^{2}r-i(e). Fr., *arthrosporées*. Ger., *Arthrosporen*. Of Léveillé, a division of *Fungi* distinguished by the arrangement of the spores in the form of an articulated chain like the beads of a rosary. Such *Fungi* seem often to be composed wholly of spores, the receptacle which supports the latter being almost indistinguishable. [Léveillé (B, 121).] It includes the divisions *Phragmonemei* and *Homiscinei*. [B, 170.]

ARTHROSPOROUS, adj. A^{3}rth-ro^{2}s'po-ru^{3}s. Fr., *arthrosporé*. Having spores formed out of portions of the cell-body or some of the individual cells of the latter set free from the parent organism; the opposite of *endosporous* (said of *Bacteria* and allied organisms). [De Bary (B, 54).]

ARTHROSTEITIS (Lat.), n. f. A^{3}rth''ro^{2}s-te^2-i(e)'ti^{2}s. Gen., *arthrosteit'idis*. From ἄρθρον, a joint, and ὀστέον, a bone (see also *-itis**). Inflammation of the articular end of a bone.

ARTHROSTENOSIS (Lat.), n. f. A^{3}rth''ro-ste^{2}n-o'si^{2}s. Gen., *arthrosteno'seos* (*-sis*). From ἄρθρον, a joint, and στένωσις (from στένειν, to straiten), contraction. Ger., *Gelenkverengerung*. Contracture of a joint. [A, 322.]

ARTHROSTEOPHYMA (Lat.), n. n. A^{3}rth''ro^{2}s-te^2-o-fi(fu^6)'-ma^3. Gen., *arthrosteophym'atos* (*-tis*). From ἄρθρον, a joint, ὀστέον, a bone, and φῦμα, a tumor. A tumor of the articular end of a bone. [L, 30.]

ARTHROSTERESIS (Lat.), n. f. A^{3}rth''ro(ro^2)-ste^{2}r-e(a)'si^{2}s. Gen., *arthrostere'seos* (*-sis*). From ἄρθρον, a limb, and στέρησις, deprivation. Fr., *arthrostérèse*. Ger., *Gliedermangel*. The lack of one or more limbs. [L, 50.]

ARTHROSTERETOS (Lat.), adj. A^{3}rth''ro(ro^2)-ste^{2}r-e(a)'to^{2}s. Lacking one or more of the limbs. [L, 50.]

ARTHROSTERIGMA (Lat.), n. n. A^{3}rth''ro(ro^2)-ste^2(sta)-ri^{2}g'-ma^3. Gen., *arthrosterig'matos* (*-tis*). From ἄρθρον, a joint, and στήριγμα, a support. Fr., *arthrostérigmate*. A sterigma made up of ramifying rows of articulated cells, from each of which spermatia are produced as lateral offshoots. Cf. STERIGMA. [Nylander (B, 54).]

ARTHROSTITIS (Lat.), n. f. A^{3}rth-ro^{2}s-ti(te)'ti^{2}s. See ARTHROSTEITIS.

ARTHROSTRACA (Lat.), n. n. pl. A^{3}rth-ro^{2}s'tra^3-ka^3. From ἄρθρον, a joint, and ὄστρακον, a shell. See EDRIOPHTHALMATA.

ARTHROSTREPTOCOCCUS (Lat.), n. m. A^{3}rth-ro(ro^2)-stre^{2}p-to(to^2)-ko^{2}k'ku^{3}s(ku^{4}s). From ἄρθρον, a joint, στρέφειν, to twist, and κόκκος, a kernel. A subdivision (subgenus) of the *Arthrococcaceæ*, comprising those forms in which the cells (cocci) are disposed in chains. [B, 270.] See STREPTOCOCCUS.

ARTHROSTYLEÆ (Lat.), n. f. pl. A^{3}r-thro(thro^2)-stil'stu^{6}l)'-e^2-e(a^3-e^2). From ἄρθρον, a joint, and στῦλος, a pillar. A section of composite plants, made by Dumortier, corresponding to the *Cynareæ* of Lessing. [B, 121, 170.]

ARTHROSYMPHYSIS (Lat.), n. f. A^{3}rth''ro(ro^2)-si^{2}m(su^{6}m)'-fi^2(fu^6)-si^{2}s. Gen., *arthrosymphys'eos* (*-sym'physis*). From ἄρθρον, a joint, and σύμφυσις, a growing together. Ger., *Gelenkverwachsung*. See ANKYLOSIS.

ARTHROSYMPHYTICUS (Lat.) adj. A^{3}rth''ro(ro^2)-si^{2}m-(su^{6}m)-fi^{2}t(fu^{6}t)'i^{2}k-u^{3}s(u^{4}s). Pertaining to, caused by, or affected with, ankylosis. [L, 50.]

ARTHROSYNDESMITIS (Lat.). n. f. A^{3}rth''ro(ro^2)-si^{2}n(su^{6}n)-de^{2}s-mi(me)'ti^{2}s. Gen., *arthrosyndesmit'idis*. From ἄρθρον, a joint, and σύνδεσμος, a bond of connection (see also *-itis**). An old term for fungous arthritis. [F. Busch (M, 1).]

ARTHROSYRINX (Lat.), n. f. A^{3}rth-ro(ro^2)-si^{2}r(su^{6}r)'i^{2}n^{2}x. Gen., *arthrosyrin'gos* (*-gis*). From ἄρθρον, a joint, and σῦριγξ, a canal. Ger., *Gelenkfistel*. A fistula communicating with the interior of a joint. [A, 322.]

ARTHROTILUM (Lat.), n. n. A^{3}r-thro(thro^2)-ti(te)'lu^{3}m(lu^{4}m). A genus of rivulariaceous plants, established by Rabenhorst. [B, 121.]—**A. thermalis** [Rabenhorst]. Syn.: *Amphithrix thermalis* [Kützing]. A species inhabiting the warm springs of Abano in Nubia. [B, 121.]

ARTHROTOMIE (Fr., Ger.), n. A^{3}r-tro^{2}t-o-me, -me'. See ARTHROTOMY.—**A. ignée** (Fr.). Arthrectomy by means of the actual cautery. [Vincent, "Rev. de chir.," iv, 1884, p. 30 (L).]

ARTHROTOMY, n. A^{3}rth-ro^{2}t'o-mi^2. From ἄρθρον, a joint, and τέμνειν, to cut. Fr., *arthrotomie*. Ger., *Arthrotomie*. Properly, the operation of cutting into a joint; often used in the sense of arthrectomy (*q. v.*). [Calliouzis, "Rev. de chir.," Jan., 1887, p. 60.]

ARTHROTOPHUS (Lat.), n. m. A^{3}rth-ro(ro^2)-to'fu^{3}s(fu^{4}s). From ἄρθρον, a joint, and *tophus* (*q. v.*). An articular tophus. [L, 50.] See TOPHUS.

ARTHROTRAUMA (Lat.), n. n. A^{3}rth-ro(ro^2)-tra^4'(tra^3'u^4)-ma^3. Gen., *arthrotrau'matos* (*-tis*). From ἄρθρον, a joint, and τραῦμα, an injury. Ger., *Gelenkwunde*. An injury of a joint by violence. [A, 322.]

ARTHROTROPIA (Lat.), n. f. A^{3}rth-ro(ro^2)-trop(tro^{2}p)'i^2-a^3. From ἄρθρον, a limb, and τροπή, a turning. Fr., *arthrotropie*. Ger., *Arthrotropie*, *Glieddrehen*. Torsion of a limb. [L, 50.]

ARTHROTROPICUS (Lat.), adj. A^{3}rth-ro(ro^2)-tro^{2}p'i^{2}k-u^{3}s-(u^{4}s). Pertaining to arthrotropia. [L, 50.]

ARTHROXEROSIS (Lat.), n. f. A^{3}rth''ro(ro^2)-ze^{2}r-o'si^{2}s. Gen., *arthroxero'seos* (*-sis*). From ἄρθρον, a joint, and ξήρωσις (=ξήρανσις [from ξηραίνειν]), a drying up. See *Chronic* OSTEO-ARTHRITIS.

ARTHROXESIS (Lat.), n. f. A^{3}rth-ro^{2}x'e^{2}s-i^{2}s. Gen., *arthroxe'seos* (*-ox'esis*). From ἄρθρον, a joint, and ξέσις (from ξεῖν, to scrape), a scraping. The abrasion of fungous growths from an articular surface. [Létiévant, "Compt.-rend. du Congr. périod. internat.," 1879 (L).] See ARTHRECTOMY.

ARTHROZAMIEÆ (Lat.), n. f. pl. A^{3}r-thro(thro^2)-za^{2}m(za^{3}m)-i(e)'e^2-e(a^3-e^2). From *Arthrozamia*, the only genus. A division of plants belonging to the *Zamiaceæ*, made by Reichenbach. [B, 170.]

ARTHROZOA (Lat.), n. n. pl. A^{3}rth-ro(ro^2)-zo'a^3. From ἄρθρον, a joint, and ζῷον, an animal. Fr., *arthrozoaires*. Ger., *Gliederthiere*. According to Burmeister, the *Arthropoda*; according to Fitzinger, the *Crustacea*, *Arachnida*, and *Insecta*. [A, 322; L, 121, 204.] Cf. ANNULOSA.

ARTHROZOIC, adj. A^{3}r''thro-zo'i^{2}k. Of or pertaining to the *Arthrozoa*; applied by Huxley to a series of invertebrate animals including the *Nematoscolices* (*Nematoidea*), the *Arthropoda*, and probably the *Chætognatha*. [B, 100.]

ARTHRYPERPATHIA (Lat.), n. f. A^{3}rth''ri(ru^6)-pu^{6}r(pe^{2}r)-pa^{2}th(pa^{3}th)'i^2-a^3. From ἄρθρον, a joint, ὑπέρ, exceeding, and πάθος, a disease. A general term for severe diseases of the joints. [Piorry (L, 50).]

ARTHRYPOSPHINXIS (Lat.), n. f. A^{3}rth''ri(ru^6)-po-sfi^{2}n^{2}x'-i^{2}s. Gen., *arthryposphinx'eos* (*-is*). From ἄρθρον, a limb, and ὑποσφίγγειν, to tie tight. See ARTHRAPOBROCHISMUS.

ARTI, n. A Malabar name for the *Ipomœa pes tigridis*. [B, 121; L, 105.]

ARTIA (Lat.), n. f. A^{3}r'ti^2-a^3. Gr., ἀρτία, ἀρτήη. An old name for the trachea. [A, 325.]

ARTIAD, n. A^{3}r'ti^2-a^{2}d. From ἄρτιος, even. In chemistry, an element having a combining capacity expressed by some even number (*e. g.*, oxygen and carbon). [B.]

ARTIAS (Sp.), n. A^{3}r'te-a^{3}s. A village in the province of Lerida, Spain, where there are hot sulphurous springs. [A, 385.]

ARTICHAUT (Fr.), n. A^{3}r-te-sho. See ARTICHOKE.—**A. camus.** The *Cynara scolymus*, var. *viride*. [B, 121.]—**A. de Jérusalem.** The *Batatas edulis*, *Helianthus tuberosus*, and the *Cucurbita melopepo*. [B, 121, 173.]—**A. des Indes.** The *Batatas edulis*. [L, 105.]—**A. d'Espagne.** The *Cucurbita melopepo*. [B, 121, 173.]—**A. des toits.** The *Sempervivum tectorum*. [L.]—**A. de terre, A. d'hiver, A. du Canada.** The *Helianthus tuberosus*. [B, 38, 121.]—**A. sauvage.** The *Sempervivum tectorum*, *Onopordon acanthium*, *Carduus marianus*, and *Carlina vulgaris*. [B, 121, 173.]

ARTICHOAK, n. A^{3}r'ti^2-chok. See ARTICHOKE.

ARTICHOKE, n. A^{3}r'ti^2-chok. Ar., *'harshaf*, or *'harshûf*. [B, 52.] Lat., *articoca*, *articocalus*. Fr., *artichaut*. Ger., *Artischocke*. It., *articiocco*, *alcachosa*. Sp., *alcachofa*. The *Cynara scolymus*, a perennial herb indigenous to southern Europe and cultivated in America. The flower-heads are used as an article of food, and the leaves are occasionally employed in medicine. [B, 5.]—**French a., Garden a.** See *A.*—**Globe a.** A variety of the garden a. preferred for cultivation. [A. 327.]—**Jerusalem a.** Fr., *artichaut de terre*. Ger., *Erdartischocke*. It., *girasole* (of which the English name is said to be a corruption). The tuberous sunflower (*Helianthus tuberosus*), Canada (or Virginia) potato; indigenous to Brazil, but cultivated in Europe and North America. The tubers are used as food for cattle and hogs. [A. 327.]

THE GLOBE ARTICHOKE. [A, 327.]

THE TUBER OF THE JERUSALEM ARTICHOKE. [A, 327.]

ARTICLE, n. A^{3}rt'i^{2}kl. Lat., *articulus* (dim. of *artus*), *articulum*. Fr., *article*. Ger., *Gelenk*. It., *articolo*. Sp., *articulo*. 1. A joint; any movable articulation. [A. 385.] 2. In botany, one of a series of similar superimposed, connected, separable parts constituting an organ or other portion of a plant; especially a portion of a fruit separable from the rest and containing a single seed. Also a vegetable cell which is developed from another cell and is shut off from the latter by a partition. See also ARTICULUM. 3. In zoology, any of the separate pieces constituting the antenna, the palpus, the tarsus, or the body of an insect. [L, 43.]—**In the a. of death.** See *In* ARTICULO *mortis* (under ARTICULUS).

ARTICOCA, ARTICOCALUS (Lat.), n's f. and m. A^{3}rt-i^2-ko'ka^3, -ko^{2}k'a^3-lu^{3}s(lu^{4}s). See ARTICHOKE.

ARTICULA (Lat.), n. n. pl. A^{3}r-ti^{2}k'u^2(u)-la^3. See ARTICULUM.

ARTICULAIRE (Fr.), adj. A^{3}r-ti^{2}k-u^6-la^{2}r. See ARTICULAR.

ARTICULAMENTUM (Lat.), n. n. A^{3}r-ti^{2}k''u^2(u)-la^3-me^{2}nt'-u^{3}m(u^{4}m). An articulation. [A, 318.]

ARTICULAR, adj. A^{3}rt-i^{2}k'u^2-la^{3}r. Gr., ἀρθρικός, ἀρθριτικός, ἀρθρίτης. Lat., *articularis*. Fr., *articulaire*. Ger., *articular*. It., *articolare*. Sp., *articular*. Pertaining to an articulation; in botany, springing from a node or from an article (2d def.); as a n. (Ger., *Gelenkstück des Unterkiefers*), the submalleal bone; a bone found in the lower jaw of many fishes. It articulates with the tympanic trochlea, sends up a process to which the ligament from the maxillary bone and the masticatory muscles are attached, and is joined with the angular and dentary pieces. [L, 27.]

ARTICULARIS (Lat.), adj. A^{3}rt-i^{2}k-u^2(u)-la(la^3)'ri^{2}s. See ARTICULAR.—**A. genu.** See SUBCRURÆUS.

ARTICULARIUS (Lat.), adj. A^{3}rt-i^{2}k-u^2(u)-la(la^3)'ri^2-u^{3}s(u^{4}s). Articular. [A, 318.]

ARTICULARY, adj. A^{3}r-ti^{2}k'u^2-la-ri^2. See ARTICULAR.

ARTICULATA (Lat.), n. n. pl. A^{3}rt-i^{2}k-u^2(u)-la(la^3)'ta^3. Fr., *articulés*. 1. In Cuvier's and von Baer's classifications, a general term for the *Crustacea*, *Arachnida*, *Annelida*, and *Insecta* (including the *Myriapoda*). 2. Of Blainville, see ENTOMOZOARIA. 3. Of Owen, see HOMOGANGLIATA. 4. Of Grant, see DIPLONEURA. 5. Of Wagner, the *Cirrhopodes*, *Annelida*, *Arachnida*, and *Insecta*. 6. Of Van Beneden, the *Epicotyledones*. 7. Of Ehrenberg, the *Insecta*, *Arachnoidea*, *Crustacea* (including the *Cirrhopodes* and *Epizoa*), and *Annelida*. 8. A phylum made by Haeckel in 1866, but now abandoned, which included the *Arthropoda* (in the present meaning), *Infusoria*, intestinal worms, and *Annelida*. 9. An order of the *Crinoidea* including the families *Pentacrinidæ* and *Comatulidæ*. 10. A group of the *Brachiopoda* made by Deshayes to include those having the shells united by teeth. See CLISTENTERATA. [L, 121, 208, 227.] The term was formerly used in nearly the same sense as *Arthropoda* (*q. v.*). [B.]

ARTICULATE, ARTICULATED, adj's. A^{3}rt-i^{2}k'u^2-lat, -lat-e^{2}d. Gr., ἀρθρώδης. Lat., *articulatus*. Fr., *articulé*. Ger., *articulirt*. It., *articolato*. Sp., *articulado*. 1. Jointed, provided with articulations. [B.] 2. Belonging to the *Articulata*. [L.] 3. Having the separate bones properly joined together (said of a prepared skeleton). 4. In botany, composed of articles or of separable connected parts (said of a fruit); also connected to another part by a joint (said of a leaf or a floral peduncle). [B, 121.]

ARTICULATIO (Lat.), n. f. A^{3}r-ti^{2}k-u^2(u)-la(la^3)'shi^2(ti^2)-o. Gen., *articulatio'nis*. See ARTICULATION.—**A. acromio-spinalis.** An articulation existing between the acromion and the spine of the scapula when the two do not unite. [Gruber (L, 30).]—**Articulationes ary-santorianæ.** The joints between the arytenoid cartilages and the cornicula laryngis. [L, 115.]—**A. astragalo-calcanea propria** [Meckel]. See *Astragalo calcaneal* ARTICULATION.—**A. atlanto-axialis, A. atlanto-epistrophica.** See *Atlanto-axoid* ARTICULATION.—**A. cardiniformis.** See GINGLYMUS.—**Articulationes cartilaginum costalium.** See *Interchondral* ARTICULATIONS.—**A. Chopartii.** Ger., *Chopart'sches Gelenk*. The articulation between the astragalus and os calcis behind and the cuboid and scaphoid bones anteriorly, being the line followed in Chopart's amputation of the foot. [L, 117.]—**A. costo-spinalis.** See *Costo-vertebral* ARTICULATION.—**A. coxæ.** The hip joint.—**A. cubiti.** The elbow joint. [L, 175.]—**A. cuneo-navicularis.** See *Naviculo-cuneiform* ARTICULATION.—**Articulationes digitorum.** See *Phalangeal* ARTICULATIONS.—**A. dubia.** See AMPHIARTHROSIS.—**A. femoris.** See *Femoro-tibial* ARTICULATION.—**A. genu.** The knee joint. [L, 175.]—**A. humeri.** The shoulder joint. [L, 175.]—**A. Lisfrancii.** Ger., *Lisfranc'sches Gelenk*. A term applied to the tarso-metatarsal articulations, on account of the line of incision in Lisfranc's amputation of the foot passing through them. [L, 117.]—**A. mandibularis, A. maxillæ, A. maxillaris.** See *Temporo-maxillary* ARTICULATION.—**Articulationes metacarpo-phalangeæ.** See *Metacarpo-phalangeal* ARTICULATIONS.—**A. mixta.** See AMPHIARTHROSIS.—**Articulationes musculo-ossariæ.** A term used by Weber to describe the attachment of muscles or tendons to bones. [L, 31.]—**A. notha.** See *False* ARTICULATION.—**A. pedis.** The ankle joint. [L, 175.]—**A. peroneo-tibialis inferior.** See *Inferior tibio-fibular* ARTICULATION.—**A. peroneo-tibialis superior.** See *Superior tibio-fibular* ARTICULATION.—**A. petro-basilaris.** The anterior portion of the spheno-temporal suture. [L, 31.]—**A. petro-occipitalis.** The petro-occipital suture. [L, 31.]—**Articulationes phalangeæ** (seu **phalangum**). See *Phalangeal* ARTICULATIONS.—**A. plana.** See ARTHRODIA.—**A. radio-ulnaris inferior.** See *Inferior radio-ulnar* ARTICULATION.—**A. radio-ulnaris superior.** See *Superior radio-ulnar* ARTICULATION.—**A. scapulo-clavicularis.** See *Acromio-clavicular* ARTICULATION.—**A. sphæroidea.** See ENARTHROSIS.—**A. sterno-costalis.** See *Costo-sternal* ARTICULATION.—**A. tali.** The ankle joint. [L, 175.]—**A. talo-calcanea.** See *Astragalo-calcaneal* ARTICULATION.—**A. talo-calcaneo-navicularis.** See *Astragalo-calcaneo-scaphoid* ARTICULATION.—**A. talo-cruralis.** The ankle joint. [L, 31.]—**A. talo-navicularis.** See *Astragalo-scaphoid* ARTICULATION.—**A. tarso-metatarsea externa.** The articulation between the cuboid and the third and fourth metatarsal bones. [L, 117.]—**A. tarso-metatarsea interna.** The articulation between the first cuneiform and the first metatarsal bones. [L, 117.]—**A. tarso-metatarsea media.** The articulation between the second and third cuneiform and the second and third metatarsal bones. [L, 117.]—**A. trochoides.** See *Trochoid* ARTICULATION.

ARTICULATION, n. A^{3}r-ti^{2}k-u^2-la'shu^{3}n. Gr., ἄρθρον. Lat., *articulatio*. Fr., *articulation*. Ger., *Gelenk* (1st def.), *Articulation*, *Knochenfügung* (1st def.), *Knochenverbindung* (1st def.). It., *articolazione*. Sp., *articulación*. 1. A joint, whether movable or not; the union of any two segments of an animal body through the intervention of a structure or structures different from both; most commonly limited to the connection existing between contiguous bones or cartilages. [L, 133, 142.] 2. The act of putting the bones of a skeleton together properly. 3. In zoology, the division of the body of an animal into separate, movable segments; the line of junction of two adjacent segments; occasionally, one of the segments themselves. 4. In botany, the connection of the parts of a plant by joints, particularly of the several parts of a compound leaf; the place or line of such connection; also applied occasionally, but improperly, to the part included between two joints. 5. The act or function of combining vocal sounds in the form of syllables or words (in which sense such of the foreign equivalents as are not derivatives of articulatio do not apply).—**Acromio-clavicular a.** Lat., *articulatio acromio-clavicularis*. Fr., *a. acromio-claviculaire*. Ger., *Schulterblattschlüsselbeingelenk*. It., *articolazione acromio-clavicolare* (o *cleido-scapolare*). Sp., *articulación acromio-clavicular*. The a. between the outer end of the clavicle and the upper edge of the acromion. [L, 172.]—**Amphiarthrodial a.** See AMPHIARTHROSIS.—**Apparent a.** One in which the separation of the parts by a joint is obvious. [B, 240.]—**Arthrodial a.** See ARTHRODIA.—**A. accidentelle, A. anorme** (Fr.). See *False a.*—**A. bicondylienne** (Fr.). An a. of two condyles separated by a bi-concave fibro-cartilage. [L, 114.]—**A. bitrochléene** (Fr.). An a. in which the articular surfaces are separated by two fibro-cartilages. [L, 114.]—**A. by mutual reception.** See SCHINDYLESIS.—**A. by suture.** See SUTURE.—**A. calcanéo-astragalienne** (Fr.). See *Astragalo-calcaneal a.*—**A. calcanéo-cuboïdienne** (Fr.). See *Calcaneo-cuboid a.*—**A. chondro-costales** (Fr.). See *Chondro-costal a's.*—**A. chondro-sternale** (Fr.). See *Costo-sternal a.*—**A. condylienne** (Fr.). See CONDYLARTHROSIS.—**A. contre nature** (Fr.). See *False a.*—**A's cunéennes** (Fr.). See *Cuneiform a's.*—**A. cunéo-cuboïdienne** (Fr.). See *Cubo-cuneiform a.*—**A. cunéo-scaphoïdienne** (Fr.). The a. between the articular apophyses of the vertebræ. [L, 188.]—**A. des apophyses épineuses** (Fr.). The connection between the spinous processes of the vertebræ by the interspinous and supraspinous ligaments. [L, 188.]—**A. douteuse** (Fr.). See AMPHIARTHROSIS.—**A. du cinquième genre** (Fr.). See *Trochoid a.*—**A. du cou de pied** (Fr.). The ankle joint. [L, 188.]—**A. du deuxième genre** (Fr.). A variety of a. allowing of motion of every kind except rotation. [L, 87.]—**A. du genou** (Fr.). See *Tibio-femoral a.*—**A. du première genre** (Fr.). See ENARTHROSIS.—**A. du quatrième genre** (Fr.). See CYLINDRARTHROSIS.—**A. du troisième genre** (Fr.). See CONDYLARTHROSIS.—**A. en charnière** (Fr.), **A. en genou** (Fr.). See GINGLYMUS.—**A. fausse** (Fr.). See *False a.*—**A. fixe** (Fr.). See SYNARTHROSIS.—**A. ginglyme** (Fr.), **A. ginglyme angulaire** (Fr.). See GINGLYMUS.—**A. ginglyme latérale** (Fr.). See *Trochoid a.*—**A. ginglymoïdale** (Fr.). See GINGLYMUS.—**A. immobile** (Fr.). See SYNARTHROSIS.—**A. médio-carpienne** (Fr.). See *Medio-carpal a.*—**A. médio-tarsienne** (Fr.). See *Medio-tarsal a.*—**A's métacarpiennes** (Fr.). See *Intermetacarpal a's.*—**A's métatarsiennes** (Fr.). See *Intermetatarsal a's.*—**A. mixte** (Fr.). See AMPHIARTHROSIS.—**A. mobile** (Fr.). See DIARTHROSIS.—**A. neutre** (Fr.). See AMPHIARTHROSIS.—**A. orbiculo-stapédienne** (Fr.). See *Incudo-stapedial a.*—**A. par contiguité** (Fr.). See DIARTHROSIS.—**A. par continuité** (Fr.). See AMPHIARTHROSIS.—**A. par double emboîtement réciproque** (Fr.). An a. in which the bones are separated by a fibro-cartilage the surfaces of which are of the same shape as the extremities of the bones (*e. g.*, the sterno-clavicular a.). [L, 114.]—**A. par emboîtement réciproque** (Fr.). Ger., *Sattelgelenk*. It., *articolazione a sella*, *diartrosi a sella* (o *efippiale*). A term applied by Cruveilhier and Richet to that variety of ginglymus in which a shallow curved groove articulates with a regularly rounded curved ridge, as in the carpo-metacarpal articulation of the thumb. [A, 314.]—**A. péronéo-sous-tibiale** (Fr.), **A. péronéo-tibiale inférieure** (Fr.). See *Inferior tibio-fibular a.*—**A. péronéo-tibiale moyenne** (Fr.). See *Middle tibio-fibular a.*—**A. péronéo-tibiale supérieure** (Fr.). See *Superior tibio-fibular a.*—**A. pivotante** (Fr.). See *Trochoid a.*—**A. pubienne** (Fr.). See SYMPHYSIS *pubis*.—**A. radio-cubitale inférieure** (Fr.). See *Inferior radio-ulnar a.*—**A. radio-cubitale supérieure** (Fr.). See *Superior radio-ulnar a.*—**A. scaphoïdo-astragalienne** (Fr.). See *Astragalo-scaphoid a.*—**A. scaphoïdo-cuboïdienne** (Fr.). See *Naviculo-cuboid a.*—**A'sebene** (Ger.). The general plane of contact between the head of a bone and the cavity in which it plays, irrespective of the greater size of the former. [L, 31.]—**A. serrée** (Fr.). Syn.: *diarthrose planiforme*. A movable a. by flat or nearly flat surfaces (like those of the carpal bones). [A, 301.]—**A'sfläche** (Ger.). An articular surface. [L, 31.]—**A'sgrube** (Ger.). An articular fossa or cavity. [L, 80.]—**A. semi-mobile** (Fr.). See AMPHIARTHROSIS.—**A. sternale inférieure** (Fr.). The a. between the gladiolus and the body of the sternum. [L, 114.]—**A. sternale supérieure** (Fr.). Of Sappey, the a. between the manubrium and the body of the sternum. [L, 114.]—**A. supplémentaire** (Fr.). A form of *a. surnuméraire* (*q. v.*) in which the fractured ends become rounded (or one is rounded and the other hollowed out), smooth like cartilage, and covered with a fibrous capsule. [A, 301.]—**A. surnuméraire** (Fr.). A sort of joint formed between the fragments of a broken bone. [A, 301.]—**A. trochléenne** (Fr.). See *Trochoid a.*—**A. unicondylienne** (Fr.). A variety of a. in which there are two elliptical surfaces, one of which is convex and termed a condyle. [L, 114.]—**A. vertébro-iliaque** (Fr.). A term applied to the union established between the last lumbar vertebra and the coccyx by the ilio-lumbar ligaments. [L, 188.]—**Astragalo-calcaneal a., Astragalo-calcanean a.** Lat., *articulatio astragalo-calcanea*. Fr., *a. calcanéo-astragalienne*. Ger., *unteres Sprung-*

beingelenk. The a. between the astragalus and the os calcis. [L, 31.]—**Astragalo-calcaneo-scaphoid a.** Lat., *articulatio astragalo-calcaneo-scaphoidea.* Ger., *vorderes Sprungbeingelenk.* An arthrodial a. formed by the astragalus, the os calcis, and the scaphoid bone; by some anatomists it is divided into the astragalo-calcaneal and the astragalo-scaphoid a's. [L, 31.]—**Astragalo-scaphoid a.** Lat., *articulatio astragalo-scaphoidea.* Fr., *a. scaphoïdo-astragalienne.* The a. between the astragalus and the scaphoid bone. [L, 31.]—**Atlanto-axial a.** Lat., *articulatio atlanto-axialis.* Fr., *a. atloïdo-axoïdienne.* Ger., *Drehwirbelgelenk.* It., *articolazione atloido-assoidea.* Sp., *articulación atloido-axoidea.* An arthrodial a. between the articular surfaces of the atlas and axis. [L, 31.]—**Atlanto-occipital a.** See *Occipito-atlantal a.* —**Atlanto-odontoid a.** Lat., *articulatio atlantico-odontoidea.* Fr., *a. atlanto-odontoïdienne.* Ger., *Zahngelenk.* Sp., *articulación atloido-odontoidea.* A lateral ginglymoid a. between the anterior arch of the atlas and the odontoid process of the axis. [L, 31, 142.]—**Atlo-axoid a.** See *Atlanto-axial a.*—**Ball-and-socket a.** See Enarthrosis.—**Bewegliche A.** (Ger.). See Diarthrosis. —**Bewegliche runde A.** (Ger.). See Enarthrosis.—**Calcaneo-cuboid a.** Lat., *articulatio calcaneo-cuboidea.* Fr., *a. calcanéo-cuboïdienne.* Ger., *Würfelbeingelenk.* Sp., *articulación calcaneo-cuboidea.* The a. between the os calcis and the cuboid bone. [L, 31.]—**Calcaneo-scaphoid a.** Fr., *a. calcanéo-scaphoïdienne.* A term applied to the connection existing between the os calcis and the scaphoid bone through the calcaneo-scaphoid ligaments. [L, 188.]—**Carpo-metacarpal a's.** Lat., *articulationes carpo-metacarpeæ.* Fr., *a's carpo-métacarpiennes.* Ger., *Carpalmetacarpalgelenke.* It., *articolazioni carpo-metacarpali.* Sp., *articulaciones carpo-metacarpianas.* The a's between the carpal and metacarpal bones. [L, 31.]—**Chondro-costal a's.** Fr., *a's chondro-costales.* Sp., *articulaciones condro-costales.* The a's between the ribs and the costal cartilages. [L, 188.]—**Chondro-sternal a.** See *Costo-sternal a.*—**Chondro-transverse a.** See *Costo-transverse a.*—**Chondro-vertebral a.** See *Costo-vertebral a.* —**Coccygeal a's.** Fr., *a's coccygiennes.* The a's between the coccygeal vertebræ. [L, 114.]—**Coraco-clavicular a.** Lat., *articulatio coraco-clavicularis.* Fr., *a. coraco-claviculaire.* It., *articolazione coraco-clavocolare.* A term applied to the union established between the outer end of the clavicle and the coracoid process of the scapula by the coracoid ligament. [L, 114.]—**Costo-central a.** See *Costo-vertebral a.*—**Costo-clavicular a.** Ger., *Costoclaviculargelenk, Rippenschlüsselbeingelenk.* An a. formed by a small facet on the inferior surface of the sternal end of the clavicle and the upper border of the first rib. [L, 31.]—**Costo-sternal a.** Lat., *articulatio costo-sternalis.* Fr., *a. chondro-sternale.* Ger., *Rippenbrustbeingelenk.* It., *articolazione costo-sternale.* Sp., *articulación condro-esternale.* The a. between a costal cartilage and a fossa on the margin of the sternum. [L, 31.]—**Costo-transverse a's.** Lat., *articulationes costo-transversales.* Fr., *a's costo-transversaires.* Ger., *Rippenhöckergelenke.* Sp., *articulaciones costo-transversales.* The a's between the transverse processes of the vertebræ and the neck and tubercles of the ribs. [L, 114.]—**Costo-vertebral a.** Lat., *articulatio costo-vertebralis.* Fr., *a. costo-vertébrale.* Ger., *Rippenköpfchengelenk.* It., *articolazione costo-vertebrale.* Sp., *articulación costo-vertebral.* The a. between the head of a rib and the bodies of two adjacent vertebræ; occasionally the rib is attached to one vertebra only. [L, 31.]—**Coxo-femoral a.** Lat., *articulatio coxo-femoralis.* Fr., *a. coxo-fémorale.* Sp., *articulación coxo-femoral.* The hip joint. [L, 114.]—**Crico-arytenoid a's.** Lat., *articulationes crico-arytænoideæ.* The a's between the convex surfaces on the upper border of the cricoid cartilage and the concave depressions on the bases of the arytenoid cartilages. [L, 117.]—**Crico-thyreoid a's.** Lat., *articulationes crico-thyreoideæ.* The a's between the lesser cornua of the thyreoid cartilage and the sides of the cricoid cartilage. [L, 117.]—**Cubo-cuneiform a.** Fr., *a. cunéo-cuboïdienne.* The a. between the cuboid and the external cuneiform bones. [L, 142.]—**Cuneiform a's.** Fr., *a's cunéenes.* The a's between the cuneiform bones. [L, 142.]—**Cup-and-ball a.** See Enarthrosis. **Diathrodial a.** See Diarthrosis.—**False a.** Lat., *articulatio notha.* Fr., *a. fausse* (ou *accidentelle*, ou *contre nature*, ou *anorme*, ou *surnuméraire*). Ger., *falsches Gelenk.* Syn.: *pseudarthrosis.* A sort of joint formed between the fragments of a broken bone or between the end of a dislocated bone and the surrounding parts.—**Femoro-tibial a.** Lat., *articulatio genu.* Fr., *a. fémoro-tibiale.* Ger., *Kniegelenk.* It., *articolazione femoro-tibiale.* Sp., *articulación femoro-tibial.* The knee joint. [L, 188.]—**Humero-cubital a.** Lat., *articulatio cubiti.* Fr., *a. huméro-cubitale.* Ger., *Ellenbogengelenk.* Sp., *articulación humero-cubital.* 1. The elbow joint. [L, 115.] 2. See *Humero-ulnar a.*—**Humero-radial a.** Fr., *a. huméro-radiale.* The a. between the lower end of the os brachii and the upper end of the radius. [L, 13.]—**Humero-scapular a.** See *Scapulo-humeral a.*—**Humero-ulnar a.** The a. between the lower end of the os brachii and the upper end of the ulna. [L, 190.]—**Immovable a.** See Synarthrosis.—**Inco-orbicular a.** Lat., *articulatio inco-orbicularis.* Fr., *a. inco-orbiculaire.* Ger., *Amboss-orbiculargelenk.* It., *articolazione inco-orbicolare.* Sp., *articulación inco-orbicular.* A term applied by the older anatomists to the union between the incus and the so-called os orbiculare. [F.]—**Incudo-stapedial a.** Lat., *articulatio incudo-stapedica.* Fr., *a. incudo-stapédiale.* Ger., *Ambosssteigbügelgelenk.* The a. between the lenticular process of the incus and the head of the stapes. [F.]—**Inferior radio-ulnar a.** Lat., *articulatio radio-ulnaris inferior.* Fr., *a. radio-cubitale inférieure.* Ger., *unteres Radioulnargelenk.* It., *articolazione cubito-radiale inferiore.* A lateral ginglymoid a. between the sigmoid cavity of the radius and the lower end of the ulna. [L, 172.]—**Inferior tibio-fibular a.** Lat., *articulatio peroneo-tibialis inferior.* Fr., *a. péronéo-sous-tibiale.* Ger., *unteres Tibiofibulargelenk.* It., *articolazione tibio-peronea inferiore.* Sp., *articulación peroneo-tibial inferior.* The a. between the articular surfaces of the lower end of the tibia and that of the fibula. [L, 142.]—**Intercarpal a's.** See *Medio-carpal a's.*—**Interchondral a's.** Lat., *articulationes cartilaginum costalium.* The a's formed by processes on the adjacent margins of the costal cartilages; they usually exist from the sixth to the ninth cartilages. [L, 142.]—**Interhyoideal a's.** A term applied to the a's between the different pieces of the hyoideal apparatus. [L, 13.]—**Intermetacarpal a's.** Lat., *articulationes intermetacarpeæ.* Fr., *a's intermétacarpiennes.* A term applied to the a's of the metacarpal bones with each other. [L, 142.]—**Intermetatarsal a's.** Lat., *articulationes intermetatarseæ.* Fr., *a's intermétatarsiennes.* The a's between the proximal and distal ends of the metatarsal bones. [L, 142.]—**Interphalangeal a's.** See *Phalangeal a's.*—**Intertarsal a's.** The a's of the tarsal bones with each other. [L, 13.]—**Intervertebral a's.** Lat., *articulationes intervertebrales.* Fr., *a's intervertébrales.* A term applied to the a's between the bodies and the transverse and spinous processes of the vertebræ. [L, 13.]—**Ischio-pubic a.** A term applied to the union between the ischium and the pubic bone, which in many young and in some adult animals is a true amphiarthrodial joint. [L, 13.]—**Kugelförmige A.** (Ger.). See Enarthrosis.—**Lateral ginglymoid a.** Fr., *a. ginglyme latérale.* See *Trochoid a.*—**Lumbo-sacral a.** See *Sacro-vertebral a.* —**Malleo-incudal a.** Fr., *a. malléo-incudale.* Ger., *Hammerambossgelenk.* The a. between the posterior surface of the head of the malleus and the body of the incus. [F, 3.]—**Medio-carpal a.** Fr., *a. médio-carpienne.* The a. between the adjacent surfaces of the two rows of carpal bones. [L, 114.]—**Medio-tarsal a.** Fr., *a. médio-tarsienne.* Sp., *articulación medio-tarsiana.* A term applied to the articulation of the os calcis and the astragalus with the scaphoid and cuboid bones. [L, 114.]—**Metacarpal a's.** See *Intermetacarpal a's.*—**Metacarpo-phalangeal a's.** Lat., *articulationes metacarpo-phalangeæ.* Fr., *a's métacarpo-phalangiennes.* Ger., *Metacarpophalangealgelenke.* Sp., *articulaciones metacarpo-falángicas.* The a's between the metacarpal bones and their corresponding phalanges. [L, 114.]—**Metatarso-phalangeal a's.** Lat., *articulationes metatarso-phalangeales.* Fr., *a's métatarso-phalangiennes.* Ger., *Metatarsophalangealgelenke.* Sp., *articulaciones metatarso-falángicas.* The a's between the heads of the metatarsal bones and the corresponding phalanges. [L, 114.]—**Middle radio-ulnar a.** A term applied to the union between the radius and the ulna formed by the interosseous membrane and the oblique ligament. [L, 172.] —**Middle tibio-fibular a.** Fr., *a. péronéo-tibiale moyenne.* A term applied to the connection between the tibia and the fibula formed by the interosseous membrane. [L, 172.]—**Mixed a.** See Amphiarthrosis.—**Movable a.** See Diarthrosis.—**Naviculo-cuboid a.** Lat., *articulatio naviculo-cuboidea.* Fr., *a. scaphoïdo-cuboïdienne.* The a. between the cuboid and scaphoid bones. [L, 142.]—**Naviculo-cuneiform a.** Lat., *articulatio cuneo-navicularis.* Fr., *a. cunéo-scaphoïdienne.* Ger., *Schiffbeingelenk.* The a. between the scaphoid and the cuneiform bones. [L, 142.]—**Obsolete a.** One in which the separation of the parts by a joint is not obvious. [B, 240.]—**Occipito-atlantal, Occipito-atloid a.** Lat., *articulatio atlanto-occipitalis.* Fr., *a. occipito-atloïdienne.* Ger., *Hinterhauptsgelenk.* It., *articolazione atloido-occipitale.* Sp., *articulación occipito-atloidea.* The a. formed by the condyles of the occipital bone and the articular surfaces of the upper surface of the atlas. [L, 31.]—**Occipito-axoid a.** Lat., *articulatio occipito-axoidea.* Fr., *a. occipito-axoïdienne.* Sp., *articulación occipito-atloidea.* A term applied to the connection between the occipital bone and the axis formed by the odontoid and occipito-axoid ligaments. [L, 172.]—**Orbiculo-stapedial a.** Fr., *a. orbiculo-stapédienne.* See *Incudo-stapedial a.*—**Pedal a.** A term applied to the a. between the second phalanx and the third phalanx and navicular bone of the horse and some other of the solipeds. [L, 13.]—**Phalangeal a's.** Lat., *articulationes phalangum.* Fr., *a's phalangiennes.* Ger., *Fingergelenke.* Sp., *articulaciones falángicas.* The a's between the heads of the phalanges. [L, 114.]—**Posterior calcaneo-astragaloid a.** Lat., *articulatio astragalo-calcanea propria.* Fr., *a. calcanéo-astragalienne postérieure.* Ger., *hinteres Sprungbeingelenk.* The a. between the posterior articular surface of the astragalus and the sustentaculum tali. [L. 32.]—**Pubic a.** Lat, *articulatio pubica.* Fr., *a. pubienne.* Sp., *articulación pubiana.* See Symphysis *pubis.*—**Quadrato-mandibular a.** The a. of the mandible with the quadrate bone. [L, 12.]—**Radio-carpal a.** Lat., *articulatio radio-carpalis.* Fr., *a. radio-carpienne.* Ger., *Radio-carpalgelenk.* The a. formed by the lower end of the radius and the cuneiform, scaphoid, and semilunar bones. [L, 142.] —**Rundliche A.** (Ger.). See Enarthrosis.—**Sacro-coccygeal a.** Lat., *articulatio sacro-coccygea.* Fr., *a. sacro-coccygienne.* Ger., *Kreuzsteissbeingelenk.* Sp., *articulación sacro-coccijea.* The a. between the sacrum and the coccyx. [L, 142.]—**Sacro-iliac a.** Lat., *articulatio sacro-iliaca.* Fr., *a. sacro-iliaque.* Ger., *Hüftkreuzbeingelenk.* Sp., *articulación sacro-iliaca.* The a. between the sacrum and the ilium. [L, 142.]—**Sacro-vertebral a.** Lat., *articulatio sacro-vertebralis.* Fr., *a. sacro-vertébrale.* Ger., *Lendenwirbelkreuzbeingelenk.* Sp., *articulación sacro-vertebral.* The a. between the sacrum and the last lumbar vertebra. [L, 172.]—**Scapulo-clavicular a.** Lat., *articulatio scapulo-clavicularis.* Fr., *a. scapulo-claviculaire.* See *Acromio-clavicular a.*—**Scapulo-humeral a.** Lat., *articulatio scapulo-humeralis.* Fr., *a. scapulo-humérale.* Ger., *Schultergelenk.* Sp., *articulación escapulo-humeral.* The shoulder joint; formed by the head of the os brachii and the glenoid fossa of the scapula. [L, 142.]—**Stapedio-vestibular a.** Fr., *a. de l'étrier avec la fenêtre ovale.* Ger., *Steigbügelvorhofgelenk.* It., *articolazione della staffa colla finestra ovale.* Sp., *articulación del estrio con la ventana oval.* The a. between the stapes and the margin of the fenestra ovalis. [F, 32.]—**Sterno-clavicular a.** Lat., *articulatio sterno-clavicularis.* Fr., *a. sterno-claviculaire.* Ger., *Brustbeinschlüsselbeingelenk.* Sp., *articulación esterno-clavicular.* The a. between the sternum and the clavicle. [L, 114.]—**Superior radio-ulnar a.** Lat., *articulatio radio-ulnaris superior.* Fr., *a. radio-cubitale supérieure.*

Ger., *oberes Radioulnargelenk.* Sp., *articulación cubito-radial superior.* The a. formed by the head of the radius and the sigmoid fossa of the upper end of the ulna. [L, 31.]—**Superior tibio-fibular a.** Lat., *articulatio peroneo-tibialis superior.* Fr., *a. péronéo-tibiale supérieure.* Ger., *oberes Tibiofibulargelenk.* The a. formed by the upper end of the fibula and an articular surface on the tibia just below and to the outer side of the knee joint. [L, 142.]—**Synovial a.** An a. which is lubricated by synovial fluid. [C.]—**Tarso-metatarsal a's.** Fr., *a's tarso-métatarsiennes.* Ger., *Tarsometatarsalgelenke.* See ARTICULATIO *tarso-metatarsea externa, interna,* and *media.*—**Temporo-hyoideal a.** The a. between the styloid bone and the styloid process of the temporal bone. [L, 13.]—**Temporo-maxillary a.** Lat., *articulatio maxillaris.* Fr., *a. temporo-maxillaire.* Ger., *Unterkiefergelenk.* Sp., *articulación temporo-maxilar.* The a. formed by the condyle of the lower jaw and the glenoid fossa of the temporal bone. [L, 142.]—**Thyreo-hyoid a.** A term applied to the connection between the thyreoid cartilage and the hyoid bone formed by the thyreo-hyoid ligaments and membrane. [L, 190.]—**Tibio-tarsal a.** Lat., *articulatio tibio-tarsalis.* Fr., *a. tibio-tarsienne.* Ger., *Knöchelgelenk.* Sp., *articulación tibio-tarsiana.* The ankle joint; formed by the inferior extremities of the tibia and fibula and the astragalus. [L, 142.]—**Trochoid a.** Lat., *articulatio trochoides,* Fr., *a. trochléene.* Ger., *Achsenfügung, Rollgelenk.* A form of a. in which rotation alone is possible (*e. g.*, the superior radio-ulnar a.). [L, 31.]

ARTICULATIVE, adj. A^{3}rt-i^{2}k′u^2-la-ti^{2}v. See ARTICULAR.

ARTICULATOR, n. A^{3}rt-i^{2}k′u^2-la-to^{2}r. One who articulates bones. [L.]

ARTICULATUS (Lat.), adj. A^{3}rt-i^{2}k-u^2(u)-la(la^3)′tu^{3}s(tu^{4}s). Articulated. [B.]

ARTICULÉ (Fr.), adj. A^{3}rt-i^{2}k-u^6-la. 1. Articulated. [B.] 2. Belonging to the *Articulata.* [A, 385.] 3. Articulate (said of speech). [A, 301.] 4. As a n., in the pl., see ARTICULATA.—**A's en dedans** [Duméril]. Vertebrates. [L, 208.]—**A's en dehors** [Duméril]. A general term for insects, crustaceans, and worms. [L, 208.]

ARTICULEUX (Fr.), adj. A^{3}rt-i^{2}k-u^6-lu^5. See ARTICULÉ and ARTICULOSUS.

ARTICULIRT (Ger.), adj. A^{3}rt-i^{2}k-u-lert′. Articulated. [L, 80.]

ARTICULO-ANGULAIRE (Fr.), n. A^{3}r-ti^{2}k-u^6-lo-a^{3}n^2-gu^6-la^{2}r. Dugés's term for the articular bone (see under ARTICULAR). [L.]

ARTICULO-ANGULO-OPERCULAIRE (Fr.), adj. A^{3}rt-ik-u^6-lo-a^{3}n^2-gu^6-lo-o-pe^{2}r-ku^6-la^{2}r. A descriptive zoological term applied to a bone in the head of the *Cœciliæ.* [B, 38.]

ARTICULOSUS (Lat.). adj. A^{3}rt-i^{2}k-u^2(u)-lo′su^{3}s(su^{4}s). From *articulus,* a joint. Fr., *articuleux.* Many-jointed (applied as a species-name to a crab having many-jointed antennæ). [L, 180.] In botany, made up of superimposed articulated segments (articles). [B, 121.]

ARTICULUM (Lat.), n. n. A^{3}r-ti^{2}k′u^2(u)-lu^{3}m(lu^{4}m). A faultily formed diminutive of *artus.* A term applied by the older botanists to the spores or conidia of *Fungi,* when arranged in the form of a chain or rosary. [B, 121.]

ARTICULUS (Lat.), n. m. A^{3}rt-i^{2}k′u^2(u)-lu^{3}s(lu^{4}s). Dim. of *artus.* 1. A joint. [L, 50.] 2. A segment, as of an animal. [L, 11.] 3. A limb. [L, 50.] 4. A moment of time. See *In articulo mortis.*—**Aqua articulorum.** See SYNOVIA.—**Articuli coarctatio.** See ARTHROSTENOSIS.—**Articuli dilatatio.** See ARTHRECTASIS.—**Articuli duplicati.** Lit., double joints; an old term for rickets. [D, 72.]—**A. nothus, A. novus.** See PSEUDARTHROSIS.—**Articuli of the lenticular nucleus.** Lat., *articuli nuclei lentiformis.* Ger., *Glieder des Linsenkerns.* The three (sometimes four) divisions of the lenticular nucleus, applied against each other like concavo-convex vertebræ, the outer one being known as the *putamen,* and the two (or three) others together as the *globus pallidus.* [α, 10.]—**A. præternaturalis, A. spurius.** See PSEUDARTHROSIS.—**In articulo mortis.** At the moment of death.—**Lenticular articuli.** See *Articuli of the lenticular nucleus.*

ARTIER, n. A^{3}r′ti^2-u^{3}r. An obsolete form of artery. [B, 222.]

ARTIFICIAL, adj. A^{3}rt-i^2-fi^{2}sh′a^{2}l. Lat., *artificialis* (from *arte,* by art, and *facere,* to make). Fr., *artificiel.* Ger., *künstlich.* It., *artificiale.* Sp., *artificial.* Made by man (opposed to *natural*); in natural history, an a. system is a system of classification and nomenclature founded upon distinctions selected arbitrarily. [B.]

ARTIODACTYLA (Lat.), n. n. pl. A^{3}r″shi^2(ti^2)-o-da^{2}k(da^{3}k)′-ti^{2}l(tu^{6}l)-a^3. From ἄρτιος, even, and δάκτυλος, a finger. The artiodactyls; a subdivision of the hoofed quadrupeds, including such as have an even number of toes to each foot; it comprises pigs and all the ruminant hoofed animals. [B, 28.]

ARTIOMORPHA (Lat.), n. n. pl. A^{3}r″shi^2(ti^2)-o-mo^{2}rf′a^3. From ἄρτιος, even, and μορφή, form. Fr., *artiomorphes.* Ger., *Artiomorphen.* In Blainville's classification of animals, a subkingdom comprising those which are symmetrical on the two sides. [L, 121.]

ARTIOZOA, ARTIOZOARIA (Lat.), n's n. pl. A^{3}r″shi^2(ti^2)-o-zo′a^3, -zo-a(a^3)′ri^2-a^3. From ἄρτιος, even, and ζῷον, an animal. Fr., *artiozoaires.* See ARTIOMORPHA.

ARTIPHYLLUS (Lat.), adj. A^{3}rt-i^2-fi^{2}l(fu^{6}l)′lu^{3}s(lu^{4}s). From ἄρτι, exactly, and φύλλον, a leaf. Having buds in the axils of all the leaves. [B, 38.]

ARTISCHOCKE (Ger.), n. A^{3}rt-i^2-shok′e^2. See ARTICHOKE.—**A'bart.** The inner, filamentous portion of an artichoke; the "choke." [L, 46.]—**A'nbogen.** The bottom of the artichoke. [L, 46.]—**A'ndistel.** See ARTICHOKE.—**A'nfast.** A mixture of wine and the expressed juice of the artichoke; used in scurvy. [L, 30.]—**A'nkäse.** See *A'nbogen.*—**A'nsamen.** The fruit of *Cynara scolymus.* [B, 180.]—**A'nstuhl.** See *A'nbogen.*—**Cardonen-A.** The *Cynara cardunculus.* [B, 180.]—**Echte A., Französische A., Garten-A., Glatte A., Grüne A.** See ARTICHOKE.—**Kugel-A., Rothe A.** See *Globe* ARTICHOKE.—**Spanische A.** The *Cynara cardunculus.* [B. 49.]—**Wilde A.** The *Carlina acaulis.* [B, 180.]

ARTISCHOCUS, ARTISCOCCUS (Lat.), n's m. A^{3}rt-i^{2}s-ko(ch^{2}o^2)′ku^{3}s(ku^{4}s), ko^{2}k′ku^{3}s(ku^{4}s). The artichoke. [B, 59.]—**A. lævis.** The common artichoke, *Cynara scolymus.* [B, 59.]—**Semen artischoci.** The fruit of *Cynara scolymus.* [B, 180.]

ARTISCUS (Lat.), n. m. A^{3}rt-i^{2}s′ku^{3}s(ku^{4}s). Gr., ἀρτίσκος (dim. of ἄρτος), a little loaf, a roll, a cake. An old name for a troche, on account of its shape; especially one made of bread and viper's flesh. [L, 84, 94.]

ARTISTOMIA (Lat.), n. f. A^{3}rt-i^{2}s-tom(to^{2}m)′i^2-a^3. Gr., ἀρτιστομία (from ἄρτι, exactly, and στόμα, a mouth). 1. A distinct, precise articulation. [L, 50.] 2. That state of an opening (in an instrument and especially in an operation wound) in which its size exactly answers the purpose. [L, 50.

ARTISTOMUS (Lat.), adj. A^{3}rt-i^{2}st′o(o^2)-mu^{3}s(mu^{4}s). Gr., ἀρτίστομος. Having the quality of artistomia. [L, 50.]

ARTIYLS, n. pl. A^{3}r′ti^2-i^{2}lz. From ἄρτιος, even (see also *-yl**). Ger., *Artiyle.* A name given by Löwig to the hydrocarbons of the general formula C_nH_{2n}. [B, 196.]

ARTIYPOCHROS, ARTIYPOCHRUS (Lat.), adj's. A^{3}rt″i^2-i^{2}p(u^{6}p)-o′kro^{2}s(ch^{2}ro^{2}s), -kru^{3}s(ch^{2}ru^{4}s). Gr., ἀρτιύπωχρος (from ἄρτι, exactly, and ὕπωχρος, pale yellow). Of a pale-yellow color. [Hippocrates (L, 50).]

ARTIZOOS (Lat.), adj. A^{3}rt-i^2-zo′o^{2}s. Gr., ἀρτίζωος. 1. Barely alive (said of infants that are born in a state of impaired vitality). [A, 322.] 2. Recently born. [A, 322.]

ARTOCARPACEÆ (Lat.), n. f. pl. A^{3}rt″o-ka^{3}rp-a(a^3)′se^2(ke^2)-e(a^3-e^2). For deriv., see ARTOCARPUS. Fr., *artocarpées, artocarpacées.* Ger., *Artokarpaceen, Brodfruchtbäume.* The artocarpads. Of Lindley and others, an order of apetalous phanerogams comprising trees and shrubs with milky opalescent juice, usually acrid and poisonous, sometimes nutritious and wholesome; leaves usually alternate, convolute in the bud, and provided with large deciduous stipules which are usually amplexicaul; flowers collected in dense heads or aments; ovaries with a single ovule, which is ascending or, if descending, is nearly or quite orthotropal, the micropyle being always superior; and large fleshy fruit formed by the aggregation of the ovaries. This order, which comprises *Artocarpus, Ficus, Antiaris, Cecropia,* and other genera, is by many regarded as a tribe of the *Ulmaceæ* related to the *Moreæ,* or is merged with the latter, from which it is chiefly distinguished by the character of its leaves and stipules and by its erect stamens. [B, 34, 121.]

ARTOCARPACEOUS, adj. A^{3}rt″o-ka^{3}rp-a′shu^{3}s. Fr., *artocarpé.* Belonging to the *Artocarpaceæ.*

ARTOCARPADS, n. pl. A^{3}rt-o-ka^{3}rp′a^{2}dz. See ARTOCARPACEÆ.

ARTOCARPEÆ [R. Brown] (Lat.), n. f. pl. A^{3}rt-o-ka^{3}rp′e^2-e(a^3-e^2). The *Artocarpaceæ,* especially when regarded as a tribe of the *Ulmaceæ* or the *Moraceæ,* and not as a distinct order. [B.]

ARTOCARPEOUS, adj. A^{3}r″to-ka^{3}r′pe-u^{3}s. See ARTOCARPACEOUS.

ARTOCARPIDEÆ [Dumortier] (Lat.), n. f. pl. A^{3}r-to-ka^{3}r-pi^{2}d′e^2-e(a^3-e^2). See ARTOCARPEÆ.

ARTOCARPOUS, adj. A^{3}rt-o-ka^{3}rp′u^{3}s. See ARTOCARPACEOUS.

ARTOCARPUS (Lat.), n. m. (although treated by botanists as fem.). A^{3}rt-o-ka^{3}rp′u^{3}s(u^{4}s). From ἄρτος, bread, and καρπός, a fruit. Fr., *artocarpe, arbre à pain.* Ger., *Brodfruchtbaum, Brodbaum.* A genus of artocarpaceous trees, made by Forster, bearing separate male and female flowers, the former on long, club-shaped spikes, and the latter in round heads which soon coalesce into a fleshy mass rich in starch—the bread-fruit—which is largely used

THE ARTOCARPUS INCISA. [A, 327.]

as food in the Pacific islands and in India. [B, 19.]—**A. Blumei** [Trécul]. A species growing in Java and Malabar, used like *A. pubescens* and *A. lakoocha*. An ointment of the buds and leaves is applied to buboes and hæmorrhoids. The fruit is edible, contains an oil used in cooking, and is employed in diarrhœa. [H. Baillon (B.)]—**A. brasiliensis** [Gomez]. The *jaca* of Brazil; a species producing an edible fruit. [H. Baillon (B); L, 105.]—**A. camansi.** The *camangei, dalangian, dolongyian*, or *pacac*; a species growing in the Philippines, having edible seeds of a taste like that of chestnuts. [Blanco (B).]—**A. chaplasha.** A large species found in Chillagonz and the forests lying east of Bengal; furnishing timber. [B, 177.]—**A. communis** [Forster]. See *A. incisa*.—**A. echinata.** A large tree found in the Neilgherries, furnishing timber. [B, 172.]—**A. elastica** [Reinw.]. An East Indian species with edible fruit. [H. Baillon (B).]—**A. heterophylla** [Lamarck]. A species the root of which is astringent and used in diarrhœa and other affections. [B, 121.]—**A. hirsuta** (seu **hirsutus**) [Lamarck]. The *ansjeli* of the Malays; a species bearing an edible fruit which, eaten in excess, is said to cause diarrhœa, for which the bark and root of the same plant are used as remedies. [L, 87, 105.]—**A. imperialis** [Roxburgh]. An East Indian species having an edible fruit. [H. Baillon (B).]—**A. incisa** (seu **incisus**) [Linnæus fil.].

THE LEAVES, FLOWER, AND FRUIT OF THE ARTOCARPUS INCISA. [A, 327.]

Fr., *arbre à pain, rimier.* Ger., *Brodfruchtbaum, gemeiner Brodbaum.* The bread-fruit tree of the South Sea Islands; a tree of 50 to 60 feet in height, with rough, dark-green, lobate leaves, and a rounded, greenish, edible fruit, of the size of a man's head, which consists internally of a whitish, pulpy mass resembling fresh bread in texture, and forms one of the staple articles of food in the Pacific islands. The fresh flowers are made into an acidulous conserve, and the dried female flowers are used in the manufacture of a sort of amadou. The seeds are eaten. The juice of the tree contains caoutchouc, and the bark can be fashioned into a sort of coarse cloth. The ashes of the leaves mixed with cocoanut oil are used as an inunction in leprous skin diseases, a decoction of the wood, together with that of *Mangifera fœtida*, is drank in order to purify the blood and bring on the lochia, and the root is employed as a remedy in dysentery. [B, 33, 121, 180.]—**A. integrifolia** (seu **integrifolius**) [Linnæus fil.]. Fr., *jaquier, jacquier.* Ger., *indischer Brodbaum.* The *iak, iack, jaq, jaques*, or *iaca*; a species found on the islands of the Indian Ocean, differing from *A. incisa* in having the leaves entire. The fruit is ovoid-oblong, sometimes 1½ feet in length. This and the other parts of the tree have properties and uses similar to those of *A. incisa*. A decoction of the root is used in diarrhœa and externally in leprous skin diseases, and concretions forming spontaneously from the exuded juice of the root are employed in diarrhœal diseases. [B, 33, 121, 180.]—**A. jaca** [Lamarck]. See *A. integrifolia*.—**A. kertau.** A Java species bearing an edible fruit. [H. Baillon (B).]—**A. lævis.** An East Indian species bearing an edible fruit. [H. Baillon (B).]—**A. lakoocha.** A Bengal species. The male spadix is acid and astringent, and is eaten in curry. The roots furnish a yellow dye. [B, 172.]—**A. longifolia** [H. Cels]. An East Indian species bearing an edible fruit. [H. Baillon (B).]—**A. maxima.** The *nangea*; a species growing in the Philippines, bearing an edible fruit 1½ foot long and 1 foot thick. The ashes of the wood are used as an application to burns. [Blanco (B).]—**A. ovata.** A species with large, ovate-oblong leaves, indigenous to the Philippines, where it is called *anobing*, or *anobling*. Its wood is very durable. [Blanco (B).]—**A. parvifolia** [Wight]. An East Indian species bearing an edible fruit. [H. Baillon (B).]—**A. polyphema** [Persoon]. Syn.: *Polyphema champeden* [Loureiro]. The *tjampeda*, or *cay mit nai*, of Annam; a species with an edible fruit, indigenous to Cochin China. [H. Baillon (B).]—**A. pubescens** [Willdenow]. See *A. hirsuta*.—**A. rigida** [Blume]. An East Indian species bearing an edible fruit. [H. Baillon (B).]—**A. venenosa** [Zoll.]. An East Indian species with a very poisonous juice. [H. Baillon (B).]

ARTOCREAS (Lat.), n. n. A^{3}rt-o^{2}k're^2-a^{2}s(a^{3}s). Gen., *artocre'atos (-tis).* Gr., ἀρτόκρεας (from ἄρτος, bread, and κρέας, meat). Fr., *artocréas.* Ger., *Artokreas, Fleischbrod.* Syn.: *pastœtum.* An ancient article of pastry containing meat. [A, 325; L, 50.]

ARTOGALA (Lat.), n. n. A^{3}rt-o^{2}g'a^3-la^3. Gen., *artogalac'tos (-tis).* From ἄρτος, bread, and γάλα, milk. An ancient name for a mixture of bread and milk, used either for food or as a poultice. [L, 119.]

ARTOICUM (Lat.), n. n. A^{3}rt-o(o^2)'i^{2}k-u^{3}m(u^{4}m). From ἄρτος, bread. An ancient preparation made by boiling bread with a red oil derived from the roots of certain plants. [A, 325.]

ARTOMELI (Lat.), n. n. A^{3}rt-o^{2}m'e^{2}l-i(e). Gen., *artomel'itos (-tis).* From ἄρτος, bread, and μέλι, honey. Fr., *artomel.* Ger., *Artomel, Honigteig.* An ancient plaster or poultice of bread and honey. [A, 311; L, 43.]

ARTOPŒOPSORA (Lat.), n. f. A^{3}rt-o-pe''(po''e^2)-o^{2}p-so'ra^3. From ἀρτοποιός, a baker, and ψώρα, the itch. Ger., *Bäckerkrätze.* Bakers' itch; a form of eczema of the hands to which bakers are subject in consequence of their occupation. [G; L, 50.]

ARTOPTA (Lat.), n. m. A^{3}rt-o^{2}p'ta^3. Gr., ἀρτόπτης (from ἄρτος, bread, and ὀπτᾶν, to bake). Ger., *Tortenpfanne.* Lit., a baking pan; applied by H. Deventer to women whose labors are easy and rapid. [A, 322, 325; L, 94.]

ARTOPTICIUS (Lat.), adj. A^{3}rt-o^{2}p-ti^2'si^2(ki^2)-u^{3}s(u^{4}s). Gr., ἀρτοπτίκιος. Baked in a pan; as a n., bread so cooked. [A, 311, 312, 325.]

ARTORRHIZEÆ (Lat.), n. f. pl. A^{3}rt-o^{2}r-ri^{2}z'e^2-e(a^3-e^2). From ἄρτος, bread, and ῥίζα, a root. Fr., *artorrhizées.* Ger., *Brodwurzeln.* Of Endlicher, a class of monocotyledonous plants having edible roots or rhizomes, embracing the *Dioscoreaceæ* and the *Taccaceæ.* [B, 121; L, 41.]

ARTOS (Lat.), n. m. A^{3}rt'o^{2}s. Gr., ἄρτος. Bread. [A, 322.] See Panis.

ARTOTROGUS (Lat.), n. m. A^{3}r-to-tro'gu^{3}s(gu^{4}s). From ἄρτος, bread, and τρώγειν, to chew. A genus of parasitic hyphomycetous *Fungi*, made by Montagne, but which, according to Tulasne, is only the conidiferous form of a species belonging to the *Peronosporeæ.* [B, 54, 76, 121.]

ARTURO, n. A Cretan name for the *Astragalus sesameus* and the *Celsia arcturus.* [B, 121.]

ARTUS (Lat.), n. m. (in the sing.) or n. (in the pl.). A^{3}rt'u^{3}s(u^{4}s). Gen., *art'us*; pl., *artus* or *art'ua*; gen. pl., *art'uum.* A joint or a limb. [A, 312, 322.]

ARTY, n. See Arti.

ARTYMA (Lat.), n. n. A^{3}rt-i(u^6)'ma^3. Gen., *artym'atos (-tis).* Gr., ἄρτυμα. See Condiment.

ARTZET (O. Ger.), n. A^{3}rt'ze^{2}t. The medical art. [Paracelsus (H).]

ARTZNEY (Ger.), n. A^{3}rtz'ni. See Arznei.—**Beider A. Doctor.** A doctor of medicine and surgery. [H.]

ARU-ARU, n. A native name for the finest *Manioca* arrowroot. [A, 385.]

ARUBA (Lat.), n. f. A^{2}r(a^{3}r)-u^2(u)'ba^3. Of Aublet, a genus of simarubaceous plants corresponding to the genus *Simaba.* By Baillon it is included under the genus *Quassia.* [B, 121.]—**A. cedron.** See Simaba *cedron.*—**Cortex arubæ.** A bark imported from Brazil, supposed to be derived from a species of *A.* It occurs in rolled fragments smooth on both sides, covered with a greenish-brown or yellowish-brown epidermis, and having an astringent bitterish taste. [B, 180.]

ARUBAJWAIN, n. An East Indian name for the *Ptychotis carum*, used in India as a carminative. [H. Baillon (L, 87).]

ARUBEA (Lat.), n. A^{2}r(a^{3}r)-u^2(u)'be^2-a^3. Of Nees and Martius, a section of the genus *Galipea*, including species with free stamens. [B, 121.]

ARUBIA, n. A Kabyle name for the *Rubia tinctorum.* [B, 121.]

ARUDA, n. A Cingalese and Tamil name for the *Ruta graveolens.* [L, 105.]

ARUEIRA, ARUERA, n's. The *Pistacia lentiscus* and *Schinus molle.* [B, 121.]

ARUGAM VAYR, n. An East Indian name for the *Agrostis linearis.* [L, 105.]

ARULAY GUDDA, n. A Teloogoo name for the potato. [L, 77.]

ARUM (Lat.), n. n. A(a^3)'ru^{3}m(ru^{4}m). Gr., ἄρον. Fr., *arum* [Fr. Cod.]. Ger., *Aron, Aaron.* It., *aro.* A genus of araceous herbs (subfamily *Aroideæ*, tribe *Areæ*, subtribe *Arinæ* [Engler]; tribe *Arineæ*, subtribe *Euarineæ* [Bentham and Hooker]), established by Linnæus. It formerly included many species now referred to distinct genera. It now includes perennial acaulescent herbs, with hastate or sagittate leaves, convolute spathe, and free, appendiculate, club-shaped spadix, flowerless at the top, in the middle densely covered with the male flowers, which are naked and consist of sessile or subsessile anthers, and at its base bearing the female flowers, which are also naked, are devoid of staminodia, and consist of unilocular ovaries containing many orthotropal ovules. The fruit is baccate and many-seeded. [B, 19, 42.]—**Arrow a.** The *Peltandra virginica.* [B, 19.]—**A. abyssinicum** [Richard]. A species probably referable to the *Sauromatum abyssinicum* (*q. v.*). [B, 216.]—**A. acaule.** See *A. maculatum.*—**A. à cinq feuilles** (Fr.). See *A. pentaphyllum.*—**A. ægyptiacum** [Död.], **A. ægyptium** [Rumphius]. The *Colocasia antiquorum.* [B, 211.]—**A. æthiopicum.** The *Richardia africana.* [B, 211.]—**A. albispathum** [Hort.]. See *A. italicum.*—**A. alpinum** [Schott]. The *A. maculatum*, var. γ. [B, 216.]—**A. americanum ari vulgaris facie.** The *Richardia africana.* [B, 211.]—**A. americanum betæ foliis.** The *Dracontium fœtidum.* [B, 211.]—**A. arborescens** [Plumier]. Fr., *gouet en arbre.* Ger., *Aronsbaum.* See Montrichardia *arborescens.*—**A. arisarum** [Linnæus]. Fr., *gouet*

en capuchon. See ARISARUM *vulgare.*—**A. à trois feuilles** (Fr.). See *A. triphyllum.*—**A. atrorubens.** 1. Of Aiton, the *Arisæma atrorubens.* 2. Of Sprengel, the *Pinellia tuberifera.* [B, 216.]—**A. auritum** [Vell.]. See SYNGONIUM *auritum.*—**A. besserianum** [Schott]. The *A. maculatum,* var. β *angustatum.* [B, 216.]—**A. bicolor** [Aiton]. See CALADIUM *bicolor.*—**A. byzantinum** [Schott]. The *A. italicum,* var. *concinnatum.* [B, 216.]—**A. cordifolium** [Bory]. A species more properly referred to the genus *Alocasia* (*A. indica,* var. γ *variegata*); highly prized in the Gilbert Islands as an article of food. [A, 327; B, 216.]—**A. costatum** [Wallich]. See ARISÆMA *costatum.*—**A. crinitum** [Aiton]. See HELICODICEROS *muscivorus.*—**A. cuspidatum** [Blume]. See TYPHONIUM *cuspidatum.*—**A. cyprium** [Schott]. The *A. Dioscoridis,* var. α *Smithii.* [B, 216.]—**A. d'Éthiopie** (Fr.). The *Richardia æthiopica.* [B, 19.]—**A. Dioscoridis** [Sibthorp and Smith]. Gr., ἄρον [Dioscorides]. Fr., *gouet de Dioscoride.* A species indigenous to Greece. The petiole is two or three times as long as the hastate or sagittate leaf, the anterior lobe of which is oblong-triangular and nearly twice the length of the posterior lobe; the tube of the spathe, pale within, is from a fifth to a third the length of the lanceolate-oblong, variously colored lamina; the female inflorescence is of two to three times the length of the male, the appendix of the spadix is elongated, club-shaped or cylindroid, and of a dark-violet color. The *A. Dioscoridis,* var. α *Smithii,* occurring in Cyprus, has a purple spathe covered with dark-purple, lenticular spots, and yellowish female flowers purplish at their apex. The *A. Dioscoridis,* var. β *spectabile,* found in Rhodes, Cilicia, and Tripoli, has elongate-sagittate leaves with the anterior lobes of nearly three times the length of the posterior, the spathe with tube greenish within and yellowish-green lamina covered with large spots, and the appendix of the spadix cylindrical and terminating in a club-shaped extremity. The *A. Dioscoridis,* var. γ *Syriacum,* occurring in Syria, Tripoli, and the Grecian Archipelago, has the lamina of the spathe dark-purple below, greenish above, and covered with dark-purple spots, and the appendix of the spadix is cylindroid. The *A. Dioscoridis,* forma *guttata,* occurring in Syria, resembles the last variety, but the lamina of the spathe is yellowish-green and the spots on its surface are larger. The root of *A. Dioscoridis* is edible when cooked. [B, 173, 180, 216.]—**A. divaricatum** [Linnæus]. See TYPHONIUM *divaricatum* and TYPHONIUM *cuspidatum.*—**A. diversifolium** [Blume]. See TYPHONIUM *divaricatum.*—**A. dracontium.** 1. Of Linnæus, the *Arisæma dracontium.* 2. Of Thunberg, the *Arisæma Thunbergii.* 3. Of Loureiro, the *Pinellia Wawræ.* 4. Of Velloz, the *Staurostigma luschnathianum.* [B, 216.]—**A. dracunculus.** 1. Of Linnæus and Sieber, the *Dracunculus vulgaris.* 2. Of Thunberg, the *Arisæma japonicum.* [B, 216.]—**A. esculentum** [Linnæus]. Fr., *chou caraïbe.* See COLOCASIA *antiquorum,* var. ε *esculentum.*—**A. flagelliforme** [Lodd.]. See TYPHONIUM *cuspidatum.*—**A. fornicatum** [Roth]. See PINELLIA *tuberifera.*—**A. gracile** [Unverricht]. The *A. maculatum,* var. γ *alpinum.* [B, 216.]—**A. gramineum** [Lamarck]. See BIARUM *tenuiflorum.*—**A. guttatum** [Wall.]. See SAUROMATUM *guttatum.*—**A. hederaceum.** 1. Of Jacquin, the *Philodendron Hoffmanni.* 2. Of Willdenow, the *Philodendron hederaceum.* [B, 216.]—**A. humile angustifolium.** See BIARUM *tenuiflorum.*—**A. immaculatum** [Schott]. The *A. maculatum,* forma *immaculata.* [B, 216.]—**A. incurvatum** [Lamarck]. See ARISARUM *vulgare.*—**A. indicum.** 1. Of Loureiro, the *Colocasia indica.* 2. Of Roxburgh, a species more properly referred to the *Alocasia indica* (*q. v.* in Supplement). [B, 216.]—**A. indicum sativum** [Rumphius]. See *A. macrorrhizon.*—**A. intermedium** [Schur.]. The *A. maculatum,* var. β *angustatum.* [B, 216.]—**A. italicum** [Miller]. Gr., δρακόντιον μικρὸν [Dioscorides]. Ger., *italienischer Aron.* A species growing throughout southern Europe, with hastate auriculate leaves; spathe with oblong-cylindrical tube, white within, and of a quarter to a third the length of the oblong-acuminate lamina, which is greenish externally, yellowish within; and cylindrical-cuneate spadix, shorter than the spathe, yellow-colored at its upper naked portion, and at its base bearing the cylindrical female inflorescence, which is of three to four times the length of the male inflorescence and consists of very pale ovoid ovaries. The *A. italicum,* var. β *canariense,* growing in the Canary Islands, the *A. italicum,* var. γ *concinnatum,* growing in Cyprus and Asia Minor, and the *A. italicum,* var. δ *byzantinum,* growing in Crete, differ from the ordinary form chiefly in the form and color of the leaves, spathe, and appendix of the spadix. The root of *A. italicum—radix ari gallici* (seu *majoris,* seu *dracunculi*)—has the same properties and is used for the same purposes as that of *A. maculatum.* [B, 180, 216.]—**A. Liepoldii** [Schott]. The *A. Dioscoridis,* var. γ *syriacum.* [B, 216.]—**A. lyratum** [Roxburgh]. A species more properly referred to the *Amorphophallus lyratus* (*q. v.* in the Supplement).—**A. macrorrhizon** [Linnæus]. See ALOCASIA *macrorrhiza* (in Supplement).—**A. macrourum.** The *Pinellia tuberifera.* [L, 75.]—**A. maculatum.** Fr., *aron, gouet, pied-de-veau, a. tacheté* (ou *maculé*). Ger., *gefleckter Aron, Aronstab, gemeine Aronswurz, Aasblume, deutscher Ingwer.* It., *aro, gigaro.* 1. Of Linnæus, European dragon-root, wake-robin, cuckoo-pint, lords and ladies. A species growing wild in Europe distinguished by the following characters: The petioles, sheathed for one third their length, are twice as long as the hastate or sagittate-hastate leaves, the oblong anterior lobe of which is twice as long as the retrorse posterior lobe; the peduncle is usually shorter than the petiole; the tube of the spathe, whitish within and marked with a purple band, is one third the length of the oblong-lanceolate lamina, which is greenish within, purplish at the edge; the spadix is at most one half the length of the spathe, bearing at its base the female inflorescence, which is of three or four times the length of the male inflorescence and consists of ovoid, pale-greenish ovaries; the appendix of the spadix terminates in a violet club-shaped extremity. In the form *A. maculatum,* forma *vulgaris immaculata,* or common variety, the leaves are not spotted; in the *A. maculatum,* forma *vulgaris maculata,* the leaves and lamina of the spathe are sprinkled with black or purple spots. The *A. maculatum,* var. β *angustatum,* found in Dalmatia Montenegro, and Greece, has a spathe with elongated oblong-lanceolate purplish lamina, and the *A. maculatum,* var. γ *alpinum,* growing in Transylvania, is distinguished by its peduncle equal to the petiole in length, the ovate-lanceolate lamina of the spathe, and the slender cylindroid appendix of the spadix. The corm of *A. maculatum—radix ari, radix ari communis* (seu *vulgaris*), *radix Aronis* (seu *barbæ Aronis,* seu *dracontiæ minoris,* seu *serpentariæ minoris,* seu *laphæ,* seu *alami*)—is ovoid in shape, of about the size of a hazel-nut, yellowish-brown externally, white within, and contains a very volatile neutral acrid principle, a fixed oil, resin, starch (27·2 per cent.), gum, mucilage, sugar, etc. When freshly gathered, it is a powerful irritant, vesicant, and drastic, acting in over-doses as an acrid poison. It loses its acrimony, gradually on drying and immediately on heating, and then, from the quantity of starch which it contains, forms a useful article of diet, furnishing a variety of arrow-root (*Portland arrow-root, Portland sago*) prepared in the Isle of Portland. Medicinally, the recently dried root, which retains part of its acrimony, is used internally in doses of 10 grains as a stimulant in chronic affections of the respiratory tract, especially asthma, whooping-cough, rheumatism, and various cachectic states. 2. Of Allioni and Mason, includes also the *A. italicum.* [B, 5, 180, 216.]—**A. Malyi** [Schott]. The *A. maculatum,* var. β *angustatum.* [B, 216.]—**A. margaritiferum** [Roxburgh]. See PLESMONIUM *margaritiferum.*—**A. marmoratum** [Schott]. The *A. italicum,* var. *concinnatum.* [B, 216.]—**A. maximum ægyptium** [Bauhin]. See COLOCASIA *antiquorum.*—**A. maximum macrorrhizon zeylanicum** [Herm.]. See *A. macrorrhizon.*—**A. montanum** [Roxburgh]. See ALOCASIA *montana* (in Supplement).—**A. moschatum.** Common pepper. [L, 119.]—**A. mucronatum** [Lamarck]. See *A. macrorrhizon.*—**A. muscivorum** [Linnæus]. See HELICODICEROS *muscivorus.*—**A. Nickelii** [Schott]. Zelebori** [Schott]. The *A. maculatum*, forma *vulgaris immaculata*. [B, 216.]—**Conserva ari** [Lond. Ph., 1788]. Fr., *conserve de pied-deveau*. A conserve made by beating together in a mortar 2 parts of the bruised corm of *A. maculatum* and 3 of sugar. [L, 184.] In the Dispens. lippiacum, 1792, 1 part of the corm and 3 parts of sugar were ordered. [B, 119.]—**Essbarer A.** (Ger.). See *A. esculentum*.—**Extractum ari.** Ger., *Aronsextract*. An alcoholic extract of the corm of *A. maculatum*. [L, 30.]—**Fæcula ari.** A preparation official in several of the older pharmacopœias, made by adding water to the expressed juice of the corm of *A. maculatum*, decanting, and drying the sediment at a gentle heat. [B, 119.]—**Grand a.** (Fr.). The *Colocasia antiquorum*. [B, 121.]—**Pulvis ari compositus** [Ph. fuldens., 1791]. A powder made up of the corm of *A. maculatum* 3 parts, rhizome of *Acorus calamus* 3 parts, and *Cannella alba* 2 parts. [B, 119.]—**Radix ari.** See *Radix ari communis*.—**Radix ari æthiopici.** The tuberous root of *Richardia æthiopica*. [B, 180.]—**Radix ari communis.** Ger., *Aronswurzel*. The corm of *A. maculatum*. [B, 180 ; L, 30.]—**Radix ari dracunculi, Radix ari gallici.** Gr., ῥίζα λευκή. Ger., *französische Aronswurzel*. Terms applied to the root both of *A. italicum* and of *Dracunculus vulgaris* (*A. dracunculus*). [B, 180.]—**Radix ari indici.** The rhizome of *Arisæma triphyllum*. [B, 270.]—**Radix ari majoris.** The root of *A. italicum*. [B, 180.]—**Radix ari vulgaris.** See *Radix ari communis*.—**Rhizoma ari, Tuber ari.** The rhizome of *A. maculatum*. [B, 270.]—**Tuber ari indici.** See *Radix ari indici*.—**Water a.** The *Calla palustris*. [B, 19.]—**White a.** The *Richardia africana*. [B, 19.]

ARUMARI, n. See Caramata.

ARUND, ARUNDA (Hind.), n's. The *Ricinus communis*. [B, 172.]

ARUNDARBOR FERA SECUNDA [Rumphius] (Lat.), n. f. A^{2}r(a^{3}r)-u^{3}nd(u^{4}nd)-a^{3}r'bo^{2}r fe(fa)'ra^3 se^{2}k-u^{3}n(un)'da^3. See Bambusa *spinosa*.

ARUNDE (Fr.), n. A^{3}r-u^{6}nd. See Arundo.

ARUNDEL, n. A^{2}r-u^{3}nd'e^{2}l. A sea-bathing resort on the southern coast of England. [A, 319.]

ARUNDIFEROUS, adj. A^{2}r-u^{3}nd-i^{2}f'e^{2}r-u^{3}s. From *arundo*, a reed, and *ferre*, to bear. Producing reeds or canes. [Blount (A, 302).]

ARUNDINACEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-u^{3}nd(u^{4}nd)-i^{2}n-a-(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *arundinacées, arondinacées*. A tribe of gramineous plants, in Kunth's classification comprising *Arundo*, *Ampelodesmus*, *Phragmites*, *Deyeuxia*, *Calamagrostis*, and some other genera. It is the *Arundineæ* of Bentham and Hooker, with the addition of some genera included by the latter among the *Euagrosteæ*. [B, 42, 170, 188.]

ARUNDINACEOUS, adj. A^{2}r-u^{3}nd-i^{2}n-a'shu^{3}s. Lat., *arundinaceus*. Fr., *arundinacé*. Resembling the genus *Arundo*; resembling or belonging to the *Arundinaceæ*. [L, 180.]

ARUNDINARIA (Lat.), n. f. A^{2}r(a^{3}r)-u^{3}n(u^{4}n)-di^{2}n-a(a^3)'ri^2-a^3. A genus of gramineous plants belonging to the *Bambusidæ*, established by Richard. They form shrubs or small trees with jointed stems resembling those of the bamboo. [B, 19, 197.]—**A. falcata** [Nees]. A species indigenous to Nepal and the Himalayas, where the jointed stems, which contain an abundance of silica, are used to thatch the houses. [B, 19.]—**A. macrosperma** [Mich.]. A species the root of which is used in French Guiana as a diuretic and sudorific. [B, 173.]—**A. Schomburghii.** A species indigenous to Guiana, with stems often 16 feet in height and 4 to 6 inches in diameter. The latter are used by the Indians in making the blow-guns from which they shoot the poisoned arrows. [B, 197.]

ARUNDINARIÆ [Nees], **ARUNDINARIEÆ** [Steud.] (Lat.), n's f. pl. A^{2}r(a^{3}r)-u^{3}n(u^{4}n)-di^{2}n-a(a^3)'ri^2-e(a^3-e^2), -a^{2}r(a^{3}r)-i(e)'e^2-e-(a^3-e^2). A section or series of gramineous plants belonging to the *Bambusaceæ*, including *Arundinaria* and other genera. [B, 170.]

ARUNDINEÆ (Lat.), n. f. pl. A^{2}r(a^{3}r)-u^{3}n(u^{4}n)-di^{2}n'e^2-e^2-(a^3-e^2). 1. Of Reichenbach, a section of gramineous plants belonging to the *Agrosteæ*, and, of Lindley, a tribe of the *Gramineæ*, corresponding to the *Arundinaceæ* of Kunth. 2. Of Bentham and Hooker, a subtribe of the *Festuceæ*, including *Arundo*, *Ampelodesmos*, *Phragmites*, and other genera. [B, 42, 170.]

ARUNDINEOUS, adj. A^{2}r-u^{3}nd-i^{2}n'e^2-u^{3}s. Fr., *arundiné*. See Arundinaceous.

ARUNDO (Lat.), n. f. A^{2}r(a^{3}r)-u^{3}nd(und)'o. Written also *harundo*. Gen., *arund'inis*. Gr., κάλαμος. Fr., *arunde*, *roseau*, *canne*. Ger., *Rohr*, *Schilfrohr*. 1. A reed. 2. A genus of gramineous plants belonging to the tribe *Festuceæ*, subtribe *Arundineæ*, established by Tournefort. It formerly included many species now referred to distinct genera, but is now restricted to those with broadly paniculate spicules and those in which the flowering glumes are membranaceous, tripli-nerved, bidentate, and mucronate between the dentations. [B, 42, 170.] 3. An old term for a surgical splint or a bandage. [L, 128.]—**A. ægyptia** [Desfontaines]. A variety of *A. donax*, derived from Egypt. [B, 188.]—**A. alpina** [Vill.] See Calamagrostis *halleriana*.—**A. ampelodesmos** [Cyrill Neap.]. See Ampelodesmos *tenax*.—**A. arbor** [Linnæus]. The *Bambusa* or the *Bambusa spinosa*. [B, 188, 211.]—**A. arenaria** [Linnæus]. See Psamma *arenaria*.—**A. bambos** [Linnæus]. See Bambusa *arundinacea*.—**A. bengalensis** [Bojer]. The *Phragmites communis*. [B.]—**A. biflora** [Lamarck]. See Ampelodesmos *tenax*.—**A. calamagrostis.** 1. Of Haller, see Calamagrostis *halleriana*. 2. Of Linnæus, see Calamagrostis *lanceolata*.—**A. canescens** [Wigg.]. See Calamagrostis *epigeios*.—**A. colorata** [Aiton]. See Phalaris *arundinacea*.—**A. donax** [Linnæus]. Fr., *canne de Provence*, *grand roseau* [Fr. Cod.], *roseau aromatique* (ou *à grenouilles*). It., *canna dei giardini*. Provence cane ; a species found in the south of Europe and cultivated in England ; a reed 10 feet or more in height. The rhizome is official in the Fr. Cod., and has been used as a diaphoretic, diuretic, and antigalactic. It is subject to a variety of black rust (the *Sporotrichum dermatodes*) the spores of which, inhaled or ingested, give rise to a form of dermatitis venenosa (Fr., *maladie des roseaux*) characterized by great swelling of the face, with a marked papular eruption and other serious symptoms. [A, 301 ; B, 61.]—**A. epigeios.** 1. Of Linnæus, the *Calamagrostis epigeios*. 2. Of Forskål, the *Imperata arundinacea*. [B, 173, 188.]—**A. farcta.** 1. Of Rumphius, the *Andropogon nardus*. 2. Of Aublet, the *Scleria flagellum*. [B, 188, 211.]—**A. farcta Alpium Ravennæ** [Zanon]. The *Erianthus Ravennæ*. [B, 211.]—**A. farcta Indiæ orientalis.** The *Calamus draco*. [B, 59.]—**A. festucoides** [Desfontaines]. See Ampelodesmos *tenax*.—**A. gigantea** [Walter]. The *Arundinaria macrosperma*. [B, 188.]—**A. Halleri** [Willdenow]. The *Stipa calamagrostis*. [B, 173.]—**A. halleriana** [Gaudichaud]. The *Calamagrostis halleriana*. [B, 188.]—**A. indica**, etc. [Commelyn]. The *Bambusa arundinacea*. [B, 211.]—**A. indica arborea maxima cortice spinoso, tabaxir fundens** [Burmann]. The *Bambusa spinosa*. [B, 188.]—**A. indica florida angustifolia** [Moris.]. The *Canna angustifolia*. [B, 211.]—**A. indica latifolia.** 1. Of Bauhin, the *Canna indica*. 2. Of Morison, the *Costus arabicus* of Linnæus. [B, 211.]—**A. indica odorata** [Grim.]. The *Andropogon nardus*. [B, 211.]—**A. intermedia** [Gmelin]. The *Calamagrostis epigeios*. [B, 188.]—**A. Leersii** [Oett.]. The *Calamagrostis lanceolata*. [B. 188.]—**A. linearis.** An Indian species the botanical properties and position of which are not given. The root is said to be used in the preparation of a refreshing beverage. [B, 173.]—**A. lithuanica** [Bess.]. The *Calamagrostis epigeios*. [B, 188.]—**A. major.** An old term for the tibia. [L, 97.]—**A. mauritanica** [Poiret]. See Ampelodesmos *tenax*.—**A. minor.** An old term for the fibula. [L, 97.]—**A. phragmites, A. phragmitis** [Linnæus]. See Phragmites *communis*. — **A. pseudo-phragmites.** 1. Of Schrader, the *Calamagrostis halleriana*. 2. Of Lejeune, a variety of the *Phragmites communis*. [B, 188.]—**A. saccharifera.** The *Saccharum officinarum*. [B, 211.]—**A. sativa** [Lamarck]. See *A. donax*.—**A. sedenensis** [Deslongchamps]. The *Avena sempervirens*. [B, 188.]—**A. silvatica** [Schrader]. The *Deyeuxia silvatica*. [B, 188.]—**A. speciosa** [Schrader]. The *Stipa calamagrostis*. [B, 188.]—**A. syriaca.** The *Acorus calamus*. [B, 59.] —**A. tabaxifera** [Dal.]. The *Bambusa arundinacea* [B, 211.] —**A. tenax** [Wahl]. See Ampelodesmos *tenax*.—**A. vallatoria** [Lob.]. The *Phragmites communis*. [B, 211.]—**A. versicolor** [Miller]. A variety of *A. donax*. [B, 188.]—**A. viba brasiliensis.** See Saccharum *officinarum*.—**A. villosa** [Schultz]. The *Deyeuxia silvatica*. [B, 188.]—**A. vilnensis** [Bess.]. The *Calamagrostis epigeios*. [B, 188.]—**A. vulgaris** [Lamarck], **A. vulgaris Dioscoridis** [Bauhin], **A. vulgaris palustris, A. vulgaris vallatoria.** The *Phragmites communis*. [B, 211.]—**A. zeylanica** [Burmann]. The *Calamus rotang*. [B, 173.]—**A. zeylanica farcta** [Burmann]. The *Andropogon nardus*. [B, 211.] —**Flores (et Folia) arundinis calamagrostis.** The flowers and the leaves of *Calamagrostis lanceolata*. [B, 180.]—**Radix arundinis calamagrostis.** The root of *Calamagrostis lanceolata*. [B, 180.]—**Radix arundinis donacis.** The root of *A. donax*, formerly official. [B, 180.]—**Stipites arundinis calamagrostis.** The stalks of *Calamagrostis lanceolata*. [B, 180.]—**Syrupus de arundine.** Syrup of sweet flag. A preparation of the Sardinian Ph., 1773, made by macerating 1¼ lb. of the fresh rhizome of *Acorus calamus* in 1½ lb. of purified apple-juice and 6 lbs. of water, reducing the mixture by boiling to one half, then adding 2 handfuls of colt's-foot flowers, boiling again, straining, and adding to the strained liquor 3 lbs. of honey, 1 lb. of sugar, and an infusion made by digesting 6 oz. of fresh lemon-peel in ½ lb. of apple-juice. [B, 97.]

ARUS (Hind.), n. The *Adhatoda vasica*. [B, 172.]

ARUSHKARA, n. A Teloogoo name for the *Semecarpus anacardium*, esteemed as an antisyphilitic. [H. Baillon (L, 87).]

ARUZ (Ar.), n. Rice. [L, 105.]

ARVA, n. See Ava.

ARVE (Ger.), n. A^{3}r'fe^2. See Arvele.

ARVEGILLA (Sp.), n. A^{3}r-va-hel'ya^3. A Peruvian name for the *Valeriana laciniata*. [B, 121.]

ARVELE (Ger.), n. A^{3}r'fe^{2}l-e^2. The fir-leaved pine-tree (*Pinus cembra*). [B, 270 ; L, 46.]

ARVENSIS (Lat.), adj. A^{3}r-ve^{2}n(we^{2}n)'si^{2}s. From *arvum*, cultivated land. Fr., *arvin*, *arvien*. Growing in cultivated fields (used as a botanical species-name). [B.]

ARVIC ACID, n. A^{3}rv'i^{2}k. From *arvum*, cultivated land. Fr., *acide avique*. Ger., *Ackersäure*. An acid substance obtained

from tilled soil, containing from 4·89 to 15 per cent. of nitrogen ; of the same class of substances as Berzelius's apocrenic acid. [B, 140.]

ARVICOLA, ARVICOLINÆ (Lat.), n's n. pl. and f. pl. A^{3}r-vi^{2}k(wi^{2}k)'o(o^{2})-la^{3}, -vi^{2}k(wi^{2}k)-o(o^{2})-li(le)'ne(na^{3}-e^{2}). From *arvum*, cultivated land, and *colere*, to inhabit. The voles ; a subfamily of the family *Muridæ* of rodent animals. [A, 359 ; L, 121.]

ARVICOLUS (Lat.), adj. A^{3}r-vi^{2}k(wi^{2}k)'o(o^{2})-lu^{3}s(lu^{4}s). Fr., *Arvicole*. Inhabiting cultivated fields. [L, 41.]

ARVIEN, ARVIN (Fr.), adj's. A^{3}r-vi^{2}-a^{3}n^{2}, -va^{2}n^{2}. See ARVENSIS.

ARVINA (Lat.), n. f. A^{3}r-vi(we)'na^{3}. Lard. [A, 325.]

ARVISIUM (Lat.), n. n. A^{3}r-vi^{2}s(wi^{2}s)'i^{2}-u^{3}m(u^{4}m). An ancient wine from Mt. Arvisius, in Chios. [A, 318.]

ARVORE (Port.), n. A^{3}r'vo-ra. A tree.—**A. da vida.** Paraguay tea. [L, 105.]—**A. de congonha.** The *Ilex paraguayensis.* ["Proc. of the Am. Pharm. Assoc.," xxvi, p. 299 (L).]—**A. de poina.** The *Chorisia speciosa.* [B, 121.]—**A. do mate.** Paraguay tea. [L, 105.]

ARVUM (Lat.), n. n. A^{3}r'vu^{3}m(wu^{4}m). A field.—**Arva muliebria, Genitale a.** The female genitals. [Lucretius, Vergil (A, 318).]

ARYAMUCHA, n. A Carib name for pimento. [L, 105.]

ARY-ARYTÆNOIDEUS (Lat.), n. m. A^{2}r(a^{3}r)''i^{2}(u^{6})-a^{2}r(a^{3}r)-i^{2}(u^{6})-te^{2}n(ta^{3}-e^{2}n)-o(o^{2})-i^{2}d'e^{2}-u^{3}s(u^{4}s). Fr., *ary-aryténoïdien*, *ary-santorinien.* A name given by Morgagni and Santorini to the arytænoideus transversus muscle. [A, 301 ; L, 41.]

ARY-CORNICULATUS (Lat.), n. m. A^{2}r(a^{3}r)''i^{2}(u^{6})-ko^{2}rn-i^{2}k-u^{2}(u)-la(la^{3})'tu^{3}s(tu^{4}s). See ARYTÆNOIDEUS *rectus.*—**A.-c. rectus.** See ARYTÆNOIDEUS *rectus.*

ARY-EPIGLOTTEUS, ARY-EPIGLOTTICUS (Lat.), n's m. A^{2}r(a^{3}r)''i^{2}(u^{6})-e^{2}p-i^{2}-glo^{2}t(glot)'te^{2}-u^{3}s(u^{4}s), -ti^{2}k-u^{3}s(u^{4}s). See ARYTÆNO-EPIGLOTTICUS.

ARYSANE (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}s(u^{6}s)'a^{3}-ne(na). Gr., ἀρυςάνη. See ARYTÆNA.

ARY-SANTORINIANUS (Lat.), n. m. A^{2}r(a^{3}r)''i^{2}(u^{6})-sa^{2}n(sa^{3}n)-to(to^{2})-ri^{2}n-i^{2}-a(a^{3})'nu^{3}s(nu^{4}s). See ARYTÆNOIDEUS *transversus.*

ARYSTER (Lat.), n. m. A^{2}r(a^{3}r)-i^{2}st(u^{6}st)'u^{6}r(e^{2}r). Gen., *aryste'ros (-ris).* See ARYTÆNA.

ARYSTICHUS (Lat.), n. m. A^{2}r(a^{3}r)-i^{2}st(u^{6}st)'i^{2}k(i^{2}ch^{2})-u^{3}s-(u^{4}s). Gr., ἀρύστιχος (dim. of ἀρυτήρ). A little arytæna (*q. v.*). [L, 50.]

ARYSTIS, ARYSTRIS (Lat.), n's f. A^{2}r(a^{3}r)-i^{2}st(u^{6}st)'i^{2}s, -ri^{2}s. Gen., *aryst'idos (-dis)*, *aryst'ridos (-dis).* Gr., ἄρυστις, ἀρυστρίς. See ARYTÆNA.

ARY-SYNDESMICUS (Lat.), n. m. A^{2}r(a^{3}r)''i^{2}(u^{6})-si^{2}n(su^{6}n)-de^{2}s'mi^{2}k-u^{3}s(u^{4}s). From ἀρύταινα (see ARYTÆNA), and συνδεσμικός, conjunctive. A bundle of muscular fibres running from the cricoid cartilage to the arytenoid. It may be regarded as a part of the crico-arytænoideus lateralis. [L, 34.]

ARYTÆNA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}(u^{6})-te'(ta^{3}'e^{2})-na^{3}. Gen., *arytœ'nes.* Gr., ἀρύταινα. 1. A pitcher, jug, cup, or ladle. [A, 322.] 2. A part resembliug such a utensil ; the arytenoid cartilages. [A, 322.]

ARYTÆNEPIGLOTTICUS (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te^{2}n-(ta^{3}-e^{2}n)-e^{2}p-i^{2}-glo^{2}t(glot)'ti^{2}k-u^{3}s(u^{4}s). See ARYTENO-EPIGLOTTIC.

ARYTÆNODES (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te^{2}n(ta^{3}-e^{2}n)-o'-dez(das). See ARYTENOID.

ARYTÆNO-EPIGLOTTICUS (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te''(ta^{3}''e^{2})-no-e^{2}p-i^{2}-glo^{2}t(glot)'ti^{2}k-u^{3}s(u^{4}s). See ARYTENO-EPIGLOTTIC and ARYTÆNO-EPIGLOTTIDEUS.

ARYTÆNO-EPIGLOTTIDEUS (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te''(ta^{3}''e^{2})-no-e^{2}p-i^{2}-glo^{2}t(glot)-ti^{2}d'e^{2}-u^{3}s(u^{4}s). See ARYTENO-EPIGLOTTIC. As a n., a name applied by some anatomists to both the a.-e. superior and the a.-e. inferior. [L.]—**A.-e. inferior.** Syn. : *compressor sacculi laryngis.* A small bundle of muscular fibres running from the arytenoid cartilage to the margin of the epiglottis. [L, 172.]—**A.-e. superior.** A small bundle of muscular fibres arising from the apex of the arytenoid cartilage, which, running upward, is lost in the aryteno-epiglottic mucous membrane. [L, 172.]

ARYTÆNOIDES (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te^{2}n(ta^{3}-e^{2}n)-o-i(e)'dez(das). See ARYTENOID.

ARYTÆNOIDEUS (Lat.), adj. A^{2}r(a^{3}r)-i^{2}(u^{6})-te^{2}n(ta^{3}-e^{2}n)-o-(o^{2})i^{2}d'e^{2}-u^{3}s(u^{4}s). See ARYTENOID. As a n. (Fr., *muscle aryténoïdien ;* Ger., *Giesskannenmuskel, Pyramidenmuskel*), a band of muscular fibres passing from the back of one arytenoid cartilage to the other ; also a muscle of the solipeds, analogous to the a. of man. [L, 44.]—**A. major.** See *A. transversus.*—**A. minor, A. obliquus.** Fr., *aryténoïdien oblique* [Cruveilhier] (ou *croisé*, ou *supérieur* [Winslow]). The oblique portion of the a., formerly considered as a separate muscle. [L, 44.]—**A. rectus.** Syn. : *ary-corniculatus rectus, depressor cartilaginis Santorini.* An anomalous band of muscular fibres running from the arytenoid cartilage to the corniculum laryngis of the same side. [L, 31.]—**A. transversus.** Fr., *aryténoïdien transversal* [Winslow]. Syn. : *a. major, a. tertius semicircularis* [Casser]. The transverse portion of the a., formerly considered as a separate muscle. [L, 44.]

ARYTÆNO-PHARYNGEUS (Lat.), n. m. A^{2}r(a^{3}r)-i^{2}(u^{6})-te''(ta^{3}''e^{2})-no(no^{2})-fa^{2}r(fa^{3}r)-i^{2}n(u^{6}n^{2})'je^{2}(ge^{2})-u^{3}s(u^{4}s). A muscle of the solipeds, extending from the posterior border of the arytenoid cartilage to the origin of the œsophagus. [L, 13.]

ARYTÉNÉAL (Fr.), adj. A^{3}-ri^{2}-ta-na-a^{3}l. Arytenoid ; as a n., according to G. St.-Hilaire, the arytenoid cartilage when it is ossified. [L, 181.]

ARYTENO-EPIGLOTTIC, ARYTENO-EPIGLOTTIDEAN, adj's. A^{2}r-i^{2}-te''no-e^{2}p-i^{2}-glo^{2}t'ti^{2}k, -glo^{2}t-ti^{2}d'e-a^{2}n. Lat., *arytæno-epiglotticus.* Fr., *aryténo-épiglottique.* Ger., *arytäno-epiglottisch.* Pertaining to the arytenoid cartilage and the epiglottis. [C.]

ARYTENOID, adj. A^{2}r-i^{2}-te'noid. Gr., ἀρυταινώδης (from ἀρύταινα, a pitcher, and εἶδος, resemblance). Lat., *arytænodes, arytænoideus.* Fr., *aryténoïde, aryténoïdal, aryténoïdien.* Ger., *arytänoidisch, giesskannenförmig.* 1. Shaped like the mouth of a pitcher. [A, 322.] 2. Pertaining to the a. cartilages. See *A.* CARTILAGES, *A.* GLANDS, and ARYTÆNOIDEUS.

ARYTÉNOÏDIEN (Fr.), n. A^{3}-ri^{2}-ta-no-i^{2}d-i^{2}-a^{3}n^{2}. See ARYTÆNOIDEUS.—**A. croisé** [Winslow]. See ARYTÆNOIDEUS *obliquus.*—**A. transversal** [Winslow], **Vrai a.** See ARYTÆNOIDEUS *transversus.*

ARYTER (Lat.), n. m. A^{2}r(a^{3}r)'i^{2}(u^{6})-tu^{6}r(te^{2}r). Gen., *aryte'ros (-ris).* Gr., ἀρυτήρ. See ARYTÆNA.

ARYTERA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}t(u^{6}t)-e(a)'ra^{3}. The genus *Rotonia* (*Cupania*). [B, 121.]

ARYTHÉNOÏDE (Fr.), adj. A^{3}-ri^{2}-ta-no-ed. See ARYTENOID.

ARYTHMIA (Lat.), n. f. A^{2}r(a^{3}r)-i^{2}th^{2}(u^{6}th^{2})'mi^{2}-a^{3}. For this and other words in *aryth-*, see the corresponding words in *arrhyth-*.

ARZ (Ar.), n. Rice. [L, 105.] See ARUZ.

ARZATWURZ (Ger.), n. A^{3}rt'za^{3}t-vurtz. The *Atropa mandragora.* [L, 43.]

ARZEL (Fr.), n. A^{3}r-ze^{2}l. A veterinary term for a horse which has the hind feet and the face white. [A, 301.]

ARZENEI (Ger.), n. A^{3}rt-ze^{2}n-i'. See ARZNEI.

ARZEZ (Ar.), n. The *Marchanta polymorpha.* [L, 105.]

ARZI (Ar.), n. See ARZ.

ARZIZ (Ar.), n. The *Marchanta polymorpha.* [B, 121.]

ARZNEI (Ger.), n. A^{3}rtz-ni'. A drug, a medicine. [A, 315.]—**A'abgabe.** The dispensing of drugs. [B, 270.]—**A'anwendung.** Medication. [L, 80.]—**A'ausschlag.** A cutaneous eruption produced by a drug. [G. Behrend (A, 319).]—**A'bereiter.** An apothecary. [L, 46.]—**A'bereitung.** Pharmacy, the dispensing of medicines. [L, 46.]—**A'bereitungsbuch.** A dispensatory, a formulary. [L, 46.]—**A'bereitungskunst, A'bereitungslehre.** The science and art of pharmacy. [L, 46.]—**A'bier.** A medicated beer (*cerevisia medicata*). [B, 270.]—**A'buch.** See *A'bereitungsbuch.*—**A'erkenntnisslehre.** Pharmacology. [L, 30.]—**A'essig.** See ACETUM *medicatum.*—**A'flasche.** The same as *A'glas*, but usually restricted to the narrow-mouthed or to the larger-sized bottles. [B, 270.]—**A'form.** The form into which a drug is brought for medicinal use. [B, 270.]—**A'formel.** A pharmaceutical formula, a prescription. [L, 80.]—**A'gabe.** A dose. [A, 317.]—**A'garten.** A garden in which medicinal plants are cultivated. [L, 30.]—**A'gelatin.** A preparation made by incorporating a medicine with gelatin. [B, 270.] See LAMELLA.—**A'gelatinverband.** A medicated gelatin bandage or dressing. [B, 270.]—**A'gelehrsamkeit.** See *A'gelehrtheit.*—**A'gelehrte.** A physician. [L, 46.]—**A'gelehrtheit.** Therapeutics. [L, 46.]—**A'gewicht.** Apothecaries' weight. [A, 315.]—**A'glas.** A bottle or jar in which medicines are dispensed. [B, 270.]—**A'gott.** The god Æsculapius. [A, 317.]—**A'göttin.** The goddess Hygeia. [A, 315.]—**A'handel.** The drug trade. [L, 46.]—**A'händler.** A druggist. [L, 46.]—**A'handlung.** An apothecary's shop or a drug-store. [A, 315.]—**A'kästchen, A'kasten, A'kiste.** A medicine chest. [L, 80.]—**A'körper.** A medicinal substance. [L, 46.]—**A'kräftig.** Medicinal. [L, 46.]—**A'kraut.** A medicinal herb. [L, 46.]—**A'kugel.** A bolus. [L, 46.]—**A'kügelchen.** A lozenge, a tablet. [L, 46.]—**A'kunde, A'kunst.** Pharmacy or therapeutics. [A, 315.]—**A'künstig.** Pharmaceutical. [L, 46.]—**A'künstler.** A pharmacist. [L, 46.]—**A'laden.** An apothecary's shop or a drug-store. [A, 315.]—**A'lehre.** Pharmacology. [L, 46.]—**A'lich.** Medicinal, medical. [L, 46.]—**A'mittel.** A drug. [L, 46.]—**A'mittelkunde, A'mittellehre.** Pharmacology. [L, 46, 80.]—**A'niederschreiblehre.** The art of prescribing. [A, 322.]—**A'öl.** See OLEUM *coctum* and OLEUM *infusum.*—**A'pflanze.** A medicinal plant. [L, 80.]—**A'schatz.** See THESAURUS *medicamentorum.*—**A'schrank.** See *A'kiste.*—**A'stoff.** A medicinal principle. [L, 80.]—**A'sucht.** An excessive propensity to take or prescribe medicines. [L, 80.] See PHARMACOMANIA.—**A'tasche.** A bag or satchel for carrying medicines. [H. Frölich (A, 319).]—**A'trank.** A potion, a draught. [L, 46.]—**A'verkäufer.** A druggist. [L, 43.]—**A'verordnung.** A prescription. [L, 30.]—**A'verordnungslehre.** The art of prescribing. [L, 30.]—**A'verpflegung.** A system of maintaining a supply of medicines (as in an army). [H. Frölich (A, 319).]—**A'verschreibung.** A prescription, a pharmaceutical formula. [L, 46.]—**A'verständig.** Skilled in pharmacology. [L, 46.]—**A'verständiger.** A physician. [L, 46.]—**A'verzeichniss.** A schedule, inventory, or price-list of drugs. [A, 315.]—**A'vorrath.** See APPARATUS *medicaminum.*—**A'waare.** A drug. [A, 317.]—**A'wein.** A medicated wine. [B. 270.]—**A'wesen.** The state of the drug trade, the interests of pharmacists and druggists. [L, 46.]—**A'wirkung.** The action of a drug. [B, 270.]—**A'wissenschaft.** The science of pharmacology. [L, 46.]—**A'wissenschaftlich.** Pharmacological. [L, 46.]—**A'zettel.** A prescription. [L, 46.]—**Bewährte A.** A specific. [L, 43.]—**Gerichtliche A'kunde.** Forensic medicine. [L, 43.]

ARZNEY (Ger.), n. A^{3}rtz-ni'. See ARZNEI.

ARZT (Ger.), n. A^{3}rtzt. A physician. [A, 315.]—**Armena'.** A physician appointed to attend the poor.—**A'finger.** The ring-finger. [L, 43.]—**A'gebühr.** A physician's fee. [A, 315.]—**A'in.** A female physician. [L, 43.]—**A'lohn.** See *A'gebühr.*—**Ausübender A.** A practising physician. [A, 315.]—**Herumziehender A.** A charlatan. [L, 43.]—**Wunda'.** A surgeon.—**Zahna'.** A dentist.

ARZUELLA, n. A vegetable substance, supposed to be a *Lichen*, obtained at the Cape de Verde Islands; used to mix with cochineal. [L, 105.]

ARZUNG (Ger.), n. A³rtz'ung. Medical treatment. [A, 315.]

AS (Lat.), n. m. A²s(a³s). Gen., *as'sis.* See ASSARIUS.

AS (Ar.), n. The *Myrtus communis.* [B, 121.]

ASA (Lat.), n. f. A(a³)'sa³. From Pers. *asa.* A gum. [L.]—**A. dulcis, A. dulcis odorata.** Benzoin. [L, 105.]—**A. fetida, A. fœtida.** See ASAFŒTIDA, ASA FŒTIDA, and ASSA FŒTIDA.—**A. odorata.** See *A. dulcis.* — **Stinkende A.** (Ger.). Asafœtida. [L, 43.]

ASA, n. A name given in the Marquesas Islands to the *Ficus religiosa.* [B, 121.]

ASAB (Ar.), n. A disease said to be epidemic about the River Senegal, affecting the genitals, but differing from syphilis (applied to it only as it occurs in males). [L, 104, 116.] See BOROZAIL.

ASABA HERMES (Ar.), n. The meadow-saffron. [L, 119.]

ASABON, n. An alchemical name for soap. [Ruland, Johnson (A, 325).]

ASÆSTUS (Lat.), n. m. A²s(a³s)-e²st'(a³'e²st)-u³s(u⁴s). An old name for lime or limestone. [A, 325.]

ASAFETIDA, n. A²s-a³-fe²t'i²d-a³. See ASAFŒTIDA. — **A. mixture.** See *Mistura* ASAFŒTIDÆ.—**A. plaster.** See *Emplastrum* ASAFŒTIDÆ.—**Milk of a.** See *Mistura* ASAFŒTIDÆ.—**Pills of a.** See *Pilulæ* ASAFŒTIDÆ.—**Tincture of a.** See *Tinctura* ASAFŒTIDÆ.

ASAFŒTIDA [U. S. Ph., Br. Ph.] (Lat.), n. f. A²s(a²s)-a³-fe²t'-(fo²'e²t)-i²d-a³. From *asa* (adopted from Pers.), a gum, and *fœtidus*, fœtid. Gr., *σίλφιον μηδικὸν* [Dioscorides]. Fr., *asse-fétide.* Ger., *Asafötida Stinkasant, Teufelsdreck.* It., *assafetida.* Sp., *asafétida* [Sp. Ph.]. Syn.: *asa fœtida* [Fr. Cod., Ger. Ph., Austr. Ph., Hung. Ph., Swiss Ph., Belg. Ph., Netherl. Ph., Greek Ph.], *assafœtida* [Br. Ph., 1867], *gummi asæ fœtidæ, gummi-resina asa fœtida* [Dan. Ph., Norweg. Ph., Russ. Ph., Swed. Ph.], *gummi-resina assa fœtida* [Finn. Ph.], *stercus diaboli, cibus deorum.* A gum-resin extracted from the root of the *Ferula narthex* and *Ferula scorodosma*, Persian umbelliferous plants. The fresh juice is white, but gradually becomes yellow and at last dark-brown. A. occurs in commerce in the form of reddish gum-like masses streaked with white, having an extremely disagreeable alliaceous odor and a snarp, biting taste. It dissolves readily in alcohol, and forms a milky mixture with water. According to Pelletier, it contains 65 per cent. of resin, 19·4 per cent. of soluble gum, 11·2 per cent. of bassorin, 3·6 per cent. of volatile oil, and 0·3 per cent. of calcium malate. [B, 2, 5.] It is occasionally used in medicine for flatulence and hysterical attacks, also as an expectorant.—**Amygdaloid a.** Lat., *a. amygdaloides.* Ger., *mandelartige Asafötida.* Tear a. agglutinated into masses. [L, 132.]—**A. disgunensis** [Kaempfer]. See FERULA *a.*—**A. in granis, A. in lacrimis.** See *Tear a.*—**A. in massis.** See *Lump a.*—**A. petræa.** See *Stony a.*—**A'tinctur** (Ger.). See *Tinctura asafœtidæ.*—**A'wasser** (Ger.). See *Aqua* ASAFŒTIDÆ.—**Emplastrum asafœtidæ** [U. S. Ph.]. Fr., *emplâtre d'asa fœtida.* Ger., *Stinkasantpflaster.* Sp., *emplastro de asafétida compuesto.* Syn.: *emplastrum asæ fœtidæ* [Belg. Ph., Netherl. Ph.], *emplastrum assæ fœtidæ compositum* [Finn. Ph., Greek Ph.], *emplastrum fœtidum* [Ger. Ph., 1st ed.; Swiss Ph.]. A. plaster; made by digesting 35 parts of a. and 15 of galbanum in 120 of alcohol, straining, evaporating to the consistence of honey, and adding a mixture of 35 parts of lead plaster and 15 of yellow wax melted together. The preparations of the other pharmacopœias contained yellow wax 20 per cent. [Belg. Ph., Ger. Ph., Swiss Ph.], 40 per cent. [Finn. Ph.], or 42 per cent. [Greek Ph.]; pine-resin 20 per cent. [Belg. Ph., Ger. Ph., Swiss Ph.], 10 per cent. [Finn. Ph.], or 5 per cent. [Greek Ph.]; olive-oil 10 per cent. [Greek Ph.]; powdered ammoniac 10 per cent. [Ger. Ph., Swiss Ph.], or 21 per cent. [Greek Ph.]; powdered a. 40 per cent. [Belg. Ph.], 30 per cent. [Ger. Ph., Swiss Ph.], or 21 per cent. [Greek Ph.]; and turpentine 20 per cent. [Ger. Ph.], or larch turpentine 20 per cent. [Belg. Ph., Swiss Ph.]. The plaster of the Netherl. Ph. contains colophony 31 parts. a. 46 parts, powdered galbanum 15 parts, and larch turpentine 8 parts; that of the Sp. Ph. contains yellow wax 57 per cent., turpentine 14 per cent., a. and olibanum each 7 per cent., anime 5¼ per cent., myrrh 3½ per cent., castoreum canadense and cumin fruit each 2¼ per cent., and rectified oil of amber, 1¾ per cent. [B, 5, 95.]—**Emplastrum asafœtidæ matricale** [Brunsw. Disp., 1777]. A plaster containing 12 parts of galbanum, 6 each of tacamahac and yellow wax, and 4 each of a., Venice turpentine, and cumin. With slight variations, it was given in several old formularies. [L, 85.]—**Enema asafœtidæ.** Fr., *lavement d'asa fœtida.* A mixture of a. and water, in varying proportions, used as an enema. [L, 85.]—**Essentia asafœtidæ.** See *Tinctura asafœtidæ.*—**Essentia asafœtidæ kalica.** See *Tinctura asafœtidæ kalica.*—**A. Ferula a.** See under FERULA.—**Gummi-resina asafœtidæ.** See *A.*—**Lac asafœtidæ.** See *Mistura asafœtidæ.*—**Lump a.** Lat., *a. in massis.* A. in irregular masses of various sizes, reddish or brownish-yellow in color. [L, 132.]—**Mistura asafœtidæ** [U. S. Ph.]. A. mixture, milk of a.; an emulsion made by rubbing up 4 parts of a. with 100 of water, and straining. [B.]—**Oil of a.** A sulphureted essential oil, constituting about 3 per cent. of a., obtained by distilling the latter with water; according to Hlasiwetz, a variable mixture of the two compounds $C_{12}H_{22}S_2$ and $C_{12}H_{22}S$. [B, 2.]—**Pilulæ asafœtidæ** [U. S. Ph.]. Pills each containing 3 grains of a. and 1 grain of soap. [B.]—**Pilulæ asafœtidæ martiatæ** [Würzb. Ph.]. See *Pilulæ* ASÆ FŒTIDÆ *martiatæ.* [L. 85.]—**Resin of a.** A resin extracted from a. with alcohol; light-yellow when pure, turning purple on exposure to the sun. [B, 2.]—**Stony a.** Lat., *a. petræa.* Ger., *steiniger Stinkasand.* A. adulterated with plaster of Paris (sometimes to the extent of 50 per cent.); more or less angular pieces, having the odor of a., yellowish-brown, with numerous small shining points or plates. [L, 132.]—**Tear a.** Lat., *a. in granis* (seu *in lacrimis*). Ger., *Stinkasand in Körnern.* A. occurring in flattened, oval, or irregular pieces, in size from that of a pea to that of a walnut, yellow or brownish-yellow without and white within. Compared with lump a., it is feebler in odor and less yellow, and its fractured surface does not become so red or turn red so rapidly. [L, 132.]—**Tinctura asafœtidæ** [U. S. Ph.]. Fr., *teinture d'asa fœtida* [Fr. Cod.]. Ger., *Asanttinctur* [Ger. Ph.]. Syn.: *tinctura assafœtidæ* [Br. Ph.] (seu *asæ fœtidæ*) [Fr. Cod., Ger. Ph.]. Tincture of a.; made by macerating a. in alcohol and filtering; 100 parts contain 20 [U. S. Ph., Fr. Cod., Ger. Ph.] or about 15 parts [Br. Ph.] of a. [B.]—**Tinctura asafœtidæ ammoniata.** See *Spiritus* AMMONIÆ *fœtidus.*—**Tinctura asafœtidæ kalica.** Fr., *teinture alcaline d'asa fœtida.* An alkaline tincture of a.; made by digesting for three days, with a gentle heat, equal parts of a., potassium carbonate, and alcohol, and filtering. [Brunsw. Disp., 1777; Würtemb. Ph., 1798 (L).]—**Volatile oil of a.** See *Oil of a.*

ASA FŒTIDA [Fr. Cod., Ger. Ph.] (Lat.), n. f. See ASAFŒTIDA.—**Alcoolature d'a. f.** (Fr.). See *Tinctura* ASAFŒTIDÆ.—**Alcoolé alcaline d'a. f.** (Fr.). See *Tinctura* ASAFŒTIDÆ *kalica.*—**Alcoolé d'a. f.** (Fr.). See *Tinctura* ASAFŒTIDÆ.—**Alcoolé d'a. f. composé** (Fr.). See *Tinctura* FULIGINIS *fœtida.*—**Aqua asæ fœtidæ.** Ger., *Asafœtidawasser.* A preparation made by distilling asafœtida with water. [B, 48.]—**Aqua asæ fœtidæ composita** [Belg. Ph., Pruss. Ph. (6th ed.)]. The product obtained by distilling 1,000 parts from a mixture of asafœtida, angelica root, sweet-flag rhizome, and alcohol, of each, 65 parts [Belg. Ph.] or 60 parts [Pruss Ph.], and water a sufficiency. [B, 95.] Cf. AQUA *fœtida antihysterica.*—**Aqua asæ fœtidæ cum castoreo** [Belg. Ph.]. A preparation made up of aqua asæ fœtidæ composita 98 parts and tinctura castorei canadensis 2 parts. [B, 95.]—**A. f. purifiée** [Fr. Cod.]. Asafœtida purified by dissolving in alcohol, straining, and evaporating. [B.]—**Emplastrum asæ fœtidæ** [Belg. Ph., Netherl. Ph.]. See *Emplastrum* ASAFŒTIDÆ.—**Emplâtre d'a. f. composé** (Fr.). See *Emplastrum* ASAFŒTIDÆ *matricale.*—**Essence d'a. f.** (Fr.). See *Tinctura* ASAFŒTIDÆ.—**Éthérolé d'a. f.** (Fr.). See *Teinture éthérée d'a. f.*—**Gummi asæ fœtidæ, Gummi-resina asæ fœtidæ** [Dan. Ph., Norweg. Ph., Swed. Ph., Russ. Ph.]. See ASAFŒTIDA.—**Lac asæ fœtidæ, Lait d'a. f.** (Fr.). See *Mistura* ASAFŒTIDÆ.—**Lavement d'a. f.** (Fr.). See *Enema* ASAFŒTIDÆ.—**Mixtura asæ fœtidæ, Mixture d'a. f.** (Fr.). See *Mistura* ASAFŒTIDÆ.—**Pilulæ asæ fœtidæ martiatæ.** 1. A preparation containing 2 scruples each of asafœtida and the ammonio-chloride of iron, 10 drops of rectified oil of amber, and a sufficient quantity of balsam of Peru to make a pilular mass [Würzburg Ph., 1796]. 2. A pill mass containing equal parts of asafœtida, ferrous sulphate, and extract of chamomile [Dan. Ph., 1805]. [B, 119.]—**Pilules d'aloès et d'a. f.** (Fr.). See under ALOÈS.—**Pilules d'a. f. et de galbanum** (Fr.). See PILULÆ *gummosæ.*—**Pilules d'a. f. hyoseyamées** (Fr.). 2-grain pills of a mixture of 120 parts of asafœtida, 40 of extract of hyoscyamus, 3 of powdered hyoscyamus, and 1 part of powdered ipecac. [Hamb. Cod., 1835 (L).]—**Pilules d'a. f. martiales** (Fr.). See *Pilulæ asæ fœtidæ martiatæ.*—**Pilules d'a. f. musquées** (Fr.). 10- to 15-grain pills of a mixture of asafœtida and castoreum each 56 parts, oil of amber 12 parts, musk 1 part, and a sufficient quantity of diascordium. [Ferrara Ph., 1832 (L).]—**Pilules d'a. f. savonneuses** (Fr.). See *Pilulæ* ASAFŒTIDÆ.—**Pilules d'a. f. valérianées** (Fr.). See *Pilulæ* VALERIANÆ *ferulaceæ.*—**Poudre d'a. f.** [Fr. Cod.] (Fr.). A powder made by drying asafœtida, triturating it in a mortar, and passing it through a sieve of 80 meshes to the inch (of 27 mm.). [B.]—**Rétinolé d'a. f. composé** (Fr.). A preparation very similar to the emplastrum asafœtidæ. [L.]—**Teinture alcoolique d'a. f.** (Fr.), **Teinture d'a. f.** [Fr. Cod.] (Fr.). See *Tinctura* ASAFŒTIDÆ.—**Teinture d'a. f. ammoniacée** (Fr.). See *Spiritus* AMMONIÆ *fœtidus.*—**Teinture éthérée d'a. f.** [Fr. Cod.] (Fr.), **Tinctura ætherea asæ fœtidæ** [Fr. Cod.]. Syn.: *éthérolé d'a. f.* A preparation made by macerating for ten days 1 part of powdered asafœtida in 5 parts of ether diluted with alcohol (3½ parts of ether and 1½ of alcohol), and filtering. [B.]—**Tinctura asæ fœtidæ** [Ger. Ph.]. See *Tinctura* ASAFŒTIDÆ.—**Tinctura asæ fœtidæ ammoniata.** See *Spiritus* AMMONIÆ *fœtidus.*—**Trochisques d'a. f. et de myrrhe** (Fr.). See *Trochischi* MYRRHÆ *compositi.*

ASAFÖTIDA (Ger.), n. A³s-a³-fu⁵t'i²d-a³. See ASAFŒTIDA.—**Feine A., Mandelartige A.** See *Amygdaloid* ASAFŒTIDA.

ASAGAR, n. Verdigris. [L, 97.]

ASAGEN, n. An alchemical term for dragon's-blood. [Ruland, Johnson (A, 325).]

ASAGI, n. An alchemical term for vitriol. [Ruland (A, 325).]

ASAGRÆA (Lat.), n. f. A-sa³-gra'a³. Named after Asa Gray, an American botanist. Fr., *asagrée.* 1. A genus of melanthaceous herbs, established by Lindley, now referred to *Schœnocaulon.* 2. A genus of papilionaceous plants, made by H. Baillon, belonging to the *Psoraleæ.* [B, 5, 19, 121.]—**A. officinalis** [Lindley]. See SCHŒNOCAULON *officinale.*—**A. spinosa** [Baillon]. A species of *A.* (2d def.); a branching shrub growing in California. [B, 121.]

ASAGRAYA (Lat.), n. f. A-sa³-gra'a³. See ASAGRÆA.

ASAHASAFRA, n. A plant mentioned by Avicenna; probably a species of orchis. [B, 121.]

ASAKANA, n. A Carib name for the *Laurus borbonia.* [L, 105.]

ASAMAR, n. See ASAGAR.

ASAMAZ, n. See ASAGI.

ASAN (Hind.), n. The *Terminalia glabrata* and *Terminalia tomentosa.* [B, 121.]

ASAND (Ger.), n. A³-za³nd'. See ASANT.

ASANON, n. Prepared sal ammoniac. [L, 119.]

ASANT (Ger.), n. A^3-za^{3}nt′. A general term for benzoin and asafœtida. [A, 315.]—**A'aloëpillen.** See *Pilules d'*ALOÈS *et d' asa fœtida.*—**A'ammoniumtinctur.** See *Spiritus* AMMONIÆ *fœtidus.*—**A'pflaster.** See *Emplastrum* ASAFŒTIDÆ.—**A'pillen.** See *Pilulæ* ASAFŒTIDÆ.—**A'tinctur.** See *Tinctura* ASAFŒTIDÆ.—**Stinka', Stinkender A.** Asafœtida. [L, 46.]—**Wohlriechender A.** Benzoin. [L. 46.]

ASAPEIXE, n. A Brazilian name for the *Bœhmeria caudata.* [H, Baillon (L, 87).]

ASAPES (Lat.), adj. A^{2}s(a^{3}s)′a^3-pez(pas). Gr., ἀσαπής (from α priv., and σήπειν, to cause to decay). 1. Not decaying, not decayed. [A, 322.] 2. Crude, unconcocted, not elaborated (said of the sputum). [Hippocrates (A, 322, 325).]

ASAPHATUM, n. From Ar., *al-safat* or *assafat.* [Choulant (A, 322).] An old term for a cutaneous affection characterized by worm-like formations with black heads (? comedones) which may be squeezed out. [Dornæus, Ruland, Johnson (A, 325).]

ASAPHIA (Lat.), n. f. A^{2}s(a^{3}s)-a^3-fi(fe)′a^3. Gr., ἀσάφεια (from α priv., and σαφής, distinct). Fr., *asaphie.* Ger., *unverständliche Ausrede.* Indistinctness of speech, especially from cleft palate. [A, 325; L, 83.]

ASAPHINI (Lat.), n. m. pl. A^{2}s(a^{3}s)-a^3-fi(fe)′ni(ne). A family of trilobites. [L, 204.]

ASAPRIXE, n. See ASAPEIXE.

ASARABACA, ASARABACCA (Lat.), n's f. A^{2}s(a^{3}s)-a^3-ra^3-ba^{2}k(ba^{3}k)′ka^3. From *Asarum* (*q. v.*), and *bacca*, a berry. [B, 7.] The *Asarum europœum.* [B, 121.]—**A. officinarum.** See ASARUM *europœum.*—**Broad-leaved a.** See ASARUM *canadense.*—**Common a.** See *A.*—**Compound powder of a.** See *Pulvis* ASARI *compositus.*—**Herba asarabacæ, Radix asarabacæ.** The leaves and root of *Asarum europœum.* [B, 180.]

ASARACEÆ [Link] (Lat.), n. f. pl. A^{2}s(a^{3}s)-a^{2}r(a^{3}r)-a(a^3)′-se^2(ke^2)-e(a^3-e^2). From *Asarum.* See ARISTOLOCHIACEÆ.

ASARAL, adj. A^{2}s′a^{2}r-a^{2}l. From *Asarum.* Lat., *asaralis.* Of, pertaining to, or resembling, the genus *Asarum;* belonging to the *Asarales.* [B, 197.]—**A. alliance.** See ASARALES (1st def.).

ASARALES (Lat.), n. f. pl. A^{2}s(a^{3}s)-a^3-ra(ra^3)′lez(las). 1. An alliance of epigynous exogens, established by Lindley, comprising the orders *Santalaceæ*, *Loranthaceæ*, and *Aristolochiaceæ*, which have monochlamydeous flowers and a small embryo surrounded by abundant albumen. [B, 197.] 2. In other classifications, a cohort of apetalous dicotyledonous plants, including the orders *Rafflesiaceæ* and *Aristolochiaceæ*, distinguished by their usually monoclinous flowers, inferior ovary, and seeds provided with integuments and containing a minute embryo usually surrounded by albumen. Cf. SERPENTARIÆ. [B, 75.]

ASARAN, n. An Arabic and Dukhanee name for the *Asarum europœum.* [L, 105.]

ASARATH, n. A Turkish name for the *Cannabis sativa.* [L, 105.]

ASARCIA (Lat.), n. f. A^{2}s(a^{3}s)-a^{3}r′si^2(ki^2)-a^3. Gr., ἀσαρκία (from α priv., and σάρξ, flesh). Fr., *asarcie, maigreur.* Ger., *Asarcie, Asarkie, Fleischmangel.* Emaciation. [L, 50.]

ASARCODÉS (Fr.), n. pl. A^3-sa^{3}r-ko-da. From α priv., and σάρξ, flesh. A division of *Fungi* in Bertillon's classification, comprising those made up solely of free filaments not connected with any fleshy or membranous body. It corresponds nearly to the old group *Hyphomycetes.* [B, 46, 121.]

ASARCON (Lat.), n. n. A^{2}s(a^{3}s)-a^{3}rk′o^{2}n. Gr., ἄσαρκον. See ASARCIA.

ASARCUS (Lat.), adj. A^{2}s(a^{3}s)-a^{3}rk′u^{3}s(u^{4}s). Gr., ἄσαρκος. Emaciated. [A, 322.]

ASAREÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-a(a^3)′re^2-e(a^3-e^2). Of Duchartre and others, a suborder of the *Aristolochiaceæ* (*q. v.*). [B, 104, 170.]

ASARENE, n. A^{2}s′a^3-ren. Fr., *asarène.* Ger., *Asaren.* A terpene. $C_{10}H_{16}$, found in the volatile oil derived from *Asarum canadense.* [B, 33.]

ASARERO (Port.), n. A^3-sa^3-ra-ro. The *Prunus lusitanica.* [B, 121.]

ASARET (Fr.), n. A^3-sa^3-ra. The genus *Asarum.* [A, 385.]—**A. à feuilles d'aron.** The *Asarum arifolium.*—**A. d'Europe.** The *Asarum europœum.* [L, 43.]—**A. du Canada.** The *Asarum canadense.* [L.]—**Extrait d'a.** See *Extractum* ASARI.—**Poudre d'a. composée.** See *Pulvis* ASARI *compositus.*—**Teinture d'a.** See *Tinctura* ASARI.

ASARIA-PALA, n. See ADSARIA-PALA.

ASARIFE, n. According to Bory, a name given by Dioscorides to the *Atriplex halimus.* [B, 121.]

ASARIFOLIUS (Lat.), adj. A^{2}s(a^{3}s)-a^{3}r-i^2-fol(fo^{2}l)′i^2-u^{3}s(u^{4}s). From *Asarum* (*q. v.*), and *folium*, a leaf. Ger., *haselwurzblätterig.* Having leaves like those of the *Asarum* (*e. g.*, the *Valeriana asarifolia*). [B.]

ASARIN, n. A^{2}s′a^3-ri^{2}n. Fr., *asarine.* Ger., *Asarin.* 1. A bitter, yellow coloring matter, $C_{20}H_{26}O_6$, found by Gräger in the root and leaves of *Asarum europœum* and *Asarum canadense*, of an aromatic taste and odor, soluble in alcohol and in ether. [B, 5, 10.] 2. A neutral substance of the empirical formula $C_{12}H_{16}O_3$ found in the root of *Asarum canadense.* 3. Asarone (*q. v.*). [B.]—**Camphorous a.** See ASARONE.

ASARINÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-a^{2}r(a^{3}r)-i(e)′ne(na^3-e^2). Fr., *asarinées.* Ger., *Asarinen.* 1. A family of plants belonging to the *Polymorphæ* made by Batsch, including *Asarum* and other genera now ranked with the *Aristolochiaceæ*, and also the genera *Pistia* and *Tacca*, now placed in distinct orders. 2. Of Agardh, Link, and others, a division of aristolochiaceous plants corresponding to the *Asareæ* of Duchartre. [B, 49, 170.]

ASARINE (Fr.), n. A^3-sa^3-ren. 1. Asarin. 2. The root of *Antirrhinum asarina.* [L, 105.]

ASARINEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-a^3-ri^{2}n′e^2-e(a^3-e^2). Fr., *asarinées.* 1. A tribe, division, or family of aristolochiacous plants corresponding in some classifications to the *Asareæ* of Duchartre, in others to the *Aristolochieæ* and *Asareæ*, and, in others, including with the *Asareæ Bragantia* and other genera usually placed in distinct tribes. 2. Of Kunth, a family of *Apetalæ*, including *Asarum* and *Aristolochia.* See ARISTOLOCHIACEÆ. 3. Of Brongniart, a class of perigynous *Dialypetalæ*, including the families *Aristolochieæ*, *Nepentheæ*, *Cytineæ*, *Rafflesiaceæ*, and possibly the *Balanophoreæ.* [B, 170.]

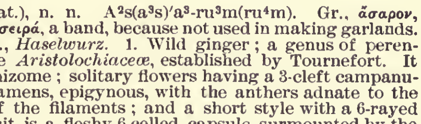
ASARINEOUS, adj. A^{2}s-a^3-ri^{2}n′e^2-u^{3}s. Lat. *asarineus.* Fr., *asariné.* Resembling the genus *Asarum*, or belonging to the *Asarineæ.* [L, 41.]

ASARITE, n. A^{2}s′a^3-rit. Fr., *asarite.* Ger., *Asarit.* Of Gräger, a camphor-like substance found, together with asarin and asarone, in the rhizome of *Asarum europœum.* It forms small acicular crystals of silky lustre, devoid of taste and odor, and soluble in alcohol, in ether, and in the volatile oils. It volatilizes on heating, with the evolution of an acid white vapor. [B, 2, 98.]

ASARITES (Lat.), n. m. A^{2}s(a^{3}s)-a^3-ri(re)′tez(tas). Gr., ἀσαρίτης. Wine flavored with *Asarum.* [Dioscorides (A, 311); L, 97.]

ASARKIE (Ger.), n. A^3-za^{3}rk-e′. See ASARCIA.

ASAROIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-a^{2}r(a^{3}r)-o(o^2)-i^{2}d′e^2-e(a^3-e^2). From ἄσαρον (see ASARUM), and εἶδος, likeness. Fr., *asaroidées.* Of Ventenat, an order of plants, including *Asarum*, *Aristolochia*, and *Cytinus.* [B, 170.] See ARISTOLOCHIACEÆ.



ASAROL, n. A^{2}s′a^3-ro^{2}l. A body allied to the camphors, $C_{10}H_{18}O$, having the chemical constitution of an alcohol. The acetic and probably the valerianic ethers of this body exist in the rhizome of *Asarum canadense.* Two isomeric varieties of a. exist, differing in their boiling points and their behavior to polarized light. [F. B. Powers, "Proc. of the Am. Ph. Assoc.," xxviii, p. 485 (B).]

ASARONE, n. A^{2}s′a^3-ron. Fr., *asarone.* Ger., *Asaron.* Asarum camphor, camphorous asarin; a concrete, volatile, camphor-like substance obtained from the root of *Asarum europœum* by distillation with water; insoluble in water, but readily soluble in alcohol, in ether, and in essential oils. [B, 2, 5.]

ASAROON (Ar.), n. See ASARAN.

ASAROT, n. A name given in Languedoc to the *Acer pseudoplatanus.* [B, 121.]

ASARUM (Lat.), n. n. A^{2}s(a^{3}s)′a^3-ru^{3}m(ru^{4}m). Gr., ἄσαρον, from α priv., and σειρά, a band, because not used in making garlands. Fr., *asaret.* Ger., *Haselwurz.* 1. Wild ginger; a genus of perennial herbs of the *Aristolochiaceæ*, established by Tournefort. It has a creeping rhizome; solitary flowers having a 3-cleft campanulate calyx; 12 stamens, epigynous, with the anthers adnate to the middle or top of the filaments; and a short style with a 6-rayed stigma. The fruit is a fleshy 6-celled capsule surmounted by the remains of the calyx. [B, 19. 34.] 2. In the U. S. Ph., the root of *A. canadense.* [A, 247.] 3. In the Fr. Cod., the *A. europœum.* [B.]—**Alcoolé d'opium et d'a. composé** (Fr.). Syn.: *gouttes anodynes anglaises.* A preparation made by digesting for 20 days and filtering a mixture of 30 parts each of the root of *A. europœum* and sassafras, 15 of aloes-wood, 12 of opium, 4 of ammonium carbonate, and 500 of alcohol; used in epilepsy and hysteria. [L, 77.]—**A. arifolium** [Michaux]. A species indigenous to the south-eastern United States, distinguished by its broadly hastate solitary leaves, which are puberulent along the veins, and by its inflated-urceolate purplish-brown calyx, trilobate at its summit. The slender whitish rhizome has a faint taste of ginger, and is sometimes substituted for serpentaria. It has the medicinal properties of *A. europœum.* [B, 34, 180.]—**A.-bitter.** See ASARIN.—**A. camphor.** Fr., *camphre d'a.* See ASARONE.—**A. canadense** [Linnæus]. Fr., *asaret du Canada.* Ger., *canadische Haselwurz.* Syn.: *A. villosum* [Michaux] (seu *carolinianum* [Walter], seu *latifolium* [Salisbury]). Canada snakeroot, wild ginger; a species distinguished by its pair of large, radical, reniform leaves, with the solitary purplish flower lying between them and close to the ground. Its rhizome is used in domestic medicine, and contains a volatile oil made up of *asarene*, *asarol*,

THE ASARUM CANADENSE. [A, 327.]

and ethereal derivatives of the latter, also a neutral body (*asarin*) of the composition $C_{12}H_{16}O_2$, resin, starch, mucilage, sugar, and a coloring matter (*asarin*). [B, 33, 34.]—**A. carolinianum** [Walter]. See *A. canadense.*—**A. europæum** [Linnæus]. Fr., *cabaret* [Fr. Cod.], *rondelle, oreille d'homme, oreillette, nard sauvage.* Ger., *wilde Narde, gemeine Haselwurz.* It., *asaro, nardo silvatico.* Syn.: *asarum* [Fr. Cod.], *Nardus montana* (seu *rustica*, seu *silvestris*), *asarabacca.* A European species resembling *A. canadense* in appearance and botanical character. It contains a volatile oil, a bitter principle (*asarin*), *asarone*, and *asarite.* The rhizome is rounded, of about the thickness of a quill, branching, and beset with rootlets; it has a sharply aromatic odor like that of pepper and valerian, and a nauseous, bitter, and acrid taste. The leaves and rhizome, *radix* (et *herba*) *asari* (seu *azari*, seu *nardi silvestris*, seu *nardi rusticani*, seu *cabaretæ*, seu *vulgaginis*, seu *sanguinis Martis*), were formerly much employed before ipecac was known as an emetic, diuretic, and diaphoretic, and in the form of a dry powder as a sternutatory. After the introduction of ipecac they were used chiefly in veterinary practice. [A, 247; B, 19, 180.]—**A. grandiflorum** [Klotsch]. See *A. arifolium.*—**A. Hookeri.** A species resembling *A. canadense*, of which it is sometimes regarded as a variety, growing on the Pacific coast of North America. [B, 214.]—**A. hypocistis** [Linnæus]. See CYTINUS *hypocystis.*—**A. latifolium** [Salisbury]. See *A. canadense.*—**A. officinale.** See *A. europæum.*—**A. oil.** Lat., *oleum asari.* A volatile oil obtained in small quantity from the root of *A. europæum* by distillation; a yellowish, viscid liquid, smelling like valerian oil, of a sharp, burning taste, sparingly soluble in water, but readily soluble in alcohol, in ether, and in fixed and volatile oils. Its exact composition is unknown, but the following formulæ have been deduced: C_8H_9O and $C_{10}H_{15}O_2$. [B, 2; L, 132.] See also *A. canadense.*—**A. Sieboldii** [Miquel]. A species growing in Japan, where it is called *to-sai-shin*, having a slender, aromatic rhizome of a pungent, irritating after-taste. [A, 247.]—**A. udne.** An Arabic name for the *A. europæum.* [A, 259.]—**A. villosum** [Michaux]. See *A. canadense.*—**A. virginianum, A. virginicum** [Willdenow]. Black snake-weed; a low acaulescent species, growing in the mountainous regions of the southeastern United States, and said also to occur in China and Japan; it resembles *A. canadense*, but differs in having solitary, glabrous, coriaceous, orbicular-ovate, deeply cordate leaves, and a short subcampanulate dark-purpled calyx. The root is sometimes substituted for that of *Aristolochia serpentaria.* [B, 34, 180; L.]—**A. vulgare, A. vulgare rotundifolium** [Morison]. See *A. europæum.*—**Essentia asari.** See *Tinctura asari.*—**Extractum asari.** Fr., *extrait d'asaret.* An alcoholic solid extract of the root of *A. europæum*, formerly official. [L, 85.]—**Folia asari, Herba asari.** The leaves of *A. europæum.* [B, 180; L, 120.]—**Oleum asari.** See *A. oil.*—**Poudre d'a.** [Fr. Cod.] (Fr.), **Pulvis asari** [Fr. Cod.]. A preparation made by powdering the recently dried leaves of *A. europæum* and passing the powder through a sieve of 80 meshes to the inch (of 27 mm.). [B.]—**Pulvis asari compositus** (seu **errhinus,** seu **sternutatorius**). Compound powder of asarabacca, containing 8 parts of the leaves of *A. europæum* and 1 part of lavender, slightly different proportions being given in several old pharmacopœias; used as an errhine in headache and ophthalmia. [L, 132.]—**Radix asari.** The rhizome of *A. europæum.* [B, 180.]—**Tinctura asari** [Fr. Cod., 1837]. Fr., *teinture d'asaret.* A tincture made by macerating 1 part of the leaves of *A. europæum* in 4 parts of alcohol for 15 days, and filtering. [L, 85.]

ASARWURZ (Ger.), n. A^3'za^{3}r-vurtz. The *Asarum europæum.* [L, 43.]

ASARYAPALA, n. See ADSARI-PALA.

ASASI, n. A Guinea tree, resembling the laurel, a decoction of which is used for toothache. [L, 105.]

ASAUNA, n. The *Briedelia montana.* ["Proc. of the Am. Phar. Assoc.," xxv, p. 225 (B).]

ASBARDO, n. The stems of *Kleinia pteroneura.* ["Proc. of the Am. Phar. Assoc.," xxiii, p. 167 (B).]

ASBEST (Ger.), n. A^{3}s-be^{2}st'. Asbestos. [A, 315.]—**A'ähnlich.** See ASBESTOID.—**A'artig.** See ASBESTINE.—**A'holz.** See *Ligneous* ASBESTOS.—**A'weiss.** See AMIANTINUS.—**Biegsamer A.** Flexible asbestos. [B, 49.] See ASBESTOS.—**Gemeiner A.** A variety of asbestos having a nacreous lustre, translucent at the edges only, and made up of long, thin fibres which are little or not at all elastic. [B, 49.]—**Holza'.** See *Ligniform* ASBESTOS.—**Kanadischer A.** Canadian asbestos. [B, 49.]—**Papiera'.** See *Elastic* ASBESTOS.—**Schillernder A.** See CHRYSOTILE.

ASBESTE (Fr.), n. A^{3}s-be^{2}st. See ASBESTOS.—**A. ligniforme.** See *Ligneous* ASBESTOS.

ASBESTIC, adj. A^{2}s-be^{2}st'i^{2}k. See ASBESTINE.

ASBESTIFORM, adj. A^{2}s-be^{2}st'i^2-fo^{2}rm. Lat., *asbestiformis.* Fr., *asbestiforme.* Fibrous like asbestos. [L, 73, 180.]

ASBESTINE, adj. A^{2}s-be^{2}st'i^{2}n. Lat., *asbestinus.* 1. Pertaining to or resembling asbestos. [A, 302.] 2. Incombustible. [A, 302.]

ASBESTINUM (Lat.), n. n. A^{2}s(a^{3}s)-be^{2}st'i^{2}n-u^{3}m(u^{4}m). See ASBESTOS.

ASBESTINUS (Lat.), adj. A^{2}s(a^{3}s)-be^{2}st'i^{2}n-u^{3}s(u^{4}s). See ASBESTINE.

ASBESTOID, adj. A^{2}s-be^{2}st'oid. Lat., *asbestoides.* Fr., *asbestoïde.* Ger., *asbestähnlich.* Resembling asbestos. [L, 180.]

ASBESTOS (Lat.), n. m. A^{2}s(a^{3}s)-be^{2}st'o^{2}s. Gr., ἄσβεστος. Fr., *asbeste, amiante.* Ger., *Asbest, Bergflachs.* 1. Anciently (τίτανος understood), unslaked lime. [Dioscorides (A, 311).] 2. A name given to several fibrous varieties of double silicate of magnesium and calcium, remarkable for their resistance to the action of heat. A soft, fibrous substance, made up of flexible or elastic filaments sometimes closely resembling those of flax or silk. It surpasses all other substances as a non-conductor of heat. It is found chiefly in the mountains of northern Italy, but is sparsely distributed throughout the world. The constituents of the Italian and Canadian varieties are given as follows:

	Italian.	Canadian.
Lime and magnesia	37·84	33·20
Silica	41·69	40·90
Oxide of iron	3·01	5·75
Potassa	0·85	traces.
Soda	1·41	0·68
Alumina	2·57	6·60
Moisture (hygroscopic)	3·04	—
Organic matter and water of hydration	9·56	12·50
Loss	·03	0·12
Chlorine	—	0·25

It was formerly employed in medicine as a local irritant, and has been used internally as an anthelminthic. [A, 247, 347, 377; "Brit. and Colon. Druggist," June 12, 1886, p. 432; B, 180.]—**A. plumosus.** See *A.*—**Elastic a.** Ger., *Bergkork, Papierasbest.* Mountain cork; a variety in which the fibres are so interlaced as to be hardly separable or even distinguishable; dull exteriorly or but slightly lustrous, not translucent, of a brown, gray, or green color. It is found in Sweden, Spain, and the Tyrol. [B, 49.]—**Flexible a.** Lat., *amiantus, amianthus.* Ger., *biegsamer Asbest.* Amianth. See *A.*—**Ligneous a., Ligniform a.** Fr., *asbeste ligniforme.* Ger., *Asbestholz, Holzasbest.* A brownish variety found in the Tyrol, closely resembling wood in appearance and texture. [B, 49.]

ASBESTOUS, adj. A^{2}s-be^{2}st'u^{3}s. See ASBESTINE.

ASBESTUS (Lat.), n. m. A^{2}s(a^{3}s)-be^{2}st'u^{3}s(u^{4}s). See ASBESTOS.

ASBIDAGH (Ar.), n. Carbonate of lead. [A, 259.]

ASBIREE (Ar.), n. See As (Ar.).

ASBO, n. An old name for an unknown animal the fat of which was used as an ingredient of a plaster employed in the treatment of pleurisy. [L, 94.]

ASBOLAN, n. A^{2}s'bo-la^{2}n. From ἄσβολος, soot. See *Earthy* COBALT.

ASBOLE (Lat.), n. f. A^{2}s(a^{3}s)'bo^{2}l-e(a). Gr., ἀσβόλη (=ἄσβολος). See ASBOLOS.

ASBOLICUS (Lat.), adj. A^{2}s(a^{3}s)-bo^{2}l'i^{2}k-u^{3}s(u^{4}s). Fr., *asbolique.* Ger., *russartig* (1st def.). 1. Sooty, fuliginous. 2. Caused by soot. [A, 322.] See CARCINOMA *scroti asbolicum.*

ASBOLIN, n. A^{2}s'bo-li^{2}n. Lat., *asbolinum, asbolina.* Fr., *asboline.* Ger., *Asbolin.* 1. An old remedy for tape-worm, containing soot. [A, 322.] 2. A yellow volatile oil, bitter and very acrid, extracted, according to Braconnot, from soot. [B, 2.] 3. A resinous substance derived from soot. [B, 7.]

ASBOLODES (Lat.), adj. A^{2}s(a^{3}s)-bo^{2}l-o'dez(das). Gr., ἀσβολώδης (from ἄσβολος, soot, and εἶδος, resemblance). Sooty, resembling soot. [A, 322.]

ASBOLOS (Lat.), n. f. and m. A^{2}s(a^{3}s)'bo^{2}l-o^{2}s. Gr., ἄσβολος. Fr., *suie.* Ger., *Russ.* Soot. [A, 322.] See FULIGO.

ASBOLOTICUS (Lat.), adj. A^{2}s(a^{3}s)-bo^{2}l-o^{2}t'i^{2}k-u^{3}s(u^{4}s). See ASBOLICUS.

ASCAIN (Fr.), n. A^{3}s-ka^{2}n^2. A town in the department of the Basses-Pyrenées, France, where there is a cold ferruginous spring. [L, 105.]

ASCALERON (Lat.), n. n. A^{2}s(a^{3}s)-ka^{2}l(ka^{3}l)'e^{2}r-o^{2}n. Of Athenæus, the *ascalia* (*q. v.*). [Bory (B, 121).]

ASCALIA (Lat.), n. f. A^{2}s(a^{3}s)-ka^{2}l(ka^{3}l)'i^2-a^3. Gr., ἀσκαλία. An ancient name for the receptacle of the artichoke. [Pliny (B, 121).]

ASCALONIA (Lat.), n. f. A^{2}s(a^{3}s)-ka^3-lo'ni^2-a^3. See ALLIUM *ascalonicum.*

ASCALONICUS (Lat.), adj. A^{2}s(a^{3}s)-ka^3-lo^{2}n(lon)'i^{2}k-u^{3}s(u^{4}s). From *Ascalon*, a city in Judæa. See ALLIUM *ascalonicum.*

ASCALONIUM (Lat.), n. n. A^{2}s(a^{3}s)-ka^3-lo'ni^2-u^{3}m(u^{4}m). See ALLIUM *ascalonicum.*

ASCAMONIA (Lat.), n. f. A^{2}s(a^{3}s)-ka^3-mo'ni^2-a^3. Gr., ἀσκαμωνία (= σκαμωνία). See SCAMMONY.

ASCARACANTHA (Lat.), n. f. A^{2}s(a^{3}s)-ka^3-ra^3-ka^{2}nth-(ka^{3}nth)'a^3. From ἀσκαρίς (see ASCARIS), and ἄκανθα, a prickle. A genus of nematoid worms. [A, 249.]—**A. tenuis.** A species found by Van Beneden in the gizzard of the large goosander, having around its head four blades, toothed on the concave side. [A, 249.]

ASCARDAMYCTUS (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}rd-a^3-mi^{2}k(mu^{6}k)'-tu^{3}s(tu^{4}s). Gr., ἀσκαρδάμυκτος (from ἀσκαρδαμυκτεῖν, to look without winking). Fr., *ascardamycte.* Having a fixed, staring gaze. [A, 322.]

ASCARIASIS (Lat.), n. f. A^{2}s(a^{3}s)-ka^3-ri(re)'a^3-si^{2}s. Gen., *ascaria'scos* (*-ri'asis*). See ASCARIDIASIS.

ASCARICIDA (Lat.), n. f. A^{2}s(a^{3}s)-ka^{2}r(ka^{3}r)-i^2-si(ke)'da^3. From ἀσκαρίς, an intestinal worm, and *cædere*, to destroy. Fr., *ascaricide.* A genus of vernoniaceous plants, made by Cassini, now referred to *Vernonia.* [B, 42.]—**A. anthelminthica, A. indica** [Cassini]. Fr., *ascaricide indienne.* See VERNONIA *anthelminthica.*

ASCARICIDE, n. A^{2}s-ka^{2}r'i^2-sid. Lat., *ascaricidum* (1st def.). Fr., *ascaricide.* 1. A remedy capable of destroying ascarides. [A, 385.] 2. The genus *Ascaricida.* [B.]—**A. indienne** (Fr.). See ASCARICIDA *indica.*

ASCARIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ka^{2}r(ka^{3}r)'i^{2}d-e(a^3-e^2). Fr., *ascaridiens, ascaridés.* Ger., *Askariden, Springwürmer.* A family of nematoid worms of the class *Scolecida*, including those genera which have the mouth furnished with three papillæ, one

dorsal and two ventral; usually possess a pharyngeal bulb (or muscular stomach); and have two spicula, or chitinous rods, connected with the male genital apparatus. [B, 27.]

ASCARIDARIUS (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}-ri^{2}d-a(a^{3})′ri^{2}-u^{3}s(u^{4}s). Fr., *ascaridaire.* Resembling the *Ascaridæ* (said of a section of *Microzoaria* [the *Ascaridaria*] belonging to the apodous worms). [Blainville (L, 116).]

ASCARIDE (Fr.), n. A^{3}s-ka^{3}r-ed. See ASCARIS.—**A. ailée.** See ASCARIS *mystax.*—**A. du cheval.** See ASCARIS *megalocephala.*—**A. du chien.** See ASCARIS *marginata.*—**A. du cochon.** See ASCARIS *suilla.*—**A. du mouton.** See ASCARIS *ovis.*—**A. du saumon.** See ASCARIS *capsularia.*

ASCARIDES (Lat.), n. f. pl. of *ascaris* (*q. v.*). A^{2}s(a^{3}s)-ka^{2}r(ka^{3}r)′i^{2}d-ez(as).

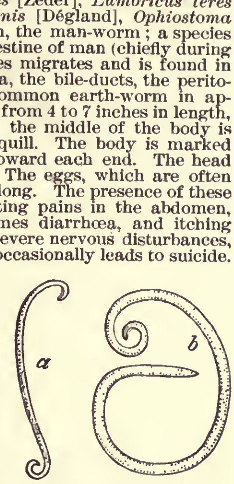
ASCARIDÉS (Fr.), n. pl. A^{3}s-ka^{3}r-i^{2}d-a. See ASCARIDÆ.

ASCARIDIA [Reichenbach] (Lat.), n. f. A^{2}s(a^{3}s)-ka^{3}r-i^{2}d′i^{2}-a^{3}. See ASCARICIDA.

ASCARIDIASIS (Lat.), n. f. A^{2}s(a^{3}s)-ka^{3}-ri^{2}d-i(i^{2})′a^{3}-si^{2}s. Gen., *ascaridia′seos* (*-di′asis*). Fr., *ascaridiase* (1st def.). Ger., *Askaridenkrankheit* (1st def.), *Spulwurmkrankheit* (1st def.). 1. The state of being infested with ascarides, together with the resulting morbid phenomena. [A, 322.] 2. Phtheiriasis. [Bory de St. Vincent (A, 322).]

ASCARIDICUS (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}-ri^{2}d′i^{2}k-u^{3}s(u^{4}s). Pertaining to or affected with ascarides. [A, 322.]

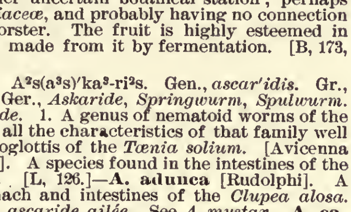
ASCARIDIENS (Fr.), n. pl. A^{3}s-ka^{3}r-i^{2}d-i^{2}-a^{3}n^{2}. See ASCARIDÆ.



ASCARIDIUS (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}-ri^{2}d′i^{2}-u^{3}s(u^{4}s). See ASCARIDARIUS.

ASCARIDOCNESMUS (Lat.), n. m. A^{2}s(a^{3}s)-ka^{2}r(ka^{3}r)″i^{2}d-o^{2}k-ne^{2}s(nas)′mu^{3}s(mu^{4}s). From ἀσκαρὶς (see ASCARIS), and κνησμός, itching. Fr., *ascaridocnesme.* Itching of the anus or vulva, due to the presence of ascarides. [M, 13.]

ASCARIDODES (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}-ri^{2}d-o′dez(das). Gr., ἀσκαριδώδης. Infested with a great number of ascarides. [A, 322.]



ASCARINA (Lat.), n. f. A^{2}s(a^{3}s)-ka^{3}-ri(re)′na^{3}. Fr., *ascarine.* A genus of chloranthaceous plants established by Forster. [B, 214.]—**A. rubra** [Poiret]. Syn.: *Morella rubra* [Loureiro]. An Asiatic plant of altogether uncertain botanical station; perhaps referable to the *Euphorbiaceæ*, and probably having no connection with the genus *A.* of Forster. The fruit is highly esteemed in China, where a liquor is made from it by fermentation. [B, 173, 214; L, 105.]

ASCARIS (Lat.), n. f. A^{2}s(a^{3}s)′ka^{3}-ri^{2}s. Gen., *ascar′idis.* Gr., ἀσκαρίς. Fr., *ascaride.* Ger., *Askaride, Springwurm, Spulwurm.* It., *ascaride.* Sp., *ascáride.* 1. A genus of nematoid worms of the family *Ascaridæ*, having all the characteristics of that family well marked. [B.] 2. The proglottis of the *Tænia solium.* [Avicenna (L, 17).]—**A. acus** [Bloch.]. A species found in the intestines of the herring and the salmon. [L, 126.]—**A. adunca** [Rudolphi]. A species found in the stomach and intestines of the *Clupea alosa.* [L, 127.]—**A. alata.** Fr., *ascaride ailée.* See *A. mystax.*—**A. caniculæ, A. canis, A. canis aurei.** See *A. marginata.*—**A. canis et martis** [Schrank]. See EUSTRONGYLUS *gigas.*—**A. canis lagopodis.** A species found in the *Canis lagopus.* [L, 127.]—**A. capsularia** [Rudolphi]. Fr., *ascaride du saumon.* A species found in the intestines and abdomen of the salmon. [L, 126.]—**A. cati** [Schrank]. See *A. mystax.*—**A. clupearum.** A species found in the abdomen of the *Clupea harengus.* [L, 127.]—**A. columbæ** [Gmelin]. See *A. maculosa.*—**A. conosoma.** A term applied by Bremser, Diesing, and others to the larva of the common fly (*Musca domestica*), mistaken for an entozoon. [L, 16.]—**A. corpore utrinque sulcato, cauda obtusiuscula.** See *A. lumbricoides.*—**A. crenulata.** See *A. leptoptera.*—**A. dipodis.** See *A. tetraptera.*—**A. dispar** [Schrank]. A species found in the cæcum of the goose. [L, 127.]—**A. equi** [Gmelin]. See *A. megalocephala.*—**A. felis** [Gmelin]. See *A. mystax.*—**A. gibbosa** [Rudolphi]. A species found in the intestine of the pheasant. [L, 127.]—**A. gigas.** See *A. lumbricoides.*—**A. gigas equi** [Goeze]. See *A. megalocephala.*—**A. inflexa** [Zeder]. A species found in fowls. [L, 24.]—**A. labiata** [Rudolphi]. A species found in the eel. [L, 126.]—**A. leptoptera** [Rudolphi]. A species found in many of the cat family. [L, 126.]—**A. lumbricoides** [Linnæus]. Fr., *ascaride lombricoïde, lombriç intestinal.* Ger., *gemeiner Spulwurm, regenwurmähnlicher Springwurm.* It., *ascaride lombricoide.* Sp., *ascáride lumbricoida, lombriz.* Syn.: *A. gigas* [Goeze], *Fusaria lumbricoides* [Zeder], *Lumbricus teres hominis* [Tyson], *Nematoideum hominis* [Dégland], *Ophiostoma Pontierii* [Bremser]. The round-worm, the man-worm; a species of common occurrence in the small intestine of man (chiefly during middle childhood), whence it sometimes migrates and is found in the most diverse localities (the trachea, the bile-ducts, the peritoneal cavity, etc.). It resembles the common earth-worm in appearance. The males usually measure from 4 to 7 inches in length, and the females from 9 to 14 inches; the middle of the body is about as large as an ordinary goose-quill. The body is marked by fine transverse rings, and tapers toward each end. The head is provided with three oral papillæ. The eggs, which are often found in the fæces, are from 50 to 60 μ long. The presence of these worms gives rise to colicky and shooting pains in the abdomen, indigestion, nausea, vomiting, sometimes diarrhœa, and itching of the nose; also in some instances to severe nervous disturbances, including a morbid sensitiveness that occasionally leads to suicide. The diagnosis rests on the passage of the worm or its ova. Santonin is the remedy most commonly used to expel these worms. [A, 249; T. S. Cobbold (A, 364); B, 27; L, 16.]—**A. lumbricoides asini feri** [Pallas]. See *A. megalocephala.*—**A. maculosa** [Rudolphi]. A species found in the intestine of the pigeon. [L, 24, 126.]—**A. marginata** [Linnæus]. Fr., *ascaride du chien.* A species found in the small intestine of the dog and the wolf. [L, 18.]—**A. maritima** [Leuckart]. A species of which only one specimen has been observed—in the matter vomited by a child. It was 32 mm. (1¼ inch) long and 1 mm. broad. [B, 27.]—**A. megalocephala** [Cloquet]. Fr., *ascaride du cheval.* Syn.: *A. equi* [Gmelin], *A. gigas equi* [Goeze]. A species infesting the horse, the ass, and other like animals; resembling the *A. lumbricoides*, and formerly considered to be identical with it. [B, 84; L, 126.]—**A. mystax** [Rudolphi]. Ger., *Katzenspringwurm.* Syn.: *A. felis* [Gmelin], *A. teres felis* [Goeze], *A. cati* [Schrank], *A. alata* [Dujardin], *Fusaria mystax* [Zeder]. A species resembling the *A. lumbricoides*, but smaller; found in the intestines of cats and dogs and occasionally of man. It has a very slender worm-like body, and is provided with a wing-like projection on either side of the head. The tail of the male is usually rolled into the form of a spiral. [B, 27; L, 16.]—**A. negrovenosa.** A species forming a connecting link between the free and the parasitic *Nematoda.* It inhabits the lungs of frogs, and the young, after escaping, develop in damp earth or mud into sexually mature animals, but the young of the latter do not reach sexual maturity until they have become parasitic in the frog. [L, 147.]—**A. obvelata** [Rudolphi]. See *A. tetraptera.*—**A. ovis.** Fr., *ascaride du mouton.* A species found in the intestine of the sheep. [Rudolphi (L, 17).]—**A. perspicillum** [Rudolphi]. A species found in the small intestine of the turkey. [L, 126.]—**A. renalis** [Gmelin]. See EUSTRONGYLUS *gigas.*—**A. salaris, A. salmonis.** See *A. capsularia.*—**A. stephanostoma** [Jördens]. The larva of the *Musca carnaria*, which, having been found in the intestinal canal of man, Jördens, Lenz, and others regarded as an entozoon. [B, 84; L, 16.]—**A. suilla.** Fr., *ascaride du cochon.* A species found in the hog; formerly thought to be identical with *A. lumbricoides.* [B, 84; L, 16, 17.]—**A. teres canis** [Goeze]. See *A. marginata.*—**A. teres felis** [Goeze]. See *A. mystax.*—**A. tetraptera** [Nitzsch]. A species found in the large intestine of the mouse. [L, 126.]—**A. trichiura** [Linnæus]. See TRICOCEPHALUS *dispar.*—**A. tricuspidata.** See *A. marginata.*—**A. triquetra.** See *A. mystax.*—**A. truncatula** [Rudolphi]. A species found in the intestine of the perch. [L, 127.]—**A. vermicularis** [Linnæus]. Fr., *ascaride vermiculaire.* Ger., *Afterwurm, Aftermade.* See OXYURIS *vermicularis.*—**A. vesicularis** [Fröhlich]. A species found in the cæcum of the domestic fowl. [L, 44.]—**A. visceralis** [Gmelin]. See EUSTRONGYLUS *gigas.*—**A. Werneri** [Rudolphi]. See *A. marginata.*

THE ASCARIS MYSTAX, NATURAL SIZE. (FROM QUAIN, AFTER LEUCKART.)

a, the male; *b*, the female.

THE ASCARIS LUMBRICOIDES. (AFTER VAN BENEDEN.)

1, the complete worm; 2, the head; 3, the tail of the male; 4, the middle of the body of the female.

ASCAROIDES (Lat.), adj. A^{2}s(a^{3}s)-ka^{3}-ro(ro^{2})-i(e)′dez(das). From ἀσκαρίς (see ASCARIS), and εἶδος, resemblance. Ger., *askaridenartig.* Of the nature of an *Ascaris*; as a n., a genus of nematoid worms resembling the *Ascaris.* [A, 249; L, 81.]

ASCE (Fr.), n. A^{3}s. See ASCUS.

ASCEA (It.), n. A^{3}s-cha′a^{3}. An Italian village where there is a cold sulphurous and ferruginous spring. [A, 385.]

ASCELES (Lat.), adj. A^{2}s(a^{3}s)′se^{2}l(ke^{2}l)-ez(as). Gr., ἀσκελής (from α intens., and σκέλλειν, to dry, parch [1st def.], or α priv., and σκέλος, the leg [2d def.]). Fr., *ascèle.* Ger., *dünnschenkelig* (1st def.). 1. Very thin in the legs. [A, 322.] 2. Having no legs. [A, 322; L, 41, 94.]

ASCELLA (Lat.), n. f. A^{2}s(a^{3}s)-se^{2}l(ke^{2}l)′la^{3}. Fr., *ascelle.* See AXILLA.

ASCELLUS (Lat.), n. m. A^{2}s(a^{3}s)-se^{2}l(ke^{2}l)′lu^{3}s(lu^{4}s). See ASCUS.

ASCELUS (Lat.), adj. A^{2}s(a^{3}s)′se^{2}l(ke^{2}l)-u^{3}s(u^{4}s). See ASCELES.

ASCENDING, adj. A^{2}s-se^{2}nd′i^{2}ng. Lat., *ascendens* (from *ascendere*, to ascend). Fr., *ascendant, montant.* Ger., *aufsteigend.* It., Sp., *ascendente.* Rising, pursuing an upward course (in botany, said especially of a stem or other part of a plant which, at first horizontally disposed, takes an upward direction). [B, 19.] See also *A.* AORTA, *A.* COLON, *A.* CURRENT, *A.* METAMORPHOSIS, and *A.* PARALYSIS.

ASCENSION, ASCENT, n's. A^{2}s-se^{2}n'shu^{3}n, -se^{2}nt'. Lat., *ascensio, ascensus.* Fr., *ascension.* Ger., *Aufsteigen, Erhöhung.* 1. Locomotion upward, note being taken of the physiological effects of changes of altitude. [A, 385.] 2. An increase in the severity of a disease. [A, 322.] 3. Of an organ, *e. g.*, the uterus (Lat., *ascensus* [seu *elevatio*] *uteri*; Ger., *Höhenstand* [oder *Erhebung*] *des Uterus*), the assumption of a more elevated situation. [A, 69.] 4. An old term for the process of sublimation. [Libavius (L, 116).]

ASCEOUS, adj. A^{2}s'se^2-u^{3}s. Of or pertaining to an ascus (*q. v.*). [Farlow (B).]

ASCESIS (Lat.), n. f. A^{2}s(a^{3}s)-se(ka)'si^{2}s. Gen., *asce'seos* (*-sis*). Gr., ἄσκησις (from ἀσκεῖν, to exercise, to practice). Exercise. [A, 325.]

ASCHAM (Ar.), n. See AMNIYOS.

ASCHBAUM (Ger.), n. A^{3}sh'ba^3-u^{4}m. The ash-tree. [A, 315.] —**A'rinde.** See *Cortex* FRAXINI. [B, 180.] See FRAXINUS *excelsior.*

ASCHBLATT (Ger.), n. A^{3}sh'bla^{3}t. See ARTEMISIA *maritima.*

ASCHBLEI (Ger.), n. A^{3}sh'bli. 1. Graphite. 2. Bismuth. [B, 49, 180.]

ASCH-BUTCHEGAN (Ar.), n. Castoreum. [L, 77.]

ASCHE (Ger.), n. A^{3}sh'e^2. See ASH.—**A'nartig.** Cineritious. [L, 80.]—**A'nbad.** An ash-bath. [L, 80.]—**A'nbett.** The application of heat to the body by means of hot, dry ashes. [L, 135.]—**A'nflockenblume.** The centaury. [L, 43.]—**A'nkapelle, A'nkupelle.** Ashes used in cupellation. [L, 46.]—**A'nkraut.** The sky-flower. [L, 46.] See CINERARIA.—**A'nlauge.** The lye of wood-ashes. [A, 315.]—**A'npflanze.** 1. The sky-flower. [L, 30.] See CINERARIA. 2. The *Artemisia vulgaris.* [A, 315.]—**A'nsalz.** Potash. [L, 30.]—**Blaue A.** Cinis cærulea; azurite. [B, 180.]—**Grüne A.** Cinis viridis; chrysocolla or green malachite. [B, 180.]—**Holza'.** Wood-ashes. [L, 30.]—**Knochena'.** Bone-ash. [L, 30.]

ASCHÉE (Fr.), n. A^{3}sh-a. An old name for the earth-worm. [L, 105.]

ASCHENFETT (Ger.), n. A^{3}sh'e^{2}n-fe^{2}t. Salmon-fat. [B, 180.] See SALMO *thymallus.*

ASCHERWURZEL (Ger.), n. A^{3}sh'e^{2}r-vur-tze^{2}l. White dittany root; the root of *Dictamnus albus.* [B, 180.]

ASCHIA (Lat.), n. f. A^{2}s(a^{3}s)'ki^2(ch^{2}i^2)-a^3. The salmon. [B, 180.]—**Axungia aschiæ, Oleum aschiæ.** Salmon-fat. [B, 180.] See SALMO *thymallus.*

ASCHIDASARUM (Lat.), n. n. A^{2}s(a^{3}s)-ki^{2}d(ch^{2}i^{2}d)-a^{2}s-(a^{3}s)'a^3-ru^{3}m(ru^{4}m). From α priv., σχίζειν, to split, and *Asarum* (*q. v.*). A section of the genus *Asarum*, including species with undivided styles. [Duchartre (B, 214).]

ASCHIDOBLASTEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ki^{2}d(ch^{2}i^{2}d)-o-(o^2)-bla^{2}s(bla^{3}s)'te^2-e(a^3-e^2). From α priv., σχίζειν, to split, and βλαστός, a germ. Fr., *aschidoblastées.* Of Jussieu, a subdivision of the *Perispermeæ*, including the families (orders) *Burmanniaceæ*, *Apostasieæ*, and *Orchidaceæ*, characterized by the presence of a very imperfect, undivided, homogeneous embryo. [B, 121.]

ASCHIL, ASCHILL (Ar.), n's. The *Scilla maritima.* [A, 259.]

ASCHION (Lat.), n. n. A^{2}s(a^{3}s)'ki^2(ch^{2}i^2)-o^{2}n. Gr., ἄσχιον. An ancient name for the truffle [Dioscorides (A, 311)]; applied by Wallroth to the genus *Tuber.* [B, 121.]—**A. nigrum** [Wallroth]. See TUBER *cibarium.*

ASCHISTODACTYLIA (Lat.), n. f. A^{2}s(a^{3}s)-ki^{2}st(ch^{2}i^{2}st)''-o(o^2)-da^{2}k(da^{3}k)-ti^{2}l(tu^{6}l)'i^2-a^3. From ἄσχιστος, not cloven, and δάκτυλος, a finger Fr., *aschistodactylie.* See SYNDACTYLIA.

ASCHISTODACTYLUS (Lat.), adj. A^{2}s(a^{3}s)-ki^{2}st(ch^{2}i^{2}st)''-o(o^2)-da^{2}k(da^{3}k)'ti^{2}l(tu^{6}l)-u^{3}s(u^{4}s). Fr., *aschistodactyle.* Pertaining to or affected with syndactylia. [A, 322.]

ASCHIUM (Lat.), n. n. A^{2}s(a^{3}s)'ki^2(ch^{2}i^2)-u^{3}m(u^{4}m). See ASCHIA.—**Axungia aschii, Oleum aschii.** Salmon-fat. [B, 180.] See under SALMO *thymallus.*

ASCHKUR (Ar.), n. The *Andropogon schœnanthus.* [L, 77.]

ASCHLAUCH (Ger.), n. A^{3}sh'la^3-u^{4}k. The common leek (*Allium porrum*). [L, 37.]

ASCHNITZ (Ger.), n. A^{3}sh'ni^{2}tz. The lady's-mantle (*Alchemilla vulgaris*). [L, 46.]

ASCHWURZ (Ger.), n. A^{3}sh'vurtz. The white dittany (*Dictamnus albus*). [A, 315.]

ASCHWURZEL (Ger.), n. A^{3}sh'vur-tze^{2}l. The root of the *Dictamnus albus.* [B, 180.]

ASCIA (Lat.), n. f. A^{2}s(a^{2}s)'si^2(ki^2)-a^3. From ἄσκιος, shadowless, so thin as to cast no shadow. 1. A hatchet, or ax. [A, 322.] 2. In zoology, the salmon (*Salmo thymallus*). 3. A spiral bandage. Galen (A, 325).]—**Axungia asciæ, Oleum asciæ.** Salmon-fat. [B, 180.] See under SALMO *thymallus.*

ASCIANO (It.), n. A^{3}s-chi^2-a^3'no. A place in Tuscany, a mile from Pisa, where there is a spring containing earthy sulphates, carbonates, and chlorides. [A, 319; L, 135.]

ASCIDÉS (Fr.), n. pl. A^{3}s-i^{2}d-a. The *Ascomycetes.* [Bertillon (B, 46).]

ASCIDIA (Lat.), n. n. pl. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)'i^2-a^3. From ἀσκίδιον (= ἀσκίον), dim. of ἀσκός, a leather wine-bag. Fr., *ascidies, ascidiens.* Ger., *Mantelthiere* (1st def.). 1. The ascidians. See ASCIDIVIDA. 2. The pl. of *ascidium* (*q. v.*).—**A. abdominalia** [Huxley]. An order of the *Tunicata* characterized by the alimentary canal being completely behind the branchial sac, which is comparatively small. [L, 147.]—**A. branchialia** [Huxley]. An order of the *Tunicata* characterized by a branchial sac occupying the whole or nearly the whole length of the body, the intestine lying on one side of it. [L, 147.]—**A. larvalia** [Huxley]. An order of the *Tunicata* which retain the larval form throughout their life. [L, 147.] Cf. APPENDICULARIA.

ASCIDIACEA (Lat.), n. n. pl. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i^2-a(a^3)'se^2-(ke^2)-a^3. Fr., *ascidiacés.* See ASCIDIADÆ.

ASCIDIADÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i(e)'a^3-de(da^3-e^2). Fr., *ascidides.* The simple ascidians; a family of the *Tunicata* made by Woodward, characterized by the members being simple, fixed, solitary or gregarious, oviparous, the sexes united, and the branchial sac simple or disposed in deep and regular folds. [L, 147.]

ASCIDIALIS (Lat.), adj. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i^2-a(a^3)'li^{2}s. Of or pertaining to an ascidium. [B, 198.]

ASCIDIANS, n. pl. A^{2}s-si^{2}d'i^2-a^{2}nz. Fr., *ascidiens.* See ASCIDIA.—**Compound a.** See BOTRYLLIDÆ.—**Simple a.** See ASCIDIADÆ.—**Social a.** See CLAVELLINIDÆ.

ASCIDIARIUM (Lat.), n. n. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i^2-a(a^3)'ri^2-u^{3}m-(u^{4}m). An aggregation of compound ascidians. [A, 316, 359.] See BOTRYLLIDÆ.

ASCIDIATE, adj. A^{2}s-si^{2}d'i^2-at. Lat., *ascidiatus.* Fr., *ascidié.* Shaped like a vase or flask; in botany, provided with an ascidium. [B, 198; L, 180.]

ASCIDICOLIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i^2-ko^{2}l'i^{2}d-e(a^3-e^2). A family of copepods. [L, 204.]

ASCIDIFORM, adj. A^{2}s-si^{2}d'i^2-fo^{2}rm. Lat., *ascidiformis, ascidiiformis* (from ἀσκίδιον [see ASCIDIA], and *forma*, form). See ASCIDIOID.

ASCIDIGEROUS, adj. A^{2}s-si^{2}d-i^{2}j'e^{2}r-u^{3}s. From ἀσκίδιον (see ASCIDIA), and *gerere*, to bear. Fr., *ascidigère.* Bearing ascidia (said of leaves or plants). [B, 121.]

ASCIDIOCARPA (Lat.), n. n., pl. of adj. *ascidiocarpus.* A^{2}s-(a^{3}s)-si^{2}d(ki^{2}d)-i^2-o(o^2)-ka^{3}r'pa^3. Fr., *ascidiocarpes.* A class of cryptogams, established by Lühnemann for the two genera *Blasia* and *Riccia.* [B, 170.]

ASCIDIOCARPOUS, adj. A^{2}s-si^{2}d''i^2-o-ka^{3}rp'u^{3}s. From ἀσκίδιον (see ASCIDIA), and καρπός, a fruit. Lat., *ascidiocarpus.* Fr., *ascidiocarpe.* Having the fruit open at the top (said of certain *Hepaticæ*). [L, 41.]

ASCIDIOID, adj. A^{2}s-si^{2}d'i^2-oid. Lat., *ascidiodes* (from ἀσκίδιον [see ASCIDIA], and εἶδος, resemblance). Fr., *ascidioïde.* Ger., *schlauchförmig.* Sac-shaped. [A, 322.]

ASCIDIOIDA (Lat.), n. n. pl. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)-i^2-o(o^2)-i(e)'da^3. The *Tunicata* (*q. v.*), so called because many of them are shaped like a two-necked bottle. [A, 359.]

ASCIDION (Lat.), n. n. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)'i^2-o^{2}n. From ἀσκίδιον (= ἀσκίον, dim. of ἀσκός), a little pouch or bottle. 1. A genus of lichens found on cinchona barks. 2. A genus of *Fungi.* [L, 41, 109.]

ASCIDIOZOOID, n. A^{2}s-si^{2}d''i^2-o-zo'oid. From ἀσκίον, a little pouch, ζῷον, an animal, and εἶδος, resemblance. Huxley's term for one of the zooids or individuals into which the anterior portion of the blastoderm of certain of the ascidians develops. [L.] Cf. CYATHOZOOID.

ASCIDIUM (Lat.), n. n. A^{2}s(a^{3}s)-si^{2}d(ki^{2}d)'i^2-u^{3}m(u^{4}m). Fr., *outre, goudet.* Ger., *Schlauch.* 1. A tubular or pitcher-shaped organ, open at the top and often filled with liquid, developed from or upon a leaf. 2. A name given by Fries to the spore of an ascophorous *Fungus*, when this spore contains in its interior several vesicles (sporidiola). 3. Of Fée, a genus of lichens. 4. Of A. Braun, a genus of *Algæ.* [B, 170, 198.]

ASCIE (Fr.), n. A^{3}s-se. The *Cyprinus erythropthalmus.* [A, 385.]

ASCIFORM, adj. A^{2}s'si^2-fo^{2}rm. From ἀσκός, a pouch or bottle, and *forma*, form. Fr., *asciforme.* Ger., *schlauchförmig.* Shaped like a flask or ascus. [B.]

ASCIGERI (Lat.), n. m. pl. A^{2}s(a^{3}s)-si^{2}j(ki^{2}g)'e^{2}r-i(e). Fr., *ascigères.* The ascigerous *Fungi*, or *Ascomycetes.* Of Bail, a division of the *Gasteromycetes*, including the *Tuberaceæ*, and of the *Pyrenomycetes*, including the *Sphæriacei.* [B, 121.]

ASCIGEROUS, adj. A^{2}s-si^{2}j'e^{2}r-u^{3}s. Lat., *ascigerus* (from ἀσκός, a pouch or bottle, and *gerere*, to bear). Fr., *ascigère.* Ger., *schlauchtragend.* Bearing asci (said of certain *Fungi*, such as the *Ascomycetes*, which are provided with asci). [B, 19.]

ASCILLA (Lat.), n. f. A^{2}s(a^{3}s)-si^{2}l(ki^{2}l)'la^3. See AXILLA.

ASCINDOE, n. A shrub of Guinea, used in gonorrhœa. [L, 105.]

ASCITE (Fr.), n. A^{3}s-set. See ASCITES.—**A. chyliforme.** See *Chylous* EFFUSION.—**A. de l'utérus.** See HYDROMETRA.—**A. huileuse.** See ASCITES *adiposus.*—**A. isolée.** A form of ascites occurring suddenly, with fever, and running an acute course (to recovery) without any concomitant disease. [Besnier (L, 87).]—**A. péritonéale.** See ASCITES.—**A. sous-cutanée.** See ŒDEMA and ANASARCA.—**A. vaginale.** See ASCITES *vaginalis.*—**A. vraie.** See ASCITES.

ASCITES (Lat.), n. m. A^{2}s(a^{3}s)-si(ke)'tez(tas). Gen., *asci'tæ*; acc., *asci'ten.* Gr., ἀσκίτης (ὕδρωψ understood), the bag-like dropsy (from ἀσκός, a pouch or bottle). Fr., *ascite, hydropisie du bas ventre* (ou *du péritoine*), *hydropéritoine* [Piorry]. Ger., *Bauchwassersucht.* It., *ascite.* Sp., *ascitis.* Syn.: *hydroperitonæum, hydrops peritonæi* (seu *abdominis*). Dropsy of the peritonæum (or of the belly), abdominal dropsy; a collection of serous fluid in the peritoneal cavity, especially one not due to inflammation of the peritonæum. It is a symptom of various diseases, especially of the heart, liver, and kidneys, or may be due to local causes, such as degeneration of the peritonæum or obstruction of the portal circulation. The sp. gr. of the liquid varies from 1·008 to 1·014, and it occasionally contains fibrin, cholesterin, biliary elements, etc., and, in cases of renal origin, urea. [D, 21; Eichhorst (M, 1).]—**Active a.,**

Acute a. Fr., *ascite aiguë.* A form in which a large effusion takes place suddenly, especially as the result of exposure to wet and cold. [D, 1.]—**A. ab aqua sanguinolenta** (seu **nigrescente**). See *A. cruentus.*—**A. abdominalis.** See *A.*—**A. ab exanthemate.** A. attributed to the suppression of a cutaneous eruption. [L, 132.]—**A. ab hepate.** A. due to hepatic disease. [L, 132.]—**A. ab herpetibus repressis.** See *A. ab exanthemate.*—**A. ab inanitione et colliquatione.** See *A. a sanguifluxibus.*—**A. ab oppilatione.** A. from visceral obstruction. [L, 132; M, 60.]—**A. ab ovariis.** A. due to ovarian disease. [L, 132.]—**A. a colliquatione.** See *A. febrilis.*—**A. a cruore loturæ carnium simili, A. a cruore mero.** See *A. cruentus.*—**A. adiposus.** Fr., *ascite huileuse.* A form in which the effusion contains much fatty matter and occasionally peptones, casein-like masses, or lecithin; commonly associated with malignant or tubercular disease of the peritonæum. [H, Eichhorst (A, 319).]—**A. a liene.** A. due to enlargement of the spleen from malarial poisoning. [L, 132.]—**A. a mesenterio strumoso.** See *A. scrofulosus.*—**A. arthriticus.** A. due to gout. [L, 132.]—**A. a sanguifluxibus.** A. due to impoverishment of the blood from repeated hæmorrhages. [L, 132.]—**A. a scabie repulsa.** See *A. ab exanthemate.*—**A. a vesica disrupta.** See *A. urinosus.*—**A. calidus.** See *Acute a.*—**A. chylosus.** See *Chylous* EFFUSION.—**A. cruentus.** Hæmorrhage into the peritonæum. [L, 132.]—**A. exquartana** [Werlhof]. A. due to malarial fever of the quartan type. [L, 119, 132.]—**A. febrilis.** A. occurring as the result of a fever. [L, 119, 132.]—**A. flatulento-peritonæus.** Abdominal distension from tympanites. [L, 132.]—**A. hepaticus.** A. due to hepatic disease.—**A. hepato-cysticus.** Dropsy or great distension of the gall-bladder. [M, 60.]—**A. intercus.** Dropsy situated between the skin and the peritonæum. [L, 132; M, 60.]—**A. intermuscularis.** Œdema of the abdominal muscles. [L, 132.]—**A. maculis repressis.** See *A. ab exanthemate.*—**A. of the uterus.** See HYDROMETRA.—**A. oleosus.** See *A. adiposus.*—**A. omentalis.** Dropsy of the omentum. [L, 132.]—**A. ovarii.** See *Ovarian* CYSTOMA.—**A. purulento-peritonæus, A. purulentus.** Ger., *Eiterbauchwassersucht.* A collection of purulent matter in the peritonæum. [L, 132.]—**A. rubeola repressa.** See *A. ab exanthemate.*—**A. saccatus.** 1. Encysted dropsy of the peritonæum; a form in which the effusion is shut off from the general peritoneal cavity by inflammatory exudate or adhesions. 2. Ovarian dropsy. [L, 84, 132.] See *Ovarian* CYSTOMA.—**A. sanguineo-intercus.** Hæmorrhage beneath the peritonæum, separating it from the abdominal muscles. [L, 132.]—**A. sanguineo-peritonæus.** Hæmorrhage into the abdominal muscles. [L, 132.]—**A. sanguineo-uterinus.** See HÆMATOMETRA.—**A. scorbuticus** [Boerhaave]. A. due to scurvy or accompanied with scorbutic symptoms. [L, 132.]—**A. scrofulosus.** A. occurring in scrofulous children. [L, 132.]—**A. stomachi.** An accumulation of water in the stomach. [L, 132.]—**A. urinosus.** An escape of urine into the peritonæum. [L, 132.]—**A. uterinus.** See HYDROMETRA.—**A. vaginalis.** Fr., *ascite vaginale.* Ger., *Bauchmuskelscheidewassersucht.* An accumulation of liquid within the sheath of the rectus abdominis muscle. [L, 44.]—**A. vulgatior.** A. preceded by high-colored, scanty urine, evidently due to kidney disease. [L, 132.]—**Chronic a.** A. of long standing, or in which the effusion takes place slowly. [M.]—**Chyliform a., Chylous a.** Fr., *ascite chyliforme.* See *Chylous* EFFUSION.—**Encysted a.** See *A. saccatus.*—**Hepatic a.** See *A. hepaticus.*—**Hydrops a. adiposus.** See *A. adiposus.*—**Mechanical a., Passive a.** A. due to disease of the heart, liver, spleen, or kidneys leading to retardation of the blood current in the vena portæ. [D, 1.]—**Saccated a.** See *A. saccatus.*—**Subcutaneous a.** Œdema of the abdominal wall. [L, 44.]—**Visceral a.** See *Mechanical a.*

ASCITIC, ASCITICAL, adj's. A^{2}s-si^{2}t'i^{2}k, -i^{2}k-a^{2}l. Lat., *asciticus.* Fr., *ascitique.* Ger., *ascitisch, bauchwassersüchtig.* It., *ascitico.* Sp., *ascitico.* Pertaining to or affected with ascites. [D.]

ASCIUM (Lat.), n. n. A^{2}s(a^{3}s)'si^2(ki^2)-u^{3}m(u^{4}m). See ASCIDIUM.

ASCLÉPEION (Fr.), n. A^{3}s-kla-pa-o^{2}n^2. See ASCLEPIEION.

ASCLEPIACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *asclépiacées.* 1. A division of the *Asclepiadaceæ,* made by Reichenbach. 2. The *Asclepiadaceæ.* [B, 121, 172.]

ASCLEPIADACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a^{3}da(da^3)'se^2(ke^2)-e(a^3-e^2). For deriv., see ASCLEPIAS. Fr., *asclépiadées.* Ger., *Asklepiadaceen.* It., *asclepiadacee.* Syn.: *Asclepiadeæ* [Jacquin, R. Brown, Endlicher, Decaisne, Bentham and Hooker]. The milk-weeds or asclepiads; an order of dicotyledonous herbs or shrubs belonging to the solanal alliance (Lindley) or the cohort *Gentianales* [Bentham and Hooker], having a milky, frequently acrid juice, and bearing entire, exstipulate, usually opposite leaves. The calyx and corolla are regular, 5-parted, and both are valvate in æstivation; the stamens are united to each other, and the pollen coheres in masses (pollinia); there are 2 ovaries, with the 2 stigmas united and adherent to the stamens. The *A.* (*Asclepiadeæ*) have been variously subdivided. By Bentham and Hooker and others they are divided into the suborders *Periploceæ,* including the single tribe *Periploceæ,* which have flowers with granulose pollen applied to the extremity of the acuminate or appendiculate anthers, and *Euasclepiadeæ* (*Asclepiadeæ veræ*), comprising the tribes *Secamoneæ, Cynancheæ, Gonolobeæ, Marsdenieæ, Ceropegieæ,* and *Stapelieæ,* which have waxy pollen in masses (pollinia), of which there is usually but one in each loculus. By Endlicher the *Secamoneæ* are made a distinct suborder, and by Decaisne and Lindley the order is divided into the tribes *Periploceæ, Secamoneæ, Asclepiadeæ veræ, Gonolobeæ, Stapelieæ.* In the most recent classification (Hooker's) the *Stapelieæ* are omitted as a distinct tribe. [B, 34, 42, 170, 212.]

ASCLEPIADACEOUS, adj. A^{2}s-kle^{2}p''i^2-a^{2}d-a'shu^{3}s. Of or belonging to the *Asclepiadaceæ.* [B.]

ASCLEPIADÆ (Lat.), n. m., pl. of *Asclepiades.* A^{2}s(a^{3}s)-kle^{2}p-(klap)-i(e)'a^3-de(da^3-e^2). 1. The pl. of *Asclepiades* (*q. v.*). 2. Of Decaisne, a division of the *Asclepiadeæ veræ,* including *Asclepias* and 6 other genera, in which the corolla is naked at the throat and there is a staminal corona made up of 5 concave leaflets each furnished with an appendix. [B, 121, 170.]

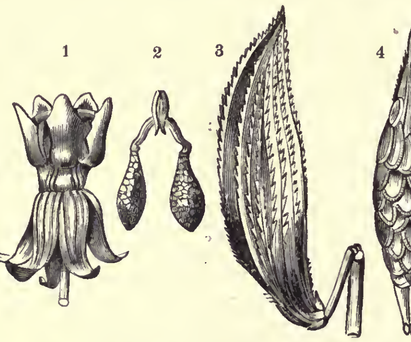
ASCLÉPIADE (Fr.), n. A^{3}s-kla-pi^2-a^{3}d. Syn.: *dompte-venin.* 1. In the Fr. Cod., the *Cynanchum vincetoxicum.* [B, 5.] 2. The genus *Asclepias.* [A, 385.] 3. See ASCLEPIADES.—**A. bicolor.** See ASCLEPIAS *curassavica.*—**A. blanc, A. blanche.** See CYNANCHUM *vincetoxicum.*—**A. colorant.** See GYMNEMA *tingens.*—**A. de Curaçoa.** See ASCLEPIAS *curassavica.*—**A. de Syrie.** See ASCLEPIAS *Cornuti.*—**A. lactifère.** See ASCLEPIAS *lactifera.*—**A. laniflore.** See ASCLEPIAS *laniflora.*—**A. tubéreuse, A. tubéreux.** See ASCLEPIAS *tuberosa.*—**Racine d'a. tubéreuse.** The root of *Asclepias tuberosa.*

ASCLEPIADEACEÆ [Lindley] (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^{2}a^{2}d(a^{3}d)-e^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). See ASCLEPIADACEÆ.

ASCLEPIADEÆ (Lat.), n f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a^{2}d-(a^{3}d)'e^2-e(a^3-e^2). Fr., *asclépiadées.* 1. Of R. Brown, Endlicher, Bentham and Hooker, and most botanists, the *Asclepiadaceæ* (*q. v.*). 2. Of Lindley, a tribe of the *Asclepiadaceæ* corresponding to the *A. veræ* of Decaisne. [B, 170.]—**A. genuinæ** [Bartling]. The same as the *Euasclepiadaceæ* (*q. v.* under ASCLEPIADACEÆ). [B, 170.]—**A. veræ.** 1. Of R. Brown, see *A. genuinæ.* 2. Of Endlicher, a suborder of the *Asclepiadaceæ,* including all the *Euasclepiadaceæ* of Bentham and Hooker, except the *Secamoneæ,* and divided by him into the tribes *Cynancheæ, Gonolobeæ,* and *Pergularineæ.* 3. Of Decaisne and Lindley, a tribe (also called *A.* by Lindley) of the *Asclepiadaceæ,* including genera having stamens with connate filaments and bilocular anthers, each anther bearing a pair of pollinic masses suspended by two threads. It includes the subdivisions *Astephaneæ, Microlomeæ, Haplostemmeæ, Cynoctoneæ, Sarcostemmeæ, Eustegieæ, Asclepiadæ, Ditassæ,* and *Oxypetalæ.* [B, 34, 121, 170.]

ASCLEPIADES (Lat.), n. m. A^{2}s(a^{3}s)-kle^{2}p(klap)-i(e)'a^3-dez-(das). Gr., Ἀσκληπιάδης (from Ἀσκληπιός = Æsculapius). Fr., *Asclépiade.* A son, priest, or disciple of Æsculapius; in the pl., *Asclepiadæ,* physicians. [A, 311, 322.]

ASCLEPIADIN, n. A^{2}s-kle^{2}p-i'a^{2}d-i^{2}n. Fr., *asclépiadine.* Ger., *Asclepiadin.* Syn.: *asclepin, cynanchin.* A yellow, amorphous, bitter glucoside obtained from various species of *Asclepias* and *Cynanchum.* It is emetic, diaphoretic, and purgative, and is poisonous, and is readily decomposed into sugar and asclepin (*q. v.*). [C. Gram, "Arch. f. exp. Pathol. u. Pharm.," xix, 6; "Dtsch. Med.-Ztg.," Jan. 25, 1886, p. 82; "Am. Jour. of Pharm.," Sept., 1886, p. 451; B, 2, 207.]



ASCLEPIADINEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a^{2}d-(a^{3}d)-i^{2}n'e^2-e(a^3-e^2). Fr., *asclépiadinées.* Ger., *Asklepiadineen.* Of Brongniart, a class of hypogynous gamopetalous plants, including the families (orders) *Spigeliaceæ, Loganiaceæ, Apocyneæ, Asclepiadeæ,* and *Gentianeæ.* [B, 170.] Cf. GENTIANALES [Bentham and Hooker].

ASCLEPIADS, n. pl. A^{2}s-klep'i^2-a^{2}dz. See ASCLEPIADACEÆ.

ASCLEPIARIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a^{2}r-(a^{3}r)-i(i^2)'e^2-e(a^3-e^2). 1. Of Reichenbach, a division of asclepiadaceous plants (*Stelliflorœ*), including the *Asclepieæ, Astephaneæ, Ditasseæ, Gonolobeæ.* and *Pergularieæ.* 2. Of Dumortier, an order of the *Torocoronæ,* including the families *Menyanthideæ, Gentianaceæ, Loganiaceæ, Asclepiadeæ,* and *Apocyneæ.* [B, 170.] Cf. GENTIANALES.

ASCLEPIAS (Lat.), n. f. A^{2}s(a^{3}s)-kle^{2}p(klap)'i^2-a^{2}s(a^{3}s). Gen., *asclepi'ados* (*-dis*). Gr., ἀσκληπιάς. Fr., *asclépiade.* Ger., *Asclepias, Schwalbenwurzel, Seidenpflanze.* It., *asclepiade.* 1. An unknown plant mentioned by Dioscorides. [A, 311.] 2. The milk-weed, butterfly-weed, or orange swallow-wort; a genus of perennial herbs of the *Asclepiadaceæ,* made by Tournefort and Linnæus. The flower consists of a 5-parted calyx, a corolla of 5 petals bent downward toward the stalk, a corona of 5 cup-shaped processes, each provided with a curved, horn-shaped eminence lying within the corolla, and an antheridium consisting of 5 anthers with connate filaments, bearing 5 pairs of pollinia suspended by threads, and adherent to the 5-angled stigma. The fruit is a pair of follicles containing numerous seeds, provided with a tuft of silky hairs. The juice is milky-white and somewhat acrid. [B, 19, 34.] 3. In the U. S. Ph., the root of *A. tuberosa.* [B.]—**A. acida** [Roxburgh]. See SARCOSTEMMA *brevistigma.*—**A. acuminata** [Roxburgh]. See GYMNEMA *acuminata.*—**A. alba** [Cavanilles], **A. albo flore.** Fr., *asclépiade blanche.* See CYNANCHUM *vincetoxicum.*—**A. alexicaca** [Jacquin]. A species, now referred to *Tylophora,* growing in Malabar and Ceylon, where it is used as an emetic and alexipharmic. [B, 180, 216.]—**A. amœna** [Linnæus]. See *A. incarnata.*—**A. annularis** [Roxburgh]. See HOLOSTEMMA *Rheedei.*—**A. aphylla.** See SARCOSTEMMA *brevistigma,* S. *forskahlianum,* and S. *aphyllum.*—**A. apocynum.** See *A. Cornuti.*—**A. arborescens** [Linnæus]. See GOMPHOCARPUS *arborescens.*—**A. asthmatica** [Linnæus]. See TYLOPHORA *asthmatica.*—**A. bicolor** [Mönch]. Fr., *Asclépiade bicolor.* See *A. curassavica.*—**A. brevicornu** [Scheele]. See ASCLEPIODORA *decumbens.*—**A. connivens** [Baldwin]. See ANANTHERIX *connivens.*—**A. contrayerva.** A Mexican species, said to furnish *mechoacan,* with which jalap is adulterated. [Guibourt (A, 308).]—**A. convolvulacea.** See DÆMIA *extensa* and DÆMIA *angolensis.*—**A. Cornuti** [Decaisne]. Fr., *asclépiade à la soie, herba à l'ouate.* Syn.: *A. syriaca* [Linnæus]. Milk-weed, Virginian swallow-wort, Virginian silk, common silk-weed, wild cotton; a species found throughout the United States. It is an herb from 3 to 4 feet high, bearing numerous greenish-purple, fragrant flowers in a globular umbel, and having the fruit follicles covered with soft, warty spines, and full of silky seeds. The young shoots are used as a substitute for asparagus; a sort of sugar is obtained from the flowers; the rhizome, which is employed in medicine as an anodyne and sedative in catarrhal affections and asthma, contains asclepion,

caoutchouc, resin, starch, sugar, and tannin ; and the juice, applied to wounds, forms a firm pellicle. The silk of the seeds is used for stuffing pillows and is sometimes woven into fabrics. [A, 327 ; B, 19, 33, 34, 180 ; L, 65.]—**A. crispa** [Linnæus]. See GOMPHOCARPUS *crispus*.—**A. curassavica** [Linnæus]. Fr., *asclépiade de Curaçoa*. The *ponchishuis* of Mexico ; a species indigenous to South

THE ASCLEPIAS CORNUTI. [A, 327.]
1, the flower ; 2, the pollen masses ; 3, the pod ; 4, the seeds.

America, Central America, and the West Indies, naturalized in Florida. A tall shrubby plant, bearing scarlet flowers ; sometimes erroneously called ipecacuanha. In doses of from 3 to 9 drops, the juice is powerfully emetic and cathartic, and has been used as an antiperiodic and vermifuge ; the extract is a violent sternutatory ; the stem is credited with the same properties as sarsaparilla and China-root ; the leaves are said to be hæmostatic, antiblennorrhagic, and curative of cancer ; and the root has been recommended in asthma and other nervous affections. Great care is necessary in using any preparation of the plant. [B, 19, 34 ; J. M. Maisch, "Am. Jour. of Pharm.," Feb., 1886, p. 72.]—**A. cynanchoides** [Willdenow]. Ger., *fleischfarbige Schwalbenwurzel*. Flesh-colored a., swamp milk-weed ; a species growing in the United States and Canada, having a stalk from 3 to 4 feet high, bearing purple flowers disposed in close umbels. Its rhizome, which has been used as an emetic, cathartic, and expectorant, contains a volatile oil in minute quantities, two acrid resinous substances, an alkaloid, starchy and saccharine principles, and a gum. [A, 308 ; B, 34, 108.]—**A. javanica zeylanica**, etc. [Burmann]. See TYLOPHORA *asthmatica*.—**A. lactifera** [Linnæus]. Fr., *asclépiade lactifere*. See GYMNEMA *lactiferum*.—**A. laniflora.** Fr., *asclépiade laniflore*. See KANAHIA *Delilii* and KANAHIA *Forskalii*.—**A. leucophylla** [Engelmann]. See *A. erosa*.—**A. linaria** [Cavanilles]. A species growing throughout Mexico upon the high table-lands. [B, 60, 214.]—**A. linearis** [Linnæus]. The *A. verticillata*, var. *subverticillata*. [B, 215.]—**A. longipetala** [Scheele]. See ASCLEPIODORA *viridis*.—**A. macrophylla** [Nuttall], **A. mexicana** [Cavanilles]. A species 3 to 5 feet high, growing throughout Oregon, California, Nevada, Arizona, and Mexico, bearing verticillate leaves and greenish-white flowers in many-flowered corymbose umbels. [B, 60, 215.]—**A. microphylla** [Roxburgh]. See PENTATROPIS *microphylla*.—**A. montana** [Roxburgh]. See GYMNEMA *montanum*.—**A. nigra** [Linnæus], **A. nigro folio** [C. Bauhin]. See CYNANCHUM *nigrum*.—**A. nivea** [Linnæus]. A plant 1 to 2 feet in height, with white flowers, growing in the Gulf States. The juice is vermifuge ; the root, "bastard ipecacuanha," is emetic. [B, 34 ; L, 43.]—**A. obovata.** See *A. Cornuti*.—**A. odoratissima** [Roxburgh]. See PERGULARIA *minor*.—**A. pallida** [Roxburgh]. See PERGULARIA *pallida*.—**A. phytolaccoides** [Pursh]. An American species the silk of the seeds of which is used like that of *A. Cornuti*.—**A. procera** [Aiton]. See CALOTROPIS *procera*.—**A. prolifera** [Röttler]. An East Indian species. The root is emetic. [B, 180 ; L, 87.]—**A. pseudosarsa** [Roxburgh]. The *Hemidesmus indicus*. [B, 212.]—**A. pubescens** [Michaux]. See GOMPHOCARPUS *arborescens*.—**A. pulchra.** 1. Of Arrab, the *Oxypetalum pulchrum*. 2. Of Ehrhart, a variety of the *A. incarnata* with densely tomentose stem and leaves. [B, 214.]—**A. rosea.** 1. Of Kunth, a species growing at moderate elevations in Central America and Mexico. 2. Of Roxburgh, see OXYSTELMA *esculentum*. [B, 60, 212.]—**A. scandens** [Beauvois]. See DÆMIA *angolensis*.—**A. setosa.** 1. Of Forskål, see GOMPHOCARPUS *setosus*. 2. Of Bentham, a Mexican species, the *contrayerba de julimes* of the inhabitants. It is said to be tonic, diaphoretic, and antiperiodic. [B, 60, 214 ; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 773 (B).]—**A. spiralis** [Forskål]. See PENTATROPIS *spiralis*.—**A. stipitacea** [Forskål]. See SARCOSTEMMA *stipitaceum*.—**A. syriaca** [Linnæus]. See *A. Cornuti*.—**A. tinctoria** [Roxburgh]. See MARSDENIA *tinctoria*.—**A. tingens** [Ham.]. See GYMNEMA *tingens*.—**A. tomentosa.** 1. Of Thonning, a species of *Leptadenia*. 2. Of the "Herb. Madr.," the *Marsdenia tenacissima*. [B, 214.]—**A. tuberosa** [Linnæus]. Fr., *asclépiade tubéreuse*. Ger., *knollige Schwalbenwurzel*. Pleurisy-root, wind-root, butterfly-weed ; a species indigenous to the United States and Canada, bearing alternate sessile leaves and bright-orange flowers disposed in corymbs. Its root is the a. of the U. S. Ph. ; it contains starch, tannin, albumin, pectin, gum, two resins, a fixed oil, a volatile odorous matter, and a peculiar principle having the taste of the root. It has emetic, purgative, diaphoretic, expectorant, and carminative properties. The *A. tuberosa* of Roxburgh is the *Leptadenia reticulata*. [A, 247 ; B, 34, 212.]—**A. tunicata** ["Hort. Calc."]. See TYLOPHORA *asthmatica*.—**A. undulata** [Linnæus]. A species now referred to *Xysmalobium*, several species of which it includes. [B, 214.] See XYSMALOBIUM *undulatum*.—**A. verticillata** [Elliott]. A species found in the United States, Mexico, and Canada. It stands about 2 feet high, and bears greenish-white flowers, and leaves from 3 to 5 inches long and only a line in width, usually disposed in whorls of from 4 to 6. The *A. verticillata*, var. *pumila* [Gray], occurring in the western and southwestern States, is a dwarf many-stemmed leafy plant. The *A. verticillata*, var. *subverticillata* [Gray] (*A. linearis* [Scheele in Linnæus]), is a species from 1 foot to 2½ feet high, with opposite leaves, growing in Texas, New Mexico, and Mexico. This variety is the *romerillo* of the Mexicans, the *venenillo* of the Mex. Ph. Its milky juice is said to be a violent and dangerous cathartic ; and the seed-hairs are used like eider-down, and, impregnated with a solution of ferric chloride and well dried, are employed in Mexico as a hæmostatic. The *A. verticillata* has been used as an anodyne and sudorific, and as a remedy for venomous bites. [A, 308 ; J. M. Maisch, "Am. Jour. of Pharm.," April, 1886, p. 168 ; B, 34, 215 ; "Proc. of the Am. Pharm. Assoc.," xxiv (B).]—**A. vincetoxicum.** See CYNANCHUM *vincetoxicum*.—**A. volubilis.** See SARCOSTEMMA *dombeyanum*, DREGEA *volubilis*, and LEPTADENIA *reticulata*.—**A. vomitoria** [Roxburgh]. See TYLOPHORA *asthmatica*. —**Flesh-colored a.** See *A. incarnata*.

ASCLEPIASMUS (Lat.), n. m. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-a^{2}z(a^{3}s)′mu^{3}s(mu^{4}s). A term applied by the later Greek physicians to hæmorrhoids. [A, 322.]

ASCLEPIDIN, n. A^{2}s-kle^{2}p′i^{2}d-i^{2}n. Fr., *asclépidine*. Ger., *Asclepidin*. A principle found in *Asclepias tuberosa*, said to be efficacious against congestions. [A, 385 ; B, 8.]

ASCLEPIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-kle^{2}p(klap)-i(i^2)′e^2-e(a^3-e^2). Fr., *asclépiées*. A tribe, suborder, or division of asclepiadaceous plants (*Asclepiarieæ* [Reichenbach]), corresponding to the *Asclepiadeæ veræ* of Endlicher [Meisner], or including the tribes *Stapelieæ*, *Cynancheæ*, and *Astephaneæ* [Reichenbach], or the tribes *Cynancheæ*, *A. genuinæ* (= *Euasclepieæ*), and *Calotropideæ* [Reichenbach]. [B, 170.]

ASCLEPIEION, ASCLEPIEUM (Lat.), n's n. A^{2}s(a^{3}s)-kle^{2}p-(klap)-i^2-i′(e^2′i^2)-o^{2}n, -e(a)′u^{3}m(u^{4}m). Gr., Ἀσκληπιεῖον. Fr., *Asclépiion*. A temple of Æsculapius. [A, 322.]

ASCLEPIN, n. A^{2}s-kle′pi^{2}n. Fr., *asclépine*. Ger., *Asclepin*. 1. A gummy, brownish-yellow substance of repulsive odor and taste resembling that of ipecac, insoluble in water, formed by the decomposition of asclepiadin. It is said to be diaphoretic, purgative, and alterative, and acts as a poison to the respiratory centre, and, if artificial respiration is kept up, paralyzes the heart. 2. Asclepiadin (*q. v.*). [C. Gram, "Arch. f. exp. Pathol. u. Pharm.," xix, 6 (B) ; "Dtsch. Med.-Ztg.," Jan. 25, 1886, p. 82 ; B, 207.]

ASCLEPIODORA (Lat.), n. f. A^{2}s(a^{3}s)-kle^{2}p(klap)-i^2-o(o^2)-do′-ra^3. From *Asclepias* (*q. v.*), and δῶρον, a gift. A genus of asclepiadaceous plants. established by A. Gray. [B, 215.]—**A. decumbens** [Gray]. Syn. : *Asclepias brevicornu* [Scheele]. A species also described as *Acerates decumbens* (*q. v.*), growing in the western and southwestern States and Territories of the United States. [B, 215.]—**A. viridis** [Gray]. Syn. : *Anantherix paniculatus* [Nuttall] (seu *torreyanus* [Don]), *Asclepias longipetala* [Scheele]. A species growing in the southern and western United States. [B, 215.]

ASCLEPION, ASCLEPIONE, n's. A^{2}s-kle^{2}p′i^2-o^{2}n, -on. Fr., *asclépione*. Ger., *Asclepion*. A crystalline compound, $C_{20}H_{34}O_3$, obtained by coagulating the albumin of the milky juice of *Asclepias Cornuti* with heat, treating the coagulum with ether, and evaporating ; white, tasteless, odorless, insoluble in water and in alcohol, but readily soluble in ether. [B, 2, 5, 207.]

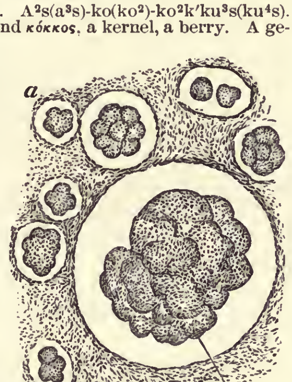
ASCLEPIOS (Lat.), n. m. A^{2}s(a^{3}s)-kle^{2}p(klap)′i^2-o^{2}s. Gr., Ἀσκληπιός (1st def.), ἀσκλήπιος (2d and 3d def's). 1. Æsculapius, the god of medicine. [A, 322.] 2. The name of an ancient dry detergent mentioned by Paulus Ægineta, a troche mentioned by Aetius, and a collyrium mentioned by Scribonius. [A, 325.] 3. A hæmorrhoid. [Leo Medicus (A, 468).]

ASCOBACTERIA (Lat.), n. f. A^{2}s(a^{3}s)″ko(ko^2)-ba^{2}k(ba^{3}k)-te-(ta)′ri^2-a^3. For deriv., see ASCUS and BACTERIUM. A genus of *Schizomycetes*, of uncertain affinities, made by Van Tieghem, consisting of colonies of cells surrounded by a thick gelatinous membrane. [B, 73.]—**A. ulvina** [Van Tieghem]. A species found upon the surface of liquids containing decaying leguminous seeds. It consists of short rod-like forms, which increase by division, aggregated into polyhedral colonies inclosed in a cartilage-like membrane. [B, 73.]

ASCOBOLEI (Lat.), n. m. pl. A^{2}s(a^{3}s)-ko(ko^2)-bol(bo^{2}l)′e^2-i(e). Fr., *ascobolées*. A division of helvellaceous *Fungi*, including the *Ascobolus*. [B, 61.] Cf. ASCOBOLIDEÆ.

ASCOBOLIDEÆ (Lat.), n. f. A^{2}s(a^{3}s)-ko(ko^2)-bo^{2}l-i^{2}d′e^2-e-(a^3-e^2). Of Gray, a division of *Fungi* belonging to the *Hymenothecæ*, including the single genus *Ascobolus*. [B, 170.]

ASCOBOLUS (Lat.), n. m. A²s(a³s)-ko²b′o(o²)-lu³s(lu⁴s). From ἀσκός, a pouch or bottle, and βάλλειν, to cast; so called from the manner in which the asci are protruded when ripe. [B, 19.] Fr., *ascobole*. A genus of *Fungi* of the family *Discomycetes*, occurring on the excrement of the *Herbivora*. [A, 396.]—**A. furfuraceus.** A species found on cow-dung. [B, 54, 61, 75.]—**A. inquinans** [Nees]. See Bulgaria *inquinans*.

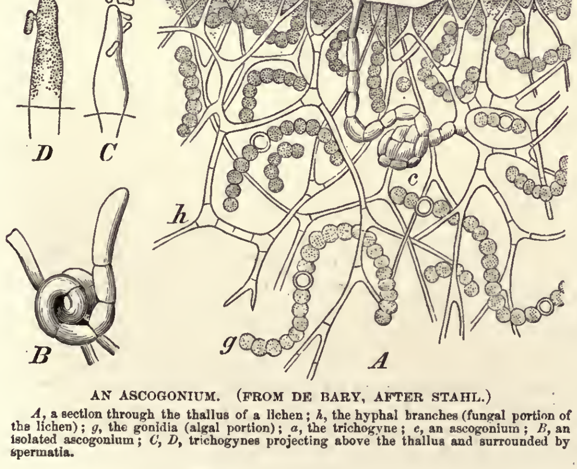


SECTION OF THE SPOROCARP OF ASCOBOLUS. (AFTER JANCZENSKI [A, 443].)

a, the cortical layer of cells forming the pericarp; *b*, the secondary layer (pseudo-parenchymatous sterile tissue); *c*, the subhymenial tissue bearing the asci; *d*, asci, containing ascopores; *e*, paraphyses.

ASCOCHYTACEI (Lat.), n. m. pl. A²s(a³s)-ko(ko²)-ki²t(ch²u⁶t)-a(a³)′se²-i(e). From *Ascochyta*, one of the genera. Of Lebert, a section of *Fungi* belonging to the *Xylomyci*. [B, 170.]

ASCOCOCCUS (Lat.), n. m. A²s(a³s)-ko(ko²)-ko²k′ku³s(ku⁴s). From ἀσκός, a pouch or bottle, and κόκκος, a kernel, a berry. A genus of *Schizomycetes* established by Billroth and adopted by Cohn, belonging to the *Coccaceæ* [Zopf] and consisting of very small round cells arranged in several layers and united into families by a thick, glairy intercellular substance, each family containing a great number of individuals. [B, 29.]—**A. Billrothii** [Cohn]. A species forming globular or lobulated masses from 20 to 160 μ in diameter, surrounded by a thick, gelatinous envelope; it produces a sort of mucilaginous fermentation in saccharine solutions and decomposes ammonium tartrate with the evolution of butyric acid. [A, 396; B, 30, 237.]—**A. mesenterioides** [Cienkowski]. See Leuconostoc *mesenterioides*.—**A. vibrans** [Van Tieghem]. A species found upon the surface of water containing *Beggiatoæ*, and resembling *A. Billrothii*, but distinguished by the whirling, oscillating motion of the cells. [B, 73.]



THE ASCOCOCCUS BILLROTHII. (FROM ZOPF, AFTER COHN.)

a, *a*, small isolated colonies of cocci; *b*, a large isolated colony.

ASCOGENOUS, adj. A²s-ko²j′e²n-u³s. From ἀσκός, a pouch, and γεννᾶν, to beget. Fr., *ascogène*. Ger., *ascogen*. Producing asci, as *a. hyphæ*, *a. cells*. [B, 54.]

ASCOGONIUM (Lat.), n. n. A²s(a³s)-ko(ko²)-gon(go²n)′i²-u³m-(u⁴m). From ἀσκός, a pouch or bottle, and γόνος, an organ of reproduction. Ger., *Ascogon*. An organ discovered by Stahl in the *Collemaceæ*, and believed by him to represent the carpogonium of other *Ascomycetes*. It consists of a spirally coiled tube connected with a vertical portion which projects above the surface of the plant and which acts as the channel through which the spermatia act upon the a. After the fertilization of the latter by the spermatia, it develops asci and becomes enveloped in a distinct investment (sporocarp). [B, 54, 75.]

AN ASCOGONIUM. (FROM DE BARY, AFTER STAHL.)

A, a section through the thallus of a lichen; *h*, the hyphal branches (fungal portion of the lichen); *g*, the gonidia (algal portion); *a*, the trichogyne; *c*, an ascogonium; *B*, an isolated ascogonium; *C*, *D*, trichogynes projecting above the thallus and surrounded by spermatia.

ASCO-HYMENIUM (Lat.), n. n. A²s(a³s)″ko(ko²)-hi(hu⁶)-me-(ma)′ni²-u³m(u⁴m). For deriv., see Ascos and Hymenium. Fr., *ascyméne*. An hymenium composed of asci. [Bertillon (B, 46).]

ASCOIDIUM (Lat.), n. n. A²s(a³s)-ko(ko²)-i²d′i²-u³m(u⁴m). From ἀσκός, a pouch, and εἶδος, form, from their pouch-like shape. A genus of *Infusoria* belonging to the *Vorticeltæ*, found in drainage-water, cattle-stalls, the cæcum of pigs, and the dejecta and urine of typhoid-fever patients. ["Ctrlbl. f. Bacteriol. u. Parasitenk.," i, 7, p. 204.]

ASCOLI (It.), n. A³s′ko-le. A place in Italy, where there is a hot spring containing sulphates, iron, and hydrogen sulphide, with carbonated saline springs containing sodium sulphate. [A, 316.]

ASCOLIMBROS, ASCOLOMBROS, n′s. Cretan names for the *Scolymus hispanicus*. [L, 105.]

ASCOMA (Lat.), n. n. A²s(a³s)-ko′ma³. Gen., *ascom′atos* (*-tis*). Gr., ἄσκωμα. Fr., *ascome*. Lit., a leather padding; in botany, a term used by Wallroth for the receptacle or thalamium of hymenomyatous *Fungi*, and more particularly the hymenophore as distinguished from the hymenium; also an old term for the mons Veneris. [B, 198; L, 94.]

ASCOMORPHOUS, adj. A²s-ko-mo³r′fu³s. From ἀσκός, a pouch, and μόρφη, form. Resembling an ascus in shape or structure. [B, 121.]

ASCOMYCES (Lat.), n. m. A²s(a³s)-ko²m′i²(u⁶)-sez(kas). Gen., *ascomyce′tos* (*-tis*). From ἀσκός, a pouch or bottle, and μύκης, a mushroom. A species of ascomycetous *Fungi*, consisting mainly of asci filled with spores, occurring as parasites upon plants. [B, 19.]—**A. bullatus** [Berkeley]. A species found on the leaves of the pear-tree. [B, 61.]—**A. deformans** [Berkeley]. A species forming blisters on the leaves of the peach-tree. [B, 61.]—**A. juglandis** [Berkeley]. A species found on the leaves of the walnut-tree. [B, 61.]—**A. pruni** [Fehl.]. A species that attacks young plums. [B, 61.]

ASCOMYCETE, n. A²s-ko²m′i²-set. A member of the *Ascomycetes*. [W. G. Farlow, "Arch. of Otol.," x, 1881 (B).]

ASCOMYCETES (Lat.), n. m., pl. of *Ascomyces* (*q. v.*). A²s-(a³s)-ko(ko²)-mi(mu⁶)-se(ka)′tez(tas). Fr., *ascomycètes*. Ger., *Ascomyceten*, *Sporenschlauchpilze*, *Schlauchschwämme*. A division of *Fungi* distinguished by their spores being contained in sac-like receptacles (*asci*). As originally made by Fries, it was considered a subclass and included the cohorts *Hymenomycetes* and *Pyrenomycetes*. In Lindley's classification it constituted an order of the fungal alliance and included the suborders *Ellvelacei*, *Tuberacei*, *Phacidiacei*, *Sphœriacei*, *Perisporiacei*, and *Onygeni*. It is now counted as one of the classes of the grand subdivision *Carposporæ*, including non-chlorophyllaceous plants consisting of a mycelium upon which are developed antheridia and carpogonia, the latter of which, upon fertilization by the former, produce sporocarps containing asci in their interior. The asci are at first single cells, but later form sacs in which spores (*ascospores*) are produced by internal cell-formation. The *A.* include the groups (orders) *Perisporiaceæ*, *Tuberaceæ*, *Helveltaceæ* (*Discomycetes*), *Pyrenomycetes*, *Lichenes* (including the entire division of lichens), and probably the *Uredineæ* and *Ustilagineæ*. [B, 54, 75, 170.]

ASCOMYZENTIDÆ (Lat.), n. f. pl. A²s(a³s)-ko(ko²)-mi²z-(mu⁶z)-e²nt′i²d-e(a³-e²). A family of copepods. [L, 204.]

ASCONEMATIDÆ (Lat.), n. f. pl. A²s(a³s)-ko²n-e²m-a²t(a³t)′-i²d-e(a³-e²). A family of the *Lyssacina* the dermal spicules of which are pinnuli. [L, 121.]

ASCONEMEÆ (Lat.), n. f. pl. A²s(a³s)-ko(ko²)-ne²m(nam)′e²-e(a³-e²). From ἀσκός, a pouch, and νῆμα, a thread. A division of hyphomycetous *Fungi* made by Kickx comprising those with spores developed in the interior of unicellular, claviform, ascomorphous filaments. [B, 121.]

ASCONES (Lat.), n. m. pl. A²s(a³s)-kon(ko²n)′ez(as). An order of calcareous sponges. [L, 173.]

ASCONIDÆ [Haeckel] (Lat.), n. f. pl. A²s(a³s)-ko²n′i²d-e(a³-e²). A family of the *Homocœla* which are simple or composite, but never develop radial tubes. [L, 121.]

ASCOPAREA (Lat.), n. n. pl. A²s(a³s)-ko(ko²)-pa(pa³)′re²-a³. A family of tailed *Catarrhini* with cheek-pouches. [L, 173.]

ASCOPHORA (Lat.), n. f. A²s(a³s)-ko²f′o²r-a³. From ἀσκός, a pouch or bottle, and φορεῖν, to bear. Tode's name for a genus of *Fungi* (*Zygosporeæ*) belonging to the *Mucorini*. It is in part equivalent to the *Mucedo* of Persoon. It differs from the related genus *Mucor* in that sporangeia becomes at length flaccid, hanging over the top of their support like a bonnet. [B, 19.]—**A. elegans.** The bread-mold; a species more properly referred to *Mucor*, causing moldiness in bread, distinguished by the repeatedly forked division of its hyphæ, each branch bearing a sporangeium. It is found very rarely in the ear; first described in that situation by Schenk and von Tröltsch. [F.]

ASCOPHORÆ (Lat.), n. f. pl. A²s(a³s)-ko²f′o²r-e(a³-e²). A cohort of *Fungi*, made by Ehrenberg, including *Aspergillus*, *Mucor*, and other genera in which the sporongeium is borne upon an erect pedicel springing from the mycelium. [B, 121, 170.]

ASCOPHORE, n. A²s′ko-for. From ἀσκός, a pouch, and φορεῖν, to bear. A branch of the hyphæ, in *Fungi*, bearing an ascus. [B.]

ASCOPHOREI (Lat.), n. m. pl. A²s(a³s)-ko(ko²)-for(fo²r)′e²-i(e). Fr., *ascophorées*. Of Léveillé, a section of *Fungi* belonging to the

Columellei, including *Ascophora*, *Mucor*, etc. [B, 170.] Cf. Ascophoræ.

ASCOPHORI (Lat.), n. m. pl. A^{2}s(a^{3}s)-ko^{2}f′o^{2}r-i(e). Of Corda, a suborder of hymenomycetous *Fungi*, including the families *Pyronemeæ*, *Agyriaceæ*, *Patellariaceæ*, *Pezizeæ*, *Geoglosseæ*, *Leotiaceæ*, and *Helvellaceæ*. [B, 170.]

ASCOPHOROUS, adj. A^{2}s-ko^{2}f′o-ru^{4}s. Lat., *ascophorus*, *ascophoreus*. Fr., *ascophore*. Ger., *schlauchtragend*. Bearing asci (said of hyphæ). [B, 75.]

ASCOPHYCÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ko(ko^2)-fi(fu^6)′se(ka^3-e^2). From ἀσκός, a pouch, and φῦκος, sea-weed. Of Reichenbach, a formation of *Algæ* comprising the families *Florideæ*, *Fucoideæ*, and *Ceramiaceæ*. [B, 170.]

ASCOPHYCEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ko(ko^2)-fi^{2}s(fu^{6}k)′e^2-e(a^3)-e^2). From ἀσκός, a pouch, and φῦκος, sea-weed. Fr., *ascophycées*. Ger., *Ascophyceen*. 1. Of Zanardini, an order of *Algæ* (*Phyceæ*), including the series *Gymnosporeæ*, *Angiosporeæ*, and *Gloiasporeæ*. 2. Of Rabenhorst, a suborder of *Algæ*, including the families *Ceramiaceæ*, *Sphærococceæ*, and *Phyceæ*. Cf. Ascophycæ. [B, 170.]

ASCOPSORÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ko^{2}p-so′re(ra^3-e^2). From ἀσκός, a pouch, and ψώρα, the itch, also a lichen. An order of lichens, made by Reichenbach, including the formations *Gasteropsoræ* and *Hymenopsoræ*. [B, 170.]

ASCORUM (Lat.), n. n. A^{2}s(a^{3}s)′ko(ko^2)-ru^{3}m(ru^{4}m). From ἀσκός, a pouch. Fr., *ascore*. Nees von Esenbeck's name for that portion of the pileus of a fungus which incloses the asci. [L, 180.]

ASCOS (Lat.), n. m. A^{2}s(a^{3}s)′ko^{2}s. Gr., ἀσκός. Fr., *asque*. Ger., *Schlauch*, *Sack*. 1. A bag or bottle anciently employed, filled with warm water or oil, for applying heat to a part. [Hippocrates (A, 325; L, 94).] 2. The abdomen, especially when distended by dropsy or pregnancy. [A, 322.]

ASCOSPORA (Lat.), n. f. A^{2}s(a^{3}s)-ko^{2}s′po(po^2)-ra^3. From ἀσκός, a pouch, and σπόρος, a seed. 1. Of Fries and others, a genus of *Fungi* belonging to the *Sphæronemei*. [B, 170.] 2. Of some botanists, the spore-case of the *Nidularei*; of Vittadini, that of the *Tuber*. [B.]

ASCOSPORÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ko^{2}s′po(po^2)-re(ra^3-e^2). See Ascosporeæ (1st def.).

ASCOSPORE, n. A^{2}s′ko-spor. Fr., *ascospore*. Ger., *Schlauchspore*. Syn.: *sporidium*, *thecaspore*. A spore developed in an ascus, as in the *Ascomycetes*. [B.]

ASCOSPOREÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ko(ko^2)-spo(spo^2)′re^2-e(a^3-e^2). 1. Of Fries, a division of the *Phyllostictei*. [B, 170.] 2. Of Cohn, an order of his class *Thallophyta*, including the families *Tuberaceæ*, *Onygenaceæ*, *Erysiphaceæ*, *Sphæriaceæ* (*Pyrenomycetes*), *Helvellaceæ*, and *Lichenes*. It corresponds nearly to the *Ascomycetes*. [B, 75.]

ASCOSPOREI (Lat.), n. m. pl. A^{2}s(a^{3}s)-ko(ko^2)-spo(spo^2)′re^2-i(e). Of Bonorden, a family of *Fungi* (*Cryptomycetes*), including *Ascospora* and other genera. [B, 170.]

ASCOSPORIC, ASCOSPOROUS, adj's. A^{2}s-ko^{2}s-po^{2}r′i^{2}k, -ko^{2}s′po^{2}r-u^{3}s. Lat., *ascosporus*, *ascosporeus*. Fr., *ascospore*. Provided with or containing ascospores. [W. G. Farlow, "Arch. of Otol.," x, 1881, p. 324 (B); B, 77.]

ASCOTRICHA (Lat.), n. f. A^{2}s(a^{3}s)-ko^{2}t′ri^{2}k(ri^{2}ch^2)-a^3. From ἀσκός, a pouch, and θρίξ, the hair. A genus of perisporiaceous *Fungi*, made by Berkeley. [B, 170.]—**A. chartarum** [Berkeley]. One of the varieties of paper-mildew; a species with thin greenish-brown perithecium and numerous linear sporangeia containing elliptical chocolate-colored spores. [B, 76.]

ASCULA (Lat.), n. f. A^{2}s(a^{3}s)′ku^2(ku^4)-la^3. Dim. of *ascus* (*q. v.*). A term applied to the embryo of a sponge after it has become fixed and has lost its flagella, and is developing into the adult form. [B, 100.]

ASCUS (Lat.), n. m. A^{2}s(a^{3}s)′ku^{3}s(ku^{4}s). Gr., ἀσκός (see Ascos). Fr., *asque*. Ger., *Sporenschlauch*. In the *Ascomycetes*, a cell or pouch developed as the result of the fertilization of the carpogonium and containing the spores. [B, 54. 75.] See figure under Ascobolus.—**A. suffultorius** [Corda]. Ger., *Stützschlauch*. See Sterigma.

ASCYMÈNE (Fr.), n. A^{3}s-si^{2}m-e^{2}n. See Asco-hymenium.

ASCYPHOUS, adj. A^{2}s′si^{2}f-u^{3}s. Gr., ἄσκυφος (from α priv., and σκύφος, a cup). Lat., *ascyphos*, *ascyphus*. Fr., *ascyphe*. Ger., *becherlos*. 1. Headless (said formerly of monsters). [A, 322.] 2. Not terminating in a funnel-shaped dilatation (*scyphus*); said of the podelium of lichens.. [B, 198.]

ASCYREÆ [Reichenbach], **ASCYRINEÆ** [Spach] (Lat.), n's f. pl. A^{2}s(a^{3}s)-si^{2}r(ku^{6}r)′e^2-e(a^3-e^2), -si^{2}r(ku^{6}r)-i^{2}n′e^2-e(a^3-e^2). Fr., *ascyrées*, *ascyrinees*. A division of plants belonging to *Hypericeæ*, includihg *Ascyrum* [Spach] or *Ascyrum*, *Androsæmum*, *Hypericum*, and related genera [Reichenbach]. [B, 170.]

ASCYROIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-si^{2}r(ku^{6}r)-o(o^2)-i^{2}d′e^2-e-(a^3-e^2). Fr., *ascyroidées*. Of Necker, an order of plants including *Cistus* and *Hypericum*. [B, 170.]

ASCYROIDES (Lat.), n. n. A^{2}s(a^{3}s)-si^{2}r(ku^{6}r)-o(o^2)-i(e)′dez(das). Gr., ἀσκυροειδές [Dioscorides]. An ancient name of a plant resembling the *Ascyrum*. [Pliny (A, 318).]

ASCYRON, ASCYRUM (Lat.), n's n. A^{2}s(a^{3}s)′si^{2}r(ku^{6}r)-o^{2}n, -u^{3}m(u^{4}m). Gr., ἄσκυρον. Fr., *ascyre*. Ger., *Hartheu*. St. John's-wort, St. Peter's-wort; a genus of hypericaceous plants, made by Linnæus, characterized by the tetramerous division of the calyx and corolla. [A, 318; B, 34.]—**A. crux Andreæ.** Ger., *Andreaskraut*, *Andreaskreuz*. St. Andrew's-cross, a species growing along the Atlantic coast of the United States, with stalk from 1 to 2 feet in height, bearing many suberect branches with linear-oblong obtuse leaves and bracteolate flowers; used for the same purposes as *Hypericum perforatum*. [A, 247; B, 34; L.]—**A. hypericoides** [Linnæus], **A. stans** [Michaux]. A species from 1 to 3 feet in height with erect branches and oblong sessile leaves, growing on the Atlantic coast of the United States. From the leaves an astringent decoction is prepared, and the seeds are said to be purgative. [B, 34, 173.]

ASDENIGI, n. See Asedenigi.

ASE (Lat.), n. f. A(a^3)′se(sa). Gr., ἄση (from ἄν, or ἄμεναι, to hurt, or to satiate). Pain or a sense of oppression in the region of the heart or the stomach, or a general feeling of discomfort, due to repletion of the stomach. [A, 325.]

ASEB, n. An alchemical name for alum. [Ruland, Johnson (A, 325).]

ASED, n. From Ar., *asad*, a lion. An alchemical name for gold. [B, 52.]

ASEDENIGI, n. An alchemical name for the blood-stone (lapis hæmatites). [Ruland, Johnson (A, 325).]

ASEF (Ar.), n. An old name for some vesicular affection of the skin (perhaps hidroa, sudamina, or pemphigus). [A, 322; L, 84, 94; M, 56.]

ASEFÉTIDE (Fr.), n. A^{3}s-fa-ted. See Asafœtida.

ASEGEN, ASEGON, n's. Alchemical names for dragon's-blood. [Ruland, Johnson (A, 325); L, 94.]

ASELGOTRIPSIA, ASELGOTRIPSIS (Lat.), n's f. A^{2}s-(a^{3}s)-e^{2}l-go(go^2)-tri^{2}p′si^2-a^3, -si^{2}s. Gen., *aselgotrip′siæ*, *-trip′seos* (*-sis*). From ἀσελγής, lascivious, and τρῖψις, friction. Fr., *aselgotripsie*. See Tribadismus.

ASELLATION, n. A^{2}s-e^{2}l-la′shu^{3}n. From *asellus*, an ass. Riding on an ass, prescribed as a remedial measure. [L, 41.]

ASELLI (Lat.), n. m. pl. A^{2}s(a^{3}s)-e^{2}l′li(le). Ger., *Asseln*. A name formerly applied to various *Crustacea* belonging to the *Isopoda* (*Armadillo*, *Armadillidium*) and other animals of similar appearance comprising the pharmaceutical group of *Millepedes* (*q. v.*). [B, 180.]

ASELLIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-e^{2}l′li^{2}d-e(a^3-e^2). Fr., *asellides*. Ger., *Wasserasseln*. A family of crustaceans having the *Asellus* as a type. [Lamarck (L, 110).]

ASELLOTA (Lat.), n. n. pl. A^{2}s(a^{3}s)-e^{2}l-lo′ta^3. Fr., *asellotes*. See Asellidæ.

ASELLUS (Lat.), n. m. A^{2}s(a^{3}s)-e^{2}l′lu^{3}s(lu^{4}s). Fr., *aselle*. 1. An ass. [A, 325.] 2. A genus of cursorial isopods of the subclass *Malacostraca*, class *Crustacea*. [A, 359.] 3. An old name for the cod-fish. [A, 306.]—**A. major** [Schoner.]. See Gadus *morrhua*.—**A. niger** [Willoughby]. See Gadus *carbonarius*.—**A. secundus** [Gessner]. See Gadus *merlangus*.—**A. striatus** (vel **varius**) [Willoughby]. See Gadus *callarias*.—**Oleum jecinoris aselli, Oleum jecoris aselli** [Ger. Ph.]. Cod-liver oil. [B.]

ASELOURI, n. The *Atriplex halimus*. [Dioscorides, Bory (B, 121).]

ASEMA (Lat.), n., f. of adj. *asemos* (*crisis* understood). A^{2}s-(a^{3}s)-e(a)′ma^3. An unexpected crisis, or one that occurs without the usual signs. [A, 322.]

ASEMA (Lat.), n., n. pl. of adj. *asemos*. A^{2}s(a^{3}s)-e(a)′ma^3. Irregular, deceptive, or untimely morbid phenomena. [M, 13.]

ASEMASIA (Lat.), n. f. A^{2}s(a^{3}s)-e^{2}m-a(a^3)′zi^2(si^2)-a^3. See Asemia.

ASEMIA (Lat.), n. f. A^{2}s(a^{3}s)-e(a)′mi^2-a^3. From ἄσημος, unintelligible. Fr., *asémie*. Ger., *Asemie*. A general term suggested by Steinthal, indicating an inability to comprehend signs or tokens as well as articulate speech. [D, 53.]—**A. expressiva.** A. of expression, including aphasia, agraphia, amimia, and their subdivisions. [D, 18.]—**A. graphica.** See Agraphia.—**A. mimica.** See Amimia.—**A. perceptiva.** A. of perception, including alexia, paralexia, anakroasia, and paranakroasia. [D, 18.]—**A. spuria.** See Parasemia.—**A. verbalis.** See Aphasia.

ASEMOS (Lat.), adj. A^{2}s(a^{3}s)-e(a)′mo^{2}s. Gr., ἄσημος (from α priv., and σῆμα, a sign). Taking place without notab.e signs or symptoms. [A, 322.]

ASEMOSPERMEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-e^{2}m(am)-o(o^2)-spu^{6}rm(spe^{2}rm)′e^2-e(a^3-e^2). From ἀ priv., σῆμα, sign, and σπέρμα, seed. Fr., *asémospermées*. Kützing's name for a division of *Algæ* belonging to the suborder *Tiloblasteæ* (section *Glœosipheæ*), including the *Oscillarieæ* and *Leptotricheæ*. [B, 197.]

ASEMUS (Lat.), adj. A^{2}s(a^{3}s)-e(a)′mu^{3}s(mu^{4}s). See Asemos.

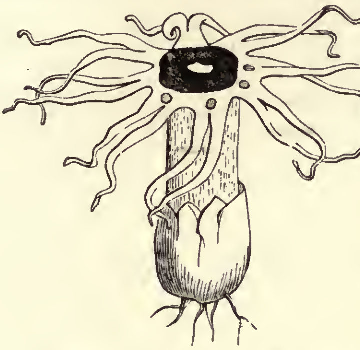
ASEPH, n. See Aseb.

ASEPSIS (Lat.), n. f. A^{2}s(a^{3}s)-e^{2}p(ap)′si^{2}s. Gen., *asep′seos* (*-sis*). From α priv., and σῆψις, putrefaction. Fr., *asepsie*. Ger., *Asepsie*. Freedom from putrefaction or from its effects. [A, 385.]

ASEPTA (Lat), n. n. pl. A^{2}s(a^{3}s)-e^{2}p(ap)′ta^3. 1. Substances not liable to putrefaction. [Hippocrates (A, 311).] 2. Undigested food. [Hippocrates (A, 311).]

ASEPTIC, adj. A^{2}s-e^{2}p′ti^{2}k. Gr., ἄσηπτος (from α priv., and σήπειν, to rot). Fr., *aseptique*. Ger., *aseptisch*. Lat., *aseptos*, *aseptus*. Free from putrefaction and from its causes. [A, 385.]

ASEPTICISM, n. A^{2}s-e^{2}p′ti^2-si^{2}zm. The practice of surgery or obstetrics with strict regard to the prevention of sepsis.



ASEPTICITY, n. A^{2}s-e^{2}p-ti^{2}s′i^{2}t-i^2. The state of being aseptic. [B.]

ASEPTOL, n. A^{2}s-e^{2}p′to^{2}l. A brown, syrupy, aromatic liquid, $C_6(H,H,H,H,OH,SO_2OH) = C_6H_4.OH.SO_2.OH = C_6H_6SO_4$, having an odor of carbolic acid and the chemical constitution of sulpho-

carbolic (orthophenolsulphonic) acid, soluble in 10 parts of water; recommended as an antiseptic application. [Anneessens, " Jour. de pharm. d'Anvers"; "Revist. de Med. y Cirug. Práct.," July 22, 1884, p. 74 (B); Transer, "France méd."; "N. Y. Med. Jour.," Jan. 10, 1885, p. 56; Merck, "Dtsch. Med.-Ztg.," Feb. 11, 1886, p. 137.]

ASEPTOS, ASEPTUS (Lat.), adj's. A^{2}s(a^{3}s)-e^{2}p(ap)'to^{2}s, -tu^{2}s-(tu^{4}s). See ASEPTIC.

ASEROE (Lat.), n. f. A^{2}s(a^{3}s)-e^{2}r'o(o^2)-e(a). A genus of gasteromycetous *Fungi* belonging to the *Phalloidei*, distinguished by the bifid processes radiating from the receptacle. When fresh, these organisms have a very fœtid odor.

THE RECEPTACLE OF AN ASEROE. (FROM DE BARY, AFTER BERKELEY. [B, 54].)

THE RECEPTACLE OF AN ASEROPHALLUS. (FROM DE BARY, AFTER MONTAGNE AND LEPIDEUR [B, 54].)

ASEROPHALLUS (Lat.), n. m. A^{2}s(a^{3}s)-e^{2}r-o-fa^{2}l(fa^{3}l)'lu^{3}s-(lu^{4}s). A genus of gasteromycetous *Fungi* belonging to the *Phalloidei*, characterized by the long cylindrical pedicel bearing the receptacle and terminating at its apex in 4 arms which embrace the gleba. [B, 54.]

ASEROS (Lat.), adj. A^{2}s(a^{3}s)-e(a)'ro^{2}s. Gr., ἀσηρός (from ἄση [see ASE]). Causing nausea, irksome. [Hippocrates (A, 311).]

ASEROSMEI (Lat.), n. m. pl. A^{2}s(a^{3}s)-e^{2}r-o^{2}s'me^2-i(e). Fr., *asérosmées*. Of Léveillé, a tribe of *Fungi* belonging to the *Ectobasides*, including the sections *Phalloidei*, *Clathracei*, and *Lysurei*. [B, 170.]

ASETIGEROUS, adj. A^{2}s-e^{2}t-i^{2}j'-e^{2}r-u^{3}s. Lat., *asetiger* (from α priv., *seta* [=*sœta*], a bristle, and *gerere*, to bear). Destitute of bristles. [L, 116.]

ASEXUAL, adj. A^{2}s-e^{2}x'u^2-a^{2}l. Lat., *asexus* (from α priv., and *sexus*, sex). Fr., *asexe*, *asexué*, *asexuel*. Ger., *geschlechtlos*. It., *asessuale*. Sp., *asexual*. Non-sexual; in botany, having no organs of reproduction (said formerly of the cryptogams); in botany and zoology, effected without sexual congress (said of reproduction). [B, 19, 28, 75.]

ASFE, n. Of Dioscorides, the *Atriplex balimus*. [Bory (B, 121).]

ASFIDAJ (Ar.), n. Carbonate of lead. [L, 77, 105.]

ASFOS, n. An Egyptian name for the *Ballota fœtida*. [B, 121.]

ASFRAK, n. Syn.: *trayamana*. An East Indian name for a drug consisting of the flowers, flower-stalks, and the unripe fruit of an unknown plant, probably a species of *Delphinium*. It is of light yellowish-green color and has an odor somewhat resembling that of honey. It is used to make a yellow dye, and is also employed as a detergent, anodyne, and diuretic. ["Proc. of the Am. Pharm. Assoc.," xxvi, p. 161 (B).]

ASGANDA [Hind.], n. The *Adhatoda vasica*. [B, 172.]

ASGANDH (Hind.), n. The *Physalis somnifera*. [B, 181.]

ASGUND, n. See ASGANDH.

ASH, n. A^{2}sh. A.-S., *asca* (1st def.), *æsc* (2d def.). Gr., κόνις (1st def.). Lat., *cinis* (1st def.), *fraxinus* (2d def.). Fr., *cendre* (1st def.), *frêne* [Fr. Cod.] (2d def.). Ger., *Asche* (1st def.), *Esche* (2d def.) It., *cenere* (1st def.), *frassino* (2d def.). Sp., *ceniza* (1st def.), *fresno* (2d def.). 1. The incombustible residue left after a substance has been burned with free access of air. [B, 2.] 2. The common name of a number of trees of the genus *Fraxinus* (*q. v.*). [B.]—**American mountain-a.** The *Sorbus* (*Pyrus*) *americana*. [B.]—**Antimony a.** See under ANTIMONY.—**A. bath.** See under BATH.—**A. maple.** See NEGUNDO.—**A.-weed.** See ÆGOPODIUM *podagraria*.—**Bitter a.** 1. The Quassia-tree. [B.] 2. The *Byttera febrifuga*. [B.]—**Black a.** 1. See *British* BARILLA. 2. The *Fraxinus sambucifolia*. [B, 75.]—**Black mountain-a.** The *Eucalyptus leucoxylon*. [B, 19.]—**Blue a.** The *Fraxinus quadrangulata*. [B, 34.]—**Bone-a.** The residue left after burning bone. [B.]—**Calabrian a.** The *Fraxinus rotundifolia*. [L.]—**Cape a.** The *Ekebergia capensis*. [B, 19.]—**Common a.** The *Fraxinus excelsior*.—**Copper-a'es.** The scales cast off from copper in the process of forging. [B.]—**European a.** The *Fraxinus excelsior*. [B, 34.]—**European mountain-a.** The *Sorbus* (*Pyrus*) *aucuparia*. [B.]—**Flowering a.** The *Fraxinus ornus*. [L.]—**Fluid extract of prickly a.** See *Extractum* XANTHOXYLI *fluidum*.—**Green a.** The *Fraxinus viridis*. [B, 34.]—**Hoop a.** The *Celtis crassifolia*. [B, 19.]—**Manna a.** The *Fraxinus ornus*. [L.]—**Mountain-a.** See PYRUS *aucuparia*, SORBUS *americana*, and PANAX *dendroides*.—**Pearl-a.** See PEARLASH.—**Poison a.** The *Rhus venenatum*. [B, 19.]—**Prickly a.** Properly, the *Xanthoxylum fraxineum*, but also applied to the *Aralia spinosa*. [B, 5.]—**Red a.** The *Fraxinus pubescens*. [B, 19.]—**Rim a.** The *Celtis occidentalis*. [B, 19.]—**Small-leaved flowering a.** The *Fraxinus ornus*. [L.]—**Soda-a.** See under SODA.—**Volcanic a.** The pulverulent portion of the matter thrown out by volcanoes. [B, 2.]—**Water a.** The *Fraxinus sambucifolia*. [B, 34.]—**White a.** The *Fraxinus americana*. [B, 5.]

ASHBY-DE-LA ZOUCHE, n. A^{2}sh'bi^2-d'-la^3-zush''. A town in Leicestershire, England, where there is a spring containing sodium chloride and bromide, calcium chloride, etc., employed in rheumatic and scrofulous affections. [A, 316; L, 49, 57.]

ASHEK (Ar.), n. Gum ammoniacum. [L, 77.]

ASHEN KEYS, n. pl. A^{2}sh'e^{2}n-kez. The seed-vessels of the ash-tree. [L, 73.]

ASHEVILLE, n. A^{2}sh'vi^{2}l. A town in the centre of the mountainous region of western North Carolina, recommended as a residence for consumptives. [T. M. Lloyd, "N. Y. Med. Jour.," April 9, 1887, p. 399.]

ASHNEH, n. A name given in India to the *Parmelia kamtchadalis*. [B, 121.]

ASHOCA, n. The *Jonesia asoca*. [L, 73.] See ASOCA and ASOK.

ASHOO-KUCHOO (Bengal.), n. The *Colocasia antiquorum*. [B, 172.]

ASHTEAD, n. A^{2}sh'te^{2}d. A place in England, near Epsom, where there is a saline spring. [B, 277.]

ASHUVA (Sanscr.), n. See ASHWA.

ASHVAGANDSHA, n. See ASVAGANDHÁ.

ASHWA (Sanscr.), **ASHWADA-GUNDA** (Bengal.), n's. The *Withania somnifera*. [B, 172.]

ASHWERTHA (Bengal.), **ASHWUTH** (Hind.), n's. The *Ficus religiosa*. [A, 316; B, 172.]

THE FLOWERING BRANCH AND MATURE LEAF OF ASIMINA TRILOBA, ¼ SIZE. (AFTER J. U. AND C. G. LLOYD.)

ASIA (Lat.), n. f. A(a^3)'sha^3(si^2-a^3). Gr., ἀσία. An ancient name for a variety of rye. [Pliny (A, 318).]

ASIALIA, ASIALOCHIA (Lat.), n's f. A^{2}s(a^{3}s)-i^2-a^{2}l(a^{3}l)'i^2-a^3. -a^{2}l(a^{3}l)-ok(o^{2}ch^2)'i^2-a^3. From α priv., and σίαλον, saliva; or σίαλον, and χεῖσθαι, to stream. Fr., *asialie*. Ger., *Speichelmangel*. Failure or deficiency of the salivary secretion. [M, 13.]

ASIALOCHOOS (Lat.), adj. A^{2}s-(a^{3}s)-i^2-a^{2}l(a^{3}l)-o^{2}k(o^{2}ch^2)'o(o^2)-o^{2}s. Affected with asialia. [A, 322.]

ASIALORRHŒA (Lat.), n. f. A^{2}s(a^{3}s)-i(i^2)-a^{2}l(a^{3}l)-o^{2}r-re'(ro^2'e^2)-a^3. From α priv., σίαλον, saliva, and ῥεῖν, to flow. Fr., *asialorrhée* [Piorry]. See ASIALIA.

ASIENAWURZEL (Ger.), n. A^3-zen'a^3-vurtz-e^{2}l. The rhizome of gentian. [B, 270.]

ASIGI, n. See AZAGOR.

ASIGRUM (Lat.), n. n. A^{2}s(a^{3}s)-i^{2}g'ru^{3}m-(ru^{4}m). Of C. Bauhin, the *Hypericum montanum*. [B, 121.]

ASILE (Fr.), n. A^{3}s-el. See ASYLUM.—**A. d'aliénés.** A lunatic asylum. [A, 385.]—**A. de convalescents.** A home for convalescents. [A, 385.]

ASILIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-i^{2}l'i^{2}d-e-(a^3-e^2). Fr., *asilidées*. A family of dipterous insects, including the genus *Asilus*. [A, 385; L, 73.]

ASILIFORMIS (Lat.), adj. A^{2}s-(a^{3}s)-i^{2}l-i^2-fo^{2}rm'i^{2}s. From *Asilus* (*q. v.*), and *forma*, form. Fr., *asiliforme*. Resembling an *Asilus*. [L, 180.]

ASILUS (Lat.), n. m. A^{2}s(a^{3}s)-i(e)'-lu^{3}s(lu^{4}s). Fr., *asile*. A genus of flies. [L, 26.]—**A. crabroniformis.** A species which attacks man and the lower animals, inflicting wounds from which considerable blood flows. [L, 26.]

ASIMEN, n. A Madagascar name for the *Volkameria*. [B, 121.]

ASIMIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}m'-i^2-a^3. See ASIMINA.

ASIMINA (Lat.), n. f. A^{2}s(a^{3}s)-i^2-mi(me)'na^3. Fr., *asimine* (1st def.), *asiminier* (2d def.) 1. Of Desvaux, a fruit, such as that of the *Anona*, formed by the union of several fleshy fruits. [B, 198; L,

41.] 2. A genus of anonaceous trees or shrubs, made by Adanson, much resembling the genus *Anona*, with which it was formerly united. [B, 19, 34.]—**A. triloba** [Dunal]. Fr., *asiminier, monin.* Syn.: *Anona triloba* [Linnæus], *Orchidocarpum arietinum* [Michaux], *Porcelia triloba* [Persoon], *Uvaria triloba* [Torrey, Gray]. The North American papaw, or custard-apple (to be distinguished from the true papaw of tropical America [*Carica papaya*]); a shrub or small tree common in the Ohio Valley, rare in western New York and central and eastern Pennsylvania, and thence south to Florida and west to Kansas. The ripe fruit, somewhat resembling the banana, is edible; the green fruit and all parts of the plant contain a volatile oil of a disagreeable odor; the seeds contain a characteristic alkaloid, *asiminine.* [J. U. and C. G. Lloyd, "Drugs and Med. of N. Am.," Sept., 1886, p. 49.]

ASIMININE, n. A^{2}s-i^{2}m'i^{2}n-en. An alkaloid obtained by J. U. and C. G. Lloyd from the seeds of *Asimina triloba;* colorless, tasteless, and practically insoluble in water, but freely soluble in alcohol and in ether, and less readily in choloroform and in benzol. The hydrochloride tastes sweetish at first, but leaves a bitter aftertaste. R. Bartholow, who experimented with it in the form of a 1-to-60 solution of the hydrochloride, found that, in frogs, it produced a primary stage of excitement and exaggerated sensibility to certain tactile impressions, followed by narcosis. ["Drugs and Med. of N. Am.," Sept., 1886, p. 49.]

ASINA, n. A Russian name for the *Populus alba.* [B, 121.]

ASINALUNGA (It.), n. A^3-se-na^3-lun'ga^3. A place in Italy, where there is an alkaline chalybeate spring. [A, 316.]

ASINES (Lat.), adj. A^{2}s(a^{3}s)'i^{2}n-ez(as). Gr., ἀσινής (from α priv., and σίνεσθαι, to hurt). 1. Uninjured. [A, 322.] 2. Innocuous. [A, 322.]

ASINGAR, n. See AZAGOR.

ASININUS (Lat.), adj. A^{2}s(a^{3}s)-i^{2}n-i(e)'nu^{3}s(nu^{4}s). Fr., *asine.* Asinine, pertaining to an ass. [A, 312.]—**Lac asininum.** See *Ass's* MILK.—**Lac asininum artificiale.** See *Mock ass's* MILK.

ASINUS (Lat.), n. m. A^{2}s(a^{3}s)'i^{2}n-u^{3}s(u^{4}s). Gr., ὄνος. Fr., *âne.* Ger., *Esel.* It., *asino.* Sp., *asno, burro.* 1. The ass. 2. A genus of the family *Equidæ*, comprising the asses and zebras. [A, 359.] 3. See ASIRACUS.

ASINUSCA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n-u^{3}s(us)'ka^3. An ancient name for a sort of wild vine. [Pliny (A, 318).]

ASIPHONATE, adj. A^{2}s-i^{2}f'o^{2}n-at. From α priv., and σίφων, a tube. Having no respiratory siphou (said of certain *Mollusca*). [B, 28.]

ASIPHONIA [Griffith] (Lat.), n. f. sing. and n. pl. A^{2}s(a^{3}s)-i^{2}f-o'ni^2-a^3. See BRAGANTIA and ASIPHONIATA.

ASIPHONIATA, ASIPHONIDA, ASIPHONIDÆ (Lat.), n's n. pl., n. pl., and f. pl. A^{2}s(a^{3}s)-i^{2}f-o-ni^2-a(a^3)'ta^3, -i^{2}f-o^{2}n(on)'-i^{2}d-a^3, -o^{2}n(on)'i^{2}d-e(a^3-e^2). A section of lamellibranchiate molluscs characterized by the absence of respiratory siphons, by the mantle lobes being free or united at only one point, which divides the branchial from the exhalant chamber, and by the pallial line being simple and not indented. [L. 147.]

ASIRACOSTUM, n. See SIRACOSTUM.

ASIRACUS (Lat.), n. m. A^{2}s(a^{3}s)-i^{2}r'a^3-ku^{3}s(ku^{4}s). Gr., ἀσίρακος. Fr., *asiracque.* An ancient name for a kind of wingless locust esteemed a remedy for the bite of the scorpion. [A, 325; L, 94.]

ASITIA (Lat.), n. f. A^{2}s(a^{3}s)-i^2'shi^2(ti^2)-a^3. Gr., ἀσιτία (from α priv., and σῖτος, food). Fr., *asitie.* Ger., *Asitie.* It., *asizia.* 1. Lack of food. [A, 311.] 2. Fasting. [L, 43.] 3. Loss of appetite. [M, 13.]

ASIUS (Lat.), adj. A^{2}s(a^{3}s)'i^2-u^{3}s(u^{4}s). See ASSIUS.

ASJAGAN, ASJOGAM, n's. East Indian names for the *Jonesia pinnata.* [A, 385.] Cf. ASOK.

ASKELIA (Lat.), n. f. A^{2}s(a^{3}s)-ke^{2}l'i^2-a^3. From ἀσκελής (from α priv., and σκέλος, the lower limb). Fr., *askélie, ascélie.* Lack of development of the legs or thighs. [A, 385.]

ASKER, n. A^{3}sk'u^{5}r. See ESCHAR.

ASKERN, n. A^{3}sk'u^{5}rn. A village near Doncaster, England, where there is an alkaline sulphurous spring. [L, 57.]

ASKIDA (Lat.), n. f. A^{2}s(a^{3}s)-ki(ke)'da^3. A name applied by Dioscorides to the *Veratrum album.* [Bory (L, 87).]

ASKOE, n. A Norwegian island, where there is a hot spring. [A, 305.]

ASKOGON (Ger.), n. A^{3}s-ko-gon'. See ASCOGONIUM.

ASKOKAN, n. An African name for the *Pastinaca oleracea.* [L, 105.]

ASKOLAME (Ar.), n. The *Asphodelus ramosus.* [L, 105.]

ASKOLIN, n. A^{2}s'ko^{2}l-i^{2}n. Glycerin supersaturated with sulphurous acid. [Hager (B, 270).]

ASKOMYCETEN (Ger.), n. pl. A^{3}s-ko-mu^6-tzat'e^{3}n. See ASCOMYCETES.

ASKOSAIRE (Fr.), n. A^{3}s-ko-sa^{3}r. From ἀσκός, a pouch. See TETRACHÆNIUM.

ASKOSIS (Lat.), n. f. A^{2}s(a^{3}s)-ko'si^{3}s. Gen., *asko'seos (-sis).* Fr., *askose.* A name formerly applied to that variety of achænium found in the *Cyperaceæ* and in some *Polygoneæ* and *Chenopodieæ.* [B, 121.]

ASMAGA, n. An alchemical term for an admixture of certain metals in turn. [Ruland, Johnson (A, 325).]

ASMAN JUNIE (Ar.), n. Florentine iris. [L, 77.] Cf. ASMENIS.

ASMEGMATIA (Lat.), n. f. A^{2}s(a^{3}s)-me^{2}g(mag)-ma(ma^3)'shi^2-(ti^2)-a^3. From α priv., and σμῆγμα (see SMEGMA). A deficiency of smegma. [L, 50.]

ASMENIS (Ar.), n. The *Iris germanica.* [L, 105.]

ASMIAR (Ar.), n. An alchemical name for verdigris. [Ruland, Johnson (L, 116).]

ASMOGA, n. See ASMAGA.

ASMONICH, n. A Peruvian name for the *Cinchona rosea* [Ruíz and Pavón] (*Lasionema rosea* [Don]). [B, 121; L, 49.]

ASNELLE-LA-BELLE-PLAGE (Fr.), n. A^{3}s-ne^{2}l-la^3-be^{2}l-pla^{3}zh. A sea-bathing station in the department of Calvados, France. [L, 57.]

ASOCA, n. The *Jonesia a.* [L, 73.] See ASOK.

ASODES (Lat.), adj. A^{2}s(a^{3}s)-o'dez(das). Gr., ἀσώδης (from ἄση, nausea, and εἶδος, resemblance). Fr., *asode.* Ger., *asodisch, voll Ekel, höchst unbehaglich.* Affected with or characterized by restlessness, nausea, and a feeling of anxiety; as a n. (*febris* understood; Ger., *Angstfieber*), an old term for a form of fever characterized by such symptoms. [A, 322, 385.]

ASOK, n. An East Indian name for the *Jonesia asoca.* [E. J. Waring, "Indian Med. Gaz.," Aug., 1885, p. 260.]

ASONATOU, n. See ASOUATOU.

ASOPIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-o^{2}p'i^{2}d-e(a^3-e^2). A family of the suborder *Heteroptera* of the *Hemiptera.* [L, 121.]

ASOPOR, n. An alchemical name for soot. [Ruland, Johnson (A, 325).]

ASOUATOU, n. An East Indian name for the *Ficus indica.* [B, 121.]

ASP, n. A^{2}sp. Gr., ἀσπίς. Lat., *aspis.* Fr., *aspic.* Ger., *Natter* (2d def.). *Otter* (2d def.). 1. The Egyptian cobra (*Naja haie*). [A, 311, 385.] 2. The common viper (*Vipera aspic* [Latreille]). [A, 385.]

ASPALASOMA (Lat.), n. n. A^{2}s(a^{3}s)-pa^{2}l(pa^{3}l)-a^3-so'ma^3. Gen., *aspalasom'atos (-tis).* From ἀσπάλαξ, the mole, and σῶμα, the body. Fr., *aspalasome.* A monstrosity characterized by an eventration at the lower part of the body, so that the rectum, the urethra, and the genital apparatus open by three distinct orifices, as in the moles. [Geoffroy St.-Hilaire (L, 49).]

ASPALATH (Fr., Ger.), n. A^{3}s-pa^3-la^{3}t, -la^{3}t'. See ASPALATHUS.—**A'holz** (Ger.), **Bois d'a.** (Fr.). See ALOES-WOOD (2d def.) and *Lignum* ASPALATHI.

ASPALATHOIDES (Lat.), adj. A^{2}s(a^{3}s)-pa^2(pa^3)-la^{2}th(la^{3}th)-o(o^2)-i(e)'dez(das). Fr., *aspalathoïde.* Resembling the *Aspalathus;* as *Indigopera a.* [B; L, 41.]

ASPALATHUS (Lat.), n. m. and f. A^{2}s(a^{3}s)-pa^{2}l(pa^{3}l)'a^3-thu^{3}s-(thu^{4}s). Gr., ἀσπάλαθος. Fr., *aspalath, aspalathe.* Ger., *Aspalath.* 1. A prickly shrub, yielding a fragrant oil, mentioned by Theophrastus, Pliny, Celsus, and other ancient writers. 2. A genus of leguminous trees or shrubs belonging to the suborder *Papilionaceæ*, established by Linnæus, having ternately arranged, sometimes cæspitose leaves and flowers in terminal racemes or spikes. 3. A name given to various leguminous plants, as the *Cytisus* and *Ulex.* [A, 311; B, 19, 45, 121.]—**A. ebenus** [Linnæus]. Syn.: *Amerimnum ebenus* [Swartz], *Pterocarpus buxifolius* [Murray] (seu *ebenus* [Persoon], seu *glaber* [Reichenbach]). A South American tree, the wood of which takes a high polish and is used in cabinet-making. [B, 173.]—**A. indica** [Linnæus]. See INDIGOFERA *uniflora* and I. *aspalathoides.*—**Lignum aspalathi.** Fr., *bois d'aspalath.* A fragrant wood derived, according to some, from the *A. ebenus* [B, 93], but, according to others, from the *Aquilaria malaccensis.* [B.] See ALOES-WOOD (2d def.) and BOIS *de Rhodes.*

ASPALTUM (Lat.), n. n. A^{2}s(a^{3}s)-pa^{2}lt(pa^{3}lt)'u^{3}m(u^{4}m). See ASPHALTUM.

ASPARACTICUS (Lat.), adj. A^{2}s(a^{3}s)-pa^3-ra^{2}k(ra^{3}k)'ti^{2}k-u^{3}s-(u^{4}s). Pertaining to or derived from *Asparagus.* [A, 322.]—**Acidum asparacticum.** See ASPARTIC ACID.

ASPARAGACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pa^{2}r(pa^{3}r)-a^{2}g(a^{3}g)-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *asparagacées.* Ger., *Asparagaceen.* Of Kunth, an order of plants belonging to the *Coronariæ*, including the tribes *Dracæneæ* and *Asparageæ.* [B, 170.]

ASPARAGACEITES (Lat.). n. f. pl. A^{2}s(a^{3}s)-pa^{2}r(pa^{3}r)-a^{2}g-(a^{3}g)-a^{2}s(a^{3}k)-e^2-i(e)'tez(tas). Of Sternberg, an order of fossil plants. [B, 170.]

ASPARAGEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pa^{3}r-a(a^3)'je^2(ge^2)-e-(a^3-e^2). Fr., *asparagées.* Ger., *Asparageen.* 1. Of De Candolle, Eichler, and others, a family (order) of monocotyledonous plants, including *Asparagus, Smilax, Convallaria, Dracœna*, and other genera usually classed under the *Litiaceæ.* 2. Of several authors, a subdivision of the *Smilaceæ* or *Asphodeleæ* [Endlicher]. 3. Of Kunth, a division of the *Asparagineæ*, including 3 genera. Bentham and Hooker make it a tribe of the *Liliaceæ*, including *Asparagus* and three other genera. [B, 42, 170.]

ASPARAGI (Lat.), n. m. pl. A^{2}s(a^{3}s)-pa^{2}r(pa^{3}r)'a^3-ji(ge). Gr., ἀσπάραγοι. Fr., *asperges.* Ger., *Spargelsprossen, Spargelstengel* (1st def.). 1. The young shoots of asparagus and of other like vegetables. [A, 311, 322; L, 119.] 2. Of Adanson, a section of liliaceous plants, including *Asparagus, Smilax, Dioscorea, Medeola*, and *Ruscus.* 3. Of Jussieu, an order of plants corresponding to the *Asphodeleæ* and *Smilacinæ* of Brown. [B, 170, 180.]

ASPARAGIA (Lat.), n. f. A^{2}s(a^{3}s)-pa^{3}r-a(a^3)'ji^2(gi^2)-a^3. Gr., ἀσπαραγία. An ancient name for the root of asparagus. [A, 387.]

ASPARAGIC ACID, n. A^{2}s-pa^{2}r-a^{2}j'i^{2}k. See ASPARTIC ACID.

ASPARAGIN (Ger.), n. A^{3}s-pa^{3}r-a^3-gen'. See ASPARAGINE.—**A'säure.** See ASPARTIC ACID.—**A'thier.** An animal fed on asparagine. [B.]—**Gallena'.** See TAURINE.

ASPARAGINÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pa^{2}r(pa^{3}r)-a^{2}j(a^{3}g)-i(e)'ne(na^3-e^2). Fr., *asparaginées.* Ger., *Asparaginen.* An order of endogenous plants made by Link. [B, 120.]

ASPARAGINE, n. A[2]s-pa[2]r′a[3]-jen. Lat., *asparagina, asparaginum.* Fr., *asparagine, agedoïl* [Caventou]. Ger., *Asparagin, Spargelstoff.* It., *asparagina, acido aspartammidico.* Syn.: *asparamide, amidosuccinamic acid, altheine.* An alkaloid, $C_4H_8N_2O_3.H_2O$, or $CO.NH_2 - C_2H_3.NH_2 \left\{ \begin{matrix} H \\ CO \\ O \end{matrix} \right.$, found in asparagus, marsh-mallow, comfrey, licorice-root, the root of the locust-tree, lily-of-the-valley, the milky juice of lettuce, the tubers of the *Dahlia*, the young shoots of vetches, peas, beans, and several other leguminous plants grown in the dark, also sweet almonds. The juice of the young shoots of asparagus, filtered and evaporated to a syrup, deposits the crystals after standing for some days. They are inodorous and of but slight taste, and dissolve in 11 parts of cold water and in 4·44 of boiling water, the solution having a faint acid reaction, but do not dissolve in alcohol, in ether, or in oils. A. forms definite salts with acids, also salts in which 1 atom of its hydrogen is replaced by a metal. It is said to be a circulatory depressant. [B, 2.]—**A. hydrochlorate, A. hydrochloride.** A salt of a. and hydrochloric acid, occurring in large crystals of the composition $C_4H_8N_2O_3.HCl$. [B, 2.]—**Biliary a.** Lat., *asparagina* (seu *asparaginum*) *bilis.* Fr., *asparagine biliaire.* Ger., *Gallenasparagin.* A name given by Tiedemann and Gmelin to taurine (*q. v.*). [A, 322; L, 81.]

ASPARAGINEÆ (Lat.), n. f. pl. A[2]s(a[3]s)-pa[2]r(pa[3]r)-a[3]-ji[2]n-(gi[2]n)′e[2]-e(a[3]-e[2]). Fr., *asparaginées.* 1. Of Jussieu and Kunth, a family of monocotyledonous plants, including genera usually referred to the tribe *Asphodeleæ* of liliaceous plants. It was divided by Kunth into the *Dracæneæ, Asparageæ,* and *Eustrepheæ.* 2. A tribe of *Liliaceæ* corresponding to the *Convallarineæ.* [B.] 3. Of Dumortier, a family of the *Liliarieæ*, including the *Smilacineæ, Maianthemeæ, Ruscineæ, Asparageæ, Draceneæ,* and *Convallarieæ.* [B, 170.]

ASPARAGINUM (Lat.), n. n. A[2]s(a[3]s)-pa[2]r(pa[3]r)-a[3]-ji(ge)′-nu[3]m(nu[4]m). See ASPARAGINE.—**A. bilis.** See TAURINE.

ASPARAGOIDEÆ (Lat.), n. f. pl. A[2]s(a[3]s)-pa[2]r(pa[3]r)-a[2]g-(a[3]g)-o(o[2])-i[2]d′e[2]-e(a[3]-e[2]). Fr., *asparagoïdées.* 1. Of Ventenat, an order of plants, including *Dracæna, Asparagus, Convallaria,* and other genera, usually grouped under the tribes *Asphodeleæ* and *Convallarineæ* of the *Liliaceæ.* [B, 170.] 2. Of Engler, a suborder of liliaceous plants, including those with a subterranean rhizome terminating above in aerial, more or less leafy, flowering branches, and also branching in the ground or sending out subterranean offshoots which develop lateral flowering branches. The fruit is a berry. [Engler (B, 245).]

ASPARAGONIA (Lat.), n. f. A[2]s(a[3]s)-pa[2]r(pa[3]r)-a[3]-go′ni[2]-a[3]. Gr., **ἀσπαραγωνία.** Asparagus or its root. [A, 311, 322, 387.]

ASPARAGOPSIS (Lat.), n. f. A[2]s(a[3]s)-pa[2]r(pa[3]r)-a[2]g(a[3]g)-o[2]p′si[2]s. Gen., *asparagop′seos* (*-sis*). From **ἀσπάραγος** (see ASPARAGUS) and **ὄψις**, appearance. See ASPARAGUS.—**A. umbellulata** [Kunth]. See ASPARAGUS *umbellulatus.*

ASPARAGUS (Lat.), n. m. A[2]s(a[3]s)-pa[2]r(pa[3]r)′a[3]-gu[3]s(gu[4]s). Gr., **ἀσπάραγος, ἀσφάραγος.** Fr., *asperge* [Fr. Cod.]. Ger., *Spargel.* It., *asparago, sparagio.* Sp., *espárrago.* 1. Anciently, any shoot or sprout [Pliny (A, 318)], and used in this sense as a botanical descriptive name by the earlier botanists. [B, 198.] 2. A genus of perennial liliaceous herbs of the tribe *Asphodeleæ*, established by Linnæus. The flower has a 6-parted perianth, 6 perigynous straight stamens, a very short style, and 3 stigmas; the fruit is a berry containing 3 cells, each cell containing 2 seeds; the leaves are very narrow. [B.] 3. The *A. officinalis* (*q. v.*). [B.]—**A. acutifolius** [Linnæus]. Fr., *asperge sauvage, espargon sauvage.* Syn.: *Corruda.* A species growing in southern Europe resembling in appearance and properties *A. officinalis.* The young shoots are eaten, and the rhizome and fruit (*radix et semen corrudæ*) are used like those of *A. officinalis.* It is said to contain more asparagine and to act more powerfully as a medicinal agent than the latter. [B, 173, 180; L, 120.]—**A. albus** [Linnæus]. Fr., *asperge blanche.* A shrubby, trailing species indigenous to the East, but growing in Spain and Portugal, where the young shoots are eaten. [B, 71, 173, 180.]—**A. altilis.** See *A. officinalis.*—**A. amarus** [De Candolle]. See *A. scaber.*—**A. aphyllus** [Linnæus]. A shrubby species indigenous to the East. It has the same properties and uses as *A. officinalis.* [B, 173.]—**A. ascendens.** A species the root of which (*sufed-mush*) is used in India as a substitute for salep. [B, 172.]—**A. bean.** The *Dolichos sesquipedalis.* [B, 19.]—**A. corruda** [Scopoli]. See *A. acutifolius.*—**A. crispus.** 1. Of Lamarck, a species growing at the Cape of Good Hope. 2. Of Bojer, the *A. umbellulatus.* [B, 192.]—**A. draco** [Linnæus]. See DRACÆNA *draco.*—**A. falcatus** [Linnæus]. An herbaceous species growing in China and the East Indies. The root is used in China as an anodyne and antisyphilitic. [B, 71, 180; L, 75.]—**A. juice.** See *Suc de pointe d'*ASPERGE.—**A. officinalis** [Linnæus]. Gr., **ἀσπάραγος** [Dioscorides]. Fr., *asperge, asperge officinale.* Ger., *gebräuchlicher Spargel.* Ordinary garden a., a perennial herbaceous plant indigenous to Europe and cultivated both there and in America. It is from 2 to 4 feet high, bearing filiform leaves, axillary flowers, and globose red berries. The young shoots (Lat., *turiones*) are used as food, and, together with the stalks and the rhizome, are official in the Fr. Cod., the Belg. Ph., and the Swiss Ph. The berries and seeds were also formerly employed in medicine. The juice contains asparagine. [B, 5, 180.] The plant is used as a diuretic, and imparts a peculiar disagreeable odor to the urine. [A, 319.]—**A. petræa, A. petræus.** See *A. acutifolia.*—**A. phyllacanthos** [Lamarck]. See *A. aphyllus.*—**A. racemosus** [Willdenow]. A climbing shrub with slender terete woody stems, bearing dense racemes of white flowers with small globose red anthers. It is found in N. Australia and throughout the Pacific islands. Its tubers are employed for the same purposes as salep. Boiled in milk, they are used in bilious disorders. The bark is considered poisonous. The leaves, boiled and mixed with ghee, are applied to promote suppuration. [B, 172, 192; L, 65.]—**A. sarmentosus** [Willdenow]. An East Indian climbing species, used for the same purposes as salep. An infusion of the root (the *sufed-mush* of southern India) is used to prevent small-pox pustules from becoming confluent. [B, 172, 173; L, 105.]—**A. scaber** [Brogniart]. A European species, regarded by Linnæus as a variety of *A. officinalis*, but distinguished from the latter by the dentate scabrous margins of the leaves.—**A. silvaticus** [Waldstein and Kitaibel]. See *A. tenuifolius.*—**A. tea.** See *Tisane de racine d'*ASPERGE.—**A. tenuifolius** [Lamarck]. A European species, regarded by Linnæus as a variety of the *A. officinalis*, distinguished by its finely capillary leaves, which, with the branches, are glabrous. [B, 173, 178.]—**A. umbellulatus** [Sieber]. A climbing shrub of Mauritius having deflexed branches and flowers in axillary umbels. [B, 192.]—**A. verticillaris** [Bieb.]. A semi-scandent herbaceous species indigenous to the Caucasus. [B, 71.]—**Baceæ asparagi.** The fruit of the *A. officinalis*, regarded as diuretic and aphrodisiac. [B, 180.]—**Bath a.** The *Ornithogalum pyrenaicum.* [B, 185.]—**Common a.** See *A. officinalis.*—**Extractum asparagi.** An extract made from the fresh shoots of the *A. officinalis.* [B, 270.]—**French a.** See *Bath a.*—**Garden a.** See *A. officinalis.*—**Ptisana radicis asparagi.** See *Tisane d'*ASPERGE.—**Radix asparagi, Radix asparagi alticis.** Fr., *racine d'asperge.* The rhizome of *A. officinalis*, formerly official in the Brit. Ph. and regarded as one of the five major aperient roots, also as diuretic, emmenagogue, and aphrodisiac; still official in the Fr. Cod., the Belg. Ph., and the Swiss Ph. [B, 270; L, 120.]—**Rock a.** See *A. petræus.*—**Semen asparagi.** The seeds of *A. officinalis.* [B, 180.]—**Succus turionum asparagi amari** [Fr. Cod.]. The juice of the shoots of the *A. officinalis*, var. *maritimus*, and the *A. scaber*; used in making *sirop de pointe d'asperge.* [B, 270.]—**Syrupus cum succo asparagi** [Fr. Cod.]. See *Sirop de pointe d'*ASPERGE.—**Turiones asparagi, Turiones asparagi juniores.** The young edible shoots of *A. officinalis.* [A, 319; B, 270.]

THE ASPARAGUS OFFICINALIS.
[A, 327.]

ASPARAMIC ACID, n. A[3]s-pa[3]r-a[2]m′i[2]k. Fr., *acide asparamique.* See ASPARTIC ACID.

ASPARAMIDE, n. A[2]s-pa[2]r′a[3]-mi[2]d. See ASPARAGINE.

ASPARMATE, n. A[2]s-pa[3]rm′at. See ASPARTATE.

ASPARMIC ACID, n. A[2]s-pa[3]rm′i[2]k. See ASPARTIC ACID.

ASPARTATE, n. A[2]s-pa[3]rt′at. A salt of aspartic acid. [B, 2.]

ASPARTIC ACID, n. A[3]s-pa[3]rt′i[2]k. Fr., *acide aspartique.* Ger., *Aspartinsäure.* It., *acido aspartico.* Sp., *ácido aspártico.* Syn.: *asparagic* (or *asparamic*, or *asparmic*, or *amidosuccinic*) *acid.* A dibasic crystalline acid, having the composition $C_4H_7NO_4 = \left\langle \begin{matrix} CH_2.CO.OH \\ CH(NH_2).CO.OH \end{matrix} \right.$, being that of malic acid in which a molecule of amidogen replaces one of hydroxyl; formed from asparagine. Both the active and the inactive acid form definite crystallizable compounds with the stronger acids, and unite with bases to form salts (aspartates). In each series the individual compounds show the same behavior toward polarized lights as the acid entering into their composition. [B, 2, 4.]—**Active a. a.** An isomeric variety which, when dissolved in an acid, rotates the plane of polarization to the right, and, when dissolved in an alkali, rotates it to the left. It crystallizes in thin rectangular plates. [B, 2.]—**Inactive a. a.** An isomeric variety which has no action on the polarized beam, and forms crystals of the monoclinic system. [B, 2.]—**Isoa' a.** Syn.: *methylmalonic acid, amidoisosuccinic acid.* A crystalline variety, $CH_3 - C(CO.OH).NH_2 - CO.OH$, soluble with difficulty in water and almost insoluble in alcohol. Its solutions are optically inactive. [G. Körner and A. Menozzi, "Ann. di chim. e di farm.," July, 1886, p. 32 (B).]

ASPASIA (Lat.), n. f. A[2]s(a[3]s)-pa(pa[3])′zi[2](si[2])-a[3]. A term applied in the middle ages to a ball of wool or a sachet imbued with an infusion of galls, used in the vagina as an astringent. [A, 322, 325.]

ASPECTION (Ger.), n. A[3]s-pe[2]k-ti[2]-on′. See INSPECTION.

ASPÉLINE (Fr.), n. A[3]s-pa-len. A species of groundsel (*Senecion*). [L, 41.]

ASPEN, n. A[3]sp′e[2]n. A.-S., *æspe, æsp, æps, epse.* Fr., *tremble.* Ger., *Espe, Zitterpappel.* It., *tremula.* Sp., *álamo temblon.* A tree of the genus *Populus*, including the American variety (*Populus tremuloides*) and the European variety (*Populus tremula*). Its bark contains salicin and populin, and has been used in medicine. [B, 5.]

ASPER (Lat.), adj. A[2]s(a[3]s)′pe[2]r. Gr., **τραχύς.** Rough, uneven. [M, 13.] See ARTERIA *aspera* and LINEA *aspera.*

ASPERAGO (Lat.), n. f. A[2]s(a[3]s)-pe[2]r-a(a[3])′go. Gen., *asperag′inis.* A faulty spelling for *Asperugo* (*q. v.*). [B.]

ASPERATUS (Lat.), adj. A[2]s(a[3]s)-pe[2]r-a(a[3])′tu[3]s(tu[4]s). Roughened. [A, 312.] See SPECILLUM *asperatum.*

ASPERBEERE (Ger.), n. A[3]′pe[2]r-bar-e[2]. The rough gooseberry (*Ribes grossularia*). [A, 315.]

ASPERCETTE (Fr.), n. A^{3}s-pe^{2}r-se^{2}t. The botanical genus *Onobrychis*. [A, 300; L, 41.]

ASPÉRELLE (Fr.), n. A^{3}s-pa-re^{2}l. The *Equisetum arvense*. [A, 300; L, 41.]

ASPERELLINÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pe^{2}r-e^{2}l-li(le)′-ne(na^3-e^2). Fr., *aspérellinées*. A mistaken spelling for *Asprellinæ* (*q. v.*).

ASPÉRELLINÉ (Fr.), adj. A^{3}s-pa-re^{2}l-en-a. Rough to the touch (said of leaves). [L, 41.]

ASPERGE (Fr.), n. A^{3}s-pe^{2}rzh. See Asparagus.—**A. commune.** See Asparagus *officinalis*.—**A's de Cosaque.** The young shoots of the *Typha latifolia*, used as food by the Cossacks. [L, 77.]—**A. du Cap.** The edible shoots of the *Aponogeton distachyum*. [A, 385.]—**A. officinale.** See Asparagus *officinalis*.—**Sirop de pointe d'a.** [Fr. Cod.]. Lat., *syrupus cum succo asparagi*. A syrup made by mixing, on a water-bath, 10 parts of asparagus juice and 18 of white sugar. [B, 113.]—**Tisane d'a.** [Fr. Cod.]. Lat., *ptisana radicis asparagi*. Asparagus tea; made by infusing 2 parts of asparagus root in 100 of boiling water. [B.]

ASPERGEMENT (Fr.), n. A^{3}s-pe^{2}rzh-ma^{3}n^2. See Aspersion.

ASPERGETTES (Fr.), n. pl. A^{3}s-pe^{2}rzh-e^{2}t. The young shoots of the *Ornithogalum pyrenaicum*, used as food in the neighborhood of Geneva. [B, 173.]

ASPERGILLACEÆ, ASPERGILLEÆ (Lat.), n's. f. pl. A^{2}s-(a^{3}s)-pu^{3}r(pe^{2}r)-ji^{2}l(gi^{2}l)-a(a^3)′se^2(ke^2)-e(a^3-e^2), -ji^{2}l(gi^{2}l)′e^2-e(a^3-e^2). Fr., *aspergillacées, aspergillées*. Ger., *Aspergillaceen, Aspergilleen*. Of Link, a family of mucedinous *Fungi*, including *Aspergillus, Mucor, Penicillium*, etc. [B, 170.]

ASPERGILLEI (Lat.), n. m. pl. A^{2}s(a^{3}s)-pu^{3}r(pe^{2}r)-ji^{2}l(gi^{2}l)′-e^2-i(e). Fr., *aspergillés*. Of Fries and Léveillé, a division of *Fungi* belonging to the *Mucedines* or *Hormiscini*, characterized by the floccose receptacle, which is either simple or branching and which bears the sporidia fixed upon a spherical or ovate terminal vesicle. [B, 170, 239.]

ASPERGILLIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pu^{3}r(pe^{2}r)-ji^{2}l(gi^{2}l)-li^{2}d′e^2-e(a^3-e^2). Fr., *aspergillidées*. Of Gray, a division of *Fungi*, corresponding in part to *Aspergillaceæ*. [B, 170.]

ASPERGILLIFORM, adj. A^{2}s-pu^{5}r-ji^{2}l′li^2-fo^{2}rm. Lat., *aspergilliformis* (from *aspergillum*, a sprinkler, and *forma*, form). Fr., *aspergilliforme*. Ger., *sprengwedelförmig*. In botany, resembling a sprinkler. [A, 300; B.]

ASPERGILLINI (Lat.), n. m. pl. A^{2}s(a^{3}s)-pu^{3}r(pe^{2}r)-ji^{2}l(gi^{2}l)-li(le)′ni(ne). Fr., *Aspergillinés*. Of Corda, a family of hyphomycetous *Fungi* (*Mucedines*), including *Stilbum, Peronospora, Penicillium*, etc. Of Reichenbach, a section of *Fungi* including *Oidium, Penicillium, Aspergillus*, etc. [B, 170.]

ASPERGILLINUS (Lat.), adj. A^{2}s(a^{3}s)-pu^{5}r(pe^{2}r)-ji^{2}l(gi^{2}l)-li(le)′nu^{3}s(nu^{4}s). Fr., *aspergillin*. Pertaining to or caused by an *Aspergillus*. [Siebenmann, "Arch. of Otol.," xii, 3, 4; "N. Y. Med. Jour.," May 10, 1884, p. 539.] See Otomycosis *aspergillina*.

ASPERGILLUS (Lat.), n. m. A^{2}s(a^{3}s)-pu^{5}r(pe^{2}r)-ji^{2}l(gi^{2}l)′-lu^{2}s(lu^{4}s). From *aspergere*, to sprinkle (from its resemblance to the *aspergillus* used for sprinkling holy water). Fr., *aspergille*. Ger., *Aspergillus, Kolbenschimmel*. It., *aspergillo*. Sp., *aspergilo*. A genus of ascomycetous *Fungi*, made by Micheli, belonging to the section *Aspergillei*, consisting of a mycelium made up of translucent, tubular, septate, branching threads (hyphæ), with thin walls, bearing erect, unbranched, usually non-septate, and thick-walled branches, the apices of which are dilated into spherical or club-shaped vesicles (receptacles). From the receptacle radiate a number of thin processes, the sterigmata, and each sterigma, by a process of terminal segmentation, divides into a row of spores (conidia). The entire apparatus, receptacle, sterigmata, and conidia, constitute the capitulum. *A.* is also found in another stage of development, the so-called sclerotium stage, when it consists of a dense tissue of mycelial threads inclosing hard, irregularly shaped granules (the sclerotia) made up of a dark fibrous cortex and a tough, yellowish medullary substance. Several species of *A.* are now known to be only the non-sexual reproductive stages of *Eurotium*, and the other species should probably be referred to the latter or to some similar genus. [B, 72, 239.]—**A. albus.** A species growing upon bread, distinguished by its branching sterigmata, white capitulum, and the small size of all its parts. [B, 72.]—**A. auricularis** [Link]. A species said to have been found in the external auditory canal of man. [B, 93.]—**A. candidus** [Micheli]. Syn.: *Monilia candida* [Persoon]. A species with white hyphæ and conidia, found in the air-sacs of a bird (*Pyrrhula vulgaris*) which were infiltrated with tubercles. [B, 46, 239.]—**A. clavatus.** A greenish-colored species with club-shaped receptacle larger than that of *A. fumigatus*, bearing very small conidia and supported upon very large and long hyphal branches. [B, 72.]—**A. flavescens** [Wreden], **A. flavus** [Brefeld]. The conidial form of *Eurotium a. flavus* (*q. v.*). [B, 72.]—**A. fumigatus** [Fresenius]. Syn.: *A. nigrescens* [Robin]. A pathogenetic species, with small club-shaped receptacles, bearing unbranched sterigmata and spherical conidia and carried upon short hyphal branches. The capitulum is at first colorless; afterward the receptacle and sterigmata (seldom the conidia) become yellowish, then blue or dark-green, and finally brown or dark-gray. The whole fungus has the aspect of a thin blue, green, or gray mold. It is the smallest of the varieties found in the human ear, and is said to be the only one capable of development in the healthy ear, and then only under the influence of constant moisture. It causes in the external auditory canal a variety of inflammation, although, according to Bezold, it is less apt to do so than the other species. It has also been found in the lungs of man and of the lower animals (the pheasant) and the nose of man. [A, 396; B, 72, 232, 239.]—**A. glaucus** [Link, Fries]. The conidial stage of *Eurotium a. glaucus* (*q. v.*). [B, 72.]—**A. mucoroides.** A species found, according to Virchow, in human lungs affected with tuberculosis or gangrene. [L, 87.]—**A. niger** [Van Tieghem]. See Eurotium *a. niger*.—**A. nigrescens** [Robin]. See *A. fumigatus*.—**A. nigricans** [Wreden]. See Eurotium *a. niger*.—**A. ochraceus.** A species distinguished by its branched sterigmata, its regularly spherical receptacles, and its color, which, at first flesh-colored, soon changes to an ochre-yellow. [B, 72.]—**A. oryzæ.** See Eurotium *oryzæ*.—**A. rubens.** J. O. Green's name for the *Otomyces purpureus*. [F.]

ASPERGOUTE (Fr.), n. A^{3}s-pe^{2}r-gut. See Espargoute.

ASPERGULA (Lat.), n. f. A^{2}s(a^{3}s)-pu^{5}rg(pe^{2}rg)′u^2(u^4)-la^3. See Asperula.

ASPERICIFOLIACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pe^{2}r-i^{2}s(i^{2}k)″-i^2-fo(fo^2)-li^2-a(a^3)′se^2(ke^2)-e(a^3-e^2). See Asperifoliaceæ.

ASPERICOLLIS (Lat.), adj. A^{2}s(a^{3}s)-pe^{2}r-i^2-ko^{2}l′li^{2}s. From *asper*, rough, and *collum*, the neck. Fr., *aspéricolle*. Ger., *rauhhalsig*. Having the neck or corselet rough. [L, 109, 116.]

ASPERICORNIS (Lat.), adj. A^{2}s(a^{3}s)-pe^{2}r-i^2-ko^{2}rn′i^{2}s. From *asper*, rough, and *cornu*, a horn. Having rough, horny processes. [L, 180.]

ASPERIFOLIACEÆ [Reichenbach], **ASPERIFOLIÆ** [Linnæus] (Lat.), n's f. pl. A^{2}s(a^{3}s)-pe^{2}r-i^2-fo(fo^2)-li^2-a(a^3)′se^2(ke^2)-e-(a^3-e^2), -fo′li^2-e(a^3-e^2). From *asper*, rough, and *folium*, a leaf. Fr., *aspérifoliées, aspérifoliacées*. Ger., *Rauhblättrige*. A family of plants belonging to the *Tubifloræ*, corresponding nearly to the *Borragineæ*; by some, made a tribe of that order. It is divided into the *Borragineæ, Echieæ*, and *Hydrophylleæ*, or into the *Schizocarpicæ, diocarpicæ*, and *Capsulares*. [B, 170.]

ASPERIFOLIATE, adj. A^{2}s″pe^{2}r-i^2-fo′li^{2}at. See Asperifolious.

ASPERIFOLIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pe^{2}r-i^2-fo(fo^2)-li(li^2)′-e^2-e(a^3-e^2). Fr., *asperifoliées*. 1. Of Martius, Spach, and Jussieu, a tribe or suborder of borraginaceous plants including *Buglossum, Arnebia*, and the *Anchuseæ* and *Cynoglosseæ* of Endlicher. 2. Of Brongniart, a class of hypogynous *Gamopetalæ*, comprising the families *Cordiaceæ, Borragineæ, Hydrophylleæ*, and *Hydroleaceæ*. [B, 170.]

ASPERIFOLIOUS, adj. A^{2}s-pe^{2}r-i-fo′li^2-u^{3}s. Lat., *asperifolius*. Fr., *aspérifolié*. Ger., *rauhblättrig*. Having the leaves rough. [A, 385.]

ASPERITAS (Lat.), n. f. A^{2}s(a^{3}s)-pe^{2}r′i^{2}t-a^{2}s(a^{3}s). Gen., *asperita′tis*. Fr., *aspérité, âpreté*. Ger., *Asperität, Rauhigkeit*. 1. Roughness, coarseness, rugosity (as of the surface of a bone where a muscle is attached). [A, 385; L, 43.] 2. Dryness, barrenness. [A, 312.] 3. Hoarseness. [A, 312.] 4. Harshness, sharpness, acidity, brackishness. [A, 312.]—**A. ab ætate, A. a. lixivio.** See *A. cutis*.—**A. arteriæ asperæ.** See *A.* (3d def.).—**A. a sapone, A. a vento.** See *A. cutis*.—**A. cutis.** Roughness of the skin. Plenck describes an *a. a vento*, due to exposure to cold winds; an *a. a lixivio* (seu *a sapone*), affecting the hands of washerwomen, and due to the caustic alkali in the soap used; and an *a. ab ætate*, observed in old persons, in whom the skin, especially that of the face, tends to grow coarse and rough. [G, 11.]—**A. unguium.** Roughness of the nails. [G.]

ASPÉRITÉ (Fr.), n. A^{3}s-pa-ri^2-ta. See Asperitas and Scabrities.

ASPERITUDO (Lat.), n. f. A^{2}s(a^{3}s)-pe^{2}r-i^2-tu^2(tu)′do. Gen., *asperitu′dinis*. See Asperitas.

ASPERITY, n. A^{2}s-pe^{2}r′i^2-ti^2. See Asperitas.

ASPERMA (Lat.), n. f. A^{2}s(a^{3}s)-pu^{5}rm(pe^{2}rm)′a^3. See Aspermatism.

ASPERMÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pu^{5}rm(pe^{2}rm)′e(a^3-e^2). Fr., *aspermes*. Ger., *Aspermen*. Of Wiggers, an order of cryptogamous plants, comprising such as he believed to be without seed or spore, and including *Ceramium, Conferva, Byssus, Ulva*, and other genera. [B, 170.]

ASPERMAL, adj. A^{2}s-pu^{5}rm′a^{2}l. See Aspermous.

ASPERMASIA, ASPERMATIA (Lat.), n's f. A^{2}s(a^{3}s)-pu^{5}rm(pe^{2}rm)-a(a^3)′zi^2(si^2)-a^3, -shi^2(ti^2)-a^3. Fr., *aspermasie*. See Aspermatism.

ASPERMATIC, adj. A^{2}s-pu^{5}rm-a^{2}t′i^{2}k. Lat., *aspermaticus*. Fr., *aspermatique*. Ger., *aspermatisch*. 1. Aspermous (*q. v.*). [A, 322.] 2. Pertaining to, caused by, or affected with, aspermatism. [M, 13.]

ASPERMATISM, n. A^{2}s-pu^{5}rm′a^{2}t-i^{2}zm. Lat., *aspermatismus* (from *α* priv., and *σπέρμα*, a seed). Fr., *aspermatisme*. Ger., *Aspermie, Samenmangel*. 1. A deficiency of seminal fluid. [D, 18.] 2. An habitually deficient or impeded ejaculation of the semen. [D, 18.]

ASPERMATOUS, adj. A^{2}s-pu^{5}rm′a^{2}t-u^{3}s. See Aspermous.

ASPERMATOZOË (Ger.), n. A^{3}s-pe^{2}rm-a^3-to-tso′e^2. See Azoospermia.

ASPERMATUS (Lat.), adj. A^{2}s(a^{3}s)-pu^{3}r(pe^{2}r)-ma(ma^3)′tu^{3}s-(tu^{4}s). Fr., *aspermé*. In botany, unable to reproduce; said of certain plants. [B, 121.]

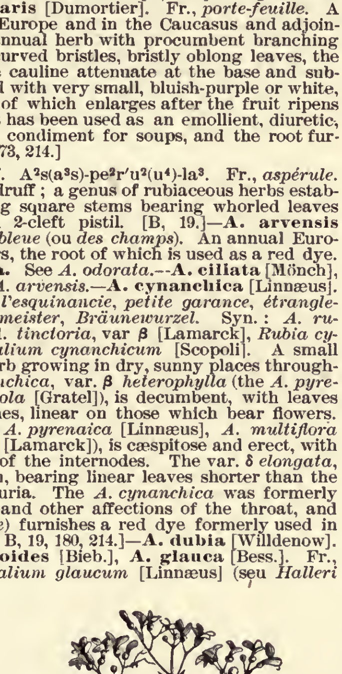
ASPERMIA (Lat.), n. f. A^{2}s(a^{3}s)-pu^{5}rm(pe^{2}rm)′i^2-a^3. Fr., *aspermie*. See Aspermatism.

ASPERMOUS, adj. A^{2}s-pu^{5}rm′u^{3}s. Gr., *ἄσπερμος*. Lat., *aspermus*. Fr., *aspermé*. Ger., *aspermisch, samenlos*. 1. Deficient in semen, affected with aspermatism. [A, 322.] 2. In botany, destitute of seeds. [B, 7.]

ASPEROCOCCEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pe^{2}r-o(o^2)-ko^{2}k′-se^2-(ke^2)-e(a^3-e^2). From *asperococcus*, one of the genera, from *asper*,

rough, and κόκκος, a berry. Fr., *aspérococcées.* Of Zanardini, a tribe of *Algæ* (*Ectogymnosporeæ*), including 4 genera. [B, 170.]

ASPEROUS, adj. A^{2}s'pu^{3}r-u^{3}s. In entomology, rugged, uneven, having very distinct elevated dots. [B, 240.]



ASPERSION, n. A^{2}s-pu^{5}r'zhu^{3}n. Gr., ῥαντισμός. Lat., *aspersio* (from *aspergere*, to sprinkle). Fr., *aspersion*, *arrosage*, *arrosement.* Ger., *Bestreuen*, *Besprengen.* Irrigation or sprinkling of the body or of a part with a liquid or a powder. [A, 322, 325.]

ASPERSUS (Lat.), adj. A^{2}s(a^{3}s)-pu^{5}rs(pe^{2}rs)'u^{3}s(u^{4}s). From *aspergere*, to sprinkle. Ger., *aufgestreut.* In botany, covered with scattered spots as if sprinkled. [B, 198.]

ASPERTANNIC ACID, n. A^{2}s-pu^{5}r-ta^{2}n'ni^{2}k. Fr., *acide aspertannique.* Ger., *Aspertannsäure.* A variety of tannic acid, $C_{14}H_9O_9$, or, according to others, $C_7H_8O_4 + \frac{1}{2}H_2O$, found in the *Asperula odorata.* It is a light-brown, odorless, very hygroscopic substance. [B, 2, 81, 207.]

ASPERUGO (Lat.), n. f. A^{2}s(a^{3}s)-pe^{2}r-u^2(u)'go. Gen., *asperu'ginis.* 1. A prickly plant mentioned by Pliny. [A, 312.] 2. A genus of borraginaceous plants. [B, 19.]—**A. ægyptiaca** [Linnæus]. Syn.: *Anchusa ægyptiaca* [De Candolle], *Lycopsis ægyptiaca* [Linnæus]. A species more properly referred to *Anchusa;* an annual plant growing near Alexandria. [B, 214.]—**A. procumbens** [Linnæus], **A. vulgaris** [Dumortier]. Fr., *porte-feuille.* A species found throughout Europe and in the Caucasus and adjoining portions of Asia; an annual herb with procumbent branching stems covered with stiff, curved bristles, bristly oblong leaves, the radical ones petiolate, the cauline attenuate at the base and subopposite or alternate; and with very small, bluish-purple or white, axilary flowers, the calyx of which enlarges after the fruit ripens and incloses the latter. It has been used as an emollient, diuretic, and diaphoretic, and as a condiment for soups, and the root furnishes a red dye. [B, 19, 173, 214.]

ASPERULA (Lat.), n. f. A^{2}s(a^{3}s)-pe^{2}r'u^2(u^4)-la^3. Fr., *aspérule.* Ger., *Waldmeister.* Woodruff; a genus of rubiaceous herbs established by Linnæus, having square stems bearing whorled leaves and 4-parted flowers and 2-cleft pistil. [B, 19.]—**A. arvensis** [Linnæus]. Fr., *aspérule bleue* (ou *des champs*). An annual European herb with blue flowers, the root of which is used as a red dye. [B, 173, 214.]—**A. cheirosa.** See *A. odorata.*—**A. ciliata** [Mönch], **A. cœrulea** [Dod.]. See *A. arvensis.*—**A. cynanchica** [Linnæus]. Fr., *aspérule* (ou *herbe*) *à l'esquinancie*, *petite garance*, *étranglechien.* Ger., *Hügel-Waldmeister*, *Bräunewurzel.* Syn.: *A. rubeola*, var. α [Lamarck], *A. tinctoria*, var β [Lamarck], *Rubia cynanchica* [J. Bauhin], *Galium cynanchicum* [Scopoli]. A small perennial, nearly erect, herb growing in dry, sunny places throughout Europe. The *A. cynanchica*, var. β *heterophylla* (the *A. pyrenaica* [Linnæus], *A. rubeola* [Gratel]), is decumbent, with leaves ovate on the sterile branches, linear on those which bear flowers. The var. γ *saxatilis* (the *A. pyrenaica* [Linnæus], *A. multiflora* [Lapeyrouse], *A. saxatilis* [Lamarck]), is cæspitose and erect, with linear leaves of the length of the internodes. The var. δ *elongata*, with elongated, erect stem, bearing linear leaves shorter than the internode, is found in Tauria. The *A. cynanchica* was formerly used as a gargle in quinsy and other affections of the throat, and the root (*radix cynanchicæ*) furnishes a red dye formerly used in place of madder. [A, 301; B, 19, 180, 214.]—**A. dubia** [Willdenow]. See *A. arvensis.*—**A. galioides** [Bieb.], **A. glauca** [Bess.]. Fr., *aspérule gaillet.* Syn.: *Galium glaucum* [Linnæus] (seu *Halleri* [Sut.], seu *campanulatum* [Villars], seu *grandiflorum* [Clairo]). A perennial herb growing in middle and southern Europe. [B, 214.]—**A. multiflora** [Lapeyrouse]. The *A. cynanchica*, var. γ *saxatilis.* [B, 214.]—**A. odorata** [Linnæus]. Fr., *aspérule odorante*, *muguet* (ou *reine*, ou *hépatique*) *des bois*, *petit muguet*, *hépatique étoilée.* Ger., *gemeiner Waldmeister*, *Meserich*, *Megerkraut.* Syn.: *Galium odoratum*, *herba matrisilvæ.* Sweet-scented woodruff, wood-rowel; a European species bearing brilliant white flowers and bright-green leaves disposed in a stellate fashion about the stem. The leaves, which are inodorous when fresh, acquire the scent of new-mown hay when wilted, and, after being dried, retain it for years; they are infused in Rhine wine to make the *Maitrank*, or *Maiwein*, of the Germans. The plant contains aspertannie acid and coumarin, and is esteemed as an aromatic, tonic, astringent, and diaphoretic. Its herb, *herba matrisilvæ* (seu *hepaticæ stellatæ*, seu *asperulæ*, seu *aparines montanæ*, seu *stellariæ*), was formerly used as a remedy for hydrophobia. [A, 301, 327; B, 19, 119, 180; H. Baillon (L, 87).]—**A. odorosa.** See *A. odorata.*—**A. pyrenaica** [Linnæus], **A. rubeola** [Lamarck, Gratel], **A. saxatilis** [Lamarck]. Species now regarded as varieties of *A. cynanchica* (*q. v.*). [B, 214.]—**A. tinctoria** [Linnæus]. Fr., *aspérule à teinture.* Syn.: *A. rubeola*, var. β [Lamarck], *A. tinctoria*, var. α [Lamarck], *Galium tinctorium* [Scopoli]. A perennial species, closely related to *A. cynanchica*, and used as a dye-plant, growing in dry, rocky places of Europe. The *A. tinctoria*, var. β, of Lamarck is a variety of the *A. cynanchica.* [B, 173, 214.]—**Herba asperulæ.** The herb of *A. odorata.* [A, 319.]—**Herba asperulæ aureæ.** The herb of *Galium cruciata.* [B, 180.]—**Radix asperulæ.** The root of *A. odorata.* [L, 57.]

THE ASPERULA ODORATA. [A, 327.]

ASPÉRULE (Fr.), n. A^{3}s-pa-ru^{6}l. See ASPERULA.—**A. à l'esquinancie.**—See ASPERULA *cynanchica.*—**A. à teinture.** See ASPERULA *tinctoria.*—**A. des champs.** See ASPERULA *arvensis.*—**A. des teinturiers.** See ASPERULA *tinctoria.*—**A. gaillet.** See ASPERULA *glauca.*—**A. odorante.** See ASPERULA *odorata.*

ASPERULEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pe^{2}r-u^2(u)'le^2-e(a^3-e^2). Fr., *aspérulées.* A tribe of rubiaceous plants, including the genus *Asperula*, corresponding to the *Stellatæ* of De Candolle. [A. Richard (B, 170).]

ASPERULEOUS, adj. A^{2}s-pe^{2}r-u^2'le^2-u^{3}s. Lat., *asperuleus.* Fr., *aspérulé.* Resembling or belonging to the genus *Asperula.* [L, 41.]

ASPERULUS (Lat.), adj. A^{2}s(a^{3}s)-pe^{2}r'u^2(u^4)-lu^{3}s(lu^{4}s). Dim. of *asper.* Slightly rough. [B, 121.]

ASPERUM (Lat.), n. n. A^{2}s(a^{3}s)'pe^{2}r-u^{3}m(u^{4}m). A rough surface. [L, 94.]

ASPHALGESIA (Lat.), n. f. A^{2}s(a^{3}s)-fa^{2}l(fa^{3}l)-je(ga)'zi^2(si^2)-a^3. A term applied by A. Pitres to that condition in which a person affected with hemi-anæsthesia or hemi-analgesia feels intense pain on touching certain articles, such as copper or silver, followed by a convulsive attack if the contact is prolonged; usually observed during hypnotism, rarely in the waking state. ["Brit. Med. Jour.," Nov. 13, 1886, p. 946.]

ASPHALT, n. A^{2}s-fa^{2}lt'. Gr., ἄσφαλτος, ἄσφαλτον. Lat., *asphaltum* [Fr. Cod.], *bitumen judaicum.* Fr., *asphalte*, *goudron minéral*, *bitume de Judée* [Fr. Cod.]. Ger., *Asphalt*, *Judenpech*, *Erdharz*, *Erdpech*, *Bergpech.* It., *asfalto*, *bitume giudaico.* Sp., *asfalto* [Sp. Ph.]. Compact bitumen, mineral pitch, Jew's pitch; a smooth, hard, brittle, black or brownish-black, resinous mineral, of conchoidal fracture and bituminous odor, which takes fire easily and burns with a bright but very smoky flame. It consists of carbon, hydrogen, oxygen, and nitrogen in varying proportions, with a variable amount of ash. According to Boussingault, it is a mixture of asphaltene and petrolene. It is found pure on the shores of the Dead Sea, and more or less pure in other parts of the world. Occurring mixed with liquid petroleum, so as to be semi-solid, it constitutes *maltha*, or mineral tar. It was used by the ancient Egyptians for embalming. [B, 2.]—**Artificial a.** Coal-tar a., gas-tar a.; a mixture of sand, chalk, or limestone, with the thick, pitchy residue obtained by evaporating the more volatile portion of coal-tar. [B.]—**A. cement.** See *A. varnish.*—**A. oil.** Lat., *oleum asphalti.* Ger., *A'öl.* A yellow or dark-brown oil, consisting of hydrocarbons with a small quantity of oxidized matter, obtained by the dry distillation of a. It has been used in the treatment of phthisis and as an antispasmodic. [A, 301; B; L, 30.]—**A'stein** (Ger.). A mixture of a. and limestone, found in various parts of the world. [L, 37.]—**A. varnish.** Brunswick black, a varnish made by dissolving, with the aid of heat, 4 oz. of asphalt and $\frac{1}{2}$ drachm of India-rubber in 10 oz. of mineral naphtha; used for making cells on microscope slides. [Carpenter (B, 164).]—**Coal-tar a.** See *Artificial a.*—**Gas-tar a.** See *Artificial a.*

ASPHALTENE, n. A^{2}s-fa^{2}lt'en. Fr., *asphaltène.* Ger., *Asphalten.* A black solid body, $C_{40}H_{20}O_6$, forming the chief constituent of certain bituminous substances. [A, 385.]

ASPHALTIAS (Lat.), n. m. A^{2}s(a^{3}s)-fa^{2}lt(fa^{3}lt)'i^2-a^{2}s(a^{3}s). Gr., ἀσφαλτίας. An ancient name for one of the lumbar vertebræ. Authors differ as to whether it was the first or the fifth. [A, 301; Pollux (A, 311); A, 322, 323; Gorræus (A, 325); A, 385.]

ASPHALTIC, adj. A^{2}s-fa^{2}lt'i^{2}k. Fr., *asphaltique.* Consisting of, containing, derived from, contained in, or pertaining to, asphalt. [B, 137; L, 73.]

ASPHALTION (Lat.), n. n. A^{2}s(a^{3}s)-fa^{2}lt(fa^{3}lt)'i^2-o^{2}n. Gr., ἀσφάλτιον. An ancient name for a kind of trefoil having a bituminous odor, supposed to have been the *Psoralea bituminosa.* [Dioscorides (A, 311; L, 105); Pliny (A, 312).]

ASPHALTITES (Lat.), adj. A^{2}s(a^{3}s)-fa^{2}lt(fa^{3}lt)-i(e)'tez(tas). Gr., ἀσφαλτίτης. Fr., *asphaltite.* Of, pertaining to, or containing, asphalt; as a n. (σπόνδυλος understood), see ASPHALTIAS. [A, 311.]

ASPHALTITIS (Lat.), n., f. of adj. *asphaltites.* A^{2}s(a^{3}s)-fa^{2}lt-(fa^{3}lt)-i(e)'ti^{2}s. Gen., *asphaltit'idis.* Gr., ἀσφαλτῖτις. Fr., *asphaltite.* 1. See ASPHALTIAS. 2. See ASPHALTION.

ASPHALTUM (Lat.), n. n. A^{2}s(a^{3}s)-fa^{2}lt(fa^{3}lt)'u^{3}m(u^{4}m). Gr., ἄσφαλτος, ἄσφαλτον. In the Fr. Cod., the official title of asphalt (*q. v.*). [B.]—**Gummi asphalti.** See ASPHALT.—**Oleum asphalti.** See ASPHALT *oil.*

ASPHARAGONIA (Lat.), n. f. A^{2}s(a^{3}s)-fa^{2}r(fa^{3}r)-a^3-go'ni^2-a^3. See ASPARAGONIA.

ASPHARAGUS (Lat.), n. m. A^{2}s(a^{3}s)-fa^{2}r(fa^{3}r)'a^3-gu^{3}s(gu^{4}s). Gr., ἀσφάραγος. See PHARYNX and ASPARAGUS.

ASPHENDAMNOS (Lat.), n. f. A^{2}s(a^{3}s)-fe^{2}n-da^{2}m(da^{3}m)'no^{2}s. See SPHENDAMNUS.

ASPHODEL, n. A^{2}s'fo-de^{2}l. See ASPHODELUS.—**Bog a.** The *Narthecium ossifragum.* [B, 19.]—**False a.** The *Tofieldia.* [B, 19.]—**Lancashire a.** The *Narthecium ossifragum.* [B, 19.]—**Scotch a.** The *Tofieldia palustris.* [B, 19.]—**White a.** See ASPHODELUS *ramosus* and ASPHODELUS *albus.*—**Yellow a.** See ASPHODELINE *lutea.*

ASPHODÈLE (Fr.), n. A^{3}s-fo-de^{2}l. See ASPHODELUS.—**A. à Jeanne.** See ASPHODELINE *lutea.*—**A. blanc.** See ASPHODELUS

O, no; **O^2**, not; **O^3**, whole; **Th**, thin; **Th^2**, the; **U**, like oo in too; **U^2**, blue; **U^3**, lull; **U^4**, full; **U^5**, urn; **U^6**, like ü (German).

ramosus, Asphodelus *albus*.—**A. jaune.** See Asphodeline *lutea*. —**A. mâle, A. rameux.** See Asphodelus *ramosus*.

ASPHODELEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-fo(fo^2)-de^{2}l'e^2-e(a^3-e^2). Fr., *asphodelées*. Ger., *Asphodeleen*. A family (order) of monocotyledonous plants, in the systems of Jussieu, Brown, and others, comprising *Aletris*, *Sanseviera*, *Aloe*, *Anthericum*, *Asphodelus*, *Phalangium*, *Hyacinthus*, *Scilla*, *Ornithogalum*, *Allium*, and other genera. It includes caulescent or acaulescent herbs with 6-parted regular perianth, deciduous or withering ; 6 stamens inserted on the calyx with introrse bilocular anthers ; a free trilocular ovary with the loculi opposite the outer divisions of the perianth, and each loculus containing several (rarely 2 or 1) biseriate, generally anatropous ovules ; a single terminal, more or less elongated style with entire or 3-cleft stigma ; and a capsular, trilocular, loculicidal fruit containing in each loculus 1 to many seeds which have a membranaceous, rarely crustaceous, testa and horny or fleshy albumen. It was divided by Endlicher into the *Hyacintheæ*, *Anthericeæ*, and *Asparageæ ;* by Kunth into *Hyacintheæ*, *Allieæ*, and *Anthericeæ*, to which others add a fourth tribe, the *Tulipeæ ;* by Reichenbach into the *Scilleæ*, *Hemerocallidieæ*, and *Anthericeæ*, and in another classification into the *Tullbaghieæ*, *Scilleæ*, and *Dracæneæ ;* and by others into the *Aloineæ*, *Hemerocallideæ*, *Tullbaghieæ*, *Hyacintheæ*, *Scilleæ*, *Eriospermeæ*, *Anthericeæ*, *Aphyllantheæ*, and *Tulipeæ*. By most of the later writers it is joined to the *Liliaceæ*, being regarded as a tribe of the latter. It then is usually employed in a more restricted sense, comprising those liliaceous herbs in which the rhizome is quite short, the stem rarely bulbous, the leaves are not fleshy, the inflorescence is simple, rarely branching, the segments of the perianth are separate and patent, the anthers are introrsely dehiscent, and the fruit is a capsule [Bentham and Hooker]. It is divided into the subtribes *Euasphodeleæ*, *Chlorogaleæ*, *Bowieæ*, *Anthericeæ*, and *Dianelleæ*. Engler divides the *A.* into the subtribes *Asphodelinæ*, the *Anthericinæ* (in part, the *Anthericeæ* and the *Euasphodeleæ* of Bentham and Hooker), the *Chlorogalinæ* (Bentham and Hooker's *Chlorogaleæ*), the *Odontosteminæ*, the *Eriosperminæ* (Bentham and Hooker's *Bowieæ*), the *Xeronemieæ* (comprising two genera referred by Bentham and Hooker to the *Euasphodeleæ* and the *Anthericeæ*), and the *Dianellinæ* (Bentham and Hooker's *Dianelleæ*). [B, 42, 170, 188 ; Engler (B, 245).]

ASPHODELEOUS, adj. A^{2}s-fo-de^{2}l'e^2-u^{3}s. Lat., *asphodeleus*. Fr., *asphodelé*. Resembling an *Asphodelus* or belonging to the *Asphodeleæ*. [L, 116.]

ASPHODELI (Lat.), n. m. pl. A^{2}s(a^{3}s)-fo^{2}d'e^{2}l-i(e). Fr., *asphodelés*. Ger., *Asphodelen*. Of Jussieu and De Candolle, a section of plants corresponding to *Asphodeleæ* in the more extended sense. [B, 170.]

ASPHODELIACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-fo^{2}d-e^{2}l-i^2-a(a^3)'-se^2(ke^2)-e(a^3-e^2). Fr., *asphodeliacées*. Ger., *Asphodeliaceen*. See Asphodeleæ.

ASPHODELIN, n. A^{2}s-fo^{2}d'e^{2}l-i^{2}n. Fr., *asphodéline*. Ger., *Asphodelin*. Rogain's name for the variety of cane-sugar found in the root of *Asphodelus ramosus*. [B, 207.]

ASPHODELINÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-fo(fo^2)-de^{2}l-i(e)'ne-(na^3-e^2). Of Engler, a subtribe of the *Asphodeleæ*, comprising *Asphodelus*, *Asphodeline*, and two other genera with racemose flowers having an infundibuliform or campanulate perianth. [Engler (B, 245).]

ASPHODELINE (Lat.), n. f. A^{2}s(a^{3}s)-fo^{2}d-e^{2}l-i(e)'ne(na). A genus of plants separated by Reichenbach from *Asphodelus*, from which it differs in its more or less leafy stem and usually yellow flowers. [B, 42.]—**A. lutea** [Reichenbach]. Fr., *asphodèle jaune*. Ger., *gelber Asphodill* (oder *Affodill*). Syn. : *Asphodelus luteus* [Linnæus]. A perennial herb growing in rocky districts in southern Europe and North America, with erect leafy stalks 1 to 3 feet in height, bearing long racemes of fragrant yellow flowers. The tubers (*radix asphodeli lutei*) of the yellow fleshy root were formerly employed like those of *Asphodelus ramosus*. [B, 180.]

ASPHODELODES (Lat.), adj. A^{2}s(a^{3}s)-fod(fo^{2}d)-e^{2}l-o'dez-(das). Gr., ἀσφοδελώδης. Resembling the *Asphodelus*. [Theophrastus (A, 311).]

ASPHODELOIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-fo^{2}d-e^{2}l-o(o^2)-i^{2}d'-e^2-e(a^3-e^2). Fr., *asphodeloidées*. 1. A section of liliaceous plants made by Ventenat. [B, 170.] 2. Of Engler, a suborder of liliaceous plants, comprising the tribes *Asphodeleæ*, *Hemerocallideæ*, *Aloineæ*, *Aphyllantheæ*, *Johnsonieæ*, *Dasypogoneæ*, *Lomandreæ*, and *Calectasieæ ;* corresponding in part, therefore, to *Asphodeleæ* in its widest sense. [Engler (B, 245).]

ASPHODELUS (Lat.), n. m. A^{2}s(a^{3}s)-fo^{2}d'e^{2}l-u^{3}s(u^{4}s). Gr., ἀσφόδελος. Fr., *asphodèle*. Ger., *Asphodill*, *Affodill*. It., *asfodilo*. Sp., *asfodel*. The asphodel, day-lily, or daffodil ; a genus of liliaceous plants belonging to the *Asphodeleæ*, established by Linnæus, comprising herbs with radical subulate leaves, and flowers, usually white, having a 6-parted, spreading perianth and 6 declinate upcurved stamens with dilated bases arching over the free ovary, and with a globular, trilocular, capsular fruit, having 2 seeds in each cell. [B, 34, 180.]—**A. æstivus.** 1. Of Reichenbach, see *A. tenuifolius*. 2. Of Brotero, a perennial Portuguese species. [B, 188.]—**A. albus** [Miller], **A. albus non ramosus.** Fr., *asphodèle blanc*. Ger., *weisser Asphodill* (oder *Affodill*). A species by some united with *A. ramosus*, but differing from the latter in its not-branching stem, the color and length of the bracts and the larger, ovate capsule. It is found in the portions of Europe and Africa bordering upon the Mediterranean and in Dalmatia and Persia. Its root-tubers (*radix asphodeli albi*) were used like those of *A. ramosus*. The *A. albus* of Nees v. Esenbeck is the *A. fistulosus*. [B, 180, 188.]—**A. albus ramosus.** See *A. ramosus*.—**A. canariensis** [Smith]. See *A. tenuifolius*.—**A. fistulosus** [Linnæus]. A species, by some included with *A. ramosus*, growing in the Mediterranean countries of Europe and Africa, distinguished by its stems branching above and by its subulate, subfistulose, rather rough leaves. [B, 188.]—**A. fœminus** [Cam.], **A. folio fistuloso striato** [Morison]. The *Asphodeline lutea*. [B, 211.]—**A. intermedius** [Hornem.]. See *A. tenuifolius*.—**A. luteus** [Linnæus]. See Asphodeline *lutea*.—**A. major albus ramosus.** See *A. ramosus*.—**A. major non ramosus.** See *A. albus*.—**A. major ramosus flore albo.** See *A. ramosus*.—**A. microcarpus** [Viviani]. See *A. ramosus*.—**A. minor** [Clusius]. See *A. fistulosus*.—**A. neglectus** [Römer and Schultes]. A species growing in Hungary, the mountains of Italy, and the Pyrenees ; by Kunth identified with *A. albus*, by others regarded as a distinct species closely related to *A. ramosus*. It has the same medicinal applications as the latter. [B, 180, 188.]—**A. racemosus** [Link]. See *A. ramosus*.—**A. ramosus** [Linnæus]. Fr., *asphodèle rameux*, *lis asphodèle*, *baton royal*. Ger., *ästiger Asphodill*, *Königswurzel*, *Kupferwurzel*, *Goldwurzel*. Syn. : *hastula regia*, *sceptrum regium*. King's-spear, white branched asphodel ; a species having a naked branching stem, each branch bearing a spike of white, star-shaped flowers having the petals streaked with purple. The rhizome and aggregated, oblong, wedge-shaped root-tubers, brownish externally, dirty yellow within, of fleshy consistency and unpleasant, acrid, bitter taste, were formerly used in medicine under the names of *radix asphodeli* (seu *asphodeli albi vera*, seu *hastulæ*, seu *hastulæ regis*, seu *hastulæ regiæ*, seu *martagi*) and *bacilli regii*. They were the ἀσφόδελος of Dioscorides and are said to constitute the drug, used at the present day in Morocco, known as *ablaluz*. They have been used as a diuretic, emetic, and emmenagogue, and boiled in wine lees, as a poultice for application to wounds and cutaneous eruptions. [A, 327; B, 180; "Proc. of the Am. Pharm. Assoc.," xxiii, p. 133 (B) ; L, 94.]—**A. tenuifolius** [Cavanilles]. A species indigenous to the Canary Islands, closely related to *A. fistulosus* and perhaps only a variety of the latter. It constitutes the drug known as *elhet lahode* in Morocco. The *A. tenuifolius* of the "Hortus berolinensis" is the *A. fistulosus*. [B, 188 ; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 114 (B).]—**A. verus albus.** See *A. albus*.—**A. verus luteus.** See Asphodeline *lutea*.—**Radix asphodeli.** The tuberous roots of *A. ramosus* and *Asphodeline lutea*. [B, 180 ; L, 30.]—**Radix asphodeli albi.** The rhizome and tubers of *A. albus* and *A. ramosus*. [B, 180.]—**Radix asphodeli albi vera.** The rhizome and tubers of *A. ramosus*. [B, 180.]—**Radix asphodeli lutei.** The tuberous rhizome of *Asphodeline lutea*. [B, 180.]

THE ASPHODELUS RAMOSUS.
[A, 327.]

ASPHODILL (Ger.), n. A^{3}s-fo-del'. See Asphodelus.—**Aestiger A., A'lilie.** See Asphodelus *ramosus*.—**Gelber A.** See Asphodeline *lutea*.—**Weisser A.** See Asphodelus *ramosus* and Asphodelus *albus*.

ASPHOTA (Sanscr.), n. The *Clitorea ternata*. [B, 172.]

ASPHYCTIC, adj. A^{2}s-fi^{2}k'ti^{2}k. Gr., ἄσφυκτος. Lat., *asphyctus*, *asphycticus*. Fr., *asphyctique*. Ger., *asphyktisch*. It., *asfittico*. Sp., *asfictico*. Pertaining to, affected with, or causing, asphyxia. [A, 322, 385 ; L, 54.]

ASPHYCTOUS, adj. A^{2}s-fi^{2}k'tu^{3}s. See Asphyctic.

ASPHYXIA (Lat.), n. f. A^{2}s(a^{3}s)-fi^{2}x(fu^{6}x)'i^2-a^3. Gr., ἀσφυξία (from α priv., and σφύζειν, to pulsate, or σφύξις [=σφυγμός], pulsation). Fr., *asphyxie*. Ger., *Asphyxie*, *Pulslosigkeit*, *Scheintod*. It., *asfissia*. Sp., *asfixia*. 1. Anciently, any condition attended with sudden cessation or weakness of the pulse. [A, 387.] 2. As now used, a state of suspended animation caused by impeded respiration, as by strangulation, smothering, submersion, or the inhalation of an irrespirable gas. 3. In botany, that condition of a plant which is produced by an obstruction to the entrance of air into its tissues. [B, 19.]—**A. absoluta.** A. without intervals of sensibility or consciousness. [L, 83.]—**A. a carbone.** A. due to the inhalation of the fumes of burning charcoal. [L, 132.]—**A. a fumis.** A. due to the inhalation of any noxious gas, vapor, or exhalation. [L, 132.]—**A. algida.** Insensibility from exposure to cold. [L, 83, 120.]—**A. a mephitide, A. a musto.** See *A. a fumis*.—**A. a pathemate.** See Apoplexia *mentalis*.—**A. carbone.** See *A. a carbone*.—**A. cataleptica.** Catalepsy. [L, 132.] —**A. cataphora.** A. with short, imperfect remissions. [L, 83.]—**A. congelatorum.** See *A. algida*.—**A. demersorum.** See *A. immersorum*.—**A. electrica.** A. caused by electricity or lightning. [L, 120.]—**A. ex compressu.** A. from being crushed. [M, 66.]—**A. ex corpore superincubante.** A. from overlying. [M, 66.]—**A. ex obturatis spiritus itineribus.** A. from occlusion of the air-passages. [M, 66.]—**A. ex suspendio.** See *A. suspensorum*.—**A. ex vaporibus pestiferis.** See *A. a fumis*.—**A. flatulenta.** See Apoplexia *flatulenta*.—**A. foricariorum, A. fumis.** See *A. a fumis*.—**A. hysterica.** Sudden loss of consciousness due to hysteria. [L, 132.]—**A. idiopathica.** See *Idiopathic a.*—**A. immersorum** [Morgagni]. A. due to submersion, apparent death by drowning. [L, 132.]—**A. lethargica.** A state of mental and bodily torpor with deep, quiet sleep. [L, 83.]—**A. livida.** That form or stage of suspended animation in which the skin is dusky-red or cyanotic, the cutaneous vessels being turgid with blood, and the reflex contractility of the muscles is preserved. [A, 22.]—**A. localis.** See *Local a.*—**A. localis cum gangræna symmetrica.** Fr., *asphyxie locale avec gangrène symétrique*. Syn.: *Raynaud's disease*, *Raynaud's symmetrical gangrene*. A general

nervous disease, specially characterized by local disorders of the circulation (in the form of ischæmia, cyanosis, or rubor) of the skin, affecting particularly the extremities, and attended with severe pain, together with symmetrical gangrene of the ends of the fingers or toes, and sometimes also of the nose, ears, or other parts. [Raynaud, "De l'asphyxie locale et de la gangrène symétrique des extrémités." Thèse de Paris, 1862 (G, 75).]—**A. mephitica, A. musta.** See *A. a fumis.*—**A. neonatorum.** Fr., *asphyxie* (ou *mort apparente*) *des nouveau-nés.* Ger., *Scheintod Neugeborenen.* It., *asfissia dei neonati.* Sp., *asfixia de los recien nacidos.* Suspended animation of the new-born; a condition in which the respiratory muscles do not act, or act imperfectly, and consequently breathing does not take place, although the heart may be acting with regularity. It is met with under two forms, *a. livida* and *a. pallida* (*q. v.*). [A, 22; D, 29.]—**A. neophytorum, A. of the new-born.** See *A. neonatorum.*—**A. pallida.** That form or stage of suspended animation in which the surface is cold and pallid, and the reflex contractility of the muscles is lost. [A, 22.]—**A. pestilenta.** See *Asiatic* CHOLERA.—**A. sideratorum.** Apparent death from sunstroke or from a stroke of lightning. [L, 132.]—**A. spinalis** [Duhamel]. Death from extravasation into the spinal canal. [L, 132.]—**A. strangulatorum, A. suffocationis.** A. from suffocation. [L, 83.]—**A. suspensorum.** A. from suspension (hanging). [L, 132.]—**A. traumatica** [Bohn]. Apparent death due to an injury. [L, 132.] See SHOCK.—**A. valsalviana.** Cardiac syncope. [L, 132.]—**A. vigil.** See COMA *vigil.*—**Cholera a.** See *Asiatic* CHOLERA.—**Choleraic a.** An asphyctic state occurring in the course of Asiatic cholora. [D, 41.]—**Cutaneous a.** Fr., *asphyxie cutanée.* Ger., *Hautasphyxie.* It., *asfissia cutanea.* 1. A term which has been applied to the condition which results from covering an animal, such as a rabbit, with an impermeable varnish so as to prevent all ingress or egress of liquids or gases by the skin. The temperature undergoes a decided reduction, due to its increased discharge from the surface, and the condition may be mitigated by keeping the animal warm; otherwise it soon ends in death. It seems to be due to retention of some of the constituents of the sweat in the blood and to rapid loss of heat. [A, 383.] 2. Cutaneous gangrene. [L, 44.]—**Heat a.** Sunstroke. [D.]—**Idiopathic a.** Lat., *a. idiopathica.* A really meaningless term formerly applied to such occurrences as sudden death from heart disease. [A, 69.]—**Local a.** Lat., *a. localis.* Fr., *asphyxie locale* (ou *des parties*). Ger., *locale Asphyxie.* 1. A localized anæmia with chilling, as of the tips of the fingers, so that they become white and insensible, as if frozen; a condition due to spasmodic constriction of the blood-vessels. [Huchard, "Sur les névroses," Paris, 1882; rev. in "Gaz. hebd. de méd. et de chir.," Apr. 28, 1882, p. 274.] 2. Gangrene of a part. Cf. *Symmetrical* GANGRENE and *A. localis cum gangræna symmetrica.*—**Paralytic a.** A form of a. neonatorum produced by compression or other injury of the brain and medulla oblongata during delivery. [A, 398.]—**Pestilential a.** Lat., *a. pestilenta.* See *Asiatic* CHOLERA.—**Secondary a.** A form that comes on after apparent resuscitation, gradually increasing and sometimes proving fatal. [M. Hall (A, 398).]—**Solar a.** Sunstroke. [M, 10.]

ASPHYXIAL, adj. A^{2}s-fi^{2}x'i^2-a^{2}l. See ASPHYCTIC.

ASPHYXIANT (Fr.), adj. A^{3}s-fi^{2}x-i^2-a^{3}n^2. Asphyxiating, producing asphyxia. [L, 41, 42.]

ASPHYXIATED, adj. A^{2}s-fi^{2}x'i^2-at-e^{2}d. Fr., *asphyxié.* Ger., *asphyxirt.* In a state of asphyxia.

ASPHYXIE (Fr., Ger.), n. A^{3}s-fi^{2}x-e, -e'. Asphyxia.—**A. croupale** (Fr.). Asphyxia due to croup. ["Rev. mens. des mal. de l'enfance," Nov., 1884 (D).]—**A. des nouveau-nés** (Fr.). See ASPHYXIA *neonatorum.*—**A. des parties** (Fr.). See *Local* ASPHYXIA.—**A. lente des nouveau-nés** (Fr.). See SCLEREMA *neonatorum.*—**A. locale** (Fr.). See *Local* ASPHYXIA.

ASPHYXIED, adj. A^{2}s-fi^{2}x'i^{2}d. See ASPHYXIATED.

ASPHYXY, n. A^{2}s-fi^{2}x'i^2. See ASPHYXIA.

ASPIC, n. A^{2}s'pi^{2}k. Fr., *aspic.* Ger., *Spieke* (1st def.). 1. (A corruption of *spica*) see LAVANDULA *spica.* 2. The asp. [L, 43.]—**A. d'outre mer** (Fr.). See ANDROPOGON *nardus.*—**Essence d'a.** (Fr.), **Huile d'a.** (Fr.), **Oil of a.** See *Oleum* LAVANDULÆ.

ASPICILIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^2-si^{2}l(ki^{2}l)-i(i^2)'e^2-e(a^3-e^2). Fr., *aspiciliées.* Of Arnold, a tribe of the *Urceolariaceæ,* comprising 2 genera. [B, 170.]

ASPIDECHIDNEI (Lat.), n. m. pl. A^{2}sp(a^{3}sp)''i^{2}d-e^2-ki^{2}d-(ch^{2}i^{2}d)'ne^2-i(e). From ἀσπίς, a shield, and ἔχιδνα, a viper.

ASPIDES (Lat.), n. m. pl. A^{2}s(a^{3}s)'pi^{2}d-ez(as). Ger., *Aspiden, Schildthiere.* Of Hæckel, a class of the *Articulata,* including the *Trilobita* and the *Merostoma.* [L, 228.]

ASPIDEUS (Lat.), adj. A^{2}s(a^{3}s)-pi^{2}d'e^2-u^{3}s(u^{4}s). Shield-shaped; a botanical species-name. [B.]

ASPIDIACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^2-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *aspidiacées.* Of Gray, Presl, and others, a suborder or division of polypodiaceous ferns, including *Aspidium* and related genera. According to Hooker, it comprises *Aspidium, Nephrodium, Onoclea,* and 5 other genera with subglobose, rarely elliptical, dorsal sori, and superior involucre which may be orbicular and peltate, or cordate, or reniform and affixed by the sinus, or elliptical and attached by a longitudinal receptacle, the margins being free or nearly so. [B, 170, 242.]

ASPIDIACEOUS, adj. A^{2}s-pi^{2}d-i^2-a'shu^{3}s. Lat., *aspidiaceus.* Fr., *aspidiacé.* Resembling the genus *Aspidium,* or belonging to the *Aspidiaceæ.* [L, 116, 180.]

ASPIDIACITES (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^2-a^2(a^3)-si(ke)'-tez(tas). A tribe of fossil ferns (*Filicacites*), made by Sternberg. [B, 170.]

ASPIDIARIÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^2-ar(a^{3}r)'i^2-e(a^3-e^2). A section of the *Aspidiaceæ,* made by Presl, including *Aspidium* (in its broadest sense) and one other genus, which have a peltate suborbicular indusium. [B, 121, 170.]

ASPIDIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i(i^2)'e^2-e(a^3-e^2). Fr., *aspidiées.* Of Gaudichaud and others, a tribe or subtribe of polypodiaceous ferns, corresponding to the *Aspidiaceæ,* with the addition of *Cystopteris* and 1 or 2 other genera. [B, 170.]

ASPIDIN, n. A^{2}s'pi^{2}d-i^{2}n. Fr., *aspidine.* Ger., *Aspidin.* It., *aspidina.* A substance obtained by Pavesi from the male fern (*Aspidium filix mas*); not a definite chemical compound, but a sort of extract. [B, 5.]

ASPIDIOID, adj. A^{2}s-pi^{2}d'i^2-oid. Gr., ἀσπιδοειδής (from ἀσπίς, a shield, and εἶδος, resemblance). Lat., *aspidiodes, aspidioides.* Fr., *aspidiode.* Ger., *schildförmig.* 1. Shield-shaped. [M, 13.] 2. In botany, resembling *Aspidium.* [B, 19.]

ASPIDION (Lat.), n. n. A^{2}s(a^{3}s)-pi^{2}d'i^2-o^{2}n. Gr., ἀσπίδιον (dim. of ἀσπίς, a shield). An ancient name for the plant *Alysson,* from the resemblance of its pods to a buckler. [Dioscorides (L, 84).]

ASPIDIONEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^2-on(o^{2}n)'e^2-e-(a^3-e^2). Fr., *aspidionées.* See ASPIDIACEÆ.

ASPIDIONEOUS, adj. A^{2}s-pi^{2}d-i^2-o'ne^2-u^{3}s. Lat., *aspidioneus.* Fr., *aspidioné.* See ASPIDIACEOUS.

ASPIDIOPSORIASIS (Lat.), n. f. A^{2}s(a^{3}s)-pi^{2}d''i^2-o-so-ri^2-a(a^3)'si^{2}s. Gen., *aspidiopsoria'seos* (*-sis*). From ἀσπιδιον (dim. of ἀσπίς, a shield), and ψωρίασις (see PSORIASIS). Fr., *aspidiopsoriase.* Ger., *Schildräude.* An old term for a variety of psoriasis attended with the formation of shield-shaped scales. [A, 322.]

ASPIDIOTA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-i^2-o'ta^3. Fr., *aspidiotes.* A family of *Crustaceæ* having the body covered with a kind of shield; parasitic on plants. [L, 30; Latreille (L, 116).]

ASPIDIPHORA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-i^{2}f'o(o^2)-ra^3. From ἀσπίς, a shield, and φορεῖν, to bear. Fr., *aspidiphores.* Ger., *Schildträger.* A family of *Crustaceæ* having the body covered with a shell. [Cuvier, Latreille (L, 116).]

ASPIDISCINA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^2-di^{2}s-si(ke)'na^3. A family of *Infusoria,* made by Ehrenberg, including loricate genera, provided with an intestine (*Enterodela*), and having the apertures variously disposed (*Allotreta*). [B, 208.]

ASPIDISCOS, ASPIDISCUS (Lat.), n's m. A^{2}s(a^{3}s)-pi^2-di^{2}sk'o^{2}s, -u^{3}s(u^{4}s). Gr., ἀσπιδίσκος. Fr., *aspidisque.* 1. Lit., the boss of a shield; applied figuratively to the sphincter ani. [Cælius Aurelianus (A, 325; L, 84).] 2. A genus of *Infusoria* belonging to the *Aspidiscina.* [Ehrenberg (B, 208).]

ASPIDISTRACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^{2}s-tra(tra^3)'-se^2(ke^2)-e(a^3-e^2). From *Aspidistra,* one of the genera. Fr., *aspidistracées.* An order of plants belonging to the *Coronariæ,* made by Kunth. [B, 170.]

ASPIDISTREÆ [Bentham and Hooker], **ASPIDISTRINÆ** [Engler] (Lat.), n's f. pl. A^{2}s(a^{3}s)-pi^{2}d-i^{2}s'tre^2-e(a^3-e^2), -i^{2}s-tri(tre)'-ne(na^3-e^2). Fr., *aspidistrées.* Of Endlicher, a family of plants related to the *Smilaceæ,* from which they are distinguished by their radiate stigma and dense spicate inflorescence; by others, made a tribe of the *Smilaceæ.* Of Bentham and Hooker, a tribe (of Engler, a subtribe) of the *Liliaceæ,* distinguished by the style terminating in more or less broad stigmatic lobes. [B, 42, 245.]

ASPIDIUM (Lat.), n. n. A^{2}s(a^{3}s)-pi^{2}d'i^2-u^{3}m(u^{4}m). From ἀσπίδιον (dim. of ἀσπις, a shield), from the shape of the indusium. Fr., *rhizome de fougère mâle* [Fr. Cod.] (2d def.). Ger., *Schildfarn.* Syn.: *filix mas* [Br. Ph.] (2d def.), *rhizoma filicis* [Ger. Ph.] (2d def.). 1. The shield-fern; a genus of polypodiaceous ferns belonging to the tribe *Aspidieæ,* characterized by the dorsal subglobose sori, covered by the orbicular-peltate or reniform indusium. It includes the following sections, frequently regarded as distinct genera: (1) *Polystichum,* in which the veins are free (non-anastomosing) and either simple, pinnate, or variously dichotomous, and the pinnæ and pinnules are usually rigid and spinuloso-serrate; (2) *Cyclodium,* in which the primary veins are pinnate, opposite branches uniting at an angle and sending a free veinlet into the areola so formed, and the pinnæ of the fertile frond are contracted; (3) *Cyrtomium,* in which the primary veins are pinnated, the branches being more or less united or often quite free, and the fronds, sterile and fertile, are nearly or quite uniform; (4) *Euaspidium* (the *A.* of Schott and many others), in which the primary veins arising from the costæ are generally straight, the rest are compoundly anastomosing and sometimes send free veinlets into the included areolæ, and the indusium is orbicular-peltate, as in the preceding sections, or cordate, or horseshoe-shaped; (5) *Nephrodium,* distinguished by its cordate or reniform indusium attached by its sinus to the backs of the veins. This last subgenus is itself divided into the sections *Pleocnemia, Eunephrodium* (the *Nephrodium* of Schott), and *Lastrea,* which are often regarded as distinct genera. 2. In the U. S. Ph., the rhizome of *A. filix mas.* [B, 5, 242.]—**A. aculeatum** [Swartz]. Syn.: *Polypodium aculeatum* [Linnæus], *Polystichum aculeatum* [Roth]. False male fern; a species belonging to the section *Polystichum,* found in the mountain woods of Italy, closely resembling *A. filix mas.* [B, 10.]—**A. æmulum** [Swartz]. A variety of *A. spinulosum.* [B, 242.]—**A. alpestre** [Swartz]. See POLYPODIUM *alpestre.*—**A. angustum** [Willdenow]. See ASPLENIUM *filix fœmina.*—**A. appendiculatum** [Wallich]. See *A. molle.*—**A. argutum** [Kaulfuss]. See *A. rigidum.*—**A. asplenioides** [Swartz]. See ASPLENIUM *filix fœmina.*—**A. athamanticum** [Kunze]. Syn.: *Nephrodium athamanticum* [Hooker], *Lastrea Plantii* [Moore]. A southern African species belonging to the section *Nephrodium.* The rhizome, which is thicker than that of the *A. filix mas* and is brownish inside, is termed *umkomo-komo* and *panna-panna* by the natives of Natal, who use it as a tæniacide. [B, 33, 242.]—**A. baromets** [Willdenow]. See CIBOTIUM *glaucescens.*—**A. californicum.** A California species enumer-

ated among the medicinal plants. ["Proc. of the Am. Pharm. Assoc.," xix, p. 307 (B).]—**A. campylopterum** [Kunze]. A variety of *A. spinulosum.* [B, 242.]—**A. canariense** [A. Braun]. A variety of *A. filix mas.* [B, 242.]—**A. canescens** [Wall.]. See *A. molle.*—**A. capense** [Willdenow]. See *A. coriaceum.*—**A. colobodon** [Kunze].—A variety of *Cystopteris fragilis* (*q. v.*). [B, 242.]—**A. coriaceum** [Swartz]. Syn.: *Polypodium berteroanum* [Sprengel] (seu *adiantiforme* [Forster]), *Tectaria calahuala* [Cavanilles], *Rumohrea aspidioides* [Raddi]. A species, belonging to the section *Polystichum*, found throughout the Pacific islands, New Zealand, southern Africa, Madagascar, the Mauritius, South America, and the West Indies. The rhizome, *radix calagualæ* (seu *calahualæ*, seu *calaguellæ*), *calahuala*, is said to contain an acrid oil and other principles, and was formerly held in much repute as a tonic, respiratory stimulant, diuretic, diaphoretic, and antispasmodic, and as a remedy in syphilis. Several varieties of the rhizome were formerly described. [B, 173, 180, 242.]—**A. depastum** [Schkuhr]. A variety of *A. filix mas.* [B, 242.]—**A. discolor** [Langs. and Fisch.]. See *A. coriaceum.*—**A. elatius** [Link]. See Asplenium *filix fœmina.*—**A. elongatum** [Swartz], **A. erosum** [Schkuhr]. A variety of *A. filix mas.* [B, 242.]—**A. filix fœmina** [Swartz]. The *Asplenium filix fœmina.* [B, 242.]—**A. filix mas** [Swartz]. Fr.,

THE ASPIDIUM FILIX MAS. (AFTER DE LANESSAN.)

fougère mâle [Fr. Cod.]. Ger., *männliches Farnkraut, Farnkrautmännchen, Wurmfarn, Waldfarn, Johanniswurzel.* It., *felce maschia.* Sp., *helecho macho.* Syn.: *Polypodium* [Linnæus] (seu *Nephrodium* [Richard]) *filix mas.* The male fern; a species belonging to the section *Nephrodium*, common in Europe, and found also in Africa, eastern India, and tropical America, but rare in the United States, where it has been found only in the neighborhood of Lake Superior. It has a lanceolate frond with linear-lanceolate pinnæ, very obtuse pinnules toothed at the apex, and the sori placed nearer to the mid-vein than to the border of the frond. A number of varieties are described, differing much in appearance, and including many sorts described as distinct species by some botanists. The rhizome is from 3 to 6 inches long, and from ½ to 1 inch thick (or, with the adherent stipe, from 2 to 2½ inches thick), and covered with transparent, brown, chaffy scales; internally it is light-green and of a spongy texture; it contains filitannic acid, filicic acid, filix red, chlorophyll, and a fixed oil; it has a slight disagreeable odor and an astringent, bitter, and nauseous taste. The rhizome is used as a remedy for tape-worm, in doses of from 30 to 90 grains of the powder, fasting, followed by a purge. The *A. filix mas* of Pursh is the *A. goldieanum.* [A, 327; B, 33, 34, 242: L, 65.]—**A. fragile** [Swartz]. See Cystopteris *fragilis.*—**A. furcatum** [Forster]. Syn.: *Nephrodium furcatum* [Hooker]. A species, belonging to the section *Nephrodium*, found in tropical America from Peru to Panama.—**A. goldieanum** [Hooker]. Syn.: *Nephrodium goldieanum* [Hooker], *A. filix mas* [Pursh]. Goldie's fern; a species, belonging to the section *Nephrodium*, having a broad ovate frond, from 10 to 16 inches in length, and with a uniform peltrate indusium, found in the northern and western United States and Canada. [B, 34.]—**A. heracleifolium** [Willdenow]. See *A. trifoliatum.*—**A. lonchitis** [Swartz]. Ger., *Milzkraut.* Syn.: *Polypodium lonchitis* [Linnæus], *Polystichum lonchitis* [Roth]. A species growing in Europe, India, and, though rarely, the northern part of North America. Under the name of *herba lonchitis majoris* it was formerly employed in diseases of the spleen. [B, 180, 242.]—**A. ludovicianum** [Kunze]. A variety of the *A. filix mas.* [B, 242.]—**A. marginale** [Swartz]. The marginal shield-fern; a large fern, belonging to the section *Nephrodium*, found in the United States and Canada, distinguished by its fruit-dots being disposed in regular rows along the borders of the segments of the frond. Its rhizome is employed for the same purpose as that of *A. filix mas.* [B, 33.]—**A. molle** [Swartz]. Syn.: *Nephrodium molle* [Desvaux], *Polypodium molle* [Jacquin], *Polystichum molle* [Gaudichaud]. A species belonging to the section *Nephrodium.* It is found throughout the entire world except in North America. [B, 242.]—**A. munitum** [Kaulfuss]. Syn.: *Polystichum munitum* [Presl], *Nephrodium plumula* [Presl]. A species growing in California and Oregon; the roots are roasted and eaten by the Indians. [B, 242.]—**A. nymphale** [Forster]. See *A. molle.*—**A. oreopteris** [Swartz]. Syn.: *Nephrodium oreopteris* [Desvaux], *Polypodium oreopteris* [English botany], *Lastrea oreopteris* [Presl]. A species, belonging to the section *Nephrodium*, growing in hilly regions throughout Europe. It possesses a balsamic fragrance due to its numerous resin-glands. [B, 242.]—**A. orientale** [Desvaux]. See *A. coriaceum.*—**A. pallidum** [Link]. See *A. rigidum.*—**A. parallelogrammum** [Kunze]. A variety of *A. filix mas.* [B, 242.]—**A. parasiticum** [Sieb. and Swartz]. See *A. molle.*—**A. Pontederæ** [Willdenow]. A variety of the *Cystopteris fragilis.* [B, 242.]—**A. pseudo-trifoliatum** [Swartz]. See Polypodium *pseudo-trifoliatum.*—**A. recurvum** [Bree]. A variety of *A. spinulosum.* [B, 242.]—**A. remotum** [A. Braun]. A variety of *A. filix mas.* [B, 242.]—**A. rhæticum** [Swartz]. See Polypodium *alpestre.*—**A. rigidum** [Swartz]. Syn.: *Nephrodium rigidum* [Desvaux], *Polypodium rigidum* [Hoffmann] (seu *fragrans* [Villars]). A species, belonging to the section *Nephrodium*, growing in central Europe and in the mountainous parts of Great Britain. The variety *α pallidum* (the *A. pallidum* [Link]) with pale-green fronds is found in Asia Minor and the Mediterranean islands, and the variety *β americanum* (the *A. argutum* [Kaulfuss]) with very large fronds, grows in California and New Mexico. It is closely related to some varieties of the *A. filix mas*, from which it differs in the longer and thinner rhizome, and in that the stipes are not closely imbricated. It is used as a remedy for the tape-worm, and in Siberia an infusion has been employed as a substitute for tea, and under the name of *serlik* as a remedy in gout and scurvy. [B, 33, 88, 242; L.]—**A. schimperianum** [Hochst. and A. Braun]. A variety of the *A. filix mas.* [B, 242.]—**A. setosum** [Swartz]. See *A. varium.*—**A. spinulosum** [Swartz]. Syn.: *Nephrodium spinulosum* [Desvaux], *Polystichum spinosum* [Roth]. A species, belonging to the section *Nephrodium*, of which a number of varieties, often referred to distinct species and even to other genera, are known. Some of these varieties bear a close resemblance to the *A. filix mas*, and, according to some, the latter should be included with *A. spinulosum* in a single species. The rhizome is thin, with about 6 fibro-vascular bundles, remnants of a dark-brown nearly cylindrical stipe, and little or no chaff. [B, 242; L, 65.]—**A. tenue** [Swartz]. A variety of the *Cystopteris fragilis.* [B, 242.]—**A. trifoliatum** [Swartz]. Syn.: *Polypodium trifoliatum* [Linnæus] (seu *cordifolium* [Martius and Gal.]), *Drynaris cordifolia* [Fée]. A species belonging to the section *Euaspidium*, growing in the West Indies, tropical South America, Central America, and Mexico, where it is said to be used for the same purposes as the *Polypodium vulgare.* [B, 180, 242.]—**A. varium** [Swartz]. Syn.: *Polypodium varium* [Linnæus]. A species belonging to the section *Polystichum* growing in China, Cochin-China, and Japan, where the tender shoots form an article of food. [B, 88, 242.]—**Oleo-resina aspidii** [U. S. Ph.], **Oleo-resin of a.** [U. S. Ph.]. Fr., *extrait éthéré* (ou *huile*) *de fougère mâle.* Ger., *Wurmfarnextrakt, Wurmfarnöl.* Syn.: *oleo-resina filicis* [U. S. Ph., 1870], *extractum filicis æthereum* [Br. Ph.], *extractum filicis* [Ger. Ph.], *oleum filicis maris.* Fluid (or liquid) extract of male fern; made by digesting 100 parts of the rhizome of *A. filix mas*, in No. 60 powder, in a sufficient quantity of stronger ether. The powder is put into a cylindrical glass percolator, provided with a stopcock and arranged with a cover and receptacle suitable for volatile liquids, and pressed firmly, and stronger ether is poured upon it until 150 parts of liquid have slowly passed. The greater part of the ether is recovered by distillation on a water-bath, and the residue is exposed in a capsule until the remaining ether has evaporated. On standing, the preparation usually deposits a granular-crystalline substance (filicic acid), which should be well mixed with the liquid before it is used. This is a very sure remedy for the unarmed tape-worm, and reasonably certain for the armed variety, if suitable precautions are taken. Trousseau and Pidoux's method of using it, recommended by Bartholow, is as follows: On the first day, a strictly milk diet; on the morning of the second day, 4 grammes (about 1 drachm) of the oleo-resin in four doses, with an interval of a quarter of an hour between them; on the third day, the same quantity, given in the same way, followed by 50 grammes (about 12½ drachms) of syrup of ether, and, a half-hour later, an emulsion containing 3 drops of croton-oil. [A, 247, 286.]

ASPIDOACHIRI (Lat.), n. m. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^2)-a^3-ki-(ch^{2}e)'ri(re). From ἀσπίς, a shield, α priv., and χείρ, the hand. Fr., *aspidoachires.* J. A. Ritgen's name for a family of saurian reptiles, comprising those having the body covered with scales having 2 feet behind and none in front. [L, 180.]

ASPIDOBRANCHIA, ASPIDOBRANCHIATA (Lat.), n's n. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^2)-bra^{2}n^2(bra^{3}n^2)'ki^2(ch^{2}i^2)-a^3, -bra^{2}n^2-(bra^{3}n^2)-ki^2(ch^{2}i^2)-a-(a^3)'ta^3. From ἀσπίς, a shield, and βράγχια, gills. Fr., *aspidobranches.* 1. A family of gasteropod mollusks having the branchiæ protected by a shield-shaped shell. [L, 180.] 2. Of Schweigger, the *Scutibranchia* of Cuvier. [L, 204.]

ASPIDOCARPA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-o(o^2)-ka^{3}r'pa^3. From ἀσπίς, a shield, and καρπος, fruit. Of Lühnemann, a class of cryptogamous plants, including the orders *Idiothalamia* and *Cœnothalamia.* [B, 170.]

ASPIDOCEPHALI (Lat.), n. m. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-se^{2}f-(ke^{2}f)'a^{3}-li(le). From ἀσπίς, a shield, and κεφαλή, the head. Fr., *aspidocéphales.* A section of ophidian reptiles, comprising those having the head covered with scales. [Ritgen (L, 180).]

ASPIDOCHIRI (Lat.), n. m. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-ki(ch^{2}e)'-ri(re). Fr., *aspidochires.* From ἀσπίς, a shield, and χείρ, the hand. Ritgen's name for a division of saurian reptiles covered with scales and having 2 feet in front and none behind. [L, 180.]

ASPIDOCHIROTA (Lat.), n. n. pl. A^{2}s(a^{2}s)''pi^{2}d-o(o^{2})-ki-(ch^{2}i^{2})-ro'ta^{3}. An order of the *Eupodia*, or sea-cucumbers, with aquatic feet and scutiform tentacles. [L, 173.]

ASPIDOCHIROTÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-ki-(ch^{2}i^{2})-ro-te(ta^{3}-e^{2}). A division of the *Dipneumona* having shield-like tentacles. [L, 121.]

ASPIDOCOLOBI (Lat.), n. m. pl. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-ko^{2}l'o(o^{2})-bi(be). Fr., *aspidocolobes.* A family of saurian reptiles with scaly bodies and imperfect limbs. [Ritgen (L, 180).]

ASPIDOCOTYLUS (Lat.), n. m. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-ko^{2}t'i^{2}l(u^{5}l)-u^{3}s(u^{4}s). From ἀσπίς, a shield, and κοτύλη, a socket. Fr., *aspidocotyle.* A genus of the *Trematoda* (family *Polystemidœ*), made by Diesing. [Cobbold (L).]

ASPIDOFERÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}d-o^{2}f'e^{2}r-e(a^{3}-e^{2}). From ἀσπίς, a shield, and *ferre*, to bear. Of Wiggers, an order of cryptogamous plants (lichens), comprising the genera *Lichen*, *Collema*, *Cladonia*, *Usnea*, *Verrucaria*, etc. [B, 170.]

ASPIDOGASTER (Lat.), n. f. A^{2}s(a^{3}s)''pi^{2}d-o(o^{2})-ga^{2}s(ga^{3}s'-tu^{5}r(tar). From ἀσπίς, a shield, and γαστήρ, the belly. Fr., *aspidogastre.* A genus (or a larval form) of entozoa of the order *Distomidœ*, infesting certain fresh-water shell-fish. [Von Baer (L, 16, 18); Rudolphi (L, 27).]

ASPIDOID, adj. A^{2}s'pi^{2}d-oid. From ἀσπίς, a shield, and εἶδος, resemblance. Fr., *aspidoïde.* Ger., *Schildförmig.* Shield-shaped, scutiform, peltate. [A, 385.] See Aspidioid.

ASPIDOL, n. A^{2}s'pi^{2}d-o^{2}l. A substance, $C_{20}H_{34}O$, obtained by Daccomo from the *Aspidium filix mas*, giving the reactions of cholesterin. ["Ann. di chim. e di farm.," Aug., 1886, p. 112 (B).]

ASPIDOPHORA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-o^{2}f'o^{2}r-a^{3}. From ἀσπίς, a shield, and φορεῖν, to bear. Fr., *aspidophores.* See Aspidoferæ, than which, however, this is a better form.

ASPIDOPHOROUS, adj. A^{2}s-pi^{2}d-o^{2}f'o-ru^{3}s. Lat., *aspidophorus.* Fr., *aspidophore.* Ger., *schildtragend, beschildet.* In zoology, provided with a shield-like scaly exoskeleton. [L, 41, 42.]

ASPIDORRHYNCHIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)''pi^{2}d-o^{2}r-ri^{2}n^{2}(ru^{6}n^{2})'ki^{2}d(ch^{2}i^{2}d)-e(a^{3}-e^{2}). From ἀσπίς, a shield, and ῥύγχος, a snout. A family of the *Lepidosteoidei* having an elongated body, ganoid scales, and beak-like jaws, with the termination of the vertebral column homocercal. [L, 207.]

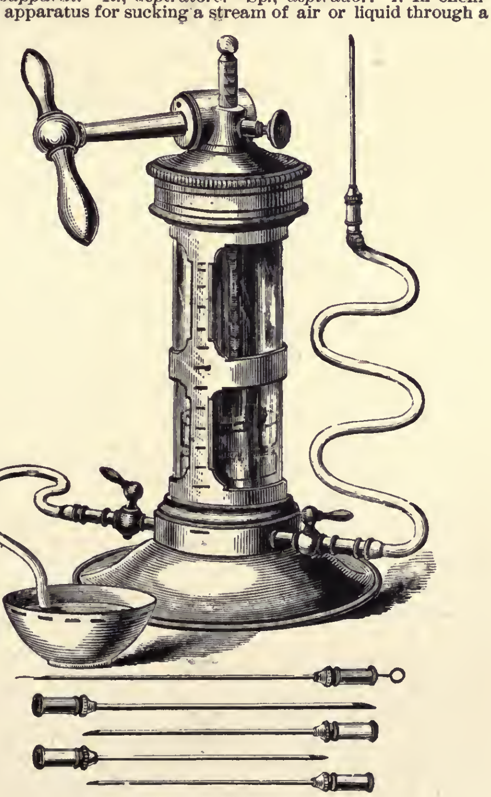
ASPIDOSAMINE, n. A^{2}s-pi^{2}d-o^{2}s'a^{2}m-en. For deriv., see Aspidosperma and Amine. Fr., *aspidosamine.* Ger., *Aspidosamin.* An alkaloid, $C_{22}H_{28}N_2O_2$, melting at about 100° C., found in white quebracho bark, having emetic properties. [Hesse, "Ann. d. Chem.," ccxi; "Pharm. Jour. and Trans.," Mar. 25, 1882, p. 781; "Am. Jour. of Pharm.," July, 1882, p. 366; Harmack and Hoffmann, "Ztschr. f. klin. Med.," viii, 6; "Gaz. hebd. de méd. et de chir.," Feb. 13, 1885, p. 113; A, 247.]

ASPIDOSPERMA (Lat.), n. n. A^{2}s(a^{3}s)-pi^{2}d-o(o^{2})-spu^{5}rm-(spe^{2}rm)'a^{3}. Gen., *aspidosperm'atos* (*-tis*). From ἀσπίς, a shield, and σπέρμα, a seed. Fr., *aspidosperme.* A genus of apocynaceous trees, established by Martius and Zuccarini, bearing alternate leaves and having the flowers disposed in terminal cymes, with a 5-parted calyx, an hypogynous, subinfundibuliform, 5-lobed corolla, 5 stamens inserted into the middle of the corolla, with subsessile anthers and 2 ovaries with numerous ovules. The fruit is an obovate woody follicle with many membranaceous seeds. [B, 19.]—**A. peroba.** A Brazilian species the fruit of which is used medicinally. ["Proc. of the Am. Pharm. Assoc.," xxxiii, p. 102 (B).]—**A. quebracho** [Schlechtendal]. Sp., *quebracho blanco.* A large evergreen tree of South America, furnishing the quebracho bark of commerce. The bark contains tannic acid, aspidospermine, aspidospermatine, aspidosamine, quebrachine, quebrachamine, and hypoquebrachine. It is used chiefly as a remedy for dyspnœa, but also as a stomachic tonic. [A, 247, 286.] Cf. Quebracho.

ASPIDOSPERMATINE, n. A^{2}s-pi^{2}d-o-spu^{5}rm'a^{3}-ten. Lat., *aspidospermatina, aspidospermatinum.* Fr., *aspidospermatine.* Ger., *Aspidospermatin.* A crystalline, bitter, lævogyrous alkaloid found in the bark of *Aspidosperma quebracho*, isomeric with aspidosamine, melting at 162° C. [Hesse, "Ann. d. Chem.," ccxi; "Pharm. Jour. and Trans.," Mar. 25, 1882, p. 781; "Am. Jour. of Pharm.," July, 1882, p. 366; A, 247.]—**A. lactate.** Lat., *aspidospermatinæ lactas, aspidospermatinum lacticum.* A compound of a. and lactic acid, having a marked depressant action upon the animal temperature. [C. Eloy and H. Huchard, "Union méd.," 1884, No. 137; "Ctrlbl. f. d. med. Wssnsch.," Feb. 2, 1885, p. 77 (B).]

ASPIDOSPERMINE, n. A^{2}s-pi^{2}d-o-spu^{5}rm'en. Lat., *aspidospermina, aspidosperminum.* Fr., *aspidospermine.* Ger., *Aspidospermin.* A weak, crystalline, lævogyrous alkaloid, $C_{22}H_{30}N_2O_2$, melting at 205° C., found in the bark of *Aspidosperma quebracho*; soluble with difficulty in water, but readily soluble in oils, in absolute alcohol, and in ether. Its physiological action closely resembles that of quebracho bark. [Hesse, "Ann. d. Chem.," ccxi; "Pharm. Jour. and Trans.," Mar. 25, 1882, p. 781; "Am. Jour. of Pharm.," July, 1882, p. 366; A, 247, 286; B, 5.]—**A. citrate.** Ger., *citronensaures Aspidospermin.* A salt of a. and citric acid; obtained either as an amorphous or as a crystalline compound, readily soluble in water. [A, 286; Guttmann, "Arch. f. exp. Path. u. Pharm.," xiv, p. 451 (B).]—**A. hydrochlorate, A. hydrochloride.** Lat., *aspidosperminæ hydrochloras* (seu *hydrochloridum*), *aspidosperminum hydrochloricum.* Fr., *chlorhydrate d'aspidospermine.* Ger., *chlorwasserstoffsaures Aspidospermin, Chlorwasserstoffaspidospermin.* A salt of a. and hydrochloric acid, very soluble in water. [B, 5.]—**A. sulphate.** Ger., *schwefelsaures Aspidospermin.* A salt of a. and sulphuric acid, very soluble in water. [B, 5.]

ASPIDOSTRACA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-o^{2}s'tra^{2}-ka^{3}. A family of crustaceans established by Zenker, now included in the *Branchiopoda.* [L, 204.]

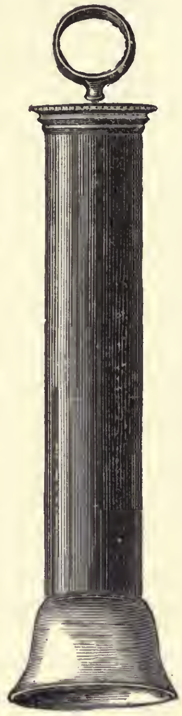


ASPIDOTA (Lat.), n. n. pl. A^{2}s(a^{3}s)-pi^{2}d-o'ta^{3}. See Aspidiota.

ASPILIA (Lat.), n. f. A^{2}s(a^{3}s)-pi^{2}l(pel)'i^{2}-a^{3}. Fr., *aspilie.* A genus of composite plants, belonging to the *Helianthoideœ*, established by Dupetit Thouars. [B, 121; L, 41.]—**A. latifolia** [Oliver and Hiern]. Hæmorrhage plant; an herbaceous African species, 1½ to 4 feet in height, with spreading branches, opposite, very hard and roughly hairy, ovate, acuminate, serrulate leaves, and yellow flowers with neuter ray florets and nearly obsolete pappus. It is said to have remarkable hæmostatic powers when locally applied, and it is also used internally in the form of infusion in pulmonary hæmorrhage. ["Proc. of the Am. Phar. Assoc.," xxvi, p. 168 (B); B, 250.]

ASPIRALES (Lat.), n. f. pl. A^{2}s(a^{3}s)-pi^{2}r-a(a^{2})'lez(las). Of Corda, a division of vascular cryptogams, comprising the subdivisions *Stomatophorœ* and *Astomatophorœ.* [B, 170.]

ASPIRATION, n. A^{2}s-pi^{2}r-a'shu^{3}n. Lat., *aspiratio* (from *aspirare*, to breathe or blow upon). Fr., *aspiration.* Ger., *Aspiration.* It., *aspirazione.* Sp., *aspiracion.* 1. In chemistry and pharmacy, the process of sucking a gas or a liquid from one receptacle into another, as by means of a siphon. [B, 2.] 2. The act of drawing in the breath; inspiration (used in this sense by French and Italian writers especially). [J.] 3. The sucking action exerted upon the circulatory system during inspiration, by which the vessels in the thorax are somewhat expanded, so that the movement of the blood in the systemic veins toward the heart is accelerated, while the peripheral, or outward, movement of the blood in the systemic arteries is retarded. The movement of the blood in the entire pulmonary circulation is accelerated after the first instant. [J, 11, 19.] 4. Pronunciation with a full emission of the breath, giving a rough *h*-sound. [J.] 5. The removal of fluid from a cavity of the body by means of suction, especially with the aspirator (*q. v.*, 3d def.).—**Pneumatic a.** Fr., *a. pneumatique.* See *A.* (5th def.).



ASPIRATOR, n. A^{2}s'pi^{2}r-a-to^{2}r. Fr., *aspirateur.* Ger., *Aspirationsapparat.* It., *aspiratore.* Sp., *aspirador.* 1. In chemistry, an apparatus for sucking a stream of air or liquid through a

DIEULAFOY'S ASPIRATOR.

tube or other vessel; generally a modification of the siphon. A vessel provided with a stopcock at the bottom is filled with water, which, being allowed to flow out by opening the stopcock, sucks a current of air or other fluid through a tube opening into the vessel at its top. [B, 2.] 2. A drying apparatus formed of V-shaped tubes filled with pumice-stone soaked in sulphuric acid, for dehydrating air or gases. [L, 41.] 3. An apparatus devised by Dieulafoy for removing liquids from a natural or pathological cavity of the body

by suction. It consists essentially of an exhausting pump (a glass barrel partly incased in metal), a set of sharp and blunt cannulæ of various sizes, and two pieces of flexible tubing. The nozzle of the pump has a short tube connected at its side, with a stopcock. A cannula is attached at the nozzle by one of the pieces of tubing, the other piece of tubing being connected with the side-tube and having its free end placed in a basin. The cannula is thrust into the cavity to be evacuated, and, when the stopcock is turned so as to open the nozzle and close the side-tube, and the piston of the pump is slowly drawn up, the fluid rushes into the pump to fill the vacuum. On reversing the stopcock so as to close the nozzle, and pushing the piston down, the fluid is driven through the side-tube into the basin. This alternation is repeated until enough of the fluid has been withdrawn. Many modifications of the instrument are in use. [E.]—**Micro-a.** A suction apparatus for drawing a current of air through some filtering medium, so as to separate the microscopical substances contained in it for purposes of examination. [L. Vorstädter, "Illustr. Mntschr. d. ärztl. Polytechn.," Aug., 1884, p. 171.]—**Pneumatic a.** Fr., *aspirateur pneumatique.* See *A.* (especially 3d def.).—**Tracheal a.** A hard-rubber syringe terminating in a soft-rubber cup; to be applied over the mouth of a tracheotomy-tube, when in position, for the purpose of freeing it from clots, mucus, etc.

THE TRACHEAL ASPIRATOR.

ASPIRATORY, adj. A^{2}s'pi^{2}r-a^3-to-ri^2. Pertaining to aspiration.

ASPIROZ (Sp.), n. A^{3}s-pe-roth^2'. A place in Navarre, Spain, where there is a cold sulphurous spring. [A, 385.]

ASPIS (Lat.), n. f. A^{2}s(a^{3}s)'pi^{2}s. Gen., *as'pidos (-dis).* Gr., ἀσπίς. See Asp.—**Emplastrum ex aspidibus.** An old plaster made from asps; used for scrofulous swellings and for gout. [Paulus Ægineta (L, 94).]

ASPIS (Ar.), n. The *Cannabis sativa.* [H. Baillon (B).]

ASPISTÈRE (Fr.), n. A^{3}s-pi^{2}st-e^{2}r. The botanical genus *Parmelia.* [L, 41.]

ASPISTES (Lat.), adj. A^{2}s(a^{3}s)-pi^{2}st'ez-(as). Gr., ἀσπιστής. Fr., *aspiste.* Covered with scales (said of serpents). [L, 109.]

ASPISURE (Fr.), adj. A^{3}s-pi^{2}s-u^{6}r. From ἀσπιστής, armed with a shield, and οὐρά, the tail. Having the tail covered with horny plates. [A, 385.]

ASPLENIACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ple^{2}n(plan)-i^2-a(a^3)'se^2-(ke^2)-e(a^3-e^2). Fr., *aspléniacées.* Ger., *Aspleniaceen.* Of Gray and others, a division or suborder of polypodiaceous ferns, including the genus *Asplenium* (in its widest sense) and one or two other genera, and hence corresponds to the *Asplenieæ* of Hooker (*q. v.*); according to some, it also comprises *Blechnum, Lomaria, Scolopendrium,* and similar genera, included by Hooker among the *Lomarieæ* and *Scolopendrieæ.* By Presl, the *A.* were divided into the *Cystopterideæ, Blechnaceæ, Aspleniariæ, Diplazieæ,* and *Scolopendrieæ.* [B, 170, 242.]

ASPLENIACEOUS, adj. A^{2}s-ple^{2}n''i^2-a'shu^{3}s. Lat., *aspleniaceus.* Fr., *aspléniacé.* Resembling the genus *Asplenium*; of or pertaining to the *Aspleniaceæ.* [B; L, 41.]

ASPLENIACITES (Lat.), n. f. pl. A^{2}s(a^{3}s)-ple^{2}n(plan)-i^2-a^{2}s-(a^{3}k)-i(e)'tez(tas). A tribe of fossil ferns (*Filicaceites*), made by Sternberg. [B, 170.]

ASPLENIARIÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ple^{2}n(plan)-i^2-ar(a^{3}r)'-i^2-e(a^3-e^2). Fr., *aspléniaires, aspléniariées.* Of Presl, a section of the *Aspleniaceæ,* comprising *Asplenium* and 2 other genera. [B, 170.]

ASPLÉNIE (Fr.), n. A^{3}s-pla-ne. See Asplenium.—**A. noire.** See Asplenium *adiantum nigrum.*—**A. polytric.** See Asplenium *trichomanes.*—**A. rue de muraille.** See Asplenium *ruta muraria.*

ASPLENIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ple^{2}n(plan)-i(i^2)'e^2-e(a^3-e^2). Fr., *aspléniées.* Ger., *Asplenieen.* A section or subtribe of polypodiaceous ferns, including *Asplenium* (in its widest sense) and 2 other genera [Hooker]; or, according to others, also comprising *Ceterach, Grammitis, Scolopendrium, Diplazium, Blechnum, Lomaria,* etc. As defined by Hooker, it comprises ferns, either tufted or furnished with somewhat elongated caudex or rhizome, with dorsal, linear or oblong sori, usually distant from the margin, scattered, and generally oblique with regard to the costa, and with involucres, arising from the side of a vein or veinlet, sometimes from the superior or inferior aspect, opening toward the costa, plane or vaulted, and generally membranaceous in texture. [B, 170, 242.]

ASPLENIIFOLIUS (Lat.), adj. A^{2}s(a^{3}s)-ple^{2}n(plan)-i^2-i^2-fo-(fo^2)'li^2-u^{3}s(u^{4}s). From *Asplenium* and *folium.* Having leaves or fronds like the *Asplenium.* [B, 242.]

ASPLENIOID, adj. A^{2}s-ple^{2}n'i^2-oid. Lat., *aspleniodes* (from ἀσπλήνιον [see Asplenium], and εἶδος, resemblance). Fr., *asplénioïdé.* Resembling the *Asplenium,* or disposed as in the *Asplenium* (said of an arrangement of sori). [B.]

ASPLENIOIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ple^{2}n(plan)-i^2-o(o^2)-i^{2}d'e^2-e(a^3-e^2). Fr., *asplénioïdées.* A section of polypodiaceous ferns, made by Reichenbach, including *Asplenium, Scolopendrium, Diplazium,* and 3 other genera. [B, 170.]

ASPLENION (Lat.), n. n. A^{2}s(a^{3}s)-ple^{2}n(plan)'i^2-o^{2}n. See Asplenium.

ASPLENIUM (Lat.), n. n. A^{2}s(a^{3}s)-ple^{2}n(plan)'i^2-u^{3}m(u^{4}m). Gr., ἄσπληνον, ἀσπλήνιον (from α priv., and σπλήν, an affection of the spleen). Fr., *asplénie, asplénium, doradille.* Ger., *Milzfarn, Milzkraut, Streifenfarn, Strichfarn.* It., *asplenio.* A genus of polypodiaceous ferns belonging to the *Asplenieæ,* having a short rhizome, very variable venation, and dorsal, linear or oblong sori, in rows arranged more or less obliquely to the mid-vein of the frond, and usually asplenioid in attachment, *i. e.,* attached to one side of a vein, sometimes diplazioid, *i. e.,* in sets of 2, one on each side of the vein and opposite the other. The indusium is of the same shape as the sorus and opens toward the costa when single, but, when diplazioid, the 2 indusia open in opposite directions. The genus includes the following sections, frequently regarded as independent genera: (1) *Thamnopteris,* having undivided fronds and a vein running longitudinally along the margin and uniting with the apices of the transverse veins. The sori are nearly or quite plane and quite single. (2) *Euasplenium,* including by far the greater number of species, which has sori like (1) and usually free veins. (3) *Athyrium,* with pinnato-pinnatifid or bi-tripinnate fronds, usually short sori, and a loose convex indusium which may be straight or often more or less arcuate. (4) *Eudiplazium,* with free veins, and diplazioid, usually associated with asplenioid, indusia. (5) *Anisogonium,* resembling (4) but having anastomosing veins. (6) *Hemidictyum,* with very long, naked, asplenioid sori with the veins near the margin anastomosing. [B, 242.]—**A. acrostichoides.** See *A. thelyptroides.*—**A. acutiusculum** [Blume]. See *A. hirtum.*—**A. acutum** [Bory]. The *A. adiantum nigrum,* var. β *acutum.* [B, 242.]—**A. adiantum nigrum** [Linnæus]. Fr., *capillaire, doradille noir.* Ger., *Frauenhaarstreiffarn.* Black maiden-hair; a species belonging to the section *Euasplenium,* found throughout Europe, northern and southern Asia, northern and southern Africa, and the adjacent islands. The varieties β *acutum,* with acute or acuminate narrower pinnæ, pinnules, and segments, γ *obtusum* [Moore] or *capense* [Schlecht.], with the lobes of the pinnules very broad, and δ *gaudichaudianum* [Hooker], with thick, coriaceous fronds, are known. The rhizome, which is beset with numerous black fibrils, and the frond (*herba adianti nigri*) were formerly employed like the true maiden-hair (*Adiantum capillus Veneris*) as a bechic and diuretic. [B, 173, 180, 242.]—**A. alternifolium** [Wulf.]. See *A. germanicum.*—**A. ambiguum** [Swartz]. See *A. esculentum.*—**A. anceps** [Sol.]. See *A. trichomanes.*—**A. approximatum** [Blume]. See *A. hirtum.*—**A. arboreum** [Willdenow]. Syn.: *Diplazium auriculatum* [Kaulfuss]. A species, belonging to the section *Eudiplazium,* growing in South America and Jamaica. The *A. pellucidum* of Lamarck, said to be useful in thoracic affections and as a vermifuge, is by Hooker identified with this species and with *A. hirtum.* [B, 173, 242.]—**A. argutum** [Kaulfuss]. See *A. adiantum nigrum.*—**A. aureum.** The *A. ceterach.* [B.]—**A. Breynii** [Retzius]. See *A. germanicum.*—**A. capense** [Linnæus]. See *A. adiantum nigrum.*—**A. castaneum** [Schlecht.]. A variety of the *A. trichomanes.* [B, 242.]—**A. ceterach** [Linnæus]. Fr., *dorade, doradille, herbe doree.* Ger., *kleine Hirschzunge, gebräuchlicher Milzfarn, Milzkraut.* Sp., *doradilla.* Syn.: *Ceterach officinarum* [Willdenow], *Grammitis* [Schkuhr] (seu *Gymnogramme* [Sprengel], seu *Scolopendrium* [Swartz]) *ceterach.* Milt-waste, scale fern; a species, belonging to the section *Hemidictyum,* growing throughout Europe and Asia. It is distinguished by its coriaceous texture and the dense covering of tawny imbricated scales upon the lower surface of the frond. The variety β *aureum,* the *Ceterach aureum* [Link] (seu *canariensis* [Willdenow], seu *latifolium* [Fée]), *Acrostichum aureum* [Cavanilles], *Grammitis aurea* [Swartz], is larger and has longer segments and toothed scales. The whole plant, constituting the ἄσπληνον of Dioscorides, and the *herba ceterach* (seu *asplenii,* seu *asplenii veri,* seu *scolopendrii veri,* seu *doradillæ*), is somewhat bitter and mucilaginous, and was formerly held in great repute in diseases of the spleen, dropsy, and asthma, and is now sometimes employed as a demulcent, anodyne, and mildly astringen remedy in pulmonary disorders, and as a lithontriptic. [B, 19, 180, 242.]—**A. crenulatum** [Presl]. See *A. serratum.*—**A. cuneifolium** [Vis.]. The *A. adiantum nigrum,* var. γ *obtusum.* [B, 242.]—**A. densum** [Brack.], **A. dichroum** [Kunze]. See *A. trichomanes.*—**A. esculentum** [Presl]. Syn.: *Diplazium malabaricum* [Sprengel] (seu *umbrosum* [Moritz]), *Digrammaria ambigua* [Presl]. A species, belonging to the section *Anisogonium,* growing in India, Java, and China. It is said to be employed in the treatment of intermittent fever and thoracic affections, and as a laxative. [B, 180, 242.]—**A. falcatum** [Lamarck]. Syn.: *Trichomanes adiantoides* [Linnæus], *filix non ramosa zeylanica* [Burmann]. A species, belonging to the section *Euasplenium,* found in Australia, New Zealand, the South Sea Islands, Mauritius, Ceylon, and India, and, according to some, in the West Indies. The rhizome is used in the treatment of dysentery, and the herb as a laxative. [B, 180, 242; L, 37.]—**A. filix fœmina** [Bernhardi]. Fr., *fougère femelle.* Ger., *weiblicher Streiffarn, Farnkrautweibchen.* It., *felce femmina.* Sp., *helecho hembra.* Syn.: *Polypodium* [Linnæus] (seu *Athyrium* [Roth], seu *Aspidium* [Swartz], seu *Tectaria* [Cavanilles]) *filix fœmina, Polypodium rhoeticum* [Linnæus], *Aspidium asplenioides* [Swartz], etc. Lady-fern, female fern; a species belonging to the section *Athyrium,* found in Europe and America, having fronds from 1 to 2 feet in height, of a peculiarly delicate plumy appearance, and bipinnately or tripinnately divided into obtuse, deeply serrated segments. The sori are large and finally confluent, giving the frond a brownish hue. The rhizome is used as a substitute for that of the *Aspidium filix mas,* but is much less powerful. [B, 19, 34.]—**A. firmum** [Fée]. A variety of *A. falcatum.* [B, 242.]—**A. frondibus pinnatis.** See *A. trichomanes.*—**A. germanicum** [Weiss]. A species, belonging to the section

Euasplenium, growing in central and northern Europe and rarely in Great Britain. It is used like *A. ruta muraria.* [B, 173, 242; L, 30.]—**A. Harovii** [Godr.]. See *A. trichomanes.*—**A. hemionitis.** 1. Of Linnæus, a species, belonging to the section *Euasplenium*, growing in the woody regions of northwestern Africa and southwestern Europe and the adjacent Atlantic islands. It is the *Hemionitis vulgaris* [Bauhin] (seu *vera* [Clusius]). 2. Of other authors, the *Scolopendrium hemionitis* (*q. v.*). [B, 211, 242.]—**A. heterochroum** [Kunze]. See *A. trichomanes.*—**A. hirtum** [Kaulfuss]. A species, belonging to the section *Euasplenium*, growing in the South Pacific islands, Mauritius, Madagascar, Java, and Borneo. The *A. pellucidum* of Lamarck, which, by Hooker, is identified with this species and with *A. arboreum*, is said to be efficient as a vermifuge and remedy in diseases of the chest. [B, 173, 242.]—**A. humile** [Blume]. See *A. adiantum nigrum.*—**A. hymenodes** [Mettenius]. See *A. arboreum.*—**A. integrum** [Fée]. See *A. serratum.*—**A. latifolium** [Sturm.]. A species belonging to the section *Athyrium*. The *A. latifolium* [Bory] is the *A. ceterach.* [B, 242.]—**A. lucidum** [Forster]. A New Zealand species belonging to the section *Euasplenium.* [B, 138, 242.]—**A. luridum** [Salisbury]. See *A. adiantum nigrum.*—**A. Lyallii** [Moore]. See *A. lucidum.*—**A. Macræi** [Hooker]. See *A. rhizophyllum.*—**A. Matthioli** [Gasp. and Guss.]. See *A. ruta muraria.*—**A. melanocaulon** [Muhlenberg]. See *A. trichomanes.*—**A. meyerianum** [Presl]. See *A. hirtum.*—**A. microphyllum** [Tineo]. See *A. trichomanes.*—**A. multicaule** [Presl], **A. murale** [Bernhardi], **A. murorum** [Lamarck]. See *A. ruta muraria.*—**A. myriophyllum** [Presl]. See *A. rhizophyllum.*—**A. nidus** [Raddi]. See *A. serratum.*—**A. nigrum** [Bernhardi]. See *A. adiantum nigrum.*—**A. obtusum** [Kitaibel]. See *A. adiantum nigrum.*—**A. officinarum.** See *A. ceterach.*—**A. palmatum** [Lamarck]. The *A. hemionitis* [Linnæus]. [B, 242.]—**A. patens** [Gaudichaud]. The *A. adiantum nigrum*, var. *δ.* [B, 242.]—**A. pellucidum** [Lamarck]. See *A. hirtum* and *A. arboreum.*—**A. plumosum** [Bory]. See *A. hirtum.*—**A. polyodon** [Forster]. See *A. falcatum.*—**A. productum** [Low.]. See *A. adiantum nigrum.*—**A. pubescens** [Mettenius]. See *A. esculentum.*—**A. radiatum** [Swartz]. A species described under *Acrostichum dichotomum* (*q. v.*), but more properly referred to *Actinopteris radiata.* [B, 242.]—**A. Raddii** [Kl.]. See *A. serratum.*—**A. rhizophyllum** [Kunze]. Syn.: *Cœnopteris myriophylla* [Swartz], *Camptosorus rhizophyllus.*

THE ASPLENIUM RHIZOPHYLLUM. [A, 327.]

The walking fern, or walking leaf. A species belonging to the section *Euasplenium*, growing in the United States, Mexico, Central America, tropical South America, the West Indies, and the Sandwich Islands. [B, 138, 242.]—**A. ruta muraria** [Linnæus]. Fr., *capillaire blanc, sauve-vie, rue de muraille.* Ger., *Mauerraute, Mauer-Streiffarn.* Syn.: *Ruta muraria* [Bauhin], *Adiantum album.* Wall-rue, tent-wort, white maidenhair; a species belonging to the section *Euasplenium*, growing in Europe, northern Asia, northern and southern Africa, and North America. The leafy frond, *herba rutæ murariæ* (seu *adianti albi*, seu *paronychiæ*), was formerly employed in the form of a decoction as an aperient and expectorant remedy in phthisis and other thoracic affections, and also in disorders of lactation and in gout. [B, 180, 242.]—**A. saxatile** [Salisbury]. See *A. trichomanes.*—**A. schomburgkianum** [Kl.]. See *A. serratum.*—**A. scolopendrium** [Linnæus]. See *Scolopendrium vulgare.*—**A. semihastatum** [Kunze]. See *A. arboreum.*—**A. septentrionale** [Swartz]. A species belonging to the section *Euasplenium*, growing in mountainous districts in Europe, and central Asia, and in New Mexico. It is said to have the same properties as *A. ruta muraria.* [B, 173, 242.]—**A. Serpentini** [Tausch and Henfl.]. The *A. adiantum nigrum*, var. *γ.* [B, 242.]—**A. serratum** [Linnæus]. A species belonging to the section *Euasplenium*, growing in the West Indies, South America, and the Pacific islands. It is said to be used in the West Indies in diseases of the liver and obstinate diarrhœas. [B, 173, 180, 242.]—**A. silesiacum** [Milde]. See *A. adiantum nigrum.*—**A. spicant.** See Lomaria *spicant.*—**A. stenopteris** [Kunze]. See *A. hirtum.*—**A. tenuifrons** [Wall.]. See *A. filix fœmina.*—**A. thelypteroides** [Michaux]. A species belonging to the section *Athyrium*, growing in Canada, the United States, India, and Tartary; its rhizome closely resembles that of *Aspidium filix mas.* [B, 242; L, 65.]—**A. torresianum** [Gaudichaud]. See *A. hirtum.*—**A. trichomanes** [Linnæus]. Fr., *asplénie polytric, polytric officinal, capillaire rouge.* Ger., *rothes Frauenhaar, Goldhaar, rother* (oder *gemeiner*) *Wiederthon, Abthon, Aberthon.* Syn.: *Adiantum aureum, Polytrichum commune.* Dwarf-spleenwort, common maidenhair; a species belonging to the section *Euasplenium*, found generally distributed throughout the world; a small fern having a black, polished stipe and a pinnate frond from 3 to 6 inches high, with from 8 to 12 pairs of rounded, sessile leaflets about $\frac{1}{8}$ inch long; formerly accounted one of the five aperient herbs. Its frond, *herba trichomanes* (seu *adianti rubri*, seu *saxifragæ rubræ*), was formerly used like that of *A. ruta muraria.* This species was the τριχομανές of Dioscorides. [B, 5, 34, 180; L, 30.]—**A. trichomanoides** [Cavanilles]. See *A. trichomanes.*—**A. zamiæfolium** [Presl]. See *A. falcatum.*—**Herba asplenii, Herba asplenii veri.** The herb of *A. ceterach.* [B, 180.]

ASPLENUM (Lat.), n. n. A^{2}s(a^{3}s)-ple(pla)′nu^{3}m(nu^{4}m). Gr., ἄσπληνον. 1. Of Dioscorides, the *Asplenium ceterach.* [B, 180.] 2. An ancient name for the *Mandragora silvestre*, from the notion that it destroyed the spleen in animals that fed upon it. [B, 2.] 3. A name proposed for *Asplenium*, as being etymologically more correct. [B.]

ASPONDYLOÏDE, ASPONDYLOPHORE (Fr.), adj's. A^{3}s-po^{2}nd-i^{2}l-o-ed, -for. From α priv., σπόνδυλος, a vertebra, and εἶδος, resemblance, or φορεῖν, to bear. Invertebrate. [L, 41, 109.]

ASPORÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)′po^{2}r-e(a^3-e). From α priv., and σπόρος, seed. Fr., *asporées.* Ger., *Asporen.* A name formerly applied to a group of *Fungi*, including *Sclerotium* and other genera, which were supposed to be destitute of spores. These genera are now known to be only vegetative states of spore-producing *Fungi.* [B, 121.]

ASPOREÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-po(po^2)′re^2-e(a^3-e^2). Fr., *asporées.* Ger., *Asporeen.* A division of *Schizomycetes*, comprising those which have no spores, or, at least, none which are distinguishable from the vegetative cells of which the organisms are composed. [H. M. Ward (B, 77).]

ASPORI (Lat.), n. m. pl. A^{2}s(a^{3}s)′po^{2}r-i(e). Fr., *asporés.* See Asporæ.

ASPOROMYCETES (Lat.), n. m. pl. A^{2}s(a^{3}s)″po(po^2)-ro(ro^2)-mi(mu^6)-se(ka)′tez(tas). From α priv., σπόρος, a seed, and μύκης, a fungus. Of Wallroth, an order of *Fungi* comprising 3 groups: the *A. gongromorphi*, including *Sclerotium* and other genera; the *A. helicomorphi*; and the *A. rhizomorphi*, including *Dematium, Rhizomorpha*, etc. [B, 170.] Cf. Asporæ.

ASPOROUS, adj. A^{2}s′po-ru^{3}s. From α priv., and σπόρος, a seed. Fr., *aspore.* Having no spores. [B, 38.]

ASPREDO (Lat.), n. f. A^{2}s(a^{3}s)-pre(pra)′do. Gen., *aspred′inis.* From *asper*, rough. 1. Trachoma. [G, 13.] 2. Urticaria. [Celsus (G, 13).] 3. The ruff, a sort of perch, one of the bones of the head of which was formerly used as a remedy for nephritic colic. [Gesner (L, 94).]—**A. cernua.** See *A.* (3d def.).—**A. miliacea.** An old term for miliaria. [G.]—**A. perca fluviatilis minor.** See *A.* (3d def.).

ASPRELLA (Lat.), n. f. A^{2}s(a^{3}s)-pre^{2}l′la^3. From *asper*, rough. Fr., *asprèle.* 1. An old name for the *Equisetum majus.* [L, 94.] 2. A genus of gramineous plants. [B.]—**A. oryzoides** [Lamarck]. See Leersia *oryzoides.*

ASPRELLINÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-pre^{2}l-li(le)′ne(na^3-e^2). From *asprellus* (*q. v.*). Fr., *asprellinées.* A family of gramineous plants, including *Leersia*, made by Link. [B, 170.]

ASPRELLUS (Lat.), adj., dim. of *Asper.* A^{2}s(a^{3}s)-pre^{2}l′lu^{3}s-(lu^{4}s). Slightly rough; a botanical species name. [B, 74.]

ASPRES-LEZ-VEYNE (Fr.), n. A^{3}spr-la-van. A place in the department of the Hautes-Alpes, France, where there are hot springs containing carbonates. [A, 321, 385.]

ASPRETUDO (Lat.), n. f. A^{2}s(a^{3}s)-pre^{2}t-u^2(u)′do. Gen., *aspretu′dinis.* See Aspredo.

ASPRIS (Lat.), n. f. A^{2}s(a^{3}s)′pri^{2}s. Gr., ἄσπρις. An ancient name for a kind of oak-tree [Theophrastus (A, 311)]; according to others, a gramineous plant akin to *Avena* [Bory (B, 121)].

ASPRITUDO (Lat.), n. f. A^{2}s(a^{3}s)-pri^2-tu^2(tu)′do. Gen., *aspritu′dinis.* See Aspredo.

ASQUE (Fr.), n. A^{3}sk. See Ascus.

ASS, n. A^{3}s(a^{2}s). See Asinus.

ASS (Ar.), n. See As.

ASSA (Lat.), n., f. of adj. *assus* (*nutrix* understood). A^{2}s(a^{3}s)′sa^3. 1. A dry-nurse. [A, 312; M, 60.] 2. See Asa. 3. The tamarind. [C. Bauhin (B, 121).]

ASSA (Lat.), n., n. pl. of adj. *assus.* An ancient term for a sun-bath or for the sweating-room (sudatorium) of a bath. [A, 312.]

ASSAB, n. See Asab.

ASSABATUS, n. See Borozail.

ASSAC, n. See Ammoniacum (1st def.).

ASSACOU, ASSACÙ, n's. Written also *ussacou* and *ussacù.* Brazilian names for the *Hura brasiliensis* or for a poisonous substance contained in its bark and juice, used in the treatment of elephantiasis. [B; L, 30, 65.]

ASSADA, n. An old name for the nutmeg. [L, 84.]

ASSAFAT, ASSAFATUM, n's. See Safat.

ASSAFETIDA, ASSAFŒTIDA (Lat.), n's f. A^{2}s(a^{3}s)-sa^3-fe^{2}t(fat)′i^{2}d-a^3, -fe^{2}t′(fo^2′e^{2}t)-i^{2}d-a^3. See Asafœtida.

ASSA FŒTIDA (Lat.), n. f. See ASAFŒTIDA.—**Emplastrum assæ fœtidæ compositum** [Finn. Ph., Greek Ph.]. See *Emplastrum* ASAFŒTIDÆ.—**Emulsio assæ fœtidæ** [Finn. Ph.]. See *Mistura* ASAFŒTIDÆ.—**Gummi resina a. f.** [Finn. Ph.]. See ASAFŒTIDA.

ASSAI, n. A Brazilian term for a drink made from the fruits of various species of palm. [L, 49.] See EUTERPE *edulis*.

ASSAINISSEMENT (Fr.), n. A^3-se^{2}n-es-ma^{3}n^2. The sanitation of a locality; the act or process of rendering it wholesome (as by disinfection, drainage, etc.); also the result of such action. [A, 300, 385.]

ASSAISONNEMENT (Fr.), n. A^3-se^{2}z-on-ma^{3}n^2. The act of seasoning; also a condiment. [A, 300.]

ASSAL (Ar.), n. Honey. [L, 77.]

ASSALA, n. The nutmeg. [Dornæus, Ruland, Johnson (A, 325); L, 87.]

ASSALIÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-sa(sa^3)'li^2-e(a^3-e^2). An old name for worms that feed on wood; anciently esteemed in the treatment of jaundice. [A, 325.]

ASSAM, n. An East Indian name for the tamarind. [L, 105.]

ASSAMAR, n. A^{2}s'sa^{2}m-a^{3}r. From *assare*, to roast, and *amarus*, bitter. Fr., *assamare*. Ger., *Röstbitter*. Reichenbach's term for a peculiar bitter principle formed by roasting gum, sugar, starch, gluten, meat, bread, etc.; said to have the property of retarding tissue metamorphosis. [B, 2, 14; L, 120.]

ASSAM-KALUBI, n. An East Indian name for the *Zalacca conferta*. [B, 121.]

ASSAMODUM, n. A Cingalese name for various aromatic and stimulating umbelliferous plants, including probably the *Ammi majus*. [H. Baillon (L, 87).]

ASSAM-PAIAH, n. See ASSAM-KALUBI.

ASSANEGI, ASSANGI, n's. The powder that falls from the walls of salt mines. [Ruland (A, 325); L, 94, 104.]

ASSAPHAT, ASSAPHATUM, n's. See SAFAT.

ASSARABACCA (Lat.), n. f. A^{2}s(a^{3}s) sa^3-ra^3-ba^{2}k(ba^{3}k)'ka^3. See ASARABACCA.

ASSARIUM, ASSARIUS (Lat.), n's n. and m. A^{2}s(a^{3}s)-sa(sa^3)'-ri^2-u^{3}m(u^{4}m), -u^{3}s(u^{4}s). Syn.: *as*. Gr., ἀσσάριον. Ancient names for: (1) the twelfth part of anything; (2) a weight of 2 drachms. [Galen (A, 325).]

ASSASSIN, n. Ar., *chashîsh*. See HASCHISCHIN.

ASSATIO (Lat.), n. f. A^{2}s(a^{3}s)-sa(sa^3)'shi^2(ti^2)-o. Gen., *assatio'nis*. From *assare*, to roast. Gr., ὄπτησις. Fr., *assation*. Ger., *Rösten, Braten*. It., *assazione*. The cooking of any article of food or medicine in its own juice. [A, 325, 385; L, 35, 94.]

ASSATURA (Lat.), n. f. A^{2}s(a^{3}s)-sa^3-tu^2(tu)'ra^3. Syn.: *a. suffocata* [Santes Ardoynus]. An old term for a roasted animal or piece of meat swathed in cloth immediately after its removal from the fire; considered poisonous. [A, 325.]

ASSAY, v. tr. A^{2}s-sa'. Fr., *essayer*. Ger., *versuchen, probiren*. It., *assaggiare*. Sp., *ensayar*. To subject a substance, especially a metallic compound, to analysis; to test it with the special purpose of ascertaining the proportion in which a particular constituent is contained in it. Thus, opium and its preparations are a'ed to determine the amount of morphine that they contain.

ASSAY, n. A^{2}s-sa'. Fr., *essai*. Ger., *Versuch, Probe, Prüfung, Untersuchung*. It., *saggio*. Sp., *ensayo*. The process of assaying (see ASSAY, v.).

ASSAZŒ, n. An Abyssinian name for a plant (probably fabulous) believed to be efficacious against the bites of serpents. [L, 105.]

ASSBERRI (Ar.), n. The *Ruscus aculeatus*. [L, 77.]

ASSEFOLIUM (Lat.), n. n. A^{2}s(a^{3}s)-se^2-fo(fo^2)'li^2-u^{3}m(u^{4}m). The herb, dog's-tooth or dog's-grass. [Apuleius (A, 318).]

ASSEL (Ger.), n. A^{3}s'se^{2}l. The woodlouse; in the pl., *A'n*. the *Aselli*. [B, 180.]—**Kellera'**. The *Oniscus scaber*. [B, 49.]—**Kugela'n**. The *Sphæromidæ*. [B, 49.]—**Landa'n**. The *Oniscidæ*. [B, 49.]—**Rolla'**. The *Armadillo officinarum*. [B, 49.]—**Wassera'n**. The *Asellidæ*. [B, 49.]

ASSELLA (Lat.), n. f. A^{2}s(a^{3}s)-se^{2}l'la^3. See AXILLA.

ASSENAR (Ar.), n. A species (in the pharmaceutical sense). [L, 77.]

ASSENZIO (It.), n. A^{3}s-se^{2}nt'si^2-o. Wormwood. [B.] See ABSINTHIUM.—**A. alpino.** See ACHILLEA *moschata*.—**A. maggiore.** See ARTEMISIA *absinthium*.—**A. maritimo, A romano.** See ARTEMISIA *pontica*.—**A. selvatico.** See ARTEMISIA *vulgaris*.—**Piccolo a.** See ARTEMISIA *pontica*.—**Sale d'a.** See *Sal* ABSINTHII.

ASSER (Lat.), n. m. A^{2}s(a^{3}s)'su^{5}r(se^{2}r). Gen., *as'seris*. A splint. [L, 135.]—**A. pedibus fulciendis.** A splint for fractures of the bones of the feet. [L, 135.]

ASSERAC, n. See HASCHISCHIN and ASSIS.

ASSERCULUM, ASSERCULUS (Lat.), n's n. and m. A^{2}s(a^{3}s)-su^{5}rk(se^{2}rk)'u^2(u^4)-lu^{3}m(lu^{4}m), -lu^{3}s(lu^{4}s). Dim. of *asser* (*q. v.*).

ASSERIDA, n. The native name of a Guinea plant which is chewed for pain in the stomach. [L, 105.]

ASSERVATIO (Lat.), n. f. A^{2}s(a^{3}s)-su^{5}r(se^{2}r)-va(wa^3)'shi^2-(ti^2)-o. Gen., *asservatio'nis*. From *asservare*, to keep, to preserve. The preservation of drugs in readiness for use. [A, 325; L, 84.]

ASSESTRIX (Lat.), n. f. A^{2}s(a^{3}s)-se^{2}s'tri^{2}x. Gen., *assestri'cis*. From *assidere*, to sit by, to attend upon. A midwife. [A, 318.]

ASSI, n. A Madagascar name for the *Dracœna umbraculifera*. [B, 121.]

ASSIDENS (Lat.), adj., pres. partic. of *assidere*, to sit by. A^{2}s-(a^{3}s)'si^{2}d-e^{2}nz(e^{2}ns). Fr., *assident*. Associated, accessory, concomitant (said of symptoms). [A, 301, 325, 385.]

ASSIDERATION, n. A^{2}s-si^{2}d-e^{2}r-a'shu^{3}n. From *ad*, intens., and *sideratio* (from *sidus*, a star), the stroke of a malign influence, because such strokes were formerly attributed to the evil action of certain stars. Fr., *assidération*. A medico-legal term for homicide (especially infanticide) by forcing the victim to remain for a long time in ice-cold water, so that the cause of death may not be known. [A, 301; L, 41.]

ASSIDUUS (Lat.), adj. A^{2}s(a^{3}s)-si^{2}d'u^2(u^4)-u^{3}s(u^{4}s). Continued (said of fevers). [Fernelius (A, 325).]

ASSILIS (Ar.), n. The *Selinum silvestre*. [L, 105.]

ASSIMILABILITY, n. A^{2}s-si^{2}m''i^2-la^{2}b-i^{2}l'i^{2}t-i^2. Fr., *assimilabilité*. Ger., *Assimilationsvermögen*. That state of an aliment in which it is capable of being assimilated; according to Burdach, its capability, while still in the intestinal canal, of assuming a form similar to that of the constituents of the blood. [A, 385; C.]

ASSIMILABLE, adj. A^{2}s-si^{2}m'i^{2}l-a^2-bl'. Lat., *assimilabilis*. Fr., *assimilable*. Ger., *angleichbar*. It., *assimilabile*. Sp., *semejable*. Capable of being assimilated (said of food). [C.]

ASSIMILATION, n. A^{2}s-si^{2}m''i^{2}l-a'shu^{3}n. Gr., ὁμοίωσις. Lat., *assimilatio* (from *similis*, like). Fr., *assimilation*. Ger., *Aehnlichmachung, Gleichmachung, Aneignung*. It., *assimilazione*. Sp., *asimilación*. The process by which nutritive material, having been prepared by digestion, and having been brought into molecular contact with the organism, is appropriated by the latter and becomes a part of it. [A, 385; C; K.]—**A'skraft** (Ger.). The assimilative faculty.—**A'svermögen** (Ger.). See ASSIMILABILITY.—**Destructive a.** Fr., *désassimilation*. Ger., *zerstörende A.* Disassimilation, destructive metamorphosis; the molecular separation of any of the constituents of an organism and their reduction to the excrementitious state. [K.]

ASSIMILATIVE, adj. A^{2}s-si^{2}m'i^{2}l-a-ti^{2}v. Lat., *assimilativus*. Fr., *assimilateur*. Ger., *ähnlichmachend*. Assimilating; having the power to assimilate. [C.]

ASSIMILATORY, adj. A^{2}s-si^{2}m'i^{2}l-a^{2}t-o-ri^2. See ASSIMILATIVE.

ASSIMINUM (Lat.), n. n. A^{2}s(a^{3}s)-si^{2}m'i^{2}n-u^{3}m(u^{4}m). Fr., *assimine*. A sort of fruit. [L, 109.] See ASIMINA.

ASSIMINIA (Lat.), n. f. A^{2}s(a^{3}s)-si^{2}m-i^{2}n'i^2-a^3. See ASIMINIA.

ASSIS (Lat.), n. m. and f. A^{2}s(a^{3}s)'si^{2}s. 1. An ancient name for opium or for some preparation of hemp, of an intoxicating nature, used by the Egyptians. [Prosper Alpinus (A, 325); L, 105, 116.] 2. A slice (as of a root). [Pliny (A, 318).] 3. See ASSER.

ASSISTENTES (Lat.), n., fem. pl. of partic. *assistens* (*glandulæ* understood). A^{2}s(a^{3}s)-si^{2}st-e^{2}nt'ez(as). Lit., the accessory glands; an old term for either the epididymides or the lobes of the prostate. [A, 325; L, 116.] Cf. PARASTATÆ.

ASSITRA, n. The *Bauhinia variegata*. [B, 121; L, 94, 104.]

ASSIUS (Lat.), adj. A^{2}s(a^{3}s)'si^2-u^{3}s(u^{4}s). Gr., ἄσσιος. From *Assos*, a city of Troas. Ger., *assisch*. See LAPIS *a.* and SARCOPHAGUS.

ASSMANNSHAUSEN (Ger.), n. A^{3}s'ma^{3}ns-ha^3-u-ze^{2}n. A place on the Rhine, where there are warm springs containing sodium bicarbonate and chloride and lithium bicarbonate. [L, 57.]

ASSOCIABLE, adj. A^{2}s-so'si^2-a-bl'. Liable to be affected by sympathy (said of a part). [L, 56.]

ASSOCIATÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-so(so^3)-si^2(ki^2)-a(a^3)'te(ta^3-e^3). Of Hill, a class of herbaceous plants the type of which is *Carduus*. [B, 121.]

ASSOCIATED, adj. A^{2}s-so'si^2-a-te^{2}d. Fr., *associé*. Accompanying voluntary muscular acts, but not directed by the will (said of muscular action). [L, 41.]

ASSOCIATION, n. A^{2}s-so-si^2-a'shu^{3}n. Lat., *associatio* (from *associare*, to join to, to unite with). Fr., *association*. Ger., *Association, Verbindung, Vereinigung*. It., *associazione*. Sp., *asociación*. 1. A functional or structural connection (said chiefly of the structure and functions of the brain). See *A.* BUNDLES, *A.* FIBRES, *A.* PARALYSIS, and *A.* SYSTEM. 2. In chemistry, the reverse of dissociation (*q. v.*). [B, 196.]—**A. of ideas.** Fr., *a. des idées*. Ger., *Ideenverbindung*. That operation of the mind by which an idea or a mental impression evokes the memory of other ideas or mental impressions that at some previous time have co-existed with one similar to the former. [A, 306.]

ASSODES (Lat.), adj. A^{2}s(a^{3}s)-so'dez(das). See ASODES.

ASSOGNE, n. Sp., *azogne* (probably from Ar., *zawaq*, mercury). Originally, mercury; hence, a vessel in which mercury was carried. [B, 52.]

ASSONIA [Cavanilles] (Lat.), n. f. A^{2}s(a^{3}s)-so'ni^2-a^3. See DOMBEYA.

ASSOS, n. An alchemical name for alum. [Ruland (A, 325).]

ASSOSUNUL (Ar.), n. *Iris florentina*. [L, 77.]

ASSOUBLEND TCHICHEI, n. A Turkish name for benzoic acid. [A, 259.]

ASSOUPISSANT (Fr.), adj. A^{3}s-su-pe-sa^{3}n^2. Causing drowsiness. [A, 385.]

ASSOUPISSEMENT (Fr.), n. A^{3}s-su-pes-ma^{3}n^2. Somnolence, drowsiness. [A, 385.]

ASSOUPLISSEMENT (Fr.), n. A^{3}s-su-ples-ma^{3}n^2. A term which seems to denote a peculiar kind of softening (attributed to imbibition) which fibrous tumors of the uterus undergo during the last few days of pregnancy. [A, 24.]

ASSOUROU, n. A Jamaica name for the *Myrtus pimenta*, or, according to some, of the *Myrtus citrifolia*. [L, 87.]

ASSOUVISSEMENT (Fr.), n. A^{3}s-su-ves-ma^{3}n^2. Satiety. [A, 385.]

ASSRAMINA, n. A native name of a Guinea plant which is said to kill the Guinea worm. [L, 105.]

ASSUEFACTIO (Lat.), n. f. A^{2}s(a^{3}s)-su^2(su^4)-e^2(a)-fa^{2}k(fa^{3}k)′-shi^2(ti^2)-o. Gen., *assuefactio′nis*. From *assuefacere*, to accustom to. Ger., *Angewöhnung*. Properly, the establishment of assuetude, but sometimes used as synonymous with that term. [A, 355.]

ASSUETUDE, n. A^{2}s′swe^2-tu^{2}d. Lat., *assuetudo* (from *assuescere*, to become accustomed to). Fr, *assuétude*. Ger., *Angewohnheit*. An acquired tolerance of disturbing agencies, climatic, medicinal, toxic, etc.; that state of the organism in which it has become so habituated to an agent that the latter no longer has its former effect. [A, 385.]

ASSUJETTISSEMENT (Fr.), n. A^{3}s-su^6-zhe^{2}t-tes-ma^{3}n^2. The process or means of restraining an animal on which an experiment is to be performed. [L, 49.]

ASSULA (Lat.), n. f. A^{2}s(a^{3}s)′su^2(su^4)-la^3. Dim. of *assis*. Fr., *assule*. 1. A splint. [E.] 2. In zoology, the cuirass of a mammal when composed of scales united in a sort of areolated form. [Illiger (L, 180).]

ASSULTUS (Lat.), n. m. A^{2}s(a^{3}s)-sú^{3}lt(sult)′u^{3}s(u^{4}s). Gen., *assultus*. From *assultare*, to leap upon. An attack (as of a disease). [L, 45.]

ASSUMPTION, n. A^{2}s-su^{3}mp′shu^{3}n. Gr., πρόσληψις, προσφορά. Lat., *assumptio* (from *assumere*, to take to one's self). Fr., *assomption*. Ger., *Aufnahme, Annahme*. It., *assunzione*. Sp., *asunción*. A taking up, an appropriation (as of oxygen or nutrient material by the blood). [J, 19.]

ASSURGENT, adj. A^{2}s-su^{5}rj′e^{2}nt. Lat., *assurgens* (from *assurgere*, to rise up). Fr., *assurgent*. Ger., *aufstrebend*. In botany, at first depressed, and then rising so as to grow upward; ascending. [B.]

ASSURINE, n. A^{2}s′u^2-ren. Fr., *assurine*. Ger., *Assurin*. A substance, $C_{46}H_{94}N_2P_2O_9$ or $C_{47}H_{101}N_2P_2O_{11}$, belonging to the group of diphosphatides, occurring in the alcoholic extract of cerebrine, from which myeline, sphingomyeline, and kerasine have been extracted. [B, 220.]

ASSY, n. See Assi.

ASSYOUNI, n. An African name for an intoxicating preparation of *Cannabis indica*. [A, 259.] See Hasheesh and Bhang.

AST (Ger.), n. A^{3}st. A branch. [B.]—**A'achsel.** The axilla of a branch; the angle made by a branch with the stem or with another branch. [B, 198.]—**A'achselständig.** Placed in the axilla of a branch; alar. [B, 198.]—**A'ähnlich.** Resembling a branch. [B, 198.]—**A'blatt.** A leaf growing upon a branch (folium rameale). [B, 198.]—**A'gabel.** See *A'achsel*.—**A'knorren.** A knot (in wood). [B, 198.]—**A'los.** Destitute of branches. [L, 46.]—**A'moos.** See the major list.—**A'pinsel.** See Penicilli *ramulorum*.—**A'quirle.** See Verticilli *ramulorum*.—**A'ständig.** See Ramealis and Rameus.—**A'ranke.** See Capreolus.—**A'stiel.** See Cladopodium.—**A'voll.** Branching; full of branches. [B, 131.]—**A'vortretend.** See Rameanus.—**A'winkel.** See *A'achsel*.—**Horizontaler A.** A horizontal branch. [L, 80.]—**Horizontaler A. des Arbor vitæ.** A layer of white substance which extends backward from the corpus trapezoides in a line with the roof of the fourth ventricle of the brain. [I, 17; K.]—**Kleiner A.** See Ramulus.—**Verticaler A. des Arbor vitæ.** A tract of white substance described by Schwalbe as extending vertically upward from the medullary centre of the vermiform process of the cerebellum. [I, 17; K.]

ASTACAIRE (Fr.), adj. A^{3}s-ta^3-ka^{2}r. See Astacoid.

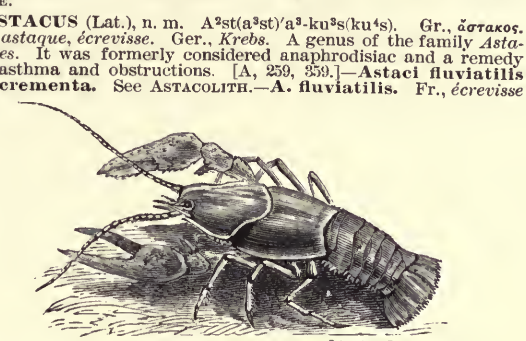
ASTACIAN, adj. A^{2}s-ta′sha^{2}n. Fr., *astacien*. Belonging to the genus *Astacus* or to the family *Astacidæ*.

ASTACIDÆ (Lat.), n. f. pl. A^{2}st(a^{3}st)-a^{2}s(a^{3}k)′i^{2}d-e(a^3-e^2). Fr., *astacidées*. See Astacoides.

ASTACIFORM, adj. A^{2}st-a^{2}s′i^2-fo^{2}rm. Lat., *astaciformis* (from *astacus* [= ἄστακος], a kind of lobster, and *forma*, form). Fr., *astaciforme*. Ger., *krebsförmig*. Having a shell like a crab. [B, 195.]

ASTACII (Lat.), n. m. pl. A^{2}s(a^{3}s)-ta(ta^3)′si^2(ki^2)-i(e). Of Lamarck, see Astacoides.

ASTACINA (Lat.), n. n. pl. A^{2}s(a^{3}s)-ta^3-si(ke)′na^3. A tribe of the *Crustacea*, including *Astacus*, divided into the families *Potamobiidæ* and *Parastacidæ*. [L, 168.] Cf. Astacoides.



ASTACINÆ (Lat.), n. f. pl. A^{2}st(a^{3}st)-a^3-si(ke)′ne(na^3-e^2). See Astacoides.

ASTACOID. adj. A^{2}st′a^3-koid. Lat., *astacoides* (from ἄστακος, a lobster, and εἶδος, resemblance). Fr., *astacoïde*. Ger.. *krebsähnlich*. Belonging to or resembling the genus *Astacus*. [L, 109, 116.]

ASTACOIDES (Lat.), n. m. pl. A^{2}s(a^{3}s)-ta^2(ta^3)-ko(ko^2)-i(e)′dez-(das). An order of *Crustacea*, or a family of decapod *Crustacea*, including *Astacus*. [B, 195.]

ASTACOLITH, n. A^{2}s-ta^{2}k′o-li^{2}th. From ἄστακος, a lobster, and λίθος, a stone. Fr., *astacolithe*. Syn.: *eye-stone, crab-stone*. A concretion found in the stomach of the craw-fish (*Astacus fluviatilis*), consisting of calcium carbonate and a gelatinous material. These concretions, commonly termed crab's eyes (Lat., *oculi* [seu *lapides*] *cancrorum*; Fr., *yeux* [ou *pierres*] *d'écrevisses*; Ger., *Krebsaugen, Krebssteine*; It., *occhi di grauchio*; Sp., *ojos de cangrejos*). are little hemispherical bodies formed of concentric layers, smooth, hard, and having a shallow central depression which gives them some resemblance to an eye. They were formerly used for acidity, gout, and hæmorrhages. [A, 259, 385.] See *Yeux d'*Écrevisse.

ASTACUS (Lat.), n. m. A^{2}st(a^{3}st)′a^3-ku^{3}s(ku^{4}s). Gr., ἄστακος. Fr., *astaque, écrevisse*. Ger., *Krebs*. A genus of the family *Astacoides*. It was formerly considered anaphrodisiac and a remedy for asthma and obstructions. [A, 259, 359.]—**Astaci fluviatilis concrementa.** See Astacolith.—**A. fluviatilis.** Fr., *écrevisse*

THE ASTACUS FLUVIATILIS. [A, 327.]

de rivière. Ger., *Flusskrebs, Bachkrebs*. It., *cammaro*. The crawfish, cray-fish, or river-lobster; a species found in the United States and in Europe. Its flesh is esteemed as an article of food, and in its stomach are found the concretions known as crab's eyes (see Astacolith). [A, 327; L, 65.]—**A. homarus, A. marinus.** The lobster. [L, 128.] See Homarus *vulgaris*.

ASTA DE CIERVO (Sp.), n. A^{3}s′ta^3 da the-e^{2}r′vo. See *Cornu* cervi.

ASTAKILLOS (Lat.), n. m. A^{2}st(a^{3}st)-a^3-ki^{2}l′lo^{2}s. Probably a dim. of ἄστακος, a kind of lobster. See Astchachilos.

ASTANTES (Lat.), n. m. and f. pl. A^{2}st(a^{3}st)-a^{2}nt(a^{3}nt)′ez(as). From *astare*, to stand by. An old term for nurses. [M, 59.]

ASTAPHIS (Lat.), n. f. A^{2}st(a^{3}st)′a^3-fi^{2}s. Gen., *astaph′idos* (*-dis*). Gr., ἀσταφίς. 1. A raisin; especially the Corinthian raisin. [L, 94.] 2. Staphisagria. [B, 217.]—**A. agria** [Pliny]. See Staphisagria.

ASTAPHYS (Lat.), n. f. A^{2}st(a^{3}st)′a^3-fi^{2}s(fu^{6}s). See Astaphis (1st def.).

ASTAQUE (Fr.), n. A^{3}st-a^{3}k. See Astacus.

ASTARACH, n. Ar., *aḉt'arak*. The *Styrax officinale*. [B, 121.]

ASTARTIF, n. An African name for chamomile. [L, 105.]

ASTARZOF, n. A term applied by Paracelsus to an ointment made with ½ oz. of washed litharge, 1½ oz. of frog-spawn, and 3 oz. each of the juice of the house-leek and of the water-lily; also to a mixture of 1 oz. of camphor and 2 oz. of rose-water. [L, 94.]

ASTASIA (Lat.), n. f. A^{2}s(a^{3}s)-ta(ta^3)′zi^2(si^2)-a^3. Gr., ἀστασία (from α priv., and ἱστάναι, to be stationary). Fr., *astasie*. Ger., *Astasie*. It., *astasi*. Sp., *astasis*. 1. Great restlessness with jactitation. [A, 322.] 2. Muscular unsteadiness, tremor. [M, 3.] 3. A genus of *Infusoria* (*Flagellata-Eustomata*), made by Ehrenberg. [B, 208.]

ASTASIÆ [Perty] (Lat.), n. f. pl. A^{2}s(a^{3}s)-ta(ta^3)′zi^2(si^2)-e(a^3-e^2). A family of *Infusoria*, including *Astasia* and other genera. [B, 208.] See Astasiadæ.

ASTASIÆA (Lat.), n. n. pl. A^{2}s(a^{3}s)-ta^{2}s(ta^{3}s)-i^2-e′(a^{3}e^2)-a^3. A family of *Infusoria*, made by Ehrenberg, comprising genera such as *Astasia*, which are anenterous, without appendages (pseudopodia), of changeable form, and illoricate. [B, 208.]

ASTASIADÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ta^{2}s(ta^{3}s)-i(i^2)′a^3-de-(da^3-e^2). A family of flagellate infusorians (*Eustomata*), including those with single flagellum (*Monomastiga*), of very changeable form (metabolic) and with colorless endoplasm. [B, 208.]

ASTASINA (Lat.), n. n. pl. A^{2}s(a^{3}s)-ta^3-si(se)′na^3. A family of the *Euglenoidea*, colorless, metabolic or stiff, and provided with a supplementary paraflagellum. [L, 121.]

ASTATHE, n. A^{2}s′tath^2. From ἀσταθής, unstable. Fr., *astathe*. The innermost layer of cellulose in vegetable cells. [Hartig (A, 385).]

ASTATIC, adj. A^{2}s-ta^{2}t′i^{2}k. Lat., *astaticus* (from α priv., and στατικός, bringing to a stand-still. Fr., *astatique*. Ger., *astatisch*. It., *astatico*. Sp., *astático*. 1. Unstable, constantly in motion (said of the needle of a galvanometer). [A, 385.] 2. Free to move, not affected by the earth's magnetism (said of a magnetic needle that is made free to move in any direction—usually by connecting to the axis on which it revolves a parallel needle with its poles reversed). [B.]

ASTCHACHILOS (Lat.), n. m. A^{2}st(a^{3}st)-ka^3(ch^{2}a^3)-ki(ch^{2}e)′-lo^{2}s. Syn.: *araneum*. A malignant gangrenous ulcer of the foot, spreading to the leg, attributed to the presence of a mercurial salt in the blood. [Paracelsus (A, 325).]

ASTEATODES (Lat.). adj. A^{2}s(a^{3}s)-te(te^2)-a^3-to′dez(das). From α priv., and στεατώδης, tallow-like. Deficient in or destitute of sebaceous secretion; as a n.. see Asteatosis. [G.]

ASTEATOSIS (Lat.), n. f. A^{2}s(a^{3}s)-te(te^2)-a^3-to′si^{2}s. Gen., *asteato′seos* (*-sis*). For deriv., see *A-**, Stearin, and *-osis*.* Fr., *astéatose*. Ger., *Asteatose*. It., *asteatosi*. Sp., *asteatósis*. A deficiency of sebum or of fat; in the pl., *asteatoses*, in Auspitz's classification of skin diseases, a family of the *steatoses*, comprising xerodermia congenita and xerodermia acquisita, characterized by absence or deficiency of the sebaceous secretion. [G, 4.]

ASTELIA (Lat.), n. f. A^{2}s(a^{3}s)-te(ta)′li^2-a^3. From ἀ priv., and στήλη, a column. Fr., *astélie.* 1. A genus of liliaceous plants belonging to the tribe *Dracæneæ.* [Banks and So.ander (B, 42).] 2. The state of being astelic. .[" Ann. des sci. nat. (Bot.)," 1886, p. 275 (B).]—**A. alpina.** A Tasmanian species having a very short flattened scape bearing at its apex a dense panicle of chestnut-colored flowers. The hairy linear leaves are edible. [B, 19.]

ASTELIACEÆ [Dumortier], **ASTELIEÆ** [Endlicher] (Lat.), n's f. pl. A^{2}s(a^{3}s)-te^{2}l(tal)-i^2-a(a^3)-se^2(ke^2)-e(a^3-e^2), -i(i^2)′e^2-e(a^3-e^2). A family of plants related to the *Juncaceæ* (by some made a suborder of the latter), including the genus *Astelia*, which is now referred to the *Liliaceæ.* [B, 170.]

ASTELIC, adj. A^{2}s-te^{2}l′i^{2}k. Fr., *astélique.* Having no central cylinder, or stele (said of the stems of plants). [" Ann. des sci. nat. (Bot.)," 1886, p. 275 (B).]

ASTELIS (Lat.), adj. A^{2}s(a^{3}s)-te(ta)′li^{2}s. From ἀ priv., and στήλη, a column. Without support, pedicel, or podetium; a term applied to lichens. [B, 123.]

ASTEMON (Lat.), n. m. A^{2}s(a^{3}s)-te(ta)′mo^{2}n(mon). Gen., *aste′monos (-is).* From ἀ priv., and στήμων, a thread. A genus of labiate plants. [B, 19.]—**A. graveolens.** A shrub, 6 to 8 feet in height, of disagreeable odor, growing in Bolivia. [B, 19.]

ASTELLE (Fr.), n. A^{3}s-te^{2}l. A splint. [L, 109.]

ASTEOS (Lat.), adj. A^{2}s(a^{3}s)-te(ta)′o^{2}s. Gr.. ἀστεῖος. Lit., pleasant; harmless, non-poisonous (said of plants). [Hippocrates (A, 325).]

ASTEPHANÆ [Decaisne], **ASTEPHANEÆ** [Reichenbach] (Lat.), n's f. pl. A^{2}s(a^{3}s)-te^{2}f′a^3-ne(na^3-e^2), -te^{2}f-a^{2}n(a^{3}n)′e^2-e(a^3-e^2). A division of asclepiadaceous plants, including *Astephanus* and 3 or 4 other genera. As defined by Decaisne, it includes those of the *Asclepiadeæ veræ* in which the throat of the corolla is devoid of scales and the stamens have no corona. [B, 121, 170, 214.]

ASTER (Lat.), n. m. A^{2}s(a^{3}s)′tu^{5}r(tar). Gen., *as′teris.* Gr., ἀστήρ. Fr., *aster* (1st def.), *étoile mère* (1st def.). Ger., *Stern* (1st def.), *Sternform* (1st def.), *Sternblume* (3d def.). 1. That phase or condition (*star*, *mother-star*, *astral* or *stellate phase* or *figure*) of a dividing nucleus in which the fibrils are in open loops and arranged around a common centre, thus producing the appearance of a star; also a star-like figure that appears in an ovum, in the vitelline plasma between the lacuna and the surface, after the disappearance of the germinal spot (Cf. AMPHIASTER). [A, 15; J, 30, 32; Flemming, "Arch. f. mikr. Anat.," 1878, 1880 (J)]. 2. An ancient name for a very white earth, used as a hæmostatic. [Aretæus (A, 322).] Cf. TERRA *samia.* 3. A genus of composite plants, established by Tournefort, belonging to the tribe *Asteroideæ*, subtribe *Heterochromeæ*, including leafy-stemmed herbs with hemispherical or campanulate, sometimes oblong or turbinate, involucre, consisting of several rows of imbricated, unequal, generally herbaceous, bracts; flowers with numerous, not very narrow rays and slender-subulate, lanceolate, or ovate-acute style-appendages; and fruit consisting of compressed 2 to 10-nerved achænia with abundant, usually simple pappus. The genus *A.* includes 2 series: (*a*) perennial herbs with many-headed rhizome, and (*b*) annuals or biennials. The first series includes the sections *Amellastrum*, with 2 to 3 rows of slightly unequal bracts, the outer foliaceous or herbaceous at the tip, and with broad, obovate, usually flat achænia with callous nerves at the margin only; *Megalastrum; Heleastrum* (the genus *Heleastrum* of De Candolle); *Hesperastrum; Biotia* (the genus *Biotia* of De Candolle), having corymbosely cymose heads, campanulate involucre of subcoriaceous, appressed, obtuse bracts, 6 to 18 rays, subulate-lanceolate style-appendages, achænia, usually linear, but little compressed, and with 3 or more ribs and slightly rigid simple pappus, and having the radical and lower cauline leaves cordate and long-petiolate; *Aster* proper (*Euaster*), including most of the species, having bracts either foliaceous or with green herbaceous tips and non-scarious margins, obovate-oblong or linear achænia with 3 or more nerves and usually fine, soft, simple pappus; *Erigerastrum; Dœllingeria; Ianthe;* and *Orthomeris*, with imbricated, appressed bracts without foliaceous or herbaceous tips and often scarious at the edge, and with fertile rays. The second series includes *Oxytripolium*, *Conyzopsis*, and *Machlœrunthera.* [B, 215.]—**A. acris** [Linnæus]. See *A. tripolium.*—**A. alpinus** [Linnæus]. A species with violet rays belonging to the section *Amellastrum*, growing in Europe on the Alps and Pyrenees, in the Caucasian Mountains and Siberia, and in the Arctic regions of North America and the northern Rocky Mountains. [B, 214, 215.]—**A. amelloides** [Besser, Reichenbach, Römer]. Different varieties of *A. amellus.* [B, 214.]—**A. amellus** [Linnæus]. Gr., ἀστὴρ ἀττικός. Fr., *œil de Christ.* Ger., *blaue A.* A species belonging to the section *Amellastrum*, growing in central and southern Europe and western Asia, of which several varieties are described. Its herb and root, *radix et herba bubonii* (seu *asteris attici*), were formerly employed in inflammatory buboes, hernias, and diseases of the eyes. [B, 180, 214.]—**A. amœnus** [Lamarck]. See *A. puniceus.*—**A. annuus** [Linnæus]. See ERIGERON *annuus.*—**A. argophyllus** [Labillardière]. See OLEARIA *argophylla.*—**A. artemisiæ folius** [Poiret]. See *A. Tradescanti.*—**A. atticus** [Dod.]. Gr., ἀστὴρ ἀττικός. See *A. amellus.*—**A. atticus luteus montanus villosus, magno flore** [Bauhin]. The *Inula montana* [Linnæus]. [B, 211.]—**A. bessarabicus** [Bernhardi]. A variety of *A. amellus.* [B, 214.]—**A. bifrons** [Allioni]. See INULA *bifrons.*—**A. blandus** [Todd., Pursh]. See *A. puniceus.*—**A. britannicus** [Allioni]. See INULA *britanica.*—**A'es callimeridi** [Nees]. See under ASTEREÆ.—**A. chinensis** [Linnæus]. See CALLISTEPHUS *chinensis.*—**A'es cinerariformes** [Nees]. See under ASTEREÆ.—**A. Collinsonii** [Nuttall]. See SERIOCARPUS *tortifolius.*—**A. confertus** [Hort. par.]. The *A. puniceus*, var. *lævicaulis.* [B, 215.]—**A. conyzoides.** See ERIGERON *acris.*—**A. conyzoides flore luteo.** See PULICARIA *dysenterica.*—**A. cordifolius.** 1. Of Linnæus, the heart-leaved a., a species belonging to the section *Aster* proper, found throughout the eastern half of the United States and in Canada. 2. Of Michaux, the *A. corymbosus.* [B, 215.]—**A. corymbosus** [Aiton]. Syn.: *Biotia* [De Candolle] (seu *Eurybia* [Cassini]) *corymbosa.* A species belonging to the section *Biotia*, found in the Atlantic United States and Canada. [B, 215.]—**A. crispus** [Forskål]. A species referred to *Pulicaria* (*q. v.*). [B, 42.]—**A. divaricatus** [Linnæus]. See *A. corymbosus.*—**A. Durandi** [Nuttall]. See *A. Menziesii.*—**A. dysentericus** [Scopoli]. See PULICARIA *dysenterica.*—**A. ericoides Meliloti, agrariæ umbone** [Dillenius]. A variety of the *A. vimineus.* [B, 215.]—**A. firmus** [Nees]. A variety of *A. puniceus.* [B, 215.]—**A. flexuosus** [Nuttall]. The *A. tenuifolius* [Linnæus]. [B, 215.]—**A. foliolosus** [Aiton]. A variety of the *A. vimineus* [Lamarck]. [B, 215.]—**A. fragilis.** 1. Of Willdenow, the *A. Tradescanti.* 2. Of Nees, the *A. vimineus* [Lamarck].—**A. fruticosus** [Linnæus], **A. fruticulosus** [Willdenow]. Syn.: *Diplopappus fruticulosus* [Less.] (et *obtusatus* [Less.]). A species growing at the Cape of Good Hope. [B, 214.]—**A'es genuini** [Nees]. See under ASTEREÆ.—**A. helenium** [Scopoli]. See INULA *helenium.*—**A. heterophyllus** [Willdenow]. The *A. cordifolius* [Linnæus]. [B, 215.]—**A. hirtus** [Scopoli]. See INULA *hirta.*—**A. hispidus** [Lamarck]. See *A. puniceus.*—**A. ibericus** [Stev.]. A variety of *A. amellus.* [B, 214.]—**A. indicus** [Linnæus]. See LOTONIA *indica.*—**A. inguinalis.** See ERYNGIUM *campestre.*—**A. javanensis** [Gac.]. See BOLTONIA *indica.*—**A. latifolius glaber** [Moris.], **A. latifolius autumnalis.** The *A. cordifolius* [Linnæus]. [B, 211.]—**A. leucanthemus** [Desfontaines]. See *A. Tradescanti.*—**A. linosyris** [Bernhardi]. Fr., *dorelle.* Syn.: *Linosyris vulgaris* [Cassini] (et *foliosa* [Cassini], seu *nuperorum* [Lob.]), *Chrysocoma* [Linnæus] (seu *Crinitaria* [Less.], seu *Erigeron* [Clairo.]) *linosyris.* A perennial European species said to be anthelminthic and deobstruent. [B, 42, 173, 214.]—**A. lucidus** [Wenderoth]. The *A. puniceus*, var. *lucidulus.* [B, 215.]—**A. luteus radice odora.** The *Inula* (*Pulicaria*) *odora.* [B, 211.]—**A. Menziesii** [Lindley]. Syn.: *A. Durandi* [Nuttall]. A California species, belonging to the section *A.* proper, enumerated among the medicinal plants. [B, 215; " Proc. of the Am. Phar. Assoc.," xix, p. 302 (B).]—**A. miser.** 1. Of Aiton, the *A. Tradescanti.* 2. Of Linnæus, a variety of the *A. vimineus* [Lamarck]. [B, 215.]—**A. odorus** [Allioni]. See PULICARIA *odora.*—**A. officinalis** [Allioni]. See INULA *helenium.*—**A. omnium maximus.** The *Inula helenium.* [B, 211.]—**A'es paleigeri** [Nees]. See under ASTEREÆ.—**A. palustris** [Lamarck]. See *A. tripolium.*—**A. paniculatus.** 1. Of Nees and Willdenow, the *A. cordifolius.* 2. Of Lamarck, a species, belonging to the section *A.* proper, growing throughout the United States and Canada. [B, 215.]—**A. pannonicus** [Jacquin]. A variety of *A. tripolium.* [B, 214.]—**A. parviflorus** [Nees]. See *A. Tradescanti.*—**A. persoonoides** [Cum.]. See OLEARIA *argophylla.*—**A. peruanus, A. peruvianus.** The *Helianthus tuberosus.* [B, 59.]—**A'es plumigeri** [Nees]. See under ASTEREÆ.—**A. pratensis autumnalis conyzæ folio.** The *Pulicaria dysenterica.* [B, 211.]—**A. pseudo-amellus** [De Candolle]. A variety of *A. amellus.* [B, 214.]—**A. pulicaria** [Allioni], **A. pulicarius** [Scopoli]. See PULICARIA *vulgaris.*—**A. puniceus** [Linnæus]. Rough-stemmed a., red-stalked a.; a species belonging to the section *A.* proper, growing in Canada and the northern, central, and Atlantic districts of the United States. It has a stem from 3 to 7 feet in height, covered with spreading bristles and often red or purple in color. The *A. puniceus*, var. *lævicaulis*, is lower, and the stem, which is usually green, is almost completely devoid of bristly appendages; and the *A. puniceus*, var. *lucidulus*, which is also lower and has a glabrous stem, has somewhat lucid leaves. This species is counted among the medicinal plants. [B, 215; "Proc. of the Am. Pharm. Assoc.," xxix, p. 442 (B).]—**A. salicilifolius** [Scholler]. A variety of *A. paniculatus* [Lamarck]. [B, 215.]—**A. salicinus** [Scopoli]. See INULA *salicina.*—**A. salinus** [Schrader]. A variety of the *A. tripolium.* [B, 214.]—**A. samius.** See *A.* (2d def.).—**A. scabrosus** [Bertol.]. See SERIOCARPUS *tortifolius.*—**A. secundiflorus** [Desfontaines]. The *A. vimineus* [Lamarck]. [B, 215.]—**A. simplex** [Torrey and Gray]. The *A. paniculatus* [Lamarck]. [B. 215.]—**A. sparsiflorus** [Pursh]. The *A. tenuifolius* [Linnæus]. [B, 215.]—**A'es tenelli** [Nees]. See under ASTEREÆ.—**A. tenuifolius.** 1. Of Linnæus, a species belonging to the section *Orthomeris*, growing in salt marshes along the Atlantic coast of the United States. 2. Of Nees, in part, the *A. paniculatus* [Lamarck]. 3. Of Elliott, the *A. vimineus* [Lamarck]. [B, 215.]—**A. thalassius.** Gr., αστὴρ θαλάσσιος. Syn.: *stella marina.* 1. A certain marine zoophyte which, together with a species of *Brassica* and aromatic wine, was recommended by Hippocrates for the so-called ascent of the womb and for hysterical pains. [A, 325.] 2. An ancient name for a medicament used for catarrh and for various pains. [Galen (A, 325).]—**A'es thalattii.** See *A. thalassius.*—**A. tortifolius** [Michaux]. See SERIOCARPUS *tortifolius.*—**A. Tradescanti** [Linnæus]. The Michaelmas daisy; a species belonging to the section *A.* proper, growing throughout the United States. It is enumerated among the medicinal plants. [B, 215; "Proc. of the Am. Pharm. Assoc.," xxix, p. 442 (B).]—**A. tripolium.** Syn.: *Tripolium vulgare* [Nees]. 1. Of Linnæus, a species of which several varieties are enumerated, growing in Europe and northern Asia. Its ash contains a large amount of soda, potash, and sodium chloride. 2. Of Walter, the *A. tenuifolius* [Linnæus]. [B, 196, 214, 215.]—**A. undulus** [Mönch]. See PULICARIA *dysenterica.*—**A. vimineus.** 1. Of Nees, the *A. puniceus*, var. *lævicaulis.* 2. Of Lamarck, a species belonging to the section *A.* proper, found in moist ground throughout the eastern half of the United States and in Canada. [B, 215.]—**A. virginianus parvis floribus Tradescanti** [Moris.]. See *A. Tradescanti.*—**Blaue A.** (Ger.). See *A. amellus.*—**China a.** Ger., *chinesische A.* See CALLISTEPHUS *chinensis.*—**Heart-leaved a.** See *A. cordifolius.*—**Herba asteris attici.** The herb of *A. amellus.* [B, 180.]—**Herba asteris conyzoidis.** The herb of *Erigeron acris.* [B, 180.]—**Jährige A.** (Ger.). See ERIGERON *heterophyllus.*—**Radix asteris attici.** The root of *A. amellus.* [B, 180.]—**Radix asteris conyzoidis flore luteo.** The root of *Pulicaria dysenterica.* [B, 180.]—**Radix asteris inguinalis.** The root of *Eryngium campestre.* [B, 180.]—**Red-stalked a., Rough-stemmed a.** See *A. puniceus.*

ASTERACANTHA (Lat.), n. f. A^{2}s(a^{3}s)″te^{2}r-a^3-ka^{2}n(ka^{3}n)′-tha^3. From ἀστήρ, a star, and ἄκανθα, a prickly plant. Fr., *astéracanthe.* A genus of acanthaceous plants established by Nees von Esenbeck, now made a subgenus of *Hygrophila.* [A; B, 42.]—**A. auriculata** [Nees], **A. longifolia** [Nees]. See HYGROPHILA *spinosa.*

ASTERACE (Lat.), n. f. A^{2}s(a^{3}s)-te^{2}r′a^3-se(ka). See ASTERIACE.

ASTERACEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-a(a^3)′se^2(ke^2)-e(a^3-e^2). Fr., *astéracées.* 1. Of Lindley, see COMPOSITÆ. 2. Of Brongniart, a tribe of the *Compositæ*, including the subtribes *Eclipteæ*, *Buphthalmeæ*, *Inuleæ*, *Tarchonantheæ*, *Baccharideæ*, and *Astereæ.* [B, 170.] Cf. ASTEROIDEÆ [De Candolle].

ASTERAL, adj. A^{2}s′te^{2}r-a^{2}l. Lat., *asteralis.* Resembling the *Aster*; belonging to the *Asterales.* [B.]—**A. alliance.** See ASTERALES (1st def.).

ASTERALES (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-a(a^3)′lez(las). 1. Of Lindley, an alliance of monopetalous plants (*Aggregatæ*), including the orders *Calycereæ* and *Compositæ.* 2. Of Bentham and Hooker, a cohort of gamopetalous dicotyledons belonging to the series *Inferæ*, including the orders *Valerianæ*, *Dipsaceæ*, *Calycereæ*, and *Compositæ*, in which the limb of the calyx is frequently obsolete, or heteromorphous, or reduced to a pappus, the stamens are applied to the corolla and alternate with its lobes, the anthers are either free (in the first 2 orders) or connate (in the last 2 orders), and the ovary is unilocular and contains a single ovule. [B, 42, 170.]

ASTERANTHEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-a^{2}n(a^{3}n)′the^2-e(a^3-e^2). Fr., *astéranthées.* A section of the *Olacinæ*, made by Reichenbach, comprising 2 genera. [B, 170.]

ASTEREÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te(te^2)′re^2-e(a^3-e^2). Fr., *astérées.* A tribe of composite plants, or a subtribe belonging to the *Asteroideæ* [Less.], or *Asterineæ* [De Candolle], established by Cassini. By the latter it was divided into the *Solidagineæ*, *Baccharideæ*, *A. archetypæ*, and *Bellideæ*; by Nees into the *Asteres callimeridi*, *cinerariformes*, *genuini*, *paleigeri*, *plumigeri*, and *tenelli*; by others into the *Amelloideæ*, *A.*, including *Aster*, *Diplopappus*, *Solidago*, *Bellis*, and many other genera, and *Chrysocomeæ*; and by De Candolle into the *Euastereæ*, *Diplopappeæ*, *Erigereæ*, *Heteropappeæ*, *Bellieæ*, and *Bellideæ.* It includes, according to the latter, genera having receptacles without pales and either bare, alveolate or fimbrilliferous and heterogamous heads with the female ray flowers ligulate and heterochromous. [B, 170, 214.]—**A. archetypæ** [Cassini]. A division of *A.*, including the *Erigereæ* and *A. archetypæ veræ*, the latter comprising *Aster*, *Eurybia*, and 1 or 2 other genera. [B, 170.]—**A. genuinæ** [Reichenbach]. 1. A section of the *A.* comprising the *Asterinæ* and *Erigereæ.* Cf. *A. archetypæ.* 2. A subdivision of the *Asterinæ* (2d def.), corresponding nearly to the *Euastereæ* of De Candolle. [B, 170.]

ASTERELLA (Lat.), n. f. A^{2}s(a^{3}s)-te^{2}r-e^{2}l′la^3. Fr., *astérelle.* The *Rebouillia* of Rudd. [B, 121.]

ASTERENCRINEA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-e^{2}n-kri^{2}n′-e^2-a^3. See CRINOIDEA.

ASTERENIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-e^{2}n′i^{2}d-e(a^3-e^2). Fr., *astérides.* A family of the *Asteroidea.* [L, 147.]

ASTERENK, n. A Persian name for the plant mandragora. [L, 41.]

ASTERGES (Lat.), adj. A^{2}s(a^{3}s)-tu^{5}r(te^{2}r)′jez(gas). Gr., ἀστεργής. Hard, compact, crude. [Hippocrates (A, 325).]

ASTERGIR (Ar.), n. The azederach. [Bory (B, 121).]

ASTERIA (Lat.), n. f. A^{2}s(a^{3}s)-te(te^2)′ri^2-a^3. 1. See ASTERIAS. 2. See ASTERISM.

ASTERIACE (Lat.), n. f. A^{2}s(a^{3}s)-te^{2}r-i(i^2)′a^3-se(ka). Gr., ἀστεριακή. A mineral, probably yellow ochre, mentioned by Celsus as an application to ulcers. [B, 45.]

ASTERIADÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-i(i^2)′a^3-de(da^3-e^2). A family of the *Asteroidea*, including those with ambulacra having four rows of feet, and with a simple dorsal wart. [L, 147.]

ASTERIÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te(te^2)′ri^2-e(a^3-e^2). Fr., *astéries.* An order [Goldfuss] of the *Radiata*, or a family [Ficinus and Caruo] of the *Oozoaria.* [B, 195.] According to Haeckel, the *Asteroidea*, divided by him into the *Palasteriæ* and the *Colasteriæ.* [L, 228.]

ASTERIAS (Lat.), n. m. A^{2}s(a^{3}s)-te(te^2)′ri^2-a^{2}s(a^{3}s). Gr., ἀστερίας. Fr., *astérias*, *astériade* (3d def.). 1. A kind of heron. [Pliny (A, 312).] 2. The star-stone; a fossil gem found in India and Carmania, having black rays; formerly esteemed as a preventive of pestilential disease and of birth-marks, and as a vermicide. [A, 325; L, 94.] 3. A genus separated from *Gentiana* by several writers; by others, made a section of that genus. [B, 121, 170.]—**A. lutea** [Gaudichaud]. See GENTIANA *lutea.*

ASTERICUM (Lat.), n. n. A^{2}s(a^{3}s)-te^{2}r′i^{2}k-u^{3}m(u^{4}m). Gr., ἀστερικόν. A plant mentioned by Pliny. [A, 312.]

ASTERIDA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r′i^{2}d-a^3. Of Haeckel, the *Asteroidea*, divided by him into the *Actinogastra* and the *Discogastra.* [L, 173.]

ASTÉRIDE (Fr.), adj. A^{3}s-ta-red. Belonging to the *Asteroidea.* [A, 385.]

ASTÉRIDÉ (Fr.), adj. A^{3}s-ta-re-da. Resembling the genus *Aster.* [L, 41, 109.]

ASTERIDEA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-i^{2}d′e^2-a^3. See ASTEROIDEA.

ASTERINÆ [Reichenbach] (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-i(e)′-ne(na^3-e^2). Fr., *astérinées.* A section of the *Astereæ genuinæ* (1st def.), comprising *Aster* and several other genera, with radiate homogamous or heterogamous heads, a receptacle without pales, anthers without appendages, and frequently alternate leaves. 2. A division of *Astereæ*, comprising the *Bellideæ*, *Bellieæ*, *Boltonieæ*, *Erigeroneæ*, *Diplopappeæ*, *Astereæ genuinæ*, *Amelleæ*, *Disparaginæ*, and *Chrysocomeæ.* [B, 121, 170.]

ASTERINEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-i^{2}n′e^2-e(a^3-e^2). Fr., *astérinées.* Of De Candolle, a subtribe of the *Asteroideæ*, comprising the *Amelleæ*, *Astereæ*, *Chrysocomeæ*, and *Solenogyneæ.* [B, 170.]

ASTERINEI (Lat.), n. m. pl. A^{2}s(a^{3}s)-te^{2}r-i^{2}n′e^2-i(e). Fr., *astérinés.* Of Fries, a division of periphoriaceous *Fungi*, including *Erysiphe* and other genera. [B, 170.]

ASTERINIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-i^{2}n′i^{2}d-e(a^3-e^2). A division of the *Asteroidea*, made by Poirrier, including those with pedunculated pedicellariæ, and having the pedicels quadriserial as a rule. [L, 121.]

ASTERIOIDEA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-i^2-o(o^2)-i^{2}d′e^2-a^3. See ASTEROIDEA.

ASTERION (Lat.), n. n. A^{2}s(a^{3}s)-te(te^2)′ri^2-o^{2}n. Gr., ἀστέριον. Fr., *astérion.* 1. An ancient name for a sort of spider. [Pliny (A, 312).] 2. In craniometry, the point of junction of the occipital, parietal, and temporal bones. [L, 150.]

ASTERISCA (Lat.), n. f. A^{2}s(a^{3}s)-te^{2}r-i^{2}sk′a^3. For deriv., see ASTERISCUS. Ger., *Sternflechte.* A genus of lichens made by Meyer, having usually a radiate star-shaped apothecium; now referred to *Medusula.* [B, 121, 180.]—**A. cinchonarum** [Sprengel]. Ger., *China-Sternflechte.* A species found on the surface of Huanuco cinchona bark. [B, 180.]—**A. tricosa** [Meyer]. Ger., *verschlungene Sternflechte.* A species found on cascarilla bark. [B, 180.]

ASTERISCUS (Lat.), n. m. A^{2}s(a^{3}s)-te^{2}r-i^{2}sk′u^{3}s(u^{4}s). Gr., ἀστερίσκος (dim. of ἀστήρ, a star). Fr., *astérisque.* It., *asterisco.* 1. A kind of aster mentioned by Theophrastus. [A, 311.] 2. A genus of composite plants, made by Mönch, now referred to *Odontospermum.* [B, 42.] 3. A star-shaped opacity of the cornea. 4. A small otolith of certain fishes, lying in a diverticulum of the vestibule, just beneath the ampulla of the posterior canal. [L, 200.]

ASTERISM, n. A^{2}s′te^{2}r-i^{2}zm. Lat., *asterismus*, *asteria.* A peculiar star-like luminosity produced in certain minerals by either reflected or refracted light-rays. [B, 195, 196.]

ASTERITES (Lat.), n. m. A^{2}s(a^{3}s)-te^{2}r-i(e)′tez(tas). Gen., *asteri′tæ.* Gr., ἀστερίτης. An ancient name for a sort of basilisk or cockatrice. [Apuleius (A, 318).]

ASTERKILLOS, n. An African name for the *Achillea millefolium.* [L, 105.]

ASTERNAL, adj. A^{2}s-tu^{5}rn′a^{2}l. From α priv., and στέρνον, the chest. Fr., *asternal.* Not attached to the sternum. [A, 385.] See *A.* RIBS.

ASTERNIA (Lat.), n. f. A^{2}s(a^{3}s)-tu^{5}rn(te^{2}rn)′i^2-a^3. Fr., *asternie* [Breschet]. A developmental defect characterized by absence of the sternum. [L, 109.]

ASTEROCARPEÆ [Reichenbach] (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-ka^{3}rp′e^2-e(a^3-e^2). See ASTROCARPEÆ.

ASTEROCEPHALÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-se^{2}f-(ke^{2}f)′a^3-le(la^3-e^2). Fr., *astérocéphalées.* Of Butsch, an order of composite plants, including the single family *Corymbiferæ.* [B, 170.]

ASTEROCEPHALUS (Lat.), n. m. A^{2}s(a^{3}s)″te^{2}r-o(o^2)-se^{2}f-(ke^{2}f)′a^3-lu^{3}s(lu^{4}s). From ἀστήρ, a star, and κεφαλή, the head. Fr., *astérocéphale.* A section of the genus *Scabiosa.* [L, 84.]—**A. columbarius** [Wallroth]. See SCABIOSA *columbaria.*—**A. succisus** [Wallroth]. See SCABIOSA *succisa.*

ASTERODACTYLUS (Lat.), adj. A^{2}s(a^{3}s)″te^{2}r-o(o^2)-da^{2}k-(da^{3}k)′ti^{2}l(tu^{6}l)-u^{3}s(u^{4}s). From ἀστήρ, a star, and δάκτυλος, a finger. Having radiated digits.

ASTEROGEUM [Gray] (Lat.), n. n. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-je(ga)′-u^{3}m(u^{4}m). See CORONOPUS.

ASTEROID, adj. A^{2}s′tu^{5}r-oid. Lat., *asteroides*, *asterodes*, *asteroideus* (from ἀστήρ, a star, and εἶδος, resemblance). Fr., *astéroïde.* Ger., *sternähnlich.* Star-shaped, stellate; in zoology, having radiating lobes or rays, like a star-fish. [A, 359.]

ASTEROIDA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-i(e)′da^3. Fr., *astéroïdes.* See ASTEROIDEA.

ASTEROIDEA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-i^{2}d′e^2-a^3. Fr., *astéroïdées.* Ger., *Seesterne.* An order of animals of the class *Echinodermata*, including the star-fishes. [B.]

ASTEROIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-i^{2}d′e^2-e(a^3-e^2). 1. Of Brongniart, a class of the perigynous *Gamopetalæ*, comprising the single family *Compositæ.* 2. Of Link, an order of the *Anthodiatæ*, comprising *Aster*, *Solidago*, *Arnica*, *Pulicaria*, *Inula*, and other genera. 3. Of most authors, a tribe of the *Compositæ*, including the subtribes *Astereæ*, *Baccharideæ*, *Tarchonantheæ*, *Heliantheæ*, *Melampodieæ* [Less.], or *Asterineæ*, *Baccharideæ*, *Tarchonantheæ*, *Inuleæ*, *Buphthalmeæ*, and *Eclipteæ* [De Candolle], or the subtribes *Homochromeæ*, *Grangeineæ*, *Bellideæ*, *Heterochromeæ*, *Conyzeæ*, and *Baccharideæ* [Bentham and Hooker]. It includes genera with heterogamous, radiate, or disciform, or, by the absence of the ray, homogamous heads; anthers obtuse at the base, nearly entire; branches of the style flattened, usually appendiculate; leaves usually alternate; receptacle generally naked; disk-florets usually yellow, those of the ray homochromous or heterochromous. [B, 42, 214.] Cf. ANTHODIATÆ.

ASTEROLAMPREÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-la^{2}m-(la^{3}m)′pre^2-e(a^3-e^2). From *Asterolampra*, one of the genera. Fr., *astérolamprées.* A family of diatoms belonging to the tribe *Cryptoraphidieæ*, characterized by their circular (rarely angular) and usually hyaline valves, with linear, frequently bifurcating, rays. [B, 75.]

ASTEROLINON, ASTEROLINUM (Lat.), n's. n. A^{2}s(a^{3}s)''-te^{2}r-o(o^2)-li(le)'no^{2}n, -nu^{3}m(nu^{4}m). From ἀστήρ, a star, and *linum*, flax. Fr., *astérolinon*. A genus of primulaceous plants closely related to *Lysimachia*, from which it differs in having minute corollæ and capsules with few seeds. [B, 19.]—**A. linum stellatum** [Link and Hoff.], **A. stellatum.** Syn.: *Lysimachia linum stellatum* [Linnæus]. A small annual plant with pale-red, star-shaped flowers, and flax-like leaves, growing in France. [B, 243.]

ASTEROMA [De Candolle] (Lat.), n. n. A^2 (a^{3}s)-te^{2}r-o'ma^3. Gen., *asterom'atos* (*-tis*). Fr., *astérome*. A genus of microscopic *Fungi* parasitic on the upper surface of leaves. [L, 109.]—**A. rosæ.** A species attacking roses. [B, 61.]

ASTEROMEI (Lat.), n. m. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)'me^2-i(e). Fr., *astéromées*. Of Leveille, a section of *Fungi* belonging to the *Endosporei* (*Endoclini*), having horny conceptacles opening by a pore at the apex and supported by a receptacle composed of radiating fibres. [B, 121, 170.]

ASTEROMŒA (Lat.), n. f. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-me'(mo^2'e^2)-a^3. A genus of composite plants, made by Blume; now regarded as a section of *Boltonia*. [B, 42.]—**A. indica** [Blume]. See BOLTONIA *indica*.

ASTEROPHORA (Lat.), n. n. pl. A^{2}s(a^{3}s)-te^{2}r-o^{2}f'o^{2}r-a^3. From ἀστήρ, a star, and φορεῖν, to bear. A suborder of the *Choristida*, the microsclere of which is an aster. [L, 121.]

ASTEROPHORIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-fo-(fo^2)-ri^{2}d'e^2-e(a^3-e^2). Fr., *astérophoridées*. A division of *Hymenotheceæ* (*Cœomaceæ*), made by Gray. [B, 170.]

ASTEROPHRYDIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o^{2}f-ri^{2}d-(ru^{6}d)'i^{2}d-e(a^3-e^2). 1. A family of the *Opisthoglossa* made by Günther. [L, 204.] 2. A family of the *Arciferi* having opisthocœlous vertebræ. [E. D. Cope, "Nat. Hist. Rev.," 1865, p. 104 (L); L, 204.]

ASTEROPHYLLITÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-fi^{2}l-(fu^{6}l)-li(le)'te(ta^3-e^2). A family of fossil *Equisetaceæ*, made by Brongniart. [B, 170.]

ASTÉROSPHÉRIE (Fr.), n. A^{3}s-ta-ro-sfa-re. Itzigsohn's name for a star-shaped body which develops in the *Conjugatæ* at the point at which conjugation takes place, and which is regarded by him as the male generative element. [B, 121.]

ASTÉROSCOPIE (Fr.), n. A^{3}s-ta-ro-sko-pe. From ἀστήρ, a star, and σκοπεῖν, to observe. Divination by examining stars. [A, 385.]

ASTEROSPONDYLIA (Lat.), n. f. A^{2}s(a^{3}s)''te^{2}r-o(o^2)-spo^{2}n-di^{2}l(du^{6}l)'i^2-a^3. From ἀστήρ, a star, and σπόνδυλος (= σφόνδυλος), a vertebra. The development of osseous rays around the double cone represented by the bodies of the vertebræ, as in certain of the *Plagiostomi*. [A, 385.]

ASTEROSPORIUM (Lat.), n. n. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-spo(spo^2)'-ri^2-u^{3}m(u^{4}m). From ἀστήρ, a star, and σπόρος, a seed. A genus of *Fungi* (*Stilbosporæ*), made by Kunze. [B.]

ASTEROSTIGMEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-te^{2}r-o(o^2)-sti^{2}g'-me^2-e(a^3-e^2). Of Schott, a tribe of araceous plants belonging to the section *Effilamentatæ*, subsection *Pachyzeugmaticæ*. [B, 121.]

ASTHENEMA (Lat.), n. n. A^{2}s(a^{3}s)-the^{2}n-e(a)'ma^3. Gen., *asthenem'atos* (*-tis*). Gr., ἀσθένημα. See ASTHENIA.

ASTHENES (Lat.), adj. A^{2}s(a^{3}s)'the^{2}n-ez(as). Gr., ἀσθενής. Feeble, sickly, infirm. [Hippocrates (A, 325).] Cf. ASTHENIC.

ASTHENIA (Lat.), n. f. A^{2}s(a^{3}s)-the^{2}n-i(e)'a^3. Gr., ἀσθένεια (from α priv., and σθένος, strength). Fr., *asthénie*. Ger., *Asthenie*, *Schwäche*, *Kraftlosigkeit*. It., *astenia*. Sp., *astenia*. 1. Infirmity, debility. [Galen (A, 325).] 2. That state of an individual in which he is not really sick, but is prone to be affected by morbific influences. [Hippocrates (L, 41).] 3. According to the Brunonian nosology. one of the fundamental divisions (the other being *sthenia*), characterized by weakness and lassitude. Brown regarded disease as a departure from the normal irritability; named an increase of the latter *sthenia*, and a decrease *a.*; and classed fevers as sthenic or asthenic, according as they were attended with a full, strong pulse or a small, weak, and thready pulse. [D, 3; Samuel (M, 1).] 4. According to Sauvages, weakness of the organs of animal life. [L, 87.]—**Alcoholic a.** A condition, imputed to the habitual use of alcohol, in which sensations are felt that seem to depend on a flagging of the heart's power (notably a feeling of depression or sinking, referred to the locality of the stomach or to some point within the chest), and are relieved for the time being by taking alcohol. [B. W. Richardson, "Asclepiad," iii, 3, p. 193.]—**A. ab inanitione.** A. resulting from hæmorrhages or morbid fluxes. [L, 132.]—**A. ab osteosarcosi.** The debility of osteomalacia. [L, 132.]—**A. abstinentium.** Weakness due to abstinence from food. [L, 132.]—**A. a hydrocephalo.** A. due to hydrocephalus. [L, 132.]—**A. americana.** A form of a. observed in scorbutic persons who are addicted to strong drink. [L, 132.]—**A. a pathematis.** A. due to mental disturbances. [L, 132.]—**A. aphrodisiaca.** Sterility. [Young (L, 83).]—**A. cachectica.** The debility of scrofulous children. [L, 132.]—**A. chlorotica.** The a. of scurvy. [L, 132.]—**A. deglutitionis** [Young]. See DYSPHAGIA *atonica*.—**A. dolorifica.** Angina pectoris. [Darwin (L, 134).]—**A. febrilis.** The feeling of lassitude that precedes severe diseases. [L, 132.]—**A. hydrocephali, A. hydrocephalica.** See *A. a hydrocephalo*.—**A. hysterica.** Debility due to hysteria. [L, 132.]—**A. infantum.** The marasmus of children. [L, 132.]—**A. nativa.** Congenital weakness. [L, 132.]—**A. ossifraga.** A debilitating disease attributed to the use of *Narthecium ossifragum*. [L, 132.]—**A. pannonica.** See AMPHEMERINA *hungarica*.—**A. pectoralis.** Angina pectoris. [Young (L, 134).]—**A. scorbutica.** Weakness due to scurvy. [L, 132.]—**A. syphilitica.** A. due to syphilitic infection. [L, 132.]—**A. virginica.** A form of a. characterized by wakefulness, loss of appetite, and emaciation, observed among the early settlers in America. [L, 132.]—**A. vocis** [Young]. See PSELLISMUS *dentiloquens*.—**Local a.** Fr., *asthénie locale*. Loss or impairment of function of any organ or set of organs (*e. g.*, muscular a.). [L, 41.]—**Muscular a.** Fr., *asthénie musculaire*. Weakness of certain groups of muscles. Pinel made five varieties: 1. Weakness of voluntary movements. 2. Paralysis. 3. Muscular tremor. 4. Contracture. 5. Torticollis. [L, 41.]—**Nervous a.** A lowering of the tone of the nervous system. [A. Flint, "N. Y. Med. Jour.," Nov. 29, 1884, p. 597 (D).] Cf. NEURASTHENIA.—**Structural a.** A normal or pathological weakness of parts or tissues which prevents their effective resistance to opposing forces. [W. D. Schuyler, "N. Y. Med. Jour.," Dec. 1, 1883, p. 596 (D).]—**Typhoid a.** A weak and depressed condition of the system in which, while no definite type of disease is present, more or fewer of the symptoms of the typhoid condition are manifest. [D, 1.]

ASTHENIC, adj. A^{2}s-the^{2}n'i^{2}k. Gr., ἀσθενής. Lat., *asthenes*, *asthenicus*. Fr., *asthénique*. Ger., *asthenisch*. It., *astenico*. Sp., *asténico*. Of the nature of, depending on, characterized by, or causing, asthenia. [A, 322; L, 105.] See *A.* FEVER and ADYNAMIC.

ASTHENICOPYRA, ASTHENICOPYRETOS, ASTHENICOPYRETUS (Lat.), n's f., m., and m. A^{2}s(a^{3}s)-the^{2}n-i^{2}k-o^{2}p'i^2(u^6)-ra^3, -o(o^2)-pi^{2}r(pu^{6}r)'e^{2}t-o^{2}s, -u^{3}s(u^{4}s). See ASTHENOPYRA.

ASTHÉNIE (Fr.), n. A^{3}s-ta-ne. See ASTHENIA.—**A. cérébrale.** Cerebral exhaustion. [L, 41.]—**A. surrénale.** See *Addison's* DISEASE.

ASTHENOGENIA (Lat.), n. f. A^{2}s(a^{3}s)-the^{2}n-o(o^2)-je(ge^2)'-ni^2-a^3. From ἀσθένεια (see ASTHENIA) and γένειν (= γίγνεσθαι), to come into existence. Fr., *asthénogénie*. The production of asthenia. [A, 322.]

ASTHENOLOGY, n. A^{2}s-the^{2}n-o^{2}l'o-ji^2. Lat., *asthenologia* (from ἀσθένεια, asthenia, and λόγος, understanding). Fr., *asthénologie*. Ger., *Asthenologie*. The study, science, or doctrine of asthenia. [A, 322.]

ASTHENOMACROBIOTICA (Lat.), n., f. of adj. *asthenomacrobioticus* (*ars* understood). A^{2}s(a^{2}s)''the^{2}n-o(o^2)-ma^{2}k(ma^{3}k)-ro(ro^2)-bi(bi^2)-o^{2}t'i^{2}k-a^3. From ἀσθένεια, asthenia, and μακροβίοτος, long-lived. Ger., *Asthenomakrobiotik*. The art of prolonging a life which is naturally feeble. [D, 18.]

ASTHENOPIA (Lat.), n. f. A^{2}s(a^{3}s)-the^{2}n-o(o^2)'pi^2-a^3. From ἀσθενής, weak, and ὄψις, the power of sight. Fr., *asthénopie*, *amblyopie presbytique*. Ger., *Asthenopie*, *Gesichtsermüdung*, *Augenschwäche*, *Schwachsichtigkeit*. It., *astenopia*. Sp., *astenopía*. Syn.: *copiopia*, *hebetudo* (seu *debilitas*) *visus*. Impaired vision, weak-sightedness; a peculiar condition described by Donders, consisting of more or less inability to use the eyes continuously for close work without the occurrence of one or more of the following symptoms; fatigue, tension, or a strained feeling in and above the eyes, sometimes amounting to absolute pain; blurring of the sight, so that all objects appear indistinct; blepharospasm; lacrymation; photophobia; nausea, and even vomiting; and vertigo. There is no organic disease of the eyes, and the cause is usually to be found in an error of refraction, generally hypermetropia. [H. Schmidt-Rimpler (A, 318); F.]—**Accommodative a.** Lat., *a. accommodativa*. Fr., *asthénopie accommodative*. Ger., *accommodative Asthenopie*. A. of accommodation; a. dependent on either an inherent weakness or an overworked condition of the ciliary muscle (muscle of accommodation), due in the latter case to an uncorrected error of refraction, almost always hypermetropia. [F.]—**A. nervosa.** See *Retinal a.*—**A. of accommodation.** See *Accommodative a.*—**Binocular a.** See *Muscular a.*—**Muscular a.** Lat., *a. muscularis*. Fr., *asthénopie musculaire*. Ger., *muskuläre Asthenopie*. It., *astenopia muscolare*. Sp., *astenopía muscular*. A. dependent on inherent weakness of the muscles of the eyes (insufficiency of the internal or external recti), alone or in connection with weakness of the ciliary muscle. [F.]—**Nervous a.** Lat., *a. nervosa*. Fr., *asthénopie nerveuse*. Ger., *nervöse Asthenopie*. See *Retinal a.*—**Retinal a.** Lat., *a. retinalis*. Fr., *asthénopie rétinienne* (ou *de la rétine*). Ger., *Netzhautasthenopie*. It., *astenopia retinica*. Sp., *astenopía retinal*. 1. An old term implying an a. depending on hyperæsthesia and irritability of the retina, accompanied with hyperæmia, occurring mainly in feeble, nervous, and excitable persons. 2. A reflex form, of sympathetic nature, characterized by periodical failure of central vision of very short duration, during which all objects seem covered by a thin mist or fog. [F.]—**True a.** See *Accommodative a.*

ASTHENOPYRA, ASTHENOPYRETOS, ASTHENOPYRETUS (Lat.), n's f., m., and m. A^{2}s(a^{3}s)-the^{2}n-o^{2}p'i^2(u^6)-ra^3, -o(o^2)-pi^{2}r(pu^{6}r)'e^{2}t-o^{2}s, -u^{3}s(u^{4}s). From ἀσθενής, weak, and πῦρ or πυρετός, fever. Fr., *asthénopyre*. Fever accompanied with or dependent on asthenia. [A, 322.]

ASTHMA (Lat.), n. n. A^{2}sth(a^{3}sth)'ma^3. Gen., *asth'matos* (*-tis*). Gr., ἆσθμα. Fr., *asthme*. Ger., *Asthma*, *Kurzathmigkeit*, *Engbrüstigkeit*. It., *asma*, *bolsaggine*. Sp., *asma*. A disease characterized chiefly by attacks of excessive dyspnœa caused by spasmodic contraction of the smaller bronchial tubes. It is manifested by paroxysms, which may be excited by indigestion, by nervous strain, by various meteorological conditions, or by causes that are peculiar to the individual case. In many instances it seems to be due to an inherited tendency, and is believed by some to be associated with the gouty or the rheumatic diathesis. It attacks infants and persons of all ages, and seems to have no tendency to shorten life. The paroxysms commonly come on at night, and may recur for several nights; they may last only a few minutes or be prolonged, with brief intermissions, for many hours or days. The patient wheezes and gasps, the shoulders are raised, the head is thrown back, the upper part of the chest is immovable, while the lower part is agitated, the face becomes livid, and suffocation seems imminent. As the spasm wears away, there is an expectoration of tough mucus in which certain crystals have been found that have been thought to be connected with the ætiology of the disease. At the beginning of the attack there is apt to be profuse diuresis, and neuralgic pains may occur in various parts of the body. [A.

Fraenkel (A, 319); D, 1.]—**Abdominal a.** Lat., *a. abdominale.* A. due to some abdominal affection. [M, 6.]—**Acute and chronic a. of Millar.** See *A. acutum et chronicum Millari.*—**Arthritic a.** Lat., *a. arithriticum.* 1. A. depending on the gouty diathesis. [M, 2.] 2. Angina pectoris. [Schmidt (L, 134).]—**A. abdominale.** See *Abdominal a.*—**A. acutum, A. acutum et chronicum Millari, A. acutum periodicum infantum** (seu **Millari**). Fr., *asthme aigu de Millar.* Spasm of the glottis or laryngismus stridulus. [D, 39.]—**A. adultorum convulsivum.** The ordinary a. of adults.—**A. a gibbo.** 1. A form observed in hunchbacks. [Hippocrates (L, 132).] 2. A. due to bronchocele. [M, 60.]—**A. a polypo cordis.** Shortness of breath, with palpitation of the heart, attributed to concretions in the heart. [L, 132.]—**A. arthriticum.** See *Arthritic a.*—**A. biliosum.** See *Dyspeptic a.*—**A. bronchiale.** See *A.*—**A. cachecticum.** A. associated with cachexia. [L, 132.]—**A. cardiacum.** See *Cardiac a.*—**A. catarrhale.** See *Catarrhal a.*—**A. convulsivum.** See *Convulsive a.*—**A. convulsivum Willisii.** A form which is sudden in its attacks; supposed by Willis to be due to some affection of the costal nerves. [L, 132.]—**A. crystals.** Ger., *A.-Krystalle.* Syn.: *Charcot-Neumann crystals.* Certain crystalline bodies found in the sputum of persons suffering with a., considered by Leyden to be peculiar to the disease, but they are frequently absent and have often

ASTHMA CRYSTALS. (AFTER A. FRAENKEL [A, 319].)

been found in the sputum of persons entirely free from a. They are colorless, opalescent, and of different sizes, and consist, according to Salkowski, of a substance resembling mucin, or, according to Friedreich, of tyrosine. [A. Fraenkel (A, 319); A, 444.]—**A. cultrariorum.** See *Grinders' a.*—**A. dentientium.** Spasm of the glottis in teething children. [D, 29.]—**A. der Tuchmacher** (Ger.). See *A. fullorum.*—**A. diaphragmaticum, A. dolorificum.** Angina pectoris. [A, 316; Darwin (M, 50).]—**A. dyspepticum.** See *Dyspeptic a.*—**A. emphysematicum.** A. accompanied with pulmonary emphysema.—**A. equinum.** The dyspnœa of broken-winded horses. Koppii, A. laryngeum infantum.** Laryngismus stridulus. [A. Fraenkel (M, 1).]—**A. metallariorum, A. metallicum.** See *Miners' a.*—**A. metastaticum.** See *Metastatic a.*—**A. Millari, A. Millari acutum.** See *A. acutum et chronicum Millari.*—**A. nephriticum.** See *Renal a.*—**A. nervosum.** See *Nervous a.*—**A. nocturnum.** Nightmare. [L, 132.] See INCUBUS.—**A. nothum.** See *A. hypochondriacum.*—**A. occultum.** See *A. convulsivum Willisii.*—**A. paper.** Nitre paper. [A, 308.] See *Charta* POTASSII *nitratis.*—**A. phlegmaticum.** A. attributed to "repelled œdema of the extremities . . . with scanty secretion of urine." [M, 50.]—**A. pituitosum.** See *Catarrhal a.*—**A. plethoricum.** See *Plethoric a.*—**A. pneumodes.** A form in which the sputum is solid or becomes so soon after its expulsion. [Aretæus (L, 132).]—**A. pneumonicum.** See *Catarrhal a.*—**A. pressoriodolorificum.** Angina pectoris. [L, 30.]—**A. pulverulentorum.** See *Grinders' a.*—**A. purulentum.** Dyspnœa due to an abscess in the air-passages. [Morgagni (L, 132).]—**A. sanguineum.** See *Plethoric a.*—**A. saturninum.** A. due to chronic lead poisoning. [L, 80.]—**A. senile, A. seniorum.** See *Senile a.*—**A. siccum.** See *Dry a.*—**A. simplex.** See *Idiopathic a.*—**A. spasmodico-arthriticum inconstans.** Angina pectoris. [L, 30.]—**A. spasmodico-flatulentum.** See *Flatulent a.*—**A. spasmodicum.** See *Convulsive a.*—**A. spasticum, A. spasticum adultorum.** See *Convulsive a.*—**A. spontaneum.** See *Idiopathic a.*—**A. stomachicum.** See *Dyspeptic a.*—**A. symptomaticum.** See *Symptomatic a.*—**A. syncopticum.** Ger., *Bräune der Brust.* Angina pectoris. [M, 19.]—**A. thymico-cyanoticum, A. thymicum, A. thymicum Koppii.** Spasm of the glottis. [D, 39.]—**A. thyreoideum.** See *Thyreoid a.*—**A. typicum.** See *Periodic a.*—**A. uræmicum, A. urinosum.** See *Uræmic a.*—**A. uteri, A. uterinum.** See *Uterine a.*—**A. vaporosum.** See *Miners' a.*—**A. venereum.** A. attributed to syphilis. [L, 132.]—**A. verminosum.** A. attributed to intestinal worms. [A. Fraenkel (M, 1).]—**Bronchial a.** Lat., *a. bronchiale.* Fr., *asthme bronchial.* Ger., *Bronchial-asthma.* It., *asma bronchiale.* See *A.*—**Bronchitic a.** See *Catarrhal a.*—**Cardiac a.** Lat., *a. cardiacum.* Fr., *asthme cardiaque.* Ger., *cardiales A.* It., *asma cardiaco.* A term applied to sudden attacks of pain and distress, with dyspnœa, occurring in subjects of advanced heart disease. [B. F. Westbrook, "N. Y. Med. Jour.," Oct. 9, 1886, p. 393.]—**Catarrhal a.** Lat., *a. catarrhale.* Fr., *asthme catarrhal.* Ger., *catarrhalisches A.* A. attended with increased bronchial secretion. [Copland (M).]—**Central a.** [Salter]. A. or dyspnœa due to the influence of the central nervous system. [L, 87.]—**Congestive a.** Ordinary a. attributed to a congested state of the digestive organs. [D, 1.]—**Continued a.** See *Moist a.*—**Convulsive a.** Lat., *a. convulsivum.* Fr., *asthme convulsif.* Ger., *convulsivisches A.* 1. Dry a. [B, 117.] 2. Spasm of the glottis. [M, 80.]—**Diathetic a.** Fr., *asthme diathésique.* A. depending on some diathesis. [M, 69.]—**Diurnal a.** A. in which the attacks occur in the day-time. [D, 1.]—**Dry a.** Lat., *a. siccum.* A. without expectoration. [B, 117.]—**Dynamic a.** See *A.*—**Dyspeptic a.** Lat., *a. dyspepticum.* A. presumed to depend on gastric irritation. [D, 1.]—**Emotional a.** [Salter]. A. in which the attacks are due to emotional excitement. [D, 1.]—**Feuchtes A.** (Ger.). See *Moist a.*—**Flatulent a.** Lat., *a. flatulentum.* Shortness of breath arising from flatus. [Copland (M).]—**Grinders' a.** Lat., *a. cultrariorum.* Fr., *maladie des aiguiseurs, phthisie calculeuse* (ou *silicieuse*). Ger., *Schleiferkrankheit.* It., *asma degli arrotini.* A., or pulmonary phthisis, caused by the constant inhalation of small particles of steel or of stone. [D, 92.]—**Hæmic a.** See *Toxic a.*—**Hay a.** Lat., *a. ex fœno.* Fr., *asthme* (ou *fièvre,* ou *rhume*) *des foins* (ou *d'été*). Ger., *Heu-A.* The asthmatic form of hay fever (see under FEVER).—**Heberden's a.** Angina pectoris. [L, 44.]—**Herpetic a.** Lat., *a. herpeticum.* A. occurring in connection with cutaneous eruptions. [Waldenburg (M, 2).]—**Heu-A.** (Ger.). See *Hay a.*—**Humid a., Humoral a.** Lat., *a. humidum.* See *Catarrhal a.*—**Hysterical a.** Lat., *a. hystericum.* A. due to hysteria. [D, 1.]—**Idiopathic a.** Lat., *a. idiopathicum.* Ger., *idiopathisches A.* A. not depending on any other disease. [M, 6.]—**Idiosyncratic a.** Lat., *a. idiosyncraticum.* A. in which the attacks are brought on by some substance, like a rose, a violet, etc., concerning which the individual has an idiosyncrasy. [A. Fraenkel (M, 1).]—**Infantile a.** Spasm of the glottis or laryngismus stridulus.—**Intermittent a. of children.** Laryngismus stridulus. [L. Elsberg, "N. Y. Med. Jour.," Dec. 20, 1884, p. 685.]—**Intrinsic a.** [Salter]. Fr., *asthme intrinsèque.* An a. or dyspnœa due to a direct irritation of the lungs. [L, 87.]—**Kopp's a.** Lat., *a. thymicum Koppii.* Spasm of the glottis. [D, 40.]—**Krampfa'** (Ger.). See *Convulsive a.*—**Laryngeal a.** Laryngismus stridulus. [L. Elsberg, "N. Y. Med. Jour.," Dec. 20, 1884, p. 685.]—**Marine a.** Beriberi. [H. J. Carter (D, 74).]—**Metastatic a.** Lat., *a. metastaticum.* A. supposed to be due to a metastasis of some other disease. [M, 69.]—**Millar's a.** Ger., *Millar'sches A.* See *A. acutum et chronicum Millari.*—**Miners' a.** Lat., *a. metallariorum.* Fr., *asthme des mineurs.* Ger., *A. der Bergleute.* It., *asma dei minatori.* See ANTHRACOSIS (4th def.).—**Moist a.** Lat., *a. humidum.* Ger., *feuchtes A.* A. with expectoration of purulent matter. [B, 117.]—**Nervous a., Neuro-pulmonary a.** Lat., *a. nervosum.* 1. Ordinary a. [D, 35.] 2. A variety described by Laennec, in which there is apparently no bronchial spasm, but simply dyspnœa accompanied by puerile respiration. [Copland (L, 137).]—**Non-organic a.** See *Idiopathic a.*—**Organic a.** See *Cardiac a.*—**Paralytic bronchial a.** A rare form, supposed to depend on a relaxed rather than a spasmodic condition of the bronchioles. [Walshe (L).]—**Peptic a.** See *Dyspeptic a.*—**Periodic a.** A. recurring at definite intervals. [Salter (D, 1).]—**Pituitous a.** See *Catarrhal a.*—**Plethoric a.** Lat., *a. plethoricum.* A. due to plethora or to the suppression of some habitual flux. [L, 132; M, 60.]—**Pneumobulbar a.** Sée's term for a. supposed to be occasioned by pulmonary irritation transmitted to the origin of the pneumogastric nerve and reflected back to the bronchioles. [Mendelsohn, "Dtsch. med. Wchnschr.," Oct. 15. 1885; "Med. Chron.," Dec., 1885, p. 211.]—**Primary a.** See *Idiopathic a.*—**Renal a.** Lat., *a. nephriticum.* See *Uræmic a.*—**Rheumatic a.** A. depending on the rheumatic diathesis. [M, 69.]—**Saturnine a.** The dyspnœa that sometimes attends lead poisoning. [Remak (M, 1).]—**Secondary a.** See *Symptomatic a.*—**Senile a.** Lat., *a. senile.* A term applied by some authors to a. attributed to old age. [L, 135.]—**Simple a., Spasmodic a.** See *A.*—**Spasmodic a. of children.** Spasmodic croup. [D, 63.]—**Spasmodic bronchial a.** [Walshe]. See *A.*—**Spitting a.** See *Moist a.*—**Stomachic a.** See *Dyspeptic a.*—**Symptomatic a.** Lat., *a. symptomaticum.* A. occurring as a manifestation of some other disease, organic or functional. [M.]—**Thymic a.** Lat., *a. thymicum.* Fr., *asthme thymique.* It., *asma timica.* Spasm of the glottis; so called by Kopp, who attributed it to enlargement of the thymus gland. [D, 5, 39.]—**Thyreoid a.** A. attributed to enlargement of the thyreoid gland. [Hildebrandt (M, 1).]—**Toxic a.** A. due to poisoning of the nervous system by some specific morbid matter. [G. Sée (L, 88).]—**Uræmic a.** Lat., *a. uræmicum.* A. occurring in connection with Bright's disease, often due to a chronic pulmonary œdema. [Korányi (M, 1).]—**Uterine a.** Lat., *a. uterinum.* A form of dyspnœa observed in hysterical patients and not dependent on any organic disease. [M, 1.]—**Urticarial a.** A. associated with urticaria. [Pryce, "Lancet," May 22, 1886; "N. Y. Med. Jour.," Aug. 21, 1886, p. 222.]

ASTHMATIC, adj. and n. A^{2}sth-ma^{2}t'i^{2}k. Gr. ἀσθματικός. Lat., *asthmaticus.* Fr., *asthmatique.* Ger., *asthmatisch* (adj.), *engbrüstig* (adj.), *Asthmatiker* (n.). It., *asmatico.* Sp., *asmático.* Pertaining to, affected with, or proceeding from, asthma or dyspnœa; as a n., one who suffers with asthma. [A, 322; D.]—**A. dropsy.** See BERI-BERI.—**A. fever.** See FIÈVRE *asthmatique.*

ASTHMATICO-SCORBUTIC, adj. A^{2}sth-ma^{2}t''i^{2}k-o-sko^{3}r-bu^2'ti^{2}k. Pertaining at the same time to asthma and scurvy; suffering from asthma and scurvy. [B, 200.]

ASTHMATOPHTHISIS (Lat.), n. f. A^{2}sth(a^{3}sth)''ma^3-to(to^2)-ti(te)'si^{2}s. Gen., *asthmatophthis'eos* (*-sis*). For deriv., see Asthma and Phthisis. Fr., *asthmato-phthisie.* Ger., *Schwindsucht mit Asthma.* Syn.: *phthisis asthmatica.* Phthisis accompanied with asthma. [A, 322.]

ASTHMATORTHOPNŒA (Lat.), n. f. A^{2}sth(a^{3}sth)-ma^{2}t-(ma^{3}t)-o^{2}r-tho^{2}p-ne'(no^2'e^2)-a^3. See Asthmorthopnœa.

ASTHME (Fr.), n. A^{3}sm, a^{3}zm. See Asthma.—**A. aigu de Millar.** See Asthma *acutum et chronicum Millari.*—**A. aigu des enfants.** Laryngismus stridulus. [L.]—**A. avec respiration puérile.** See *Nervous* ASTHMA (2d def.).—**A. charbonneux.** See Anthracosis (4th def.).—**A. dartreux.** See *Exanthematic* ASTHMA.—**A. des aiguiscurs.** See *Grinders'* ASTHMA.—**A. des foins.** See *Hay* FEVER.—**A. des solipèdes.** Syn.: *pousse.* Pursiness; a disease of horses, in which there is pulmonary emphysema, characterized by pulsation in the flanks, and by an interruption of the inspiratory act. [A, 385.]—**A. des vieillards.** See *Senile* ASTHMA.—**A. d'été.** See *Hay* FEVER.—**A. glottique.** Spasm of the glottis. [M, 3.]—**A. mixte.** See *Diathetic* ASTHMA.—**A. nocturne.** Nightmare. [M, 80.] See Incubus.—**A. pituiteux, A. pneumonique, A. pseudo-continu.** See *Moist* ASTHMA.—**A. sec.** See *Dry* ASTHMA.

ASTHMORTHOPNŒA (Lat.), n. f. A^{2}sth(a^{3}sth)''mo^{2}r-tho^{2}p-ne'(no^2'e^2)-a^3. For deriv., see Asthma and Orthopnœa. Fr., *asthmorthopnée.* Ger., *Asthmorthopnöe, Bruststeckung.* Orthopnœa due to asthma or to any impediment to respiration situated within the chest. [A, 322; M, 56.]

ASTHWEED, n. A^{2}sth'wed. The genus *Ægopodium.* [L, 67.]

ASTICHUS (Lat.), adj. A^{2}s(a^{3}s)'ti^{2}k(ti^{2}ch^2)-u^{3}s(u^{4}s). From α priv., and στίχος, a row. Ger., *unreihig.* Not disposed in rows. [B, 198.]

ASTICOT (Fr.), n. A^{3}s-te-ko. The larva of the fly (various species of *Musca*). [A, 385.]

ASTIGMATIC, adj. A^{2}s-ti^{2}g-ma^{2}t'i^{2}k. Fr., *astigmatique.* Ger., *astigmatisch.* It., *astigmatico.* Sp., *astigmático.* 1. Pertaining to, caused by, or affected with, astigmatism. 2. Used for defining degrees of astigmatism (*e. g.*, a. lens).

ASTIGMATISM [Whewell], n. A^{2}s-ti^{2}g'ma^{2}t-i^{2}zm. Lat., *astigmatismus* (from α priv., and στίγμα, a spot). Fr., *astigmatisme.* Ger., *Astigmatismus.* It., Sp., *astigmatismo.* A state of irregular refraction of an eye, usually congenital, in which the rays of light diverging from a single point can not be brought to a focus at a point on the retina; an asymmetrical condition of the refraction of the different meridians of the eye. [F.]—**Abnormal irregular a.** Fr., *astigmatisme irrégulier anormal.* Ger., *abnormer unregelmässiger Astigmatismus.* It., *astigmatismo irregolare anormale.* Sp., *astigmatismo irregular anormal.* A due to some defect in the curvature of the cornea or to some irregularity in the structure or position of the crystalline lens. Metamorphopsia is the chief symptom. [F.]—**Acquired a.** Fr., *astigmatisme acquis.* Ger., *erworbener Astigmatismus.* It., *astigmatismo acquistato* (o *guadagnato*). Sp., *astigmatismo adquirido.* A. dependent on flattening of the cornea from inflammatory changes, on irregular apposition of the flaps after a cataract extraction, or on dislocation of the crystalline lens. [F.]—**Compound hypermetropic a.** Fr., *astigmatisme hypermétropique composé.* Ger., *zusammengesetzter hypermetropischer Astigmatismus.* It., *astigmatismo ipermetropico composto.* Sp., *astigmatismo hipermetrópico compuesto.* That state of refraction in which hypermetropia exists in the two principal meridians, with an additional degree of hypermetropia in one of them; symbol, H+Hm. [F.]—**Compound myopic a.** Fr., *astigmatisme myopique composé.* Ger., *zusammengesetzter myopischer Astigmatismus.* It., *astigmatismo miopico composto.* Sp., *astigmatismo miópico compuesto.* That state of refraction in which myopia exists in both principal meridians, with an additional degree of myopia in one of them; symbol, M+Am. [F.]—**Corneal a.** A. due to causes residing in the cornea. [L.]—**Hypermetropic a.** Fr., *astigmatisme hypermétropique.* Ger., *hypermetropischer Astigmatismus.* It., *astigmatismo ipermetropico.* Sp., *astigmatismo hipermetrópico.* See *Simple* and *Compound hypermetropic a.*—**Irregular a.** Fr., *astigmatisme irrégulier.* Ger., *unregelmässiger Astigmatismus.* It., *astigmatismo irregolare.* Sp., *astigmatismo irregular.* See *Normal* and *Abnormal irregular a.*—**Lenticular a.** Fr., *astigmatisme lenticulaire.* Ger., *Linsenastigmatismus.* A. due to causes residing in the crystalline lens. [L.]—**Mixed a.** Fr., *astigmatisme mixte.* Ger., *gemischter Astigmatismus.* It., Sp., *astigmatismo misto.* A form of a. in which myopia exists in one principal meridian, and hypermetropia in the other. When there is predominant myopia, its symbol is Amh, and when there is predominant hypermetropia, Ahm. [F.]—**Myopic a.** Fr., *astigmatisme myopique.* Ger., *myopischer Astigmatismus.* It., *astigmatismo miopico.* Sp., *astigmatismo miópico.* See *Simple* and *Compound myopic a.*—**Normal irregular a.** Fr., *astigmatisme irrégulier normal.* Ger., *unregelmässiger normaler Astigmatismus.* It., *astigmatismo irregolare normale.* Sp., *astigmatismo irregular normal.* A. due to irregularities in the structure and density of the crystalline lens, so that an aberration of the rays occurs as they traverse the different sectors, in consequence of which there is an imperfect coincidence of the images of the different sectors. Its chief symptom is polyopia. [F.]—**Regular a.** Fr., *astigmatisme regulier.* Ger., *regelmässiger Astigmatismus.* It., *astigmatismo regolare.* Sp., *astigmatismo regular.* That error of refraction which is due to a difference in the focal distance of the two principal meridians, and depends mainly on the curvature of the cornea. [F.]—**Simple hypermetropic a.** Fr., *astigmatisme simple hypermétropique.* Ger., *einfacher hypermetropischer Astigmatismus.* It., *astigmatismo ipermetropico semplice.* Sp., *astigmatismo hipermetrópico simple.* A. with emmetropia in one of the principal meridians of the eye and hypermetropia in the other: symbol, Ah. [B; F.]—**Simple myopic a.** Fr., *astigmatisme simple myopique.* Ger., *einfacher myopischer Astigmatismus.* It., *astigmatismo miopico semplice.* Sp., *astigmatismo miópico simple.* A. with emmetropia in one of the principal meridians of the eye and myopia in the other; symbol, Am. [B; F]

ASTIGMATISMUS (Lat.), n. m. A^{2}s(a^{3}s)-ti^{2}g-ma^3-ti^{2}z(ti^{2}s)'-mu^{3}s(mu^{4}s). See Astigmatism.—**Linsena'** (Ger.). See *Lenticular* ASTIGMATISM.

ASTIGMOMETER, n. A^{2}s-ti^{2}g-mo^{2}m'e^{2}t-u^{5}r. From α priv., στίγμα, a spot, and μέτρον, a measure. Fr., *astigmomètre.* An instrument for measuring the degree of astigmatism by determining the difference in refraction between the meridians of the cornea, devised by Javal and Schiotz, and based upon Coccius's ophthalmometer. The object of fixation is formed by two white rectangles moving on a perimetric arc, with a radius of 35 ctm., in the centre of which is the corneal image of the eye observed. This reflection is seen through a lens or glass, the objective of which produces a real and reversed image in the tube of the instrument. This image is divided by a Wollaston's bi-refracting prism, introduced between the two objectives and seen through the eye-piece, at the focus of which it is formed. The strength of the bi-refracting prism is such that it exactly bisects an object of 3 mm., situated at the point where the eye of the patient is to be placed. One of the white rectangles is cut out in the shape of a staircase in which the steps measure 6 mm. in width. The instrument being properly placed, the two rectangles may readily be turned until one of the images of one is in contact with one of the images of the other. In turning the instrument around its axis, the two images maintain their relative position if no astigmatism is present. They separate or become superimposed if the curvature of the cornea varies from one meridian to another. Each step of the staircase, one of the images of which encroaches upon the other, when the position of the arc changes by 90°, corresponds to a refractive difference of D1 between the two meridians of the cornea, and a fraction of a step to an equivalent fraction of a dioptre. [F.] Cf. *Registering* KERATOSCOPE.

ASTILBEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-ti^{2}l'be^2-e(a^3-e^2). From *Astilbe*, the typical genus. Fr., *astilbées.* A suborder of saxifragaceous plants, made by Miquel. [B, 170.]

ASTISCOCCUS (Lat.), n. m. A^{2}s(a^{3}s)-ti^{2}s-ko^{2}k'ku^{3}s(ku^{4}s). See Artiscoccus.—**A. lævis.** See Artiscoccus *lævis.*

ASTITES (Lat.), n. m. pl. A^{2}s(a^{3}s)'ti^{2}t-ez(as). See Parastatæ.

ASTMARY, n. A^{2}st'ma-ri^2. The *Chrysanthemum balsamita.* [B.]

ASTMOOS (Ger.), n. A^{3}st'mos. The genus *Hypnum.* [B, 180.]—**Dreieckiges A., Dreikantiges A.** The *Hypnum triquetrum.* [L, 80.]

ASTOCHADOS (Sp.), n. A^{3}s-to-cha^3'dos. The *Lavandula stœchas.* [B, 121.]

ASTOMA (Lat.), n. f. A^{2}s(a^{3}s)'to^{2}m-a^3. 1. The genus *Sclerotium.* [Gray (B, 121).] 2. A genus of umbelliferous plants. [De Candolle (B, 42).]

ASTOMÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)'to^{2}m-e(a^3-e^2). From ἀ priv., and στόμα, the mouth. Fr., *astomées.* 1. A division of mosses made by Agardh. Cf. Astomi. 2. A name given by Persoon to a group of the *Sphæriæ*, in which the ostiole is not apparent. [B, 121, 170.]

ASTOMATA (Lat.), n. n. pl. A^{2}s(a^{3}s)-to^{2}m'a^3-ta^3. A term used by some authors to include the *Gregarinidea* and the *Rhizopodes.* [L, 147.]

ASTOMATICÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-to^{2}m-a^{2}t(a^{3}t)'i^2-se-(ka^3-e^2). 1. In Kützing's classification of the *Diatomaceæ*, an order of the tribe *Striatæ*, comprising those without a central opening on the secondary side (the families *Eunotieæ*, *Meridieæ*, *Fragilarieæ*, *Melosireæ*, and *Surirelleæ*). 2. In the same classification, an order of the *Vittatæ*, including those without a central aperture on the secondary side (the tribes *Licmophoreæ* and *Striatelleæ*). [B, 261.]

ASTOMATOPHORÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-to^{2}m-a^3-to^{2}f'o^{2}r-e(a^3-e^2). From α priv., στόμα, the mouth, and φορεῖν, to bear. Of Corda, a division of plants (*Aspirales*) including the classes *Lemneæ*, *Rhizospermeæ*, *Characeæ*, and *Musci.* [B, 170.]

ASTOMATOUS, adj. A^{2}s-to^{2}m'a^{2}t-u^{3}s. See Astomous.

ASTOMI (Lat.), n. m. pl. A^{2}s(a^{3}s)'to^{2}m-i(e). Fr., *astomés.* A class of mosses (*Vaginulati*), comprising the orders *Acrocarpi* and *Pleurocarpi.* [Brid. (B, 170).]

ASTOMIA (Lat.), n. f. A^{2}s(a^{3}s)-tom(to^{2}m)'i^2-a^3. From α priv., and στόμα, the mouth. Fr., *astomie.* Ger., *Astomie.* It., *astomia.* Sp., *astomía.* The state of having no mouth. [L, 49.]

ASTOMOUS, adj. A^{2}s'to-mu^{3}s. Gr., ἄστομος. Lat., *astomos, astomus.* Fr., *astome.* Ger., *mundlos, mündunglos, astomös.* It., Sp., *astomo.* Having no mouth; in botany, having no opening to the theca (said of mosses). [B, 7.]

ASTOURES (Fr.), n. pl. A^{3}s-tur. Certain seeds poisonous to fishes, said to be the product of two species of *Verbascum.* [Bosc (B, 121).]

ASTOURON, n. The Carib name for the *Pimenta communis.* [B, 121.]

ASTRABES (Lat.), adj. A^{2}s(a^{3}s)'tra^3-bez(bas). Gr., ἀστραβής (= ἀστραφής). 1. Not twisted or distorted (said of the jaws or the teeth). [Hippocrates (A, 311, 325).] 2. Stretched tight. [Aretæus (A, 311).]

ASTRÆA (Lat.), n. f. A^{2}s(a^{3}s)-tre'(tra^3'e^2)-a^3. From ἀστραῖος, starry, starred. Of Klotzsch, a genus of euphorbiaceous plants, by Bentham and Hooker referred to *Croton.* [B, 42, 170.]

ASTRÆANS, n. pl. A^{2}s-tre′a^{2}nz. See Astræidæ.

ASTRÆIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tre′(tra^3′e^2)-i^{2}d-e(a^3-e^2). The astræans ; a family of the division *Aporosa* of the order *Zoantharia sclerodermata* of the *Actinozoa ;* characterized by having the corallum simple or compound, no proper cœnenchyma, numerous dissepiments, no synapticulæ, no tabulæ, and the corallites well defined and separated from each other by perfect walls. [A, 359.]

ASTRÆIFORM, adj. A^{2}s-tre′i^2-fo^{2}rm. Shaped like the *Astrœa*, a genus of the *Astrœidœ*. [L, 121.]

ASTRÆOPSIS (Lat.), n. f. A^{2}s(a^{3}s)-tre(tra^3-e^2)-o^{2}p′si^{2}s. Gen., *astrœop′seos* (*-sis*). From *Astrœa* and ὄψις, an appearance. A section of the genus *Croton*. [H. Baillon (B, 121).]

ASTRAGALAR, adj. A^{2}s-tra^{2}g′a^{2}l-a^{3}r. Lat., *astragaleus*. Fr., *astragalien*. Pertaining to the astragalus. [L, 41.]

ASTRAGALE (Fr.), n. A^{3}s-tra^3-ga^{3}l. See Astragalus.—**A. à gousses velues, A. antivénérien.** See Astragalus *exscapus*.—**A. de Crète.** See Astragalus *creticus*.—**A. gommeux, A. gommifère.** See Astragalus *gummifer*.—**A. réglisse.** See Astragalus *glycyphyllos*.—**A. sans tige.** See Astragalus *exscapus*.

ASTRAGALÉ (Fr.), adj. A^{3}s-tra^3-ga^3-la. See Astragaloid and Astragaleous.

ASTRAGALEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^3-ga^{2}l(ga^{3}l)′e^2-e(a^3-e^2). Fr., *astragalées*. Ger., *Astragaleen*. According to Sprengel, De Candolle, and Bentham and Hooker, a subtribe of papilionaceous plants of the tribe *Galegeœ*, including herbs, shrubs, and trees, bearing axillary flowers, which are sometimes solitary, but usually disposed in racemes, spikes, or umbels, and have an erect vexillum, often narrow, with reflected margins ; a free vexillary stamen and a mass formed by the fusion of the other stamens ; muticous anthers ; and numerous ovules with a glabrous style. The fruit is either inflated, vesiculose, cylindrical, or, more rarely, compressed, and is often divided into two false longitudinal compartments by an inward projection of the wall. It includes the genera *Astragalus*, *Oxytropis*, *Caragana*, *Glycyrrhiza*, and four others. [B, 121, 170.]

ASTRAGALEOUS, adj. A^{2}s-tra^{2}g-a^{2}l′e-u^{3}s. Lat., *astragaleus*. Fr., *astragalé*. Belonging to the *Astragaleœ*.

ASTRAGALI (Lat.), n. m. pl. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)′a^3-li(le). A section of leguminous plants including the genus *Astragalus*. [Adanson (B, 121, 170).]

ASTRAGALIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)-a^3-li^{2}d′e^2-e(a^3-e^2). A section of the *Leguminosœ* comprising the genera *Astragalus* and *Oxytropis*. [Gray (B, 121).]

ASTRAGALIEN (Fr.), adj. A^{3}s-tra^3-ga^3-li^2-a^{3}n^2. See Astragalar.

ASTRAGALINEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)-a^3-li^{2}n′e^2-e(a^3-e^2). Fr., *astragalinées*. Ger., *Astragalineen*. Brongniart's term for the Astragaloideæ (*q. v.*). [B, 170.]

ASTRAGALINEUS, ASTRAGALINUS (Lat.), adj's. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)-a^3-li^{2}n′e^2-u^{3}s(u^{4}s), -li(le)′nu^{3}s(nu^{4}s). Fr., *astragalin*, *astragaliné*. Pertaining to or resembling the genus Astragalus. [B.] Cf. Astragalineæ.

ASTRAGALO-CALCANEAL, adj. A^{2}s-tra^{2}g″a^3-lo-ka^{2}l-ka′-ne-a^{2}l. Lat., *astragalo-calcaneus*. Fr., *astragalo-calcanéen*. Pertaining to the astragalus and the calcaneum. See *A.-c.* ligaments.

ASTRAGALO-EX-MÉTATARSIEN (Fr.), n. A^{3}s-tra^{3}g-a^3-lo-e^{2}x-ma-ta^3-ta^{3}r-si^2-a^{3}n^2. One of the extensor muscles of the thigh in the frog. [L, 109.]—**A.-e.-m. du pouce** [Dugés]. The extensor brevis digiti of certain of the *Amphibia*. [L, 204.]

ASTRAGALOGIA [De Candolle] (Lat.), n. f. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)″a^3-lo(lo^2)′ji^2(gi^2)-a^3. See Astragalologia.

ASTRAGALOID, adj. A^{2}s-tra^{2}g′a^3-loid. Gr., ἀστραγαλώδης (from ἀστράγαλος [see Astragalus], and εἶδος, resemblance). Lat., *astragaloides*, *astragaloideus*. Fr., *astragaloïde*, *astragaloïdé*, *astragalé*. Resembling an astragalus.

ASTRAGALOIDEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)″a^3-lo(lo^2)-i^{2}d′e^2-e(a^3-e^2). Fr., *astragaloïdées*. Syn. : *Astragalineœ* [Brongniart]. A section of papilionaceous plants including the genera *Astragalus*, *Oxytropis*, *Phaca*, and *Bisserula*. [B, 170.]

ASTRAGALOIDES (Lat.), adj. and n. f. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)-a^3-lo(lo^2)-i(e)′dez(das). 1. (Adj.) see Astragaloid. 2. (N.) of Tournefort and others, a genus of leguminous plants corresponding in part to *Astragalus*. [B, 170.] 3. (N.) of Adanson, the same as the genus *Phaca*. [B, 170.]—**A. cicera** [Mönch]. See Astragalus *cicer*.—**A. glaux** [Mönch]. See Astragalus *glaux*.—**A. syphilitica** [Mönch]. See Astragalus *exscapus*.

ASTRAGALOLOGIA (Lat.), n. f. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)″a^3-lo(lo^2)-lo(lo^2)′ji^2(gi^2)-a^3. From ἀστράγαλος (see Astragalus), and λόγος, understanding. Fr., *astragalologie*. Ger., *Astragalologie*. That department of botany which treats of the *Astragali*. [De Candolle (A, 322).]

ASTRAGALOMANCY, n. A^{2}s-tra^{2}g′a^3-lo-ma^{2}n-si^2. From ἀστράγαλος (see Astragalus), and μαντεία, divination. Fr., *astragalomancie*. Divination by means of the astragalus and other small bones. [A, 385.]

ASTRAGALOS (Lat.), n. m. A^{2}s(a^{2}s)-tra^{2}g(tra^{3}g)′a^3-lo^{2}s. Gr., ἀστράγαλος. See Astragalus.

ASTRAGALO-SCAPHOID, adj. A^{2}s-tra^{2}g″a^3-lo-ska^{2}f′oid. For deriv., see Astragalus and Scaphoid. Fr., *astragalo-scaphoïde*. Syn. : *talo-scaphoid*. Pertaining to the astragalus and to the scaphoid bone.

ASTRAGALO-SUS-PHALANGETTIEN (Fr.), **ASTRAGALO-SUS-PHALANGIEN** (Fr.), n's. A^{3}s-tra^3-ga^3-lo-su^6-fa^3-la^{3}n^2-zhe^{2}t-ti^2-a^{3}n^2, -zhi^2-a^{3}n^2. One of the extensor muscles of the thigh in the frog. [L, 109, 229.]

ASTRAGALUM (Lat.), n. n. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)′a^3-lu^{3}m-(lu^{4}m). See Astragalus.

ASTRAGALUS (Lat.), n. m. A^{2}s(a^{3}s)-tra^{2}g(tra^{3}g)′a^3-lu^{3}s(lu^{4}s). Gr., ἀστράγαλος, ἄστρις (3d def.). Fr., *astragale*. Ger., *Sprungbein* (3d def.), *Würfelbein* (3d def.), *Rollbein* (3d def.), *Wirtelbein* (3d def.). It., *astragalo*. Sp., *astrágalo*. Syn.: *talus* (3d def.), *quatrio* (3d def.), *os ballistœ* (3d def.). 1. An old name for one of the cervical vertebræ. [A, 311.] 2. Anciently, any small bone used in the game of dice. [A, 311.] 3. The ankle bone, the sling bone, the huckle-bone, the first bone of the tarsus ; an irregularly cubical bone which forms the key-stone of the arch of the foot, articulating above with the tibia and fibula, anteriorly (by a large convex head) with the scaphoid bone, and inferiorly (by two synovial joints, one behind the other) with the os calcis. The superior articulation (the ankle joint proper) is a simple hinge-joint allowing of antero-posterior motion, the rolling lateral mobility of the foot being provided for in the articulations between the a. and the os calcis below and the scaphoid bone in front. The convex portion which articulates with the scaphoid bone is termed the *head*, the constricted portion behind it the *neck*, and the remainder of the bone the *body*. The a. of the hare and that of the pig were recommended by the ancients in the treatment of epilepsy, difficult parturition, colic, and calculous affections, also for the pain following fractures. [A, 5, 70, 325.] 4. An ancient measure used by physicians. [A, 311.] 5. A leguminous plant mentioned by Dioscorides. 6. Of Linnæus, the milk-vetch, a genus of herbaceous or suffructicose, papilionaceous plants belonging to the tribe *Galegeœ*, subtribe *Astragaleœ*, bearing imparipinnate leaves, flowers growing in axillary clusters with 5-parted calyx, blunt carina, and diadelphous stamen, and fruit consisting of a legume divided into 2 compartments by a reflection of the cell-wall inward. [B, 34.]—**A. aboriginum** [Richards]. A species growing in the polar regions of North America, where its sweet, juicy root is eaten. [B, 270.]—**A. acanthoides** [Lamarck]. See *A. declinatus*.—**A. ammodytes** [Pallas]. A perennial herb indigenous to Siberia, all parts of which are sweet and can be used as a substitute for licorice. [B, 173, 214 ; L, 105.]—**A. angustifolius** [Lamarck]. A shrubby species, of which the principal variety, *A. angustifolius*, var. α *genuinus* (the *A. echinoides* of L'Héritier), indigenous to Greece and Crete, is distinguished by its peduncles shorter than the leaves and its whitish-yellow corolla. This variety furnishes a sort of tragacanth. The varieties *A. angustifolius*, var. β *violaceus* with violet corolla, and var. γ *glabrescens*, also occur in Greece, and the *A. angustifolius*, var. δ *peduncularis* (the *A. bracteolatus* of De Candolle), so called from its longish peduncles equaling or excelling in length the bracteate calyx, is found in Galatia and Cappadocia. [B, 63, 173.]—**A. arenarius** [Pallas]. See *A. hypoglottis*.—**A. argenteus** [Wheeler]. Probably the *A. syriacus*. [B, 200.]—**A. aristatus.** 1. Of L'Héritier, a perennial herb (the *A. sempervirens* of Lamarck, the τραγάκανθα ἐν Ἀρκαδία of Eresios) with spiny petioles, hairy mucronate leaves, and aristate calyx, growing throughout the mountainous districts of southern Europe. It is said to furnish a variety of tragacanth which is largely exported from Morea. 2. Of the "Flora græca," the *A. Parnassi*. [B, 63, 71, 180.]—**A. arnacantha** [Biebst.]. A Caucasian species said to furnish a slight amount of tragacanth of poor quality. Its root contains much mucilage. [B, 63, 180.]—**A. ascendens** [Boissier and Haussknecht]. An undershrub about 4 feet in height, growing on the mountains of southwestern Persia, having branches at first prostrate, finally ascending, and bearing compound leaves provided with adnate triangular stipules, tomentose at the base, glabrous at the apex, and made up of 4 to 6 pairs of hairy, oblong-linear, mucronate leaflets. It is said to furnish a large quantity of tragacanth and a variety of manna like that afforded by *A. florulentus*. [B, 63, 106, 270 ; L, 78.]—**A. aureus** [Willdenow]. A species growing in Armenia, Turkey, and the Caucasus, closely resembling *A. aristatus*, but bearing sessile yellowish flowers. [B, 63, 214.]—**A. bæticus** [Linnæus]. Fr., *café français*. Ger., *spanischer Tragacanth*. An annual herb growing in southern Europe and northern Africa, with ascending stem and compound leaves, having ovate acuminate stipules, and consisting of from 10 to 15 pairs of obtuse oblong leaflets. The seeds, which are contained in an erect 3-sided pod, are sometimes employed as a substitute for coffee. [B. 63, 180.]—**A. bethlemiticus** [Boissier]. A species growing in Lebanon, Syria, and Judæa. [B, 63.]—**A. Boissieri** [Bunge]. The *A. creticus* of Linnæus. [B, 63.]—**A. brachycalyx** [Fischer]. A species about 3 feet high, closely related to *A. ascendens*, from which it differs chiefly in the larger size and elliptical shape of its leaflets and in its oval obtuse bracts. It is a native of Persian Kurdistan and furnishes tragacanth. [B, 63, 106 ; L, 78.]—**A. bracteolatus** [De Candolle]. The *A. angustifolius*, var. δ *peduncularis*. [B, 63.]—**A. carnosus.** 1. Of Nuttall, the *A. caryocarpus*. 2. Of Pursh, a trailing shrub bearing fleshy pods, indigenous to the southern United States. [B, 71, 214.]—**A. caryocarpus** ["Botanical Register"]. An annual herb growing in the southern and western United States ; counted among the medicinal plants. [B, 214 ; "Proc. of the Am. Pharm. Assoc.," xxix, p. 447 (B).]—**A. caucasicus** [Pallas]. A shrubby species growing in the Caucasus and furnishing tragacanth. [B, 63, 173.]—**A. caudatus** [Pallas]. See Oxytropis *caudata*.—**A. cephalonicus** [Fischer]. A variety of *A. aristatus*. [B, 63.]—**A. chartosteglus** [Boissier and Hausknecht]. An oriental species furnishing a variety of manna like that afforded by *A. florulentus*. [B, 270.]—**A. christianus** [Linnæus]. An herbaceous species having an erect stalk with leaves having linear subulate stipules and elliptical leaflets, and with clusters of yellow flowers, indigenous to Armenia and Judæa. [B, 71, 214.]—**A. chromolepis** [Boissier and Hoh.]. A variety of the *A. aureus*. [B, 63.]—**A. cicer** [Linnæus]. Syn. : *Astragaloides cicera* [Mönch]. A perennial herb growing throughout middle and southern Europe, Russia, the Caucasus, and Siberia, employed as a forage plant and having an edible seed used in Rus-

sia as a food for children. The seeds are said to be laxative and detersive. [B, 63, 173; L, 91, 105.]—**A. cornutus** [Pallas]. See *A. vimineus*.—**A. crassicarpus** [Fras.]. See *A. caryocarpus*.—**A. creticus** [Lamarck]. Fr., *astragale de Crète*. Ger., *kretischer Traganth*. Syn.: *A. Boissieri* [Bunge], *Tragacantha cretica incana* [Tournefort]. A branching shrub indigenous to Greece and Crete, with stems and branches covered with thickly-set hairs and short spines, and bearing leaves composed of 5 or 6 pairs of oblong leaflets terminating in spinous points and covered with whitish hairs, and flowers in sessile globular heads. It is said to furnish a small amount of tragacanth (according to Martius, the vermicelli tragacanth of the Morea). It is the τραγάκανθα ἐν Κρήτῃ of Eresios. The *A. creticus* of Willdenow is the *A. angustifolius*, var. *α*. [B, 18, 63, 106, 214.]—**A. crotalariæ** [Gray]. A species growing on the Pacific coast of California; according to some authorities, the poisonous rattle-weed or loco-weed which produces in cattle feeding upon it the disease called *loco*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 247 (B).] Cf. *A. Hornii* and *A. mollissimus*.—**A. cylleneus** [Boissier and Heldreich]. A shrub growing in the Peloponnesus, having short branches armed with long slender spines, and bearing leaves composed of 5 pairs of oblong obtuse leaflets terminating in a long spine and flowers in oval or oblong heads. It furnishes a variety of the tragacanth exported from Greece. [B, 63, 106; L, 65.]—**A. danicus** [Hoffmann]. See *A. hypoglottis*.—**A. declinatus** [Willdenow]. A species growing in Armenia, Turkey, the Caucasus, and Kurdistan. [B, 63.]—**A. denudatus** [Stev.]. See *A. microcephalus*.—**A. Dioscoridis quibusdam, A. Dioscoridis vulgo Christianæ radix.** A name applied to a plant probably the *A. syriacus* or the *A. christianus*. [B, 200.]—**A. echinoides** [L'Héritier], **A. echioides** [Willdenow]. The *A. angustifolius*, var. *α genuinus*. [B, 214.]—**A. erianthus** [Willdenow]. See *A. gummifer*.—**A. ericantha** [Stev.]. See *A. arnacantha*.—**A. erinaceus** [Presl]. The *A. angustifolius*, var. *α genuinus*. [B, 63.]—**A. eriocaulos** [De Candolle]. See *A. microcephalus*.—**A. eriophaca** [Ball.]. See Phaca *bœtica*.—**A. exscapus** [Linnæus]. Fr., *astragale sans tige* (ou *à gousses velus*). Ger., *stengelloser Traganth*. Syn.: *Astragaloides syphilitica* [Mönch]. Stemless milk-vetch. A perennial European herb with very short stem covered with shaggy hairs and bearing imparipinnate leaves with deciduous petiole, adnate deciduous stipules, and ovate leaflets, and capitulate racemes of flowers upon short stalks. The root, which is cylindrical, from ½ to 1 inch in thickness, and frequently 2 feet in length is odorless, has a taste at first bitter and astringent, afterward sweetish, and contains a bitter extractive principle, and mucilage. Under the name of *radix astragali exscapi*, it was formerly much employed as a diuretic and diaphoretic, and was especially used as a remedy for the various complications of the later stages of syphilis, and also for gout and rheumatism. [B, 173, 180.]—**A. floridus** [Scopoli]. See *A. christianus*.—**A. florulentus** [Boissier and Haussknecht]. A species indigenous to southwestern Persia, related in botanical characters to *A. leioclados*. It furnishes a variety of manna (the *gaz anjabin*, *gaz alefi*, or *gaz khonsari* of the Persians) which contains dextrin, uncrystallizable sugar, and acids. [B, 63, 370; L, 78.]—**A. glaucoides** [Gmelin]. The *Coronilla varia*. [B, 214.]—**A. glaux** [Linnæus]. Fr., *herbe au lait*. Syn.: *Astragaloides glaux* [Mönch]. An annual herb growing in dry places in the south of France and in Spain, believed to be the γλαῦξ of Dioscorides. This plant, prepared with a decoction of

THE ASTRAGALUS CRETICUS. (AFTER DE LANESSAN.)

THE ASTRAGALUS GLYCYPHYLLOS. (AFTER DE LANESSAN.)

barley, has been used as a galactagogue in Spain. [B, 173, 180.]—**A. glycyphyllos** [Linnæus]. Fr., *fausse réglisse*, *réglisse bâtarde* (ou *sauvage*), *chasse-vaches*. Ger., *wildes Süssholz*, *Wolfsschoten*. A prostrate, nearly glabrous, perennial herb, growing throughout Europe and northern Asia, bearing leaves, with ovate, acute, nearly free stipules and from 5 to 6 pairs of ovate leaflets, flowers in pedunculated spicate racemes, shorter than the leaves, and 3-sided cylindroid pods. The disagreeably tasting, sweetish leaves (*herba glycyrrhizœ silvestris*) and the seeds (*semen glycyrrhizœ silvestris*) have been used as an aperient and a remedy in retention of urine, strangury, and dartrous affections; and the sweetish root has been employed as a substitute for licorice. [B, 121, 173, 180.]—**A. granatensis** [Linnæus]. See *A. poterium* (1st def.).—**A. gummifer, A. gummiferus** [Labillardière]. Fr., *astragale gommifère*. Ger., *gummigebender Traganth*. A shrub from 2 to 3 feet in height, growing throughout central Asia Minor, Syria, and thence north to Kurdistan, having numerous branches which bear glabrous leaves with from 4 to 6 pairs of linear-oblong leaflets, persistent thorny petioles, and persistent adnate glabrous stipules, and sessile flowers aggregated in groups of 2 to 5 in the axils of the leaves. It is said to furnish a variety of tragacanth, but not so copiously as *A. verus*, also, according to Guibourt, a variety of false tragacanth (Bassora gum) used in the adulteration of genuine tragacanth. [B. 63, 106, 121, 180, 270.]—**A. hispidulus** [De Candolle]. A species growing in Egypt and Arabia. [B, 63, 214.]—**A. Hornii** [Gray]. A California species, said to be one of those producing the disease *loco* in animals which feed upon it. [B, 66.]—**A. horridus.** 1. Of Boissier, a Persian species. 2. Of Willdenow, the *A. arnacantha*. [B, 63.]—**A. hypoglottis** [Linnæus]. A procumbent species distributed through North America, Siberia, Barbary, and Europe. [B, 63, 71, 214.]—**A. incanus.** 1. Of Linnæus, an acaulescent European species with purplish flowers borne on decumbent scapes. 2. Of Wulfen, the *A. Wulfeni*. [B, 71, 214.]—**A. incurvus** [Reichenbach]. See *A. Wulfeni*.—**A. kurdicus** [Boissier]. A shrub, 3 to 4 feet in height, growing throughout Cilicia and Cappadocia and extending eastward to Kurdistan. It has numerous naked branches with branchlets bearing blackish spines, with leaves having short, flat, narrow, silvery leaflets terminating in a long spine, and with flowers disposed in groups of 2 to 6 in a short loose spike. It furnishes, along with *A. stromatodes*, the greater part of the Aintab tragacanth. [B, 63, 106; L, 78.]—**A. lanigerus** [Desfontaines]. A north African species. A variety (the *A. tragacanthoides* [Willdenow]), a perennial herb indigenous to Armenia and Russia, is said to furnish a decoction employed by the Russians in the treatment of intermittent fever. [B, 173, 214.]—**A. leioclados** [Boissier]. A very branching fruticose species, the *guini* of the Kurds, growing in Cappadocia, Armenia, and Lebanon. It is closely related in botanical characters to *A. ascendens* and *A. brachycalyx*, and, like them, furnishes tragacanth. [B, 63; L, 78.]—**A. lentiginosus** [Douglas]. A species growing throughout the Pacific United States. A variety, the *A. lentiginosus*, var. *Fremontii* [Watson], growing in Nevada and California, is said to produce the disease called *loco* in animals feeding upon it. [B, 66.]—**A. leucophyllus** [Willdenow]. The *A. angustifolius*, var. *α genuinus*. [B, 63.]—**A. lusitanicus** [Lamarck]. See Phaca *bœtica*.—**A. luteus perennis procumbens vulgaris** [Morison]. The *A. glycyphyllos*. [B, 211.]—**A. macropodius** [Fischer]. See *A. aureus*.—**A. massiliensis** [Lamarck]. Fr., *barbe de renard*, *dragante*, *épine de bouc*. Syn.: *A. tragacantha* [Pallas], *A. tragacantha*, var. *α*. [Linnæus], *Tragacantha massiliensis* [Miller]. A shrubby species, growing in the south of France, Corsica, and Morocco, with spiny petioles and whitish flowers. It is said not to furnish tragacanth, although it has been placed among the plants producing that gum. [B, 173, 214.]—**A. mexicanus** [De Candolle]. A species growing in the prairies of the western United States, where the fruit, which is as large as a plum, is said to be eaten both raw and cooked. [B, 34.]—**A. micranthus** [Nuttall]. See *A. nuttallianus*.—**A. microcephalus** [Willdenow]. A shrub, growing in Asia Minor, Armenia, and Russia, with stems covered with white lanuginous hairs and yellowish petiolary spines, and bearing its flowers in small oval or oblong heads. It furnishes a variety of tragacanth. [B, 63, 106; L, 78.]—**A. mollissimus.** 1. Of Presl, the *A. bethlemiticus*. 2. Of Torrey, a species growing in the United States west of the Mississippi as far as California. It is one of the so-called loco weeds producing *loco* in cattle. It contains an active principle which, according to Ott, reduces the cardiac force and frequency; at first increases, then diminishes, the arterial tension; decreases motor irritability, blunts the sensibility of the cerebral centres, and acts as a strong narcotic; increases the secretion of saliva, powerfully dilates the pupil, and acts as a tetanizing agent upon the spinal centres. [B, 63; J. Ott, "New Remedies," Aug., 1882, p. 236; "Proc. of the Am. Pharm. Assoc.," xxxi, p. 157 (B).]—**A. monspessulanus.** 1. Of Linnæus, an acaulescent herbaceous species growing in the south of Europe and in Morocco. 2. Of Grisebach, the *A. Wulfeni*. [B, 63, 214.]—**A. Mortoni** [Nuttall]. A California species, said to act as a deadly poison upon sheep. [B, 66.]—**A. nudatus** [Bunge]. See *A. kurdicus*.—**A. nummularis** [C. A. Meyer]. See *A. talyschensis*.—**A. nuttallianus** [De Candolle]. An annual or biennial decumbent herb, becoming perennial on cultivation, found in the western United States and as far as California. It produces a fatal variety of loco in cattle. [B, 214; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 611 (B).]—**A. odessanus** [Besser]. See *A. vimineus*.—**A. olympicus** [Pallas]. The *A. angustifolius*, var. *α. genuinus*. [B, 63.]—**A. orientalis acaulis, flore luteo** [Tournefort]. See *A. declinatus*.—**A. Parnassi** [Boissier]. A species growing on Mt. Parnassus in Greece. The *A. Parnassi*, var. *cylleneus*, of some is the *A. cylleneus* (*q. v.*). [B, 63.]—**A. plumosus** [Sieber]. See *A. bethlemiticus*.—**A. poterium.** 1. Of Vahl, the *A. granatensis* [Linnæus] and *A. tragacantha*, var. *β* [Linnæus], the *poterium* of Clusius, and probably the ποτήριον of Dioscorides; a shrub with white flowers growing in dry places in Granada. The root contains much gum, and was formerly used as a tonic, nervine, and vulnerary. 2. Of

Pallas, the *A. arnacantha.* 3. Of Willdenow, a species not satisfactorily determined, but probably different from the species of Vahl. [B, 180, 214.]—**A. pseudo-tragacantha** [Pallas]. See *A. aureus.*—**A. pungens** [Willdenow]. The *A. angustifolius,* var. *δ peduncularis.* [B, 63.]—**A. pycnocladus** [Boissier and Hausskneeht]. A species growing in Persia and Kurdistan, closely allied to *A. microcephalus,* from which it is distinguished chiefly by its densely set, slender spines and its very short, green, folded leaflets. It furnishes a large amount of tragacanth. [B, 63, 106; L, 78.]—**A. pycnophyllus** [Stev.]. See *A. microcephalus.*—**A. retusus** [Willdenow]. The *A. angustifolius,* var. *α genuinus.* [B, 63.]—**A. sempervirens** [Lamarck]. See *A. aristatus.*—**A. siculus** [Biv.]. A species with white or purplish flowers, growing in Sicily and southern Italy. [B, 214.]—**A. silvaticus** [Willdenow], **A. silvicolus** [Pallas]. The *Oxytropis silvatica.* [B, 214.]—**A. spicatus** [Pallas]. The *Oxytropis caudata.* [B, 214.]—**A. strobiliferus** [Lindley]. An herbaceous species, growing in Turkestan, bearing woolly leaves with 3 pairs of oval awned leaflets and purple flowers in sessile heads, with plumose calyx and regular corolla; said to furnish the red variety of tragacanth. [B, 5, 71; L, 130.]—**A. stromatodes** [Bunge]. A species closely resembling the *A. kurdicus,* from which it differs chiefly in its globular inflorescence, its larger flowers, and its smaller size. It grows in northern Syria at elevations of about 5,000 feet. [B, 63, 106; L, 78.]—**A. succulentus** [Richards]. A species growing in polar North America, where it is used like *A. aboriginum.* [B, 270.]—**A. syriacus** [Linnæus], **A. syriacus hirsutus** [Bauhin]. A plant of uncertain botanical character; probably the *A. vimineus.* [B, 63, 211, 214.]—**A. talyschensis** [Bunge]. A species growing in waste fields in the province of Talyshin bordering on northern Persia. [B, 63.]—**A. tragacantha.** 1. Of Bernhardi, the *A. siculus.* 2. Of Pallas, the *A. massiliensis.* 3. Of Linnæus, the *A. massiliensis* and *A. poterium.* [B, 214.]—**A. tragacanthoides.** 1. Of Willdenow, the *A. lanigerus.* 2. Of Lamarck, the *A. declinatus.* 3. The *A. talyschensis.* [B, 63, 214.]—**A. uncinatus** [Mönch]. See *A. bæticus.*—**A. varius** [Gmelin]. See *A. virgatus.*—**A. verus.** 1. Of Olivier, a shrub growing in western Persia, with thick tomentose branches covered with short, slender, petiolar spines, and bearing leaves with 8 to 10 pairs of very narrow, linear, hispid leaflets and sessile flowers disposed in groups of 2 to 5, tomentose, and with obtusely 5-dentate calyx. According to Olivier, it furnishes the greater part of the gum tragacanth of commerce; according to Martius, it furnishes the flake tragacanth. 2. Of De Candolle, a plant referred to a different species. [B, 63, 106.]—**A. vimineus** [Pallas]. A species growing in Siberia and about Odessa. [B, 214.]—**A. virgatus** [Pallas]. 1. A species growing in Hungary and eastward along the Volga to the Caspian Sea. 2. A variety of the *A. crotalariæ,* made by Gray. [B, 214; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 247 (B).]—**A. vulgo Christianæ radix.** The *A. christianus,* or perhaps the *A. syriacus.* [B, 200, 211.]—**A. Wulfeni** [Koch]. A species growing in Greece, Macedonia, and Dalmatia. [B, 63.]—**Gummi astragalorum.** Gum tragacanth. [B.]—**Infusum astragali exscapi.** A preparation made by infusing 1 part of the root of *A. exscapus* in 12 parts of water and straining. [B, 119.]—**Radix astragali, Radix astragali exscapi.** Ger., *Astragalwurzel.* The root of *A. exscapus.* [B, 180; L, 30.]

ASTRAGALWURZEL (Ger.), n. A^{3}s-tra^3-ga^{3}l'vurt-se^{2}l. See *Radix* ASTRAGALI.

ASTRAL, adj. A^{2}s'tra^{2}l. Gr., ἀστρικός. Lat., *astralis* (from *aster,* a star). Fr., *astral.* Ger., *astralisch.* 1. Pertaining to the stars or to an aster (*q. v.*). 2. Pertaining to the stellate phase of the nucleus in karyokinesis. [J.]

ASTRANCE (Fr.), n. A^{3}s-tra^{3}ns. See ASTRANTIA.

ASTRANTHIUM [Nuttall] (Lat.), n. n. A^{2}s(a^{3}s)-tra^{2}n(tra^{3}n)'-thi^2-u^{3}m(u^{4}m). From ἀστήρ, a star, and ἄνθος, a flower. A genus of composite plants corresponding in part to *Bellis* (*q. v.*). [B, 121.]

ASTRANTIA (Lat.), n. f. A^{2}s(a^{3}s)-tra^{2}n(tra^{3}n)'shi^2(ti^2)-a^3. From ἄστρον, a star. Fr., *astrance.* Ger., *Astrantie, Sterndolde, Meisterwurz.* A genus of umbelliferous herbs of the tribe *Saniculeæ,* established by Linnæus. [B, 121.]—**A. candida** [Miller]. See *A. major.*—**A. diapensia** [Scopoli]. The *Sanicula europæa.* [B, 180.]—**A. epipactis** [Linnæus]. A species supposed to be the ἐπιπακτίς of Dioscorides. [L, 105.]—**A. major** [Linnæus]. Fr., *otruche noire, sanicle femelle* (ou *de montagne*). Ger., *grosse Astrantie, schwarze* (odor *falsche*) *Meisterwurz.* The black sanicle, black masterwort; a species growing in the mountainous districts of central Europe. The rhizome (*radix astrantiæ majoris, radix imperatoriæ nigræ*) is brownish-black, or, when dried, completely black, beset with numerous slender branching fibrils, and devoid of odor, but of an acrid, bitter taste. It has been used as a purgative, and is sometimes mixed with or substituted for black hellebore root. [B, 173, 180; L, 80.]—**A. minor.** Ger., *kleine Astrantie.* An herbaceous plant indigenous to Switzerland. [B, 71.]—**A. nigra** [Scopoli], **A. nigra major, A. vulgaris.** See *A. major.*—**Radix astrantiæ.** The rhizome of *Imperatoria ostruthium.* [B, 180.]—**Radix astrantiæ majoris.** The rhizome of *A. major.* [B, 180.]

ASTRANTIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^{2}n(trɛ^{3}n)-ti(ti^2)'-e^2-e(a^3-e^2). A tribe of umbelliferous plants including only the genus *Astrantia.* [B, 170.]

ASTRAPÆA (Lat.), n. f. A^{2}s(a^{3}s)-tra^3-pe'(pa^3'e^2)-a^3. From ἀστραπαῖος, pertaining to lightning. A genus of plants, referred by Lindley to the *Sterculiaceæ,* by others to the *Malvaceæ,* and regarded by many as a section of *Dombeya,* but distinguished from the latter by the sessile flowers being surrounded by an involucre of large bracts. [B, 19, 121, 170.]—**A. cannabina.** A Madagascar species furnishing a material used in making cordage. [B, 19.]—**A. Wallichii.** A species indigenous to Madagascar and cultivated in Europe, having bright-red flowers borne in pendulous umbels. [B, 19.]

ASTRAPÆARIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tra^3-pe(pa^3-e^2)-a^3-ri(ri^2)'e^2-e(a^3-e^2). A subdivision of the *Malveæ* made by Reichenbach, including *Astrapæa.* [B, 170.]

ASTRAPE (Lat.), n. f. A^{2}s(a^{3}s)'tra^3-pe(pa). Gr., ἀστραπή. Lightning; reckoned by Galen among the procatartic causes of epilepsy. [A, 325.]

ASTRAPHOBIA (Lat.), n. f. A^{2}s(a^{3}s)-tra^3-fo(fo^2)'bi^2-a^3. From ἀστραπή, lightning, and φόβος, terror. Fr., *astraphobie.* Excessive terror at the approach of thunder-storms, accompanied by nausea, vomiting, weakness of the limbs, and vertigo. [A, 445.]

ASTRAPOPLECTUS (Lat.), adj. A^{2}s(a^{3}s)''tra^3-po(po^2)-ple^{2}k-(plak)'tu^{3}s(tu^{4}s). Gr., ἀστραποπληκτός. Struck or blasted with lightning. [A, 318.]

ASTRENZWURZEL (Ger.), n. A^{3}s-tre^{2}ntz'vurtz-e^{2}l. See *Radix* ASTRUTII.

ASTREPHIA (Lat.), n. f. A^{2}s(a^{3}s)-tre^{2}f'i^2-a^3. Of Dufresne, a genus of perennial valerianaceous herbs. [B, 42, 214.]—**A. coarctata** [Dufresne]. See VALERIANA *coarctata.*

ASTRICTIF (Fr.), adj. A^{3}s-tri^{2}k-tef. Astringent. [L, 41.]

ASTRICTION, n. A^{2}s-tri^{2}k'shu^{3}n. Lat., *astrictio* (from *astringere,* to bind, to tighten). Fr., *astriction.* Ger., *Zusammenziehung, Verstopfung.* It., *astrizione.* Sp., *astricción.* 1. The tightening of a bandage or a ligature. [L, 41, 42.] Cf. CONSTRICTION. 2. The action of an astringent or a styptic. [A, 385.]

ASTRICTIVE, ASTRICTORY, adj's. A^{2}s-tri^{2}k'ti^{2}v, -to-ri^2. Lat., *astrictorius.* Fr., *astrictif.* Ger., *zusammenziehend, styptisch.* See ASTRINGENT.

ASTRICTUS (Lat.), adj. A^{2}s(a^{3}s)-tri^{2}k(trek)'tu^{3}s(tu^{4}s). 1. Constipated. [Celsus (A, 318).] 2. Astringent. [Pliny (A, 318).]

ASTRICUS (Lat.), adj. A^{2}s(a^{3}s)'tri^{2}k-u^{3}s(u^{4}s). Gr., ἀστρικός. See ASTRAL.

ASTRIFIBRIA (Lat.), n. f. A^{2}s(a^{3}s)-tri^2-fi^{2}b'ri^2-a^3. See CORTICALIA.

ASTRINGENCY, n. A^{2}s-tri^{2}n'je^{2}n-si^2. Fr., *astringence.* Ger., *adstringirende Kraft.* The property of acting as an astringent. [A, 385.]—**Principle of a.** An old name for gallic acid. [B, 91.]

ASTRINGENT, adj. and n. A^{2}s-tri^{2}n'je^{2}nt. Lat., *astringens.* Fr., *astringent.* Ger., *adstringirend* (adj.), *zusammenziehend* (adj.), *adstringirende Mittel* (n.). It., Sp., *astringente.* 1. Having the property of causing contraction or shrinking of living tissues, so as to diminish the amount of blood and other liquids in them, control or reduce hæmorrhage from them, and lessen their secretion. [A, 385.] 2. Constipating (by diminishing the intestinal secretions). 3. As a n., any agent producing these effects.—**A's absorbants** (Fr.). A's which act by withdrawing liquid from the tissues. [De Savignac (L, 87).]—**A's condensants** (Fr.). Those which act by contracting relaxed fibres. [De Savignac (L, 87.]—**A's emphractiques** (Fr.), **A's invisquants** (Fr.). Those which decrease the secretion of a part by coagulating the material in the mouths of its vessels. [De Savignac (L, 87).]—**A. principle.** See *Principle of* ASTRINGENCY.—**A's pycnotiques** (Fr.). See *A's condensants.*—**A's resserrants** (Fr.), **A's stégnotiques** (Fr.). Styptics. [L, 87.]

ASTRION (Lat.), n. n. A^{2}s(a^{3}s)'tri^2-o^{2}n. Gr., ἀστριον (dim. of ἀστήρ, a star). 1. Of Dioscorides, the *Plantago coronopifolia.* [Bory (B, 121).] 2. According to Ingrassias, a term used by Galen as synonymous with *astragalus* (the ankle bone); but C. G. Kühn maintains that Galen wrote *astris.* [A, 322.]

ASTRIS (Lat.), n. f. A^{2}s(a^{3}s)'tri^{2}s. Gr., ἄστρις. See ASTRAGALUS.

ASTRIZWURZEL (Ger.), n. A^{3}s-tri^{2}tz'vurtz-e^{2}l. See *Radix* ASTRUTII.

ASTROBLES (Lat.), adj. A^{2}s(a^{3}s)-tro^{2}b'lez(las). Gen., *astroble'tos* (*-tis*). Gr., ἀστροβλής, ἀστρόβλητος (from ἄστρον, a star, and βάλλειν, to strike). Syn.: *sideratus.* Affected with astrobolismus. [A, 325.]

ASTROBLESIA (Lat.), n. f. A^{2}s(a^{3}s)-tro(tro^2)-ble(bla)'si^2-a^3. Gr., ἀστροβλησία. See ASTROBOLISMUS.

ASTROBLETOS (Lat.), adj. A^{2}s(a^{3}s)-tro(tro^2)-ble(bla)'to^{2}s. Gr., ἀστρόβλητος. See ASTROBLES.

ASTROBOLESIA, ASTROBOLIA, ASTROBOLISMUS (Lat.), n's f., f., and m. A^{2}s(a^{3}s)-tro(tro^2)-bo(bo^2)-le(la)'si^2-a^3, -bol-(bo^{2}l)'i^2-a^3, -bo(bo^2)-li^{2}s'mu^{3}s(mu^{4}s). Gr., ἀστροβολησία, ἀστροβολία, ἀστροβολισμός. Fr., *astrobolisme.* Syn.: *sideratio.* 1. A sudden withering or blighting of an organism or a part (said originally of plants), as by the heat of the sun or by some malign influence attributed to the stars, especially the dog-star. [A, 322, 387.] 2. The state of being struck by lightning. [L, 30.] 3. Sunstroke. [A, 322.] 4. A stroke of apoplexy. [Gorræus (A, 325); L, 41.] 5. Sphacelus. [A, 325.]

ASTROBOLUS (Lat.), n. m. A^{2}s(a^{3}s)-tro^{2}b'o(o^2)-lu^{3}s(lu^{4}s). Gr., ἀστρόβολος. See ASTERIAS (2d def.).

ASTROCARPEÆ [Reichenbach], **ASTROCARPINEÆ** [Spach] (Lat.), n's f. A^{2}s(a^{3}s)-tro(tro^2)-ka^{3}rp'e^2-e(a^3-e^2), -ka^{3}rp-i^{2}n'e^2-e(a^3-e^2). Fr., *astrocarpées.* A tribe of resedaceous plants, including the single genus *Astrocarpus.* [B, 121, 170.]

ASTROCARYUM [C. N. G. Meyer] (Lat.), n. n. A^{2}s(a^{3}s)-tro(tro^2)-ka^{2}r(ka^{3}r)'i^2(u^6)-u^{3}m(u^{4}m). From ἄστρον, a star, and κάρυον, a nut, from the stellate dehiscence of the pericarp in some of the species. A genus of palms of the tribe *Cocoineæ.* [B, 19, 121.]—**A. acaule** [Martius]. The *Œnocarpus baccana* (*baccaba*). [B, 173.]—**A. ayri** [Martius]. Syn.: *Tophophœnix aculeatissima* [Schott]. A Brazilian species (the *ayri* of the Brazilians), of the wood of which the Indians make bows, spindles, etc., and which has an edible fruit. [B, 121, 173.]—**A. murmuru** [Martius]. A Brazilian species, the

fruit of which is eaten by the natives and given to cattle. The stony seeds, which pass through the alimentary canal unchanged, are afterward devoured by pigs. The leaves are used for thatching huts. [B, 19, 173.]—**A. tucuma** [Martius], **A. vulgare.** The tucum palm; a Brazilian species, the leaves of which furnish a fine thread woven by the Indians into hammocks. The fruit furnishes tucum oil. [B, 19, 173; L, 65, 73.] The root is said to be used as an antisyphilitic. [A, 316.]

ASTROCOMIA (Lat.), n. f. A^{2}s(a^{3}s)-tro(tro^2)-kom(ko^{2}m)'i^2-a^3. A subfamily of *Nucularia*, including two genera. [Rafinesque (B, 170).]

ASTROCYNOLOGIA (Lat.), n. f. A^{2}s(a^{3}s)''tro(tro^2)-si^{2}n(ku^{6}n)-o(o^2)-loj(lo^{2}g)'i^2-a^3. From ἀστροκύων, the dog-star, and λόγος, understanding. Astrology in its relations to the dog-star. [A, 325.]

ASTRODACTYLÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tro(tro^2)-da^{2}k-(da^{3}k)'ti^{2}l(tu^{6}l)-e(a^3-e^2). A family of the *Caducibranchia* of J. Hogg; frog-like, short-bodied, tailless, tongueless, four-legged, and having the tympanum concealed. [L, 204.]

ASTRODENDRON (Lat.), n. n. A^{2}s(a^{3}s)-tro(tro^2)-de^{2}n'dro^{2}n. From ἄστρον, a star, and δένδρον, a tree. See STERCULIA.

ASTROFEL, ASTROFELL, n's. A^{2}s'tro-fe^{2}l. See ASTER (3d def.).

ASTROGYNE [Bentham] (Lat.), n. f. A^{2}s(a^{3}s)-tro^{2}j(tro^{2}g)'-i^{2}n(u^{6}n)-e(a). A genus of euphorbiaceous plants, now regarded as a section of the genus *Croton*. [B, 121.]

ASTROIDEUS (Lat.), adj. A^{2}s(a^{3}s)-tro(tro^2)-i^{2}d(ed)'e^2-u^{3}s(u^{4}s). Fr., *astroïde*. Star-shaped. [B, 212; L, 109.]

ASTROITES, ASTROITIS (Lat.), u's m. and f. A^{2}s(a^{3}s)-tro-(tro^2)-i(e)'tez(tas), -ti^{2}s. Gen., *astroi'tae, -it'idis*. See ASTERIAS (2d def.).

ASTROLINEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tro(tro^2)-li^{2}n'e^2-e(a^3-e^2). Of Baudo, a tribe of primulaceous plants, including *Asterolinon* and *Pelletiera*. [B, 170.]

ASTROLINOIDES (Lat.), n. f. pl. A^{2}s(a^{3}s)-tro(tro^2)-li^{2}n-o(o^2)-i(e)'dez(das). A tribe of plants of the family *Anagalleidæ*, made by Baudo, with *Asterolinon* as the typical genus. [B, 170.]

ASTROLINON (Lat.), n. n. A^{2}s(a^{3}s)-tro^{2}l'i^{2}n-o^{2}n. See ASTEROLINON.

ASTROLOBIUM (Lat.), n. n. A^{2}s(a^{3}s)-tro(tro^2)-lob(lo^{2}b)'i^2-u^{3}m-(u^{4}m). See ARTHROLOBIUM.

ASTROLOGER, n. A^{2}s-tro^{2}l'o-ju^{6}r. Gr., ἀστρολόγος (from ἄστρον, a star, and λόγος, understanding). Lat., *astrologus*. Fr., *astrologue*. Ger., *Astrolog, Sterndeuter*. A practitioner of astrology.

ASTROLOGY, n. A^{2}s-tro^{2}l'o-ji^2. Gr., ἀστρολογία. Lat., *astrologia*. Fr., *astrologie*. Ger., *Astrologie, Sterndeuterei*. The pretended science of divination by observations of the stars, and of the influence of the stars on the health, etc., of human beings. [A, 322, 325.]

ASTROLOMA (Lat.), n. n. A^{2}s(a^{3}s)-tro(tro^2)-lo'ma^3. From ἄστρον, a star, and λῶμα, a fringe or border. A genus of epacrideous undershrubs of the tribe *Stypelieæ*, made by R. Brown. [B, 19, 121.]—**A. humifusum** [R. Brown], **A. pallidum** [Sond.]. A diffuse or prostrate, much-branched species growing in Australia and Tasmania. [B, 219.]

ASTROMANTIA (Lat.), n. f. A^{2}s(a^{3}s)-tro(tro^2)-ma^{2}n(ma^{3}n)-ti(te)'a^3. Gr., ἀστρομαντεία, ἀστρομαντική (τέχνη understood). Fr., *astromantie*. Ger., *Astromantie*. See ASTROLOGY.

ASTROMANTIS (Lat.), n. m. A^{2}s(a^{3}s)-tro(tro^2)-ma^{2}n(ma^{3}n)'-ti^{2}s. Gen., *astromant'eos (-tis)*. Gr., ἀστρόμαντις. See ASTROLOGER.

ASTROMARCHANTIA (Lat.), n. f. A^{2}s(a^{3}s)''tro(tro^2)-ma^{3}r-ka^{2}n(ch^{2}a^{3}n)'shi^2(ti^2)-a^3. A section of the botanical genus *Marchantia*, including the species with a central female receptacle. [Nees (B, 121).]

ASTROMATICÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tro(tro^2)-ma^{2}t(ma^{3}t)'-i^2-se(ka^3-e^2). A series of pyrenomycetous *Fungi*, including those species of *Sphæria* in which the receptacles, which are simple and distinct, are not borne upon a stroma. [Wallroth (B, 121).]

ASTRON (Lat.), n. n. A^{2}s(a^{3}s)'tro^{2}n. See ASTRUM.

ASTRONIA (Lat.), n. f. A^{2}s(a^{3}s)-tro'ni^2-a^3. A genus of melastomaceous plants resembling *Melastoma* in general appearance and belonging to the tribe *Astronieæ*. [B, 19, 121.]—**A. papetaria.** A species growing in the Moluccas, having acidulous leaves which are cooked and used as a sauce for fish. [B, 19.]

ASTRONIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-tro^{2}n-i(i^2)'e^2-e(a^3-e^2). Fr., *astroniées*. 1. A division of the *Anacardiaceæ* made by Marchand, including *Astronium*. [B, 121.] 2. Of Bentham and Hooker, a tribe of melastomaceous plants including genera, such as *Astronia*, which have triplinerved leaves; equal stamens with short, subulate filaments and short, recurved anthers, with loculi dehiscing by introrse fissures, and with a connectile usually spurred below; an ovary completely inferior, bearing a capitate, grooved, or punctiform stigma, and having from two to five loculi containing numerous ovules placed upon placentæ which are either basilar, parietal, or situated in the angles of the loculi. The fruit is a coriaceous or fleshy, many-seeded berry. [B, 121.]

ASTRONIUM (Lat.), n. n. A^{2}s(a^{3}s)-tro'ni^2-u^{3}m(u^{4}m). A genus of American anacardiaceous plants made by Jacquin. [A, 385; B, 121.]—**A. fraxinifolium** [Schott]. A species which furnishes a turpentine and has an astringent wood. [B, 121.]—**A. graveolens** [Jacquin]. A species bearing an astringent fruit, used in New Granada as a medicine. [B, 121; L, 49.]

ASTROPECTINIDÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)''tro(tro^2)-pe^{2}k-ti^{2}n'i^{2}d-e(a^3-e^2). A family of the *Asteroidea*, made by Gray, including those with two rows of feet and having the back flattish, with numerous tubercles crowned with radiating spines. [L, 147.]

ASTROPHEA (Lat.), n. f. A^{2}s(a^{3}s)-tro(tro^2)'fe^2-a^3. A section of the botanical genus *Passiflora*, destitute of cirrhi and involucre, and having a 10-parted calyx and five stamens. [B, 19.]

ASTROPHEL, n. A^{2}s'tro-fe^{2}l. See ASTER (3d def.).

ASTROPHORE (Fr.), adj. A^{3}s-tro-for. From ἄστρον, a star, and φορεῖν, to bear. Bearing star-shaped processes. [L, 41.]

ASTROPHYLLA (Lat.), n. f. A^{2}s(a^{3}s)-tro(tro^2)-fi^{2}l(fu^{6}l)'la^3. From ἄστρον, a star, and φύλλον, a leaf. A subfamily of *Aparinia* made by Rafinesque, including *Asperula* and other genera. [B, 121.]

ASTRORRHIZIDEA [Brady] (Lat.), n. n. pl. A^{2}s(a^{3}s)-tro^{2}r-ri^{2}z-i^{2}d'e^2-a^3. A marine order of the *Imperforata*, having a coating composed of foreign particles, comprising the families *Astrorrhizina, Pilulina, Saccamminia*, and *Rhabdamminina*. [L, 121.]

ASTRORRHIZINA [Brady] (Lat.), n. n. pl. A^{2}s(a^{3}s)-tro^{2}r-ri^{2}z-i(e)'na^3. A family of the *Astrorrhizidea*, having thick walls of loosely cemented sand or mud. [L, 121.]

ASTROTRICHA (Lat.), n., f. of adj. *astrotrichus*. A^{2}s(a^{3}s)-tro^{2}t'ri^{2}k(ri^{2}ch^2)-a^3. Fr., *astrotriche*. A genus of umbelliferous plants indigenous to New Holland. [L, 109.]

ASTROTRICHUS (Lat.), adj. A^{2}s(a^{3}s)-tro^{2}t'ri^{2}k(ri^{2}ch^2)-u^{3}s-(u^{4}s). From ἄστρον, a star, and θρίξ, a hair. Fr., *astrotriche*. Having hairs arranged in the form of a star; a botanical species-name. [L, 109.]

ASTRUM (Lat.), n. n. A^{2}s(a^{3}s)'tru^{3}m(tru^{4}m). Gr., ἄστρον. Lit., anything brilliant or admirable; a name formerly applied to alcohol and all essences, also to any medicinal preparation which was supposed to have acquired special virtues in the method of its preparation; the power thus acquired; any remedy of extraordinary virtues. [A, 325; L, 94, 109.]—**A. duplicatum.** Ger., *Doppelgestirn*. An old charlatanistic name for a noted stomachic preparation containing antimony, coral, amber, and musk. [A, 322.]—**A. ex igne.** The appearance of fire. [Dornæus (A, 325).]—**A. salis.** The oily liquid resulting from the deliquescence of salt. [A, 325.]—**Mercurii a.** Sublimed mercury. [A, 325.]—**Sulphuris a.** "A most excellent oil" made by burning sulphur. [L, 94.]

ASTRUTHIUM, ASTRUTIUM (Lat.), n's n. A^{2}s(a^{3}s)-tru^2-(tru)'thi^2-u^{3}m(u^{4}m), -ti^2-u^{3}m(u^{4}m). See IMPERATORIA *ostruthium*.—**Radix astrutii.** Ger., *Astrenzwurzel*. The rhizome of *Imperatoria ostruthium*. [B, 180.]

ASTUCHIUM (Lat.), n. n. A^{2}s(a^{3}s)-tu^2(tu)'ki^2(ch^{2}i^2)-u^{3}m(u^{4}m). It., *astuccio*. That portion of the inferior cornu of the lateral ventricle of the brain which is in relation with the hippocampus major. [L, 44.]

ASTURIENSIS (Lat.), adj. A^{2}s(a^{3}s)-tu^2(tu^4)-ri^2-e^{2}n'si^{2}s. Asturian, pertaining to Asturias. [G.] See ROSE *of the Asturias*.

ASTYLIS (Lat.), n. f. A^{2}s(a^{3}s)-ti(tu^6)'li^{2}s. Gen., *astyl'idos (-dis)*. From α priv., and στῦλις (dim. of στῦλος, a shaft). 1. Of Wight, a section of *Hemicyctia*, referred by Bentham to *Drypetes*. 2. An old name for the mistletoe (*Viscum album*). 3. A variety of lettuce (*Lactuca*) formerly used as an antaphrodisiac. [B, 121.]

ASTYLON (Lat.), n. n. A^{2}s(a^{3}s)-ti(tu^6)'lo^{2}n. A section of the genus *Physarum*. [B, 121.]

ASTYLOUS, adj. A^{2}s-ti'lu^{3}s. Gr., ἄστυλος (from α priv., and στῦλος, a pillar). Lat., *astylus*. Fr., *astyle*. Ger., *griffellos*. In botany, having no style. [Wachendorf (B, 121).]

ASTYPHIA (Lat.), n. f. A^{2}s(a^{3}s)-ti^{2}f(tu^{6}f)'i^2-a^3. See ASTYSIA.

ASTYPHOS (Lat.), adj. A^{2}s(a^{3}s)-ti(tu^6)'fo^{2}s. Gr., ἄστυφος. See ASCYPHOUS.

ASTYSIA (Lat.), n. f. A^{2}s(a^{3}s)-ti^{2}s(tu^{6}s)'i^2-a^3. Gr., ἀστυσία (from α priv., and στύειν, to make erect). Fr., *astysie*. A defective power of erection of the penis. [L, 70.]

ASTYTICUS (Lat.), adj. A^{2}s(a^{3}s)-ti^{2}t(tu^{6}t)'i^{2}k-u^{3}s(u^{4}s). See ASTYTOS.

ASTYTIS (Lat.), n. f. A^{2}s(a^{3}s)-ti(tu^6)'ti^{2}s. Gen., *astyt'idos (-dis)*. Gr., ἀστυτίς. See ASTYLIS (3d def.).

ASTYTOS, ASTYTUS (Lat.), adj's. A^{2}s(a^{3}s)-ti(tu^6)'to^{2}s, -tu^{3}s-(tu^{4}s). Gr., ἄστυτος. Pertaining to, dependent on, causing, or affected with, astysia. [A, 322.]

ASUGAR, n. See AZAGOR.

ASUL (Ar.), n. The *Tamarix orientalis*; in India, the *Tamarix ferox*. [B, 19.]

ASULCI, n. See LAPIS *lazuli*.

ASUNTROPHON, n. An ancient name for the *Rubus fruticosus*. [Dioscorides (B, 121).]

ASUOLI, n. An alchemical name for soot and for ink. [Ruland, Johnson (A, 325).]

ASURIK, n. An African name for the *Eruca sativa* (*Brassica eruca*). [Adanson (B, 121); L, 105.]

ASVAGANDHÂ (Sanscr.), n. The *Withania somnifera*. [B, 181.]

ASVATTHA (Sanscr.), n. The *Ficus religiosus*. [B, 181.]

ASVOLI, n. See ASUOLI.

ASWAGANDHI (Teloogoo), n. See ASVAGANDHÂ.

ASWANA, n. A Ceylonese name for the *Spermacoce hispida*. [B. 121.]

ASYLA (Lat.), n. f. A^{2}s(a^{3}s)-i(u^6)'la^3. An herb mentioned by Pliny. [A, 318.]

ASYLUM (Lat.), n. n. A^{2}s(a^{3}s)-i(u^6)'lu^{3}m(lu^{4}m). From ἄσυλος, safe from violence. Fr., *asyle*. Ger., *Asyl, Zufluchtsort*. It., Sp., *asilo*. A place of refuge for those who are sick or afflicted in any way calling for special care and protection.—**Insane a., Lunatic a.** Fr., *asyle des aliénés*. Ger., *Irrenanstalt*. An a. for the care

and treatment of the insane.—**Lying-in a.** Fr., *maternité.* Ger., *Gebäranstalt.* A maternity hospital; an institution into which women are received at or shortly before the time of labor, and where they are cared for during parturition and the puerperal period.

ASYMBOLIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}m(u^{6}m)-bo(bo^2)′li^2-a^3. From α priv., and σύμβολον, a sign. Ger., *Asymbolie.* A term proposed by Finkelnburg for the phenomena of aphasia, because those affected with it are unable to make themselves understood by the customary signs (*i. e.*, by words). [R. Arndt (D, 18).]

ASYMÉTRANTHE (Fr.), adj. A^{3}s-i^{2}m-a-trant. For this and other French words in *Asymétr-* not here given, see the corresponding English words in *Asymmetr-*.

ASYMMETRAL, adj. A^{2}s-i^{2}m′me^{2}t-ra^{2}l. See ASYMMETRICAL.

ASYMMETRANTHOUS, adj. A^{2}s-i^{2}m″me^{2}t-ra^{2}n′thu^{3}s. From ἀσύμμετρος, lacking in symmetry, and ἄνθος, a flower. Fr., *asymétranthe.* Having asymmetrical flowers. [L, 41.]

ASYMMETRIC, ASYMMETRICAL, adj's. Gr., ἀσύμμετρος. Lat., *asymmetricus.* Fr., *asymétrique.* Ger., *asymmetrisch.* Lacking in symmetry, not developed alike on both sides; of organs, existing on only one side of the body. [L, 41, 49.]

ASYMMETROCARPOUS, adj. A^{2}s-i^{2}m-me^{2}t-ro-ka^{2}rp′u^{3}s. From ἀσύμμετρος, asymmetrical, and καρπός, a fruit. Fr., *asymétrocarpe.* Having asymmetrical fruit. [L, 41, 180.]

ASYMMETRY, n. A^{2}s-i^{2}m′me^{2}t-ri^2. Gr., ἀσυμμετρία (from α priv., and συμμετρία, symmetry). Lat., *asymmetria.* Fr., *asymétrie.* Ger., *Asymmetrie.* It., *assimmetria.* Sp., *asimetría.* A deviation from equality of development of the two sides of the body, of an organ, or of the two members of a pair of organs; the existence of an organ on one side of the body without that of a corresponding organ on the other side. [A, 385; L, 42.]—**Meridional a.** Fr., *asymétrie méridionale.* Ger., *meridionale Asymetrie.* It., *assimmetria meridionale.* Sp., *asimetría meridional.* See *Regular* ASTIGMATISM.

ASYMPHOROS, ASYMPHORUS (Lat.), adj's. A^{2}s(a^{3}s)-i^{2}m-(u^{6}m)′fo^{2}r-o^{2}s, -u^{3}s(u^{4}s). Gr., ἀσύμφορος. Prejudicial, noxious. [Hippocrates (A, 322).]

ASYMPHYTOUS, adj. A^{2}s-i^{2}m′fi^{2}t-u^{3}s. Gr., ἀσύμφυτος. Lat., *asymphytus.* Distinct, not grown together. [Hippocrates (A, 311, 325).]

ASYMPTOTOUS, adj. A^{2}s-i^{2}mp-to′tu^{3}s. Gr., ἀσύμπτωτος. Lat., *asymptotus.* Not restored to normal compactness (said of swollen parts). [Hippocrates, Galen (A, 325).]

ASYNCLITISM, n. A^{2}s-i^{2}n′kli^{2}t-i^{2}zm. From α priv., σύν, along with, and κλίσις or κλιτύς, an inclination, a slope. Fr., *asynclitisme.* The state of obliquity of two or more things to each other (*e. g.*, the fœtal head and the parturient canal or a particular portion of it). [A, 385.]

ASYNECHIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-e^{2}k(e^{2}ch^2)′i^2-a^3. From ἀσυνεχής, not continuous. Fr., *asynéchie.* Lack of structural continuity. [A, 322.]

ASYNECHIC, adj. A^{2}s-i^{2}n-e^{2}k′i^{2}k. Lat., *asynechicus.* Pertaining to, affected with, or caused by, asynechia. [A, 322.]

ASYNERGIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-u^{6}r(e^{2}r)-ji(ge)′a^3, -u^{5}r(e^{2}r)′ji^2(gi^2)-a^3. See ASYNERGY.

ASYNERGIC, adj. A^{2}s-i^{2}n-u^{5}r′ji^{2}k. Gr., ἀσύνεργος. Lat., *asynergos.* Fr., *asynergique.* Ger., *asynergisch, nicht mitwirkend.* Pertaining to asynergy, not acting in harmony. [A, 322.]

ASYNERGY, n. A^{2}s-i^{2}n′u^{5}r-ji^2. Lat., *asynergia* (from α priv., and συνέργεια or συνεργία, concerted action). Fr., *asynergie.* Ger., *Asynergie, Mangel an Mitwirkung.* A lack of due proportion in the simultaneous action of two or more organs or parts. [A, 322, 385.] Cf. INCO-ORDINATION.—**Progressive locomotor** (or **motorial**) **a.** Fr., *asynergie locomotrice progressive.* See *Locomotor* ATAXIA.—**Verbal a.** Fr., *asynergie verbale.* Inco-ordination of speech, as in aphasia. [Lordat (D, 53).]—**Vocal a.** Fr., *asynergie vocale.* Choreic inco-ordination of the phonatory muscles of the larynx. [Krishaber.]

ASYNESIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-e(e^2)′si^2-a^3. Gr., ἀσυνεσία. Fr., *asynésie.* Ger., *Dummheit, Einsichtslosigkeit.* Stupidity. [A, 322.]

ASYNETOUS, adj. A^{2}s-i^{2}n′e^{2}t-u^{3}s. Gr., ἀσύνετος. Lat., *asynetos.* Ger., *dumm, einsichtslos.* Affected with asynesia. [A, 322.]

ASYNGAMIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-ga^{2}m(ga^{3}m)′i^2-a^3. From α priv., σύν, with, and γαμεῖν, to marry. That state of a flower in which its pistils and stamens are not at the same moment ready for the act of fertilization: a condition believed by the Darwinists to be favorable to the evolution of new varieties. [B, 121.]

ASYNODIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-o(o^2)′di^2-a^3. From α priv., and συνοδία, a journeying together. Fr., *asynodie.* Ger., *Asynodie, Mangel des Beischlafs* (1st def.), *Unvermögen zum Beischlaf* (2d def.). 1. Lack of sexual intercourse. 2. Impotence. [A, 322.]

ASYNODIC, adj. A^{2}s-i^{2}n-o^{2}d′i^{2}k. Lat., *asynodicus.* Fr., *asynodique.* Ger., *asynodisch.* Pertaining to, caused by, or affected with, asynodia. [A, 322.]

ASYNOVIA (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)-o′vi^2(wi^2)-a^3. For deriv., see *A-** and SYNOVIA. Fr., *asynovie.* An insufficiency of synovial fluid. [A, 322.]

ASYNTHESIS (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)′the^{2}s-i^{2}s. Gen., *asynthe′seos (-syn′thesis).* From α priv., and σύνθεσις, composition. Fr., *asynthèse.* Syn.: *defectus juncturæ.* A defective connection of parts. [A, 322.]

ASYNTHETOS (Lat.), adj. A^{2}s(a^{3}s)-i^{2}n(u^{6}n)′the^{2}t-o^{2}s. From α priv., and σύνθετος, put together. Affected with asynthesis. [A, 322.]

ASYNTROPHY, n. A^{2}s-i^{2}n′tro-fi^2. From α priv., and συντροφία, development in common. Lack of symmetrical growth or development (said of paired bones and of the lateral halves of median bones). [Gardiner-Brown, "Lancet," 1879, ii, p. 684.]

ASYSTASIA (Lat.), n. f. A^2(a^3)-si^{2}s(su^{6}s)-ta(ta^3)′zi^2(si^2)-a^3. Fr., *asystasie.* A genus of acanthaceous herbs or shrubs established by Blume. [B, 19.]

ASYSTASIEÆ (Lat.), n. f. pl. A^{2}s(a^{3}s)-i^{2}st(u^{6}st)-a^3-si(si^2)′e^2-e(a^3-e^2). Of Bentham and Hooker, a subtribe of acanthaceous plants of the tribe *Justicieæ.* [B, 42.]

ASYSTOLE (Lat.), n. f. A^{2}s(a^{3}s)-i^{2}s(u^{6}s)′to(to^2)-le(la). From α priv., and συστολή, a contraction. Fr., *asystolie.* Ger., *Asystolie.* It., *asistolia.* An abnormal action of the heart characterized by defective contraction and emptying of one or both of the ventricles, particularly in cardiac affections in the stage of compensatory disturbance. [D; M, 1.]—**Cardiataxic a.** Fr., *asystolie cardiataxique.* Temporary a. due to tumultuous action of the heart. [H. Huchard, "Union méd.," June 22, 1886, p. 1013.]—**Cardioplegic a.** Fr., *asystolie cardioplégique* [Gubler]. Permanent paralytic a.; amyocardia. [H. Huchard, *l. c.*]

ASYSTOLIC, adj. A^{2}s-i^{2}st-o^{2}l′i^{2}k. Fr., *asystolique.* Ger., *asystolisch.* Pertaining to or affected with asystole. [A, 385.]

ASYSTOLISM, n. A^{2}s-i^{2}st′o^{2}l-i^{2}zm. See ASYSTOLE.

ÁTÁ (Bengal.), n. The *Anona squamosa.* [B, 181.]

ATAC, n. An alchemical name for talc or nitre. [B, 50.]

ATACAMEZ CORTEX, n. See CINCHONA *bicolor.*

ATACLIN, n. An African name for the *Rhamnus catharticus.* [Adanson (B, 121).]

ATACTIC, adj. A^{2}t-a^{2}k′ti^{2}k. Lat., *atactos, atacticus* (from ἄτακτος, disorderly). Fr., *atactique.* Ger., *atactisch.* It., *atassico.* Sp., *atáctico.* Pertaining to, caused by, or affected with, ataxia; irregular, inco-ordinate, arrhythmical. [D, 20.] Cf. ATAXIC.

ATACTOMORPHOSIS (Lat.), n. f. A^{2}t(a^{3}t)-a^{2}k(a^{3}k)″to-mo^{2}rf-o′si^{2}s. Gen., *atactomorpho′seos (-sis).* From ἄτακτος, irregular, and μόρφωσις, a shaping. Fr., *atactomorphose.* In entomology, the state in which a larva passes through its nymphal stage in a condition of almost absolute quiescence, from which it does not emerge until it has been transformed into a perfect insect. [B, 195; L, 41, 109.]

ATACTOS (Lat.), adj. A^{2}t(a^{3}t)-a^{2}k(a^{3}k)′to^{2}s. See ATACTIC.

ATACTOSIA (Lat.), n. f. A^{2}t(a^{3}t)-a^{2}k(a^{3}k)-to′si^2-a^3. A section of the botanical genus *Polypodium*, made by Blume. [B, 121.]

ATACTUS (Lat.), adj. A^{2}t(a^{3}t)-a^{2}k(a^{3}k)′tu^{3}s(tu^{4}s). See ATACTIC.

ATADH, n. The *Rhamnus catharticus.* [L, 105.]

ÁTAICHA (Sanscr.), n. The *Aconitum heterophyllum.* [B, 181.]

ATAKTIKER (Ger.), n. A^3-ta^{3}k′ti^2-ke^{2}r. See ATAXIC (3d def.).

ATALANTA (Lat.), n. f. A^{2}t(a^{3}t)-a^3-la^{2}n(la^{3}n)′ta^3. 1. See ATALANTIA. 2. Of Nuttall, see PERITOMA.

ATALANTIA (Lat.), n. f. A^{2}t(a^{3}t)-a^3-la^{2}n(la^{3}n)′shi^2(ti^2)-a^3. Fr., *atalantie.* A genus of aurantiaceous trees and shrubs established by Correa, distinguished by the leaves being entire, by the stamens being few and united below, and by the single ovule in each loculus of the ovary. [B, 19, 121.]—**A. monophylla** [De Candolle]. Syn.: *Limonia monophylla* [Linnæus], *Turrœa virens* [Kön.], *Trichilia spinosa* [Willdenow]. A thorny shrub, about 8 feet in height, growing in Malabar and Coromandel, the fruit of which is called wild lime. The bark of the root is reddish-brown, aromatic, bitter, and antispasmodic; the leaves are aromatic; the fruit has a bitter, acid taste, and has been used in medicine; an oil obtained from the seeds is used externally in rheumatism and paralysis. [B, 19, 172, 180.]

ATALANTIEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-a^3-la^{2}n(la^{3}n)-ti(ti^2)′e^2-e(a^3-e^2). A section of the *Limonieæ* made by Reichenbach, comprising *Atalantia, Feronia,* and *Lavanga* (*Luvunga*). [B, 121, 170.]

ATALEA (Lat.), n. f. A^{2}t(a^{3}t)-a(a^3)′le^2-a^3. See ATTALEA.

ATALEC (Ar.), n. See ATTALEH.

ATALÉN (Sp.), n. A^3-ta^3-lan′. A place in Spain, where there is a sulphurous spring. [A, 385.]

ATALERRIE (Fr.), n. A^3-ta^3-le^{2}r-re. The *Hydrolea zeylanica.* [B, 121.]

ATALLEC, ATALLECH (Ar.), n's. See ATTALEH.

ATAMARAM, n. The *Anona squamosa.* [Rheede (B, 121).]

ATAMOSCO, ATAMOSKO, n's. A genus of plants made by Adanson, including the *Zephyranthus atamasco.* [B, 121.]

ATANOR, n. "Olla perforata." [B, 50.]

ATANTA, n. A species of *Rhus*, probably akin to the *Rhus tomentosum*, used in Guinea as a roborant. [B, 88.]

ATANTASCH, n. An Abyssinian name for the *Euphorbia depauperata.* [B, 270.]

ATAR, n. Attar of roses. [B, 121.]

ATARACTOPŒESIA, ATARACTOPOESIA, ATARACTOPOIESIA (Lat.), n's f. A^{2}t(a^{3}t)-a^3-ra^{2}k(ra^{3}k)″to(to^2)-pe(po^2-e^2)-e(a)′si^2-a^3, -po(po^2)-e(a)′si^2-a^3, -poi-e(a)′si^2-a^3. Gr., ἀταρακτοποιησίη

(from ἀτάρακτος, steady, not confused, and ποίησις, a making or doing). Fr., *ataractopoiésie.* Cool and collected behavior, presence of mind. [Hippocrates (A, 322, 325).]

ATARAXIA (Lat.), n. f. A^{2}t(a^{3}t)-a^3-ra^{2}x(ra^{3}x)'i^2-a^3. Gr., ἀταραξία (from α priv., and τάραξις, disturbance). Fr., *ataraxie.* Ger., *Geistesruhe.* It., *atarassia.* Freedom from emotional disturbance. [A, 322, 385.]

ATARUSHA, n. An East Indian name for the *Adhatoda vasica.* [B, 181.]

ATAS, n. The fruit of the *Anona squamosa.* [B, 121.] Cf. ÁTÁ and ATTE.

ATASI (Sanscr.), n. The *Linum usitatissimum.* [B, 181.]

ATASITES (Lat.), n. m. A^{2}t(a^{3}t)-a^3-si(se)'tez(tas). Necker's name for the botanical genus *Gerbera.* [B, 121.]

ATATIER (Fr.), n. A^3-ta^3-ti^2-a. The fruit of the *Clematis viorna.* [B; L, 109.]

ATAUHERO, n. A New Zealand name for the *Rhabdothamnus Solandri.* ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 737 (B).]

ATAVISM, n. A^{2}t'a^{2}v-i^{2}zm. Lat., *atavismus* (from *atavus,* a forefather). Fr., *atavisme.* Ger., *Atavismus, Stammähnlichkeit.* It., Sp., *atavismo.* 1. Resemblance to one's ancestors. [A, 385.] 2. The reappearance of one of the primitive types in the descendants of parents of different races. [A, 385.] 3. That manifestation of ancestral influence which consists in bodily or mental peculiarities inherited from an ancestor more remote than the father and mother; the reappearance of family traits after they have been in abeyance for one or more generations. [H; K; L, 149.]—**Direct a.** Fr., *atavisme directe.* A. occurring in the direct line of descent. [B, 121.]—**Indirect a.** Fr., *atavisme indirecte.* A term used by Sedgwick to express the phenomenon of the transmission of peculiarities not presented by, or prevailing in the family of, either parent, but possessed by a male by whom the mother had previously been impregnated; the transmission of the peculiarities of a woman's first husband to her children by a succeeding husband. [A. Lingard, "Lancet," Apr. 19, 1884, p. 703.]

ATAVISTIC, adj. A^{2}t-a^{2}v-i^{2}st'i^{2}k. Fr., *atavistique.* Pertaining to atavism. [K.]

ATAW, n. A Gaulish name for the *Nymphæa alba.* [B, 121.]

ATAXACANTHUS (Lat.), adj. A^{2}t(a^{3}t)-a^{2}x(a^{3}x)''a^3-ka^{2}n-(ka^{3}n)'thu^{3}s(thu^{4}s). From ἀταξία, irregularity, and ἄκανθα, a spine. Fr., *ataxacanthe.* In botany, having spines disposed irregularly upon the branches and petioles; a species name. [B, 195.]

ATAXIA (Lat.), n. f. A^{2}t(a^{3}t)-a^{2}x(a^{3}x)'i^2-a^3. Gr., ἀταξία. Fr., *ataxie.* Ger., *Ataxie.* It., *atassia.* Sp., *ataxia.* 1. Anciently, any morbid state, especially if characterized by disordered, irregular action, such as irregularity of the pulse, or by not conforming to the typical course. [Hippocrates, Galen (A, 314, 325).] 2. An assemblage of nervous symptoms characterized by irregularity and by want of correspondence to the gravity of the disease with which they are apparently associated; indicative of a primary or secondary cerebral affection of greater or less gravity. [Pinel (A, 314).] 3. Inco-ordination of muscular action, especially of the kind mentioned under *locomotor a.* (*q. v.*). [D.] 4. A genus of gramineous plants of the tribe *Phalarideæ,* made by R. Brown, distinguished by the flowers being borne in thyrsoid panicles, each spikelet bearing 2 unequal glumes and 3 flowers, the lower one male and provided with 2 pales, the middle one neuter with 1 pale, and the upper one hermaphrodite with 3 anthers. Bentham and Hooker refer the genus to *Hierochloe.* [B, 19, 42, 121.]—**Abortive locomotor a.** Fr., *ataxie locomotrice fruste.* Syn.: *tabes dolorosa, painful tabes.* The neuralgic form of locomotor a., in which the lancinating pains are the most prominent feature and may remain such for many years. [D, 35.]—**Acute a.** Locomotor a. of rapid development. [D, 35.]—**Alcoholic a.** A form of muscular inco-ordination observed in drunkards, resembling locomotor a.; said to depend on peripheral neuritis. [D, 35; Dreschfeld (M).]—**A. Horsfieldii.** A species of a. (4th def.) growing in Java, which, when crushed, emits a pleasant odor due to the presence of coumarin. [B, 19.]—**A. mensium, A. menstruum.** See *Menstrual a.*—**A. motus.** See *Locomotor a.*—**A. spirituum.** Fr., *ataxie des esprits animaux.* It., *atassia degli spiriti animali.* An instability of the nervous system to which Sydenham attributed nervous disorders. [A, 314.]—**Bulbar a.** Ger., *bulbäre Ataxie.* Locomotor a. occasioned by a lesion of the pons Varolii or of the medulla oblongata. [A. Pick (D, 18).]—**Central a.** Ger., *centrale Ataxie.* A. due to disturbance in the centres which preside over co-ordination. [A. Pick (D, 18).] Cf. *Sensory a.*—**Cerebellar a.** Fr., *ataxie cérébelleuse.* Ger., *cerebelläre Ataxie.* A. depending on disease of the cerebellum; usually to be distinguished by the patient's staggering from side to side like a drunken man and often falling to one side. [A. Pick (M, 1).]—**Cerebral a.** Ger., *cerebrale Ataxie.* A. due to a lesion of the cerebrum. [Friedreich, "Arch. f. path. Anat. u. Physiol. u. f. klin. Med.," lxviii, p. 216 (L).]—**Choreic a.** Fr., *ataxie choréiforme.* The muscular inco-ordination that accompanies the voluntary movements of patients with chorea. [D, 35.]—**Diphtheritic a.** A form which sometimes follows diphtheria and precedes the occurrence of diphtheritic paralysis. The main phenomena of locomotor a. are observed, and the attack may pass off without paralysis, or it may end in death from nervous exhaustion. [D, 40; A. Pick (M, 1).]—**Drunkards' a.** See *Alcoholic a.*—**Family a., Friedreich's a., Hereditary a** [Friedreich]. Fr., *ataxie héréditaire.* Ger., *hereditäre Ataxie.* It., *atassia ereditaria.* Friedreich's disease; a rare and peculiar disease somewhat resembling locomotor a., but almost always occurring in several children of a family, especially the girls, between the ages of twelve and eighteen years. The preliminary pains are usually absent; there is marked ataxia of the lower limbs, which soon extends to the arms, and subsequently there is a disturbance of speech supposed to depend on inco-ordination, together with nystagmus. The disease lasts for many years, and, being incurable, ends in paralysis, contractures, and atrophy of the muscles involved. [A, 446.]—**Hysterical a.** An assemblage of hysterical phenomena resembling those of locomotor a., but usually without the darting pains. [D, 47.]—**Locomotor a.** Lat., *a. motus.* Fr., *ataxie locomotrice.* Ger., *Bewegungsataxie.* It., *atassia locomotrice.* Sp., *a. locomotriz.* Syn.: *progressive locomotor* (or *motorial*) *a.* [Duchenne] (or *asynergy*), *posterior spinal sclerosis, inflammation* (or *sclerosis*) *of the posterior root-zones of the spinal cord* [Hammond], *tabes dorsalis* (seu *dorsualis*) [Romberg], *consumption of the spinal cord, gray degeneration of the posterior columns of the spinal cord* [Leyden], *cerebral paraplegia* [Gull], *Duchenne's paralysis* (or *disease*). A disease of the nervous system (commonly the posterior root-zones of the dorso-lumbar portion of the spinal cord) usually occurring in middle-aged men, which is generally very chronic in its course, but is believed to prove fatal in all cases. The initial symptoms are variable, the most remarkable of them being lightning-like pains beginning in the back and following the course of the nerves of the lower limbs. After a short time, muscular inco-ordination of the lower limbs (or of the upper limbs also when the spinal lesions are situated at a high level) sets in and becomes the prominent symptom to which the affection owes its name. There is no loss of power in the muscles, and the patient's lack of control over them is due to diminished sensibility, so that he is deprived of the normal guiding sensations, and has to depend almost entirely on the sense of sight—if he shuts his eyes, he is "often entirely unaware of the situation and position of his limbs," and is very apt to fall if he attempts to walk. The tendon reflexes, particularly that of the patella, are almost always diminished or abolished. Visual and auditory disturbances are frequent, especially contraction, inequality, or reflex immobility of the pupils, paralysis of the ocular muscles, atrophy of the optic or the acoustic nerve, and auditory vertigo. "Crises" are often observed, consisting of functional disturbances of the digestive organs or the laryngeal muscles, attacks of renal colic, and, in women, paroxysms of sexual excitement. Various diseases of the joints (tabetic arthropathies) are not uncommon. [A, 394, 446; D, 1.]—**Menstrual a.** Lat., *a. mensium.* Fr., *ataxie menstruelle.* An old term for vicarious menstruation, sometimes applied to other disorders of the menstrual function. [V. Poulet, "Gaz. hebdom. de méd. et de chir.," May 14, 1886 (M).]—**Motor a.** Ger., *motorische A.* 1. Locomotor a. 2. A disturbance of the nerve tracts which bear the co-ordinating impulses to the periphery. [D, 18.]—**Muscular a.** Fr., *ataxie musculaire.* Muscular inco-ordination from any cause. [Potain (L, 87).]—**Paralytic a. of the heart.** A condition observed in bulbar affections, without organic disease of the heart; characterized by palpitation, dyspnœa, weakness of the cardiac sounds, œdema, and dropsy. ["Gaz. hebdom. de méd. et de chir.," Sept. 10, 1886, p. 605 (M).]—**Progressive locomotor a.** Fr., *ataxie locomotrice progressive* [Duchenne]. Ger., *progressive locomotorische Ataxie.* It., *atassia locomotrice progressiva.* Sp., *a. locomotriz progresiva.* See *Locomotor a.*—**Sensory a.** Ger., *sensorische Ataxie.* A form of a. (the existence of which is denied by Erb and Friedreich) attributed to disturbance of the nerve tracts leading from the periphery to the centres of co-ordination. [D, 18.] Cf. *Motor a.*—**Spinal a.** Fr., *ataxie spinale.* Ger., *spinale Ataxie.* See *Locomotor a.*—**Static a.** A term for the unsteadiness of locomotor a. observed when the patient attempts to stand erect with the eyes closed and the feet side by side; also for the uncertain movements of the upper limbs in the later stages of the disease. [D, 35.]

ATAXI-AMNESIC, adj. A^{2}t-a^{2}x''i^2-a^{2}m-ne'zi^{2}k. Pertaining to a combination of muscular inco-ordination with loss of memory (said of disturbances of speech). [D, 34.]

ATAXIC, adj. A^{2}t-a^{2}x'i^{2}k. Fr., *ataxique.* 1. See ATACTIC. 2. See ADYNAMIC. 3. As a n. (Ger., *Ataktiker*), a person affected with locomotor ataxia.

ATAXIE (Fr., Ger.), n. A^3-ta^{3}x-e, -e'. See ATAXIA.—**A. cardio-vasculaire** (Fr.). Féréol's term for exophthalmic goitre. [F.]—**A. choréiforme** (Fr.). See *Choreic* ATAXIA.—**A. des esprits animaux** (Fr.). See ATAXIA *spirituum.*—**A. locomotrice fruste** (Fr.). See *Abortive locomotor* ATAXIA.—**A. morale** (Fr.). The instability of ideas and volition found in a certain class of hysterical subjects, sometimes accompanied by spasms and visceral pains. [Huchard, "Union méd.," Apr. 29, 1882; "Jour. de méd. de Paris," June 7, 1884, p. 1155 (D).] Cf. ATAXIA *spirituum.*—**A. spasmodique** (Fr.). See *Choreic* ATAXIA.—**Bewegungsa'** (Ger.). See *Motor* ATAXIA.—**Rindena'** (Ger.). Ataxia due to disease of the cerebral cortex. [D, 18.]

ATAXIOCARPEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-a^{2}x(a^{3}x)''i^2-o(o^2)-ka^{3}rp'e^2-e(a^3-e^2). From ἀταξία, disorder, and καρπός, a fruit. Fr., *ataxiocarpées.* The *Acrosticheæ* (*q. v.*); so called because the sporangeia are scattered over the surface of the fertile frond without definite order. [B, 121.]

ATAXMIR (Ar.), n. The treatment of distichiasis, four methods of which were mentioned by Albucasis under this term. [A, 325.]

ATAXO-ADYNAMIA (Lat.), n. f. A^{2}t(a^{3}t)-a^{2}x(a^{3}x)''o(o^2)-a^{2}d-(a^{3}d)-i^{2}n(u^{6}n)-a^{2}m(a^{3}m)'i^2-a^3. Fr., *ataxo-adynamie.* A state of adynamia with ataxia. [A, 385.]

ATAXO-ADYNAMIC, adj. A^{2}t-a^{2}x''o-a^{2}d-i^{2}n-a^{2}m'i^{2}k. Lat., *ataxo-adynamicus.* Fr., *ataxo-adynamique.* Pertaining to or affected with ataxo-adynamia. [A, 385.]

ATAXODYNAMY, n. A^{2}t-a^{2}x-o-di^{2}n'a^{2}m-i^2. From ἀταξία, confusion, and δύναμις, power. Fr., *ataxodynamie.* Irregularity of the movements of an organ. [L, 109.]

ATAXOPHEMIA (Lat.), n. f. A^{2}t(a^{3}t)-a^{2}x(a^{3}x)-o(o^2)-fe(fa)'-mi^2-a^3. From ἀταξία, irregularity, and φάναι, to speak. Fr., *ataxo-*

phémie. It., *atassofemia.* Inco-ordination of speech; also any abnormal cerebral condition on which it depends. [A, 385; L, 44.]

ATAXO-SPASMODIQUE (Fr.), adj. A^{3}t-a^{3}x-o-spa^{3}z-mo-dek. Pertaining to, caused by, or affected with, choreic ataxia.

ATAXY, n. A^{2}t′a^{2}x-i^2. See ATAXIA.

ATCEBARA, n. A Catalan name for the *Agave americana.* [B, 121.]

ATCHA (Tamil), n. The *Bauhinia racemosa.* [B, 172.]

ATCHAR, n. See ACHAR.

ATCHISO (Jap.), n. The *Hibiscus rosea.* [B, 121.]

ATCHY (Hind.), n. The *Morinda squamosa.* [B, 172.]

ATÉ, n. The fruit of the *Anona squamosa.* [B, 121.] See ATTE and ÁTÁ.

ATEBRAS, n. An alchemical name for a subliming vessel ("uncus aquinus, id est, vas sublimatorium"). [B, 50.]

ATECHNIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}k(e^{2}ch^2)′ni^2-a^3. Gr., ἀτεχνία. Fr., *atechnie.* Lack of art, unskillfulness. [Hippocrates (A, 322).] Used also (improperly) for *atecnia* (*q. v.*).

ATECNIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}k′ni^2-a^3. Gr., ἀτεκνία (from α priv., and τέκνον, a child). Fr., *atecnie.* Ger., *Ateknie.* Properly, childlessness or barrenness; used also to signify impotence and anaphrodisia. [A, 322, 385.]

ATECNOS (Lat.), adj. A^{2}t(a^{3}t)-e^{2}k′no^{3}s. Gr., ἄτεκνος. Ger., *ateknisch.* Childless or barren. [A, 322.]

ATEES, n. See ÁTIS.

ATEGKUDO, ATEGOCUDO, n's. The *Wrightia antidysenterica.* [B, 121.]

ATEIRA, n. An East Indian name for a fruit thought to be that of the *Anona squamosa.* [B, 121.]

ATEL (Ar.), n. The *Juniperus communis.* [Bory (B, 121).]

ATELÆMORRHOIDES (Lat.), n. f. pl. A^{2}t(a^{3}t)-e^{2}l-e^{2}m-(a^3-e^{2}m)-o^{2}r-ro(ro^2)-id(ed)′ez(as). From ἀτελής, incomplete, and αἱμοῤῥοΐς, a hæmorrhoid. Fr., *atélémorrhoïdes.* See *Blind* HÆMORRHOIDS.

ATELECTASIAL, adj. A^{2}t-e^{2}l-e^{2}k-ta′zi^{2}a^{3}l. See ATELECTATIC.

ATELECTASIE (Ger.), n. A^3-te^{2}l-e^{2}k-ta^3-ze′. See ATELECTASIS.—**Lungena'** (Ger.). See ATELECTASIS *pulmonum.*

ATÉLECTASIE (Fr.), n. A^3-ta-le^{2}k-ta^3-ze. See ATELECTASIS.

ATÉLECTASIÉ (Fr.), adj. A^3-ta-le^{2}k-ta^3-zi^2-a. See ATELECTATIC.

ATELECTASIS (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-e^{2}k′ta^3-si^{2}s. Gen., *atelecta′seos* (*-ec′tasis*). From ἀτελής, imperfect, and ἔκτασις, extension. Fr., *atélectasie.* Ger., *Atelectase, Atelectasie.* It., *atelettasia.* Sp., *atelectasía.* Defective expansion; as commonly employed, *a. pulmonum* (*q. v.*). [A, 322, 385.]—**Acquired a.** Lat., *a. acquisita.* Collapse of pulmonary tissue from disease. [M, 2.]—**A. adnata.** Congenital a. pulmonum. [M, 2.]—**A. pulmonum.** Fr., *atélectasie des poumons.* Ger., *Lungenatelectasie.* Imperfect expansion of the lungs with consequent persistence of their fœtal condition after birth. [D, 29.]—**Compression a.** Ger., *Compressionsatelectasie.* Pulmonary collapse due to pressure, as by pleural effusion. [L, 54.]—**Obstructive a.** Ger., *Obstructionsatelectasie.* Pulmonary collapse from plugging of a bronchial tube. [L, 54.]—**Post-natal a.** See *Acquired a.*

ATELECTATIC, adj. A^{2}t-e^{2}l-e^{2}k-ta^{2}t′i^{2}k. Fr., *atélectasique, atélectasié.* Ger., *atelectatisch.* Pertaining to or affected with atelectasis. [A, 15.]

ATELEKTASE (Ger.), **ATELEKTASIE** (Ger.), n's. A^3-te^{3}l-e^{2}k-ta^3′ze^2, -ta^3-ze′. See ATELECTASIS.

ATELEKTATISCH (Ger.), adj. A^3-te^{2}l-e^{2}k-ta^3′ti^{2}sh. See ATELECTATIC.

ATÉLENCÉPHALIE (Fr.), n. A^3-ta-la^{3}n^3-sa-fa^{3}l-e. From ἀτελής, incomplete, and ἐγκέφαλος, the brain. Imperfect development of the brain. [L, 49.]

ATELEOBRANCHIA (Lat.), n. n. pl. A^{2}t(a^{3}t)-e^{2}l″e^2-o(o^2)-bra^{2}n^2-(bra^{3}n^2)′ki^2(ch^{2}i^2)-a^3. From ἀτελής, imperfect, and βράγχιον, a gill. Syn.: *Imperfecti-branchia* [Hogg]. Amphibious animals with imperfect branchiæ. [B, 78.]

ATELEOPODES (Lat.), n. m. pl A^{2}t(a^{3}t)-e^{2}l-e^2-o^{2}p′o^{2}d-ez(as). For deriv., see ATELEOPUS. A tribe of aquatic birds having no thumbs. [Vieillot (L, 180).]

ATELEOPUS (Lat.), adj. A^{3}t(a^{3}t)-e^{2}l-e(e^2)′o(o^2)-pu^{3}s(pu^{4}s). From ἀτελής. imperfect, and πούς, a foot. Fr., *atéléopode.* Lacking the thumb or some other digit. [L, 41; Vieillot (L, 116).]

ATELEPLASIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-e^2-pla(pla^3)′zi^2(si^2)-a^3. From ἀτελής, imperfect, and πλάσις, formation. See ATELIA (1st def.).

ATELIA (Lat.), n. f. and n. pl. A^{2}t(a^{3}t)-e^{2}l-i(e)′a^3. Gr., ἀτέλεια. Fr., *atélie* (1st def.). *atélines* (2d def.). 1. In teratology, a lack of development of a part. [Malcarne (L, 49).] 2. In botany, as a pl., Sprengel's last class of the vegetable kingdom, comprising the orders *Aetherogamia, Epiphyllospermæ. Pteroides, Musci frondosi, Hepaticæ, Hormallophyllæ, Lichenes, Algæ, Gastromyci,* and *Fungi.* [B, 170.]

ATELLA-BASILICATE (It.), n. A^3-te^{2}l′la^3-ba^3-si^{2}l-i^2-ka^3′ta. A place in Italy, where there are hot sulphurous and ferruginous springs. [A, 385.]

ATELOCARDIA [Crampton] (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-o(o^2)-ka^{2}rd′i^2-a^3. From ἀτελής, imperfect, and καρδία, the heart. Fr., *atélocardie.* See CARDIATELIA.

ATELOCHEILIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-o(o^2)-ki′(ch^{2}e^2′i^2)-li^2-a^3. From ἀτελής, imperfect, and χεῖλος, the lip. Fr., *atélochalie.* Imperfect development of the lip. [M, 80.]

ATELOENCEPHALIA (Lat.), n. f. A^{2}t(a^{3}t)″e^{2}l-o(o^2)-e^{2}n(e^{2}n^2)-se^{2}f(ke^{2}f)-a^{2}l(a^{3}l)′i^2-a^3. See ATÉLENCÉPHALIE.

ATELOGLOSSIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-o(o^2)-glo^{2}s(glos)′si^2-a^3. From ἀτελής, imperfect, and γλῶσσα, the tongue. Defective development of the tongue. [E.]

ATELOGNATHIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-o^{2}g-na(na^3)′thi^2-a^3. From ἀτελής, imperfect, and γνάθος, the jaw. Fr., *atélognathie.* Imperfect development of the lower jaw. [A, 385; L, 49.]

ATELOMYELIA [Béclard] (Lat.), n. f. A^{2}t(a^{3}t)″e^{2}l-o(o^2)-mi-(mu^6)-e(e^2)′li^2-a^3. From ἀτελής, imperfect, and μυελός, marrow. Fr., *atélomyélie.* See MYELATELIA.

ATELOPROSOPIA (Lat.), n. f. A^{2}t(a^{3}t)″e^{2}l-o(o^2)-pro^{2}s-o′pi^2-a^3. From ἀτελής, imperfect, and πρόσωπον, the face. Fr., *atéloprosopie.* Imperfect development of the face. [M, 80.]

ATELORRHACHIDIA (Lat.), n. f. A^{2}t(a^{3}t)″e^{2}l-o^{2}r-ra^{2}k-(ra^{3}ch^2)-i^{2}d′i^2-a^3. From ἀτελής, imperfect, and ῥάχις, the spine. Fr., *atélorrhachidie.* Imperfect development of the spine. [A, 385.] See SPINA *bifida.*

ATELOSTOMIA (Lat.), n. f. A^{2}t(a^{3}t)-e^{2}l-o(o^2)-sto(sto^2)′mi^2-a^3. From ἀτελής, imperfect, and στόμα, the mouth. Defective development of the mouth. [E.]

ATENES (Lat.), adj. A^{2}t(a^{3}t)′e^{2}n-ez(as). Gr., ἀτενής (from α intens., and τείνειν, to stretch). Staring. [A, 322.]

ATER (Lat.), adj. A(a^3)′tu^{5}r(te^{2}r). Gr., μέλας. Fr., *noir.* Ger., *schwarz.* It., *nero.* Sp., *negro.* Intensely black. [B, 1.]—**A. succus, Atra bilis.** See MELANCHOLIA.

ATERAMNIA (Lat.), n. f. A(a^3)-tu^{5}r(te^{2}r)-a^{2}m(a^{3}m)′ni^2-a^3. Gr., ἀτεραμνία. Crudeness, harshness, indigestibility. [A, 325.]

ATERAMNOS, ATERAMNUS, ATEREMNOS, ATEREMNUS (Lat.), adj's. A(a^3)-tu^{5}r(te^{2}r)-a^{2}m(a^{3}m)′no^{2}s, -nu^{3}s(nu^{4}s), -e^{2}m′no^{2}s, -nu^{3}s(nu^{4}s). Gr., ἀτέραμνος, ἀτέρεμνος. 1. Crude, harsh, refractory, indigestible. [A, 322.] 2. Constipated. [A, 311.]

ATERES (Lat.), adj. A^{2}t(a^{3}t)-e(a)′rez(ras). Gr., ἀτηρής, ἀτηρός. Noxious. [Hippocrates (A, 325).]

ATERLUSI, n. The *Aristolochia indica.* [L, 105.] Cf. Ger., OSTERLUZEI.

ATERRIMUS (Lat.), adj., superl. of *ater.* A^{2}t(a^{3}t)-e^{2}r′ri^2-mu^{3}s-(mu^{4}s). Excessively black, a botanical species name. [B.]

ATESINE, n. A^{3}t′e^{2}s-en. See ATISINE.

ATETERÉ, n. A Carib name for a species of EUPATORIA. [Borg (B, 121).]

ATEUCHUS (Lat.), n. m. A^{2}t(a^{3}t)-u^2′ku^{3}s(ch^{2}u^{4}s). A variety of Egyptian scarabæus, anciently used as an amulet. [A, 385.]

ATHAD, n. Heb., אטד, from an Ar. root meaning to fasten or drive in firmly. [Parkhurst (B).] A Hebrew name for the *Lycium afrum.* [B, 121.]

ATHALAMI (Lat.), n. m. pl. A^{2}th(a^{3}th)-a^{2}l(a^{3}l)′a^3-mi(me). From α priv., and θάλαμος, an inner chamber. Fr., *athalames.* A class of lichens, embracing those in which no organs of fructification had been observed. [Acharius (B, 121, 170).]

ATHALAMOUS, adj. A^{3}th-a^{2}l′a^3-mu^{3}s. Lat., *athalamus.* Fr., *athalame.* Having no visible spore-containing organs (thalami); belonging to the *Athalami.* [B, 7.]

ATHALLINE, ATHALLOUS, adj's. A^{2}th-a^{2}l′len, -lu^{3}s. From α priv., and θαλλός, a palm-leaf. Fr., *athalle.* Having no leaves, or having no thallus. [B; L, 109.]

ATHAMANTA (Lat.), n. f. A^{2}th(a^{3}th)-a^3-ma^{2}n(ma^{3}n)′ta^3. Gen., *athamant′æ.* For deriv., see ATHAMANTICUS. Fr., *athamante.* Ger., *Augenwurz.* A genus of umbelliferous plants, of the tribe *Seselineæ*, established by Linnæus. Most of the species are referred by Bentham and Hooker to *Seseli* and *Peucedanum.* [B, 42, 180.]—**A. ajowan** [Wallich]. See CARUM *copticum.*—**A. annua** [Linnæus]. A species probably identical with *A. Matthioli.* [B, 173, 214.]—**A. aureoselinum.** See PEUCEDANUM *oreoselinum.*—**A. cervaria** [Linnæus]. See PEUCEDANUM *cervaria.*—**A. cervariæfolia** [De Candolle]. See TINGUARRA.—**A. chilioscladica** [Boiss.]. See under SESELI.—**A. chinensis** [Loureiro]. See SELINUM *Monnieri.*—**A. cretensis** [Linnæus], **A. cretica.** Gr., δαῦκος [Hippocrates], δαῦκος κρητικός [Dioscorides]. Fr., *daucus de Candie* (ou *de Crête* [Fr. Cod.]). Ger., *Alpen-Augenwurz, kretische Hirschwurz.* It., *dauco cretico.* Syn.: *Petrocarvi* [Tausch], *Libanotis hirsuta* [Rochloing] (seu *cretensis* [Scopoli]), *daucus creticus* (seu *candianus*), *myrrhis annua.* A perennial European species, of which there are two varieties: the var. α, *hirsuta*, with tomentose leaves, growing on the higher portions of the Alps; and the var. β, *mutellinoides*, with glabrous leaves, growing at lower elevations. The fruit, often called the seed (*semen dauci cretici* [seu *candiani*], seu *myrrhidis annuæ*, seu *athamantidis creticæ*), is oblong-lanceolate, about 3 lines in length, with a contracted neck. It has a pleasant aromatic odor and taste, and was formerly much used as a stimulant, stomachic tonic, diuretic, and emmenagogue. [B, 42, 180, 214.]—**A. daucifolia** [Host.], **A. daucoides** [Roesisch.]. See SESELI *libanotis.*—**A. flexuosa** [Jussieu, "Hortus parisiensis"]. The *Peucedanum silvestre.* [B. 214.]—**A. incana** [Willdenow]. The *Libanotis vulgaris* (*Seseli libanotis*). [B, 214.]—**A. latifolia** [Viviani]. The *Peucedanum cervaria.* [B, 173.]—**A. leucospermum** [Poiret]. The *Seseli leucospermum.* [B, 214.]—**A. libanotis** [Linnæus], **A. lucida** [Retzius]. See SESELI *libanotis.*—**A. macedonica** [Sprengel]. Ger., *macedonische Augenwurz.* See under SESELI.—**A. Matthioli.** 1. Of Wulfen (the *Libanotis rupestris* of Scopoli), a perennial species growing in central Europe. 2. Of De Candolle,

the *A. cretensis*, var. *mutellinoides.* [B, 42, 216.]—**A. maxima** [Chois.]. See *A. cervariæfolia.*—**A. meum** [Linnæus]. See MEUM *athamanticum.*—**A. mutellinoides** [Lamarck]. The *A. cretensis*, var. *mutellinoides.* [B, 214.]—**A. oreoselinum** [Linnæus]. 1. Of Linnæus, the *Peucedanum oreoselinum.* [B, 173, 180.] 2. Of Hudson, the *Seseli libanotis.* [B, 121, 214, 216.]—**A. pisana** [Savi]. The *Peucedanum silvestre.* [B, 214.]—**A. pubescens** [De Candolle]. A variety of *Libanotis vulgaris.* [B, 214.]—**A. roxburghiana** [Wallich]. See CARUM *roxburghianum.*—**A. rupestris** [Vill.]. The *A. cretensis*, var. *mutellinoides.* [B, 216.]—**A. sicula** [Linnæus]. See TINGUARRA.—**Radix athamantæ.** The root of *Meum athamanticum.* [B, 180.]—**Semen athamantæ creticæ.** The fruit of *A. cretica.* [B, 180.]

ATHAMANTHA (Lat.), n. f. A2th(a3th)-a3-ma2n(ma3n)'tha3. 1. Of Scopoli, the *Libanotis* [Crantz]. 2. Of De Candolle and others, the genus *Athamanta* (*q. v.*). [B, 121, 214.]

ATHAMANTICA, ATHAMANTICUM (Lat.), n's f. and n. A2th(a3th)-a3-ma2n(ma3n)'ti2k-a3, -u3m(u4m). See MEUM *athamanticum.*—**Radix athamanticæ.** The root of *Meum athamanticum.* [B, 180.]

ATHAMANTICUS (Lat.), adj. A2th(a3th)-a3-ma2n(ma3n)'ti2k-u3s(u4s). Gr., ἀθαμαντικός. Named for Athamas, a son of Æolus, of Thessaly, or coming from the mountain of the same name (a botanical species name). [A, 312, 380.]

ATHAMANTIN, n. A2th-a3-ma2n'ti2n. Fr., *athamantine.* Ger., *Athamantin.* A substance, $C_{24}H_{30}O_7$, forming slender acicular crystals, of a bitter and acrid taste, found in the root and seeds of *Peucedanum* (*Athamanta*) *oreoselinum.* It is insoluble in water, but dissolves readily in alcohol and in ether. By boiling with hydrochloric acid it is converted into valeric acid and oreoselone. [B, 2, 158.]

ATHAMANTIS (Lat.), n. f. A2th(a3th)-a3-ma2n(ma3n)'ti2s. Gen., *athaman'tidis.* From 'Αθαμαντις, a daughter of Athamas. See ATHAMANTA.

ATHAMANTOID, adj. A2th-a3-ma2n'toid. For deriv., see ATHAMANTICUS and *-oid.** Fr., *athamantoïde.* Resembling the genus *Athamanta.* [L, 109.]

ATHAMANTÖL (Ger.), n. A3-ta3-ma3nt'u5l. An oil obtained from the *Peucedanum* (*Athamanta*) *oreoselinum.* [L, 30.]

ATHAMBIA (Lat.), n. f. A2th(a3th)-a2m(a3m)'bi2-a3. Gr., ἀθαμβία. Imperturbability. [Democritus (A, 322).] Cf. ATARAXIA.

ATHAMOS, n. The *Cicer arietinum.* [B, 121 ; L, 105.]

ATHANASIA (Lat.), n. f. A2th(a3th)-a3n-a(a3)'zi2(si2)-a3. Gr., ἀθανασία (from α priv., and θανεῖν, to die). Fr., *athanasie.* Ger., *Athanasie, Unsterblichkeit.* 1. An old name for various medicines, to express their extraordinary virtues (*e. g.*, tansy, because, when inserted into the nostrils of a corpse, it was said to prevent putrefaction). [L, 84, 94, 97, 109, 119.] 2. A genus of composite plants of the tribe *Senecionidæ*, established by Linnæus ; so called from the flowers preserving their freshness for a long time. [B, 19.]—**A. amara** [Cervantes]. Sp., *prodigiosa* [Mex. Ph.]. A species of A. (2d def.) growing in the temperate parts of Mexico, the leaves of which are said to be tonic and anthelminthic. ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 774 (B) ; J. M. Maisch, "Am. Jour. of Pharm.," Feb., 1886, p. 72.]—**A. magna.** An old name for a certain preparation used for dysentery and for various hæmorrhages. [A, 325.]—**A. maritima** [Linnæus]. See DIOTIS *candidissima.*—**Herba** (seu **Flores,** seu **Summitates**) **athanasiæ.** The herb of *Tanacetum vulgare.* [B, 180.]

ATHANASIEÆ (Lat.), n. f. pl. A2th(a3th)-a2n(a3n)-a3-zi-(si2)'e2-e(a3-e2). A subtribe of composite plants belonging to the *Anthemideæ* of De Candolle (the *Artemisieæ* of Lessing), including species with a paleaceous receptacle, corymbose heads usually discoid, and alternate leaves. [B, 121, 170.]

ATHANATOS (Lat.), n. m. A2th(a3th)-a2n(a3n)'a3-to2s. From ἀθάνατος, immortal. An old name for the *Lydanis coronaria.* [L, 94.]

ATHANOR, n. A2th'a2n-o2r. From Ar., *al-tannûr* (pronounced *at-tannûr*), and this from Hebrew תנור, a furnace, from root *nûr, fire.* [B, 52.] Lat., *furnus philosophorum* (seu *philosophicus compositus*, seu *turritus*, seu *chymicus*), *uterus chymicus* (seu *spagyricus*), *piger Henricus.* Fr., *fourneau des paresseux.* Ger., *Acanor, faule Heinz.* A sort of self-feeding charcoal furnace formerly used by chemists, in which the reserve of fuel was contained in a hollow cylinder above the fire, and subsided gradually as the combustion made room for it—precisely as in the modern "base-burning" stove. The name is said to have been given it by Raymond Lully. [A, 1, 322.]

ATHAPSIA, n. Fr., *athapsie.* A Portuguese name for the *Ipomœa turpethum.* [A, 259 ; L, 87.]

ATHAR, n. See ATTAR.

ATHARA (Lat.), n. f. A2th(a3th)'a3-ra3. Gr., ἀθάρα. An ancient term for husked wheat, also for pap or porridge. [Pliny (A, 318) ; A, 387.]

ATHARASA, n. A name for a plant, probably a *Tamarix* (Ar., *el-tharsa*), found in the Latin version of an Arabic work wrongly attributed to Aristotle. [B, 121.]

ATHARE (Lat.), n. f. A2th(a3th)'a3-re(ra). Gr., ἀθάρη. See ATHARA.

ATHARODES (Lat.), adj. A2th(a3th)-a3-ro'dez(das). See ATHERODES.

ATHAROMA (Lat.), n. n. A2th(a3th)-a3-ro'ma3. See ATHEROMA.

ATHECATA (Lat.), n. n. pl. A2th(a3th)-e2k(ak)-a(a3)'ta3. From α priv., and θήκη (see THECA). See GYMNOBLASTEA.

ATHELASMUS (Lat.), n. m. A2th(a3th)-e2l(al)-a2z(a3s)'mu3s-(mu4s). From α priv., and θηλασμός (from θηλή, the nipple), suckling. Inability to give suck, especially from imperfect development of the nipple. [A, 322 ; L, 81.]

ATHELES (Lat.), adj. A2th(a3th)-e(a)'lez(las). Gr., ἀθηλής (from α priv., and θηλή, the nipple). 1. Having no nipples. [A, 322.] 2. Never having given suck. [A, 311.] 3. As a n., a child that has not been suckled. [A, 322.] Cf. ATHELUS.

ATHELIA (Lat), n. f. A2th(a3th)-e(a)'li2-a3. Fr., *athélie.* 1. The state of having no nipple. [A, 33.] 2. A genus of *Fungi* made by Persoon, now regarded as the byssoid state of certain *Telephoræ.* [B, 121.]

ATHELUS (Lat.), adj. A2th(a3th)-e(a)'lu3s(lu4s). Gr., ἄθηλος (from α priv., and θηλή, the nipple). 1. Weaned. 2. Having never been suckled. [A, 322.]

ATHELXIS (Lat.), n. f. A2th(a3th)-e2lx'i2s. Gen., *athelx'eos* (*-is*). Gr., ἄθελξις (from ἀθέλγειν, to draw off or press out). Fr., *athelxie.* The act of suckling or pressing out milk from the breast. [A, 322 ; L, 41, 109.]

ATHEM (Ger.), n. A3'te2m. The breath ; respiration. [L, 80.]—**Accessorische A'muskeln.** The auxiliary respiratory muscles. [J, 53.]—**A'bar.** Respirable. [J.]—**A'barkeit.** Respirability. [L, 43.]—**A'beklemmung, A'beschwerden.** Difficulty of breathing. [L, 50 ; M.]—**A'bewegungen.** The movements of respiration. [J, 53.]—**A'centrum.** See *Respiratory* CENTRE.—**A'folge.** The respiratory rhythm. [L.]—**A'frequenz.** The respiratory rate. [J.]—**A'geräusch.** The respiratory murmur. [A, 317.]—**A'grösse.** The breathing capacity. [J.]—**A'höhlen.** The dilated spaces formed in plants by the intercellular passages beneath each stoma. [B, 49.]—**A'holen.** To draw a breath ; as a n., respiration. [A, 315.]—**A'los.** Breathless. [A, 315.]—**A'losigkeit.** Breathlessness. [A, 315.]—**A'messer.** See SPIROMETER.—**A'messung.** See SPIROMETRY.—**A'muskeln.** The respiratory muscles. [J, 53.]—**A'nerven.** The nerves supplying the respiratory apparatus. [J, 53.]—**A'noth.** The sensation of the necessity of breathing.—**A'pause.** The period of rest which is observed after an expiration and before the beginning of the succeeding inspiration. [J.]—**A'probe.** An examination of the lungs of a dead body for medico-legal purposes. [L, 135.]—**A'raum.** See *A'grösse.*—**A'schöpfen.** To breathe. [A, 315.]—**A'schwankung.** The variation of the breathing in depth, frequency, etc. [J, 53.]—**A'stickung.** Dyspnœa. [M, 6.]—**A'zäpfchen, A'zäpflein.** The uvula. [A, 315.]—**A'zug.** A breath. [A, 315.]—**A'zünglein.** 1. The uvula. [A, 315.] 2. The epiglottis. [L, 43.]—**Bell'scher A'nerv.** The spinal accessory nerve. [L, 115.]—**Beschwerliches A'holen.** Excessive dyspnœa. [L, 80.]—**Cheyne-Stokes'scher A.** See *Cheyne-Stokes* RESPIRATION.—**Kurzer A.** Shortness of breath. [A, 315.]—**Leichter A.** Free respiration. [L, 43.]—**Mittlere vitale A'lage.** That state of the lungs in which they are moderately filled with air, as in ordinary breathing. [Panum (J, 53).]—**Schwerer A., Schwerer A'zug.** Dyspnœa ; gasping or sighing respiration. [A, 315.]

ATHENA (Lat.), n. f. A2th(a3th)-e(a)'na3. From 'Αθηνᾶ (='Αθήνη), the goddess Athene. The name of an ancient vulnerary plaster of complex composition. [Gorræus (A, 325) ; L, 94.]

ATHENATORIUM (Lat.), n. n. A2th(a3th)-e2n(an)-a3-to'ri2-u3m(u4m). A thick glass cover for a cucurbit, used by the old chemists in subliming. Its neck led into the cucurbit, instead of winding around it. [A, 325.]

ATHENIPPIUM, ATHENIPPON, ATHENIPPUM (Lat.), n's n. A2th(a3th)-e2n(an)-i2p'pi2-u3m(u4m), -i2p'po2n, -pu3m(pu4m). Gr., ἀθηνίππιον, from the name of its inventor. Syn. : *diasmyrnes.* An ancient collyrium containing pompholyx, oxide of copper, saffron, myrrh, spikenard, hæmatite, white pepper, opium, and Chian wine. [Gorræus [L, 116).]—**Athenippon panchreston.** Another collyrium described by Galen. [L, 94.]

ATHENOR, n. A2th'e2n-o2r. See ATHANOR.

ATHER (Lat.), n. m. A(a3)'thu5r(thar). Gen., *a'theros* (*-ris*). Gr., ἀθήρ. 1. See AWN. 2. The point or barb of a weapon. [Hippocrates (A, 311).]

ATHER, n. See ATTAR.

ATHERA (Lat.), n. f. A2th(a3th)-e(a)'ra3. See ATHARA.

ATHERANDRA (Lat.), n. f. A2th(a3th)-e2r-a2n(a3n)'dra3. From ἀθήρ, an awn or spike, and ἀνήρ, a man. A genus of climbing asclepiadaceous shrubs, of the tribe *Periploceæ*, established by Decaisne. [B, 19, 42.]

ATHERAPEUSIA (Lat.), n. f. A2th(a3th)-e2r-a3-pu2'si2-a3. Gr., ἀθεραπευσία (from α priv., and θεραπεύειν, to give medical attendance). Want of care or attendance, neglect of a patient. [A, 387.]

ATHERAPEUTOS (Lat.), adj. A2th(a3th)-e2r-a3-pu2'to2s. Gr., ἀθεράπευτος. 1. Neglected, not taken care of, not cured. 2. Incurable. [A, 387.]

ATHERE (Lat.), n. f. A2th(a3th)-e(a)'re(ra). Gr., ἀθήρη. See ATHARA.

ATHÉREUX (Fr.), adj. A3-ta-ru5. See ATHEROID (2d def.).

ATHER-GUL, n. From *attar* (*q. v.*), and Pers., *gul*, a rose. [B.] See ATTAR *of roses.*

ATHERICERA (Lat.), n. n. pl. A2th(a3th)-e2r-i2s(i2k)'e2r-a3. From ἀθήρ, a point, and κέρας, a horn. Fr., *athéricères.* Cuvier's name for one of the primary divisions of dipterous insects. [L, 108.]

ATHERICEROUS, adj. A2th-e2r-i2s'e2r-u3s. Lat., *athericerus.* Fr., *athéricère.* Having the lower and side pieces of the suckers setaceous (said of dipterous insects). [L. 116.]

ATHERINIDÆ (Lat.), n. f. pl. A2th(a3th)-e2r-i2n-i2d-e(a3e2). A family of mugiliform *Acanthopterygii.* [L, 207.]

ÄTHERISCH (Ger.), adj. A'te^{2}r-i^{2}sh. Aerial, ethereal. [L, 52.]

ATHERMAL, adj. A^{2}th-u^{5}rm'a^{2}l. Gr., ἄθερμος (from α priv., and θέρμη, heat). Fr., *athermal*. Ger., *athermisch*. Cool (said of spring waters of a temperature between 0° and 15° C. [= 32° and 59° F.]). [A, 385.]

ATHERMANCY, n. A^{2}th-u^{5}rm'a^{2}n-si^2. From α priv., and θερμαίνεσθαι, to become heated. Fr., *athermanéité*. The state of being athermanous. [B, 21.]

ATHERMANOUS, adj. A^{2}th-u^{5}rm'a^{2}n-u^{3}s. Fr., *athermane*. Ger., *atherman*. Impervious to, or not transmitting, radiant heat (the opposite of diathermanous). [L, 49.]

ATHERMASIA (Lat.), n. f. A^{2}th(a^{3}th)-u^{5}rm(e^{2}rm)-a(a^3)'si^2-a^3. From α priv., and θερμασία, heat. Fr., *athermasie*. Absence of heat. [L, 41, 109.]

ATHERMENNIG (Ger.), n. A^3'te^{2}r-me^{2}n-ni^{2}g. See Agrimonia.

ATHERMIC, adj. A^{2}th-u^{5}rm'i^{2}k. Gr., ἄθερμος (from α priv., and θέρμη, heat). Fr., *athermique*. Ger., *athermisch*. 1. Athermanous (*q. v.*). [L, 41.] 2. Taking place without raising the bodily temperature. [A, 385.]

ATHERMOSIA (Lat.), n. f. A^{2}th(a^{3}th)-u^{5}rm(e^{2}rm)-o'si^2-a^3. See Athermasia.

ATHERMOSYSTALTIC, adj. A^{2}th-u^{5}rm-o-si^{2}s-ta^{2}lt'i^{2}k. From α priv., θέρμη, heat, and συσταλτικός, contracting. Fr., *athermosystaltique*. Not contracting under the influence of heat (said of muscles). [K ; L, 158.]

ATHEROID, adj. A^{2}th'e^{2}r-oid. Gr., ἀθερώδης. Lat., *atherodes*. Fr., *athéroïde, athéreux*. Ger., *ährenartig, ährenförmig* (1st def.), *voll Aehren* (2d def.). 1. Resembling an ear or spike, aristiform. [A, 322 ; B, 78.] 2. Full of spikes, spicate, aristate. [B, 78.] 3. Mealy ; gruel-like. [B, 78.]

ATHEROLOGION (Lat.), n. n. A^{2}th(a^{3}th)-e^{2}r-o(o^2)-lo(lo^2)'-ji^2(gi^2)-o^{2}n. Gr., ἀθερολόγιον (from ἀθήρ, the point of a weapon, and λέγειν, to gather). An ancient forceps for extracting thorns, splinters, etc. [A, 387.]

ATHEROMA (Lat.), n. n. A^{2}th(a^{3}th)-e^{2}r(ar)-o'ma^3. Gen., *atherom'atos (-tis)*. Gr., ἀθήρωμα (from ἀθήρη, porridge). Fr., *athérome, loupe enkystée, molluscum stéarique*. Ger., *Atherom, Breigeschwulst, Balggeschwulst, Grützbeutelgeschwulst*. It., *ateroma*. Sp., *ateroma, lobanillo*. Syn.: *steatoma, acue sebacea molluscum, cystis sebacea, lupia, talpa*. 1. Properly, a wen (a sebaceous cyst) ; a subcutaneous cyst of considerable size, consisting of the retained contents of one or more sebaceous follicles, situated most commonly on the scalp, forehead, neck, or back, usually covered with skin unaltered in appearance ; so called from the porridge-like character of the contents. [G.] 2. Any morbid deposit resembling the contents of a wen. The ancients applied the term to glands affected with scrofulous degeneration. [Celsus (A, 318).] It is now often applied to atheromatous degeneration of an artery.—**Arterial a.** Lat., *a. arteriale*. Fr., *athérome artériel*. The formation of yellowish patches, consisting mostly of fat granules ; on the inner surface of the elastic coat of an artery, which subsequently assume the consistence of gruel. [A, 385.]—**A. cutis.** See *A.* (1st def.).—**Blepharo-a.** See the major list.—**Capillary a.** Fr., *athérome des capillaires*. The formation in the walls of the capillaries of fatty granules like those of the early stage of arterial a.

ATHEROMASIA (Lat.), n. f. A^{2}th(a^{3}th)-e^{2}r(ar)-o(o^2)-ma(ma^3)'-si^2-a^3. Fr., *athéromasie*. It., *ateromasia*. Atheromatous degeneration of an artery. [Sanné, "Rev. mens. des mal. de l'enfance," Feb., 1887.]

ATHEROMATOUS, adj. A^{2}th-e^{2}r-o^{2}m'a^{2}t-u^{3}s. Lat., *atheromaticus, atheromatodes*. Fr., *athéromateux*. Ger., *atheromatös*. Pertaining to, of the nature of, caused by, or affected with, atheroma. [A, 322.]

ATHEROPOGON (Lat.), n. m. A^{2}th(a^{3}th)-e^{2}r(ar)-o(o^2)-po'go^{2}n-(gon). Gen., *atheropogo'nos (-nis)*. From ἀθήρ, a spike, and πώγων, the beard. A section of the botanical genus *Bouteloua* (*q. v.*).

ATHEROSIS (Lat.), n. f. A^{2}th(a^{3}th)-e^{2}r(ar)-o'si^{2}s. Gen., *athero'seos (-sis)*. See Atheromasia.

ATHEROSPERMA (Lat.), n. n. A^{2}th(a^{3}th)-e^{2}r(ar)-o(o^2)-spu^{5}rm-(spe^{2}rm)'a^3. Gen., *atherosperm'atos (-tis)*. From ἀθήρ, a beard, and σπέρμα, a seed. Fr., *athérosperme*. A genus of trees of the order *Atherospermaceæ*, established by Labillardière. [B, 42.]—**A. moschatum** [Labillardière (who wrote *A. moschata*)]. The Tasmanian or Australian sassafras ; a large tree growing in New Holland, bearing opposite leaves and monœcious axillary flowers. The male flower is campanulate, with from 10 to 12 fertile and several barren stamens ; the female flower contains numerous sessile ovaries with one cell and one ovule. The bark (sassafras bark) yields a volatile oil which is said to act, in drop-doses, as a diuretic, diaphoretic, and cardiac sedative ; it also contains wax, a fixed oil, gum sugar, protein matters, a brownish-red aromatic resin (said to have the composition $C_{21}H_{32}O_5$), butyric and oxalic acids, atherospermatannic acid, and an alkaloid called atherospermine. [B, 5, 19. 75, 196.]—**A. Novæ Zealandiæ** [Hooker]. See Laurelia *Novæ Zelandiæ*.—**A. sassafras** [A. Cunningham]. See Doryphora *sassafras*.—**A. sempervirens** [H. Baillon]. See Laurelia *sempervirens*.

ATHEROSPERMACEÆ (Lat.), n. f. pl. A^{2}th(a^{3}th)-e^{2}r(ar)-o-(o^2)-spu^{5}rm(spe^{2}rm)-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *athérospermacées*. Of Lindley, an order of trees the fruit of which is an aromatic nut provided with a permanent style covered with long hairs ; by Bentham and Hooker made a tribe of the *Monimiaceæ*. [B, 19, 42.]

ATHEROSPERMATANNIC ACID, n. A^{2}th-e^{2}r-o-spu^{5}rm-a^3-ta^{2}n'ni^{2}k. Fr., *acide athérosperma-tannique*. Ger., *Atherospermagerbsäure*. A variety of tannic acid, obtained from the bark of *Atherosperma moschatum*, the lead salt of which has the composition $C_{10}H_{14}O_3$.Pb [B, 196] or $C_{16}H_{14}Pb_2O_3$. [B, 207.]

ATHEROSPERMEÆ (Lat.), n. f. pl. A^{2}th(a^{3}th)-e^{2}r(ar)-o(o^2)-spu^{5}rm(spe^{2}rm)'e^2-e(a^3-e^2). Fr., *athérospermées*. 1. Of R. Brown and Bentham and Hooker, the *Atherospermaceæ*. 2. Of Reichenbach, a division of nyctagineous plants, comprising the subdivisions *Pneumeæ, Chimonantheæ*, and *Calycantheæ*. [B, 170.]

ATHEROSPERMINE, n. A^{2}th-e^{2}r-o-spu^{5}rm'en. Fr., *athérospermine*. Ger., *Atherospermin*. An alkaloid extracted by Zezer from the bark of the *Atherosperma moschatum* ; a grayish, light, odorless, bitter powder, $C_{30}H_{40}N_2O_5$, insoluble in water, slightly soluble in ether, and readily soluble in alcohol and in chloroform. [B, 5, 196, 207.]

ATHEROUS, adj. A^{2}th'e^{2}r-oid. See Atheroid (2d def.).

ATHERUREÆ (Lat.), n. f. pl. A^{2}th(a^{3}th)-e^{2}r(ar)-u^2(u)'re^2-e-(a^3-e^2). A subtribe of dracunculineous plants made by Blume, including the single genus *Atherurus*. [B, 170.]

ATHERURUS [Blume] (Lat.), n. m. A^{2}th(a^{3}th)-e^{2}r(ar)-u^2(u)'-ru^{3}s(ru^{4}s). The botanical genus *Pinellia* (*q. v.*). [B, 42.]—**A. ternatus** [Blume]. See Pinellia *tuberifera*.

ATHETOID, adj. A^{2}th'e^{2}t-oid. From ἄθετος (see Athetosis), and εἶδος, resemblance. Ger., *athetotisch*. Resembling athetosis. [D.]

ATHETOSIS (Lat.), n. f. A^{2}th(a^{3}th)-e^{2}t-o'si^{2}s. Gen., *athet-o'seos (-sis)*. From ἄθετος (from α priv., and τιθέναι, to bring into position), without fixed position (see also *-osis**). Fr., *athétose*. Ger., *Athetose*. It., *atetosi*. Sp., *atetosis*. Syn.: *Hammond's disease*. An affection of the nervous system described by W. A. Hammond in 1871 and considered by him to be due to degenerative changes in the brain and to be distinct from post-hemiplegic chorea, with which it has been confounded. It is characterized by involuntary movements of the fingers and toes, usually of one side only, of a slow, apparently determinate, systematic, and uniform character, with a tendency to distortion ; often preceded and accompanied by other symptoms of cerebral disease, especially epileptic seizures and impairment of the intellect, and attacking middle-aged men of intemperate habits. In a case observed by S. Ringer, lesions of the optic thalamus, the corpus striatum, and adjacent parts were found after death. [A, 394.]

ATHIN (Ar.), n. The *Antirrhinum*. [L, 105.]

ATHLETE, n. A^{2}th'let. Gr., ἀθλητής, ἀθλητήρ (from ἀθλεῖν, to contend with). Lat., *athleta*. Fr., *athlète*. Ger., *Athlet*. It., *atleta*. A person of powerful build and great muscular development, or one who practises bodily exercises for the purpose of increasing his muscular power. [A, 322, 385.]

ATHLETIC, adj. A^{2}th-le^{2}t'i^{2}k. Gr., ἀθλητικός. Lat., *athleticus*. Fr., *athlétique*. Ger., *athletisch*. It., *atletico*. Pertaining to, of the character of, or resembling, an athlete or the exercises practised by athletes. [A, 322, 385.]

ATHLETICS, n. sing. A^{2}th-le^{2}t'i^{2}ks. Fr., *athlétique*. Ger., *Athletik*. The art and exercises of athletes. [A, 315.]

ATHLIPTOS, ATHLIPTUS (Lat.), adj's. A^{2}th(a^{3}th)-li^{2}p'to^{2}s, -tu^{3}s(tu^{4}s). Gr., ἄθλιπτος. Fr., *athlipte*. Ger., *athliptisch*. Setting in suddenly without premonition (said of fevers). [Galen (M, 59).]

ATHMEN (Ger.). v. intr. and n. A^{3}t'me^{2}n. To breathe ; as a n., breath, respiration. [D ; J.]—**A'röhre.** A siphon (of a mollusc). [L, 228.]—**A'sbedürfniss.** The respiratory sense. [J.]—**A'scentrum.** A respiratory centre. [J.]—**A'sstoff.** See Elements *of respiration*.—**Ausa'.** To breathe out, expire, exhale. [A, 315.]—**Baucha'.** Abdominal respiration. [L.]—**Schwera'.** To breathe with difficulty. [A, 315.]—**Tiefa'.** To draw a long, deep breath. [A, 315.]

ATHMUNG (Ger.), n. A^{3}t'mung. Respiration. [J.]—**Aeussere A.** See *External* respiration.—**A'losigkeit.** See Apnœa.—**A'sapparat.** The respiratory apparatus. [J.]—**A'sbewegungen.** The respiratory movements. [J.]—**A'sbreite.** The circumference of the chest when a full breath is taken and held. [M. 1.]—**A'scapacität des Blutes.** The respiratory capacity of the blood (*i. e.*, its capacity to absorb oxygen). [Maragliano, "Ctrlbl. f. d. med. Wssnsch.," Dec. 13, 1884, p. 881 (B).]—**A'scentrum.** A respiratory centre. [J.]—**A'scurve.** A graphic tracing showing the respiratory movements. [J, 53.]—**A'sdruck.** Syn.: *Respirationsdruck*. The pressure of the air in the respiratory tract ; less than the atmospheric pressure during inspiration and greater during expiration. [J, 19, 53.]—**A'sfähig.** Capable of breathing. [A, 315.]—**A'sform.** A type of respiration. [J, 53.]—**A'sgeräusch.** The respiratory murmur. [A. 315.]—**A'sgrösse.** 1. According to Budge. the air inspired and expired at one breath ; the tidal air or the breathing capacity. [J, 7.] 2. According to Rosenthal, the air inhaled at one inspiration multiplied by the number of inspirations in a minute. [J, 53.] Cf. *Respiratory* volume.—**A'shöhle.** A respiratory cavity. [A, 46.]—**A'sluft.** See *Tidal* air.—**A'smechanismus.** The mechanism of respiration. [J, 53.]—**A'smedium.** The medium (air or water) in which respiration is carried on. [J, 52.]—**A'smuskeln.** The respiratory muscles. [J.]—**A'snoth.** The sensation of the necessity of breathing.—**A'splasma.** Brass's term for the intermediate of the three layers into which he divides the body of a cell ; supposed to be especially concerned in the assumption of oxygen. [J, 55, 60.]—**A'sraum.** A respiratory cavity ; the lungs. [J, 52.]—**A'srhythmus.** The respiratory rhythm. [J.]—**A'sstillstand.** A cessation of the respiratory movements in either the inspiratory or the expiratory phase. [J, 19, 40.] See *Expiratory* and *Inspiratory* tetanus.—**A'stypus.** A type of respiration. [J, 53.]—**A'sunterbrechung.** An interruption or intermission of respiration. [J, 52.]—**A'swege.** The respiratory passages. [M, 6.]—**A'swerkzeug.** The respiratory apparatus. [M, 6.]—**A's-zentrum.** A respiratory centre. [B, 49.]—**Cheyne-Stokes'sches A'sphänomen.** See *Cheyne-Stokes* respiration.—**Darma'.**

The process of the absorption and evolution of gas by the mucous membrane of the intestines. [B, 49.]—**Hauta'.** Cutaneous respiration. [B, 49.]—**Innere A.** Internal respiration, tissue respiration. [B, 49.]—**Intramolekuläre A.** The respiration of plants when, being deprived of a free supply of oxygen, they form carbon dioxide at the expense of the carbon and oxygen of their own tissues. [B, 49.]—**Luxusa'.** The introduction into the lungs of an amount of air in excess of that which the system actually requires; a phenomenon regarded by Mosso as occurring in normal respiration. [Du Bois-Raymond's "Archiv.," 1886; "Ctrlbl. f. d. med. Wssnsch.," Feb. 19, 1887, p. 133 (B).]—**Periodische A.** Breathing which presents periodical variations in intensity and rhythm, or periodical intermissions. [Mosso, Du Bois-Raymond's "Archiv.," 1886; "Ctrlbl. f. d. med. Wssnsch.," Feb. 19, 1887, p. 133 (B).]—**Ruhige A.** Tranquil respiration. [J.]—**Tiefe A.** A full inspiration. [J.]

ATHON (Ger.), n. A^3-ton'. The *Asplenium trichomanes.* [B, 49.]

ATHONDAIYALAI, n. An East Indian name for the *Caparis horrida.* [P. S. Mootooswamy, "Indian Med. Gaz.," Jan., 1887, p. 3.]

ATHONOR, n. See Athanor.

ATHORACICA (Lat.), n., n. pl. of adj. *athoracicus* (*q. v.*). A^{2}th(a^{3}th)-o-ra^{2}s(ra^{3}k)'i^{2}k-a^3. Blainville's name for a class of the *Decapoda,* including those *Crustacea* which apparently have no thorax. [B, 195.]

ATHORACICUS (Lat.), adj. A^{2}th(a^{3}th)-o-ra^{2}s(ra^{3}k)'i^{2}k-u^{3}s(u^{4}s). From α priv., and θώραξ (see Thorax). Fr., *athoracique.* Having no thorax. [L, 42.]

ATHORACOCEPHALUS (Lat.), n. m. A^{2}th(a^{3}th)-o^{2}r(or)''a^3-ko(ko^2)-se^{2}f(ke^{2}f)'a^3-lu^{3}s(lu^{4}s). From α priv., θώραξ (see Thorax), and κεφαλή, the head. See Acephalogaster.

ATHORECTUS (Lat.), adj. A^{2}th(a^{3}th)-o-re^{2}k(rak)'tu^{3}s(tu^{4}s). Gr., ἀθώρηκτος. Sober, not drunk. [Hippocrates (A, 325).]

ATHORYBIADÆ (Lat.), n. f. pl. A^{2}th(a^{3}th)-o^{2}r-i^{2}b(u^{6}b)-i(i^2)'-a^3-de(da^3-e^2). In zoology, a family of the *Physophoridæ,* characterized by the hydrosoma having nectocalices, but without hydrophyllia, by the distal end of the filiform cœnosarc being dilated, and by the pneumatocyst being small. [Huxley (L, 147).]

ATHREPSIA (Lat.), n. f. A^{2}th(a^{3}th)-re^{2}p's'i^2-a^3. From α priv., and θρέψις (from τρέφειν, to nourish), nutrition. Fr., *athrepsie.* Ger., *Athrepsie.* It., *atrepsia.* Defective nutrition; Parrot's term for a chronic state of malnutrition in infants, attributed to faulty development, characterized by progressive emaciation, with greenish, liquid evacuations from the bowels, vomiting, and loss of digestive power. [A, 385; D, 40.]

ATHRIX (Lat.), adj. A^{2}th(a^{3}th)'ri^{2}x. Gen., *at'richos* (*-chis*). Gr., ἄθριξ (from α priv., and θρίξ, the hair). 1. Devoid of hair. [G.] 2. Weak, enervated. [Galen (A, 325).]

ATHRIXIEÆ (Lat.), n. f. pl. A^{2}th(a^{3}th)-ri^{2}x-i(i^2)'e^2-e(a^3-e^2). Fr., *athrixiées.* A subtribe of composite plants of the tribe *Inuloideæ,* comprising herbs and under-shrubs with leaves flat or recurved at the border; a non-paleaceous receptacle; homogamous radiate, or sometimes subdiscoid, heads; the flowers usually fertile, or those of the disc alone sterile, with styles having truncate divisions. [B, 42, 121.]

ATHRŒSMA (Lat.), n. n. A^{2}th(a^{3}th)-re^{2}z'(ro^2'e^{2}s)-ma^3. Gen., *athrœs'matos* (*-tis*). Gr., ἄθροισμα (from ἀθροίζειν, to collect). 1. In the Epicurean philosophy, a concourse of atoms. [Diogenes (A, 311).] 2. According to the empirics, a collection of observations. [Gorræus (A, 325).]

ATHROON (Lat.), n., n. of adj. *athroos* (*q. v.*). A^{2}th(a^{3}th)'-ro(ro^2)-o^{2}n. Gr., ἀθρόον. A group, a collection (as of phenomena). [Galen (A, 325).]

ATHROOPOMPHOLYX (Lat.), n. f. and m. A^{2}th(a^{3}th)''-ro(ro^2)-o(o^2)-po^{2}m'fo(fo^2)-li^{2}x(lu^{6}x). Gen., *athroopomphol'ygos* (*-gis*). For deriv., see Athroos and Pompholyx. See Pompholyx *conferta.*

ATHROOS (Lat.), adj. A^{2}th(a^{3}th)'ro(ro^2)-o^{2}s. Gr., ἀθρόος. Ger., *gehäuft.* Heaped up, aggregated, copious (said of cutaneous lesions and of secretions). [L, 94; M, 13.]

ATHROPOMATA (Lat.), n. n. pl. A^{2}th(a^{3}th)-ro(ro^2)-po^{2}m'a^3-ta^3. See Clistenterata.

ATHROSOPHYTUM (Lat.), n. n. A^{2}th(a^{3}th)-ro(ro^2)-so^{2}f'i^{2}t-(u^{6}t)-u^{3}m(u^{4}m). From ἀθρόος, accumulated, and φυτόν, a plant. Necker's term for an order of plants, including many genera, such as *Jungermannia, Riccia, Fucus, Lichen, Ulva, Conferva,* etc., now placed in widely different orders. [B, 170.]

ATHRUPHYLLUM (Lat.), n. n. A^{2}th(a^{3}th)-ru-fi^{2}l(fu^{6}l)'lu^{3}m-(lu^{4}m). From ἀθρόος, accumulated, and φύλλον, a leaf. Loureira's name for *Myrsine* (*q. v.*). [B, 170.]

ATHYMIA (Lat.), n. f. A^{2}th(a^{3}th)-i(u^6)'mi^2-a^3. Gr., ἀθυμία (from α priv., and θυμός, animation). Fr., *athymie.* Ger., *Muthlosigkeit.* 1. Mental dejection. [Hippocrates (A, 325).] 2. See Apsychia.

ATHYMICUS, ATHYMUS (Lat.), adj's. A^{2}th(a^{3}th)-i^{2}m(u^{6}m)'-i^{2}k-u^{3}s(u^{4}s), -i(u^6)'mu^{3}s(mu^{4}s). Gr., ἄθυμος. Ger., *schwermüthig.* Pertaining to, caused by, or affected with, athymia. [A, 322.]

ATHYMY, n. A^{2}th-i'mi^2. See Athymia.

ATHYRIUM (Lat.), n. n. A^{2}th(a^{3}th)-i^{2}r(u^{6}r)'i^2-u^{3}m(u^{4}m). Fr., *athyrion.* A genus of ferns of the suborder *Polypodiaceæ,* closely allied to *Asplenium,* from which it is distinguished by the sori being innate or somewhat resembling a horse-shoe in shape. [B, 19.]—**A. asplenioides** [Desvaux], **A. cyclosorum** [Rupr.], **A. filix fœmina** [Roth]. See Asplenium *filix fœmina.*—**A. filix mas.** See Aspidium *filix mas.*—**A. lætum** [Gray], **A. laxum** [Schum.]. See Asplenium *filix fœmina.*—**A. ovatum** [Newman]. See Asplenium *filix fœmina.*—**A. tripinnatum** [Rupr.]. See Asplenium *filix fœmina.*

ATHYRUS (Lat.), n. m. A^{2}th(a^{3}th)'i^2(u^6)-ru^{3}s(ru^{4}s). See Lathyrus.

ATI, n. A Tahiti name for the *Caulophyllum inophyllum.* [B, 121.]

ATIBALÁ (Sanscr.), n. The *Sida rhombifolia.* [B, 181.]

ATINCAR, n. An alchemical name for borax. [Ruland, Johnson (A, 325).]

ATINIA (Lat.), n. f. A^{2}t(a^{3}t)-i^{2}n'i^2-a^3. The *Ulmus campestris,* or perhaps the *Carpinus betulus.* [Pliny (B, 88).]

ATINKAL, ATINKAR, n's. See Atincar.

ATIPOLO, n. A name in the Philippine Islands for the jacktree (*Artocarpus*). [B, 88.]

ATIRBESIA, n. An African name for the *Marrubium vulgare.* [B, 88.]

ATIRSITA, n. Fr., *atirsite.* The *Plantago coronopus.* [B, 121.]

ÁTIS, n. A common name in India for the *Aconitum heterophyllum.* [B, 5, 181.] It is also applied to the root of *Aconitum napellus* and to the root of another plant, probably the *Asparagus sarmentosus.* [L, 78.]

ATISINE, n. A^{2}t'i^{2}s-en. From *átis* (*q. v.*). Fr., *atisine.* Ger., *Atisin.* An alkaloid, $C_{46}H_{74}N_2O_6$, found in *Aconitum heterophyllum.* [A, 319; B, 5, 8.]

ATITARA, n. The *Desmoncus* [Martius]; according to Adanson, the *Calamus rotang.* [B, 121.]

ÁTIVISHA, n. The *Aconitum heterophyllum.* [B, 181.]

ATJA, n. An Abyssinian name for the *Triticum arras.* [B, 121.]

AT KULAGI, n. The flowers and ripe or nearly ripe fruit of a variety of *Rheum,* said to contain iron and tannin, used in Turkestan in the preparation of baths for rheumatism. ["Proc. of the Am. Pharm. Assoc.," xxii, p. 104 (B).]

ATLANCHANA [Mex. Ph.] (Sp.), n. A^{3}t-la^{3}n-cha^3'na^3. A Mexican name for the *Cuphea lanceolata.* ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 776 (B).]

ATLANTACEA (Lat.), n. n. pl. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)-ta(ta^3)'se^2-(ke^2)-a^3. See Pteropoda.

ATLANTAD [Barclay], adv. A^{2}t-la^{2}nt'a^{2}d. Toward the atlas (*q. v.* for deriv.). [L, 141.]

ATLANTAL, ATLANTAN [Barclay], adj's. A^{2}t-la^{2}nt'a^{2}l, -a^{2}n. Gr., Ἀτλαντικός. Lat., *atlanticus.* Fr., *atlantique.* Ger., *atlantisch.* Pertaining to, connected with, or directed toward, the atlas; hence, superior (in this sense, said of the upper limbs). [L, 141.]

ATLANTIC CITY, n. A^{2}t-la^{2}nt'i^{2}k si^{2}t'i^2. A seaside resort in southern New Jersey, esteemed in the climatic treatment of consumption. [B. Reed, "N. Y. Med. Jour.," xxxiii, p. 325.]

ATLANTIDÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)'ti^{2}d-e(a^3-e^2). A family of molluscs of the order *Nucleobranchiata* (*Heteropoda*), class *Gasteropoda.* There is a well-developed shell into which the animal can retire; the branchiæ are contained in a dorsal mantle-cavity; and the shell is symmetrical, discoidal, and sometimes having an operculum. [A, 359.]

ATLANTI-OBLIQUUS (Lat.), n. m. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)''ti^2-o^{2}b-li(li^2)'kwu^{3}s(kwu^{4}s). E. Coues's name for the obliquus capitis superior muscle. ["Med. Record," July 23, 1887 (L).]

ATLANTION (Lat.), n. n. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)-ti(te)'o^{2}n. Gr., ἀτλάντειον. An old name for the atlas (the bone). [A, 325.]

ATLANTI-RECTUS (Lat.), n. m. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)''ti^2-re^{2}k'-tu^{3}s(tu^{4}s). E. Coues's name for the rectus capitis posticus minor muscle. ["Med. Record," July 23, 1887 (L).]

ATLANTIUS (Lat.), adj. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)-ti(te)'u^{3}s(u^{4}s). Gr., Ἀτλάντειος. See Atlantal.

ATLANTO-AXIAL, ATLANTO-AXOID, adj's. A^{2}t-la^{2}nt''-o-a^{2}x'i^2-a^{2}l, -a^{2}x'oid. Lat., *atlanto-axialis, atlanto-axoideus.* Fr., *atloïdo-axoïdien.* Pertaining to the bones termed the atlas and the axis. [L.]

ATLANTO-MANDIBULARIS (Lat.), n. m. A^{2}t(a^{3}t)-la^{2}n-(la^{3}n)''to(to^2)-ma^{2}n(ma^{3}n)-di^{2}b-u^2(u^4)-la(la^3)'ri^{2}s. Owen's name for a muscle in certain of the *Amphibia,* analogous to the temporal muscle of man. [L, 204.]

ATLANTO-OCCIPITAL, adj. A^{2}t-la^{2}nt''o-o^{2}k-si^{2}p'i^{2}t-a^{2}l. Lat., *atlanto-occipitalis.* Fr., *atloïdo-occipital.* Pertaining to the atlas and the occipital bone. [L, 44.]

ATLANTO-ODONTOID, adj. A^{2}t-la^{2}nt''o-o-do^{2}nt'oid. Lat., *atlanto-odontoideus.* Fr., *atloïdo-odontoïde.* Pertaining to the atlas and the odontoid process of the axis. [L, 44.]

ATLANTOSAURIDÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-la^{2}n(la^{3}n)''to-(to^2)-sa^{4}r'(sa^3'u^{4}r)-i^{2}d-e(a^3-e^2). A family of the *Dinosauria.* [L, 121.]

ATLAS (Lat.), n. m. A^{2}t(a^{3}t)'la^{3}s. Gen., *atlan'tos* (*-tis*). Gr., Ἄτλας (the name of the god who was supposed to bear up the pillars of heaven). The first cervical vertebra; ring-like or elliptical in shape, from the fact that its body, instead of being consolidated with it, constitutes the odontoid process of the second vertebra (the axis), upon which the a. turns in rotation of the head. It articulates above with the condyles of the occipital bone, allowing of the nodding movements of the head. [A, 70.]

ATLAS (Lat.), adj. A^{2}t(a^{3}t)'la^{2}s. Gr., ἄτλας (from α intens. [1st def.], or priv. [2d def.], and τλᾶν [= τολμᾶν], to dare). 1. Able to bear great suffering. [A, 322.] 2. Weak, faint-hearted, unable to bear much. [A, 311, 322.]

ATLAS, n. A^{2}t'la^{2}s. A sort of fine satin formerly obtained from the East. [B, 7.]—**A'ähnlich** (Ger.), **A'artig** (Ger.). In botany, the same as *bombycinus* or, less properly, *sericeus.* [B,

198.]—**A'baum** (Ger.), **A'beerbaum** (Ger.). The *Prunus padus*, also the *Cratægus torminalis.* [A, 315.]—**A'beere** (Ger.). The fruit of the *Cratægus torminalis.* [A, 315.]—**A'blume** (Ger.). The satin-flower (*Lunaria rediviva*). [B, 180.]—**A'erz** (Ger.). Malachite. [B, 49.]—**A'holz** (Ger.). See *Satin* WOOD.—**A'kies** (Ger.). Malachite. [A, 315.]—**A'kirschbaum** (Ger.). See *A'baum.*—**A'kraut** (Ger.). The *Lunaria biennis.* [A, 315.]—**A'spath** (Ger.). Satin-spar; a white or variously colored limestone of fibrous texture and silky lustre, found in various parts of Europe, especially England. [B, 49, 180.]—**A'stein** (Ger.). A fibrous variety of gypsum. [B, 196.]—**A'vitriol** (Ger.). Copperas (sulphate of iron). [A, 315.]—**A. wood.** See *Satin* WOOD.—**Ostindischer A'holzbaum** (Ger.). The *Chloroxylon swietenia.* [B, 180.]

ATLATLANCUAYA (Sp.), n. A^{3}t-la^{3}t-la^{3}n-kwa^3'ya^3. A Mexican name for the *Achyranthes calea.* [A, 447.] See TLATLANCUAYA.

ATLAT-ZOPILLIN, n. A Mexican name for the *Malvaviscus pentacarpus.* [B, 121.]

ATLÉ, ATLEE, n's. Ar., *athlah.* Egyptian names for the *Tamarix orientalis.* [B, 19, 52.]—**Atlee gall.** A gall, filled with a scarlet liquid, produced on the *Tamarix orientalis.* [B, 19.]

ATLO-AXOID, adj. A^{2}t''lo-a^{2}x'oid. See ATLANTO-AXIAL.

ATLODIDYMUS, ATLODYMUS (Lat.), n's m. A^{2}t(a^{3}t)-lo(lo^2)-di^{2}d'i^{2}m(u^{6}m)-u^{3}s(u^{4}s), -di(du^6)'mu^{3}s(mu^{4}s). From ἄτλας, the atlas (the bone), and δίδυμος, double. Fr., *atlodidyme, atlodyme.* I. Geoffroy St.-Hilaire's term for a monster having a single trunk and two separate but contiguous heads on a single neck. [A, 301, 385; L, 32, 49, 109.]

ATLOID, adj. A^{2}t'loid. Fr., *atloïde, atloïdien.* See ATLANTAL.

ATLOÏDE (Fr.), adj. A^{3}t-lo-ed. See ATLANTAL. As a n., the atlas. [Chaussier (A, 301).]

ATLOIDO-AXOID, adj. A^{2}t-loid''o-a^{2}x'oid. Fr., *atloïdo-axoïdien.* See ATLANTO-AXIAL.

ATLOÏDO-CORONOÏDIEN (Fr.), n. A^{3}t-lo-ed-o-co-ro-no-ed-i^2-a^{3}n^2. See ATLANTO-MANDIBULARIS.

ATLOIDO-INFRA-OCCIPITALIS (Lat.), n. m. A^{2}t(a^{3}t)-lo(lo^2)-i(e)''do(do^2)-i^{2}n-fra^3-o^{2}k-si^{2}p(ki^{2}p)-i^{2}t-a(a^3)'li^{2}s. See ATLOIDO-SUB-OCCIPITALIS.

ATLOIDO-MASTOIDEUS (Lat.), n. m. A^{2}t(a^{3}t)-lo(lo^2)-i(e)''do(do^2)-ma^{2}s(ma^{3}s)-to(to^2)-i^{2}d(ed)'e^2-u^{3}s(u^{4}s). The obliquus capitis superior muscle in man, also an analogue of the same in the solipeds. [Girard, Percivall, Leyh (L, 13).]

ATLOIDO-MUSCULARIS (Lat.), n. f. A^{2}t(a^{3}t)-lo(lo^2)-i(e)''do(do^2)-mu^{3}s(mu^{4}s)-ku^2(ku^4)-la(la^3)'ri^{2}s. Fr., *atloïdo-musculaire.* Girard's term for the superior branch of the occipital artery. [L, 43.]

ATLOIDO-OCCIPITAL, adj. A^{2}t-loid''o-o^{2}k-si^{2}p'i^{2}t-a^{2}l. Lat., *atloido-occipitalis.* Fr., *atloïdo-occipital.* See ATLANTO-OCCIPITAL; as a n., the rectus capitis posticus minor muscle in man, also an analogous muscle in the solipeds. [L, 9, Girard, Percivall, Leyh (L, 13).]

ATLOIDO-ODONTOID, adj. A^{2}t-loid''o-o-do^{2}nt'oid. Fr., *atloïdo-odontoïdien.* See ATLANTO-ODONTOID.

ATLOÏDO-SOUS-MASTOÏDIEN (Fr.), n. A^{3}t-lo-e-do-su-ma^{3}s-to-e-di^2-a^{3}n^2. The superior oblique muscle of the head. [A, 385.]

ATLOÏDO-SOUS-OCCIPITAL (Fr.), n. A^{3}t-lo-e-do-suz-o^{2}k-si^{2}p-i^{2}t-a^{3}l. The rectus capitis lateralis muscle. [A, 385.]

ATLOIDO-STYLOIDEUS (Lat.), n. m. A^{2}t(a^{3}t)-lo(lo^2)-i(e)''do(do^2)-sti(stu^6)-lo(lo^2)-i^{2}d(ed)'e^2-u^{3}s(u^{4}s). Fr., *petit droit latéral de la tête.* Ger., *Trägergriffelmuskel, kleiner* (oder *schiefer*) *Beuger des Kopfes.* Syn.: *flexor capitis parvus* [Bourgelat], *obliquus capitis anticus* [Percivall]. A muscle of the neck in quadrupeds, analogous to the rectus capitis lateralis in man. [A, 314; L, 13.]

ATLOIDO-SUB-MASTOIDEUS (Lat.), n. m. A^{2}t(a^{3}t)-lo(lo^2)-i-(e)''do(do^2)-su^{3}b(su^{4}b)-ma^{2}s(ma^{3}s)-to(to^2)-i^{2}d(ed)'e^2-u^{3}s(u^{4}s). See OBLIQUUS *capitis superior.*

ATLOIDO-SUB-OCCIPITALIS (Lat.), n. m. A^{2}t(a^{3}t)-lo(lo^2)-i-(e)''do(do^2)-su^{3}b(su^{4}b)-o^{2}k-si^{2}p(ki^{2}p)-i^{2}t-a(a^3)'li^{2}s. Fr., *atloïdo-sous-occipital.* Syn.: *flexor capitis brevis* [Bourgelat], *rectus capitis anticus minor* [Percivall], *atloido-occipitalis inferior* [Leyh]. The rectus capitis lateralis muscle in man, also an analogous muscle in quadrupeds. [L, 9, 13.]

ATMAGOOPTA-MURKUTEE (Bengal.), **ÁTMAGUPTÁ** (Sanscr.), n's. The *Mucuna pruriens.* [B, 172, 181.]

ATME (Lat.), n. f. A^{2}t(a^{3}t)'me(ma). Gr., ἀτμή. See ATMOS.

ATMELLA (Lat.), n. f. A^{2}t(a^{3}t)-me^{2}l'la^3. The *Spilanthes acmella.* [B.]—**Herba attmellæ, Semen atmellæ.** The herb and seed of *Spilanthes acmella.* [B, 180.]

ATMERYTHRIN, n. A^{2}t-me^{2}r'i^{2}th-ri^{2}n. Kane's name for a body forming reddish-green laminæ, produced by distilling litmic and litmylinic acids with lime. [B, 196.]

ATMIATRIA (Lat.), n. f. A^{2}t(a^{3}t)-mi^2-a^{3}t-ri(re)'a^3. Fr., *atmiatrie.* Ger., *Atmiatrie.* See ATMIDIATRICA.

ATMIC, adj. A^{2}t'mi^{2}k. Lat., *atmicus* (from ἀτμός, vapor). Pertaining to, caused by, or consisting of, vapor. [M, 13.]

ATMIDIATRICA, ATMIDIATRICE (Lat.), n's, f. of adj. *atmidiatricus* (*ars* understood). A^{2}t(a^{3}t)-mi^{2}d-i^2-a^{2}t(a^{3}t)'ri^2-ca^3, -se(ka). From ἀτμίς, vapor, and ἰατρικός, medical. Fr., *atmidiatrique.* Ger., *Dampfheilkunde.* Medical treatment by means of vapors or gases. [A, 322, 385.]—**A. pulmonalis.** Fr., *atmiatrie pulmonaire* [Martin Solon]. The treatment of pulmonary diseases with inhalations of medicated vapors. [A, 301; L, 44.]

ATMIDODES (Lat.), adj. A^{2}t(a^{3}t)-mi^{2}d-o'dez(das). Gr., ἀτμιδώδης (from ἀτμίς, vapor, and εἶδος, resemblance). Ger., *dampfigdunstig, dunstartig, dunstähnlich.* Vapor-like, vaporous. [A, 322.]

ATMIDOMETER, n. A^{2}t-mi^{2}d-o^{2}m'e^{2}t-u^{5}r. Lat., *atmidometrum* (from ἀτμίς, vapor, and μέτρον, a measure). Fr., *atmidomètre.* Ger., *Ausdünstungsmesser.* An instrument for measuring the amount of aqueous vapor in the air by determining the rate of evaporation from a moist surface. It consists of a long, thin, upright glass tube, graduated into inches, terminating below in a bulb of porous earthenware. It is filled with water, and the latter oozes through the bulb and evaporates, causing the level of the water to sink in the tube. The drier the air is, the faster does the evaporation proceed. [A, 305, 377.]

ATMIDOMÉTROGRAPHE (Fr.), n. A^{3}t-mi^{2}d-o-ma-tro-gra^{3}f. From ἀτμίς, vapor, μέτρον, a measure, and γράφειν, to write. A self-registering atmidometer. [L, 41.]

ATMIDOSCOPE, n. A^{2}t-mi^{2}d'o-skop. From ἀτμίς, vapor, and σκοπεῖν, to examine. Ger., *Atmidoskop.* Babinet's name for the atmidometer. [B, 196; L, 41.]

ATMIOMÈTRE (Fr.), n. A^{3}t-me-o-me^{2}tr. An apparatus for the employment of atmidiatrica (*q. v.*). [Jacobelli, "Gaz. hebd. de méd. et de chir.," Aug. 5, 1887, p. 505.] Cf. *Pneumatic* CABINET.

ATMISMOMETER, n. A^{2}t-mi^{2}s-mo^{2}m'e^{2}t-u^{6}r. Fr., *atmismomètre* [Délezenne]. See ATMIDOMETER.

ATMISTERION (Lat.), n. n. A^{2}t(a^{3}t)-mi^{2}s-te(ta)'ri^2-o^{2}n. From ἀτμίς, vapor. See VAPORARIUM.

ATMIZONE, n. A^{2}t'mi^{2}z-on. Meissner's name for antozone. [B, 196.]

ATMIZONIQUE (Fr.), adj. A^{3}t-mi^{2}z-o-nek. See ATMOZONICUS.

ATMOCLÉIDE (Fr.), n. A^{3}t-mo-kla-ed. An apparatus for the inhalation of gases. [L, 41.]

ATMODES (Lat.), adj. A^{2}t(a^{3}t)-mo'dez(das). See ATMIDODES.

ATMOGRAPH, n. A^{2}t'mo-gra^{3}f. From ἀτμὸς, the breath, and γράφειν, to write. An instrument invented by J. B. Sanderson for registering the movements of the chest in respiration. [D, 25.]

ATMOGRAPHY, ATMOLOGY, n's. A^{2}t-mo^{2}g'ra^3-fi^2, -mo^{2}l'-o-ji^2. Lat., *atmographia* (from ἀτμός, vapor, and γράφειν, to write), *atmologia* (from ἀτμός, and λόγος, understanding). Ger., *Atmologie.* The science of vapors or of evaporation. [A, 322; B, 49.]

ATMOLUTRON, ATMOLUTRUM (Lat.), n's n. A^{2}t(a^{3}t)-mo(mo^2)-lu^2(lu)'tro^{2}n, -tru^{3}m(tru^{4}m). From ἀτμός, vapor, and λουτρόν, a bath. Ger., *Dampfbad.* A vapor bath. [A, 322; L, 81.]

ATMOLYSIS (Lat.), n. f. A^{2}t(a^{3}t)-mo^{2}l'i^{2}s(u^{6}s)-i^{2}s. Gen., *atmolys'eos* (*-ol'ysis*). From ἀτμός, vapor, and λύσις, a liberation. The separation of air or any gas by diffusion through a porous plate. [B.]

ATMOLYZER, n. A^{2}t'mo^{2}l-iz-u^{5}r. An apparatus for the performance of atmolysis. [L, 73.]

ATMOMECHANE (Lat.), n. f. A^{2}t(a^{3}t)-mo(mo^2)-me^{2}k(mach^2)'-a^3-ne(na). From ἀτμός, vapor, and μηχανή, a machine. Fr., *machine à vapeur.* Ger., *Dampfmaschine.* A steam engine. [L, 81.]

ATMOMECHANICUS (Lat.), adj. A^{2}t(a^{3}t)''mo(mo^2)-me^{2}k-(mach^2)-a^{2}n(a^{3}n)'i^{2}k-u^{3}s(u^{4}s). Pertaining to or worked by steam power. [L, 81.]

ATMOMETER, n. A^{2}t-mo^{2}m'e^{2}t-u^{5}r. Lat., *atmometrum* (from ἀτμός, vapor, and μέτρον, a measure). Fr., *atmomètre.* Ger., *Atmometer, Dunstmesser, Dampfmesser.* See ATMIDOMETER.

ATMOPYRE, n. A^{2}t'mo-pir. From ἀτμός, vapor, and πῦρ, fire. A hollow cylinder of burnt clay, closed at the top, open at the bottom, and having numerous perforations in the sides; used in chemical manipulations, being fixed loosely over an ordinary gas-burner. The gas burns with a perfectly blue, smokeless flame, which envelops the cylinder and soon renders it incandescent. [B, 2.]

ÁTMORÁ (Bengal.), n. The *Helicteres isora.* [B, 181.]

ATMOS (Lat.), n. m. A^{2}t(a^{3}t)'mo^{2}s. Gr., ἀτμός. A vapor, an exhalation, the breath. [J; L, 94.]

ATMOSPHÆRILIA (Lat.), n. n. pl. A^{2}t(a^{3}t)-mo^{2}s-fe^{2}r(fa^3-e^{2}r)-i^{2}l'i^2-a^3. Fr., *atmosphérilies.* Ger., *Atmosphärilien.* The chemical constituents found in the atmosphere, especially considered in relation to alterations due to processes of combustion, respiration, etc., or to meteorological changes; constituting, according to some naturalists, a fourth, the gaseous, kingdom of nature. [B, 49; L, 43.]

ATMOSPHERE, n. A^{2}t'mo^{2}s-fer. Lat., *atmosphæra* (from ἀτμός, vapor, and σφαῖρα, a sphere). Fr., *atmosphère.* Ger., *Atmosphäre, Dunstkreis, Luftkreis.* It., *atmosfera.* Sp., *atmósfera.* 1. In chemistry, any special gaseous medium surrounding a solid or liquid body. [Tyndall (B, 2).] 2. As usually employed, the gaseous envelope (air) surrounding the earth. The *height* of the a. has been variously estimated. The usual estimates place it at about forty or fifty miles, but there is reason to think that it may be much greater than this. Its *weight* is estimated by the degree of pressure which it exerts in obedience to the law of gravitation. This pressure varies with the temperature, with differences of meteorological condition, and more especially with the height above the sea-level at which the estimate is made. It is measured with the barometer. At the level of the sea, and at a temperature of 0° C., the pressure is equal to that of a column of mercury 760 mm. (somewhat over 30 inches) in height; or it is equivalent to a weight of about 15 lbs. to every square inch of surface. The a. is continually varying in density, and the variations are the cause of those disturbances of atmospheric equilibrium which are apparent as winds and storms. Such alterations of density are due chiefly to changes of temperature effected in the a. either by variations in the amount of heat received from the sun or by inequality in the amount of heat radiated from different portions of the earth's surface. In its chemical composition, the a. may be considered as consisting of pure air (made up of oxygen and nitrogen in the proportion of

about 4 volumes of the latter to 1 volume of the former) mixed with variable amounts of water, carbon dioxide, ammonia, ozone, free nitric acid, nitrites, and various organic and inorganic gases and solids. Water is present in the a., either under the form of invisible aqueous vapor or as the visible finely divided particles of liquid constituting mist and clouds. It is constantly renewed by evaporation from the ocean and other bodies of water, and is also constantly exhaled from the cutaneous and respiratory surfaces of animals. The amount taken up from these sources increases with the temperature. When the a. has absorbed as much moisture as it can contain, it is said to be saturated ; and the degree of moisture, or *humidity*, of the a. at any time is measured by the ratio between the amount of moisture actually present and the amount that would be required to saturate it at the temperature of observation. This ratio is usually expressed as a percentage ; a humidity of 50, for instance, denoting that the air is half saturated with moisture. The humidity is measured with the hygrometer. When the amount of moisture present exceeds the limit of saturation, the atmospheric water is precipitated in the form of rain, snow, hail, dew, or frost. This is usually brought about by a lowering of the temperature, as an amount of aqueous vapor which is insufficient to saturate warm air will more than saturate an equal volume of colder air. *Carbon dioxide* (so-called carbonic acid) constitutes about 4 parts in 10.000 by volume of the a. It is continually renewed by the processes of animal respiration, and is continually decomposed by the processes of vegetable assimilation. Its quantity, therefore, varies according to the relative preponderance of these two factors. It is proportionately great in the a. of cities, and especially in houses where people are crowded together and ventilation is insufficient. The *ammonia* of the a. is usually present in combination. It is of importance as supplying plants with the nitrogenous material necessary for the full development of their seeds and other portions of their structure. The amount of atmospheric *ozone* is extremely small. It is produced in the evaporation of water and by the passage of an electric discharge (lightning) through the air. It is used up in the oxidation of nitrogen and organic matters. The other constituents of the a. may be regarded as purely adventitious. They consist of : (1) gaseous emanations from factories, furnaces, and dwellings ; (2) exhalations from decaying animal and vegetable matter ; (3) finely pulverized solid materials ; and (4) minute living organisms. Under the first head are included coal-gas, chlorine, hydrochloric acid, sulphur dioxide, sulphurous and sulphuric acids, and carbon monoxide. Under the second head are included marsh-gas, sulphureted hydrogen, and some of the ammoniacal compounds. Under the third head are included pulverized fragments of soil, coal-dust, and other inorganic material ; chloride of sodium and other salts left in suspension by the evaporation of sea-water ; and finely divided organic material composed chiefly of excrement and the products of putrefaction. Under the fourth head are included the pollen of plants and a variety of invisible vegetable germs which are believed to be the effective agents in the transmission of disease and the production of fermentations. The relative amount of these adventitious constituents varies greatly. Upon their amount the degree of salubrity of the a. chiefly depends, any air which contains a large proportion of them being unfit for respiration. The variations of the more constant ingredients of the a. are within narrow limits and are of secondary importance as regards wholesomeness. [B.] 3. In physics, a pressure equal to that of the a. (approximately, one of 15 lbs. to the square inch). [B.]—**Electrical a.** Lat., *atmosphæra electrica*. Fr., *atmosphère électrique*. Ger., *elektrische Atmosphäre*. The space about an electrified body in which it produces electric manifestations. [B, 49.]

ATMOSPHÈRE (Fr.), n. A^{3}t-mo-sfe^{2}r. 1. See ATMOSPHERE. 2. A non-aerial medium surrounding a body.—**A. adipeuse** (ou **cellulo-graisseuse,** ou **graisseuse) du rein.** The fatty tissue surrounding the kidney. [Guyon, "Ann. des mal. des org. génito-urin.," March, 1887, p. 129.]

ATMOSPHERIC, ATMOSPHERICAL, adj's. A^{2}t-mo^{2}s-fe^{2}r′i^{2}k, -i^{2}k-a^{2}l. Lat., *atmosphæricus*. Fr., *atmosphérique*. Ger., *atmosphärisch*. It., *atmosferico*. Sp., *atmosferico*. Of or pertaining to the atmosphere. [B.] See *A.* LINES, *A.* MOISTURE, *A.* PRESSURE, and *A.* PRECIPITATES.

ATMOSPHÉRIE (Fr.), n. A^{3}t-mo-sfa-re. The therapeutical use of air. [A, 385.]

ATMOSPHERIZATION, n. A^{2}t″mo^{2}s-fe^{2}r-i^{2}z-a′shu^{3}n. The change of venous into arterial blood by the absorption of oxygen. [K.]

ATMOSPHEROLOGY, n. A^{2}t-mo^{2}s-fe^{2}r-o^{2}l′o-ji^2. Lat., *atmosphærologia* (from ἀτμός, vapor, σφαῖρα, a sphere, and λόγος, understanding). Fr., *atmosphérologie*. Ger., *Atmosphärologie*. That department of science which relates to the atmosphere.

ATMOSPOREUS (Lat.), n. m. A^{2}t(a^{3}t)-mo^{2}s-po(po^2)′re^2-u^{3}s-(u^{4}s). From ἀτμός, vapor, and σπορεύς (from σπείρειν, to sow), a sower. Ger., *Dampfverbreiter*. Syn. : *vaporis disseminator*, *vaporisator*. An apparatus devised by J. Corrigan for disseminating vapor. ["Dublin Jour. of Med. Sci.," March, 1839, p. 94 (A, 322).]

ATMOSTATICS, n. sing. A^{2}t-mo^{2}s-ta^{2}t′i^{2}ks. Lat., *atmostatica* (from ἀτμός, vapor, and στατική [ἐπιστήμη understood], statics—*scientia* understood). Ger., *Atmostatik*. The science of gases in a state of equilibrium. [B, 78.]

ATMOSTATICUS (Lat.), adj. A^{2}t(a^{3}t)-mo^{2}s-ta^{2}t(ta^{3}t)′i^{2}k-u^{3}s-(u^{4}s). Pertaining to atmostatics or to the specific gravity of gases. [A, 322.]

ATMOZOMICUS, ATMOZONICUS (Lat.), adj. A^{2}t(a^{3}t)-mo-(mo^2)-zo^{2}m(zom)′i^{2}k-u^{3}s(u^{4}s), -zo^{2}n(zon)′i^{2}k-u^{3}s(u^{4}s). From ἀτμός, vapor, and ζῶμα, or ζώνη, a girdle. Fr., *atmizonique*, *atmozonique*. One or the other of these terms was applied by Blackadder to the wet-bulb hygrometer, from the bulb being swathed with muslin. [L, 41, 116 ; B, 195.]

ATMUS (Lat.), n. m. A^{2}t(a^{3}t)′mu^{3}s(mu^{4}s). See ATMOS.

ATNON, n. A name said to have been applied by Dioscorides to the *Lolium temulentum*. [Bory (B, 121).]

ATOA, n. A Brahman name for the *Anona*. [Bory (B, 121).]

ATOCHA (Sp.), n. A^3-to′cha^3. The *Lygeum spartum*, the *Stipa tenacissima*, or the berries of the *Oxycoccus palustris*. [B, 19, 46, 121.]

ATOCHADOS (Sp.), n. A^3-to-cha^3′dos. The *Lavandula stoechas*. [B, 46.]

ATOCIA (Lat.), n. f. A^{2}t(a^{3}t)-o(o^2)′si^2(ki^2)-a^3. Gr., ἀτοκία (from α priv., and τίκτειν, to bring forth). Fr., *atocie*. Ger., *Unfruchtbarkeit*. Sterility in the female. [A, 385.]

ATOCION (Lat.), n. n. A^{2}t(a^{3}t)-o(o^2)′si^2(ki^2)-o^{2}n. Gr., ἀτόκιον (φάρμακον understood). An old term for a medicine supposed to prevent conception. [Pliny (A, 318) ; A, 322.]

ATOCIOS (Lat.), adj. A^{2}t(a^{3}t)-o(o^2)′si^2(ki^2)-o^{2}s. Gr., ἀτόκιος. Causing barrenness. [A, 322.]

ATOCIUM (Lat.), n. n. A^{2}t(a^{3}t)-o(o^2)′si^2(ki^2)-u^{3}m(u^{4}m). 1. The *Lychnis silvestris*. [Pliny (B, 134).] 2. See ATOCION.

ATOCIUS (Lat.), adj. A^{2}t(a^{3}t)-o(o^2)′si^2(ki^2)-u^{3}s(u^{4}s). See ATOCIOS.

ATOCIVE (Fr.), n. A^3-to-sev. The *Anona squamosa*. [L, 49.]

ATOCOS, ATOCUS (Lat.), adj's. A^{2}t(a^{3}t)′o(o^2)-ko^{2}s, -ku^{3}s-(ku^{4}s). Gr., ἄτοκος. 1. Nulliparous. 2. Barren. [A, 311, 322.]

ATOLE, n. The *Bixa orellana* or the dye (annotto) obtained from it. [B, 173, 180.]

ATOLLIDÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-o^{2}l′li^{2}d-e(a^3-e^2). A family of *Hydrozoa* belonging to the order *Discomedusæ*, suborder *Cubostomæ*. [E. R. Lankester (B, 77).]

ATOM, n. A^{2}t′o^{2}m. Gr., ἄτομος (from α priv., and τέμνειν, to cut). Lat., *atomus*. Fr., *atome*. Ger., *Atom*, *Urstofftheilchen*. It., *atomo*. Sp., *átomo*. 1. In philosophy and physics, a supposititious, excessively small, indivisible, and unalterable particle of matter. By the aggregation of a's all substances were supposed to be formed, differences in their physical properties being attributed to differences in the a's themselves or in the arrangement and location of the component a's. This conception of an a. dates back to the time of Anaxagoras, Democritus, and Lucretius, and still exists in a somewhat modified form. [B.] See MOLECULE and *Atomic* THEORY. 2. In chemistry, a name given by Dalton to the smallest particle of a body, whether elementary or compound, which could be imagined to exist by itself or in combination. His definition thus includes both the a. and the molecule of recent chemistry. [B.] 3. In recent chemistry, the smallest conceivable portion of an elementary body which can preserve the chemical properties of the body, and go into and out of combination. [B.] Cf. MOLECULE.—**A'ähnlich** (Ger.). Atom-like. [L, 46.]—**A'gewicht** (Ger.). Atomic weight. [B.]—**A'refraction** (Ger.). See *Atomic* REFRACTION.—**A'wärme** (Ger.). Atomic heat. [B.]—**Chemical a.** See *A.* (2d and 3d def's).—**Compound a.** A molecule. [B, 140.]—**Elementary a.** The a. of an elementary body ; an a. in the chemical sense. [B, 140.]—**Organic a.** A molecule forming part of an organic compound. [B, 140.]—**Physical a.** See *A.* (1st def.) and MOLECULE.—**Simple a.** See *Elementary a.*—**Vortex-a.** Fr., *atome-tourbillon*. The elementary constituent of a substance according to the so-called vortex theory of matter ; a whirling ring (like the ring of smoke), being a portion of the infinitely attenuated, perfectly fluid ether supposed to permeate all space, to which portion a vortex motion has been communicated. Such a vortex-ring, produced in a perfect fluid (*i. e.*, one in which no friction exists), has been shown by Helmholtz to be indestructible and indivisible. [Tait (B, 164).]

ATOMARIUS (Lat.), adj. A^{2}t(a^{3}t)-o^{2}m-a(a^3)′ri^2-u^{3}s(u^{4}s). Fr., *atomaire*. Having colored dots (an entomological and botanical species-name). [B, 121.]

ATOMATO-FLOCCULOSUS (Lat.), adj. A^{2}t(a^{3}t)-o^{2}m-a(a^3)″-to(to^2)-flo^{2}k-ku^2(ku^4)-lo′su^{3}s(su^{4}s). From *atomus*, an atom, and *floccus*, a lock of wool. Ger., *atomatisch-flockig*. Flocculose in spots of very small size (like the pileus of an agaric). [B, 198.]

ATOMATUS (Lat.), adj. A^{2}t(a^{3}t)-o^{2}m-a(a^3)′tu^{3}s(tu^{4}s). See ATOMARIUS.

ATOME (Fr.), n. A^3-tom. See ATOM.—**A. insécable** [Dumas]. See ATOM (3d def.).—**A. sécable** [Dumas]. See MOLECULE.—**A.-tourbillon.** See *Vortex*-ATOM.

ATOMIC, adj. A^{2}t-o^{2}m′i^{2}k. Lat., *atomicus*. Fr., *atomique*. Ger., *atomisch*. It., *atomico*. Sp., *atómico*. Pertaining to atoms. [B.] See *A.* HEAT, *A.* THEORY, *A.* VOLUME, and *A.* WEIGHT.

ATOMICIAN, n. A^{2}t-o^{2}m-i^{2}sh′a^{2}n. See ATOMIST.

ATOMICISM, n. A^{2}t-o^{2}m′i^2-si^{2}sm. See ATOMISM.

ATOMICITY, n. A^{2}t-o^{2}m-i^{2}s′i^{2}t-i^2. Fr., *atomicité*. Ger., *Atomicität*. It., *atomicità*. Sp., *atomicidad*. Syn. : *combining capacity* (or *power*), *quantivalence*, *valence*, *valency*. The combining power of an element as compared with that of hydrogen ; a number representing the greatest number of atoms of hydrogen which it will replace in a compound. The degrees of a. are expressed by the terms *univalence*, or the a. of a *monad* element, which replaces one atom of hydrogen ; *bivalence*, or the a. of a *diad* element, replacing two atoms of hydrogen ; *trivalence*, or the a. of a *triad* element ; *quadrivalence*, or the a. of a *tetrad* element ; *quinquivalence*, or the a. of a *pentad* element ; *sexvalence*, or the a. of a *hexad* element ; etc. [B.]—**Absolute a.** The maximum combining capacity of an element ; expressed by a number indicating the maximum number of atoms of a univalent element with which it can combine. It is equal to the sum of the active and latent atomicities (*q. v.*). [B, 159.]—**Active a.** The combining capacity of an element actually shown in combination with another element or a radicle (*e. g.*, the active a. of nitrogen in ammonia, NH_3, is 3, although the absolute

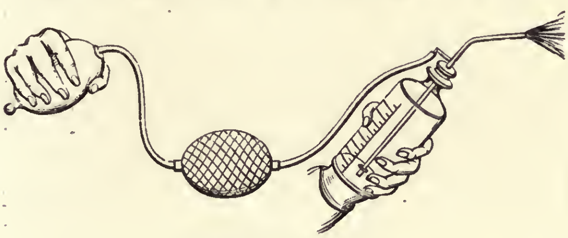
a. of nitrogen is 5). [B, 159.]—**Latent a.** The difference between the absolute a. and the active a. (*e. g.*, the latent a. of nitrogen in ammonia is 2). It expresses the number of bonds which are not attached to those of another element, and so become inter-united. Thus, ammonia may be written H—, H—, H— N >, where the 2 bonds on the right, having no connection with another element, unite with each other. [B, 159.]

ATOMIFERUS (Lat.), adj. A^{2}t(a^{3}t)-o^{2}m-i^{2}f'e^{2}r-u^{3}s(u^{4}s). From *atomus*, an atom, and *ferre*, to bear. Fr., *atomifère*. See ATOMARIUS.

ATOMIGKEIT (Ger.), n. A^3-to'mi^{2}g-kit. See ATOMICITY.

ATOMISM, n. A^{2}t'o^{2}m-i^{2}zm. Lat., *atomismus*, *atomistica* (*doctrina* understood). Fr., *atomisme*. Ger., *Atomismus*, *Atomistik*. It., Sp., *atomismo*. 1. The science or theory of atoms. [A, 302.] Cf. *Atomic* THEORY. 2. The philosophical doctrine which regards the universe as composed of atoms. [B, 49.]

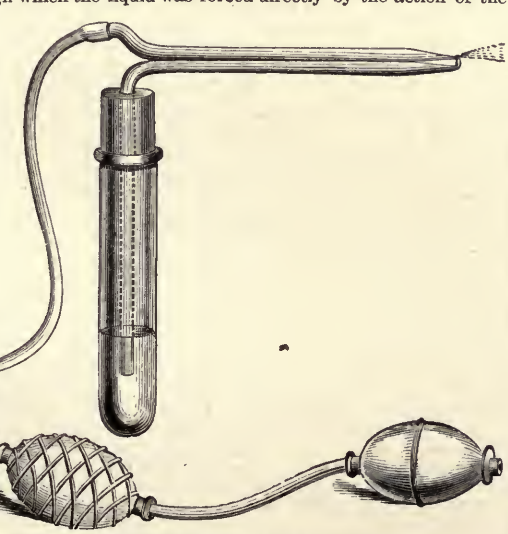
ATOMIST, n. A^{2}t'o^{2}m-i^{2}st. Lat., *atomista*. Fr., *atomiste*. Ger., *Atomist*, *Atomistiker*. One who believes in atomism. [B.]



ATOMISTIC, adj. A^{2}t-o^{2}m-i^{2}st'i^{2}k. Lat., *atomisticus*. Fr., *atomistique*. Ger., *atomistisch*. It., *atomistico*. Sp., *atomístico*. 1. Of or pertaining to an atom, consisting of a single atom, atomic. 2. Pertaining to atomism. [B.]

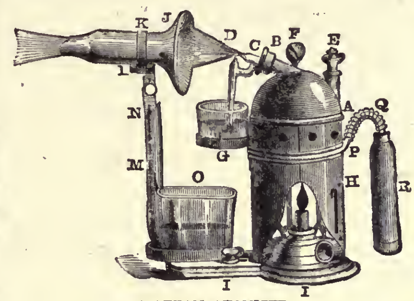
ATOMISTICS, n. sing. A^{2}t-o^{2}m-i^{2}st'i^{2}ks. Lat., *atomistica*, *atomistice* (*doctrina* understood), *atomisticum* (*systema* understood). See ATOMISM.

ATOMISTIKER (Ger.), n. A^3-to-mi^{2}st'i^{2}k-e^{2}r. See ATOMIST.



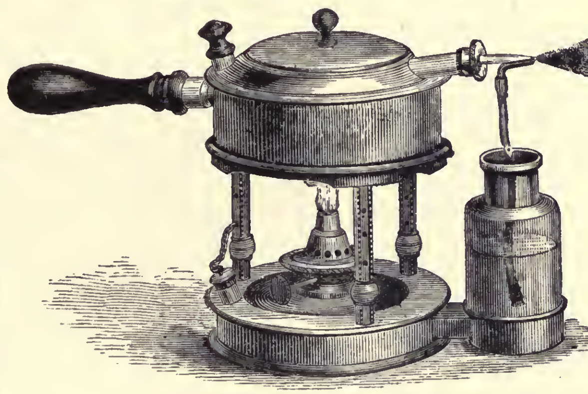
ATOMIZATION, n. A^{2}t-o^{2}m-i^{2}z-a'shu^{3}n. Fr., *atomisation*. Ger., *Zerstäuben*. The act or process of reducing a body to a state of very fine subdivision, especially that of converting a liquid into the form of spray. [B.]

ATOMIZER, n. A^{2}t'o^{2}m-i-zu^{5}r. Fr., *appareil à vapeur*, *pulvérisateur*. Ger., *Zerstäuber*, *Dampfapparat*. It., *apparecchio di vapore* (o *di spuma*), *polverizzatore*. Sp., *aparato de vapor* (ó



RICHARDSON'S ATOMIZER.

de espuma). Syn.: *spray producer* (or *apparatus*), *nebulizer*. An apparatus for throwing a jet of liquid in the form of a very fine spray. [B.] In the early a's, the spray was formed by means of a syringe having the objective end of the barrel closed with a plate of metal in which there were numerous minute perforations, through which the liquid was forced directly by the action of the



THE SUCTION ATOMIZER. (SASS'S PATTERN.)

piston. These were soon supplanted by Richardson's apparatus. This consists of a bottle to hold the liquid, closed with a stopper perforated by two tubes. One of the tubes extends nearly to the bottom of the bottle, so that its lower end is immersed in the liquid; its upper portion, which is directed at any convenient angle, ends in a fine aperture. The other tube stops short of the surface of the liquid, and is connected externally with a bulb apparatus for forcing a current of air through it. When the bulb is worked, the pressure of the air upon the surface of the liquid forces the latter out through the first tube, and, by means of a connection between the two tubes above the stopper, a portion of the current of air is diverted into the upper part of the first tube and divides the liquid into spray as it emerges. In the third form of the a., the stream of liquid, instead of being forced through the delivery tube by pressure on the surface of the liquid, is sucked up through it by the action of the current of air, the apertures of the two tubes being at right angles, the current serving at the same time to break the liquid up into spray as it reaches the aperture. Many varieties of the suction atomizer are in use, the power being furnished either by the hand-ball apparatus, by compressed air, or by a small steam-boiler, usually worked with a spirit lamp. The last-named is preferred when it is desired to warm

A STEAM ATOMIZER.

WEIR'S STEAM ATOMIZER.

the spray, as for inhalation, or to continue its production for a long time. A's are used for applying medicated liquids to diseased parts, for the production of local anæsthesia by freezing the skin, for producing sprays to be inhaled, and for disinfecting the air of an apartment or that in the immediate vicinity of a wound. [L.]

ATOMOGYNIA (Lat.), n. f. A^{2}t(a^{3}t)-o(o^2)-mo(mo^2)-ji^{2}n(gu^{6}n)'-i^2-a^3. From ἄτομος, very small, and γυνή, a female. Fr., *atomogynie*. Ger., *Atomogynie*. Richard's name for the Linnæan order *Angiospermia*. [B, 1.]

ATOMOLOGY, n. A^{2}t-o^{2}m-o^{2}l'o-ji^2. Lat., *atomologia* (from ἄτομος, an atom, and λόγος, understanding). Fr., *atomologie*. See ATOMISM (1st def.).

ATOMON (Lat.), n. n. A^{2}t(a^{3}t)'o(o^2)-mo^{3}n. A name said to have been given by Dioscorides to the *Hyoscyamus niger*. [L, 105.]

ATOMUS (Lat.), n. m. A^{2}t(a^{3}t)'o(o^2)-mu^{3}s(mu^{4}s). 1. An atom. 2. In zoology, a minute dot or point. [B, 240.]

ATON, n. The *Bunium bulbocastanum*. [Bory (B, 121); L, 105.]

ATONIA (Lat.), n. f. A^{2}t(a^{3}t)-on(o^{2}n)'i^2-a^3. Gr., ἀτονία (from α priv., and τείνειν, to stretch). See ATONY.—**A. nutritiva.** Atrophy. [Dupuytren (L, 44).]

ATONIATOUBLEPHARON (Lat.), n. f. A^{2}t(a^{3}t)-o(o^2)''ni^3-a^3-ton-ble^{2}f'a^3-ron. A Latin way of writing ἀτονία τῶν βλεφάρων (= *atonia palpebrarum*). A relaxed or paretic condition of one or both eyelids. [Beer (F).]

ATONIC, adj. A^{2}t-o^{2}n'i^{2}k. Gr., ἄτονος. Lat., *atonus*, *atonicus*. Fr., *atonique*. Ger., *atonisch*, *schwach*, *schlaff*. It., *atonico*. Sp., *atónico*. Pertaining to, caused by, causing, or affected with, atony. [A, 322.]

ATONIFICATION (Fr.), n. A^3-to-ni^2-fi^2-ka^3-si^2-o^{2}n^2. The production of atony. [L, 41.]

ATONUS (Lat.), adj. A^{2}t(a^{3}t)'o(o^2)-nu^{3}s(nu^{4}s). See ATONIC.

ATONY, n. A^{2}t'o-ni^2. Gr., ἀτονία. Lat., *atonia* (*q. v.* for deriv.). Fr., *atonie*. Ger., *Atonie*, *Erschlaffung*, *Schlaffheit*. It., *atonia*. Sp., *atonía*. Weakness, relaxation, lack of tone or of normal contractile power (said of muscles and of hollow muscular organs). [D, 35; L, 32.]—**A. of the uterus.** Lat., *atonia* (seu *adynamia*) *uteri*. Fr., *atonie de l'utérus*. According to Wigand, the second degree of diminished uterine action in parturition, the contractions being weak and imperfect, besides being too infre-

quent. [A, 20.] See also *Uterine* INERTIA and PARALYSIS *of the uterus.*—**Nutritive atony.** Fr., *atonie nutritive.* Dupuytren's term for atrophy. [A, 301.]

ATOPOS, ATOPUS (Lat.), adj's. A^{2}t(a^{3}t)'o(o^2)-po^{2}s, -pu^{3}s-(pu^{4}s). Gr., ἄτοπος (from α priv., and τόπος, a place). Out of place, strange, paradoxical (said of symptoms). [Hippocrates (A, 311).]

ATORCULARIEN (Fr.), adj. A^3-tor-ku^6-la^3-ri^2-a^{3}n^2. For deriv., see *A-** and TORCULAR. Not connected with the torcular Herophili (said of the sinuses of the dura mater). [A, 385.]

ATORSAXOCOTI, ATORSAXOCOTL CHICHILTIC, n's. A West Indian fruit like a plum. [L, 119.]

ATOVONICO EL GRANDE (Sp.), n. A^3-to-vo'ne-ko e^{2}l gra^{3}n'da. A place in Mexico, where there is a hot spring. [A, 385.]

ATOXIC, adj. A^{2}t-o^{2}x'i^{2}k. Lat., *atoxicus* (from α priv., and τοχικόν, an arrow-poison). Fr., *atoxique.* Not venomous (said of serpents). [L, 42.]

ATOYAXACOTL, n. See MACAXOCOTILIFERA.

ATRABILARIAN, n. A^{2}t-ra^3-bi^{2}l-a'ri^2-a^{2}n. A person disposed to melancholy or to biliary derangements. [L, 56.]

ATRABILARIOUS, adj. A^{2}t-ra^3-bi^{2}l-a'ri^2-u^{3}s. See ATRABILIARY.

ATRABILIARY, ATRABILIOUS, adj's. A^{2}t-ra^3-bi^{2}l'i^2-a-ri^2, -i^2-u^{3}s. Lat., *atrabilarius, atrabiliosus.* Fr., *atrabilaire, atrabilieux.* Ger., *atrabilarisch, gallsüchtig.* It., *atrabiliare.* Sp., *atrabiliar.* 1. Pertaining to, caused by, causing, or affected with, atrabilis (*q. v.*). [A, 385.] 2. Pertaining to the kidneys or the supra-renal capsules or to their blood-vessels. [A, 301.]

ATRABILIS (Lat.), n. f. A^{2}t(a^{3}t)-ra^3-bi(be)'li^{2}s. Originally written *atra* (fem. of *ater, black*) *bilis* (bile). Gr., μέλαινα χολή. Fr., *atrabile.* Ger., *Gallsucht.* Black bile; a black humor supposed by the ancients to be secreted by the supra-renal capsules and, when in excess, to give rise to melancholy. [K.]

ATRABILITÄT (Ger.), n. A^3-tra^3-bi^{2}l-i^2-tat'. The state of being atrabilious. [M, 7.]

ATRACHELIA (Lat.), n. f. sing. and n. pl. A^{2}t(a^{3}t)-ra^3-ke-(ch^{2}a)'li^2-a^3. Fr., *atrachélie* (1st def.). Ger., *Kurzhalsigkeit* (1st def.). 1. (F. sing.) absence or abnormal shortness of the neck, *i. e.*, the absence of any constriction between the head and the body. [L, 41.] 2. (N. pl.) a division of the *Heteromera* in which there is no narrowing between the head and the corselet. [L, 121.]

ATRACHELIUS, ATRACHELUS (Lat.), adj's. A^{2}t(a^{3}t)-ra^3-ke(ch^{2}a)'li^2-u^{3}s(u^{4}s), -ke(ch^{2}a)'lu^{3}s(lu^{4}s). See ATRACHELOUS.

ATRACHELOCEPHALUS (Lat.), adj. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}ch^2)''-e^{2}l(al)-o(o^2)-se^{2}f(ke^{2}f)'a^3-lu^{3}s(lu^{4}s). From ἀτράχηλος, having no neck, and κεφαλή, the head. Affected with atrachelia (1st def.); as a n., a monster so characterized. [L, 45.]

ATRACHELOUS, adj. A^{2}t-ra^3-ke'lu^{3}s. Gr., ἀτράχηλος (from α priv., and τράχηλος, the neck). Lat., *atrachelus.* Fr., *atrachèle.* Ger., *halslos, kurzhalsig.* 1. Having a very short neck. 2. Having no neck (sometimes in the sense of no head—beheaded). [Galen (A, 325).]

ATRACIUS (Lat.), adj. A^{2}t(a^3)-ra(ra^3)'si^2(ki^2)-u^{3}s(u^{4}s). Of or pertaining to Atrax (a city of Thessaly). [B, 49.] See ARS *atracia.*

ATRACTASPIDIDÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-ta^{2}s-(ta^{3}s)-pi^{2}d'i^{2}d-e(a^3-e^2). A family of venomous colubriform *Ophidii* having a cylindrical body, a short tail, the head short and not distinct from the body, and no teeth behind the poison-fangs. [L, 121.]

ATRACTENCHYMA (Lat.), n. n. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-te^{2}n^2'-ki^2(ch^{2}u^6)-ma^3. Gen., *atractenchym'atos (-tis).* From ἄτρακτος, a spindle, and χύμα, plastic material. A tissue of spindle-shaped cells. [Morren (L, 73).]

ATRACTOCÈRE (Fr.), adj. A^3-tra^{3}k-to-se^{2}r. From ἄτρακτος, a spindle, and κέρας, a horn. Having the antennæ spindle-shaped. [A, 385.]

ATRACTOÏDE (Fr.), adj. A^3-tra^{3}k-to-ed. Gr., ἀτρακτώδης. Spindle-shaped. [A, 385.]

ATRACTOSOMATA (Lat.), n. n. pl. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-to(to^2)-so^{2}m(som)'a^3-ta^3. From ἄτρακτος, a spindle, and σῶμα, the body. Fr., *atractosomes.* 1. Of Duméril, a family of fishes having the body fusiform. [L, 180.] 2. Of Blainville, all animals having the body fusiform. [L, 180.]

ATRACTOSOMATOUS, adj. A^{2}t-ra^{2}k-to-so^{2}m'a^{2}t-u^{3}s. Lat., *atractosomus.* Fr., *atractosome.* Having the body spindle-shaped. [L, 42.]

ATRACTOSOMI (Lat.), n. m. pl. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-to(to^2)-so'-mi(me). See ATRACTOSOMATA (1st def.).

ATRACTOSOMOUS, adj. A^{2}t-ra^{2}k-to-so'mu^{3}s. See ATRACTOSOMATOUS.

ATRACTYLE (Fr.), n. A^3-tra^{3}k-tel. See ATRACTYLIS.

ATRACTYLATE, n. A^{2}t-ra^{2}k'ti^{2}l-at. A salt of atractylic acid. [A, 385.]

ATRACTYLIC ACID, n. A^{2}t-ra^{2}k-ti^{2}l'i^{2}k. Fr., *acide atractylique.* Ger., *Atractylsäure.* A tribasic acid, $C_{30}H_{54}S_2O_{18}$, or a hexabasic acid, $C_{60}H_{110}S_4O_{36}$, derived from the root of the *Atractylis gummifera*, colorless, odorless, astringent, and of a sweetish-bitter taste; said by some to have the properties of a glucoside, but by others only to be converted into a glucoside, *atractylin*, by saponification with baryta or potash. An isomeric form, β a. a., occurs in the form of silky acicular crystals. [B, 2, 196, 244; "Proc. of the Am. Pharm. Assoc.," xix, p. 285 (B); Lefranc, "Rec. de mém. de méd. . . . mil.," xxii, 1869, p. 137 (B).]

ATRACTYLIDEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-ti^{2}l(tu^{6}l)-i^{2}d'e^2-e(a^3-e^2). A division of composite plants (*Amphicenianthæ*) established by Reichenbach, including *Atractylis* and some other genera. [B, 170.]

ATRACTYLIGENIN, n. A^{2}t-ra^{2}k-ti^{2}l-i^{2}j'e^{2}n-i^{2}n. Fr., *atractyligénine.* A substance produced by the decomposition of atractylin. [B, 244.]

ATRACTYLIN, n. A^{2}t-ra^{2}k'ti^{2}l-i^{2}n. Fr., *atractyline.* Ger., *Atractylin.* A sweetish gummy substance, $C_{20}H_{30}O_6$, having the properties of a glucoside, obtained by saponifying atractylic acid. By treating it with a dilute solution of potassa it is converted into atractyligenin and glucose. [B, 244.]

ATRACTYLIS (Lat.), n. f. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)'ti^{2}l(tu^{6}l)-i^{2}s. Gen., *atractyl'idos (-dis).* Gr., ἀτρακτυλίς, ἀτρακτυλλίς. Fr., *atractyle, atractylide.* Ger., *Spindelkraut.* Syn.: *Anactis* [Cassini]. A genus of perennial or annual composite herbs established by Linnæus, bearing dentate or pinnatifid leaves, frequently with spinose margins; and terminal flowers in clusters of from 1 to 4, with 2 involucres, the outer one, consisting of pinnatifid leafy scales armed with spines, separated from the inner one, which consists of spinose ovate or lanceolate scales. [B, 19.]—**A. acaulis** [Desfontaines]. See *A. gummifera.*—**A. flore luteo** [Park.], **A. fusus agrestis** [Gärtner]. See CARTHAMUS *lanatus.*—**A. gummifera** [Linnæus]. Fr., *chardonette gommeuse, grenouillette.* Syn.: *Acarna gummifera* [Willdenow], *Carthamus gummiferus* [Lamarck], *Cirsellium gummiferum* [Lamarck], *Carlina gummifera* [Lessing]. A perennial species growing on the shores of Asia Minor and of Greece, said to be the χαμαιλέων λευκός of Dioscorides. It contains atractylic acid, and furnishes a gum (acantho-mastic) which is used in Morocco. The root and the flower-receptacle are edible, and the leaves are used to make *amadou.* [B, 173, 180; L, 65, 77.]—**A. humilis** [Linnæus]. Fr., *chardon doré.* Syn.: *Cirsellium humile* [Gärtner], *Centaurea carduus* [Forskål]. A biennial species growing in France, having the same properties as *A. gummifera.* [B, 173.]—**A. lanata** [Scopoli]. See CARTHAMUS *lanatus.*—**A. lancea** [Thunberg]. Syn.: *Atractylodes lancea* (seu *alba*). A Chinese and Japanese species, with an erect branching stem; lanceolate, glabrous, ciliate leaves; and white flowers; containing a resinous substance not capable of extraction with water. The root occurs in hard, contorted pieces, wrinkled and brown externally, yellowish-white within, of a strong aromatic odor and slightly sweetish, aromatic taste. A tea, said to be stomachic and tonic, is made from it. [B, 193, 214; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 750, and xxviii, p. 148 (B).]—**A. lutea** [C. Bauhin]. See CARTHAMUS *lanatus.*—**A. ovata** [Thunberg]. Syn.: *Atractylodes ovata* (seu *rubra*). The *biaku jutsu, biakou sitzou,* or *ikera*; a Japanese and Chinese species with an erect, simple stem, glabrous, ciliate, ovate leaves, and purplish or violet flowers. The root (*biak yitz*) occurs in knotty, twisted fragments of irregular shape, about 1 inch long and ½ inch thick, pale-brown externally, whitish within, and speckled with yellowish-brown dots due to the presence of an oily, resinous substance like that of *A. lancea.* It is said to be used in Japan as a febrifuge, and in China as a tonic, stimulant, diuretic, and diaphoretic. [B, 193, 214; "Proc. of the Am. Pharm. Assoc.," xxiv, p. 749 (B).]—**A. pilosa** [Mönch], **A. vera flore luteo** [J. Bauhin]. See CARTHAMUS *lanatus.*—**Herba atractylidis.** The herb of *Carthamus lanatus.* [B, 180.]

ATRACTYLODES (Lat.), n. f. A^{2}t(a^{3}t)-ra^{2}k(ra^{3}k)-ti^{2}l(tu^{6}l)-o'-dez(das). Fr., *atractylode.* A genus of mutisiaceous plants, made by De Candolle to include the *Atractylis ovata* and *Atractylis lancea*, and referred by Bentham and Hooker to *Atractylis.* [B, 42, 170.]—**A. alba, A. lancea.** See ATRACTYLIS *lancea.*—**A. ovata, A. rubra.** See ATRACTYLIS *ovata.*

ATRACTYLSÄURE (Ger.), n. A^3-tra^{3}k-tu^{6}l'zoi-re^2. See ATRACTYLIC ACID.

ATRAGENE (Lat.), n. f. A^{2}t(a^{3}t)-ra^3-je(ga)'ne(na). Ger., *Alpenrebe.* 1. A name formerly applied to the *Clematis vitalba.* [B, 19.] 2. A genus of ranunculaceous plants closely related to *Clematis*, to which it is referred by Bentham and Hooker. [B, 42, 211.]—**A. alpina** [Linnæus]. Ger., *Alpendoppelblume.* See CLEMATIS *alpina.*—**A. americana** [Sims]. See CLEMATIS *verticillaris.*—**A. austriaca** [Scopoli]. See CLEMATIS *alpina.*—**A. flava.** A variety of *A. alpina.* [B, 173.] See CLEMATIS *alpina.*—**A. sibirica** [Linnæus]. See CLEMATIS *sibirica.*—**A. vesicatoria** [Linnæus]. The *Adonis* (*Knowltonia*) *vesicatoria.* [B, 49.]

ATRAMENTACEOUS, ATRAMENTAL, adj's. A^{2}t-ra^3-me^{2}nt-a'shu^{3}s, -me^{2}nt'a^{2}l. Inky. [B, 116.]

ATRAMENTARII (Lat.), n. m. pl. A^{2}t(a^{3}t)-ra^3-me^{2}nt-a(a^3)'-ri^2-i(e). Fr., *atramentaires.* Of Paulet, a group of *Agarici*, comprising those which grow black on maturing. [B, 121.]

ATRAMENTARIOUS, adj. A^{2}t-ra^3-me^{2}nt-a'ri^2-u^{3}s. See ATRAMENTARIUS.

ATRAMENTARIUS (Lat.), adj. A^{2}t(a^{3}t)-ra^3-me^{2}nt-a(a^3)'ri^2-u^{3}s(u^{4}s). Fr., *atramentaire.* Inky, ink-colored; a specific name applied to some plants (*e. g.*, to a species of *Agaricus* which readily melts into a sort of inky liquid). [B, 195.]

ATRAMENTOSUS (Lat.), adj. A^{2}t(a^{3}t)-ra^3-me^{2}nt-o'su^{3}s(su^{4}s). See ATRAMENTARIUS.

ATRAMENTOUS, adj. A^{2}t-ra^3-me^{2}nt'u^{3}s. See ATRAMENTARIUS.

ATRAMENTSTEIN (Ger.), n. A^3-tra^3-me^{2}nt'stin. See LAPIS *atramentarius.*

ATRAMENTUM (Lat.), n. n. A^{2}t(a^{3}t)-ra^3-me^{2}nt'u^{3}m(u^{4}m). From *ater*, black. Gr., μέλαν. Fr., *atrament.* Ink or any black liquid. In the middle ages it often denoted the philosopher's stone. [A, 318; B, 49.]—**A. album.** White vitriol (zinc sulphate). [B, 50.]—**A. citrinum.** Colcothar. [B, 50.]—**A. hispanicum.** Vitriol. [B, 50.]—**A. liberarium.** See *A. scriptorium.*—**A. pictorium.** Ink used for painting; made of sepia, ivory, or other substances. [B.]—**A. rubrum.** Red ink. [L, 119.]—**A. scriptorium, A.**

scriptorum [Celsus]. Lit., black writing-ink ; a solution of "jet-black ointment," recommended by Hippocrates to be applied to a fractured skull to aid in the detection of the line of fracture. [Nancrede (A, 63).]—**A. sutorium.** A solution of a copper salt, probably the sulphate, in water, mentioned by Pliny and Celsus, the latter of whom recommended it as a styptic ; so called because it was used by shoemakers to blacken leather. [B, 45 ; L, 41.]

ATRANORIC ACID, n. A^{2}t-ra^3-no′ri^{2}k. From *atra* (see ATER), the specific name of *Lecanora atra*. Fr., *acide atranorique*. Ger., *Atranorsäure*. A solid acid, $C_{19}H_{18}O_8$, obtained by Paterno and Oglialaro from the *Usnea barbata* and the *Lecanora atra*. [B, 207, 244.] Cf. ATRIC ACID.

ATRAPHAXIS (Lat.), n. f. A^{2}t(a^{3}t)-ra^3-fa^{2}x(fa^{3}x)′i^{2}s. Gen., *atraphax′eos* (*-is*). Gr., ἀτράφαξις. 1. The plant *Atriplex* (orach), especially the *Atriplex hortensis*. [Dioscorides (B, 180).] 2. A genus of polygonaceous shrubs of the tribe *Polygoneæ*, established by Linnæus. [B, 134.]—**A. crassifolia** [Agardh]. The *A. spinosa*, var. β. [B, 214.]—**A. densiflora** [Koch]. The *A. spinosa*, var. α. [B, 214.]—**A. Fischeri** [Jaub. and Spach]. The *A. spinosa*, var. β. [B, 214.]—**A. Karelini** [Jaub. and Spach]. The *A. spinosa*, var. γ. [B, 214.]—**A. Laxmanni** [Agardh]. The *A. spinosa*, var. β. [B, 214.]—**A. replicata.** Of Lamarck, the *A. spinosa*, var. α ; of Fischer, the *A. spinosa*, var. γ. [B, 214.]—**A. spinosa** [Linnæus]. Syn. : *Tragopyrum spinosum* [Presl]. A dwarf shrub growing in western Asia, often cultivated as an ornamental plant in Europe ; thought to be one of the sources of Oriental manna. The var. α (linnæana), the *A. spinosa* of Linnæus, is found in the Caucasus and in Armenia ; the var. β (Fischeri) is found in southern Russia and in Siberia ; the var. γ (Karelini) is found on the eastern shore of the Caspian Sea. [B, 214 ; L, 78.]

ATRAPHAXYS (Lat.), n. f. A^{2}t(a^{3}t)-ra^3-fa^{2}x(fa^{3}x)′i^{2}s(u^{6}s). Gr., ἀτράφαξυς. See ATRAPHAXIS (1st def.).

ATRATUS (Lat.), adj. A^{2}t(a^{3}t)-ra(ra^3)′tu^{3}s(tu^{4}s). From *ater*, black. Blackened. [B.]

ATRAXYLE (Lat.), n. f. A^{2}t(a^{3}t)-ra^{2}x(ra^{3}x)′i^{2}l(u^{6}l)-e(a). From a Greek name for the *Carthamus lanatus*. A section of the botanical genus *Kentrophyllum*, referred by Bentham and Hooker to *Carthamus*. [B, 42, 214.]

ATREDORA (Lat.), n. n. pl. A^{2}t(a^{3}t)-re^{2}d(rad)′o(o^2)-ra^3. See ATRETODERA.

ATREMIA (Lat.), n. f. A^{2}t(a^{3}t)-re(re^2)′mi^2-a^3. Gr., ἀτρεμία (from α priv., and τρέμειν, to tremble). Properly, absence of tremor ; applied by Neftel to a condition, real or fancied, occurring chiefly in women, in which they are unable to walk, stand, sit, or read, although the power of voluntary motion is not abolished, nor the intellect impaired. Abnormities of sensibility are present, and are intensified by any attempt at movement. ["Lancet," April 21, 1883, p. 695 (D).]

ATRESELYTRIA (Lat.), n. f. A^{2}t(a^{3}t)-rez(ras)″e^{2}l-i^{2}t(u^{6}t)′-ri^2-a^3. See ATRETELYTRIA, and for other words in *Atres-* not here given, see the corresponding words in *Atret-*.

ATRESIA (Lat.), n. f. A^{2}t(a^{3}t)-re(ra)′zi^2(si^2)-a^3. Gr., ἀτρησία (from α priv., and τρῆσις, a perforation ; said, however, to be from Ar., *alratia* or *al-ratqa* [F. B. Stephenson, "N. Y. Med. Jour.," July 24, 1886, p. 92]). Fr., *atrésie, imperforation*. Ger., *Atresie, Verschlossensein, Verschluss, Verschliessung*. It., *atresia, chiudimento, imperforazione*. Sp., *atresía, cerramiento. imperforación*. Syn. : *imperforatio*. The absence or occlusion (sometimes only an excessive narrowness) of one of the natural openings or channels of the body. [A, 322, 385.]—**Ano-rectal a., A. ani.** See *Imperforate* ANUS.—**A. ani adnata** (seu **congenita**). Fr., *imperforation congénitale de l'anus*. Ger., *angeborene Aftersperre*. A congenital imperforate state of the anus. [J. G. Albertus (D, 87).]—**A. ani vaginalis.** A. of the anus with the rectum opening into the vagina. [A. Hammer (D, 87).]—**A. ani vesicalis.** A. of the anus with the rectum opening into the bladder. [L, 54.]—**A. auris.** See ANKYLOTIA.—**A. hymenis.** An imperforate hymen. [L, 135.]—**A. ilei.** A. of the ileum. [L, 135.]—**A. intestini duodeni.** A. of the duodenum. [L, 135.]—**A. iridis.** See *A. pupillæ*.—**A. nymphæa.** A. of the nymphæ.—**A. pupillæ.** Fr., *atrésie de la pupille*. Ger., *Pupillensperre*. It., *a. della pupilla*. Sp., *atresía de la pupila*. An obsolete term for anterior synechiæ. [F.]—**A. urethræ.** A. of the urethra. [L, 135.]—**A. utero-vaginalis.** A rare condition of simultaneous a. of the uterus and vagina. [P. Müller (A, 182).]—**A. vaginæ.** A. of the vagina. [L, 135.]—**A. ventriculi.** A. of the stomach. [L, 135.]—**A. vesicæ.** A. of the urinary bladder. [L, 135.]—**A. vestibularis.** A. of the vaginal orifice in front of the hymen. [Eggel, "Mntsschr. f. Geburtsh. u. Frauenkr.," xxxi, p. 119 (A) ; A, 182.]—**A. vulvæ.** Fr., *atrésie vulvaire*. Obliteration or extreme narrowness of the vaginal orifice. [A, 385.]

ATRÉSIÉ (Fr.), adj. A^3-tra-zi^2-a. Affected with atresia. [A, 385.]

ATRETA (Lat.), n. f. of adj. *atretus* (*fœmina* understood). A^{2}t-(a^{3}t)-re(ra)′ta^3. A woman with atresia of the vaginal orifice. [A, 322.]

ATRETELYTRIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-e^{2}l-i^{2}t(u^{6}t)′-ri^2-a^3. From ἄτρητος, imperforate, and ἔλυτρον, the vagina. Fr., *atrételytrie*. Breschet's term for atresia of the vagina. [L, 41, 180.]

ATRETENTERIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-e^{2}n-te(te^2)′ri^2-a^3. From ἄτρητος, imperforate, and ἔντερον, an intestine. Fr., *atrétentérie*. Breschet's term for atresia of the intestinal canal. [L, 109, 180.]

ATRETISMUS (Lat.), n. m. A^{2}t(a^{3}t)-re^{2}t(rat)-i^{2}z(i^{2}s)′mu^{3}s-(mu^{4}s). Fr., *atrétisme*. See ATRESIA.

ATRETOBLEPHARIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-ble^{2}f-a(a^3)′ri^2-a^3. From ἄτρητος, imperforate, and βλέφαρον, the eyelid. Fr., *atrétoblépharie*. Breschet's term for symblepharon. [L, 109, 180.]

ATRETOCEPHALUS (Lat.), n. m. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-se^{2}f-(ke^{2}f)′a^3-lu^{3}s(lu^{4}s). From ἄτρητος, imperforate, and κεφαλή, the head. Fr., *atrétocéphale*. A monster having atresia of one or more of the openings situated on the head, such as the mouth, the nostrils, etc. [A, 385 ; M, 13.]

ATRETOCORMUS (Lat.), n. m. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-ko^{2}rm′-u^{3}s(u^{4}s). From ἄτρητος, imperforate, and κορμός, the trunk. Fr., *atrétocorme*. A monster having atresia of one or more of the openings situated on the trunk, such as the anus, the vulva, etc. [A, 385 ; L, 81 ; M, 13.]

ATRETOCYSIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-si^{2}s(ku^{6}s)′-i^2-a^3. From ἄτρητος, imperforate, and κυσός (= κύσθος), the anus. Fr., *atrétocysie*. Breschet's term for atresia of the anus. [L, 32, 180.]

ATRETOCYSTIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-si^{2}s(ku^{6}s)′-ti^2-a^3. From ἄτρητος, imperforate, and κύστις, the bladder. Fr., *atrétocystie*. Breschet's term for atresia of the bladder. [L, 180.]

ATRETODERA (Lat.), n. n. pl. A^{2}t(a^{3}t)-re^{2}t(rat)-o^{2}d′e^{2}r-a^3. From ἄτρητος, imperforate. A group of the tailed *Batrachia* made by S. F. Baird, characterized by gill-openings which disappear in the mature animal. [L, 204.]

ATRETOGASTRIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-ga^{2}s-(ga^{3}s)′tri^2-a^3. From ἄτρητος, imperforate, and γαστήρ, the stomach. Fr., *atrétogastrie*. Breschet's term for atresia of either the cardial or the pyloric orifice of the stomach. [L, 32, 41, 180.]

ATRETOLÆMIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-le^{2}m′-(la^3′e^{2}m)-i^2-a^3. From ἄτρητος, imperforate, and λαιμός, the gullet. Fr., *atrétolémie*. Breschet's term for atresia of the pharynx or the œsophagus. [L, 32, 41, 180.]

ATRETOMETRIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-me^{2}t-(mat)′ri^2-a^2. From ἄτρητος, imperforate, and μήτρα, the womb. Fr., *atrétométrie*. Breschet's term for atresia of the uterus. [L, 41, 180.]

ATRETOPSIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o^{2}p(op)′si^2-a^3. From ἄτρητος, imperforate, and ὤψ, the eye. Fr., *atrétopsie*. Breschet's term for atresia of the pupil. [L, 180.] See CORECLEISIS.

ATRETORRHINIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o^{2}r-ri^{2}n′i^2-a^3. From ἄτρητος, imperforate, and ῥίς, the nose. Fr., *atrétorrhinie*. Breschet's term for atresia of the nose. [L, 32, 180.]

ATRETOSTOMIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-o(o^2)-sto(sto^2)′-mi^2-a^3. From ἄτρητος, imperforate. and στόμα, the mouth. Fr., *atrétostomie*. Breschet's term for atresia of the mouth. [L, 32.]

ATRETURETHRIA (Lat.), n. f. A^{2}t(a^{3}t)-re^{2}t(rat)-u^2(u)-re-(ra)′thri^2-a^3. From ἄτρητος, imperforate, and οὐρήθρα, the urethra. Fr., *atréturéthrie*. Breschet's term for atresia of the urethra. [L, 32, 180.]

ATRETUS (Lat.), adj. A^{2}t(a^{3}t)-re(ra)′tu^{3}s(tu^{4}s). Gr., ἄτρητος. Fr., *atrésié*. Imperforate ; as a n., a person affected with atresia. [A, 322.]

ATRIA (Lat.), n. n., pl. of *atrium* (*q. v.*). A^{2}t(a^{3}t)′ri^2-a^3.

ATRIAL, adj. A^{2}t′ri^2-a^{2}l. Fr., *atrial*. Pertaining to an atrium. [Huxley (B, 53).]

ATRIC ACID, n. A^{2}t′ri^{2}k. From *atra* (f. of *ater*), the specific name of the plant from which it is obtained. Fr., *acide atrique*. Paterno's name for an acid, $C_{16}H_{18}O_5$, found by him in the *Lecanora atra*. [B, 244.] Cf. ATRANORIC ACID.

ATRICAPILLUS (Lat.), adj. A^{2}t(a^{3}t)-ri^2-ka^{2}p(ka^{3}p)-i^{2}l′lu^{3}s-(lu^{4}s). From *ater*, black, and *capillus*, a hair. Having black hair. [A, 316.]

ATRICAUDATUS (Lat.), adj. A^{2}t(a^{3}t)-ri^2-ka^{4}d(ka^3-ud)-a(a^3)′-tu^{3}s(tu^{4}s). From *ater*, black, and *cauda*, a tail. Fr., *atricaudé*. Ger., *schwarzschwanzig*. Having a black tail. [L, 42, 180.]

ATRICAULES (Fr.), n. pl. A^3-tre-kol. A group of *Fungi* made by Paulet, comprising those of dark color and firm consistence, such as *Sclerotium*, *Hypoxylon*, etc. [B, 121.]

ATRICES (Lat.), n. m., pl. of *atrix* (*q. v.*). A^{2}t(a^{3}t)′ri^2-sez(kas). An obsolete name for condylomata of the anus. [G.] Cf. ATRICI.

ATRICHÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)′ri^{2}k(ri^{2}ch^2)-e(a^3-e^2). From α priv., and θρίξ, a hair. Of Rostafinski, a section of the *Myxomycetes* (*Endosporeæ*) belonging to the *Amaurosporeæ*, including those in which the fruit is devoid of a capillitium. [B, 236.]

ATRICHI (Lat.), n. m. pl. A^{2}t(a^{3}t)′ri^{2}k(ri^{2}ch^2)-i(e). From α priv., and θρίξ, the hair. Of Sprengel, a division of gastromycetous *Fungi*, including *Eurotium*, *Coniosporium*, *Phragmidium*, *Puccinia*, and two or three other genera. [B, 170.]

ATRICHIA (Lat.), n. f. A^{2}t(a^{3}t)-ri^{2}k(ri^{2}ch^2)′i^2-a^3. Fr., *atrichie*. Ger., *Atrichie, Haarlosigkeit*. 1. Baldness, loss of hair. [G.] 2. A genus of mosses. [L, 41.]

ATRICHIASIS (Lat.), n. f. A^{2}t(a^{3}t)-ri^{2}k(ri^{2}ch^2)-i(i^2)′a^3-si^{2}s. Gen., *atrichia′seos* (*-i′asis*). See ATRICHIA (1st def.).

ATRICHOMIE [Piorry] (Fr.), n. A^3-tri^2-ko-me. Falling out of the hair. [L, 82.]

ATRICHOSIS (Lat.), n. f. A^{2}t(a^{3}t)-ri^{2}k(ri^{2}ch^2)-o′si^{2}s. Gen., *atricho′seos* (*-sis*). From α priv., and τρίχωσις, hairiness. A disease characterized by absence or loss of hair. In Auspitz's classification of skin diseases the atrichoses are a family of the trichoses, including the various forms of alopecia (*q. v.*). [G, 4.]

ATRICHUS (Lat.), adj. A^{2}t(a^{3}t)′ri^{2}k(ri^{2}ch^2)-u^{3}s(u^{4}s). Gr., ἄτριχος, ἄθριξ. Ger., *haarlos*. Not hairy, affected with loss of hair.

ATRICI (Lat.), n. m. pl. A^{2}t(a^{3}t)′ri^2-si(ke). An old term for certain small ulcers or fissures of the anus. [A, 322.] Cf. ATRICES.

ATRICOLLIS (Lat.), adj. A^{2}t(a^{3}t)-ri^2-ko^{2}l′li^{2}s. From *ater*, black, and *collum*, the neck. Fr., *atricolle*. In zoology, having the neck or the corselet black. [L, 41, 180.]

ATRICORNIS (Lat.), adj. A^{2}t(a^{3}t)-ri^{2}-ko^{2}rn'i^{2}s. From *ater*, black, and *cornu*, a horn. Fr., *atricorne*. In zoology, having the horns or the antennæ black. [L, 41, 180.]

ATRIGASTER (Lat.), adj. A^{2}t(a^{3}t)-ri^{2}-ga^{2}s(ga^{3}s)'tu^{5}r(tar). From *ater*, black, and *gaster* (γαστήρ), the belly. Fr., *atrigastre*. In zoology, having the ventral surface of the body black. [L, 109, 180.]

ATRIOPORE, n. A^{2}t'ri^{2}-o-por. For deriv., see ATRIUM and PORE. The exhalant orifice of the peribranchial chamber in the *Chordata*. [L, 210.]

ATRIO-VENTRICULAR, adj. A^{2}t''ri^{2}-o-ve^{2}n-tri^{2}k'u^{2}-la^{3}r. For deriv., see ATRIUM and VENTRICLE. Lat., *atrio-ventricularis*. See AURICULO-VENTRICULAR.

ATRIPES (Lat.), adj. A^{2}t(a^{3}t)'ri^{2}-pez(pas). From *ater*, black, and *pes*, a foot. Fr., *atripède*. In zoology, having the feet black; in botany, having the foot (or, of an agaric, the stipes) black (a specific name). [B; L, 42, 180.]

ATRIPLEX (Lat.), n. m., f., and n. A^{2}t(a^{3}t)'ri^{2}-ple^{2}x. Gen., *atrip'licis*. Gr., ἀτράφαξις. Fr., *arroche*. Ger., *Melde*. It., *atriplice*. An ancient name for the plant orache; of Linnæus, a genus of chenopodiaceous herbs or shrubs with alternate, petiolate, scurfy leaves, and spikes of closely clustered, green, monœcious or diœcious flowers, the male flower bractless, the female usually with 2 bracts, which enlarge after flowering and inclose the fruit. [B, 19, 34.]—**Aqua atriplicis fœtidi.** A distilled water made from the *Chenopodium vulvaria*. [B, 97.]—**A. alba.** 1. Of Scopoli, a variety of *A. rosea*. 2. Of Crantz, the *Chenopodium album*. 3. In pharmacy, the *A. hortensis*. [B, 180, 214.]—**A. albicans.** 1. Of Aiton (the *Exomis albicans* [Moquin], seu *atriplicoides*), a species growing at the Cape of Good Hope, having an odor like that of the musk-melon. 2. Of Besser, a variety of *A. rosea*. [B, 214.]—**A. album.** See *A. hortensis*.—**A. alimus.** See *A. halimus*.—**A. ambrosioides** [Crantz], **A. americana, A. americanum.** See CHENOPODIUM *ambrosioides*.—**A. angustifolia** [Smith]. See *A. patula*.—**A. anthelminthica** [Crantz]. See CHENOPODIUM *anthelminthicum*.—**A. arenaria** [Nuttall]. Syn.: *Obione arenaria* [Moquin]. The sand-orache; an annual herb growing in sandy places on the Atlantic coast of the United States. [B, 34, 214.]—**A. argentea.** 1. Of Schrader, the *A. rosea*, var. β. 2. Of Nuttall (the *Obione argentea*), a species growing throughout the United States west of the Mississippi River. [B, 214, 228.]—**A. astracanica** [Babington]. The *A. laciniata* [Linnæus]. [B, 214.]—**A. axillaris** [Tenore]. The *A. rosea*. [B, 214.]—**A. besserianum** [Römer and Schultes]. The *A. rosea*, var. β. [B, 214.]—**A. bonus Henricus** [Crantz]. The *Chenopodium bonus Henricus*. [B, 214.]—**A. botrys** [Crantz]. The *Chenopodium botrys*. [B, 214.]—**A. californica** [Moquin]. Syn.: *Phyllotheca californica* [Nuttall]. A California species. It is used as a substitute for soap, and its seeds are made into a sort of mush or bread by the Indians. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 214.]—**A. campestris** [Koch and Ziz.]. The *A. tatarica*, var. β *campestris*. [B, 214.]—**A. canescens.** 1. Of Nuttall, see *A. Nuttallii*. 2. Of James, a species growing throughout the United States west of the Missouri River; used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 214, 228.]—**A. canina, A. caninum.** The *Chenopodium bonus Henricus*. [B, 180.]—**A. chenopodia fœtida.** The *Chenopodium vulvaria*. [B, 200.]—**A. conduplicata.** An Australian shrub, resembling *A. hastata*, but differing from the latter in its fruit. [Von Müller, "Australas. Jour. of Pharm."; "Brit. and Colon Druggist," Jan. 8, 1887, p. 37.]—**A. confertifolia** [Watson]. Syn.: *Obione confertifolia* [Torrey]. A species growing in the western United States, from Idaho to New Mexico; used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 228.]—**A. crassifolia** [Moquin]. A species akin to *A. patula*, growing in the Altai region and furnishing soda. [B, 46, 214.]—**A. deltoidea** [Babington]. The *A. hastata*, var. α *deltoides*. [B, 214.]—**A. diffusa** [Tenore]. The *A. laciniata*, var. δ *diffusa*. [B, 214.]—**A. dioica** [Rafinesque]. The *A. purshiana*. [B, 214.]—**A. erecta** [Hudson]. The *A. patula*, var. γ *mixta*. [B, 214.]—**A. expansa** [Watson]. A species growing in Colorado, California, and New Mexico; used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 228.]—**A. fœtida, A. fœtidum.** See CHENOPODIUM *vulvaria*.—**A. fruticosum** [Nuttall]. See *A. Nuttallii*.—**A. gigantea** [Poiret]. The *A. hastata*. [B, 214.]—**A. glauca.** 1. Of Linnæus, the *Obione glauca* [Moquin]; a perennial species growing on the coasts of Spain, Algeria, Egypt, and Arabia; used, in vinous infusion, for the relief of colic. [B, 46, 173.] 2. Of Crantz, the *Chenopodium glaucum*. [B, 214.]—**A. gracilis** [Nuttall]. The *A. hastata*, var. γ. [B, 214.]—**A. halimoides** [Rafinesque]. The *A. hastata*. [B, 214.]—**A. halimus** [Linnæus]. Fr., *pourpier de mer, arroche en arbrisseau, soutenelle*. Ger., *Meermelde, Meerportulak*. Syn.: *Chenopodium halimus* [Thunberg]. A shrub 6 feet in height, growing in sandy places in southern Europe, Syria, Africa, Chili, and New Holland. The leaves are emollient, and are eaten, raw or cooked. The plant is one of those furnishing soda. [B, 173, 180.]—**A. hastata** [Linnæus]. Fr., *gosseline, trâmasse*. An annual herb growing in the Atlantic United States, South America, and Europe, with an ascending or erect stem and triangular, hastate leaves varying much in shape. The var. β *deltoides* (*A. deltoidea* [Babington]) grows in England, in cultivated fields. The var. γ *triangularis*, the var. δ *microsperma* (having very minute seeds), the var. ε *oppositifolia*, and the var. ξ *parvifolia* are also described. The plant is used for the same purposes as *A. halimus*. [B, 34, 214.]—**A. heterophylla** [Nuttall]. See *A. Nuttallii*.—**A. hortense** [Römer and Schultes], **A. hortensis** [Linnæus]. Fr., *arroche-épinard blanche, arroche des jardins, bonne-dame, érode, arrode, irrible, fallette*. Ger., *Gartenmelde, Zuckermelde, wilder Spinat*. Garden orache, mountain spinach; an annual, erect, branching herb from 3 to 5 feet high, indigenous to Siberia, but cultivated in Europe and occasionally in America. It is supposed to be the ἀνδράφαξις of Hippocrates and the ἀτράφαξις (ἀτράφαξυς) of Dioscorides. Var. β *bengalensis* (*A. bengalensis* [Lamarck]), the *bétoua du Bengal*, a Bengal variety, is somewhat reddish. The leaves are emollient and are eaten in India. Var. γ *rubra* (the var. β of Linnæus) is of a dark blood-red color all over. Var. δ *obtusifolia* is greenish all over. Var. ε *microsperma* is green or reddish, with smaller fruit. The leaves (*herba atriplicis hortensis*, seu *sativi*, seu *albi*, seu *rubri*), which are emollient, are used as a pot-herb in place of spinach. The seeds (*semen atriplicis hortensis*, etc.) are emetic and purgative. [B, 173, 180, 214.]—**A. hortensis rubra** [Bauhin]. The *A. hortensis*, var. γ *rubra*. [B, 214.]—**A. incisa** [Bieb.]. The *A. laciniata*, var. α *incisa*. [B, 214.]—**A. laciniata.** 1. Of Linnæus, the *Chenopodium laciniatum* [Thunberg] (seu *sinuatum* [Thunberg], seu *pinnatum* [Hortus]); an herbaceous species growing on the coast of Europe, in North America, and in Palestine, silvery-white all over. Var. α *incisa* is found in Corsica and the Caucasus; var. β *recurva* in Greece; var. γ *sinuata* in Venetia and France; var. δ *diffusa* in Naples; var. ε *turcomanica* in Turcomania; and var. ζ *integra* in France and Odessa. 2. Of Pursh, the *A. purshiana*. [B, 19, 214.]—**A. laciniata americana** [Torrey]. The *A. purshiana*. [B, 214.]—**A. latifolia** [Wahlenberg]. The *A. hastata*. [B, 214.]—**A. lentiformis.** A species growing in the western United States, used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B).]—**A. littorale, A. littoralis** [Linnæus]. Fr., *arroche des rivages*. Ger., *Strandmelde*. Syn.: *Chenopodium littorale* [Thunberg]. The sea-orache; an annual plant growing in waste-fields and in the sea-sand in Europe and on the shores of the great lakes in the United States. The leaves are eaten, and the plant furnishes soda. Two varieties are described: var. β *serrata*, with subserrate leaves; and var. γ *augustissima*, with linear, entire leaves. [B, 34, 46, 173, 180, 214.]—**A. marina** [Persoon]. The *A. littorale*, var. β *serrata*. [B, 214.]—**A. maritima, A. maritimum.** 1. A variety of *A. littorale*. [B, 173.] 2. Of Crantz, the *Chenopodium maritimum*, var. α *vulgaris*. [B, 214.]—**A. mexicana, A. mexicanum.** See CHENOPODIUM *ambrosioides*.—**A. microsperma.** 1. Of Waldstein and Kitaibel, the *A. hastata*, var. δ *microsperma*. 2. Of the gardens, the *A. hortensis*, var. ε *microsperma*. [B, 214.]—**A. Nuttallii** [Watson]. Syn.: *A. canescens* [Nuttall], *Obione canescens* [Moquin], *Calligonum canescens* [Pursh]. A species growing in the western United States; used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 214, 228.]—**A. oblongifolia.** 1. Of Host, the *A. hastata*, var. δ *microsperma*. 2. Of Waldstein and Kitaibel, the *A. tatarica*. [B, 214.]—**A. odora suaveolens.** See *A. odoratum*.—**A. odorata.** 1. Of Persoon, the *A. albicans*. 2. The *A. odoratum*. [B, 180, 214.]—**A. odoratum.** The *Chenopodium ambrosioides* and the *Chenopodium botrys*. [B, 180.]—**A. olida.** The *Chenopodium vulvaria*. [B, 211.]—**A. oppositifolia** [De Candolle]. The *A. hastata*, var. ε. [B, 214.]—**A. patula** [Linnæus]. A species growing in England, continental Europe, northern Africa, and the western United States. Several varieties are distinguished: var. β *microcarpa*; var. γ *mixta*, with rather an erect stem; and var. δ *obtusa*. [B, 19, 214, 228.]—**A. pedunculata** [Linnæus], **A. pedunculatum** [Römer and Schultes]. Syn.: *Obione pedunculata* [Moquin]. An annual species growing in England and continental Europe, distinguished by the fruit being pedicellate. [B, 19.]—**A. piqueres** [Lag.]. The *A. laciniata* [Linnæus]. [B, 214.]—**A. polysperma** [Tenore]. The *A. rosea*. [B, 214.]—**A. portulacoides** [Linnæus]. Fr., *arroche-pourpier*. Ger., *Portulakmelde*. Syn.: *Obione portulacoides* [Moquin], *Chenopodium portulacoides* [Thunberg], *Halimus portulacoides* [Dumortier]. The sea-purslane; a shrub or perennial herb growing on the European and African coasts of the Mediterranean, on the Atlantic coast of Europe, in Syria, and in North America. The young shoots are eaten as a relish, and the whole plant furnishes soda. [B, 173, 180, 214.]—**A. Powellii** [Watson]. A species growing in Arizona and southwestern Colorado; used like *A. californica*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 153 (B); B, 228.]—**A. prostrata** [Bouch.]. The *A. hastata*, var. γ. [B, 214.]—**A. purshiana** [Moquin]. Syn.: *A. laciniata* [Pursh], *A. laciniata americana* [Torrey]. An annual herb with an ascending, angulate stem, found in North America. [B, 214.]—**A. recurva** [Dun.]. The *A. laciniata*, var. β. [B, 214.]—**A. rosea** [Linnæus]. An annual herbaceous species growing in Europe, North America, Africa, Asia, and New Holland; comprising the varieties β *alba*, erect or procumbent, silvery-farinose; γ *crassifolia*, procumbent or ascending, with thick rhomboid or deltoid leaves; and δ *parvifolia*, ascending, subfarinose, with the leaves much smaller and subovate or subrotund. The *A. rosea* of Lamarck includes the *A. tatarica*. [B, 214.]—**A. ruberrima, A. rubra, A. rubrum.** The *A. hortense*, var. γ. [B, 214.]—**A. Sackii** [Rostk. and Schn.]. The *A. hastata*, var. γ. [B, 214.]—**A. salicina** [Pallas]. A Siberian species, perhaps a variety of *A. littorale*. [B, 214.]—**A. salina.** Of Desvaux, the *A. littorale*. [B, 214.]—**A. sativa, A. sativum.** The *A. hortense*. [B, 180.]—**A. serrata** [Hudson]. The *A. littorale*, var. β. [B, 214.]—**A. silvestris** [J. Bauhin], **A. silvestris altera** [C. Bauhin], **A. silvestris folio sinuato, etc., A. silvestris vulgatior sinuata** [Park.]. The *Chenopodium album*. [B, 211.]—**A. solanacea** [Linnæus]. The *Solanum aggregatum*. [B, 214.]—**A. spectabilis** [Ehr.]. The *A. hortense*, var. ε. [B, 214.]—**A. tatarica** [Linnæus]. An annual herb found in the Altai region, in Hungary, and in Tartary. It includes a variety (var. β *campestris*) with narrower leaves. The leaves are eaten. [B, 173, 214.]—**A. tetrandra** [Torrey]. The *A. purshiana*. [B, 214.]—**A. thunbergianum** [Römer and Schultes]. The *A. laciniata* [Linnæus]. [B, 214.]—**A. triangularis.** 1. Of Willdenow, the *A. hastata*, var. γ. 2. Of the gardens, the *A. hortensis*, var. ε. [B, 214.]—**A. turcomanica** [Turczan]. The *A. laciniata*, var. ε. [B, 214.]—**A. unctuosa, A. unctuosum.** The *Chenopodium bonus Henricus*. [B, 180.]—**A. verticillata** [Lag.]. The *A. rosea*. [B, 214.]—**A. vulvaria** [Crantz]. The *Chenopodium vulvaria*. [B, 214.]—**Herba atriplicis albæ** (seu **albi**). The herb of *A. hortense*. [B, 180.]—**Herba atriplicis americani.** The herb of *Chenopodium ambrosioides*. [B, 180.]—**Herba atriplicis**

caninæ (seu **canini**). The herb of *Chenopodium bonus Henricus.* [B, 180.]—**Herba atriplicis fœtidi.** The herb of *Chenopodium vulvaria.* [B, 180.]—**Herba atriplicis hortensis.** The herb of *A. hortense.* [B, 180.]—**Herba atriplicis mexicanæ** (seu **mexicani**). The herb of *Chenopodium ambrosioides.* [B, 180.]—**Herba atriplicis odoratæ** (seu **odorati**). The herb of *Chenopodium botrys* and of *Chenopodium ambrosioides.* [B, 180.]—**Herba atriplicis olidæ** (seu **olidi**). The herb of *Chenopodium vulvaria.* [B, 180.]—**Herba atriplicis rubri** (seu **sativi**). The herb of *A. hortense.* [B, 180.]—**Herba atriplicis silvestris.** The herb of *Chenopodium rubrum.* [B, 180.]—**Herba atriplicis unctuosi.** The herb of *Chenopodium bonus Henricus.* [B, 180.]—**Semen atriplicis albæ** (**seu albi, seu hortensis, seu rubræ, seu rubri, seu sativæ, seu sativi**). The seed of *A. hortense.* [B, 180.]

ATRIPLEXUM (Lat.), n. n. A^{2}t(a^{3}t)-ri^2-ple^{2}x′u^{3}m(u^{4}m). A name formerly applied to certain species of *Atriplex*, and by Reichenbach to a section of that genus. [B, 121.]

ATRIPLICEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ri^2-pli^{2}s(pli^{2}k)′e^2-e(a^3-e^2). Fr., *atriplicées.* 1. Of Necker, Jussieu (1842), and others, an order of dicotyledonous plants corresponding to the *Chenopodeæ* of other authors; divided by Reichenbach into the *Chenopodeæ*, *Amarantheæ*, and *Phytolacceæ*, and again into the *A.*, *Salicornieæ*, *Chenopodeæ*, and *Salsoleæ*, and by Jussieu into the *Cyclobeæ* and *Spirolobeæ.* 2. Of Meyer, Endlicher, and others, a tribe of chenopodiaceous plants (*Chenopodeæ*, *Cyclobeæ*, etc.) including *Atriplex*, *Diotis*, *Spinacia*, and one or two other genera, in which the seed has a double integument, a crustaceous or coriaceous testa, copious albumen, and a slender milky embryo. [B, 170, 214.]

ATRIPLICES [Jussieu] (Lat.), n. m., f., and n. pl. A^{2}t(a^{3}t)-ri^{2}p′li^2-sez(kas). The *Chenopodeæ* of Ventenat. [B, 170.]

ATRIPLICINEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ri^{2}p-li^2-si^{2}n(ki^{2}n)′e^2-e(a^3-e^2). Fr., *atriplicinées.* Of Persoon, a family of plants including *Atriplex*, *Chenopodium*, *Beta*, *Salsola*, *Anabasis*, *Anrederera*, and two other genera. [B, 170.]

ATRIPLICOIDES (Lat.), adj. A^{2}t(a^{3}t)-ri^{2}p-li^2-ko(ko^2)-i(e)′dez-(das). Resembling the genus *Atriplex* (*e. g.*, *Exomis a.*). [B.]

ATRIQUE (Fr.), adj. A^3-trek. See Atric acid.

ATRIROSTRIS (Lat.), adj. A^{2}t(a^{3}t)-ri^2-ro^{2}st′ri^{2}s. From *ater*, black, and *rostrum*, the beak. Fr., *atrirostre.* Having a black beak. [L, 42.]

ATRITARSE (Fr.), adj. A^3-tre-tars. From *ater*, black, and *tarsus* (*q. v.*). Having a black tarsus. [L, 41.]

ATRIUM (Lat.), n. n. A^{2}t(a^{3}t)′ri^2-u^{3}m(u^{4}m). Ger., *Vorhof.* 1. Lit., the hall, or entry, of a house; a dilatation, pouch, sinus, or ampulla. [A, 385.] 2. In the *Tunicata*, the cloaca into which the intestine opens. [B, 28.] 3. In many of the *Medusæ*, an enlargement of the somatic cavity situated at the base of the manubrium, from which the radiating canals proceed. [L, 193.] 4. An auricle of the heart, especially the main portion as distinguished from the appendix. [L, 142.] 5. The lower or main portion of the cavity of the tympanum, as distinguished from the attic; that part which is situated directly behind the tympanic membrane. [B.]—**A. anterius, A. cordis dextrum.** The right auricle of the heart. [L, 115, 175.]—**A. cordis sinistrum.** The left auricle of the heart. [L, 175.]—**A. dextrum cordis.** See *A. cordis dextrum.*—**A. genitale.** In the hermaphrodite *Planaria*, the cloaca into which the male and female organs open. [L, 121.]—**Atria mortis.** Lit., the halls of death; a term given by the ancients to those organs which are the instruments of the most important activities, and injury of which most quickly causes death; they include the heart, the lungs, and the medulla oblongata. [D, 3.]—**A. posterius** (seu **sinistrum**) **cordis.** The left auricle of the heart. [L, 115, 175.]—**A. vaginæ.** The vestibule of the vulva. [A, 182.]

ATRIVOLVO, n. The *Tribulus terrestris.* [B, 83.]

ATRIX (Lat.), n. m. A^{2}t(a^{3}t)′ri^{2}x. Gen., *at′ricis.* Thought to be from ἄθριξ, hairless. See Atrices.

ATRO-ALBUS (Lat.), adj. A^{2}t(a^{3}t)″ro(ro^2)-a^{2}l(a^{3}l)′bu^{3}s(bu^{4}s). From *ater*, black, and *albus*, white. Black and white (a botanical species-name). [B.]

ATROBILAIRE (Fr.), adj. A^3-tro-be-la^{2}r. See Atrabilious.

ATRO-CÆRULEUS (Lat.), adj. A^{2}t(a^{3}t)″ro(ro^2)-se^{2}r(ka^3-e^{2}r)-u^2(u^4)′le^2-u^{3}s(u^{4}s). From *ater*, black, and *cæruleus*, blue, azure. Ger., *schwarzblau.* Dark sky-blue. [B; L, 81.]

ATROCEPHALUS (Lat.), adj. A^{2}t(a^{3}t)-ro(ro^2)-se^{2}f(ke^{2}f)′a^3-lu^{3}s(lu^{4}s). From *ater*, black, and κεφαλή, the head. Fr., *atrocéphale.* Having a black head. [B, 195; L, 180.]

ATROCHA, ATROCHÆ (Lat.), n's n. and f. pl. A^{2}t(a^{3}t)′ro-(ro^2)-ka^3(ch^{2}a^3), -ke(ch^{2}a^3-e^2). From α priv., and τροχή, a running, a course. A division of chætopod larvæ in which the larva has at first a uniform coating of cilia which, although it may subsequently disappear from certain areas, does not break up into a series of definite bands. [L, 201.]

ATRO-CYANEUS (Lat.), adj. A^{2}t(a^{3}t)″ro(ro^2)-si(ku^6)-a^{2}n(a^{3}n)′-e^2-u^{3}s(u^{4}s). From *ater*, black, and κυάνεος, deep-blue. Dark-blue (a botanical species-name). [B.]

ATROGLYCERIC ACID, n. A^{2}t″ro-gli^{2}s-e^{2}r′i^{2}k. Fr., *acide atroglycérique.* Ger., *Atroglycerinsäure.* Syn.: *α phenyldioxypropionic acid.* A monobasic acid, $C_9H_8O_4 = C_6H_5 - C(OH)(CO.OH) - CH_2.OH$. ["Ber. d. dtsch. chem. Gesellsch.," xvi, 1883, p. 1291 (B); B, 221.]

ATROGULARIS (Lat.), adj. A^{2}t(a^{3}t)″ro(ro^2)-gu^2(gu^4)-la(la^3)′-ri^{2}s. From *ater*, black, and *gula*, the throat. Fr., *atrogulaire.* Having a black throat (a zoological species-name). [B, 195; L, 180.]

ATROLACTIC ACID, n. A^{2}t″ro-la^{2}k′ti^{2}k. From *atropic* and *lactic* (*q. v.*). Fr., *acide atrolactique.* Ger., *Atrolactinsäure.* A monobasic acid, $C_9H_{10}O_3$, or, combined with water of crystallization, $C_9H_{10}O_3 + \frac{1}{2}H_2O$. It probably has the structural composition $CH_3 - C(C_6H_5)(OH) - CO.OH$, or that of α phenyllactic acid (hence isomeric with tropic acid), and not, as Fittig and Wurster give it, $C_6H_5 - CH(CH_2.OH) - CO.OH$. ["Jahresb. . . . d. reinen Chem.," 1882, p. 372 (B); B, 225.]

ATROLACTYL, n. A^{2}t-ro-la^{2}k′ti^{2}l. The radicle, $C_9H_9O_2$, of atrolactic acid. [B.]—**A'tropeine.** Ger., *A'tropeïn.* Syn.: *pseudoatropine.* A tropeine derived from atrolactic acid; a base isomeric with atropine, $C_{17}H_{23}NO_3 = C_8H_{14}NO.C_9H_9O_2$, obtained by Roth. Like atropine, it acts as a mydriatic. ["Ber. d. dtsch. chem. Gesellsch.," xv, 1882, p. 1027 (B).]

ATRO-MARGINATUS (Lat.), adj. A^{2}t(a^{3}t)″ro(ro^2)-ma^{3}r-ji^{2}n-(gi^{2}n)-a(a^3)′tu^{3}s(tu^{4}s). From *ater*, black, and *marginare*, to inclose with a border. Fr., *atro-marginé.* Having a black margin (a species-name). [L, 41, 180.]

ATROMOS (Lat.), n. m. A^{2}t(a^{3}t)′ro(ro^2)-mo^{2}s. From α priv., and τρόμος, a trembling. Absence of shivering or of a thrill. [A, 322.] See Thoracatromos.

ATRONIC ACID, n. A^{2}t-ro^{2}n′i^{2}k. Fr., *acide atronique.* Ger., *Atronsäure.* It., *acido atronico.* A derivative, $C_{17}H_{14}O_2 =$

$$\begin{array}{l} C_6H_5 - C(CO.OH) - CH \\ \diagup \qquad\qquad\qquad\quad \| \\ C_6H_4 \text{———} CH_2 - CH \end{array}$$

, of atropic acid, acting as a dibasic acid. An isomeric form, *isatronic acid*,

$$\begin{array}{l} C_6H_5 - CH \text{————} CH \\ \diagup \qquad\qquad\qquad\qquad | \\ C_6H_4 - CH(CO.OH) - CH \end{array}$$

, is produced by the decomposition of isatropic acid. [Fittig, "Ann. d. Chem." (B).]

ATRONOL, n. A^{2}t′ro^{2}n-o^{2}l. An oily liquid, $C_{16}H_{14}$, probably

$$= \begin{array}{l} C_6H_5 - CH - CH \\ \diagup \qquad\qquad \| \\ C_6H_4 - CH_2 - CH \end{array}$$

, produced by heating isatropic acid. [B, 225; Fittig, "Ann. d. Chem." (B).]

ATROPA (Lat.), n. f. A^{2}t(a^{3}t)′ro(ro^2)-pa^3. From Ἄτροπος, one of the *Parcæ.* Fr., *belladone.* Ger., *Tollkirsche*, *Tollkraut.* A genus of herbs of the *Solanaceæ* (according to Miers, the *Atropaceæ*), distinguished by the bell-shaped, purplish corolla formed of 5 united petals, having its 5-parted calyx and its 5 stamens adherent to the tube of the corolla. The fruit is a black, succulent berry containing several seeds and having at its base the enlarged persistent calyx. [B, 19.]—**A. acuminata** [Royle]. The *A. belladonna.* [B, 212.]—**A. arborescens.** 1. Of Linnæus, the *Acnistus arborescens.* 2. Of Römer and Schultes, the *Acnistus Plumieri.* [B, 173, 214.] See Supplement.—**A. belladonna** [Linnæus]. Fr., *belladone*, *belledame*, *bouton noir*, *morelle furieuse* (ou *marine*). Ger., *Tollkirsche*, *Wolfskirsche*, *gemeines Tollkraut*, *Nachtschatten.* It., *belladonna.* Sp., *belladona*, *belladama*, *yerbamora violenta.* Syn.: *Belladonna trichotoma* [Scopoli] (seu *baccifera* [Lamarck]), *Solanum lethale* [Volck.] (seu *melano-cerasus* [C. Bauhin]). The belladonna, deadly nightshade, common dwale; an erect perennial European herb, from 3 to 5 feet high, bearing dull-green, ovate, entire leaves having a peculiar heavy odor and a fatty feel, and solitary, axillary, dull-purplish, bell-shaped flowers on drooping stalks. The fruit is a dark, shining, many-seeded berry, resembling a cherry in shape and attached in the base of the permanent calyx. The branches, the inferior surface of the leaves, and the peduncles are pubescent. The root is carrot-shaped, branching, dirty-yellow externally, white within. The root and leaves (*radix et herba belladonnæ* [seu *atropæ belladonnæ*, seu *solani furiosi* (seu *lethalis*, seu *maniaci*, seu *somniferi*)]) are official as belladonna (*q. v.*). [B, 19.]—**Atropæ belladonnæ radix.** See *Radix atropæ belladonnæ.*—**A. frutescens** [Linnæus]. See Withania *frutescens.*—**A. lethalis.** See *A. belladonna.*—**A. lutescens** [Jacquin]. The *A. belladonna.* [B, 212.]—**A. mandragora** [Linnæus]. See Mandragora *officinalis.*—**A. physaloides** [Linnæus]. See Nicandra *physaloides.*—**A. plicata** [Roth], **A. procumbens** [Cavanilles]. The *Saracha procumbens.* [B, 180, 214.]—**A'säure** (Ger.). Atropic acid. [B.]—**A. solanea.** See *A. arborescens.*—**Extractum atropæ belladonæ** [Fr. Cod.]. See *Extractum* belladonnæ *alcoholicum* (1st def.).—**Extractum de radice atropæ belladonæ** [Fr. Cod.]. See *Extractum* belladonnæ *alcoholicum* (2d def.).—**Herba atropæ belladonnæ.** The leaves of *A. belladonna.* [B, 180.] See Belladonna.—**Herba atropæ mandragoræ.** The herb of *Mandragora officinalis.* [B, 180.]—**Pulvis folii atropæ belladonæ** [Fr. Cod.]. See *Poudre de* belladone (*feuilles*).—**Radix atropæ belladonnæ.** The root of *A. belladonna.* [B, 180.] See Belladonna.—**Radix atropæ mandragoræ.** The root of *Mandragora vernalis.* [B, 180.]

THE ATROPA BELLADONNA.
[A, 327.]

ATROPACEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ro(ro^2)-pa(pa^3)′se^2(ke^2)-e(a^3-e^2). Fr., *atropacées.* Ger., *Atropaceen.* An order of plants separated by Miers from the *Solanaceæ*, including the tribes *Nicotianæ*, *Datureæ*, *Duboisieæ*, *Schizantheæ*, *Salpiglossideæ*, *Petunieæ*, *Hyoscyameæ*, *Atropeæ*, *Solandreæ*, and *Brunsfelsieæ.* [B, 19, 170.]

ATROPAL, adj. A^{2}t′ro-pa^{2}l. Gr., ἄτροπος (from α priv., and τρέπειν, to turn). Fr., *atrope.* See ORTHOTROPAL.

ATROPE, adj. A^{2}t′rop. See ORTHOTROPAL.—**A. line.** See under LINE.

ATROPÉ (Fr.), adj. A^3-tro-pa. Resembling the genus *Atropa.* [L, 41.]

ATROPEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ro(ro^2)′pe^2-e(a^3-e^2). Fr., *atropées.* A division or tribe of the *Solanieæ* (*Atropaceæ*) including the genera *Atropa*, *Nicandra*, *Cliocarpus*, *Anisodus*, *Mandragora*, and *Lycium*, according to Miers, and also, according to Reichenbach, *Lycopersicum*, *Capsicum*, and *Physalis.* [B, 170.]

ATROPHIA (Lat.), n. f. A^{2}t(a^{3}t)-ro(ro^2)′fi^2-a^3. See ATROPHY.—**A. ab alvi fluxu.** Emaciation from diarrhœa. [L, 132.]—**A. ablactatorum.** Emaciation and diarrhœa due to weaning in infants. [Cheyne (A, 316).]—**A. a crinibus.** A wasting disease of infants ascribed to the presence of stiff hairs on the back, which prick them and prevent them from sleeping. [L, 132.]—**A. acuta jecinoris.** See *Acute yellow* ATROPHY *of the liver.*—**A. a. fascino.** See *A. verminosa.*—**A. a leucorrhœa.** A. due to seminal losses in men or to leucorrhœa in women. [L, 132.]—**A. anglica.** See *A. nervosa.* —**A. a ptyalismo.** A. due to excessive salivation. [L, 132.]—**A. a sanguifluxu.** A. due to continued hæmorrhages. [L, 132.]—**A. a vomitu** [Velschius]. A. due to repeated vomiting. [L, 132.]—**A. cacochymica.** A. due to improper food. [M, 60.]—**A. cutis linearis.** See *Linear* ATROPHY *of the skin.*—**A. cutis propria.** See ADESMOSIS.—**A. facialis.** See *Facial* ATROPHY.—**A. facialis bilateralis.** See *Bilateral facial* ATROPHY.—**A. famelicorum.** A. from lack of food. [L, 83.]—**A. febrisequa.** A. consequent on a fever. [L, 132.]—**A. glandularis.** See TABES *mesenterica.*—**A. inanitorum.** A. due to excessive evacuations. [L, 83.]—**A. infantilis, A. infantum.** See TABES *mesenterica.*—**A. ingravescens musculorum.** See *Progressive muscular* ATROPHY.—**A. lateralis.** A. of one lateral half of the body. [L, 132.]—**A. linearis.** See *Linear* ATROPHY *of the skin.*—**A. mesaraica, A. mesenterica.** See TABES *mesenterica.*—**A. musculorum ingravescens.** See *Progressive muscular* ATROPHY.—**A. musculorum lipomatosa** [Seidel]. A. of muscles with the replacement of their proper structure by fat. [L, 44.]—**A. musculorum lipomatosa pseudohypertrophica.** See *Pseudo-hypertrophic spinal* PARALYSIS.—**A. musculorum progrediens** (seu **progressiva**). See *Progressive muscular* ATROPHY.—**A. musculorum progressiva pseudohypertrophica.** See *Pseudo-hypertrophic spinal* PARALYSIS.—**A. nervea.** See *Neural* ATROPHY.—**A. nervosa** [Morton]. A gradual loss of flesh and strength, with aversion to food, etc., without fever, due to exposure to an unwholesome atmosphere, depression of spirits, etc. [L, 132.]—**A. rhachitica** [F. Hoffmann]. A. due to rickets. [L, 132.]—**A. scorbutica.** A form of marasmus described by Willis, attributed to scurvy or any severe disease. [B, 117; L, 132.]—**A. senilis.** See *Senile* ATROPHY.—**A. spinalis.** See *Locomotor* ATAXIA.—**A. syphilitica.** A. due to syphilis. [M, 60.]—**A. universalis.** See *General* ATROPHY.—**A. verminosa.** A. due to intestinal worms. [L, 132.]—**A. virginiana.** See *A. nervosa.*—**Nova a. facialis** [Bergson]. See *Progressive facial* ATROPHY.

ATROPHIC, adj. A^{2}t-ro^{2}f′i^{2}k. Gr., ἄτροφος. Lat., *atrophicus.* Fr., *atrophique.* Ger., *atrophisch.* It., *atrofico.* Sp., *atrófico.* Pertaining to, affected with, due to, characterized by, or causing, atrophy. [A, 322.] Cf. MORBI *atrophici.*

ATROPHIE (Fr., Ger.), n. A^3-tro-fe, -fe′. See ATROPHY.—**Allgemeine A.** (Ger.). See *General* ATROPHY.—**Altersa'** (Ger.). See *Senile* ATROPHY.—**A. amyloïde** (Fr.). Atrophy due to amyloid degeneration. [Sarazin (L, 88).]—**A. angibromique** [Piorry] (Fr.). A diminution of the calibre of the alimentary canal. [L, 82.]—**A. avec raréfaction** (Fr.). Atrophy of a part without decrease in size or with increase. [L, 41.] Cf. PSEUDO-HYPERTROPHY.—**A. cérébrale de l'enfance** (Fr.). Localized atrophy of the brain in children, described by French writers as proceeding from a variety of causes. [D, 18.]—**A. congénitale** (Fr.). A. from arrested development. [Ball (L, 87).]—**A. du cœur avec contraction** (Fr.). A diminution of the capacity of the cavities of the heart with increase of the thickness of their walls. [Bouillaud (L, 41).]—**A. du cœur avec dilatation** (Fr.). A diminution of the thickness of the walls of the heart with dilatation of the cavities. [Bouillaud (L, 41).] —**A. du cœur simple** (Fr.). Diminution of the thickness of the walls of the heart without any noteworthy change in the capacity of its cavities. [Bouillaud (L, 41).]—**A. du placenta** (Fr.). See PLACENTA *membranacea* (2d def.).—**A. granulo-protéique** (Fr.). A form of a. due to the substitution of fine granular masses in the cells. [Sarazin (L, 88).]—**A. jaune aiguë du foie** (Fr.). See *Acute yellow* ATROPHY *of the liver.*—**A. latérale** (Fr.). See ATROPHIA *lateralis.*—**A. mésentérique** (Fr.). Syn.: *carreau.* See TABES *mesenterica.*—**A. musculaire graisseuse** (Fr.), **A. musculaire graisseuse progressive** (Fr.), **A. musculaire idiopathique** (Fr.), **A. musculaire primitive** (Fr.), **A. musculaire progressive** (Fr.). See *Pseudo-hypertrophic spinal* PARALYSIS.—**A. musculaire progressive, type Duchenne-Aran** (Fr.). True muscular atrophy due to disease of the spinal cord. [L, 191.]—**A. nerveuse** (Fr.). See ATROPHIA *nervosa*, *Neural* ATROPHY, *Neuritic* ATROPHY, and *Progressive nervous* ATROPHY.—**A. nerveuse progressive** (Fr.). See *Progressive nervous* ATROPHY.—**A. névrique** (Fr.). See *Neural* ATROPHY.—**A. par dégénérescence graisseuse** (Fr.). See *Fatty* ATROPHY.—**A. par macilence** (Fr.). See *Simple* ATROPHY.—**A. partielle de la face** [Lasègue] (Fr.). See *Progressive facial* ATROPHY.—**A. physiologique** (Fr.). See *Physiological* ATROPHY.—**A. sénile** (Fr.). See *Senile* ATROPHY.—**A. simple** (Fr.). See *Simple* ATROPHY.—**A. sympathique** (Fr.). Atrophy of one member of a pair of organs (*e. g.*, an eye) in consequence of preceding atrophy of the other. [B. Ball (L, 87).]—**Drucka'** (Ger.). Atrophy due to pressure.—**Excentrische A.** (Ger.). See *Eccentric* ATROPHY.—**Päda'** (Ger.). See *Infantile* ATROPHY.—**Progressive Muskela'** (Ger.). See *Progressive muscular* ATROPHY.

ATROPHIED, adj. A^{2}t′ro-fi^{2}d. Fr., *atrophié.* Ger., *atrophisirt.* It., *atrofizzato.* Affected with or in a state of atrophy. [D.]

ATROPHOLYSIS (Lat.), n. f. A^{2}t(a^{3}t)-ro(ro^2)-fo^{2}l′i^{2}s(u^{6}s)-i^{2}s. Gen., *atropholys'eos* (*-ol'ysis*). From ἀτροφία, want of food, and λύσις, a setting loose. Fr., *atropholyse, dissolution atrophique.* Ger., *atrophische Auflösung.* Syn.: *solutio atrophica.* Weakness and flabbiness or ulceration from lack of nourishment. [Magendie (A, 322, 385).]

ATROPHUS (Lat.), adj. A^{2}t(a^{3}t)′ro(ro^2)-fu^{3}s(fu^{4}s). Gr., ἄτροφος. 1. Atrophic. 2. Not nutritious. [A, 322.]

ATROPHY, n. A^{2}t′ro-fi^2. Gr., ἀτροφία (from α priv., and τρέφειν, to nourish). Lat., *atrophia.* Fr., *atrophie.* Ger., *Atrophie, Darrsucht.* It., *atrofia.* Sp., *atrofia.* Defective nutrition; wasting of a tissue, an organ, a part, or the whole body; in Good's nosology, a genus of the order *Marasmus*, characterized by a pale, dry, wrinkled skin and shrunken, flabby muscles, with little or no fever. [A, 322, 385; L, 83.]—**Accidental a.** A. of a part from pressure upon it or from interference with its supply of blood. [M, 66.]—**Active a.** Fr., *atrophie active.* Ger., *active Atrophie.* It., *atrofia attiva.* A general term for those forms of a. which are due to deficient or excessive functional activity, the action of certain chemical poisons or the virus of an infectious disease, to inflammations, to high fever, or to nutritive disorders of the nervous system. [D, 3.]—**Acute yellow a. of the liver.** Lat., *atrophia acuta jecinoris.* Fr., *atrophie jaune aiguë du foie.* Ger., *acute Leberatrophie.* It., *atrofia gialla acuta del fegato.* Sp., *atrofía amarilla aguda del higado.* A rare disease, more common in women than in men, and especially in pregnant women. After a simple jaundice of a few days' or weeks' duration, about which nothing peculiar is observed, symptoms indicating disease of the nervous system suddenly set in, such as delirium, convulsions, deep coma, and dilatation of the pupils, the pulse rising to 120 or 130, but the temperature remaining low until a short time before death. It is a general disease, likened by Trouss au to a pyrexia. Degeneration attacks all the glandular tissues, and, according to Virchow, is of a parenchymatous inflammatory nature. The cells of the glands become filled with granules, which are quickly followed by oily particles and drops. The disease derives its name from the yellow color of the liver and from the fact that it is usually, but not invariably, very much reduced in size. It almost always ends in death. [A, 448.] Cf. ICTERUS *gravis* and ICTERUS *gravidarum.*—**Amphiblestroid a.** Lat., *amphiblestrodatrophia.* A. of the retina. [D, 80, 90.]—**A. of the placenta.** See PLACENTA *membranacea* (2d def.).—**Bilateral facial a.** Lat., *atrophia facialis bilateralis.* A. of both sides of the face. Only one case has been recorded ("Berlin. klin. Wchnschr.," 1880, No. 31), and that occurred in a child who had been exposed to measles, but did not take that disease. [Samuel (M, 1).]—**Brown a.** Ger., *braune Atrophie.* A form of a. of the liver or the spleen observed chiefly in old people. In the liver. there is brown coloration due to pigment within the cells. In the spleen, the organ is small, dense, and reddish-brown; the capsule may be thickened and the tissue of the organ limited to trabeculæ and thickened vessels. [D, 3, 4.] See also *Simple brown a.*—**Concentric a.** Ger., *concentrische Atrophie.* A form of a. of a hollow organ, like the heart, which, proceeding from without inward, leads to a diminution of the capacity of the cavities. [D, 1, 4.]—**Cruveilhier's a.** See *Progressive muscular a.*—**Cyanotic a.** Ger., *cyanotische Atrophie.* A form of a. observed in the liver, due to long-continued and extensive interference with its circulation. [D, 66.] Cf. *Red a.*—**Degenerative a.** Fr., *atrophie dégénérative.* Ger., *Degenerationsatrophie.* A. in which there is degeneration followed by absorption of the degenerated elements. [L, 49, 87.]—**Eccentric a.** Ger., *excentrische Atrophie.* A. proceeding from within outward, leading, in the case of a hollow organ, to enlargement of the cavity. [D, 4.]—**Facial a.** See *Progressive facial a.* —**Fatty a.** Lat., *atrophia lipomatosa.* Fr., *atrophie graisseuse* (ou *lipomateuse*). Ger., *Fettatrophie.* It., *atrofia lipomatosa.* Sp., *atrofía grasienta.* A. with fatty degeneration. [D, 70.]—**Fatty muscular a.** Lat., *atrophia musculorum lipomatosa.* Fr., *atrophie musculaire graisseuse* (ou *lipomateuse*). Ger., *fettige Muskelatrophie.* See *Pseudo-hypertrophic spinal* PARALYSIS.—**General a.** Lat., *atrophia universalis.* Fr., *atrophie générale.* Ger., *allgemeine Atrophie.* Emaciation. [M.]—**Granular a.** Ger., *Granularatrophie.* A form of a. due to chronic interstitial inflammation, generally observed in the liver and the kidneys; besides the reduced size of the organs, there is an extensive formation of connective tissue, with the presence of an abundance of granular matter. [D, 4.]—**Gray a.** (of the optic papilla). A degenerative change in the optic disc in which the disc presents, on ophthalmoscopic examination, a distinctly grayish hue, different from the bluish-white or white color of simple a., with ill-defined outlines. It may result from inflammation of the retina or from disease of the central nervous system, in which the process is usually progressive, ending in more or less complete blindness. [F.]—**Halisteretic a.** A form of a. of bone; the lamellæ of the spongy tissue gradually grow thinner, but no other obvious change is to be discovered with the microscope. [Volkmann (E, 15).]—**Hemi-a.** A. limited to one lateral half of the body. See *Progressive facial a.*—**Hereditary muscular a.** A form of pseudo-hypertrophic spinal paralysis (*q. v.*) described by Erb. [L, 191.]—**Individual a.** Ger., *individuelle Atrophie.* Charcot's term for a. of single muscles in different parts. the adjacent muscles remaining intact; said to be pathognomonic of progressive muscular a. [Pick (M, 1).]—**Infantile a.** Lat., *atrophia infantilis* (seu *infantum*). Fr., *atrophie de l'enfance.* Ger., *Pädatrophie, Darrsucht der Kinder.* It., *atrofia infantile.* Sp., *atrofía infantil.* See TABES *mesenterica.*—**Infantile cerebral a.** Fr., *atrophie cérébrale de l'enfance.* A localized a. of the brain in infants; described by French writers as proceeding from a variety of processes. [D, 18.]—**Juvenile muscular a.** See *Pseudo-hypertrophic spinal* PARALYSIS.—**Linear a. of the skin.** Lat., *atrophia cutis linearis, striæ atrophicæ cutis, lineæ albicantes.* Fr., *atro-*

phie linéaire de la peau. Ger., *linearförmige Hautatrophie.* A form of a. of the cutis giving rise to stripes having the appearance of scars. In the idiopathic form, the lesions occur without obvious cause, most commonly about the nates, the hips, or the thighs, sometimes on the trunk, the neck, or the arms. The stripes are from 1 to 2 or more lines in width, curved, undulating, or irregularly broken in their course, whitish or bluish-gray, smooth, glistening, and apparently slightly depressed. In the symptomatic form, they have the same general appearance, but are most common on the abdomen, being due to over-distension of the skin by tumors, ascites, pregnancy, corpulence, etc. [G; R. W. Taylor, "N. Y. Med. Jour.," Jan. 2, 1886, p. 1.]—**Mesenteric a.** Fr., *atrophie mésentérique.* See TABES *mesenterica.*—**Myopathic muscular a.** Muscular a. due to disease of the muscles themselves, and not to a spinal lesion. [L, 191.]—**Necrobiotic a.** Ger., *nekrobiotische Atrophie.* Numerical a. (*q. v.*). [D, 3.]—**Neural a.** Fr., *atrophie névrique.* A. of a nerve due, in conjunction with sclerosis, to chronic neuritis. [D, 34.]—**Neuritic a.** A. of a part due to neuritis.—**Neurotic a.** Fr., *atrophie névrotique.* Ger., *neurotische Atrophie.* A. of a part from disorder of its trophic nerves or from lack of use (*e. g.*, the "glossy skin" produced by injury of a nerve trunk). [D, 35; Samuel (M, 1).]—**Numerical a.** That form of a. in which there is not only a diminution in the volume of the part, but also an actual decrease in the number of its elements, some of them having been destroyed. [D, 3.]—**Partial a. of the face.** Fr., *atrophie partielle de la face* [Lasègue]. See *Progressive facial a.*—**Passive a.** Ger., *passive Atrophie.* A general term for various forms of a., especially such as are due to pressure, want of nourishment, digestive and various other visceral diseases, exhausting evacuations, and certain forms of concussion. [D, 3.] Cf. *Active a.*—**Pathological a.** Fr., *atrophie pathologique.* Ger., *pathologische Atrophie.* A. due to disease, as opposed to physiological a. (*q. v.*). [D.]—**Physiological a.** Fr., *atrophie physiologique.* Ger., *physiologische Atrophie.* The natural wasting of an organ or structure that has fulfilled the normal period of its functional activity (*e. g.*, that of the thymus gland). [B. Ball (L, 87).]—**Progressive facial a.** Lat., *atrophia* (seu *hemi-atrophia*) *facialis progressiva*, *nova atrophia facialis* [Bergson], *prosopodysmorphia* [Bergson], *trophoneurosis facialis* [Romberg]. Fr., *atrophie partielle de la face* [Lasègue] (ou *du tissu conjonctif*), *aplasie lamineuse progressive.* Ger., *einseitige Gesichtsatrophie.* Syn.: *partial* [Lasègue] (or *unilateral* [Moore]) *a. of the face*, *laminar aplasia* [Lande]. An uncommon disease characterized by progressive wasting of one side of the face, generally the left side, most commonly occurring in middle-aged persons, especially women. One or more small spots of pigmentation are first noticed; then the skin grows thin, the hairs become discolored, and the cheek falls in from loss of its fatty tissue, and after a time the bony and cartilaginous structures begin to waste. It is incurable, but not dangerous to life. It is generally attributed to an affection of the cervical sympathetic nerve, but some hold that it is due to primary a. of the subcutaneous connective tissue independently of nervous influence. There is but little paralysis of motion, and the sensibility and the secretions are not usually affected. [D, 34; Seeligmüller (M, 1).]—**Progressive muscular a.** Lat., *atrophia musculorum ingravescens* (seu *progressiva*). Fr., *atrophie musculaire progressive*, *paralysie musculaire progressive atrophique.* Ger., *progressive Muskelatrophie.* It., *atrofia muscolare progressiva.* Sp., *atrofia muscular progresiva.* Syn.: *Cruveilhier's a.*, *creeping* (or *partial*, or *local*, or *wasting*) *palsy*, *Wetherbee ail*, *atrophic paralysis.* A chronic disease characterized by progressive paralysis and wasting of the muscles, usually beginning with those of the extremities and finally producing death by implicating those of respiration. Its onset is usually preceded by fibrillary contractions (*q. v.*). As it advances, contractures are apt to occur. Its pathology is not definitely known; Hammond refers it to a. of the cells of the gray matter of the anterior horns of the spinal cord. Instances have been observed of a decided hereditary tendency to the disease. [D, 34.]—**Progressive nervous a.** Fr., *atrophie nerveuse progressive.* Jaccoud's term for a. of the spinal nerve roots caused by compression by minute plates of fibrous material deposited on the spinal arachnoid. It leads to complete loss of power in all the limbs, with a. and abolition of reflex excitability. [D, 34.]—**Progressive unilateral a. of the face.** See *Progressive facial a.*—**Pseudo-hypertrophic progressive muscular a.** See *Pseudo-hypertrophic spinal* PARALYSIS.—**Pure a.** Ger., *reine Atrophie.* See *Simple a.*—**Qualitative a.** See DEGENERATION.—**Quantitative a.** See *Simple a.*—**Red a.** See *Cyanotic a.* and *Acute* CIRRHOSIS *of the liver.*—**Sclerotic a.** A term applied to deposits of connective tissue sometimes found in the substance of the heart after attacks of myocarditis. [D, 70.]—**Senile a.** Lat., *atrophia senilis.* Fr., *atrophie sénile.* Ger., *senile Atrophie*, *Altersatrophie.* A progressive wasting of the organs and tissues in general consequent on old age. [D.]—**Serous a.** [Martini]. A lesion found in the primitive muscular fasciculi in cases of sarcoma, lipomatosis, etc., in which the roundish or oval openings are filled with serous fluid and coalesce, the intervening striated tissue disappearing. [D, 3.]—**Simple a.** Lat., *atrophia simplex.* Fr., *atrophie simple.* Ger., *einfache* (oder *reine*) *Atrophie.* A simple wasting of tissue without any other pathological change. [L, 87.]—**Simple a. of the heart.** That form in which the cavities preserve their proper size as compared with one another, although the walls may undergo thinning to any extent. [D, 1.] Cf. *Simple brown a.*—**Simple brown a.** A term applied to that condition of the heart in which the muscle cells are small and contain numerous fine yellow pigment granules, but the fibres retain their normal striation. [D, 48.]—**Spinal a.** Lat., *atrophia spinalis.* See *Locomotor* ATAXIA.—**Subacute red a. of the liver.** See *Acute* CIRRHOSIS *of the liver.*—**Unilateral a. of the face, Unilateral progressive a. of the face.** See *Progressive facial a.*—**Varicose a.** See *Cyanotic a.*—**Yellow a. of the liver.** See *Acute yellow a. of the liver.*

ATROPHY, v. intr. A^{2}t'ro-fi^2. Fr., *s'atrophier.* To become atrophied.

ATROPIA (Lat.), n. f. A^{2}t(a^{3}t)-ro(ro^2)'pi^2-a^3. See ATROPINE.—**Atropiæ sulphas** [Br. Ph., 1867; U. S. Ph., 1870]. See ATROPINE *sulphate.*—**Atropiæ valerianas.** See ATROPINE *valerianate.*—**Liquor atropiæ** [Br. Ph., 1867]. A solution of 4 grains of atropine in 1 fluidrachm of rectified spirit and 7 fluidrachms of water. [B, 5.]—**Liquor atropiæ sulphatis** [Br. Ph., 1867]. See *Liquor* ATROPINÆ *sulphatis.*—**Ointment of a.** See *Unguentum* ATROPINÆ.—**Solution of a.** See *Liquor atropiæ.*—**Solution of sulphate of a.** See *Liquor* ATROPINÆ *sulphatis.*—**Sulphate of a.** [Br. Ph., 1867]. See ATROPINE *sulphate.*—**Unguentum atropiæ** [Br. Ph., 1867]. See *Unguentum* ATROPINÆ.

ATROPIC, adj. A^{2}t-ro^{2}p'i^{2}k. Lat., *atropicus.* Fr., *atropique.* It., *atropico.* Sp., *atrópico.* Of or pertaining to the genus *Atropa* or to atropine. [B.]—**A. acid.** Lat., *acidum atropicum.* Fr., *acide atropique.* Ger., *Atropasäure.* It., *acido atropico.* Sp., *ácido atrópico.* A monobasic acid, $C_9H_8O_2 = CH_2{-}C(C_6H_5){-}CO.OH$ (α phenylacrylic acid), derived from tropic acid, forming colorless monoclinic tables or acicular crystals melting between 106° and 107° C. *Isatropic acid*, which has the polymeric formula

$$C_{18}H_6O_4 = \begin{array}{l} C_6H_5 - C(CO.OH) - CH_2 \\ \qquad\qquad\qquad\qquad\quad | \\ C_6H_4 - CH(CO.OH) - CH_2 \end{array}$$

, and acts as a dibasic acid, is a crystalline substance of which two varieties, α *isatropic acid* and β *isatropic acid*, are known, differing in their melting points and in their solubility. They are both derived from *a. acid* by the action of acids. [B, 4, 225; Fittig, "Ann. d. Chem.," 206 (B).]

ATROPIDINE, n. A^{2}t-ro^{2}p'i^{2}d-en. Fr., *atropidine.* Ger., *Atropidin.* A name given to the so-called light atropine (hyoscyamine). ["Proc. of the Am. Pharm. Assoc.," xxx, p. 422 (B).]

ATROPIN (Ger.), n. A^3-tro-pen'. See ATROPINE.—**Aepfelsaures A.** Atropine malate. [B.]—**A'isirt.** See ATROPINIZED.—**A'isirung.** See ATROPINIZATION.—**A'salbe.** See *Unguentum* ATROPINÆ.—**Baldriansaures A.** Atropine valerianate. [B.]—**Chlorwasserstoffa', Chlorwasserstoffsaures A.** Atropine hydrochloride. [B, 207.]—**Chlorwasserstoffsaures A'goldchlorid.** Atropine chloroaurate. [B, 207.]—**Essigsaures A.** Atropine acetate. [B.]—**Leichtes A.** See *Light* ATROPINE.—**Pikrinsaures A.** Atropine picrate. [B.]—**Salpetersaures A.** Atropine nitrate. [B.]—**Salzsaures A.** Atropine hydrochloride. [B.]—**Schwefelsaures A.** Atropine sulphate. [B.]—**Schweres A.** See *Heavy* ATROPINE.—**Weinsaures A.** Atropine tartrate. [B.]

ATROPINA [U. S. Ph., Br. Ph., Fr. Cod., Belg. Ph., Dan. Ph., Sp. Ph., Mex. Ph.] (Lat.), n. f. A^{2}t(a^{3}t)-ro(ro^2)-pi(pe)'na^3. See ATROPINE.—**Atropinæ salicylas.** Atropine salicylate. [B.]—**Atropinæ sulphas** [U. S. Ph., Br. Ph.]. Atropine sulphate. [B.]—**Atropinæ valerianas.** Atropine valerianate. [B.]—**Liquor atropinæ sulphatis** [Br. Ph.]. Syn.: *liquor atropiæ sulphatis* [Br. Ph., 1867]. A solution of 4 grains of atropine sulphate in a fluidounce of distilled water. [B, 5.]—**Oleatum atropinæ.** A mixture of 98 parts of oleic acid and 2 of atropine. [L, 65.]—**Sulfas atropinæ** [Fr. Cod.]. Atropine sulphate. [B, 113.]—**Unguentum atropinæ** [Br. Ph.]. Syn.: *unguentum atropiæ* [Br. Ph., 1867]. An ointment made by dissolving 8 grains of atropine in ½ fluidrachm of rectified spirit, and mixing with an ounce of prepared lard. [B.]

ATROPINÆ [Miers] (Lat.), n. f. pl. A^{2}t(a^{3}t)-ro(ro^2)-pi(pe)'ne-(na^3-e^2). See ATROPACEÆ.

ATROPINE, n. A^{2}t'ro-pen. From *Atropa* (*q. v.*). Lat., *atropina* [U. S. Ph., Br. Ph., Fr. Cod., Belg. Ph., Dan. Ph., Sp. Ph., Mex. Ph.], *atropinum* [Ger. Ph., Netherl. Ph., Russ. Ph., Gr. Ph.], *atropia* [U. S. Ph., 1870; Br. Ph., 1867], *atropium.* Fr., *atropine* [Fr. Cod.]. Ger., *Atropin*, *Atropine.* It., Sp., *atropina.* An alkaloid, $C_{17}H_{23}NO_3$, obtained from *Atropa belladonna* and other solanaceous plants. It forms colorless acicular crystals having a bitter taste, dissolving in 600 parts of cold and in 35 parts of boiling water, and dissolving readily in alcohol and in chloroform. The symbol At is sometimes applied to it. Commercial a. is a mixture of true a. (heavy a., atropium verum, heavy daturine) and the isomeric hyoscyamine (light a., light daturine, duboisine, atropidine). [B, 5, 118; "Proc. of the Am. Pharm. Assoc.," xxx, p. 422 (B); "Jahresb. d. rein. Chem.," 1882, p. 512 (B).]—**Alcoolé d'a.** (Fr.). See *Teinture d'a.*—**Anhydro-a.** Atropyltropeine. [B.] See under ATROPYL.—**A. acetate.** Fr., *acétate d'a.* Ger., *Atropinacetat*, *essigsaures Atropin.* A salt of a. and acetic acid, $C_{17}H_{23}NO_3.C_2H_4O_2$, forming very soluble nacreous prisms grouped in stars. [B, 2, 196.]—**A. chloroaurate.** Fr., *chloro-aurate d'a.* Ger., *chlorwasserstoffsaures Atropingoldchlorid.* A golden-yellow crystalline mass, $C_{17}H_{23}NO_3.HCl.AuCl_3$, soluble with difficulty in water, formed by the action of trichloride of gold on a. hydrochloride. [A, 1; B, 196.]—**A. chloroplatinate.** See *A. platinichloride.*—**A. conjunctivitis.** See under CONJUNCTIVITIS.—**A. hydrochlorate, A. hydrochloride.** Fr., *chlorhydrate d'a.* Ger., *Chlorwasserstoffatropin*, *salzsaures Atropin.* A compound of a. and hydrochloric acid, $C_{17}H_{23}NO_3.HCl$, crystallizing in tufts. [Geiger (A, 1); B.]—**A. isovalerate.** See *A. valerianate.*—**A. malate.** Fr., *malate d'a.* Ger., *äpfelsaures Atropin.* A salt of a. and malic acid; the form in which a. appears to exist in the *Atropa belladonna.* [B, 8.]—**A. nitrate.** Fr., *azotate d'a.* Ger., *Atropinnitrat*, *salpetersaures Atropin.* A salt of a. and nitric acid; a syrupy, deliquescent mass. [A, 1.]—**A. picrate.** Fr., *picrate d'a.* Ger., *Atropinpikrat*, *pikrinsaures Atropin.* A yellow pulverulent precipitate compounded of a. and picric acid. [A, 1; B.]—**A. platinichloride.** Fr., *platinichlorure d'a.* Ger., *Atropinplatinchlorid.* A compound of a. hydrochloride and platinic chloride, $(C_{17}H_{23}NO_3.HCl)_2.PtCl_4$. [B, 207.]—**A. salicylate.** Lat., *atropinæ salicylas.* Fr., *salicylate a.* Ger., *salicylsaures Atropin.* A salt of a. and salicylic acid, an uncrystallizable, colloidal mass, $C_{17}H_{23}NO_3.C_7H_6O$, obtained by dissolving 289 parts of a. and 138 of salicylic acid in an excess of water, and evaporating. [B, 81.]—**A. santonate.** A compound of a. and santonic acid; recommended as a mydriatic, being said to be absolutely unirritat-

ing and to resemble homatropine in its action, 1 drop of a 1-to-2,000 solution causing dilatation of the pupil which persists for nearly twenty-four hours. [Bombelon, "Pharm. Ztg.," April, 1886; "Therap. Gaz.," June, 1886, p. 409; "N. Y. Med. Jour.," July 10, 1886, p. 56.]—**A. sulphate.** Lat., *atropinæ sulphas* [U. S. Ph., Br. Ph.], *atropiæ sulphas* [U. S. Ph., 1870; Br. Ph., 1867], *sulfas atropinæ* [Fr. Cod.], *atropinum sulfuricum* [Ger. Ph., Austr. Ph., Hung. Ph., Swiss Ph., Russ. Ph., Gr. Ph.], *sulphas atropini* [Netherl. Ph.], *sulphas atropicus* [Dan. Ph., Finn. Ph., Norweg. Ph., Swed. Ph.]. Fr., *sulfate d'a.* [Fr. Cod.]. Ger., *Atropinsulfat, schwefelsaures Atropin.* It., *solfato d'atropina.* Sp., *sulfato atrópico* [Sp. Ph.] (*ó de atropina*). A salt of a. and sulphuric acid, $(C_{17}N_{23}NO_3)_2.H_2SO_4$, a white crystalline substance having a neutral reaction and a very bitter taste, soluble in about half its weight of water and in 6 or 7 parts of alcohol. It is the salt commonly employed in medicine, being used in ophthalmic practice to dilate the pupil, paralyze the muscle of accommodation, allay inflammation in the cornea and iris, subdue pain in various inflammatory affections of the eye, etc. [A, 1; B, 5; F.] See also BELLADONNA.—**A. tartrate.** Fr., *tartrate d'a.* Ger., *Atropintartrat, weinsaures Atropin.* It., *tartrato di atropina.* Sp., *tartrato de atropina.* A salt of a. and tartaric acid; a syrupy mass. [B, 2.]—**A. valerate, A. valerianate.** Lat., *valeras atropinus* [Fr. Cod.], *valerianas atropicus* [Finn. Ph., Swed. Ph.], *atropinum valerianicum* [Russ. Ph., Gr. Ph.]. Fr., *valérianate d'a.* [Fr. Cod.]. Ger., *baldriansaures Atropin.* It., *valerianato di atropina.* Sp., *valerianato atrópico* [Sp. Ph.] (*ó de atropina*). A salt of a. and valerianic acid, $C_{17}H_{23}NO_3.C_5H_{10}O_2$, occurring under the form of minute white crystals soluble in water. [B, 10.] See also VALERIANAS *atropicus saccharatus.*—**Azotate d'a.** (Fr.). See *A. nitrate.*—**Chlorhydrate d'a.** (Fr.). See *A. hydrochloride.*—**English a.** See ATROPINUM *usu anglico paratum.*—**Gouttes d'a.** (Fr.). See *Teinture d'a.*—**Granules d'a.** [Fr. Cod.] (Fr.). Granules made of sugar of milk, gum arabic, honey, and water, together with such an amount of a. sulphate as the prescriber may direct. [B, 113.]—**Heavy a.** Ger., *schweres Atropin.* True a. [B.] See under *A.*—**Light a.** Ger., *leichtes Atropin.* Hyoscyamine. [B.] See under *A.*—**Ointment of a.** See *Unguentum* ATROPINÆ.—**Oleate of a.** See *Oleatum* ATROPINÆ. —**Pommade d'a.** (Fr.). See *Unguentum* ATROPINÆ.—**Solution of a.** See *Liquor* ATROPIÆ.—**Solution of a. sulphate.** See *Liquor* ATROPINÆ *sulphatis.*—**Teinture d'a.** (Fr.). A solution of 1 part of a. sulphate in 40 parts of dilute alcohol. [B, 92.]—**Valérate d'a.** [Fr. Cod.] (Fr.). See *A. valerianate.*

ATROPINEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ro(ro^2)-pi^{2}n'e^2-e(a^3-e^2). Fr., *atropinées.* Ger., *Atropineen.* Of Duval, a division of the *Solanaceæ* including *Atropa, Mandragora,* and several other genera. [B, 170, 214.]

ATROPINIZATION, n. A^{2}t''ro-pi^{2}n-i^{2}z-a'shu^{3}n. Fr., *atropinisation.* Ger., *Atropinisirung.* The act or process of bringing the organism, or a part of it, under the influence of atropine. [B.]

ATROPINIZED, adj. A^{2}t'ro-pi^{2}n-izd. Fr., *atropinisé.* Ger., *atropinisirt.* Treated or poisoned with atropine, or brought under its influence. [B.]

ATROPINUM [Ger. Ph., Netherl. Ph., Russ. Ph., Gr. Ph.] (Lat.), n. n. A^{2}t(a^{3}t)-ro(ro^2)-pi(pe)'nu^{3}m(nu^{4}m). See ATROPINE.—**A. hydrochloricum.** See ATROPINE *hydrochloride.*—**A. purum.** See ATROPINE.—**A. salicylicum.** See ATROPINE *salicylate.*—**A. sulfuricum** [Ger. Ph., Austr. Ph., Hung. Ph., Swiss Ph., Russ. Ph., Gr. Ph.]. See ATROPINE *sulphate.*—**A. sulfuricum album neutrale crystallisatum.** Pure white crystalline sulphate of atropine. [Merck, "Dtsch. Med.-Ztg.," Feb. 11, 1886, p. 137.]—**A. usu anglico paratum.** The so-called "English atropine," made (mostly in Germany) for the English market. [Merck, *l. c.*]—**A. valerianicum** [Russ. Ph., Gr. Ph.]. See ATROPINE *valerianate.*—**Liquor atropini.** See *Liquor* ATROPIÆ.—**Liquor atropini sulfurici.** See *Liquor* ATROPINÆ *sulphatis.*—**Sulphas atropini** [Netherl. Ph.]. See ATROPINE *sulphate.*—**Unguentum atropini.** See *Unguentum* ATROPINÆ.

ATROPINUS (Lat.), adj. A^{2}t(a^{3}t)-ro(ro^2)-pi(pe)'nu^{3}s(nu^{4}s). Of or pertaining to the genus *Atropa* (see ATROPINÆ) or to atropine (see VALERAS *a.*). [B.]

ATROPION (Fr.), n. A^3-tro-pe-o^{2}n^2. See ATROPINE.

ATROPIS (Lat.), n. f. A^{2}t(a^{3}t)'ro(ro^2)-pi^{2}s. Trinius's name for a section of the botanical genus *Poa* (= *Puccinellia* [Parlatore]), now referred to *Glyceria.* [B, 42.]—**A. californica.** The squirrel-grass; a California species used as fodder. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 604 (B).]

ATROPISM, n. A^{2}t'ro-pi^{2}zm. Fr., *atropisme.* Poisoning with atropine or with belladonna. [A, 385; L, 44.]

ATROPIUM (Lat.), n. n. A^{2}t(a^{3}t)-ro(ro^2)'pi^2-u^{3}m(u^{4}m). Atropine. [B, 196.]—**A. verum.** True (heavy) atropine. ["Proc. of the Am. Pharm. Assoc.," xxx, p. 422 (B).]

ATROPIVORUS (Lat.), adj. A^{2}t(a^{3}t)-ro(ro^2)-pi^2'vo(wo^2)-ru^{3}s(ru^{4}s). From *atropos* (a species-name), and *vorare,* to devour. Fr., *atropivore.* Feeding on the larvæ of the *Sphinx atropos* (said of dipterous insects). [L, 41, 116, 180.]

ATROPOIDES (Lat.), adj. A^{2}t(a^{3}t)-ro(ro^2)-po(po^2)-i(e)'dez(das). From Ἄτροπος (see ATROPA), and εἶδος, resemblance. Ger., *tollkirschenartig.* Resembling the genus *Atropa* (a botanical species-name). [B, 180.]

ATROPOUS, adj. A^{2}t'ro-pu^{3}s. From ἄτροπος, not to be turned. See ORTHOTROPAL.

ATROPTERUS (Lat.), adj. A^{2}t(a^{3}t)-ro^{2}p'te^{2}r-u^{3}s(u^{4}s). From *ater,* black, and πτερόν, a wing. Fr., *atroptère.* Ger., *schwarzflügelicht.* Having black wings. [L, 109, 180.]

ATROPUNCTUS (Lat.), adj. A^{2}t(a^{3}t)-ro(ro^2)-pu^{3}nk(punk)'tu^{3}s(tu^{4}s). From *ater,* black, and *pungere,* to prick in. Dotted with black points (a botanical species-name). [B.]

ATROPURPUREUS (Lat.), adj. A^{2}t(a^{3}t)''ro(ro^2)-pu^{5}r(pur)-pu^2(pu)'re^2-u^{3}s(u^{4}s). From *ater,* black, and *purpureus,* purple. Blackish-purple (a botanical descriptive and species name). [B, 74, 121.]

ATROPYL, n. A^{2}t'ro-pi^{2}l. The radicle C_9H_7O, found in atropic acid. [B.]—**A'tropeine.** Ger., *Atropyltropeïn.* Syn.: *anhydro-atropine.* A monacid base, $C_{17}H_{21}NO_2 = C_8H_{14}NO.C_9H_7O$, obtainable as an oily liquid. [Ladenberg, "Ber. d. dtsch. chem. Gesellsch.," xiii, 1880, p. 1085 (B).]

ATRORUBENS, ATRORUFUS (Lat.), adj's. A^{2}t(a^{3}t)-ro(ro^2)-ru^2(ru)'be^{2}nz(bans), -fu^{3}s(fu^{4}s). From *ater,* black, and *rubere,* to be red, or *rufus,* red. Of a dark-reddish color (botanical descriptive and species names). [B, 74, 121.]

ATROSANGUINEUS (Lat.), adj. A^{2}t(a^{3}t)''ro-sa^{2}n^2(sa^{3}n^2)-gwi^{2}n'e^2-u^{3}s(u^{4}s). From *ater,* black, and *sanguineus,* blood-red. Of a dark blood-red color. [B, 121.]

ATROSIA (Lat.), n. f. A^{2}t(a^{3}t)-ro'si^2-a^3. See ATROSIN.

ATROSIN, n. A^{2}t'ro-si^{2}n. Fr., *atrosine.* A red coloring matter found in the *Atropa belladonna.* [B, 10, 14.]

ATROSTOMUS (Lat.), adj. A^{2}t(a^{3}t)-ro^{2}s'to(to^2)-mu^{3}s(mu^{4}s). From *ater,* black, and στόμα, the mouth. Fr., *atrostome.* Ger., *schwarzmündig.* In zoology, having a black mouth. [L, 109.]

ATROTOMENTOSUS (Lat.), adj. A^{2}t(a^{3}t)''ro(ro^2)-to(to^2)-me^{2}nt-o'su^{3}s-(su^{4}s). From *ater,* black, and *tomentum,* stuffing (such as hair, feathers, etc.). Dark-colored and downy. [B, 74.]

ATROVIPARE (Fr.), adj. A^{3}t-ro-ve-pa^{3}r. From *ater,* black, *ovum,* an egg, and *parire,* to lay. Laying brown eggs. [L, 41.]

ATROVIRENS, ATROVIRIDIS (Lat.), adj's. A^{2}t(a^{3}t)-ro-(ro^2)-vi(we)'re^{2}nz(rans), -vi^{2}r(wi^{2}r)'i^{2}d-i^{2}s. From *ater,* black, and *virere,* to be green, or *viridis,* green. Ger., *schwarzgrün.* Dark green (botanical descriptive and species names). [B, 74, 121.]

ATROZOPHYTUM (Lat.), n. n. A^{2}t(a^{3}t)-ro(ro^2)-zo^{2}f(zof)'i^{2}t-(u^{6}t)-u^{3}m(u^{4}m). See ATHROZOPHYTUM.

ATRYPTODONTOPHOLIDOPHIDES (Lat.), n. m. pl. A^{2}t-(a^{3}t)-ri^{2}p(ru^{6}p)'''to(to^2)-do^{2}nt''o(o^2)-fo^{2}l-i^{2}d-o^{2}f'i^{2}d-ez(as). From α priv., τρυπᾶν, to pierce, ὀδούς, a tooth, φολίς, a reptile's scale, and ὄφις, a serpent. A family of reptiles having scales, but without venomous fangs. [J. A. Ritgen (L, 180).]

ATSCHI, n. 1. See ACHAR. 2. The *Capsicum annuum.* [B, 121.]

ATSCHIER (Ger.), n. A^{3}t'sher. See ATS HIER.

ATS HIER (Bengal.), n. An East Indian poison derived from a species of *Strychnos.* [A, 259; B, 121.]

ATSIAAR, n. See ACHAR.

ATTA (Lat.), n. m. A^{2}t(a^{3}t)'ta^3. Perhaps from ἄττειν (= ἀίσσειν), to glide. An ancient name for a person who, on account of some trouble with the legs or feet, walked without bringing the heel to the ground. [Festus (A, 312, 325).]

ATTA (Lat.), n. f. A^{2}t(a^{3}t)'ta^3. Of Martius, a section of the botanical genus *Anona,* characterized by the absence of interior petals or by their being small and scale-like. [B, 121.]

ATTACHE (Fr.), n. A^{3}t-ta^{3}sh. A portion of bone to which a tendon, a ligament, or the like, is attached. [A, 385.]

ATTACHMENT, n. A^{2}t-ta^{2}ch'me^{2}nt. Fr., *attachement.* Ger., *Zuneigung.* It., *attaccamento.* Sp., *afección.* According to Gall, a cerebral trait having its seat near that of philoprogenitiveness, leading the individual to become fond of certain other individuals or of certain localities. [A, 301.]

ATTACK, n. A^{2}t-ta^{2}k'. Gr., εἰσβολή. Lat., *insultus.* Fr., *attaque.* Ger., *Attake, Anfall, Angriff.* It., *attacco.* Sp., *ataque.* The onset of a disease; an individual illness; a paroxysm or outbreak of a constitutional or recurrent disease. [A, 385.]

ATTAGAR, n. An alchemical name for a stone or mineral. [B, 50.]

ATTAGAS, ATTAGEN, ATTAGENA (Lat.), n's m., m., and f. A^{2}t(a^{3}t)'ta^3-ga^{2}s(ga^{3}s), -je^{2}n(gan), a^{2}t(a^{3}t)-ta^3-je(ga)'na^3. Gen., *at'tagæ, attage'nis, -ge'næ.* Gr., ἀτταγᾶς, ἀτταγήν. Ancient names for a game bird of the grouse kind, supposed to have been the hazel-hen, or heath-cock (*Tetrao bonasia* [Linnæus]; Fr., *francolin;* Ger., *Haselhuhn*), esteemed a great delicacy and used also in medicine. [A, 311, 312, 322, 325, 385.]

ATTAGENUS (Lat.), n. m. A^{2}t(a^{3}t)-ta^3-je(ga)'nu^{3}s(nu^{4}s). Fr., *attagène.* A genus of coleopterous insects, the larvæ of many species of which prey upon dried animal substances. [Latreille (L, 49).]

ATTAINT, n. A^{2}t-tant'. Fr., *atteinte.* An injury of a horse's leg caused by over-reaching. [A, 385; White (L, 56).]

ATTALEA (Lat.), n. f. A^{2}t(a^{3}t)-ta(ta^3)'le^2-a^3. Fr., *attalée.* A genus of palm-trees of the tribe *Cocoineæ,* subtribe *Attaleeæ,* established by Humboldt and Bonpland, consisting of trees of moderate height, with a thick, irregularly ringed stem, large feathery leaves, yellow flowers, and an ovate or elliptical fruit with a fibrous-woody cortex and 3 edible seeds. [B, 19, 49.]—**A. Cohune** [Martius]. A Honduras species, growing about 40 feet high. A sort of wine is made from the juice of the stem, and the nuts (cohoun-nuts) furnish a fatty matter which can be substituted for cocoa-nut oil. [B, 19, 49.]—**A. compta** [Martius]. The Pindova palm, a Brazilian species having an edible fruit. [B, 19, 173.]—**A. excelsa.** A species the nuts of which are used like those of *A. speciosa.* [B, 19.]—**A. funifera** [Martius]. The piassata palm (chiqui-chiqui, *piassaba*); a Brazilian tree from 20 to 30 feet high, with very long leaves, from the base of the petioles of which, and of the spathes, a very strong, durable fibre (monkey-grass) is obtained. The nuts (coquilla-nuts) are very hard and are turned into small articles such as knobs. [A, 327; B, 75, 173.]—**A. speciosa** [Martius]. A species

furnishing nuts which are burned in order to dry the juice of the caoutchouc-tree (*Siphonia elastica*). [B, 19, 180.]

THE ATTALEA FUNIFERA. [A, 327.]

ATTALEEÆ (Lat.), n. f. pl. A^{2}t(a^{3}t)-ta(ta^3)-le(le^2)'e^2-e(a^3-e^2). A subtribe of cocoineous palms including the genus *Attalea*. [B, 245.]

ATTALEH, n. A Barbary name for a tree that furnishes a variety of gum arabic known as Barbary gum. [Jackson (A, 308).]

ATTALÉRIE (Fr.), n. A^{3}t-ta^3-la-re. See ATALERRIE.

ATTALICUM (Lat.), n. n. A^{2}t(a^{3}t)-ta^{2}l(ta^{3}l)'i^{2}k-u^{3}m(u^{4}m). Gr., ἀτταλικόν. See ATTALUS.

ATTALO, n. See ANNATTO.

ATTALUS (Lat.), n. m. A^{2}t(a^{3}t)'ta^3-lu^{3}s(lu^{4}s). Gr., ἄτταλος. A name applied by Galen to a certain medicament. [A, 325.]

ATTANCOURT (Fr.), n. A^{3}t-ta^{3}n^2-kur. A village in the department of the Haute-Marne, France, where there is a chalybeate spring. [L, 105.]

ATTAQUE (Fr.), n. A^{3}t-ta^{3}k. See ATTACK.—**A's de clownisme.** See *Hystero*-EPILEPSY.—**A's démoniaques.** The paroxysms of persons who fancy themselves possessed by an evil spirit. [Charcot (M, 1).]—**A. de nerfs.** A nervous paroxysm characterized by cerebral excitement with disordered and grotesque muscular movements. [A, 385.]

ATTAR, n. O^{2}t'ta^{3}r. From an Ar. word meaning perfume. An Oriental name for the essential oil of roses. [A, 259; B, 2.] See under ROSE.—**A. ghul, A.-gul, A. of roses.** See *A*.

ATTARUSCHA (Sanscr.), n. The *Justicia adhatoda*. [L, 87.]

ATTCHAR, n. See ACHAR.

ATTE (Fr.), n. A^{3}t. The fruit of the *Anona squamosa*. [B, 173.]

ATTEÏ (Tamil), n. The leech. [A, 259.]

ATTEINTE (Fr.), n. A^{3}t-ta^{2}nt. 1. An attack, especially a mild one. [L, 111.] 2. A lesion. [A, 385.] 3. See ATTAINT.

ATTELABUS (Lat.), n. m. A^{2}t(a^{3}t)-te^{2}l'a^3-bu^{3}s(bu^{4}s). Gr., ἀττέλαβος. An ancient name for a sort of small locust without wings. [Pliny (A, 318).]

ATTELLE (Fr.), n. A^{3}t-te^{2}l. A splint. [A, 385.]

ATTENTAT (Fr.), n. A^{3}t-ta^{3}n^2-ta^3. An attempt at a criminal act. [A, 300.]—**A. à la pudeur.** An indecent assault or attempt upon a woman or a child. [L, 42.]—**A. aux mœurs.** An indecent act committed in public. [L, 49.]

ATTENUANT, adj. A^{2}t-te^{2}n'u^2-a^{2}nt. Gr., λεπτύνων. Lat., *attenuans* (pres. partic. of *attenuare*, to weaken). Fr., *atténuant*. Ger., *verdünnend* (1st def.). It., *attenuante*. Sp., *atenuante*. 1. Having the effect of thinning the blood or the other humors. [A, 385; B, 117.] 2. Diminishing the effects of an agent. [A, 385.] 3. As a n., an agent producing either of those effects.

ATTENUATE, ATTENUATED, adj's. A^{2}t-te^{2}n'u^2-at, -ate^{2}d. Lat., *attenuatus*. Fr., *attenué*, *aminci*. Ger., *verdünnt*. It., *attenuato*, *assottigliato*. Sp., *atenuado*. 1. In botany, gradually diminishing in size. [B, 1.] 2. Diluted or finely divided. [L, 41.] 3. Reduced in potency (said particularly of viruses). [J. Guérin, 1863 (A, 385).] 4. Lean, spare. [Pliny (A, 318).]

ATTENUATION, n. A^{2}t-te^{2}n-u^2-a'shu^{3}n. Gr., λεπτυσμός, λέπτυνσις, λεπτοποίησις. Lat., *attenuatio*. Fr., *atténuation*, *amoindrissement*. Ger., *Verdünnung*. It., *attenuazione*, *sminuità*. Sp., *atenuación*. 1. The division of a substance into the finest particles possible. [L, 41.] 2. Dilution. 3. The state of being lean, or the process of losing flesh. [A, 385.] 4. A system of dietetic and medicinal treatment for the purpose of reducing corpulence. [A, 385.] 5. A process of diminishing the virulence of a pathogenetic organism by certain methods of cultivation or inoculation. [B.] See *Attenuated* VIRUS.

ATTENUATO-ACUATE, adj. A^{2}t-te^{2}n-u^2-a''to-a^{2}k'u^2-at. Tapering gradually from a hemispherical base to an acute apex. [L, 232.]

ATTENUATO-CLAVATE, adj. A^{2}t-te^{2}n-u^2-a''to-klav'at. Attenuated at one end and clavate at the other. [L, 232.]

ATTENUATO-CYLINDRICAL, adj. A^{2}t-te^{2}n-u^2-a''to-si^{2}l-i^{2}n'dri^{2}k-a^{2}l. Terminating hemispherically at each end, but with the shaft tapering from base to apex. [L, 232.]

ATTENUATO-DEPRESSO-SPINULATE, adj. A^{2}t-te^{2}n-u^2-a''to-de-pre^{2}s'''so-spi^{2}n'u^2-lat. Having a basal inflection depressed and the shaft tapering gradually from base to apex. [L, 232.]

ATTENUATO-EXPANSO-TERNATE, adj. A^{2}t-te^{2}n-u^2-a''-to-e^{2}x-pa^{2}ns'''o-tu^{5}rn'at. Having three attenuated terminal radii projecting from a shaft at angles of from 45° to 70°. [L, 232.]

ATTENUATO-PATENTO-TERNATE, adj. A^{2}t-te^{2}n-u^2-a''-to-pa^{2}t-e^{2}nt'''o-tu^{5}rn'at. Having three attenuated terminal radii projecting from a shaft nearly at right angles. [L, 232.]

ATTENUATO-PORRECTO-TERNATE, adj. A^{2}t-te^{2}n-u^2-a''to-po^{2}r-re^{2}kt'''o-tu^{5}rn'at. Having three attenuated terminal radii projecting from a shaft at an angle of less than 45°. [L, 232.]

ATTENUATO-RECURVO-TERNATE, adj. A^{2}t-te^{2}n-u^2-a''-to-re-ku^{5}rv'''o-tu^{5}rn'at. Having three attenuated terminal radii recurved from the apex of a shaft. [L, 232.]

ATTENUATO-STELLATE, adj. A^{2}t-te^{2}n-u^2-a''to-ste^{2}l'lat. Having radii attenuated toward the apices. [L, 232.]

ATTER (Ger.), n. A^{3}t'te^{2}r. The adder (*Vipera berus* [Goldfuss]). [B, 180.]

ATTHEE (Dan.), n. The genus *Althœa*. [A, 259.]

ATTI-ALU, n. A Malabar name for the *Ficus racemosa*. [B, 121.]

ATTIC OF THE TYMPANUM, n. A^{2}t'ti^{2}k. Lat., *atticus tympanicus*. Fr., *portion attique du tympan*. A pyramidal recess over the atrium and above the tympanic extremity of the external auditory meatus. It communicates with the mastoid antrum by the petro-mastoid canal (Sappey). It is partially filled by the malleus and the incus. [J. Leidy, "Science," May 11, 1883, p. 380 (L).]

ATTICH (Ger.), n. A^{3}t'ti^{2}ch^2. The dwarf-elder (*Sambucus ebulus*). [A, 259; B, 180.]—**A'beeren.** The fruit of the *Sambucus ebulus*. [B, 180.]—**A'beerensaft.** The inspissated juice (*rob*) of dwarf-elder berries. [A, 315; L, 80.]—**A'hirschschwanz, A'hollunder.** See *A*.—**A'mus.** See *A'beerensaft*.—**Virginischer A.** The *Spiræa opulifolia*. [A, 315.]

ATTICUM (Lat.), n., n. of adj. *atticus* (*mel* understood). A^{2}t-(a^{3}t)'ti^{2}k-u^{3}m(u^{4}m). Gr., ἀττικόν (μέλι understood). An ancient name for the best honey. [A, 325.]

ATTICUS (Lat.), adj. and n. m. A^{2}t(a^{3}t)'ti^{2}k-u^{3}s(u^{4}s). See ATTIC and ATTICUM.

ATTIE-PUTTAY, n. An East Indian name for the *Ficus racemosa*. [L, 105.]

ATTIER (Fr.), n. A^{3}t-te-a. The *Anona squamosa*. [L, 41, 109.]

ATTIKA-MAMADIE (Teloogoo), n. The *Boerhavia diffusa*. [B, 172.]

ATTILA, n. One of the springs at Ofen, Hungary; 1,000 parts of the water contain 24·190 of magnesium sulphate, 33·517 of sodium sulphate, and 1·715 of calcium sulphate. [L, 57.]

ATTILUS (Lat.), n. m. A^{2}t(a^{3}t)'ti^{2}l-u^{3}s(u^{4}s). An ancient name for the *Acipenser huso* [Linnæus]. [B, 88.]

ATTI-MEER-ALOU (Malay), n. The *Ficus excelsa*. [B, 172.]

ATTINCAR VENERIS, n. Syn.: *tinctura* (seu *elixir*) *ad lunam*. An alchemical preparation for whitening copper into the semblance of silver. [Paracelsus (A, 325); L, 119.]

ATTINGAS, ATTINGAT (Ar.), n's. Alchemical names for verdigris. [B, 50; L, 105.]

ATTINGIR, ATTINGIT, n's. Alchemical names for an earthen capsule or crucible. [B, 50.]

ATTIRABLE (Fr.), adj. A^{3}t-ter-a^{3}bl. Capable of being attracted (as by a magnet). [B, 195.]

ATTIRANT (Fr.), adj. A^{3}t-ter-a^{3}n^2. See ATTRAHENS.

ATTITUDE, n. A^{2}t'ti^2-tu^{2}d. Lat., *habitus*, *situs corporis*. Fr., *attitude*. Ger., *Haltung*, *Lage*. It., *attitudine*. Sp., *actitud*. The form of a body (as of the person or an organ) as determined by the state of its movable parts. See remarks under POSITION.—**Crucifixion a.** An a. sometimes assumed by patients with hystero-epilepsy; the body is rigid, the head is thrown somewhat backward, and the arms are stretched straight out from the body. [Finlayson, "Liverpool Med.-chir. Jour.," Jan., 1885, p. 14.]

ATTMELLA (Lat.), n. f. A^{2}t(a^{3}t)-me^{2}l'la^{3}. See SPILANTHES *acmella.*

ATTOLE (Fr.), n. A^{3}t-tol. See ATOLE.

ATTOLLENS (Lat.), adj. A^{2}t(a^{3}t)-to^{2}l'le^{2}nz(lans). Pres. partic. of *attollere*, to lift. Fr., *élevant*. Ger., *aufhebend*. It., *attollente*. Acting as an elevator of a part ; as a n., a muscle having that action (Lat., *levator ;* Ger., *Aufhebungsmusket.*—**A. anterior.** See ZYGOMATO-AURICULARIS.—**A. aurem, A. auriculæ, A. auriculæ superior, A. auriculam.** Fr., *muscle élevateur de l'oreille, temporo-conchinien, auriculaire supérieur, temporo-auriculaire, premier de l'oreille* [Duverney], *premier mitoyen, second mitoyen* [Vieussens], *supérieur de l'oreille* [Winslow]. Ger., *Aufheber des Ohres.* It., *attollente* (o *elevatore*) *dell' orecchio, temporo-conchiniano, temporo-auricolare.* Syn. : *levator* (seu *superior*) *auris. auricularis superior* [Santorini], *superior auriculæ* [Santorini], *auriculæ primus* [Fallopius]. A muscle which arises from the temporal portion of the epicranial aponeurosis and is inserted into the upper part of the median surface of the pinna ; its action is to draw the auricle upward. [A, 7, 214, 246, 299, 314.]—**A. humerum** [Spigelius]. See DELTOIDEUS.—**A. labium superior** [Spigelius]. See ZYGOMATICUS *major.*—**A. linguam** [Spigelius]. See MYLOGLOSSUS.—**A. maxillam temporalis** [Spigelius]. See TEMPORALIS.—**A. maximus.** The temporo-auricularis externus muscle. [Percivall (L, 13).]—**A. oculi, A. oculum** [Spigelius]. See RECTUS *superior oculi.*—**A. ossis hyoidei** [Spigelius]. See GENIO-HYOIDEUS.—**A. posterior.** The temporo-auricularis internus muscle. [Percivall (L, 13).]—**A. scapulam** [Spigelius]. See LEVATOR *anguli scapulæ.*—**A. sedem** [Spigelius]. See LEVATOR *ani.*—**A. superiorem palpebram.** The levator palpebræ superioris muscle. [Riolan (A, 246).]

ATTONITÄTSSYMPTOM (Ger.), n. A^{3}t-to^{2}n-i^{2}-tats'su^{6}mp-tom''. An apoplectoid symptom. [L, 57.]

ATTONITUS (Lat.), adj. A^{2}t(a^{3}t)-to^{2}n'i^{2}t-u^{3}s(u^{4}s). Perf. partic. of *attonere*, to stun. Gr., ἐμβρόντητος, ἀπόπληκτος, ἐκστατικός. Fr., *étonné*. Ger., *betäubt*. Stunned, stupefied, in an apoplectic state. [A, 322.]—**Morbus a., Stupor a.** Apoplexy. [Lullier-Winslow (M, 71).]

ATTOUCHEMENT (Fr.), n. A^{3}t-tush-ma^{3}n^{2}. 1. A tactile examination. [A, 300.] 2. The supposed conveyance of an influence from one person to another by a laying on of hands. [A, 305.] 3. An impingement (as of light upon the retina). [Richerand (A, 306).] 4. The topical application of a medicament. [A, 385.] 5. Masturbation. [L, 109.]

ATTRACTIF (Fr.), adj. and n. A^{3}t-tra^{3}k-tef. See ATTRAHENS.—**A. d'Estamque.** A sort of lever used in extracting teeth ; so called from the name of its inventor. [A, 301.]

ATTRACTIO (Lat.), n. f. A^{2}t(a^{3}t)-tra^{2}k(tra^{3}k)'shi^{2}(ti^{2})-o. Gen., *attractio'nis.* See ATTRACTION.—**A. electiva duplex.** See *Double* AFFINITY.—**A. electiva multiplex.** A variety of double affinity by virtue of which two ternary compounds, ABC and DEF, are decomposed into three binary compounds, AD, BE, and CF. [B, 140.]—**A. electiva simplex.** Simple elective affinity. [B.]

ATTRACTION, n. A^{2}t-tra^{2}k'shu^{3}n. Gr., ἕλξις. Lat., *attractio* (from *attrahere*, to draw toward). Fr., *attraction*. Ger., *Anziehung, Anziehungskraft*. It., *attrazione*. Sp., *atracción*. The act or force by which bodies are drawn toward each other. [B ; L, 43.]—**Acoustic a.** The a. exerted by a body when in a state of sonorous vibration upon another body in its vicinity. [B, 164.]—**Adherent a.** See *Capillary a.*—**Adhesive a.** The force of adhesion. [B, 140.]—**Atomic a.** The a. existing between atoms. [B, 164.] See *Chemical a.* and AFFINITY.—**A. of adhesion.** See *Adhesive a.*—**A. of affinity.** See AFFINITY.—**A. of aggregation, A. of cohesion.** Cohesion. [B, 140 ; L, 120.]—**A. of crystallization.** The mutual a. by virtue of which particles of matter tend to arrange themselves into crystalline forms. [B, 140.]—**A. of gravitation.** See GRAVITATION.—**A'skraft** (Ger.). The force of a. [L, 30.]—**Capillary a.** Fr., *a. capillaire.* Ger., *Capillar-A.* It., *attrazione capillare.* Sp., *atracción capilar.* The a. exerted upon the particles of a liquid by those of a solid body with which it is in contact, causing an elevation of the surface of the liquid at the line of contact ; so called because it is best observed in capillary tubes, where the elevation becomes considerable. The absorption of water by unsized paper and other vegetable tissues is due to capillary a. [B, 21.] Cf. *Capillary* REPULSION.—**Chemical a.** Fr., *a. chimique.* Ger., *chemische Anziehungskraft.* See *Chemical* AFFINITY.—**Cohesive a.** The force which binds similar particles together, as distinguished from chemical affinity, which binds dissimilar particles together ; cohesion. [B, 37.]—**Cone of a.** See under CONE.—**Corpuscular a.** See *Cohesive a.*—**Double elective a.** See *Double* AFFINITY.—**Elective a.** Lat., *attractio electiva.* Fr., *a. élective.* Chemical affinity. [B, 2.]—**Electrical a.** Fr., *a. électrique.* Ger., *elektrische Anziehung.* It., *attrazione elettrica.* Sp., *atracción eléctrica.* The a. exerted by an electrified body upon another body charged with an opposite variety of electricity. [B, 158.]—**Electro-dynamic a.** The a. produced by the interaction of two neighboring electrical currents or an electrical current and a magnet. [B, 158.]—**Magnetic a.** Fr., *a. magnétique.* Ger., *magnetische Anziehung.* It., *attrazione magnetica.* Sp., *atracción magnética.* The a. exerted by a magnet on iron and other magnetic substances. [B, 21.]—**Molar a.** Fr., *a. molaire.* Ger., *Massenanziehung.* The a. existing between masses, or the a. of gravitation. [B, 164.]—**Molecular a.** Fr., *a. moléculaire.* Ger., *molekuläranziehung.* It., *attrazione molecolare.* The a. existing between molecules. [B, 164.] See ADHESION and COHESION.—**Simple elective a.** See *Simple* AFFINITY.—**Terrestrial a.** Fr., *a. terrestre.* A. exerted by the earth or exhibited upon its surface. [B.]—**Universal a.** Fr., *a. universelle.* Ger., *allgemeine Anziehungskraft.* See GRAVITATION.

ATTRACTIVE, adj. A^{2}t-tra^{2}k'ti^{2}v. Lat., *attractivus.* Fr., *attractif.* Ger., *anziehend.* Attracting, drawing ; medicaments supposed to have the power of drawing the animal juices to the surface were formerly called *attractiva, attractoria,* or *attrahentia.* [B, 50, 117 ; L, 43.]

ATTRACTO-ÉLECTRIQUE (Fr.), adj. A^{3}t-tra^{3}k-to-a-le^{2}k-trek. Having the property of attracting an electrical current. [L, 109.]

ATTRACTOR (Lat.), n. m. A^{2}t(a^{3}t)-tra^{2}k(tra^{3}k)'to^{2}r. Gen., *attracto'ris.* See ATTRAHENS. — **A. scapulæ.** See LEVATOR *scapulæ.*

ATTRACTORIUS (Lat.), adj. A^{2}t(a^{3}t)-tra^{2}k(tra^{3}k)-to'ri^{2}-u^{3}s-(u^{4}s). See ATTRACTIVE.

ATTRAHENS (Lat.), adj. A^{2}t(a^{3}t)'tra^{3}-he^{2}nz(hans). Pres. partic. of *attrahere*, to draw toward. Ger., *anziehend*. Attractive (*q. v.*) ; as a n. (*musculus* understood), a muscle the action of which is to draw a movable part toward another part, also (*remedium* understood) a "drawing" medicament (see under ATTRACTIVE).—**A. alæ nasi.** See COMPRESSOR *naris.*—**A. aurem, A. auriculæ, A. auriculam.** Syn. : *prior* [Cloquet] (seu *protrahens*) *auriculæ, epicranius temporalis.* See AURICULARIS *anterior.*

ATTRAHENT, adj. A^{2}t'tra^{3}-he^{2}nt. See ATTRACTIVE.

ATTRAPE-LOURDAUD (Fr.), n. A^{3}t-tra^{3}p-lur-do. A sheathed bistouri. [A, 385.]

ATTRAPE-MOUCHE (Fr.), n. A^{3}t-tra^{3}p-mush. Venus's fly-trap ; the *Silene muscipula* [Linnæus], *Apocynum androsæmifolium, Drosera,* and certain other plants. [B, 173.]

ATTRAQUININE, n. A^{2}t-tra^{3}-kwi^{2}n'en. See HOMOQUININE.

ATTRIPLEX (Lat.), n. f. A^{2}t(a^{3}t)'tri^{2}-ple^{2}x. See ATRIPLEX.

ATTRIPLICES (Lat.), n. f. pl. A^{2}t(a^{3}t)-tri^{2}p'li^{2}-sez(kas). See ATRIPLICES.

ATTRITION, n. A^{2}t-tri^{2}sh'u^{3}n. Gr., παράτριψις. Lat., *attritio* (from *atterere*, to rub against). Fr., *attrition*. Ger., *Anreibung, Aufreibung, Zermalmung*. It., *attrizione*. Sp., *atrición*. 1. The friction of bodies upon each other, also the effects (chafing, abrasion, intertrigo, etc.) of such friction. [L, 41, 43.] 2. (Obs.) a severe form of cardialgia with panting respiration. [A, 325.]

ATTRITUS (Lat.), n. m. A^{2}t(a^{3}t)-tri(tre)'tu^{3}s(tu^{4}s). Gen., *attri'tus.* See ATTRITION and cf. ERYTHEMA *ab attritu.*

ATTROW, n. A plant of Guinea, used in decoction to disperse swellings. [B, 88 ; L, 105.]

ATTRUMMAPHRE, n. A Guinea name for the *Indigofera hirsuta.* [B, 88.]

ATTY-ALOW, ATTY-ALU, n's. See ATTI-ALU.

ATUM CANDIDATUM (Lat.), n. n. A(a^{3})'tu^{3}m(tu^{4}m) ka^{2}n-(ka^{3}n)-di^{2}d-a(a^{3})'tu^{3}m(tu^{4}m). The *Lycopodium rubrum.* [B, 121.]

ATUN, n. A shrub of the Moluccas, the scaly fruit of which contains a kernel which, grated, is used by the Malays as a condiment and digestive, and in the treatment of dysentery ; probably a species of *Heritiera.* [B, 88.]

ATUNYANGUA, n. A Peruvian name for the *Cybistax antisyphilitica.* [B, 19.]

ATUREB, n. An alchemical name for glass. [B, 50.]

ATURION (Lat.), n. n. A^{2}t(a^{3}t)-u^{2}(u)'ri^{2}-o^{2}n. See ATYRION.

ATWISHA, n. See ÁTIVISHÁ.

ATY, n. A West Indian name for the *Capsicum annuum.* [L, 87, 105.]

ATYLOSIA (Lat.), n. f. A^{2}t(a^{3}t)-i^{2}l(u^{6}l)-o'si^{2}-a^{3}. A genus of leguminous plants closely related to *Cajanus.* [B, 19.]

ATYOURAGLF, n. A Carib name for the *Parthenium hysterophorus.* [B, 88.]

ATYPIA (Lat.), n. f. A^{2}t(a^{3}t)-i^{2}p(u^{6}p)'i^{2}-a^{3}. Fr., *atypie.* Ger., *Mangel an Regelmässigkeit.* The state of being atypical (*q. v.*). [A, 322, 385.]

ATYPIC, ATYPICAL, adj's. A^{2}t'i^{2}p(a^{2}t-i^{2}p')-i^{2}k, -i^{2}p'i^{2}k-a^{2}l. Gr., ἄτυπος (from α priv., and τύπος, a type). Lat., *atypos, atypicus.* Fr., *atypique.* Ger., *atypisch.* Erratic, irregular, not conforming to any definite type (said particularly of periodical fevers). [Galen (A, 325) ; A, 385.]

ATYPOMORPHOSIS (Lat.), n. f. A^{2}t(a^{3}t)''i^{2}p(u^{6}p)-o(o^{2})-mo^{2}rf-o'si^{2}s. Gen., *atypomorpho'seos* (*-sis*). From ἄτυπος, atypical, and μόρφωσις, a shaping. Fr., *atypomorphose.* In entomology, a variety of metamorphosis in which the nymphæ bear no resemblance to their larval or imago state. [L, 41.] Cf. HOLOMETABOLISM.

ATYPOS, ATYPUS (Lat.), adj's. A^{2}t(a^{3}t)'i^{2}p(u^{6}p)-o^{2}s, -u^{3}s(u^{4}s). 1. Atypical (*q. v.*). 2. (N.) a person who speaks indistinctly. [A, 322.] 3. (N.) a cripple. [A, 322.]

ATYRION (Lat.), n. n. A^{2}t(a^{3}t)-i^{2}r(u^{6}r)'i^{2}-o^{2}n. An ancient name for the *Asplenium ceterach.* [L, 87.]

ATZCALXOCHITL, n. A Mexican name for the *Colchicum alpinum* [De Candolle]. [A, 447.]

ATZEL (Ger.), n. A^{3}tz'e^{2}l. The *Corvus pica.* [B, 180 ; L, 80.]

ATZOYATL, n. A Mexican name for the *Mirabilis mexicana.* [L, 94.]

AUANSIS (Lat.), n. f. A^{4}(a^{3}-u^{4})-a^{2}n(a^{3}n)'si^{2}s. Gen., *auan'seos* (*-sis*). Gr., αὔανσις (from αὐαίνεσθαι, to be dried up). An old term for morbid dryness (said of the parturient canal). [Hippocrates (A, 325).]

AUANTE (Lat.), n. f. A^{4}(a^{3}-u^{4})-a^{2}n(a^{3}n)'te(ta). Gr., αὐαντή (νόσος understood). A term applied by Hippocrates to a special form of wasting or withering of the body ascribed to acidity of the stomach, flatulence, and a vicious state of the pancreatic juice. [A, 325.]

AUANTICUS, AUANTOS (Lat.), adj's. A^4(a^3-u^4)-a^{2}n(a^{3}n)′ti^{2}k-u^{3}s(u^{4}s), -a^{2}n(a^{3}n)′to^{2}s. Gr., αὐαντός. Desiccative. [A, 322, 325.]

AUAPSE (Lat.), n. f. A^4(a^3-u^4)-a^{2}p(a^{3}p)′se(sa). Gr., αὐαψή. Galen's term for *auante* (*q. v.*). [A, 325.]

AUAREMOTEMO, n. See Abaremotemo.

AUBAD (Ger.), n. A^3′u-ba^{3}d. An alkaline chalybeate spring in the Tyrol, near Rattenberg. [L, 30.]

AUBAINE (Fr.), n. O-ban. A variety of the *Triticum durum.* [A, 385.]

AUBE (Fr.), n. Ob. A name applied in the south of France to the *Populus alba.* [L, 41.]

AUBENTONIA (Lat.), n. f. O-ba^{3}n^2-to′ni^2-a^3. The botanical genus *Waltheria.* [B, 121.]

AUBÉPIN (Fr.), n. O-ba-pa^{2}n^2. See Aubépine.

AUBÉPINE (Fr.), n. O-ba-pen. The hawthorn (*Cratægus oxyacantha*). [A, 385; B, 121.]

AUBERGINE (Fr.), n. O-be^{2}r-zhen. The fruit of the egg-plant (*Solanum esculentum*). [B, 121.]

AUBERGINO, n. A Languedoc name for the aubergine. [B, 121.]

AUBERJO, n. A Languedoc name for a sort of cling-stone peach with yellow pulp. [B, 121.]

AUBERTIA (Lat.), n. f. O-be^{2}r′ti^2-a^3. Syn.: *Euodia* [Forster]. Of Endlicher, a section of the genus *Xanthoxylon.* [B, 121.]

AUBESON, n. In the Walloon dialect, a name for the *Agarici.* [B, 121.]

AUBESSIN (Fr.), n. Ob-sa^{2}n^2. See Aubépine.

AUBE-VIGNE (Fr.), n. Ob-ven. The *Clematis vitalba.* [L, 49.]

AUBIER (Fr.), n. O-bi^2-a. 1. See Alburnum. 2. In central France, a name for the willow, also for the *Viburnum opulus.* [B, 121, 173.]—**A. double, A. faux.** Alburnum accidentally covered by a layer of true wood, over which alburnum forms again. [L, 41.]

AUBIFOIN (Fr.), n. O-bi^2-fwa^{3}n^2. The *Centaurea cyanus.* [B, 121.]—**Grand a.** The *Centaurea officinalis.* [A, 321; L, 41.]

AUBIFONIA (Lat.), n. f. A^4(a^3-u^4)-bi^2-fo′ni^2-a^3. The *Centaurea cyanus.* [B.]—**Flores aubifoniæ.** The flowers of the *Centaurea cyanus.* [B, 180.]

AUBITON, AUBITOU (Fr.), n's. O-bi^2-to^{2}n^2, -tu. See Aubifoin.

AUBLETIA (Lat.), n. f. O-bla′ti^2-a^3. From *Aublet*, a French botanist. Fr., *aublétie.* 1. Of Gärtner, the genus *Sonneratia.* 2. Of Jacquin, the *Verbena.* 3. Of Loureiro, the *Paliurus.* 4. Of Necker, *the Ruellia.* 5. Of Persoon, the *Monnieria.* 6. Of Schreb, the *Apeiba.* [B, 121.]—**A. caseolaris** [Gärtner]. See Sonneratia *acida.*—**A. trifolia** [Richard]. See Monniera *trifolia.*

AUBOUR (Fr.), n. O-bur. The *Cytisus laburnum*, also the *Viburnum opulus.* [B, 121; L, 49.]

AUBRE (Fr.), n. Obr. See Arbre.

AUBRELLE (Fr.), n. O-bre^{2}l. A name applied in central France to the poplar and the willow. [B, 121.]

AUBRESPI, n. A Languedoc name for the hawthorn (*Cratægus oxyacantha*). [B, 121.]

AUBRESSIN (Fr.), n. Obr-sa^{2}n^2. The *Cratægus oxyacantha.* [L, 105.]

AUBRIETIA (Lat.), n. f. O-bri^2-a′ti^2-a^3. Fr., *aubriétie.* A genus of cruciferous plants made by Adanson. [B, 121.]

AUBRYA (Lat.), n. f. O′bre-a^3. From *Aubry*, the name of a botanist. A genus of humiriaceous plants made by Baillon, now referred by him to *Humiria.* [B, 121.]—**A. gabonensis** [Baillon]. See Humiria *gabonensis.*

AUBSUR (Fr.), n. Ob-su^{6}r. The *Cytisus laburnum.* [A, 385.]

AUBURON (Fr.), n. O-bu^6-ro^{2}n^2. The *Agaricus acris.* [B, 88.]

AUBUZON (Fr.), n. O-bu^6-zo^{2}n^2. The genus *Agaricus.* [B, 173.]

AUCHE (Lat.), n. f. A^4′(a^3′u^4)-ke(ch^{2}a). Gr., αὐχή. Ger., *Halsstarrigkeit.* Lit., pride, haughtiness; stiffness of the neck. [A, 322.]

AUCHEIS (Lat.), adj. A^4(a^3-u^4)-ke(ch^{2}a)′i^{2}s(es). Gr., αὐχήεις. See Aucheticus.

AUCHEN (Lat.), n. m. A^4′(a^3′u^4)-ke^{2}n(ch^{2}an). Gen., *au′chenos* (*-is*). Gr., αὐχήν. The neck or the throat, also the neck of a bone, of the uterus, etc. [A, 311, 322.]

AUCHENATES (Lat.), n. m. pl. A^4(a^3-u^4)-ke^{2}n(ch^{2}e^{2}n)-a(a^3)′-tez(tas). A family of apterous insects having the head distinct from the corselet. [L, 41.]

AUCHÉNHYDROCÈLE (Fr.), n. O-kan-i^{2}d-ro-se^{2}l. See Auchenydrocele.

AUCHENIA (Lat.), n. f. A^4(a^3-u^4)-ken(ch^{2}e^{2}n)′i^2-a^3. A genus of ruminants of the camel family. [B, 180.]—**A. lama** [Illiger]. Ger., *Kameelziege.* Syn.: *Camelus llama* [Linnæus]. The llama; a domesticated species found in the mountains of Peru and Chili. A variety of bezoar (occidental bezoar) is sometimes found in its fourth stomach. [B, 180.]—**A. vicunna** [Illiger]. Ger., *Schafkameel.* The vicuña: a species found on the summits of the Cordilleras, furnishing vicuña wool. At times a variety of bezoar is found in its stomach. [B, 180.]

AUCHENIATRIA (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}e^{2}n)-i^2-a^{2}t-(a^{3}t)-ri(re)′a^3. From αὐχήν, the throat, and ἰατρεία, medical treatment. Fr., *auchéniatrie.* Ger., *Halsheilkunde.* The treatment of diseases of the throat. [A, 322, 385.]

AUCHENICUS (Lat.), adj. A^4(a^3-u^4)-ke^{2}n(ch^{2}e^{2}n)′i^{2}k-u^{3}s(u^{4}s). Gr., αὐχένιος (from αὐχήν, the neck). Pertaining to the neck. [A, 322.]

AUCHENISTER (Lat.), n. m. A^4(a^3-u^4)-ke^{2}n(ch^{2}e^{2}n)-i^{2}st′e^{2}r-(ar). Gen., *auchenisteʹros* (*-ris*). Gr., αὐχενιστήρ (from αὐχενίζειν, to behead). A term applied by Von Scanzoni to a decapitator devised by him. [A, 20.]

AUCHENIUM (Lat.), n. n. A^4(a^3-u^4)-ke(ch^{2}e^2)′ni^2-u^{3}m(u^{4}m). Fr., *auchénion.* The portion of the neck situated below the nucha. [L, 41.]

AUCHENOPTERUS (Lat.), adj. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o^{2}p′-te^{2}r-u^{3}s-(u^{4}s). From αὐχήν, the neck, and πτερόν, a wing or a fin. Fr., *auchénoptère.* Ger., *halsflügelig.* Having ventral fins under the neck. [L, 41.]

AUCHENORRHEUMA (Lat.), n. n. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o^{2}r-ru^2′ma^3. Gen., *auchenorrheu′matos* (*-tis*). From αὐχήν, the neck, and ῥεῦμα, a flux. Fr., *auchénorrhumatisme.* Ger., *Halsrheumatismus.* Rheumatism of the neck. [A, 322.]

AUCHENORRHYNCHUS (Lat.), adj. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o^{2}r-ri^{2}n^2(ru^{6}n^2)′ku^{3}s(ch^{2}u^{4}s). From αὐχήν, the neck, and ῥύγχος, the beak. Fr., *auchénorrhynque.* Ger., *halsschnabelig.* Having the beak arising apparently from the neck. [L, 41.]

AUCHENOSCHISIS (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o^{2}s′-ki^2(ch^{2}i^2)-si^{2}s. Gen., *auchenoschis′eos* (*-os′chisis*). From αὐχήν, the neck, and σχίσις, a fissure. A fissure of the neck, especially of the cervical vertebræ. [A, 322.]

AUCHENOSPHINXIS (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o-(o^2)-sfi^{2}n^{2}x′i^{2}s. Gen., *auchenosphinx′eos* (*-is*). From αὐχήν, the neck, and σφίγξις (from σφίγγειν), constriction. Strangulation. [A, 322.]

AUCHENOSTRANGALE (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o(o^2)-stra^{2}n^2(stra^{3}n^2)′ga^3-le(la). From αὐχήν, the neck, and στραγγάλη, a halter. See Auchenosphinxis.

AUCHENOZOSTER (Lat.), n. m. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-o(o^2)-zo^{2}s(zos)′te^{5}r(tar). Gen., *auchenozoste′ros* (*-ris*). From αὐχήν, the neck, and ζωστήρ, a girdle. Ger., *Halsgürtel, Halsbrenngürtel.* Zoster of the neck. [A, 322.]

AUCHENYDROCELE (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-i^{2}d-(u^{6}d)-ro(ro^2)-se(ka)′le(la). From αὐχήν, the neck, and ὑδροκήλη (see Hydrocele). Fr., *auchénhydrocèle.* Ger., *Blasenkropf, Wasserbruch des Halses.* Cystic goitre. [J. P. Maunoir (A, 322).]

AUCHENYPOSPHINXIS (Lat.), n. f. A^4(a^3-u^4)-ke^{2}n(ch^{2}an)-i(u^6)-po(po^2)-sfi^{2}n^{2}x′i^{2}s. Gen., *auchenyposphinx′eos* (*-is*). See Auchenosphinxis.

AUCHETICUS (Lat.), adj. A^4(a^3-u^4)-ke^{2}t(ch^{2}at)′i^{2}k-u^{3}s(u^{4}s). Gr., αὐχητικός. Having a stiff neck. [A, 322.]

AUCHMOS, AUCHMUS (Lat.), n's m. A^{4}k′(a^3′u^{4}ch^2)-mo^{2}s, -mu^{3}s(mu^{4}s). Gr., αὐχμός. 1. Drought, aridity. [Hippocrates (A, 325).] 2. A dry, raw air. [Hippocrates (A, 322).]

AUCKLANDIA (Lat.), n. f. A^{4}k-la^{2}nd′i^2-a^3. Of Falconer, a genus of composite plants, now referred to *Saussurea.* [B, 42, 121.]—**A. costus** [Falconer]. See under Saussurea.

AUCTIO (Lat.), n. f. A^{4}k′(a^3′u^{4}k)-shi^2(ti^2)-o. Gen., *auctio′nis.* From *augere*, to increase. See Accretion.

AUCTOVILLE (Fr.), n. Ok-to-vel. A place in the department of Calvados, France, where there is a cold spring containing iron, magnesium, and carbonic acid. [L, 49.]

AUCTUS (Lat.), adj. A^{4}k′(a^3′u^{4}k)-tu^{3}s(tu^{4}s). From *augere*, to increase. 1. Grown, especially beyond the usual limits; persisting and increasing in growth. 2. Increased by the adhesion of another part or organ. [B, 198.]

AUCUBA (Lat.), n. f. A^{2}k′(a^3′u^{4}k)-u^2(u^4)-ba^3. Fr., *aucube.* Of Thunberg, a genus of low evergreen shrubs with leathery leaves, belonging to the *Cornaceæ*, or, according to some, to the *Caprifoliaceæ.* [B, 49, 170.]—**A. japonica** [Thunberg]. A Japanese shrub from 6 to 10 feet high. [B, 49, 121.]—**A. himalaica** [Hooker fil.]. A species indigenous to the eastern Himalayas, from 15 to 20 feet high. [B, 49.]

AUCUBEÆ (Lat.), n. f. pl. A^{4}k(a^2-u^{4}k)-u^2(u)′be^2-e(a^3-e^2). Of Endlicher, a suborder of plants belonging to the *Corneæ*, including *Aucuba* and three or four other genera. [B, 170.]

AUCUPALIS (Lat.), adj. A^{4}k(a^3-u^{4}k)-u^2(u^4)-pa(pa^3)′li^{2}s. See Aucuparius.

AUCUPARIA (Lat.), n. f. A^{4}k(a^3-u^{4}k)-u^2(u^4)-pa(pa^3)′ri^2-a^3. See Sorbus.—**Baccæ** (seu **Fructus**) **aucupariæ.** The berries of the *Sorbus a.* [B, 180.]

AUCUPARIUM (Lat.), n. n. A^{4}k(a^3-u^{4}k)-u^2(u^4)-pa(pa^3)′ri^2-u^{3}m-(u^{4}m). Birdlime. [B, 180.]

AUCUPARIUS (Lat.), adj. A^{4}k(a^3-u^{4}k)-u^2(u^4)-pa(pa^3)′ri^2-u^{3}s-(u^{4}s). From *auceps* (from *avis*, a bird, and *capere*, to take), a bird-catcher. Pertaining to or suitable for bird-catching. [B.] See Aucuparium and Sorbus *aucuparia.*

AUDACIA (Lat.), n. f. A^4(a^3-u^4)-da(da^3)′shi^2(ki^2)-a^3. Gr., τόλμα, τόλμη. The boldness of delirium or insanity. [A, 325; L. 84.]

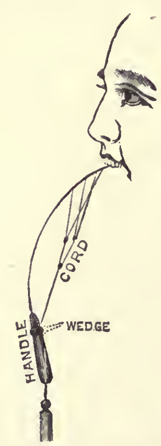
AUDBIDH (Sanscr.), n. Lit., produced of itself from the earth; a salt consisting chiefly of sodium sulphate mixed with sodium chloride, occurring as an efflorescence on rocks in India and occasionally used in medicine. [B, 181.]

AUDE (Lat.), n. f. A^4′(a^3′u^4)-de(da). Gr., αὐδή. Fr., *voix.* Ger., *Stimme, Laut.* The voice, also a sound. [A, 322, 325.]

AUDIBERTIA (Lat.), n. f. O-di^2-be^{2}rt′i^2-a^3. Fr., *audibertie.* Bentham's name for a genus of labiate under-shrubs of the tribe *Monardeæ*; akin, on the one hand, to *Rosmarinus*, and, on the other, to some sections of *Salvia.* [B, 121.]—**A. decurrens** [Nut-

tall], **A. grandiflora** [Bentham]. A California species, mentioned among the medicinal plants of the State. ["Proc. of the Am. Pharm. Assoc.," xix, p. 304 (B); B, 214.]—**A. polystachya** [Bentham]. The white sage, a California species. Its flowers are used by the Indians as a condiment, like parsley. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 163 (B); B, 214.]—**A. spinulosa** [Nuttall], **A. stachyoides** [Bentham]. A species growing in northern California, mentioned among the medicinal plants of the State. ["Proc. of the Am. Pharm. Assoc.," xix, p. 304 (B); B, 214.]

AUDIEN-BOULOHA, n. A Madagascar shrub, perhaps a species of *Tournefortia*. [Bory (B, 121).]



AUDIERNE (Fr.), n. O-di^2-e^{2}rn. A sea-bathing resort in the department of Finistère, France. [A, 385; L, 57, 87.]

AUDIMETER, n. A^{4}d-i^{2}m'e^{2}t-u^{5}r. Fr., *audimètre*. See AUDIOMETER.

AUDINAC (Fr.), n. O-di^{2}n-a^{4}k. A place in the department of Ariège, France, where there are carbonated chalybeate springs. [A, 385; L, 87.]

AUDIOMETER, n. A^{4}d-i^2-o^{2}m'e^{2}t-u^{5}r. From *audire*, to hear, and *μέτρον*, a measure. Fr., *audiomètre*. Ger., *Gehörmesser*. An instrument devised by Hughes for measuring the sensitiveness of the ear for sounds of small intensity. It consists of a microphone which is attached to a clock and which also forms part of a galvanic circuit. The galvanic current which passes through this circuit likewise passes through two induction coils, one 100 metres, the other 9 metres in length. Between these two coils, which are placed parallel to each other and about 30 centimetres apart, is a third induction coil, 100 metres in length, which moves freely along a graduated bar and can thus be placed at any point intermediate between the two primary coils. The latter are so constructed that they induce in the movable coil two currents in opposite directions, and which consequently counteract each other. The movable coil is connected with a telephone which repeats the ticking of the clock (magnified by the microphone) in greater or less intensity, according as the difference between the two currents induced in the movable coil is greater or less. When the movable coil is so placed that the two currents are equal, no sound is audible. This point is designated as zero on the scale, and the distance between this and the first of the two inducing coils is divided into 200 degrees. The instrument is used by placing the movable coil at the zero point and then gradually sliding it toward the first coil until the person listening at the telephone first perceives the ticking of the clock. The number of degrees (representing the intensity of the least sound audible) is then read off. [B, 22.]

AUDIPHONE, n. A^{4}d'i^2-fon. From *audire*, to hear, and *φωνή*, the voice. Syn: *osteophone* [Thomas]. A fan-shaped instrument of hard rubber or well-lacquered pasteboard, devised by Rhodes, for improving the hearing power of the deaf. The upper margin is provided with a little metal plate for laying on the teeth or on the zygoma, and at the lower margin there is a handle. By properly pressing the instrument against the anterior upper teeth, a forward convexity is given to it, and the sound-waves falling on it are conducted through the bones of the head to the labyrinth. There is an arrangement of cords by which the necessary curvature may be maintained. [F.]

RHODES'S AUDIPHONE, SIDE-VIEW. (AFTER POMEROY.)

AUDITION, n. A^{4}d-i^{2}sh'u^{3}n. Gr., *ἀκοή*. Lat., *auditus*, *auditio* (from *audire*, to hear). Fr., *audition*, *ouïe*. Ger., *Gehör*. It., *udito*. Sp., *audición*. The act, sense, or function of hearing. [F.]—**A. active** (Fr.). The hearing which takes place when one listens. [L, 109.] See AUSCULTATION.—**A. colorée** (Fr.). See *Color* HEARING.—**A. passive** (Fr.). The hearing of sounds which strike the ear without any effort being made to catch them. [L, 109.]—**Contre-a.** (Fr.). Ger., *Hinüberhören*. The hearing with one ear of the vibrations of a tuning-fork placed on the mastoid process of the opposite side; most marked with vibrations of more than a thousand to the second. Baumgarten first employed this test in the diagnosis and prognosis of disease of the middle ear and the internal ear. ["Ann. des mal. de l'oreille," etc., March, 1887, p. 98 (F).]—**Mental a.** Fr., *a. mentale*. The remembrance of a sound, or the formation of an idea or a mental image founded on past auditory impressions. [A, 390.]—**Verbal mental a.** Fr., *a. mentale verbale*, *parole intérieure*. The same as mental a., the sounds remembered being those of words. [A, 390.]

AUDITORY, adj. A^{4}d'i^{2}t-o-ri^2. Gr., *ἀκουστικός*. Lat., *auditorius*. Fr., *auditif*. Ger., *hörend*, *das Gehör* (oder *das Ohr*) *betreffend*. It., *auditivo*. Sp., *auditivo*. Syn.: *acoustic*, *auricular*. Relating to the sense of hearing or to the ear. [F.]

AUDITUS (Lat.), n. m. A^{4}d(a^3-u^{4}d)-i(e)'tu^{3}s(tu^{4}s). Gen., *auditus*. See AUDITION.—**A. acrior** [Darwin]. See PARACUSIS *acris*.—**A. difficilis, A. gravitas, A. imminutus.** Diminished power of hearing. [A, 325; L, 132.]

AUDORN (Ger.), n. A^3'u-do^{2}rn. The *Marrubium vulgare*. [L, 57.]

AUERBACH, AUERBACHER (Ger.), n's. A^3'u-e^{2}r-ba^{3}ch^2, -ba^{3}ch^2-e^{2}r. A mineral spring in the Grand Duchy of Hesse. [L, 105.]

AUERSWALDIA (Lat.), n. f. A^3-u-e^{2}rs-va^{3}ld'i^2-a^3. In botany, Hoffmann's name for the receptacle of a *Sphæria*. [B, 121.]

AUFATHMEN (Ger.), v. intr. A^3'uf-a^{3}t-me^{2}n. To breathe anew. [A, 315.]

AUFÄTZEN (Ger.), v. tr. A^3'uf-e^{2}tz-e^{2}n. To open (*e. g.*, an abscess) by means of caustics. [A, 315.]

AUFBÄHEN (Ger.), v. tr. A^3'uf-ba-he^{2}n. To cause (an abscess) to open by fomenting. [A, 315.]

AUFBAUCHEN (Ger.), **AUFBAUSCHEN** (Ger.), v's intr. A^3'uf-ba^3-uch^2-e^{2}n, -ba^3-ush-e^{2}n. To swell up. [A, 315.]

AUFBEIZEN (Ger.), v. tr. A^3'uf-bitz-en. 1. To corrode. [L, 46.] 2. See AUFÄTZEN.

AUFBERSTEN (Ger.), v. intr. A^3'uf-be^{2}rst-e^{2}n. To crack, chap. [A, 315.]

AUFBINDEN (Ger.), v. tr. A^3'uf-bi^{2}nd-e^{2}n. To loosen, unbind. [A, 315.]—**Den Verband a.** To remove the dressings. [A, 315.]

AUFBLÄHEN (Ger.), v. tr. A^3'uf-bla-he^{2}n. To inflate; as a n., inflation, distension. [A, 315.]—**A'd.** Flatulent. [A, 315.]—**A. des Leibes.** See TYMPANITES.

AUFBLÄHUNG (Ger.), n. A^3'uf-bla-hung. 1. Inflation, distension, flatulence. [L, 46.] 2. In the pl., *A'en*, elevated lesions of the skin. [L, 43.]—**A. des Unterleibes.** See TYMPANITES.

AUFBLASEN (Ger.), v. tr. A^3'uf-bla^3-ze^{2}n. See AUFBLÄHEN.

AUFBLÄTTERUNG (Ger.), n. A^3'uf-ble^{2}t-te^{2}r-ung. Exfoliation, desquamation. [L, 59.]

AUFBLÜHEN (Ger.), v. intr. A^3'uf-blu^6-he^{2}n. To blossom; as a n., inflorescence, also the time of flowering. [B, 36, 131.]—**Gleichzeitiges A.** See ANTHESIS *perfecta*.

AUFBRAUSEN (Ger.), v. intr. A^3'uf-bra^3-u-ze^{2}n. To boil, to effervesce, to ferment; as a n., ebullition, effervescence, fermentation. [L, 46.]—**A'd.** Effervescent. [L, 46.]

AUFBRECHEN (Ger.), v. intr. A^3'uf-bre^{2}ch^2-e^{2}n. To open, expand (said of buds); as a n., an eruption, also the pointing and bursting of an abscess. [B, 131; E; L, 43, 80.]

AUFDAMPFEN (Ger.), v. tr. and intr. A^3'uf-da^{3}mpf-e^{2}n. To evaporate. [A, 315.]

AUFDÖRREN (Ger.), v. tr. A^3'uf-du^{5}r-re^{2}n. To desiccate. [A, 315.]

AUFDUNSEN (Ger.), v. intr. A^3'uf-dun-se^{2}n. To be swollen, bloated. [A, 315.]

AUFDUNSTEN (Ger.), v. intr. A^3'uf-dunst-e^{2}n. To rise in vapor. [A, 315.]

AUFDÜNSTEN (Ger.), v. tr. A^3'uf-du^{6}nst-e^{2}n. To evaporate. [A, 315.]

AUFEINANDERLIEGEND (Ger.), adj. A^3-uf-in-a^{3}n'de^{2}r-le-ge^{2}nd. In botany, applied. [B, 123.]

AUFERNÄHREN (Ger.), v. tr. A^3'uf-e^{2}r-na-re^{2}n. To nourish, to bring up. [M, 7.]

AUFERWECKEN (Ger.), v. tr. A^3'uf-e^{2}r-ve^{2}k-e^{2}n. To resuscitate. [M, 7.]

AUFFALLEND (Ger.), adj. A^3'uf-fa^{3}l-le^{2}nd. In botany, conspicuous. [B, 198.]

AUFFANGEGLAS (Ger.), n. A^3'uf-fa^{3}ng-e^2-gla^{3}s. In optics, an objective. [B, 48.]

AUFFRESSEN (Ger.), v. tr. A^3'uf-fre^{2}s-se^{2}n. To corrode; as a n., corrosion. [B. 131; L, 46.]

AUFFRISCHUNG (Ger.), n. A^3'uf-fri^{2}sh-ung. See ANALEPSIS (1st def.).

AUFFRUCHTIG (Ger.), adj. A^3'uf-fruch^{2}t-i^{2}g. See APOCARPOUS.

AUFFÜTTERN (Ger.), v. tr. A^3'uf-fu^{6}t-te^{2}rn. To feed artificially. [L, 46.]

AUFFÜTTERUNG (Ger.), n. A^3'uf-fu^{6}t-te^{2}r-ung. Artificial feeding.

AUFGATTERN (Ger.), v. tr. A^3'uf-ga^{3}t-te^{2}rn. To keep an animal's mouth open while administering medicine. [M, 7.]

AUFGEBLÄHT (Ger.), adj. A^3'uf-ge^2-blat. Inflated, tympanitic. [B, 131; L, 80.]

AUFGEBLASEN (Ger.), adj. A^3'uf-ge^2-bla^3-ze^{2}n. See AUFGEBLÄHT.—**A'heit.** Inflation, distension, turgescence, emphysema, tympanites. [M, 7.]

AUFGEBOGEN (Ger.), adj. A^3'uf-ge^2-bo-ge^{2}n. In botany, ascending. [B, 198.]

AUFGEBORSTEN (Ger.), adj. A^3'uf-ge^2-borst-e^{2}n. See DISPANSUS.—**A.-lagersprossig.** See DISPANSO-ANABLASTETICUS.

AUFGEDUNSEN (Ger.), adj. A^3'uf-ge^2-duns-e^{2}n. Swollen, bloated. [M, 7.]—**A'heit.** Distension, inflation, swelling. [A, 315.]—**Bleiche A'heit.** Leucophlegmatia. [L, 80.]

AUFGEGOSSEN (Ger.), adj. A^3'uf-ge^2-go^{2}s-se^{2}n. Infused. [L, 43.]

AUFGEHÄUGT (Ger.), adj. A^3'uf-ge-hoigt. In botany, suspended (like an embryo in the ovum). [B, 198.]

AUFGEHEND (Ger.), adj. A^3'uf-ga-he^{2}nd. Germinating, budding. [L, 46.]

AUFGEKLEBT (Ger.), adj. A^3'uf-ge^2-kle^{2}bt. In botany, adherent, adhesive. [B, 198.]

AUFGELAUFEN (Ger.), adj. A^3'uf-ge^2-la^3-uf-e^{2}n. Bloated, swollen, inflated. [B, 131.]

AUFGELEIMT (Ger.), adj. A^3'uf-ge^2-limt. In botany, agglutinated. [B. 198.]

AUFGELÖST (Ger.), adj. A^3'uf-ge^2-lu^{5}st. Dissolved; in botany, *dissolutus* (*q. v.*). [B, 198; L, 80.]

AUFGEREGTHEIT (Ger.), n. A^3'uf-ge^2-re^{2}gt-hit. Agitation, excitement. [A, 301.]

AUFGERICHTET (Ger.), adj. A^3'uf-ge^2-ri^{2}ch^{2}t-e^{2}t. In botany, elevated (*elevatus*); sometimes in the sense of erect, sometimes in that of ascending. [B, 198.]

AUFGEROLLT (Ger.), adj. A^3'uf-ge^2-rolt. In botany, convolutive [B, 198.]

AUFGESCHÜRZT (Ger.), adj. A^3'uf-ge^2-shu^{6}rtst. Shrunken in the flank (said of horses). [L, 46.]

AUFGESCHWOLLEN (Ger.), adj. A^3'uf-ge^2-shwol-le^{2}n. Swollen, bloated; in botany, tumid. [B, 131; L, 80.]—**A'sein.** Turgescence. [L, 80.]

AUFGESETZT (Ger.), adj. A^3'uf-ge^2-ze^{2}tst. In botany, *impositus* or *superpositus*; resting upon a part without being connected with it by a pedicle. [B, 198.]

AUFGESPRUNGEN (Ger.), adj. A^3'uf-ge^2-sprung-e^{2}n. In botany, *rimosus* (*q. v.*). [B, 193.]

AUFGESTREUT (Ger.), adj. A^3'uf-ge^2-stroit. In botany, *aspersus* (*q. v.*). [B, 198.]

AUFGETAUCHT (Ger.), adj. A^3'uf-ge^2-ta^3-uch^{2}t. In botany, *emersus*, projecting from the water. [B, 198.]

AUFGETRIEBEN (Ger.), adj. A^3'uf-ge^2-treb-e^{2}n. Turgid, inflated. [B, 198.]—**A'heit.** Intumescence. [L, 46.]

AUFGEWACHSEN (Ger.), adj. A^3'uf-ge^2-va^{3}ch^{2}s-e^{2}n. In botany, innate, adnate. [B, 131, 198; L, 46.]

AUFGEWORFEN (Ger.), adj. A^3'uf-ge^2-vorf-e^{2}n. Elevated, puffy. [L, 59.]

AUFGIESSEN (Ger.), v. tr. A^3'uf-ges-se^{2}n. To affuse, to sprinkle, to infuse; as a n., see Aufgiessung.

AUFGIESSUNG (Ger.), n. A^3'uf-ges-sung. Affusion, infusion. [L, 46.]

AUFGUSS (Ger.), n. A^3'uf-gus. See Aufgiessung.—**A.-Absud.** An infuso-decoction.—[L, 80.]—**A'syrup.** A syrup made by adding sugar to an infusion or a tincture. [L, 57.]—**A'thierchen, A. würmchen.** The *Infusoria*. [B, 131.]—**Geistiger A.** An alcoholic infusion. [L, 80.]—**Heisser A.** A hot infusion. [L, 80.]—**Kalter A.** A cold infusion. [L, 80.]—**Spirituöser A.** See *Geistiger A.*—**Wässeriger A.** An aqueous infusion. [L. 80.]

AUFHÄNGE (Ger.), n. A^3'uf-he^{2}ng-e^2. A supporting apparatus. [A, 315.]—**A'band.** A suspensory ligament or bandage. [L, 43.]—**A'muskel.** A suspensory muscle. [A, 315.]

AUFHÄNGEN, AUFHÄNGUNG (Ger.), n's. A^3'uf-he^{2}ng-e^{2}n, -ung. Suspension. [A, 315; L, 57.]

AUFHÄUFEN (Ger.), v. tr. A^3'uf-hoif-e^{2}n. To accumulate; as a refl. v. (*sich a.*), to accumulate, to be congested with; as a n., accumulation, congestion, stasis. [L, 43, 80; M, 7.]—**A'd.** Cumulative. [L, 80.]

AUFHEBEBINDE (Ger.), n. A^3'uf-ha-be^2-bi^{2}nd-e^2. A truss or a suspensory bandage. [L, 46.]

AUFHEBEMUSKEL (Ger.), n. A^3'uf-ha-be^2-musk-e^{2}l. A levator muscle. [L, 46.]

AUFHEBER (Ger.), n. A^3'uf-hab-e^{2}r. 1. A levator muscle. 2. An elevator (the instrument). [A, 315.]

AUFHEBUNGSBAND (Ger.), n. A^3'uf-hab-ungs-ba^{3}nd. A suspensory ligament. [L, 80.]

AUFHEITERN (Ger.), v. tr. A^3'uf-hit-e^{2}rn. To exhilarate. [L, 80.]

AUFHELLEN (Ger.), v. tr. A^3'uf-he^{2}l-le^{2}n. To clarify; in microscopy, to make transparent. [A, 315; B, 270.]

AUFHUSTEN (Ger.), v. tr. and intr. A^3'uf-hust-e^{2}n. To cough loudly, to cough up; as a n., expectoration. [L, 80: M, 6.]

AUFKEIMEN (Ger.), v. intr. A^3'uf-kim-e^{2}n. To germinate, bud, sprout; as a n., germination. [B, 131.]

AUFKLAFFEN (Ger.), v. intr. A^3'uf-kla^{3}f-fe^{2}n. To gape (said of wounds). [L, 46.]—**A'd.** In botany, *dispansus* (*q. v.*). [B, 198.]

AUFKLAMMERN (Ger.), v. tr. A^3'uf-kla^{3}m-me^{2}rn. To clamp. [A, 315.]

AUFKLÄREN (Ger.), v. tr. A^3'uf-klar-e^{2}n. To clarify. [L, 46.]

AUFKLÄRUNG (Ger.), n. A^3'uf-klar-ung. Clarification. [L, 46.]

AUFKNATTERN (Ger.), v. intr. A^3'uf-kna^{3}t-te^{2}rn. To crepitate, crackle. [B, 131.]

AUFKNISTERN (Ger.), v. intr. A^3'uf-kni^{2}st-e^{2}rn. See Aufknattern.

AUFKNÜPFEN (Ger.), v. tr. A^3'uf-knu^{6}pf-e^{2}n. To resolve, loosen. [L, 80.]

AUFKOCHEN (Ger.), v. tr. and intr. A^3'uf-koch^2-e^{2}n. To boil; as a n., ebullition. [A, 315; L, 43.]

AUFKOMMEN (Ger.), n. A^3'uf-kom-me^{2}n. Recovery, restoration to health. [L, 80.]

AUFKRATZEN (Ger.), v. tr. A^3'uf-kra^{3}tz-e^{2}n. To rasp, to scratch open. [A, 315.]

AUFKUNFT (Ger.), n. A^3'uf-kunft. See Aufkommen.

AUFLACHEN (Ger.), v. tr. A^3'uf-la^{3}ch^2-e^{2}n. To incise a tree for the purpose of extracting the resin. [A, 315.]

AUFLAGERUNG (Ger.), n. A^3'uf-la^{3}g-e^{2}r-ung. An accumulation, a deposit. [A, 315.]

AUFLAUF (Ger.), n. A^3'uf-la^3-uf. The tympanites of ruminants. [L, 80.]

AUFLAUFEN (Ger.), v. intr. A^3'uf-la^3-uf-e^{2}n. To swell, germinate, bud, shoot; as a n., swelling, inflation, intumescence, germination. [B, 131; L, 46.]

AUFLEBEN (Ger.), v. intr. A^3'uf-lab-e^{2}n. To revive. [L, 80.]

AUFLEGEN (Ger.), v. tr. A^3'uf-lag-e^{2}n. To apply (*e. g.*, a blister, a poultice, etc.); as a n., see Auflegung. [A, 315.]

AUFLEGUNG (Ger.), n. A^3'uf-lag-ung. The act of applying (plasters, poultices, bandages, etc.). [A, 315.]

AUFLIEGEN (Ger.), v. intr. A^3'uf-leg-e^{2}n. To lie, to recline; as a refl. v. (*sich a.*), to become sore from long lying. [A, 315.]—**A'd.** In botany, incumbent. [B, 131, 198.]

AUFLOCKERUNG (Ger.), n. A^3'uf-lo^{2}k-e^{2}r-ung. Relaxation, softening. [L, 80.]

AUFLÖSBAR (Ger.), adj. A^3'uf-lu^{5}s-ba^{3}r. Soluble, also capable of being decomposed. [A, 315.]—**A'keit.** Solubility, also capability of decomposition. [A, 315.]

AUFLÖSEN (Ger.), v. tr. A^3'uf-lu^{5}z-e^{2}n. To dissolve, resolve, melt, decompose, disorganize, loosen; as a n., a solution. [L, 80.]—**A'd.** Solvent, resolvent, diluent, laxative, aperitive, analytical. [A, 301, 315.]—**A'de Mittel.** Solvents. [A, 315.]

AUFLÖSLICH (Ger.), adj. A^3'uf-lu^{5}s-li^{2}ch^2. See Auflösbar.—**A'keit.** See Auflösbar*keit*.

AUFLÖSUNG (Ger.), n. A^3'uf-lu^{5}z-ung. Solution, dissolution, analysis, decomposition. [A, 315; L, 80.]—**A. auf nassem Wege.** The process of solution when one or all of the bodies are liquid. [B, 48.] Cf. Analysis *in the wet way*.—**A. auf trockenem Wege.** The process of solution when all the bodies are solid, and liquefaction is effected either by heat or by the interaction of the ingredients. [B, 48.]. Cf. Analysis *in the dry way*.—**A. der Linse.** Solution of the crystalline lens (*i. e.*, soft cataract). [L, 135.]—**A. des Glaskörpers.** See Synchesis.—**A'sfähig.** Soluble, capable of being decomposed. [L, 46.]—**A'sfähigkeit.** Solubility, capability of being decomposed. [L, 46.]—**A'skraft.** The solvent power or capacity. [L, 46.]—**A'smittel.** A menstruum or solvent. [B, 48.]—**A'svermögen.** 1. See *A'skraft*. 2. The resolving power (of the microscope). [B, 270.]—**Gährende A.** Decomposition by fermentation. [L.]

AUFNAHMSFÄHIGKEIT (Ger.), n. A^3'uf-na^{3}ms-fa-hi^{2}g-kit. The power, possessed especially by amœboid cells, of ingesting foreign particles, the latter being often very large in proportion to the size of the cell. [Kollman, "Rec. zool. suisse," i, p. 259 (J).]

AUFNAHMSÖFFNUNG (Ger.), n. A^3'uf-na^{3}ms-u^{5}f-nung. The mouth. [L, 59.]

AUFNAHMSORGAN (Ger.), n. A^3'uf-na^{3}ms-or-ga^{3}n. An organ for the reception of nourishment in plants. [B, 36.]

AUFNÄHREN (Ger.), v. tr. A^3'uf-nar-e^{2}n. See Auffüttern.

AUFNEHMEN (Ger.), v. tr. A^{3}uf-nam-e^{2}n. To take up, absorb, appropriate. [A, 315.]

AUFPLATZEN (Ger.), n. A^3'uf-pla^{3}tz-e^{2}n. In botany, *ruptura* (as distinct from dehiscence). [B, 198.]—**A'd.** See Rumpens.

AUFQUALMEN (Ger.), v. intr. A^3'uf-kwa^{3}l-me^{2}n. To rise in the form of vapor. [A, 315.]

AUFQUELLEN (Ger.), v. tr. and intr. A^3'uf-kwe^{2}l-le^{2}n. To cause to swell in water, to soak up, to steep; to well up, to bubble, to swell. [A, 315.]

AUFRAFFEN (Ger.), v. tr. A^3'uf-ra^{3}f-fe^{2}n. To pick up; as a refl. v. (*sich a.*), to recover one's strength after an illness. [A. 315.]

AUFRÄUSPERN (Ger.), v. tr. A^3'uf-roisp-e^{2}rn. To cough up. [A, 315.]

AUFRECHT (Ger.), adj. A^3'uf-re^{2}ch^{2}t. In botany, erect. [B, 198.]—**A. abstehend.** See Erecto-patens.—**A. oblong.** Oblong and longer in the vertical than in the transverse direction (said of the separate segments of a tape-worm). [B, 27.]—**A'stehen.** The upright posture. [L, 80.]—**A. stehend.** In botany, erect. [B, 36.]

AUFREGUNG (Ger.), n. A^3'uf-rag-ung. Excitement, agitation, commotion. [A, 315; L, 80.]

AUFREIBEN (Ger.), v. tr. A^3'uf-rib-e^{2}n. To fret, to gall, to chafe; as a n., attrition. [A, 315; L, 43.]

AUFREISSEN (Ger.), v. intr. A^3'uf-ris-se^{2}n. To burst, to crack, to gape, to chap; as a n., see Aufplatzen. [B, 198; L, 46.]—**A'd.** See Rumpens.

AUFREIZUNG (Ger.), n. A^3'uf-ritz-ung. Excitation. [M, 7.]

AUFRICHTEMUSKEL (Ger.), n. A^3'uf-ri^{2}ch^{2}t-e^2-musk-e^{2}l. An erector muscle. [L, 46.]

AUFRICHTEN (Ger.), v. tr. A^3'uf-ri^{2}ch^{2}t-e^{2}n. To erect; as a n., erection. [A, 315; L, 80.]—**A'd.** Erecting. [A, 315.] See *Sich a'd.*—**A'der Muskel.** An erector muscle. [A, 315.]—**Sich a'd.** In botany, *erigens* (*q. v.*). [B, 198.]

AUFRICHTER (Ger.), n. A^3'uf-ri^{2}ch^{2}t-e^{2}r. An erector muscle. [L, 43.]

AUFRICHTUNG (Ger.), n. A^3'uf-ri^{2}ch^{2}t-ung. Erection. [L, 46.]—**A'svermögen.** The power or capability of erection. [L, 50.]

AUFRÖCHELN (Ger.), v. intr. A^3'uf-ru^{5}ch^2-e^{2}ln. To make a rattling sound in the throat. [A, 315.]

AUFRÜLPSEN (Ger.), n. A^3'uf-ru^{6}lps-e^{2}n. Eructation. [L, 80.]

AUFSÄUERN (Ger.), v. tr. A^3'uf-zoi-e^{2}rn. To acidify, to leaven. [L, 46.]

AUFSAUGEN (Ger.), v. tr. A^3'uf-za^3-ug-e^{2}n. To absorb; as a n., absorption. [B, 131.]

AUFSÄUGEN (Ger.), v. tr. A^3'uf-zoig-e^{2}n. To bring up (a child) by suckling. [A, 315.]

AUFSAUGUNG (Ger.), n. A^3'uf-za^3-ug-ung. Absorption. [B, 131.]—**Zurücka'.** Resorption. [K, 16.]

AUFSALBEN (Ger.), v. tr. A^3'uf-za^{3}lb-e^{2}n. To apply an ointment. [A, 315.]

AUFSCHÄRFEN (Ger.), v. tr. A ^{3}'uf-sharf-e^{2}n. To abrade. [A, 315.]

AUFSCHÄRFUNG (Ger.), n. A^3'uf-sharf-ung. Abrasion. [A, 315.]

AUFSCHARRER (Ger.), n. A^3'uf-sha^{3}r-re^{2}r. A scraping instrument. [L, 80.]

AUFSCHÄUMEN (Ger.), v. intr. A^3'uf-shoim-e^{2}n. To froth, to foam; as a n., effervescence. [A, 315; L, 80.]

AUFSCHIELEN (Ger.), v. intr. A^3'uf-shel-e^{2}n. To squint upward. [A, 315.]

AUFSCHIENEN (Ger.), v. tr. A^3'uf-shen-e^{2}n. To bind with splints. [A, 315.]

AUFSCHIESSEN (Ger.), v. intr. A^3'uf-shes-se^{2}n. To shoot up, to spire, to grow rapidly (said of plants). [A, 315.]—**A'd.** Arborescent. [B, 131.]

AUFSCHINDEN (Ger.), v. refl. (*sich a.*). A^3'uf-shi^{2}nd-e^{2}n. To excoriate one's self. [A, 315.]

AUFSCHLAG (Ger.), n. A^3'uf-shla^{3}g. A fomentation. [L, 80.]

AUFSCHLIESSEN (Ger.), v. refl. (*sich a.*). A^3'uf-shles-se^{2}n. To expand (said of buds and flowers). [A, 315.]

AUFSCHMELZEN (Ger.), v. intr. A^3'uf-shme^{2}ltz-e^{2}n. To melt, to dissolve, to liquefy. [A, 315.]

AUFSCHNEIDEN (Ger.), v. tr. A^3'uf-shnid-e^{2}n. To make an incision, to dissect; as a n., dissection, incision. [L, 46.]

AUFSCHNEIDUNG (Ger.), n. A^3'uf-shnid-ung. Dissection, incision. [L, 46.]

AUFSCHNITT (Ger.), n. A^3'uf-shni^{2}t. A slit, an incision. [A, 315.]

AUFSCHOSSEN (Ger.), v. intr. A^3'uf-shos-sen. To shoot, to sprout. [A, 315.]

AUFSCHÖSSLING (Ger.), n. A^3'uf-shu^{5}s-li^{2}ng. A shoot, a sprout. [B, 131.]

AUFSCHRAMMEN (Ger.), v. tr. A^3'uf-shra^{3}m-me^{2}n. To scratch (the skin). [A, 315.]

AUFSCHRUNDEN (Ger.), v. intr. A^3'uf-shrund-e^{2}n. To crack, to chap. [A, 315.]

AUFSCHWÄMMEN (Ger.), **AUFSCHWELLEN** (Ger.), v's intr. A^3'uf-shwam-me^{3}n, -shwe^{2}l-le^{2}n. To swell, bloat. [A, 315.]

AUFSCHWELLUNG (Ger.), n. A^3'uf-shwe^{2}l-lung. Swelling, tumefaction, turgescence. [B, 131.]

AUFSCHWUNG (Ger.), n. A^3'uf-shwung. Exaltation. [M, 6.]

AUFSEIGEN (Ger.), v. tr. A^3'uf-zig-e^{2}n. To wean (said of cattle). [A, 315.]

AUFSIEDEN (Ger.), v. tr. A^3'uf-zed-e^{2}n. To boil gently; as a n., ebullition. [B, 131; L, 46.]

AUFSITZEN (Ger.), v. intr. A^3'uf-zi^{2}tz-e^{2}n. To sit up (with a sick person); as a refl. v. (*sich a.*), to become sore by sitting. [A, 315.]—**A'd.** In botany, sessile (*insidens*). [B, 198.]

AUFSPALTEN (Ger.), v. intr. A^3'uf-spa^{3}lt-e^{2}n. To split, to crack, to chap. [A, 315; L, 80.]

AUFSPERRER (Ger.), n. A^3'uf-spe^{2}r-re^{2}r. A dilator. [L, 135.]

AUFSPRIESSEN (Ger.), v. intr. A^3'uf-spres-se^{2}n. To sprout, to shoot, to germinate. [A, 315.]

AUFSPRINGEN (Ger.), v. intr. A^3'uf-spri^{2}ng-e^{2}n. To crack, to chap; as a n., chapping, dehiscence. [A, 315; B, 36.]—**A'd.** Dehiscent. [B, 36.]—**A. durch Klappen, A. durch Spalten.** Valvular dehiscence. [B, 36.]—**A. durch Zähne.** See DEHISCENTIA *dentalis*.—**A. in der Quere.** Transverse dehiscence. [B, 198.]—**A. in Karpellen, A. in Knospe.** Carpellary or septicidal dehiscence. [B, 198.]—**A. in Löchern.** Porous dehiscence. [B, 198.]—**A. in Ritzen, A. in Spalten.** Dehiscence by chinks (*dehiscentia rimalis*). [B, 198.]—**A. in Zähnen.** See DEHISCENTIA *dentalis*.—**A. nach aussen.** Extrorse dehiscence. [B, 198.]—**A. nach innen.** Introrse dehiscence. [B, 198.]—**Fachspaltiges A.** Loculicidal dehiscence. [B, 198.]—**Gliederiges A.** Articular dehiscence. [B, 198.]—**Halbklappiges A.** Semivalvular dehiscence. [B, 198.]—**Klappiges A.** Valvular dehiscence. [B, 198.]—**Quera'.** Transverse dehiscence. [B, 198.]—**Scheidewandabreissendes A.** Septifragal dehiscence. [B, 198.]—**Scheidewandspaltiges A.** Septicidal dehiscence. [B, 198.]—**Umschnittenes A.** Circumscissile dehiscence. [B, 36.]—**Zähniges A.** See DEHISCENTIA *dentalis*.

AUFSPRITZEN (Ger.), v. tr. A^3'uf-spri^{2}tz-e^{2}n. To syringe. [B, 131.]

AUFSPROSSEN (Ger.), v. intr. A^3'uf-spro^{2}s-se^{2}n. To shoot, to sprout. [L, 46.]

AUFSPRÖSSLING (Ger.), n. A^3'uf-spru^{5}s-li^{2}ng. A shoot or sprout. [B, 131.]

AUFSPRUDELN (Ger.), v. intr. A^3'uf-sprud-e^{2}ln. To bubble up (said of springs), to sparkle (said of wine). [A, 315.]

AUFSTECHEN (Ger.), v. tr. A^3'uf-ste^{2}ch^2-e^{2}n. To open by puncture. [L, 46.]

AUFSTEHEN (Ger.), v. intr. A^3'uf-sta-he^{2}n. To ferment a second time (said of wine). [A, 315.]—**A'd.** In botany, *arrectus* (*q. v.*). [B, 198.]

AUFSTEIGEN (Ger.), v. intr. A^3'uf-stig-e^{2}n. To ascend; as a n., an ascent. [L, 80.]—**A'd.** Ascending, assurgent. [B; L, 80.]—**A. der Gebärmutter, A. der Mutter.** An hysterical attack. [L, 43; M, 7.]—**A. zum Kopfe.** A mounting (as of blood) to the head. [L, 80.]

AUFSTOSSEN (Ger.), v. tr. and intr. A^3'uf-sto^{2}s-se^{2}n. 1. To chafe, to abrade. 2. To become sour, to ferment afresh, to belch up wind. 3. As a n., eructation. [L, 46.]

AUFSTÖSSIG (Ger.), adj. A^3'uf-stu^{5}s-si^{2}g. Sour, causing eructations. [M, 7.]—**A'keit.** Want of appetite. [M, 7.]

AUFSTREBEND (Ger.), adj. A^3'uf-strab-e^{2}nd. In botany, assurgent. [B.]

AUFSTREIFEN (Ger.), v. tr. A^3'uf-strif-e^{2}n. To wound, to gall. [L, 46.]

AUFSTÜTZIG (Ger.), adj. A^3'uf-stu^{6}tz-i^{2}g. Sick, having no appetite (said of cattle). [M, 7.]

AUFSÜSSEN (Ger.), v. tr. A^3'uf-zu^{6}s-se^{2}n. To edulcorate. [B, 131.]

AUFTAUCHEND (Ger.), adj. A^3'uf-ta^3-uch^2-e^{2}nd. In botany, emerging (*emergens*). [B, 198.]

AUFTHAUEN (Ger.), v. tr. A^3'uf-ta^3-u-e^{2}n. To liquefy. [A, 315.]

AUFTHAUPUNKT (Ger.), n. A^3'uf-ta^3-u-punkt. The dew-point. [A, 315.]

AUFTREIBEN (Ger.), v. tr. A^3'uf-trib-e^{2}n. To distend, to cause to swell; in chemistry, to sublime. [A, 315.]

AUFTREIBUNG (Ger.), n. A^3'uf-trib-ung. Distension. [L, 46.]—**A. des Rückgrats.** See RHACHIOPHYMA.

AUFTRINKEN (Ger.), v. tr. A^3'uf-tri^{2}n^{2}k-e^{2}n. To absorb. [M, 7.]

AUFTROCKNEN (Ger.), v. tr. and intr. A^3'uf-tro^{2}k-ne^{2}n. To dry, to adhere to in drying. [A, 315.]

AUFTROCKNUNG (Ger.), n. A^3'uf-tro^{2}k-nung. Desiccation. [A, 315.]

AUFTRÖPFELN, AUFTRÖPFEN (Ger.), v's tr. and intr. A^3'uf-tru^{5}pf-e^{2}ln, -e^{2}n. To apply to, or fall upon, in drops. [A, 315.]

AUFWALL (Ger.), n. A^3'uf-va^{3}l. See AUFWALLUNG.

AUFWALLEN (Ger.), v. intr. A^3'uf-va^{3}l-le^{2}n. To boil, to bubble, to effervesce; as a n., effervescence, ebullition. [A, 315; L, 80.]

AUFWÄLLEN (Ger.), v. tr. A^3'uf-val-le^{2}n. To boil gently. [A, 315.]

AUFWALLUNG (Ger.), n. A^3'uf-va^{3}l-lung. A bubbling up, ebullition, effervescence, orgasm; in veterinary medicine, urticaria. [B, 131; L, 43, 46; M, 6.]—**A'sfieber.** The urticaria of horses. [M, 6.]

AUFWÄRTSKEHRUNG (Ger.), n. A^3'uf-varts-ke^{2}r-ung. A turning upward. [A, 315.]—**A. der Augenlider.** Eversion of the eyelids. [A, 315.]

AUFWÄRTSZIEHER (Ger.), n. A^3'uf-varts-tse-he^{2}r. A levator muscle. [L, 59.]

AUFWEICHEN (Ger.), v. tr. and intr. A^3'uf-wich^2-e^{2}n. To moisten, to soften, to become soft. [A, 315; L, 80.]—**A'd.** Emollient. [B, 131.]—**A'des Mittel.** An emollient. [A, 315.]

AUFWEICHUNG (Ger.), n. A^3'uf-wich^2-ung. The softening or breaking up of a tissue. [L, 135.]

AUFWISCHEN (Ger.), v. tr. A^3'uf-vi^{2}sh-e^{2}n. To sponge. [A, 309.]

AUFZEHREN (Ger.), v. tr. A^3'uf-tsar-e^{2}n. To absorb. [B, 131.]

AUFZIEHEN (Ger.), v. tr. and intr. A^3'uf-tse-he^{2}n. 1. To come to a head (said of abscesses). [A, 315; L, 80.] 2. To breed, to rear. [A, 309.]

AUFZIEHER (Ger.), n. A^3'uf-tse-he^{2}r. An elevator, a levator muscle. [L, 46.]

AUFZUG (Ger.), n. A^3'uf-tsug. In veterinary parlance, a portion of the shoe turned up in front and fastened upon the fore part of the hoof. [A, 315.]

AUGAPFEL (Ger.), n. A^3'ug-a^{3}p-fe^{2}l. The eyeball, also the pupil. [B; L, 115.]—**A'abscess.** See PANOPHTHALMITIS *purulenta*.—**A'ausrottung.** Removal of the eyeball. [L, 135.]—**A'bindehaut.** The ocular conjunctiva. [L, 115.]—**A'colobom.** See COLOBOMA *oculi*.—**A'entzündung.** See PANOPHTHALMITIS.—**A'geschwulst.** See EXOPHTHALMIA.—**A'halter.** See OPHTHALMOSTAT.—**A'haut.** Any of the tunics of the eye. [L, 80.]—**A'krampf.** See NYSTAGMUS.—**A'krebs.** Cancer of the eyeball. [L, 135.]—**A'lähmung.** Paralysis of the iris. [L, 46.]—**A'starrkrampf.** Spasm of the eyeball. [L, 59.]—**A'vergrösserung.** See OPHTHALMACROSIS.—**A'vorfall.** See EXOPHTHALMIA.—**A'zuckung.** See NYSTAGMUS.—**Dicke A'haut.** The sclerotic coat of the eye. [L, 80.]

AUGASTA, n. The Bengal name of a medicine which, according to Roxburgh, is derived from the *Agati grandiflora*. [L, 87.]

AUGE (Fr.), n. Ozh. 1. A term formerly applied to any vessel or receptacle of the body containing fluid. [L, 41.] 2. The space between the rami of the inferior maxilla of the horse. [L, 32.]—**A. galvanique.** A box divided into compartments for holding the cells of a galvanic battery. [L, 41.]

AUGE (Ger.), n. A^3'ug-e^2. 1. The eye. 2. In botany, the eye or oculus; a bud, especially when it is first beginning to grow; the portion of a plant which is used in budding; also the disc-shaped spot in the top of a fruit formed by the persistent apex of the ovary. [B, 198.]—**Abzieha'nmuskelnerv.** See *Trochlear* NERVE.—**Abziehender A'nmuskel.** The external rectus muscle of the eye.

[L.]—**Adducirender A'nmuskel.** The internal rectus muscle of the eye. [L.]—**Aderhaut des A's.** See CHORIOID.—**Aegyptische A'npest.** See *Egyptian* OPHTHALMIA.—**Aeusserer A'nmuskelnerv.** See *Trochlear* NERVE.—**Aeusseres A'nlidband, Aeusseres A'nwinkelband.** See *External tarsal* LIGAMENT.—**Amaurotisches Katzena'.** See *Amaurotic cat's* EYE.—**Angewachsenes A'nhäutchen.** See *Ocular* CONJUNCTIVA.—**Anziehender A'nmuskel.** The internal rectus muscle of the eye. [L.]—**Arthritische A'nentzündung.** See OPHTHALMIA *arthritica*.—**Attollirender A'nmuskel.** The superior rectus muscle of the eye. [L.]—**A'nabscess.** See PANOPHTHALMITIS *purulenta*.—**A'nachse.** See *Optic* AXIS.—**A'nader.** See *Ophthalmic* VEIN.—**A'naderhaut.** See CHORIOID.—**A'naderlass.** Abstraction of blood from the eye. [L, 135.]—**A'nähnlich.** Resembling an eye. [L, 46.]—**A'napfel.** See AUGAPFEL.—**A'narterie.** See *Ophthalmic* ARTERY.—**A'narznei.** An ophthalmic medicine. [L, 46.]—**A'arzt.** See OPHTHALMOLOGIST.—**A'närztlich.** Ophthalmological. [L.]—**A'nausrottung.** Removal of the eye. [L, 46.]—**A'nausschälung.** Enucleation of the eye. [L, 46, 135.]—**A'naxe.** See *Optic* AXIS.—**A'nbad.** The washing of an eye, also the fluid used for that purpose. [L, 43, 46.]—**A'nbadwännchen.** See *A'nbecken*.—**A'nball.** The eyeball. [L, 46.]—**A'nbalsam.** An eye-salve. [L, 46.]—**A'nbeben.** See NYSTAGMUS.—**A'nbecken, A'nbecker.** A basin or dish used for bathing the eyes. [L, 135.]—**A'nbersten.** Rupture of the eyeball.—**A'nbeschreibung.** See OPHTHALMOLOGY.—**A'nbeschützer.** An eye-protector.—**A'nbetrug.** An optical illusion. [L.]—**A'nbewegender.** The third cranial (motor oculi) nerve. [L, 43.]—**A'nbinde.** A bandage for the eyes. [L, 135.]—**A'nbindehaut.** See *Ocular* CONJUNCTIVA.—**A'nbistourie.** A bistoury for use on the eye. [L, 135.]—**A'nblasen.** The primitive optic vesicle. [I, 17.]—**A'nblasengrube.** See *Optic* CUP.—**A'nblasenspalte.** See *Fœtal ocular* FISSURE.—**A'nblasenstiel.** The pedicle of the optic vesicle; a projection in the brain of the embryo, at the extremity of which the vesicle is situated. [I, 17.]—**A'nblasenwurm.** See CYSTICERCUS *cellulosæ oculi*.—**A'nblennorrhöe.** See *Gonorrhœal* OPHTHALMIA.—**A'nblennorrhöe der Neugeborenen.** See OPHTHALMIA *neonatorum*.—**A'nblinken, A'nblinzeln, A'nblinzen.** See NICTITATION.—**A'nblöde, A'nblödigkeit.** Amblyopia. [L, 46, 135.]—**A'nblutader.** See *Ophthalmic* VEIN.—**A'nblutfluss.** See *A'nblutung*.—**A'nblutschwamm.** A fungous growth of the eye. [A, 317.]—**A'nblüthe.** See ANAGALLIS *arvensis*.—**A'nblutung, A'nblutunterlaufung.** See HÆMOPHTHALMIA.—**A'nbogen.** 1. The iris. [L. 46.] 2. See *Orbital* ARCH.—**A'nbogenfortsatz.** The zygomatic process of the superior maxilla. [L, 44.]—**A'nbogenschuppe.** Bojanus's term for the supra-temporal bone of Owen. [L, 27.]—**A'nbrand.** See BLEPHARANTHRACOSIS.—**A'nbraue.** The eyebrow. [A, 301.]—**A'nbrauenausfall.** See *A'nbraunenausfall*.—**A'nbrauenbogen.** See *Superciliary* RIDGES.—**A'nbrauenmuskel, A'nbrauenrunzler.** See CORRUGATOR *supercilii*.—**A'nbrauenzache.** A term applied to a few fibres of the occipito-frontalis muscle which run down toward the inner canthus of the eye and the side of the nose. [A, 262.]—**A'nbraune.** The eyebrow. [L, 80.]—**A'nbraunenausfall.** Falling out of the eyebrows. [L, 46.]—**A'nbraunenbogen.** See *Superciliary* RIDGES.—**A'nbraunenbogenloch.** See *Supra-orbital* FORAMEN.—**A'nbraunenkraut.** The genus *Ophrys*. [A, 315.]—**A'nbraunenmuskel.** See CORRUGATOR *supercilii*.—**A'nbraunennerv.** See *Supra-orbital* NERVE.—**A'nbraunenrunzler.** See CORRUGATOR *supercilii*.—**A'nbraunen-Verschönerungsmittel.** See CALLIBLEPHARON.—**A'nbraungegend.** The superciliary region. [L, 43.]—**A'braunhaare.** The eyebrows. [L, 135.]—**A'nbreite.** The space between the eyes. [L, 30.]—**A'nbrennen.** See *A'nweh*.—**A'nbruch.** See OPHTHALMOCELE.—**A'nbürste.** See *A'nlidkrätzer*.—**A'nbutter.** 1. The secretion of the Meibomian glands. [L, 43.] 2. See LIPPITUDO.—**A'nbutterdrüsen.** See *Meibomian* GLANDS.—**A'ncatarrh.** Catarrhal conjunctivitis. [L, 57.]—**A'ndecke.** See *Nictitating* MEMBRANE.—**A'ndeckel.** 1. An eye-protector. 2. The eyelid. [L, 43.]—**A'ndeckelhaare.** The eyelashes. [L, 43.]—**A'ndiät, A'ndiätetik.** The hygiene of the eye, or dietetics with reference to the eye. [L, 46, 80.]—**A'ndienst.** See *A'ntrost*.—**A'ndouche.** Affusion of the eyes with water. [L, 43.]—**A'ndrücken.** Pain in the eyes, especially that due to pressure. [L, 46, 59.]—**A'ndrüse.** See *Lacrymal* GLAND.—**A'ndrüsenentzündung.** See OPHTHALMIA *glandularis*.—**A'ndunkelheit.** A diminution or loss of the sight. [L, 135.]—**A'neisen.** A cautery iron for use on the eye or its appendages. [L, 135.]—**A'neiterung.** Suppuration of the eye. [L, 43.]—**A'nentzündung.** Any inflammatory process in the eye. [L, 135.]—**A'nentzündung der Neugeborenen.** See OPHTHALMIA *neonatorum*.—**A'nfällig.** Manifest, distinct. [B, 198.]—**A'nfeld.** The visual field. [A. 317.]—**A'nfell.** 1. A corneal opacity. [L, 46.] 2. A pterygium. [A, 317.]—**A'nfeuchtigkeit.** A term applied to the aqueous or vitreous humor of the eye. [L, 80.]—**A'nfistel.** A lacrymal or corneal fistula. [L, 135.]—**A'nfläche.** An orbital or ocular surface.—**A'nflechte.** See *A'nlidflechte*.—**A'nflecke.** 1. A pigment spot on the eye. [B.] 2. See *A'nfell*.—**A'nfleckig.** See OCELLATE.—**A'nfluss.** A discharge from the eye. [A, 301.]—**A'nflüssig.** Affected with a watery discharge from the eyes. [L, 46.]—**A'nförmig.** See OCELLATE.—**A'nfortsatz.** An orbital process. [L, 80.]—**A'nfunken.** See PHOTOPSIA.—**A'nganglie.** See *Optic* GANGLION.—**A'ngefässe.** The vessels of the eye. [L, 135.]—**A'ngegend.** The region of the eye. [L, 80.]—**A'ngerienkürbis.** See CUCURBITA *citrulus*.—**A'ngeschwulst.** See EXOPHTHALMIA.—**A'ngeschwür.** An ulcer upon the cornea or the sclerotic. [L, 30.]—**A'ngespenster.** An optical illusion. [L, 80.]—**A'ngewölk.** See *A'nfell*.—**A'nglas.** An eye-glass or the eye-piece of a telescope or microscope. [B.]—**A'ngläser.** Eye-glasses, spectacles. [A, 309.]—**A'nglasschleifer.** See OPTICIAN.—**A'ngrube.** 1. The orbit. 2. The depression above the eyes in certain animals. [L, 46.]—**A'ngrund.** See FUNDUS *oculi*.—**A'nhalter.** See OPHTHALMOSTAT.—**A'nhaut.** Any of the tunics of the eye. [L, 43.]—**A'nhäutchen.** See LEUCOMA.—**A'nheilkunde, A'nheillehre.** See OPHTHALMOLOGY.—**A'nheraustreten.** See EXOPHTHALMIA.—**A'nhintergrund.** See FUNDUS *oculi*.—**A'nhöhle.** The orbit. [L, 80.]—**A'nhöhlenarterie.** A term applied to any of the arteries contained within the orbit. [L, 80.]—**A'nhöhlenbogen.** See *Superciliary* RIDGES.—**A'nhöhlendach, A'nhöhlendecke.** The roof of the orbit. [A, 317; L, 80.]—**A'nhöhlenentzündung.** Inflammation of the structures surrounding the eye. [L, 135.]—**A'nhöhlenfissur.** See *Sphenoidal* FISSURE.—**A'nhöhlenfläche.** The orbital surfaces of the bones which form the orbits. [L, 115.]—**A'nhöhlenflügel.** See ALÆ *parvæ ossis sphenoidei*.—**A'nhöhlenfortsatz.** An orbital process. [L, 80.]—**A'nhöhlenhaut.** A term applied to the orbital aponeurosis or to the periosteum of the orbit. [L, 80.]—**A'nhöhlenkamm.** See CRISTA *orbitalis*.—**A'nhöhlenkrebs.** An orbital cancer. [L, 135.]—**A'nhöhlennery.** See *Orbital* NERVE.—**A'nhöhlenrand.** The margin of the orbit. [L, 80.]—**A'nhöhlenschlagader.** See *Orbital* ARTERY.—**A'nhöhlenspalte.** See *Sphenoidal* FISSURE.—**A'nhöhlenwassersucht.** See HYDROPHTHALMIA.—**A'nhöhlenwinkel.** The angle of the orbit. [L. 80.]—**A'nhöhlfläche.** See *A'nhöhlenfläche*.—**A'nindex.** See *Orbital* INDEX.—**A'njucken.** Itching of the eyes. [A, 317.]—**A'nkammer.** A chamber of the eye. [A, 301.]—**A'nklappe.** See EYELID.—**A'nklapperand.** See *A'nliderrand*.—**A'nklinik.** An eye-infirmary. [L, 46.]—**A'nknorpel.** The tarsal cartilage. [A, 301.]—**A'nknoten.** See *Ophthalmic* GANGLION.—**A'nkrampf.** See NYSTAGMUS.—**A'nkrankenanstalt.** An eye-infirmary. [L, 43.]—**A'nkrankenzimmer.** A room designed for the treatment of diseases of the eyes. [L, 135.]—**A'nkrankheit.** A disease affecting the eyes. [L, 43.]—**A'nkrankheitslehre.** See OPHTHALMOLOGY.—**A'nkrätze.** Gonorrhœal ophthalmia. [L, 135.]—**A'nkratzen.** Scarification of the conjunctiva. [L, 135.]—**A'nkratzer.** An instrument for scarifying the conjunctiva. [L, 135.]—**A'nkrebs.** Cancer of the eye. [L, 135.]—**A'nkreis.** The orbit. [L, 40.]—**A'nkugel.** The eyeball. [L, 80.]—**A'nlefzen.** The eyelids. [L, 80.]—**A'nlehre.** See OPHTHALMOLOGY.—**A'nleiden.** See *A'nkrankheit*.—**A'nleise, A'nleiste.** The orbit. [L, 80.]—**A'nleistenfortsatz.** An orbital process. [L, 80.]—**A'nlicht.** Eyesight. [L, 46.]—**A'nlid.** An eyelid. [L, 43.]—**A'nlidarterien.** See *Palpebral* ARTERIES.—**A'nlidband.** A tarsal ligament. [L, 115.]—**A'nlidbildung.** See BLEPHAROPLASTY.—**A'nlidbindehaut.** See *Palpebral* CONJUNCTIVA.—**A'nlidblutadern.** The palpebral veins. [L, 115.]—**A'nlidcarbunkel.** See BLEPHARANTHROCOSIS.—**A'nlidcolobom.** See COLOBOMA *palpebræ*.—**A'nliddrüsen.** The Meibomian glands. [L, 80.]—**A'nliddrüsenentzündung.** See BLEPHARITIS *glandulosa*.—**A'nliderarterien.** The palpebral arteries. [L, 32.]—**A'nliderauswärtskehrung.** See ECTROPION.—**A'nliderbalggeschwulst.** A cystic tumor of the eyelid. [L, 135.]—**A'nliderbänder.** The tarsal ligaments. [L, 80.]—**A'nliderbeule.** A furuncle on the inner surface of the eyelid. [L, 135.]—**A'nliderblinzeln.** See NICTITATION.—**A'nliderbindehaut.** The palpebral conjunctiva. [L.]—**A'nliderbindehautentzündung.** Palpebral conjunctivitis. [L, 50.]—**A'nliderbogen der A'nliderarterien.** A term applied to the arcus tarseus inferior and the arcus tarseus superior (*q. v.*). [L, 80.]—**A'nliderbrand.** See BLEPHARANTHRACOSIS.—**A'nlidercallosität.** See *A'nliderverknorpelung*.—**A'nlidercarbunkel.** See BLEPHARANTHRACOSIS.—**A'nliderdrüsen.** See *Meibomian* GLANDS.—**A'nliderdrüsenblennorrhöe, A'nliderdrüsenentzündung.** Inflammation of the Meibomian glands. [L, 135.]—**A'nlidereinwärtskehrung.** See ENTROPION.—**A'nliderentzündung.** See BLEPHARITIS.—**A'nliderexulceration, A'nliderflechte.** See BLEPHARITIS *marginalis*.—**A'nlidergeschwulst.** A tumor or swelling of the eyelids, of any nature. [L, 135.]—**A'nlidergeschwür.** Ulceration of the eyelids. [L, 135.]—**A'nliderhaare.** The eyelashes. [L, 135.]—**A'nliderhalter.** Any instrument used to hold the eyelids in position during an examination of or an operation upon the eye. [L, 135.]—**A'nliderhautentzündung.** See BLEPHARITIS *externa*.—**A'nliderhirsekorn.** See CHALAZION.—**A'nliderknorpel.** See *Tarsal* CARTILAGE.—**A'nliderknorpelverschrumpfung.** A corrugation or wrinkling of the tarsal cartilage. [L, 135.]—**A'nliderkrampf.** See BLEPHAROSPASM.—**A'nliderkrankheiten.** Diseases of the eyelids. [L, 135.]—**A'nliderkrätze.** See PSOROPHTHALMIA.—**A'nliderkratzer.** See *A'nkratzer*.—**A'nliderkrebs.** Cancer of the eyelid. [L, 135.]—**A'nliderlähmung.** See BLEPHAROPLEGIA.—**A'nliderläusesucht.** Ciliary phtheiriasis. [L.]—**A'nlidernerv.** See *Palpebral* NERVE.—**A'nliderödem.** See BLEPHARŒDEMA.—**A'nliderrand.** The margin of an eyelid. [L, 80.]—**A'nliderräude.** See *A'nliderflechte*.—**A'nliderrauhigkeit.** See TRACHOMA.—**A'nliderrose.** Erysipelas of the eyelids. [L, 135.]—**A'nliderschaffung.** Relaxation of the eyelids. [L. 43.]—**A'nliderschleimfluss.** A blennorrhœal discharge from the eyelids. [L, 43.]—**A'nliderschwiele.** See TYLOSIS.—**A'nliderspalte.** See *Palpebral* FISSURE.—**A'nliderstein krankheit.** See BLEPHAROLITHIASIS.—**A'nlidertriefen.** See *Egyptian* OPHTHALMIA and *A'nliderdrüsenentzündung*.—**A'nlidertripper.** See *Gonorrhœal* OPHTHALMIA.—**A'nliderumkehrung, A'nliderumlegung, A'nliderumstülpung.** See ECTROPION.—**A'nlidervenen.** The palpebral veins. [L, 80.]—**A'nliderverknorpelung.** Sclerosis of the eyelids. [L, 135.]—**A'nliderverkürzung.** See LAGOPHTHALMIA.—**A'nlidervorfall.** See BLEPHAROPTOSIS.—**A'nliderwassergeschwulst, A'nliderwassersucht.** See BLEPHARŒDEMA.—**A'nliderwindgeschwulst.** Emphysema of the eyelids. [L, 80.]—**A'nliderzellgewebsentzündung.** See BLEPHARITIS *interna*.—**A'nliderzusammenwachsung.** See SYMBLEPHARON.—**A'nlidfluss.** A discharge from the eyelids. [L.]—**A'nlidfollikel.** A palpebral follicle. [L.]—**A'nlidgeschwulst.** See *A'nlidergeschwulst*.—**A'nlidgriffel.** See *A'nliderhalter*.—**A'nlidhaare.** See *A'nl derhaare*.—**A'nlidhalter.** See *A'nliderhalter*.—**A'nlidheber.** See LEVATOR *palpebræ superioris*.—**A'nlidknorpel.** See *Tarsal* CARTILAGE.—**A'nlidkrampf.** See BLEPHAROSPASM.—**A'nlidlähmung.** See BLEPHAROPLEGIA.—**A'nlidlosigkeit.** See ABLEPHARIA.—**A'nlidlös.** See ABLEPHARUS.—**A'nlidnerv.** See *Palpebral* NERVE.—**A'nlidödem.** See BLEPHARŒDEMA.—**A'nlidrand.** The border

of the eyelid. ÄUGELN (Ger.), v. tr. Oig'e^{2}ln. To graft or bud; as a n., a bud or graft. [L, 46.]

AUGIA (Lat.), n. f. A^4'(a^3'u^4)-ji^2(gi^2)-a^3. From αὐγή, brilliancy, on account of the lustre of the varnish. Fr., *augie.* A genus of anacardiaceous trees established by Loureiro, of uncertain botanical characters, perhaps allied to *Rhus.* [B, 42, 121.]—**A. chinensis, A. sinensis** [Loureiro]. A tree from the trunk of which a resinous juice is obtained, constituting, according to Loureiro, the true varnish (lac) of the Chinese. The resin contains an acrid principle which is dissipated by heat, and is said by Loureiro to be used as a resolvent, emmenagogue, and anthelminthic. [B, 88; 121.]

AUGINOS (Lat.), n. m. A^4(a^3-u^4)-ji(ge)'no^{2}s. An ancient name for hyoscyamus. [Apuleius (A, 318).]

AUGION, n. A name said to have been applied by Dioscorides to the *Isatis.* [Bory (B, 121).]

AUGMENT (Fr.), n. Og-ma^{3}n^2. See AUGMENTUM.

AUGMENTATION, n. A^{4}g-me^{2}nt-a'shu^{3}n. See AUGMENTUM.

AUGMENTUM (Lat.), n. n. A^{4}g(a^3-u^{4}g)-me^{2}nt'u^{3}m(u^{4}m). From *augere,* to increase. Gr., αὔξη, αὔξησις. Fr., *augment.* Ger., *Zunehmen.* It., Sp., *aumento.* An old term for that period or stage of a disease in which it is increasing in intensity. [A, 268.]

AUGNAT (Fr.), n. On-ya^3. A place in the department of Puy-de-Dôme, France, where there are springs containing sodium bicarbonate, iron, and lithium. [L, 49, 57.]

AUGNATHUS (Lat.), n. m. A^{4}g'(a^3'u^{4}g)-na^3-thu^{3}s(thu^{4}s). From αὖ cumulat., and γνάθος, the jaw. Fr., *augnathe.* It., *anagnate* [Generali]. A monster having a supplementary lower jaw (the rudiment of a second head). [I. Geoffroy St.-Hilaire (A, 385; D, 76).]

AUGUO, n. A Provençal name for the *Zostera oceanica.* [B, 121; L, 105.]

AUGURE DE·LIN, AUGURE DU LIN (Fr.), n's. O-gu^{6}r d' la^{2}n^2, du^6 la^{2}n^2. The *Cuscuta europœa.* [B, 121; L, 105.]

AUGUSTA, n. A^{4}g-u^{3}st'a^3. See STRIBLING SPRINGS.

AUGUSTA (Lat.), n. A^3-u-gust'a^3. From the Empress of Austria. Carolina Augusta. Fr., *Augustée.* A genus of rubiaceous plants of the tribe *Rondeletieœ,* established by Pohl. [B, 121.]

AUGUSTAFELSENQUELLE (Ger.), n. A^3-u-gust-a^3-fe^{2}ls'-e^{2}n-kwe^{2}l-le^2. See EMS.

AUGUSTA SPRINGS, n. See STRIBLING SPRINGS.

AUGUSTBRUNNEN (Ger.), n. pl. A^3'u-gust-brun-ne^{2}n. Mineral springs in Langenschwalbach. [L, 30.]

AUGUSTEA (Lat.), n. f. A^3-u-gust'e^2-a^3. See AUGUSTA (Lat.).

AUGUSTHAFER (Ger.), n. A^3'u-gust-ha^{3}f-e^{2}r. See AVENA *sativa.*

AUGUSTHOLZBAD (Ger.), n. A^3'u-gust-holtz-ba^{3}d. A place in the Canton of Luzerne, Switzerland, having an alkaline spring and a bathing establishment. [L, 30.]

AUGUSTIA (Lat.), n. f. A^3-u-gust'i^2-a^3. From August, a Berlin professor. A genus of begoniaceous plants made by Klotsch; by De Candolle made a section of the genus *Begonia,* including the purely African species. [B, 121, 170.]

AUGUSTINEA (Lat.), n. f. A^{4}g(a^3-u^{4}g)-u^{3}st(u^{4}st)-i^{2}n'e^2-a^3. See BACTRIS.

AUGUSTNUSS (Ger.), n. A^3'u-gust-nus. The hazel-nut (*Corylus avellana*).

AUGUSTPFLAUME (Ger.), n. A^3'u-gust-pfla^3-u-me^2. The *Prunus insititia.* [L.]

AUGUSTPILZ (Ger.), n. A^3'u-gust-pi^{2}ltz. The *Boletus luteus.* [L.]

AUGUSTSCHWAMM (Ger.), n. A^3'u-gust-shwa^{3}m. An edible mushroom resembling the *Agaricus arvensis,* but paler. [L, 30.]

AUGUSTUSBAD (Ger.), n. A^3-u-gust'us-ba^{3}d. A place in Saxony, near Dresden, where there is a spring containing iron, chlorides, and carbonates. [L, 135.]

AUGWIRBEL (Ger.), n. A^3'ug-verb-e^{2}l. The third cranial vertebra. [L.]

AUJON (Fr.), n. O-zho^{2}n^2. The *Ulex europœus.* [B, 121.]

AUKLANDIA (Lat.), n. f. A^{4}k-la^{2}nd'i^2-a^3. See AUCKLANDIA.

AUKUBA (Lat.), n. f. A^{4}k'(a^3'u^{4}k)-u^2(u^4)-ba^3. See AUCUBA.

AULA (Lat.), n. f. A^4'(a^3'u)-la^3. Gr., αὐλή. Fr., *aule.* Syn.: *common ventricular cavity, communication betwixt the three ventricles, middle part of the foramen commune anterius, cavity of the basicerebrum, ventriculus communis loborum, ventriculus labi communis* (Fr., *vestibule des ventricules latéraux*; Ger., *mittlerer Theil des Vorderhirns, Verbindung der beiden Hemisphärenhöhlen untereinander und mit dem dritten Ventrikel*). B. G. Wilder's term for "the mesal portion of the prosocœle (prosencephalic ventricle), forming the dorso-cephalic part of what is commonly called the 'third ventricle'; extending ventrad to the level of the precommissure and including the slight interval (aulic recess) between the fornicolumns." [I, 80.]

AULACIA (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a(a^3)'si^2(ki^2)-a^3. Fr., *aulacie.* A genus of rutaceous plants made by Loureiro, referred (although doubtfully) to *Clausena.* [B.]—**A. falcata** [Loureiro]. Syn.: *Cookia falcata* [De Candolle]. A species the leaves of which are used in Cochin-China as an emmenagogue. [B, 88.]—**A. punctata** [Rausch.]. Syn.: *Cookia punctata* [Willdenow]. A Chinese species with an edible acid fruit. [B, 173.]

AULACIDIUM (Lat.), n. n. A^{4}l(a^3-u^{4}l)-a^3-si^{2}d(ki^{2}d)'i^2-u^{3}m(u^{4}m). Fr., *aulacidie.* Richard's name for the genus *Salpinga.* [B, 121.]

AULACINTHUS (Lat.), n. m. A^{4}l(a^3-u^{4}l)-a^3-si^{2}n(ki^{2}n)'thu^{3}s-(thu^{4}s). Fr., *aulacinthe.* Of E. Meyer, a genus of leguminous plants, now made a section of *Lotononis.* [B, 42.]

AULACOCALYX (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a^3-ko^{2}k'a^3-li^{2}x(lu^{6}x). Gen., *aulacacal'ycos* (*-cis*). From αὐλακόεις, furrowed, and κάλυξ a calyx. A genus of rubiaceous plants of the tribe *Alberteœ,* established by the younger Hooker. [B, 42.]—**A. jasminiflora** [Hooker fil.]. A branching shrub of western Africa. [B.]

AULACOMELE (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a^3-ko(ko^2)-me(ma)'le(la). From αὐλακόεις, furrowed, and μήλη, a probe. Fr., *aulacomèle.* Ger., *Hohlsonde.* Syn.: *specillum sulcatum.* An old name for a grooved probe. [A, 322; L, 41.]

AULACOMNIEÆ (Lat.), n. f. pl. A^{4}l(a^3-u^{4}l)-a^3-ko^{2}m-ni(ni^2)'e^2-e(a^3-e^2). From *Aulacamnion,* one of the genera. Fr., *aulacomniées.* A family of mosses (*Bryaceœ*). [B, 121.]

AULACOPHORA (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a^3-ko^{2}f'o(o^2)-ra^3. Fr., *aulacophore.* A section of the genus *Cacalia,* established by De Candolle. [B, 42.]

AULACOSPERMUM (Lat.), n. n. A^{2}l(a^3-u^{4}l)-a^3-ko(ko^2)-spu^{5}rm-(spe^{2}rm)'u^{3}m(u^{4}m). Fr., *aulacosperme.* Ledebour's name for the genus PLEUROSPERMUM. [B, 121.]

AULACOSTOMA (Lat.), n. n. A^{2}l(a^3-u^{4}l)-a^3-ko^{2}st'o(o^2)-ma^3. Gen., *aulacostom'atos* (*-tis*). From αὐλακόεις, grooved, and στόμα, the mouth. Fr., *aulacostome.* A genus of leeches incapable of penetrating the human skin, found near Lyons; so called from the prominent folds that form the lower jaw. [L, 41.]

AULÆDIBRANCHIA (Lat.), n. n. pl. A^{4}l(a^3-u^{4}l)-e(a^3-e^2)-di-(di^2)-bra^{2}n^2(bra^{3}n^2)'ki^2(ch^{2}i^2)-a^3. See AULODEOBRANCHIA.

AULÆUM (Lat.), n. n. A^{4}l(a^2-u^{4}l)-e'(a^3'e^2)-u^{3}m(u^{4}m). Gr., αὐλαία. Lit., a curtain; in botany, a corolla. [B, 1.]

AULANIE (Fr.), n. O-la^3-ne. An old name for the hazel-nut. [L, 109.]

AULASTOMA (Lat.), n. n. A^{4}l(a^3-u^{4}l)-a^{2}st(a^{3}st)'o(o^2)-ma^3. Gen., *aulastom'atos* (*-tis*). Fr., *aulastome.* See AULACOSTOMA.

AULAX (Lat.), n. f. A^{4}l'(a^3'u^{4}l)-a^{2}x(a^{3}x). Gen., *aul'acos* (*-cis*). Gr., αὖλαξ. 1. A furrow. [A, 322.] 2. Of Bergius, a genus (Ger., *Bartnuss*) of proteaceous plants of the tribe *Proteeœ.* [B, 121.]

AULAXANTHUS [Elliott], **AULAXIA** [Nuttall] (Lat.), n's n. and f. A^{4}l(a^3-u^{4}l)-a^{2}x(a^{3}x)-a^{2}n(a^{3}n)'thu^{3}s(thu^{4}s), -a^{2}x(a^{3}x)'i^2-a^3. See PANICUM.

AULAXINA (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a^{2}x(a^{3}x)-i(e)'na^3. Fr., *aulaxine.* A genus of lichens, probably to be referred to *Opegrapha.* [Fée (B, 211).]

AULAXIS (Lat.), n. f. A^{4}l(a^3-u^{4}l)-a^{2}x(a^{3}x)'i^{2}s. Of Haworth, a section of the botanical genus *Saxifraga.* [B, 121.]

AULAYA (Lat.), n. f. O-la^3'ya^3. See HARVEYA.

AULÉDIBRANCHES (Fr.), n. pl. O-la-de-bra^{3}n^{2}sh. See AULODEOBRANCHIA.

AULEUM (Lat.), n. n. A^{4}l(a^3-u^{4}l)-e(a)'u^{3}m(u^{4}m). See AULÆUM.

AULIC, adj. A^{4}l'i^{2}k. Lat., *aulicus.* Fr., *aulique.* Pertaining to the aula (*q. v.*). [I.]

AULISCOS, AULISCUS, AULISKOS (Lat.), n's m. A^{4}l-(a^3-u^{4}l)-i^{2}sk'o^{2}s, -u^{3}s(u^{4}s), -o^{2}s. Gr., αὐλίσκος (dim. of αὐλός, a tube). See CANNULA.

AULIX (Lat.), n. f. A^{4}l'(a^3'u^{4}l)-i^{2}x. Gen., *aul'icis.* Lit., a furrow (see AULAX); B. G. Wilder's term for the fissure of Monro. [K.]

AULIZA, AULIZEA (Lat.), n's f. A^{4}l(a^3-u^{4}l)-i(e)'za^3, -i^{2}z'e^2-a^3. See EPIDENDRUM.

AULIZEUM (Lat.), n. n. A^{4}l(a^3-u^{4}l)-i^{2}z'e^2-u^{3}m(u^{4}m). Of Lindley, a section of the botanical genus *Epidendrum,* including species (the *Auliza* of Salisbury) having a split labellum. [B. 121.]

AULLO, n. An East Indian name for the *Paspulum frumentaceum.* [B, 121.]

AULNE (Fr.), n. On. See AUNE.—**A. blanc.** See BETULA *alba.*

AULNÉE (Fr.), n. O-na. See AUNÉE.

AULOBRANCHIA (Lat.), n. n. pl. A^{4}l(a^3-u^{4}l)-o(o^2)-bra^{2}n^2-(bra^{3}n^2)′-ki^2(ch^{2}i^2)-a^3. See AULODEOBRANCHIA.

AULOCYSTIDÆ (Lat.), n. f. pl. A^{4}l(a^3-u^{4}l)-o(o^2)-si^{2}st(ku^{6}st)′-i^{2}d-e(a^3-e^2). A family of the *Inermia.* [L, 121.]

AULODEOBRANCHIA (Lat.), n. n. pl. A^{4}l(a^3-u^{4}l)-o″de^2-o(o^2)-bra^{2}n^2(bra^{3}n^2)′ki^2(ch^{2}i^2)-a^3. From αὐλοειδής, flute-like, and βράγχιον, a gill. Written also *Aulobranchia* and *Aulœdibranchia.* Fr., *aulœdibranches* [Latreille], *aulédibranches, aulobranches.* Ger., *Flötenfische.* A name applied by Latreille to a family of fishes having two branchiæ opening externally by perforations like those of a flute. [A, 322; B, 195.]

AULODES (Lat.), adj. A^{4}l(a^3-u^{4}l)-o′dez(das). Gr., αὐλοειδής (from αὐλός, a flute, and εἶδος, resemblance). Fr., *aulode.* Ger., *flötenförmig.* Flute-shaped. [A, 322, 385.]

AULONEMIA (Lat.), n. f. A^{4}l(a^3-u^{4}l)-o(o^2)-ne(ne^2)′mi^2-a^3. From αὐλός, a flute, and νέμος, a forest. A genus of gramineous plants of the tribe *Bambuseæ,* established by Goudot. [B, 121, 170.]—**A. Quecko** [Goudot]. A New Granada species, the hollow stems of which are used for making flutes. [B, 121.]

AULONJAT, n. The *Agaricus cœsareus.* [B, 88, 173.]

AULOPOMINA (Lat.), n. n. pl. A^{4}l(a^3-u^{4}l)-o(o^2)-pom-i(e)′na^3. A division of the *Cyclophoridæ.* [L, 234.]

AULOPORIDÆ (Lat.), n. f. pl. A^{4}l(a^3-u^{4}l)-o(o^2)-po^{2}r′i^{2}d e(a^3-e^2). The only family of the *Tubulosa* (*q. v.*). [L, 147.]

AULOS (Lat.), n. m. A^{4}l′(a^3′u^{4}l)-o^{2}s. Gr., αὐλός. Lit., a flute; a name anciently applied to any tube or canal. [A, 322.]

AULOSTOMA (Lat.), n. n. A^{4}l(a^3-u^{4}l)-o^{2}s′to^{2}m-a^3. A genus of *Nephelidæ,* including the leeches. [L, 235.]—**A. gulo** [Moquin-Tandon], **A. nigrescens, A. nigrum.** The horse-leech; a variety about 4 inches long when extended, having the back of a dark olive green or nearly black, and the belly yellowish green. [L, 235.]

AULOSTOMIDES (Lat.), n. m. pl. A^{4}l(a^3 u^{4}l)-o(o^2)-sto^{2}m′i^{2}d-ez-(as). From αὐλός, a flute, and στόμα, the mouth. Fr., *aulostomides.* A family of acanthopterygian fishes having the snout prolonged in the shape of a flute. [Latreille (L, 180).]

AULOSTOMUM [Diesing] (Lat.), n. n. A^{4}l(a^3-u^{4}l)-o^{2}s′to^{2}m-u^{3}m(u^{4}m). See AULOSTOMA.—**A. vorax.** See AULOSTOMUM *gulo.*

AULUK BAGDADIE (Ar.), n. Mastic. [B, 88.]

AULUS (Lat.), n. m. A^{4}l′(a^3′u^{4}l)-u^{3}s(u^{4}s). See AULOS.

AULUS (Fr.), n. O-lu^6. A place in the department of Ariège, France, where there are ferruginous and saline springs, the waters of which are used for herpetic affections. [A, 385.]

AUMADE (Fr.), n. O-ma^{3}d. An axillary phlegmon. [L, 41.]

AUMALE (Fr.), n. O-ma^{3}l. A village in the department of the Seine-Inférieure, France, where there are chalybeate springs. [L, 49, 57, 105.]

AUMARINO, n. The *Salix vitellina.* [B, 121.] See AMARINE.

AUMÉLI (Fr.), n. O-ma-le. A sort of syrup resembling hydromel. [L, 109.]

AUMOOKEERA (Tamil), n. The *Withania somnifera.* [B, 172.]

AUMURE (Fr.), n. O-mu^{6}r. The botanical genus *Parietaria.* [L, 49.]

AUNAI-COUDOUMANI (Tamil), n. The *Adenanthera pavonina.* [B, 121.]

AUNÂTRE (Fr.), n. O-na^{3}tr. The botanical genus *Alnaster,* separated by Spach from the genus *Alnus.* [B, 51.]

AUNE (Fr.), n. On. The botanical genus *Alnus.* [L, 87.]—**A. blanc.** The *Betula alba.* [A, 321, 385.]—**A. commun.** The *Alnus glutinosa.* [L, 85.]—**A. noir.** The *Rhamnus frangula.* [B, 93.]—**A. rogné.** The *Alnus emarginata.* [B, 173.]—**A. visqueux.** The *Alnus glutinosa.* [L.]—**Écorce d'a.** The bark of *Alnus glutinosa.* [L, 65.]

AUNÉE (Fr.), n. O-na. The *Inula helenium.* [A, 385.]—**Alcoolat d'a composé.** Syn.: *élixir américain de Courcelles.* A preparation formerly in great repute as an antigalactic; made by infusing 640 grammes of elecampane root, 480 of aristolochia root, 480 of sugar-cane root, and 30 of the root of *Arundo donax* in a sufficient quantity of boiling water to make 2·4 litres of liquid; expressing; adding 10 grammes of asarum root, 10 of the root of *Areca oleracea,* 160 of the leaves of *Persea gratissima,* 320 of the leaves of *Hypericum perforatum,* 80 of the leaves of *Sambucus nigra,* 40 of the leaves of a species of *Croton,* 20 of rosemary leaves, 20 of the leaves of *Justicia pectoralis,* 40 of orange flowers, 60 of the bark of *Mesua ferrea,* 30 of juniper berries, 20 of the flowers of *Tilia europœa,* 25 of opium, ½ a calabash, and 2.000 grammes of alcohol; macerating for three days, distilling off the spirituous part, expressing and burning the residue, and adding the ashes to the extractive liquid, together with water enough to enable an amount of aromatic water equal to that of the preparation already obtained to be distilled off over an open fire; mixing the two liquors; coloring the mixture with 60 grammes of *Papaver rhœas* and 30 of madder root; and filtering. [Henry, Guibourt (A, 259).]—**Alcoolé d'a.** See *Tinctura* HELENII.—**A. antidysentérique.** See PULICARIA *antidysenterica.*—**A. britannique.** The *Inula britannica.* [B, 121.]—**A. commune.** See *A. officinale.*—**A. odorante.** The *Pulicaria odora.* [B, 173.]—**A. officinale** [Fr. Cod.]. Elecampane (*Inula helenium*); the rhizome is official in the Fr. Cod. [B, 113.]—**Camphre d'a.** Helenin. [B, 121.]—**Conserve d'a.** See *Conserva* HELENII. [B, 119.]—**Décoction d'a.** See *Decoctum* HELENII.—**Eau d'a., Eau distillée d'a.** A preparation made by distilling elecampane rhizome with water. [B.]—**Électuaire d'a.** [Fr. Cod., 1837]. A preparation made of powdered elecampane root 1 part, distilled water of elecampane (*eau distillée d'a.*) 2 parts, and sugar 8 parts. [B, 119.]—**Extrait alcoolique d'a.** See *Extractum* HELENII *alcoholicum.*—**Extrait aqueux d'a.** See *Extractum* HELENII *aquosum.*—**Extrait d'a.** [Fr. Cod.]. An extract made from elecampane rhizome by exhausting with cold water and evaporating the product to the consistence of a soft extract. [B, 113.] Cf. *Extractum* HELENII *aquosum.*—**Grande a.** See *A. officinale.*—**Huile d'a. composée.** See *Oleum* INULÆ *compositum.*—**Huile essentielle d'a.** A volatile oil obtained by the distillation of elecampane rhizome. [B, 119.]—**Œnolé d'a.** See *Vin d'a.*—**Oléule d'a.** See *Huile essentielle d'a.*—**Onguent d'a.** See *Unguentum* INULÆ.—**Poudre d'a.** [Fr. Cod.]. Powder of elecampane rhizome; made by drying the rhizome, powdering in a mortar, and passing through a sieve of 120 meshes to the (French) inch. [B.]—**Rhizome d'a. officinale.** Elecampane rhizome. [B.]—**Sirop d'a.** See *Syrupus* ENULÆ.—**Teinture d'a.** See *Tinctura* HELENII.—**Tisane d'a.** [Fr. Cod.] Elecampane tea; an infusion made with 2 parts of elecampane rhizome and 100 of boiling water. [B, 113.] Cf. TISANE *pectorale.*—**Vin d'a.** [Fr. Cod.]. Wine of elecampane; made by macerating 3 parts of elecampane rhizome in 6 of 60-per-cent. alcohol for twenty-four hours, adding 100 of white wine, macerating again for ten days, and filtering. [B, 113.] Cf. *Vinum* ENULÆ.

AUNELLE (Fr.), n. O-ne^{2}l. See AUNE.

AUNIOU, n. A name in the Marquesas for the *Siegesbeckia orientalis.* [B, 121.]

AUNLA, n. A Ceylon name for the *Emblica myrobolans.* [B, 121.]

AUNTHOOLOOPAVAY (Tamil), n. The *Momordica dioica.* [B, 172.]

AUNWERD (Hind.), n. See AUNLA.

AUPALU (Teloogoo), n. The *Piratinera utilis.* [B, 88.]

AUR (Russ.), n. The *Acorus calamus.* [A, 259.]

AURA (Lat.), n. f. A^4′(a^3′u^4)-ra^3. Gen., *au′rœ, -rai.* Gr., αὖρα. Fr., *esprit volatil, vapeur, petit vent, souffle.* Ger., *Hauch, Lufthauch, Lüftchen, Anwehen.* It., *venticello piacevole.* Sp., *aura.* 1. A gentle current of air, a subtle vapor, an emanation. [A, 311, 312, 322, 325, 385.] 2. A vague subjective sensation in any part of the body, often like that caused by a gentle current of air, which precedes an epileptic or hysterical paroxysm. [A, 385; D, 35, 50; K, 4.] 3. In botany, an essence or volatile principle supposed to emanate from the grains of pollen, and to constitute their fertilizing principle. [B, 7, 104.] 4. A sort of crow (the *tropillotl*) found in Mexico, which, according to Lémery, is used as a medicine, the flesh being considered antisyphilitic and the ashes of the feathers detersive and vulnerary. [B, 88.]—**Auditory a.** An a. (2d def.) referred to the auditory apparatus; it may consist of hissing, ringing, explosive, or vocal sounds, and may be preceded by a sensation of profound stillness. [D, 35.]—**A. d'avertissement** (Fr.). See *A.* (2d def.).—**A. dolorifica.** A sudden and transient pain. [M, 6.]—**A. electrica.** See *Electric a.*—**A. epileptica.** See *A.* (2d def.).—**A. gastro-glottique** (Fr.). See *Hysterical a.*—**A. hysterica.** See *Hysterical a.*—**A. intellectuelle** (Fr.). An epileptic a. consisting of an hallucination. [D, 72.] Cf. *Psychical a.*—**A. nervea.** Ger., *Nervenäther.* See *A. vitalis.*—**A. of the special senses.** See *Auditory a., Gustatory a., Olfactory a.,* and *Visual a.*—**A. oxygena.** A supposed atmosphere of oxygen surrounding the individual red blood-corpuscles. [A, 305.]—**A. pollinaris.** See *A.* (3d def.).—**A. rabidica.** An a. (2d def.) said to precede a paroxysm of rabies. [M, 3.]—**A. sanguinis.** Ger., *Blutdunst.* Syn.: *halitus sanguinis.* The odor of fresh blood. [A, 305.]—**A. seminalis.** Fr., *vapeur* (ou *esprit volatil*) *spermatique.* Ger., *Samenhauch, Samenluft.* It., *a. seminale.* Syn.: *a. seminis, spiritus genitalis.* 1. A supposed seminal emanation which was thought by Harvey, Vaillant, Spallanzani, and others to suffice for impregnation, without actual contact of the semen with the corresponding element in the female. [A, 4.] 2. See *A.* (3d def.).—**A. seminis.** See *A. seminalis.*—**A. spermatique** (Fr.). See *A. seminalis.*—**A. vertiginosa.** Vertigo occurring as the introduction to a paroxysm of epilepsy. [A, 449.]—**A. vitalis.** Ger., *Lebenshauch.* 1. An old name for the vital principle. [A, 322, 325, 385.] 2. Van Helmont's term for vital heat. [L, 104.] 3. In botany, see *A.* (3d def.). Cf. *Vital a.*—**Electric a.** Lat., *a. electrica.* The "electric wind"; a sensation as of a current of air striking upon a part exposed to the discharge of static electricity from a number of fine points. [B.]—**Epileptic a.** Lat., *a. epileptica.* An a. (2d def.) preceding a paroxysm of epilepsy.—**Gustatory a.** An a. (2d def.) consisting of an abnormal sensation of taste, especially of a metallic character. [D, 35.]—**Hysterical a.** Lat., *a. hysterica.* An a. (2d def.) preceding a paroxysm of hysteria.—**Intellectual a.** See *A. intellectuelle.*—**Motor a.** Ger., *motorische A.* An a. (2d def.) in which there is a distinct sensation of muscular contraction, especially in the thumb, the great toe, or the side of the face; often followed by nausea and a sensation as of something rising in the throat. [B, 35.]—**Olfactory a.** An a. (2d def.) consisting of either a subjective sensation of smell or an odor proceeding from the patient. [D, 35.]—**Psychical a.** An a. (2d def.) constituted by a decided mental impression, as of horror, alarm, intellectual perversion, etc. [D, 35.] Cf. *A. intellectuelle.*—**Secretory a.** An a. (2d def.) characterized by an excessive secretion, as of saliva. [D, 35.]—**Sensitive a., Sensory a.** Ger., *sensorielle A.* An a. (2d def.) consisting of a sensation of cold, heat, tingling, numbness, pain (especially in the extremities), headache, vertigo, etc., appearing to move from the periphery toward the central organs. [D, 70.]—**Vaso-motor a.** Ger., *vaso-motorische A.* An a. (2d def.) characterized by paleness and numbness or redness and heat of the part in which it is felt; sometimes with an excessive flow of saliva. [D, 35.]—**Visceral a.** Fr., *a. viscérale.* The most common form of

a. (2d def.), consisting in sensations referred to some portion of the area of distribution of the pneumogastric nerve, such as a painful epigastric feeling, nausea, a sensation of choking, etc. [D, 35.]—**Visual a.** An a. (2d def.) consisting of some visual hallucination. Sparks, flashes of light, and even distinct colors may seem to be seen. [D, 35.]—**Vital a.** 1. See *A. vitalis.* 2. In Chinese medicine, the "circulating air," *i. e.*, air (swallowed) which, starting from the "little heart," circulates through the body. "Disease appears only when vitiated air can find entrance, or when the circulation of the vital a. is defective." [Macgowan, "Lancet," Apr. 3, 1886, p. 652.]

AURADE, AURADIN, n's. A^4'rad, -ra^{2}d-i^{2}n. Fr., *aurade, auradine.* Sp., *aurado.* Syn.: *Neroli camphor.* A white crystallizable substance, soluble in ether, extracted by Plisson from the essential oil of orange-flowers; probably a hydrocarbon. [B, 93, 180.]

AURAL, adj. A^4'ra^{2}l. Lat., *auralis* (from *aura* [*q. v.*], or *auris*, the ear). 1. Pertaining to the air or to an aura (*q. v.*). [B, 116.] 2. Pertaining to the ear or to the sense of hearing.

AURAL, n. A^4'ra^{2}l. See AURADE.

AURAMINE, n. A^4'ra^{2}m-en. A yellow powder, readily soluble in water, used as a yellow dye for cotton. It is prepared by the action of ammonium chloride and zinc chloride on tetramethyl diamidobenzophenone, and is thought to have the composition $[C_6H_4N(CH_3)_2]_2{=}CN.HCl$. [B, 258.]

AURAMMONIUM, n. A^{4}r-a^{2}m-mon'i^2-u^{3}m. For deriv., see AURUM and AMMONIUM. A compound in which gold replaces hydrogen in ammonium (*e. g.*, the radicle $(NH_3Au)'$. [B, 3.]

AURANCUM, n. An alchemical name for egg-shells. [B, 50.]

AURANGIA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n^2)'ji^2(gi^2)-a^3. For deriv., see AURANTIUM. See AURANTIA *hispalensis.*

AURANTIA (Lat.), n. f. sing. and n. pl. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)'-shi^2(ti^2)-a^3. Fr., *oranger* (2d def.), *orangers* (3d def.). Ger., *Kaisergelb* (1st def.). 1. A crystalline yellowish-red powder, $N[C_6H_2(NO_2)_3]_2.NH_4$, being the ammonium salt of hexanitrodiphenylamine. It is said to be exceedingly irritating to the skin, even in dilute solution, producing painful pustules like those caused by croton-oil; but this has been denied. [B, 49, 258.] 2. (Fem. of adj., *aurantius* [*malus* understood]) an orange. [B, 59.] 3. (Pl. of *aurantium* [*q. v.*]) oranges; also, of Jussieu and Correa, an order of plants corresponding, wholly or in part, to the *Aurantiaceæ.* [B, 121, 170.]—**Aurantiæ baccæ.** See *Fructus* AURANTII *immaturi*, under AURANTIUS.—**A. chinensis.** The China, or sweet, orange. [L, 119.]—**A. curassaventia** (seu **curassavica**). See *Fructus* AURANTII *immaturi*, under AURANTIUS.—**A. dulcis.** The sweet orange. [B, 59.]—**A. hispalensis.** The Seville, or bitter, orange. [B, 59.]—**A. immatura.** See *Fructus* AURANTII *immaturi*, under AURANTIUS.—**A. sinensis.** See *A. chinensis.*

AURANTIACEÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)-shi^2(ti^2)-a(a^3)'se^2(ke^2)-e(a^3-e^2). Fr., *aurantiacées.* Ger., *Orangengewächse.* It., *auranziache.* The citronworts, the *Aurantia* of Correa (and in part of Jussieu); an order of dicotyledonous plants belonging to the *Thalamifloræ* (*Choripetalæ*), made by Mirbel, Jussieu, De Candolle, and others. By Bentham and Hooker it is included among the *Rutaceæ*, as the tribe *Aurantieæ* (*q. v.*). [B, 36, 42, 170.]

AURANTIACEOUS, adj. A^{4}r-a^{2}n-shi^2-a'shu^{3}s. Lat., *aurantiaceus.* Fr., *aurantiacé.* Resembling the orange, or belonging to or resembling the *Aurantiaceæ.* [B.]

AURANTIACUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)-ti(ti^2)'a^3-ku^{3}s-(ku^{4}s). 1. Orange-colored. 2. Made with oranges (*e. g.*, *tinctura ferri aurantiaca*). [B.]

AURANTIÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)'shi^2(ti^2)-e(a^3-e^2). See AURANTIA (3d def.).

AURANTIEÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)-ti(ti^2)'e^2-e(a^3-e^2). Fr., *aurantiées.* Of Reichenbach, a division of the *Hesperideæ* (of Bentham and Hooker, a tribe of the *Rutaceæ*) comprising *Limonia, Clausena, Luvunga, Atalantia, Citrus, Feronia, Ægle*, and six other genera, in which the leaves are 1- to 3-foliolate or pinnate; there are regular hermaphrodite flowers with either free or connate petals and stamens and an entire ovary containing from one to many ovules, and a simple terminal style, entire at the base; and the fruit is usually a pulpy, corticate berry with exalbuminous seeds. By Reichenbach it was divided into the *Limonieæ, Clauseneæ*, and *Citreæ.* [B, 42, 170.]

AURANTIICOLLIS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)''ti^2-i^2-ko^{2}l'li^{2}s. From *aurantium*, an orange, and *collum*, the neck. Fr., *aurantiicolle.* Having an orange-colored neck (a zoological species-name). [B, 195.]

AURANTIIFLORÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)-ti^2-i^2-flo're(ra^3-e^2). From *aurantium*, an orange, and *flos*, a flower. Ger., *Orangenblüthler.* Of Reichenbach, a formation (*formatio*) of plants belonging to the *Idiocarpicæ*, comprising the families *Hypericineæ, Guttiferæ*, and *Hesperideæ.* [B, 170.]

AURANTIIN, AURANTIN, n's. A^{4}r-ra^{2}nt'i^2-i^{2}n, -ra^{2}nt'i^{2}n. Fr., *aurantiine, aurantine.* Ger., *Aurantiin.* Syn.: *naringin.* A bitter crystallizable glucoside, $C_{23}H_{26}O_{12}+4H_2O$, obtained by De Vrii from the leaves of *Citrus decumana*; formerly supposed to be identical with hesperidin. [B, 207. 244.]

AURANTIUM (Lat.), n. n. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)'shi^2(ti^2)-u^{3}m-(u^{4}m). Originally written *arantium*; deriv., through It., *aranzi*, and Sp., *naranja*, from Ar., *narunj* (Sanscr., *nâranga, nâryanga, nâgaranga*), having the color of minium. Fr., *orange, oranger.* Ger., *Orange, Pomeranze.* 1. The orange; also the specific name of the *Citrus a.*, or orange-tree. 2. In descriptive botany, a fruit like an orange. See HESPERIDIUM. 3. Of Tournefort, a genus of plants, in part the *Citrus* of Linnæus. [B, 121, 123, 170.]—**Ætheroleum aurantii.** Distilled oil of orange-peel. [B, 97.]—**Albedo aurantiorum.** The white inner part of orange-peel. [B, 119.]—**Aqua corticum aurantii.** See *Aqua corticum aurantiorum.*—**Aqua corticum aurantiorum** [Netherl. Ph.]. Fr., *eau d'écorce d'orange.* Sp., *agua de corteza de naranja* [Sp. Ph.]. Syn.: *aqua citri aurantii* [Ed. Ph., 1826]. Orange-peel water; made by distilling orange-peel with water, with or without the addition of a small amount of alcohol, in quantity sufficient to produce, for 1 part of the orange-peel, 1 part of distillate [Sp. Ph.], 2 parts [Batav. Ph., 1805; Amsterd. Ph., 1792; Belg. Ph., 1823; Brunsw. Ph., 1777; Würt. Ph., 1798], 3½ parts [Netherl. Ph.], 5 parts [U. S. Ph., 1820; Ed. Ph., 1826], or 9 parts [Sax. Ph., 1820]. [B, 95, 97, 119.]—**Aqua corticum aurantiorum alcoholica** (seu **spirituosa,** seu **vinosa**). See *Spiritus aurantii.*—**A. amarum.** The bitter orange. [B.]—**Aurantia curassaventia** (seu **curassavica**). Ger., *Curassaoapfel.* See *Fructus* AURANTII *immaturi*, under AURANTIUS.—**Aurantia dulcia, A. dulce.** The sweet orange; the fruit of *Citrus a.*, var. *aurantium.* [B.]—**Aurantia enascentia** (seu **immatura**). See *Fructus* AURANTII *immaturi*, under AURANTIUS.—**Aurantii amari cortex** [U. S. Ph.], **Aurantii cortex** [Br. Ph.]. Bitter-orange peel. [B.] See under ORANGE.—**Aurantii corticis syrupus.** See *Syrupus aurantii.*—**Aurantii dulcis cortex** [U. S. Ph.]. Sweet-orange peel. [B.] See under ORANGE.—**Aurantii flores** [U. S. Ph.]. See under AURANTIUS.—**Aurantii floris aqua.** See under AURANTIUS.—**Aurantii oleum.** Oil of orange-peel. [B.] See under ORANGE.—**Aurantii tinctura.** See *Tinctura aurantii.*—**A. corniculatum** [Tournefort]. A subvariety (*corniculata*) of the *Citrus a.*, var. *bigaradia.* [B, 173.]—**A. dulci cortice sinense** [Ferraris]. The sweet orange. [B, 183.]—**A. fœtiferum** [Ferraris]. A subvariety (the *Citrus fœtifera* [Risso]) of the *Citrus a.*, var. *bigaradia.* [B, 173.]—**A. folio crispo** [Ferraris]. A subvariety of the bitter-orange tree (*Citrus a.*, var. *bigaradia*); the *Citrus crispifolia* of the gardens. [B, 173.]—**A. hermaphroditum** [Ferraris]. See *A. corniculatum.*—**A. hispalense** (seu **hispaniense**). See AURANTIA *hispalensis.*—**A. pumiliore** [Cluss.]. See *A. sinense.*—**A. roseum** [Ferraris]. A variety of the bergamot orange (*Citrus a.*, var. *bergamia*). [B, 173.]—**A. silvestre medulla dulc-amara, A. silvestre medulla minus amara,** etc. The wild orange-tree. [B, 183.]—**A. sinense** [Tournefort], **A. sinense foliis lanceolatis, acutis, glabris.** A variety of the *Citrus a.* [B, 173, 183.]—**A. stellatum** [Ferraris]. See *A. roseum.*—**A. striatum** [Ferraris]. A variety of the ordinary sweet orange, *Citrus a.* (the *Citrus a.*, var. *lunatum*, of the gardens). [B, 173.]—**A. violaceum** [Desfontaines]. A variety (the *Citrus violacea* of the gardens) of the *Citrus a.*, var. *bigaradia.* [B, 173.]—**A. virgatum** [Ferraris]. A variety of the *Citrus a.* (the *Citrus a.*, var. *mutabile* [Risso]). [B, 173.]—**A. vulgare** [Comm.]. The bitter-orange tree (*Citrus a.*, var. *bigaradia*). [B, 173.]—**Confectio aurantii** [Lond. Ph.]. Syn.: *conserva aurantii* [Ed. Ph.]. Confection of orange-peel; made with 1 part of orange-peel and 3 parts of sugar. [B, 98.]—**Conserva aurantii** [Sard. Ph., 1773; Ed. Ph.]. 1. Of the Sard. Ph., an electuary made of 2 parts of orange-pulp with the rind and 3 parts of sugar with water. [B, 119.] 2. Of the Ed. Ph., see *Confectio aurantii.*—**Conserva corticum aurantiorum.** See *Confectio aurantii.*—**Cortex aurantiorum.** Bitter-orange peel. [B, 180.] See under ORANGE.—**Cortex aurantiorum curassaviensium.** The peel of the Curaçoa orange; rather thinner, larger, and of darker color than ordinary orange-peel, and with less of the white inner coating (*albedo*). [B, 180.]—**Cortex aurantiorum dulcium.** Sweet-orange peel. [B.]—**Cortex aurantiorum in quarto.** Orange-peels divided into connected quarters. [B, 180.]—**Elixir aurantii** [U. S. Ph.]. Elixir of orange, simple elixir; made by dissolving as thoroughly as possible 1 part of oil of orange-peel in 100 parts each of alcohol and water, and adding 100 parts of sugar. [B.]—**Elixir aurantiorum compositum** [Ger. Ph.]. Ger., *Pomeranzenelixir.* Compound elixir of orange; made by macerating 50 parts of orange-peel, 10 of cinnamon, and 2½ of potassium carbonate in 250 of sherry wine; expressing: adding to the expressed liquid, brought up to 230 parts by the addition of wine, 5 parts each of extract of gentian, extract of wormwood, extract of cascarilla, and extract of buckbean [*Trifolium fibrinum*); allowing the whole to settle; and filtering. Various modifications of this formula were formerly official in a great number of pharmacopœias, under the names of *elixir viscerale* (seu *stomachicum*, seu *viscerale Hoffmanni*, seu *balsamicum Hoffmanni*, seu *balsamicum, stomachicum et temperatum Hoffmanni*), *essentia stomachicum, vinum amarum alcalisatum, tinctura amara* (seu *stomachica*). The original formula contained no orange. A very similar preparation, but without the potassium salt, is the *vinum aurantiorum compositum* (*q. v.*). The preparation of this name in the Sp. Ph. of 1798 was made of 1½ oz. each of orange-peel and cinchona, 1 oz. each of wormwood tops, chamomile flowers, and Jamaica pepper, ½ drachm of cochineal, 1½ lb. of water, and 4 oz. of alcohol, allowed to stand for three days, and filtered. [B, 97, 119, 205.] Cf. ELIXIR *viscerale Hoffmanni.*—**Essentia aurantii.** See *Tinctura aurantii.* [B, 119.]—**Essentia aurantii dulcis.** See *Tinctura aurantii dulcis.*—**Essentia corticum aurantiorum.** See *Tinctura aurantii.*—**Essentia corticum aurantiorum vinosa.** Wine of orange-peel; made by macerating 1 part of dried orange-peel in 8 parts of Spanish wine, and filtering. [Brunsw. Ph., 1777; Würt. Ph., 1798 (B, 97).]—**Extractum aurantii amari fluidum** [U. S. Ph.]. Fluid extract of bitter-orange peel; made by exhausting 100 parts by weight of powdered bitter-orange peel with alcohol and water; reserving the first 80 parts of the percolate; evaporating the rest to the consistence of a soft extract; mixing this with the reserved portion; and adding enough alcohol and water to bring the whole up to 100 parts by volume. [B.]—**Flavedo corticis aurantii, Flavedo corticum aurantiorum.** Orange zest; the yellow outer portion of orange-peel. [B, 95, 119.]—**Infusum aurantii** [Br. Ph.; Dubl. Ph.]. 1. Of the Br. Ph., a preparation made by steeping 1 part of bitter-orange peel in 20 parts of boiling distilled water, and straining. [B, 5.] 2. Of the Dubl. Ph., see *Infusum aurantii compositum.*—**Infusum aurantii compositum** [Br. Ph.; Lond. Ph.]. Syn.: *infusum aurantii* [Dubl.

Ph.]. Compound infusion of orange-peel ; made, according to the Br. Ph., by steeping ¼ oz. (av.) of bitter-orange peel, 60 grains of lemon-peel, and 30 grains of cloves in 10 fl. oz. of boiling distilled water, and straining. The Lond. Ph. ordered ½ oz. of orange-peel, 2 dr. of lemon-peel, 1 dr. of cloves, and 1 pint of boiling water. The Dubl. Ph. ordered 3 dr. of orange-peel, ½ dr. of cloves, and ½ pint of boiling water. [B, 98.]—**Oleosaccharum aurantii.** Fr., *oléosucre* (ou *oléosaccharure* [Fr. Cod.]) *d'orange.* A preparation in several old pharmacopœias, made by impregnating 1 oz. of sugar with 10 or 12 drops of essential oil of orange, as in the present Fr. Cod. ; or by rubbing sugar upon fresh orange-rind and pulverizing it after it has imbibed the oil. This last is also called *dry essence of orange* (Fr., *essence d'orange sèche*). [B, 97, 119.]—**Oleum aurantii æthereum.** Essential oil of orange-peel. [B, 97.] See under ORANGE.—**Oleum aurantii corticis** [U. S. Ph.], **Oleum aurantiorum corticum, Oleum corticum aurantiorum, Oleum corticum aurantiorum æthereum** (seu **destillatum**). Oil of orange-peel. [B, 180.] See under ORANGE.—**Pulpa aurantiorum.** Orange-pulp. [B, 90.]—**Spiritus aurantii** [U. S. Ph.], **Spiritus aurantiorum, Spiritus aurantiorum abstractius.** Fr., *teinture d'essence d'orange* [Fr. Cod.], *esprit d'écorce d'orange.* Spirit of orange ; a solution of oil of orange-peel in alcohol, containing 6 per cent. [U. S. Ph.] or 2 per cent. [Fr. Cod.] of the oil. Preparations of a similar character, called *aqua corticum aurantiorum alcoholica* (seu *spirituosa,* seu *vinosa*) or *spiritus aurantiorum,* made by distilling an infusion of orange-peel in white wine or dilute alcohol, were formerly official in many formularies, 1 part of peel affording from 1 part to 8 or 9 parts of spirit. [B, 5, 97, 113, 119.]—**Succus aurantiorum.** Fr., *suc d'orange douce* [Fr. Cod.]. Orange-juice ; the clarified juice of ripe oranges, official in several pharmacopœias. [B, 97.]—**Syrupus aurantii** [U. S. Ph. ; Br. Ph.], **Syrupus aurantii corticis** [Ger. Ph.], **Syrupus aurantiorum** [Lond. Ph., 1824], **Syrupus corticum aurantiorum.** Fr., *sirop d'écorce d'orange amère* [Fr. Cod.]. Ger., *Pomeranzenschalensyrup.* Syn. : *syrupus de cortice citri vulgaris* [Fr. Cod.]. Syrup of orange ; made, according to the U. S. Ph., by macerating 5 parts of sweet-orange peel with 5 parts of alcohol ; expressing ; triturating the expressed liquid with calcium phosphate and water ; filtering, adding at the same time enough water to bring the filtrate up to 40 parts ; and adding 60 parts of sugar. The Br. Ph. directs 1 fl. oz. of tincture of orange to be dissolved in 7 fl. oz. of syrup. The Fr. Cod. orders 10 parts of bitter-orange peel to be macerated in 10 parts of 60-per-cent. alcohol ; 100 parts of water to be added ; and, after expression, sugar to be added in the proportion of 18 parts to 10 of the liquid. The Ger. Ph. orders 60 parts of sugar to be added to 40 of a liquid prepared by macerating 5 parts of bitter-orange peel in 45 of alcohol. Similar preparations, made with or without the addition of alcohol, and with varying proportions of the ingredients, are or have been official in various other formularies. [B, 5, 97, 113, 119, 205.] See also *Vinous syrup of* ORANGE-*peel.*—**Syrupus de aurantiis, Syrupus e succo aurantiorum.** Fr., *sirop de suc d'orange.* Syrup of orange-juice ; made of purified orange-juice 4 parts and sugar 7 [Fr. Cod., 1818] or 10 [Austr. Ph., 1792] parts, flavored with oleosaccharum of orange [Fr. Cod.]. [B, 97.]—**Tinctura aurantii** [Ger. Ph. ; U. S. Ph., 1870]. See *Tinctura aurantii amari.*—**Tinctura aurantii amari** [U. S. Ph. ; Br. Ph.]. Fr., *teinture d'orange amère.* Ger., *Pomeranzentinctur* [Ger. Ph.]. Syn. : *tinctura aurantii* [Ger. Ph. ; U. S. Ph., 1870]. Tincture of bitter-orange peel ; made by macerating bitter-orange peel in dilute alcohol, and filtering. In the U. S. Ph. the process is hastened by percolation after the maceration has been continued for twenty-four hours ; 100 parts of the tincture, 20 [U. S. Ph. ; Fr. Cod. ; Ger. Ph.] or about 12 [Br. Ph.] parts of the peel. Similar preparations, in some of which the spiritus aurantii was used as a menstruum, while in others unripe oranges were added to the orange-peel, were official in the old Lond. Ph., the Ed. Ph., the Dubl. Ph., and the old pharmacopœias of Bavaria, Saxony, and Denmark, the proportions of the ingredients varying greatly in the different formulæ. [B, 5, 97, 98, 113, 205.] Cf. *Tinctura pomorum* AURANTIORUM *immaturorum,* under AURANTIUS, and *Tinctura aurantii recentis.*—**Tinctura aurantii dulcis** [U. S. Ph.]. Fr., *alcoolature d'orange* [Fr. Cod.]. Tincture of sweet-orange peel ; made by macerating 20 parts of the peel in alcohol for twenty-four hours, and percolating, alcohol being added until 100 parts of tincture are obtained. The French preparation is made by macerating 1 part of the peel for eight days in 2 parts of 80-per-cent. alcohol, and filtering. Similar preparations, made by digesting fresh sweet-orange peel in spirit of orange, and adding sugar or syrup of orange, were official in the Palat. Ph. of 1764 and the Swed. Ph. of 1817. [B, 5, 97, 113.]—**Tinctura aurantii recentis** [Br. Ph.]. Tincture of fresh orange-peel ; made by macerating the outer rind cut from fresh bitter oranges in rectified spirit, expressing, and filtering. An imp. pint represents 6 oz. of the fresh peel (corresponding to 2 oz. of the dry peel). [B, 5.]—**Tinctura corticum aurantii** (seu **aurantiorum**). See *Tinctura aurantii amari.*—**Vinum aurantiorum compositum.** Fr., *élixir viscéral.* Syn. : *elixir balsamicum.* Compound wine of orange-peel ; a preparation resembling the *elixir aurantiorum compositum* (seu *viscerale,* seu *stomachicum Hoffmanni*), but not rendered alkaline by the addition of potassium carbonate. The various preparations known under this name consisted essentially of an infusion of fresh orange-peel in wine, to which were added the extracts of blessed thistle (*Carduus benedictus*), lesser centaury, gentian, and either wormwood or cascarilla. Aqueous extract of myrrh was frequently added to these ingredients, or substituted for one of them, and the Sax. Ph. of 1820 added also the tinctures of cloves and saffron. The Bav. Ph. ordered a vinous infusion of orange-peel and green oranges, and added the extracts of cascarilla, gentian, and buckbean. [B, 97.]

AURANTIUS (Lat.), adj. and n. m. A^{4}r(a^3-u^{4}r)-a^{2}n(a^{3}n)′shi^2(ti^2)-u^{3}s(u^{4}s). 1. (Adj.) pertaining to oranges or the orange-tree. [B.] See MALA *aurantia.* 2. (N.) the orange-tree. [B.]—**Alcoolatum corticum fructuum aurantii.** See *Spiritus* AURANTII, under AURANTIUM.—**Aqua aurantii** [Swiss Ph. ; Swed. Ph. ; Ed. Ph.]. See *Aqua aurantii florum.*—**Aqua aurantii floris** [Br. Ph.]; **Aqua aurantii florum** [U. S. Ph. ; Austr. Ph. ; Hung. Ph.]. Fr., *eau distillée de fleurs d'oranger* [Fr. Cod.]. Ger., *Orangenblüthenwasser* [Ger. Ph.]. It., *acqua di fiori d'arancio, acqua nanfa.* Sp., *agua de flores de naranjas, agua de azahar* [Sp. Ph.]. Syn. : *aqua florum aurantii* [Ger. Ph. ; Norweg. Ph. ; Gr. Ph. ; Russ. Ph.], *aqua aurantii* [Swiss Ph. ; Swed. Ph.], *aqua florum aurantiorum* [Belg. Ph. ; Finn. Ph.], *aqua aurantii triplex venalis* [Dan. Ph.], *hydrolatum floris citri aurantii* [Fr. Cod.], *aqua naphæ.* Orange-flower water ; a clear or feebly opalescent, colorless liquid, having an agreeable odor of orange-flowers, obtained by the distillation of the flowers with water. In most of the pharmacopœias it is regarded as an article of commerce, and no specific directions are given for its preparation. In the others it is directed to be prepared by distillation with water, 100 parts of the product representing 20 [Gr. Ph.], 30 [Netherl. Ph.], 35 [Belg. Ph.], 40 [U. S. Ph.], 50 [Fr. Cod.], or 80 [Sp. Ph.] parts of the flowers. The Russ. Ph. directs the dilution of the *aqua aurantii triplex* (the triple orange-flower water of commerce), and the Norweg. Ph. directs its preparation extemporaneously by the addition of water to oil of orange. Commercial orange-flower water is made in several degrees of strength, being called *double* when 2 parts of distillate are obtained from 1 part of the flowers, *triple* when 3 parts of distillate are obtained from 2 parts of the flowers, and *quadruple* when 4 parts of distillate are obtained from 4 parts of the flowers. [B, 10, 81, 95.]—**Aqua aurantii quadruplex.** Commercial quadruple orange-flower water. [B.] See under *Aqua aurantii florum.*—**Aqua aurantii triplex venalis** [Dan. Ph.]. Commercial triple orange-flower water. [B, 95.] See under *Aqua aurantii florum.*—**Aqua floris aurantii** [Lond. Ph.], **Aqua florum aurantii.** See *Aqua aurantii florum.*—**Aurantii flores** [U. S. Ph.]. The partly unexpanded flowers of the sweet and the bitter orange (*Citrus aurantium,* var. *aurantum,* and var. *bigaradia*). [B.]—**Aurantii floris aqua.** See *Aqua aurantii florum.*—**Aurantii fructus immaturi** [Gr. Ph.]. See *Fructus aurantii immaturi.*—**Aurantii fructus maturi epidermis.** Bitter-orange peel. [B.] See under ORANGE.—**Baccæ aurantii, Baccæ aurantii immaturi.** See *Fructus aurantii immaturi.*—**Conserva florum aurantii** (seu **aurantiorum**). Fr., *conserve de fleurs d'oranger.* A conserve made of 1 part of orange-flowers and 3 parts of sugar [Sard. Ph., 1773], or by boiling orange-flowers in syrup and drying [Fr. Cod., 1818]. [B, 97.]—**Cortex aurantii fructus, Cortex fructus aurantii** [Ger. Ph.], **Cortex fructuum aurantii.** Bitter-orange peel. [B.] See under ORANGE.—**Cortex fructus aurantii dulcis.** Sweet-orange peel. [B.] See under ORANGE.—**Cortex pomorum aurantii** (seu **aurantiorum**). Orange-peel. [B.]—**Essentia pomorum aurantiorum immaturorum.** See *Tinctura pomorum aurantiorum immaturorum.*—**Flavedo fructus aurantii.** The outer, yellow portion of the rind of an orange ; the part which, according to the Ger. Ph., should alone be used in medicine. [B, 95.]—**Flores aurantiorum.** See *Aurantii flores.*—**Folia aurantii** (seu **aurantiorum**). The leaves of the orange-tree. [B, 180.]—**Fructus aurantii immaturi** [Ger. Ph. ; Belg. Ph., 1st ed. ; Norw. Ph. ; Russ. Ph. ; Swed. Ph.] (seu **immaturus** [Dan. Ph.]. Fr., *orangette, petit grain* [Fr. Cod.]. Ger., *unreife Pomeranzen.* Syn. : *aurantii fructus immaturi* [Gr. Ph.], *baccæ aurantii.* Orange-berries, Curassoa apples ; the unripe fruit of the *Citrus aurantium,* especially the *Citrus aurantium,* var. *bigaradia* (the bitter-orange tree) ; hard, spherical berries, ⅛ to ⅜ inch in diameter, of a very aromatic odor and a bitter, aromatic taste. [B, 95.]—**Fructus aurantiorum viridum, Fructus immaturi aurantiorum.** See *Fructus aurantii immaturi.*—**Fructus immaturus aurantii.** The unripe fruit of the sweet-orange tree. [B, 98.] Cf. *Fructus aurantii immaturi.*—**Fructus virides aurantiorum, Mala immatura aurantiorum.** See *Fructus aurantii immaturi.*—**Oleum aurantii, Oleum aurantii florum** [U. S. Ph. ; Ger. Ph.]. Oil of orange-flowers. [B.] See under ORANGE.—**Poma aurantiorum.** Oranges. [B, 119.]—**Poma aurantiorum immatura, Poma immatura aurantiorum.** See *Fructus aurantii immaturi.*—**Pulvis foliorum aurantii** [Fr. Cod.]. See *Poudre d'*ORANGER (*feuille*).—**Syrupus aurantii floris** [Br. Ph.], **Syrupus aurantii florum** [U. S. Ph. ; Ger. Ph.], **Syrupus cum aqua floris aurantii** [Fr. Cod.], **Syrupus de floribus aurantiorum, Syrupus florum aurantii.** Fr., *sirop de fleur d'oranger* [Fr. Cod.]. Ger., *Orangenblüthensyrup* [Ger. Ph.]. Syn. : *syrupus naphæ.* Syrup of orange-flowers ; made by adding sugar to orange-flower water ; 100 parts contain 35 [U. S. Ph.], 22 [Br. Ph.], 20 [Ger. Ph.], or 36 [Fr. Cod.] parts of orange-flower water. In the Br. Ph. and the Ger. Ph. the sugar is made into a syrup with distilled water before being mixed with the orange-flower water. Similar preparations, with somewhat varying proportions of the ingredients, were official in most of the older pharmacopœias. [B, 5, 97, 113, 205.]—**Tinctura pomorum aurantiorum immaturorum.** Fr., *teinture d'oranges vertes.* Tincture of unripe oranges ; made by digesting in from 4 to 6 parts of alcohol, and filtering. [Brunsw. Ph., 1777 ; Han. Ph., 1819 ; Hamb. Ph., 1833 (B, 97, 119).]

AURANTUM, n. See AURANCUM.

AURARIC, n. An alchemical name for mercury (in both the mystical and the ordinary sense). [B, 50.]

AURARIUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a(a^3)′ri^2-u^{3}s(u^{4}s). From *aurum,* gold. Ger., *aurarisch.* Of or pertaining to gold (a botanical species-name). [B, 48, 134, 173.] See LIMONELLUS *a.*

AURARSENETHYLIUM, n. A^{4}r-a^{3}r″se^{2}n-e^{2}th-i^{2}l′i^2-u^{3}m. For deriv., see AURUM, ARSENIC, and ETHYL. A univalent arsenic radicle, $As(C_2H_5)_3Au$. [B, 2.]

AURATE, n. A^{4}r′at. Fr., *aurate, orate.* Ger., *goldsaures Salz.* It., *aurato, orato.* A salt of auric acid ; a compound of auric oxide (gold trioxide) with a basic oxide. The term is usually applied to the compounds more properly called metaurates (*q. v.*). [B, 3.]

AURATICOLLIS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a^{2}t(a^{3}t)-i^2-ko^{2}l'li^{2}s. From *aurum*, gold, and *collum*, the neck. Fr., *auraticolle*. Having a gold-colored neck (a zoological species-name). [B, 195 ; L, 41.]

AURATOS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a(a^3)'to^{2}s. See AURATUS.

AURATUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-a(a^3)'tu^{3}s(tu^{4}s). Fr., *auré*. Ger., *goldgelb*. Golden ; in botany, of a clear, vivid yellow color. [B, 123.]—**A. Germanorum.** See AURUM *horizontale*.

AUREA ALEXANDRINA (Lat.), n. f. A^{4}r'(a^3'u^{4}r)-e^2-a^3 a^{2}l-(a^{3}l)-e^{2}x-a^{2}n(a^{3}n)-dri(dre)'na^3. An old preparation of opium ; so called either from Alexander, a physician, or from Alexandria. [L, 97.]

AUREILLETOS, n. The *Ficaria ranunculoides*. [L, 105.]

AUREILLO D'ASE. Syn. : *oreille d'âne*. A Languedoc name for the *Symphytum officinale*. [B, 121.]

AURELIA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-e(a)'li^2-a^3. Fr., *aurélie*. 1. Of Cassini, see GRINDELIA. 2. Of J. Gay, a genus of amaryllidaceous plants allied to *Narcissus*. 3. Of Grisebach, a section of the genus *Hieracium*. [B, 121.] 4. A genus of the *Cœlenterata*. [B, 93.] 5. The state of an imperfect insect which succeeds the larva ; the nympha (so called from the golden lustre of the case of certain insects in this state). [B, 7, 240.] 6. (Probably from *areola* [*q. v.*]) an old term for the amnion, according to J. Hyrtl. [F. B. Stephenson, "N. Y. Med. Jour.," July 24, 1886, p. 92.]

AURELIAN, adj. A^{4}r-el'ya^{2}n. Pertaining to or resembling an aurelia ; as a n., an amateur entomologist. [B, 116.]

AURELIANA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-e(a)-li^2-a(a^3)'na^3. Fr., *auréliane*. A genus of araliaceous plants, now referred to *Panax*, and by Decaisne and Planchon to *Aralia* (section *Ginseng*). [B, 42.]—**A. canadensis** [Lafit.]. The *Aralia quinquefolia*. [B, 267.]—**A. canadensis iroquæis.** The *Panax quinquefolium*. [B, 59.]

AURELIDÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-e^{2}l'i^{2}d-e(a^3-e^2). Fr., *aurélidées*. A family of *Hydrozoa* (subclass *Hydromedusidæ*, order *Trachomedusæ*). [E. R. Lankester (B, 77).]

AURENSAN (Fr.), n. O-ra^{3}n^2-sa^{3}n^2. A place in the department of Gers, France, where there is a spring containing iron, calcium, and chlorides. [L, 49.]

AUREOLA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-e(e^2)'o-la^3. From *aureolus*, golden, brilliant. Fr., *auréole*. See AREOLA (1st def.).

AURÉOLAIRE (Fr.), n. O-ra-o-la^{2}r. Pertaining to the areola of the nipple. [A, 33.] See GLANDES *auréolaires*.

AUREOLIN, n. A^{4}r-e'o-li^{2}n. Fr., *auréoline*. A hair-bleaching agent containing hydrogen peroxide. [B, 14.]

AUREOLUS (Lat.), adj., dim. of *aureus*. A^{4}r(a^3-u^{4}r)-e(e^2)'o(o^2)-lu^{3}s(lu^{4}s). See AURATUS.

AUREOSIN, n. A^{4}r-e'o-si^{2}n. A commercial name for a yellowish aniline pigment consisting of a compound of fluorescin with chlorine. [B, 258.]

AUREUS (Lat.), adj. A^{4}r'(a^3'u^{4}r)-e^2-u^{3}s(u^{4}s). See AURATUS.

AUREUX (Fr.), adj. O-ru^5. See AUROUS.

AURIA (Lat.), n. f. A^{4}r'(a^3'u^{4}r)-i^2-a^3. See GRATIOLA.

AURIBARBIS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^2-ba^{3}rb'i^{2}s. From *aurum*, gold, and *barba*, the beard. Fr., *auribarbe*. Ger., *goldbartig*. Having golden hairs disposed like a beard (a zoological species-name). [B, 195 ; L, 41.]

AURIC, adj. A^{4}r'i^{2}k. Lat., *auricus*. Fr., *aurique*, *orique*. It., *aurico*. 1. Of or pertaining to gold ; caused by gold (see *A.* FEVER). 2. In chemistry, containing gold as a trivalent radicle. [B.]—**A. acid.** Fr., *acide aurique*. Ger., *Goldsäure*. It., *acido aurico*. A name sometimes applied to gold trioxide, but which should be given to gold trihydroxide, $Au(OH)_3$, that compound forming the true aurates. The hydrate, AuO.OH, is often called a. acid, but is more properly designated *metauric acid* (*q. v.*). [B, 3, 159 ; Schottländer, "Ann. der Chem.," v, p. 312 (B).]—**A. anhydride.** Fr., *anhydride aurique*. Ger., *Goldsäureanhydrid*. It., *anidride aurica*. Gold trioxide. [B, 159.]—**A. hydrate.** Fr., *hydrate aurique*. Ger., *Goldoxydhydrat*. It., *idrato aurico*. Gold trihydroxide. [B. 159.]—**A. iodide, A. oxide,** etc. Gold triiodide, gold trioxide, etc. [B.] See under GOLD.

AURICEPHALUS (Lat.), adj. A^{4}r(a^{3}u^{4}r)-i^2-se^{2}f(ke^{2}f)'a^3-lu^{3}s-(lu^{4}s). From *aurum*, gold, and κεφαλή, the head. Fr., *auricéphale*. Having a gold-colored head. [L, 41.]

AURICHALCUM (Lat.), n. n. A^{4}r(a^{3}u^{4}r)-i^2-ka^{2}l(ch^{2}a^{3}l)'ku^{3}m-(ku^{4}m). See ORICHALCUM.

AURICHLORIDE, n. A^{4}r-i^2-klo'ri^{2}d(rid). Ger., *Aurichlorid*. See CHLORAURIDE.

AURICHLORWASSERSTOFF (Ger.), n. A^3''ur-i^2-ch^{2}lor-va^{3}s'se^{2}r-sto^{3}f. Chlorauric acid. [B, 257.]

AURICILLA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-i^2-si^{2}l(ki^{2}l)'la^3. See AURICULA.

AURICLE, n. A^{4}r'i^{2}k-l'. Lat., *auricula*. Fr., *auricule* (1st, 2d, and 3d def's), *oreillette* (4th def.). Ger., *Oehrchen* (1st def.), *Aurikel* (4th def.), *Ohrläppchen* (3d def.), *Ohrmuschel* (3d def.), *Vorhof* (4th def.), *Herzohr* (4th def.). It., *auricola*. Sp., *aurícula*. 1. In botany, a projection resembling the lobe of the ear (*e. g.*, the divisions of certain leaves or the stipules in some plants). [B, 1.] 2. In zoology, a tuft of feathers above the eye in certain birds. [L, 41.] 3. The external ear, the pinna. [F.] 4. See *Left* and *Right a. of the heart*.—**Left a. of the heart.** Lat., *auricula cordis sinistra*. Fr., *oreillette gauche du cœur*. Ger., *linker Vorhof des Herzens*, *linkes Herzohr*. The left upper chamber of the heart. It receives arterial blood from the pulmonary veins, and discharges it into the left ventricle.—**Right a. of the heart.** Lat., *auricula cordis dextra*. Fr., *oreillette droite du cœur*. Ger., *rechter Vorhof des Herzens*, *rechtes Herzohr*. The right upper chamber of the heart. It receives venous blood from the venæ cavæ, and discharges it into the right ventricle.

DIAGRAM OF THE AURICLES AND VENTRICLES OF THE HEART. (FROM FLINT, AFTER BERNARD.)
od, the right auricle ; *vd*, the right ventricle ; *og*, the left auricle ; *vg*, the left ventricle.

AURICLED, adj. A^{4}r'i^{2}k-l'd. See AURICULATE.

AURICO-AMMONIC, adj. A^{4}r''i^{2}k-o-a^{2}m-mo^{2}n'i^{2}k. Fr., *aurico-ammonique*. Containing gold and ammonium. [B, 132.]

AURICO-BARYTIC, adj. A^{4}r''i^{2}k-o-ba^{2}r-i^{2}t'i^{2}k. Fr., *aurico-barytique*. Containing gold and barium. [B, 132.]

AURICO-CADMIC, adj. A^{4}r''i^{2}k-o-ka^{2}d'mi^{2}k. Fr., *aurico-cadmique*. Containing gold and cadmium. [B, 132.]

AURICO-COBALTIC, adj. A^{4}r''i^{2}k-o-ko-ba^{4}lt'i^{2}k. Fr., *aurico-cobaltique*. Containing gold and cobalt. [B, 132.]

AURICO-LITHIC, adj. A^{4}r''i^{2}k-o-li^{2}th'i^{2}k. Fr., *aurico-lithique*. Containing gold and lithium. [B, 132.]

AURICOLLA (Lat.), n. f. A^{4}r(a^{3}u^{4}r)-i^2-ko^{2}l'la^3. An old name for borax. [B, 88.]

AURICOLLIS (Lat.), adj. A^{4}r(a^{3}u^{4}r)-i^2-ko^{2}l'li^{2}s. From *aurum*, gold, and *collum*, the neck. Fr., *auricolle*. Having a golden-yellow neck. [B, 195.]

AURICO-MAGNESIC, adj. A^{4}r''i^{2}k-o-ma^{2}g-ne'zi^{2}k. Fr., *aurico-magnésique*. Containing gold and magnesium. [B, 132.]

AURICO-MANGANIC, adj. A^{4}r''i^{2}k-o-ma^{2}n^2 ga^{2}n'i^{2}k. Fr., *aurico-manganique*. Containing gold and manganese. [B, 132.]

AURICOME, n. A^{4}r'i^2-kom. From *aurum*, gold, and κόμη, the hair of the head. An agent for turning dark-colored hair yellow. [B, 3.]

AURICOMOUS, adj. A^{4}r-i^{2}k'o-mu^{3}s. Lat., *auricomus* (*q. v.*). Fr., *auricome*. Golden-haired, also turning the hair yellow. [L, 56.]

AURICOMUM (Lat.), n. n. A^{4}r(a^3-u^{4}r)-i^{2}k'o(o^2)-mu^{3}m(mu^{4}m). The plant maidenhair. [L, 119.]

AURICOMUS (Lat.), adj. and n. m. A^{4}r(a^3-u^{4}r)-i^{2}k'o(o^2)-mu^{3}s-(mu^{4}s). For deriv., see AURICOME. 1. Golden-haired or golden-leaved. [B.] 2. As a. n., a species of *Ranunculus* (*Ranunculus a.*), also a section of the genus *Ranunculus* including this species. [B, 109, 121, 134.]

AURICO-NATRICUS (Lat.), adj. A^{4}r''(a^3''u^{4}r)-i^{2}k-o(o^2)-na^{2}t-(na^{3}t)'ri^{2}k-u^{3}s(u^{4}s). See AURICO-SODIC.

AURICO-NICKELIC, adj. A^{4}r''i^{2}k-o-ni^{2}k-e^{2}l'i^{2}k. Fr., *aurico-niccolique*. Containing gold and nickel. [B, 132.]

AURICO-POTASSIC, adj. A^{4}r''i^{2}k-o-po^{2}t-a^{2}s'si^{2}k. Fr., *aurico-potassique*. Containing gold and potassium. [B, 132.]

AURICORNIS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}k-o^{2}rn'i^{2}s. From *aurum*, gold, and *cornu*, a horn. Fr., *auricorne*. Having horns, antennæ, or tufts of a golden-yellow color (a zoological species-name). [B, 195 ; L, 41, 180.]

AURICO-SODIC, adj. A^{4}r''i^{2}k-o-so'di^{2}k. Lat., *aurico-sodicus*, *aurico-natricus*. Fr., *aurico-sodique*. Containing gold (as a trivalent radicle) and sodium. [B, 113, 140.]

AURICO-STRONTIC, adj. A^{4}r''i^{2}k-o-stro^{2}nt'i^{2}k. Fr., *aurico-strontique*. Containing gold and strontium. [B, 132.]

AURICO-ZINCIC, adj. A^{4}r''i^{2}k-o-zi^{2}n'si^{2}k. Fr., *aurico-zincique*. Containing gold and zinc. [B, 132.]

AURICUIVRE (Fr.), n. O-ri^2-kwevr'. 1. An alloy of copper resembling gold. 2. A liquid used to give copper the appearance of gold. [L, 41.]

AURICULA (Lat.), n. f. A^4(a^3-u^4)-ri^{2}k'u^2(u^4)-la^3. Dim. of *auris*. Fr., *auricule*. Ger., *Aurikel*, *Oehrchen*. 1. See AURICLE. 2. One of the five processes in the *Echinoidea* which project inward from the ambulacral (sometimes from the inter-ambulacral) plates of

the oral margin of the corona and arch upon the ambulacrum. [B, 100; L, 121.] 3. A section of the botanical genus *Primula*, including the *Primula a.* [B, 48, 89.]—**Auriculæ absconditæ.** Ears which are covered with hair. [L, 108.]—**Auriculæ primus.** See Attollens *aurem.*—**Auriculæ secundus.** See Retrahens *aurem.*—**A. cordis dextra.** The right auricle of the heart. [L, 31.]—**A. cordis sinistra.** The left auricle of the heart. [L, 31.]—**A. flammea Malchi** [Sterb.]. A species of agaricus. [B, 121.]—**A. infima.** The lobule of the ear. [L, 175.]—**A. Judæ.** See Hirneola *a. Judæ.*—**A. leporis.** The *Bupleurum falcatum.* [B, 180.]—**Auriculæ marginatæ.** Ears bordered by a helix. [L, 108.]—**A. muris** [Brunfels]. See Hieracium *pilosella.*—**A. muris altera incana saxatilis** [Columu.]. See Hieracium *saxatile.*—**A. muris major** [Trag.]. The Hieracium *murorum.* [B, 121.]—**Auriculæ operculatæ.** Ears provided with a largely developed tragus which stands out like a subsidiary auricle. [L, 108.]—**A. ursi.** See *Primula a.*—**Flores auriculæ muris.** The flowers of the Hieracium *pilosella.* [B, 180.]—**Flores auriculæ muris albæ.** The flowers of the *Cerastium arvense.* [B, 180.]—**Flores auriculæ ursi.** The flowers of the *Primula a.* [B, 180.]—**Folia auriculæ ursi.** The leaves of the *Primula a.* [B, 180.]—**Herba auriculæ leporis.** The herb of the *Bupleurum falcatum.* [B, 180.]—**Herba auriculæ muris.** The herb of the *Hieracium pilosella.* [B, 180.]—**Herba auriculæ muris major.** The herb of the *Hieracium murorum.* [B, 180.]—**Radix auriculæ leporis.** The root of the *Bupleurum falcatum.* [B, 180.]—**Radix auriculæ ursi.** The root of the *Primula a.* [B, 180.]—**Secundus propriorum auriculæ.** See Retrahens *aurem.*—**Superior auriculæ.** See Attollens *aurem.*

AURICULAIRE (Fr.), adj. O-ri^{2}k-u^6-la^{2}r. See Auricular and Auricularis.—**A. antérieur.** See Auricularis *anterior.*—**A. antérieur profond.** See Auricularis *anterior profundus.*—**A. postérieur.** See Retrahens *aurem.*—**A. supérieur.** See Attollens *aurem.*

AURICULAR, adj. A^{4}r-i^{2}k'u^2-la^{3}r. Lat., *auricularis.* Fr., *auriculaire.* Ger., *aurikulär, ohrförmig.* It., *auricolare.* Sp., *auricular.* 1. Relating to the external ear. 2. Relating to the auricle of the heart. 3. As a n., the circle of feathers which surrounds the opening to the auditory passage of some birds. [L, 108.]

AURICULARIA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la(la^3)'ri^2-a^3. 1. J. Müller's name for the young larva of *Syanapta;* applied also to the larval form of nearly all the *Holothuroidea.* [L, 201.] 2. Of Bulliard, a genus of hymenomycetous *Fungi* belonging to the *Auricularini.* 3. The *Hedyotis.* [B, 121.]—**A. indorum.** See *A.* (2d def.).—**A. sambuci** [Persoon], **A. sambucina** [Martius]. The *Hirneola auricula Judæ.* [B, 173.]—**Folia auriculariæ.** The leaves of *Hedyotis a.* [B, 2, 48.]

AURICULARII [Reichenbach] (Lat.), n. m. pl. A^{4}r(a^3-u^{4}r) i^{2}k-u^2(u^4)-la(la^3)'ri^2-i(e). See Auricularini.

AURICULARINEÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la^{3}r-i^{2}n'e^2-e(a^3-e^2). Fr., *auricularinées.* A section of the *Agariceæ,* made by Mathieu, including the genera *Auricularia, Coriophora,* and *Telophora.* [B, 170.]

AURICULARINI (Lat.), n. m. pl. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la^{3}r-i-(e)'ni(ne). A suborder or order of *Fungi* (*Pileati* or *Hymenomycetes*) made by Fries, comprising *Auricularia, Thelephora, Stereum,* and other genera in which the hymenium is devoid of gills, pores, or other marked elevations. [B, 19, 170.]

AURICULARIS (Lat.), adj. and n. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la(la^3)'-ri^{2}s. Auricular (*q. v.*); as a n., the extensor minimi digiti, so called from its being frequently used in clearing the ear with the little finger. [A, 301.]—**A. abductor.** See Abductor *minimi digiti manus* and *A. posterior.*—**A. anterior.** Fr., *auriculaire antérieur.* See Attrahens *aurem.*—**A. anterior profundus.** Fr., *auriculaire antérieur profond.* An anomalous bundle of muscular fibres which arise from the zygoma, and are attached to the anterior portion of the auricle. [A, 262.]—**A. posterior.** See Retrahens *aurem.*—**A. superior.** See Attollens *aurem.*

AURICULARIUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la(la^3)'ri^2-u^{3}s(u^{4}s). Auricular; as a n., an aurist.

AURICULATE, AURICULATED. A^{4}r-i^{2}k'u^{2}lat, -la-te^{2}d. Lat., *auriculatus.* Fr., *auriculé.* Ger., *kleingeöhrt, geöhrelt.* Provided with ears or ear-shaped appendages. [B, 19; L, 41.]

AURICULATO-PINNATUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2-(u^4)-la(la^3)''to(to^2)-pi^{2}n-na(na^3)'tu^{3}s(tu^{4}s). From *auriculatus,* auriculate, and *pinnatus,* pinnate. Fr., *auriculato-penné.* Pinnate and having auriculate folioles (said of leaves). [Link (B, 195).]

AURICULATUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-la(la^3)'tu^{3}s-(tu^{4}s). See Auriculate.

AURICULE (Fr.), n. O-ri^{2}k-u^{6}l. See Auricle.—**A. de rat.** See Myosotis.

AURICULIDÆ (Lat.), n. f. pl. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u)'li^{2}d-e(a^3-e^2). A family of the *Inoperculata* having a spiral shell with a horny epidermis and an elongated and denticulated aperture. [L, 147.]

AURICULIFERUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}k-u^2(u^4)-li^{2}f'e^{2}r-u^{3}s(u^{4}s). From *auricula,* a little ear, and *ferre,* to bear. Fr., *auriculifère.* Ger., *ohrtragend.* Bearing auricles or ear-like appendages or impressions. [B, 195.]

AURICULIFORM, adj. A^{4}r-i^{2}k-u^2'li^2-fo^{2}rm. Lat., *auriculiformis.* Fr., *auriculiforme.* Ger., *ohrförmig.* Having the shape of an auricle or little ear. [B, 195.]

AURICULISTE (Fr.), n. O-ri^{2}k-u^6-lest. See Aurist.

AURICULO-BREGMATIC, adj. A^{4}r-i^{2}k''u^2-lo-bre^{2}g-ma^{2}t'ik. Relating to the external ear and the bregma (said of a vertical line drawn through the centre of the external auditory meatus from the alveolo-condyloid plane). [L, 195.]

AURICULO-METALLIC, adj. A^{4}r-i^{2}k''u^2-lo-me^{2}t-a^{2}l'i^{2}k. Fr., *auriculo-métallique.* A term applied by Filhos to a metallic sound sometimes heard in auscultation of the heart, supposed to be due to the impact of the apex of the heart against the chest-walls. [L, 41.]

AURICULO-PENNÉ (Fr.), adj. O-ri^{2}k-u^6-lo-pe^{2}n-na. See Auriculato-pinnatus.

AURICULO-TEMPORAL, adj. A^{4}r-i^{2}k''u^2-lo-te^{2}m'po-ra^{2}l. Lat., *auriculo-temporalis.* Fr., *auriculo-temporal.* It., *auricolo-temporale.* Relating to the external ear and the temporal region. As a n., the term was applied by Cruveilhier to the attrahens and the attollens aurem muscles, regarded as one muscle. [A, 299.]

AURICULO-VENTRICULAR, adj. A^{4}r-i^{2}k''u^2-lo-ve^{2}n-tri^{2}k'-u^2-la^{3}r. Lat., *auriculo-ventricularis.* Fr., *auriculo-ventriculaire.* Ger., *aurikulo-ventrikular.* It., *auricolo-ventricolare.* Relating to an auricle and a ventricle of the heart. [L, 41.]

AURICULO-ZYGOMATIC, adj. A^{4}r-i^{2}k''u^2-lo-zi-go-ma^{2}t'i^{2}k. Lat., *auriculo-zygomaticus.* It., *auricolo-zigomatico.* Relating to the external ear and the zygoma; as a n., the attrahens aurem muscle. [L, 44.]

AURICURE (Fr.), n. O-ri^2-ku^{6}r. From *auris,* the ear, and *cura,* cure. See Aurist.

AURICYANIC, adj. A^{4}r''i^2-si-a^{2}n'i^{2}k. From *aurum,* gold, and *cyanic* (*q. v.*). Syn.: *cyanuric.* Compounded of gold (acting as a trivalent radicle) and cyanogen. [B.]—**A. acid.** See Hydroauricyanic acid.

AURICYANIDE, AURIDCYANIDE, adj's. A^{4}r-i^2-si'a^{2}n-i^{2}d(id), -i^{2}d-si'a^{2}n-i^{2}d(id). A double cyanide of gold and another metal, which may also be regarded as a salt of hydroauricyanic acid. The general formula of the auricyanides is $R[Au(CN)_4]n$, where R is a radicle having the quantivalence n. [B, 4.]

AURIDE, n. A^{4}r'i^{2}d(id). Lat., *auridum, aururetum* (2d def.). Fr., *auride* (1st def.), *aurure* (2d def.). Ger., *Aurid.* 1. In mineralogy, a mineral consisting of gold or of its compounds. [B, 195.] 2. In chemistry, a compound of gold directly with another element or a radicle. [B.]

AURIÈRES (Fr.), n. O-ri^2-e^{2}r. A place near Clermont, in the department of Puy-de-Dôme, France, where there are cool carbonated mineral springs. [L, 57.]

AURIFEROUS, adj. A^{4}r-i^{2}f'e^{2}r-u^{3}s. Lat., *auriferus* (from *aurum,* gold, and *ferre,* to bear). Fr., *aurifère.* Containing or producing gold. [B, 140.]

AURIFIC, adj. A^{4}r-i^{2}f'i^{2}k. Fr., *aurifique.* Ger., *goldtragend.* Containing gold. [L, 32.]

AURIFICATION (Fr.), n. Or-i^2-fi^2-ka^3-si^2-o^{2}n^2. From *aurum,* gold, and *facere,* to make. Fr., *aurification.* The operation of plugging teeth with gold. [L, 42.]

AURIFIER (Fr.), v. tr. O-ri^2-fe-a. To plug with gold (said of teeth). [L, 42.]

AURIFORM, adj. A^{4}r'i^2-fo^{2}rm. Lat., *auriformis* (from *auris,* the ear, and *forma,* form). Fr., *auriforme.* Ger., *ohrförmig.* Ear-shaped. [B, 195.]

AURIFORMES (Lat.), n. m. pl. A^{4}r(a^3-u^{4}r)-i^2-fo^{2}rm'ez(as). A family of the *Scutibranchiata,* having the shell spiral at one end and ear-shaped. [L, 226.]

AURIGA (Lat.), n. f. A^{4}r(a^3-u^{4}r)-i(e)'ga^3. Ger., *Fuhrmannsbinde.* 1. A bandage used in wounds of the thorax. [L, 50.] 2. The lobulus Spigelii of the liver. [L, 84.]

AURIGASTER (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^2-ga^{2}s(ga^{3}s)'tu^{5}r(tar). From *aurum,* gold, and *gaster,* the belly. Fr., *aurigastre.* Ger., *goldbauchig.* Having a golden-yellow belly (a zoological species-name). [B, 195.]

AURIGERUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}j(i^{2}g)'e^{2}r-u^{3}s(u^{4}s). From *aurum,* gold, and *gerere,* to bear. Fr., *aurigère.* Ger., *goldtragend.* Bearing gold, or gold-like processes, appendages, or marks. [B, 195.]

AURIGINOSUS (Lat.), adj. A^{4}r(a^3-u^{4}r)-i^{2}j(i^{2}g)-i^{2}n-o'su^{3}s(su^{4}s). Fr., *aurigineux.* 1. Gold-colored. 2. Jaundiced or relating to the jaundice. [L, 41.]

AURIGNY (Fr.), n. O-ren-ye. The French name of the island of Alderney, a summer bathing resort. [L, 49.]

AURIGO (Lat.), n. f. A^{4}r(a^3-u^{4}r)-i(e)'go. Gen., *aurig'inis.* A corrupt form of *aurugo* (*q. v.*).—**A. ab obstructione.** Jaundice due to an obstacle to the escape of the bile into the intestines. [L, 132.]—**A. accidentalis.** Jaundice due to passion, fever, etc. [L, 119.]—**A. a graviditate** [Van Swieten]. Jaundice due to pregnancy. [L, 132.]—**A. a mensium suppressione.** Jaundice caused by suppression of the menses. [L, 132.]—**A. a spasmis** [F. Hoffmann]. See *A. calculosa.*—**A. a venenis.** Jaundice due to poisons or the bites of poisonous insects. [L, 132.]—**A. calculosa** [Bonetus]. Jaundice caused by gall-stones. [L, 132.]—**A. colica hysterica.** See *A. hysterica.*—**A. febricosa.** Jaundice occurring with remittent or intermittent fevers. [L, 132.]—**A. febrilis** [Sydenham]. Jaundice due to continued fevers and distinct from a. febricosa and a. hepatica. [L, 132.]—**A. hepatica** [Boerhaave]. Jaundice caused by inflammatory diseases of the liver. [L, 132.]—**A. hysterica** [Sydenham]. Jaundice arising from or accompanying hysterical gastrodynia or the hysterical colic of Sydenham. [L, 132.]—**A. indica** [Bontius]. A term applied to the yellow color of the inhabitants of hot countries. [L, 132.]—**A. neophytorum.** See Icterus *neonatorum.*—**A. plethorica.** Jaundice due to plethora. [L, 132.]—**A. purulenta** [Bonetus]. Jaundice due to abscess of the liver. [L, 132.]—**A. rhachialgica.** Jaundice caused by lead poisoning. [L, 132.]—**A. typhodes.** See *Yellow* fever.

AURIKEL (Ger.), n. A^3'ur-i^{2}k-e^{2}l. 1. See Auricle. 2. The *Primula auricula.* [B, 49.]—**A'kampher.** A stearoptene found in the *Primula auricula.* [B, 207.]

AURILAVE, n. A4r'i2-lav. From *auris*, the ear, and *lavare*, to wash. An instrument for cleansing the external auditory canal, consisting of a small piece of sponge attached to a slender handle. Its use is to be deprecated. [F.]

AURILLAC (Fr.), n. O-re-ya3k. A town in the department of Cantal, France, where there are feebly chalybeate springs. [L, 105.]

AURIN, n. A4r'i2n. From *aurum*, gold, on account of its yellow color. Fr., *aurine.* A yellow dye; pararosolic acid. See ROSOLIC ACID. [B, 4, 258.]

AURIN (Ger.), n. A3-ur-en'. The genus *Gratiola*.—**Rother A.** See ERYTHRÆA *centaurium*.—**Wilder A.** See GRATIOLA *officinalis.*

AURI-NASAL, adj. A4r''i2-na'sa2l. From *auris*, the ear, and *nasus*, the nose. Relating to the ear and the nose. [L, 141.]

AURI-NATRIUM (Lat.), n. n. A4r(a3-u4r)-i2-nat(na3t)'ri2-u3m-(u4m). From *auric* and *natrium.* See AURO-NATRIUM.—**A.-n. crystallisatum, A.-n. officinale.** Gold and sodium chloride. [B, 257.]

AURIO (Fr.), n. O-re-o. A Provençal name for the *Atriplex halimus.* [B, 88.]

AURIOL (Fr.), n. O-re-ol. A city in the department of Bouches-du-Rhone, France, not far from Marseilles, where there is a mineral spring. [B, 157.]

AURIOLE (Fr.), n. O-re-ol. See DAPHNE *laureola.*

AURIPENNIS (Lat.), adj. A4r''(a3''u4r)-i2-pe2n'ni2s. From *aurum*, gold, and *penna*, a wing. Fr., *auripenne.* Ger., *goldgeflügelicht.* Having wings of a golden color (a zoological species-name). [L, 116.]

AURIPIGMENTALIS (Lat.), adj. A4r(a3u4r)-i2-pi2g-me2nt-a(a3)'li2s. Of or pertaining to orpiment; orpimental. [B.] See ÆTHIOPS *a.*

AURIPIGMENTUM (Lat.), n. n. A4r(a3u4r)-i2-pi2g-me2nt'-u3m(u4m). From *aurum*, gold, and *pigmentum*, paint. Vitruvius's term for orpiment. [B.] See ARSENIC *trisulphide.*—**A. rubrum.** Realgar; arsenic disulphide. [B, 180.]

AURIQUE (Fr.), adj. Or-ek. See AURIC.

AURIS (Lat.), n. f. A4r'(a3'u4r)-i2s. The ear. [L.]—**A. ceti.** The cochlea of the whale; formerly used in medicine. [B, 180.]—**A. externa.** See *External* EAR.—**A. interna, A. intima.** See *Internal* EAR.—**A. media.** See *Middle* EAR.

AURISCALPIUM (Lat.), n. n. A4r(a3-u4r)-i-ska2lp(ska3lp)'i2-u3m(u4m). From *auris*, the ear, and *scalpere*, to scrape. Fr., *auriscalpe; cure-oreille.* Ger., *Ohrlöffel.* 1. An old term for an ear-picker (an instrument for cleansing the ears). [A, 318.] 2. A probe. [B, 114.] 3. In botany. See HYDNUM *a.* [B, 48.]

AURISCOPE, n. A4r'i2-skop. From *auris*, the ear, and σκοπεῖν, to explore. See OTOSCOPE.

AURISCOPY, n. A4r-i2s'ko-pi2. The examination of the ear with an otoscope or an ear speculum. [L, 56.]

AURIST, n. A4r'i2st. Fr., *auriste.* Ger., *Ohrenarzt.* It., *otologo.* Sp., *aurista.* One who treats diseases of the ear or whose practice is confined to such diseases. [L.]

AURITARSUS (Lat.), adj. A4r(a3-u4r)-i2-ta3r'su3s(su4s). From *aurum*, gold, and *tarsus* (*q. v.*). Fr., *auritarse.* Ger., *goldfusswurzelig.* Having gold-colored tarsi (a zoological species-name). [L, 41, 116.]

AURITED, adj. A4r'i-te2d. See AURICULATE and AURITUS.

AURITUS (Lat.), adj. A4r(a3u4r)-i(e)'tu3s(tu4s). Ger., *geöhrt.* In botany, auriculate; especially provided with large auricles. [B, 123.]

AURIVENTRIS (Lat.), adj. A4r(a3-u4r)-i2-ve2nt(we2nt)'ri2s. From *aurum*, gold, and *venter*, the belly. Fr., *auriventre.* Ger., *goldbauchig.* See AURIGASTER.

AURO (Fr.), n. O-ro. See AURIO.

AUROCEPHALUS (Lat.), adj. A4r(a3u4r)-o(o2)-se2f(ke2f)'a3-lu3s(lu4s). From *aurum*, gold, and κεφαλή, the head. Fr., *aurocéphale.* Having a gold-colored head (a zoological species-name). [L, 41.]

AUROCHLORIDE, n. A4r-o-klo'ri2d(rid). For deriv., see AURUM and CHLORIDE. Fr., *aurochlorure.* Ger., *Aurochlorid.* A compound of chlorine with gold (acting as a univalent radicle) and another element or radicle. [B, 41.]

AUROCYANIDE, n. A4r-o-si'a2n-i2d(id). For deriv., see AURUM and CYANIDE. Fr., *aurocyanure.* Ger., *Aurocyanid.* A compound of cyanogen with gold (acting as a univalent radicle) and another element or radicle. [B, 140.]

AUROHYDROCYANIC, adj. A4r-o-hi-dro-si-a2n'i2k. See HYDRAURICYANIC.—**A. acid.** See HYDRAURICYANIC *acid.*

AURO-NATRIUM (Lat.), n. n. A4r''(a3''u4r)-o(o2)-na2t(na3t)'-ri2-u3m(u4m). For deriv., see AURUM and NATRIUM. A supposititious radicle compounded of gold and sodium. [B.]—**A.-n. chloratum** [Ger. Ph.], **A.-n. chloratum officinale.** See GOLD and *Sodium chloride.*

AURONE (Fr.), n. O-ron. The *Artemisia abrotanum.* [B.]—**A. des champs.** See ARTEMISIA *campestris.*—**A. des jardins.** See ARTEMISIA *abrotanum.*—**A. femelle** [Fr. Cod.]. See SANTOLINA *chamæcyparissus.*—**A. mâle, A. mâle des jardins.** See ARTEMISIA *abrotanum.*—**A. sauvage.** See ARTEMISIA *campestris.*—**A. vraie.** See ARTEMISIA *abrotanum.*

AUROPLUMBIFERUS (Lat.), adj. A4r''(a3''u4r)-o(o2)-plu3m-(plu4m)-bi2f'e2r-u3s(u4s). From *aurum*, gold, *plumbum*, lead, and *ferre*, to bear. Fr., *auriplombifère.* In Haüy's terminology, containing both gold and lead as an accidental constituent. [B, 195.]

AUROPOTASSIUM (Lat.), n. n. A4r''(a3''u4r)-o(o2)-po2t-a2s-(a3s)'-si2-u3m(u4m). For deriv., see AURUM and POTASSIUM. A supposititious radicle compounded of gold and potassium. [B.]—**A. cyanide.** See POTASSIUM *aurocyanide.*

AUROPUBESCENT, adj. A4r-o-pu2-be2s'se2nt. Lat., *auropubescens* (from *aurum*, gold, and *pubescens*, covered with hair). Fr., *auropubescent.* Having small leaves of a golden color, or covered with small golden hairs (a botanical and zoological species-name). [B, 195; L, 116.]

AURORA (Lat.), n. f. A4r(a3-u4r)-o'ra3. See QUISQUALIS.—**A. consurgens.** A term used by the alchemists to express the vegetation of gold. [L, 94.]—**A'blume** (Ger.). See ECHITES.

AURORAS, n. A Peruvian name for the *Ipomœa glandulifera.* [B, 121.]

AUROREUS, AURORUS (Lat.), adj's. A4r(a3-u4r)-o're2-u3s-(u4s), -o'ru3s(ru4s). Fr., *aurore.* Of a saffron-like yellow color (a botanical species-name). [L, 116.]

AURÖS (Ger.), adj. A3'u-ru5s. See AURIFEROUS.

AUROSO-BARYTIC, adj. A4r-o''so-ba2r-i2t'i2k. For deriv., see AURUM and BARIUM. Containing gold (as a univalent radicle) and barium. [B, 140.]

AUROSO-SODIC, adj. A4r-o''so-so'di2k. For deriv., see AURUM and SODIUM. Containing gold (acting as a univalent radicle) and sodium. [B, 140.]

AUROSULPHIDE, n. A4r''o-su3lf'i2d(id). For deriv., see AUROUS and SULPHUR. A compound of sulphur with gold (acting as a univalent radicle) and another radicle or element. [B, 3.]

AUROSULPHITE, n. A4r''o-su3lf'it. For deriv., see AUROUS and SULPHITE. Fr., *auro-sulfite.* A compound of aurous sulphite with the sulphite of another radicle or element. [B, 3.]

AUROSULPHOCYANATE, n. A4r''o-su3lf-o-si'a2n-at. Fr., *auro-sulfocyanate.* See AUROTHIOCYANATE.

AURO-SULPHURET, n. A4-ro-su3l'fu2-re2t. See AUROSULPHIDE.

AUROSUS (Lat.), adj. A4r(a3-u4r)-o'su3s(su4s). 1. See AUROREUS. 2. See AUROUS.

AUROTERCHLORIDE, n. A4r''o-tu5r-klo'ri2d(rid). Lat., *auroterchloridum.* A compound of gold terchloride with the chloride of another element or radicle. [B, 98.]

AUROTHIOCYANATE, n. A4r''o-thi-o-si'a2n-at. For deriv., see AUROUS and THIOCYANATE. A thiocyanate of gold (acting as a univalent radicle) and another radicle or element. [B, 3.]

AUROTHIOSULPHATE, n. A4r''o-thi-o-su3lf'at. For deriv., see AUROUS and THIOSULPHATE. A thiosulphate of gold (acting as a univalent radicle) and another element or radicle. [B, 3.]

AUROTHIOSULPHURIC ACID, n. A4''ro-thi-o-su3l-fu2r'-i2k. Fr., *acide auro-thiosulfurique.* Ger., *Aurothioschwefelsäure.* An aurothiosulphate of hydrogen; a substance, $3H_2S_2O_3 + Au_2S_2O_3$, which may be regarded as the acid of which the aurothiosulphates are salts. It is known only in solution. [B, 3, 257.]

AUROUS, adj. A4r'u3s. Lat., *aurosus* (from *aurum*, gold). Fr., *aureux.* It., *auroso.* Sp., *auróso.* 1. Belonging to or containing gold, or of a golden color. 2. In chemistry, containing gold as a univalent radicle, Au'. Some compounds, however, in which gold is apparently univalent, and which are hence called a. compounds, probably contain 2 atoms of trivalent gold (— Au ═ Au —) so united that each has only one free bond. [B.]—**A. cyanide, A. iodide,** etc. See GOLD *monocyanide*, GOLD *moniodide.*

AURUELO (Fr.), n. A Provençal name for the *Centaurea solstialis.* [B, 92.]

AURUGINATUS, AURUGINEUS, AURUGINOSUS (Lat.), adj's. A4r(a3-u4r)-u2(u4)-ji2n(gi2n)-a(a3)'tu3s(tu4s), -ji2n(gi2n)'e2-u3s-(u4s), -ji2n(gi2n)-o'su3s(su4s). From *aurum*, gold. Jaundiced; yellow. [B, 114.]

AURUGO (Lat.), n. f. A4r(a3-u4r)-u2(u)'go. Gen., *auru'ginis.* Written also, but incorrectly, *aurigo.* From *aurum*, gold. Jaundice; the yellow disease, so called from the color of the skin.

AURULENTUS (Lat.), adj. A4r(a3-u4r)-u2(u4)-le2nt'u3s(u4s). Of a golden color. [B, 114.]

AURUM (Lat.), n. n. A4r'(a3'u4r)-u3m(u4m). 1. Gold; the official title of gold in the Fr. Cod. and the Greek and Netherl. pharmacopœias. [B, 95, 113.] 2. An old name for ambra flava. [L, 104.]—**Ammoniuretum auri.** Fulminating gold. [B, 2, 48.]—**Auri chloratum, Auri chloridum.** See GOLD *trichloride.*—**Auri cyanidum.** Cyanide of gold. [B, 14.]—**Auri et ammonii chloridum.** See GOLD *and ammonium chloride.*—**Auri et natri chloretum, Auri et sodii chloridum** [U. S. Ph.]. See GOLD *and sodium chloride.*—**Auri iodidum, Auri ioduretum.** See GOLD *iodide.*—**Auri limatura.** Gold filings. [B.]—**Auri murias.** See GOLD *chloride.*—**Auri oxidum.** The trioxide of gold. [B, 81.]—**Auri pigmentum.** See AURIPIGMENTUM.—**Auri pulvis.** Gold in the form of a fine powder. See *A. præcipitatum, A. præparatum,* and *Auri lamitum.* [B, 81.]—**Auri sulphuretum.** See GOLD *sulphide.*—**Auri terchloridum.** Gold trichloride. [B, 98.]—**Auri tercyanidum.** Gold tricyanide. [B, 98.]—**Auri teroxidum, Auri teroxydum.** Gold trioxide. [B, 98.]—**Auri tinctura.** See *Tinctura auri.*—**A. ad inaurandas pilulas.** See *A. ad obducendas pilulas.*—**A. ad obrussam.** Gold tried by fire; refined gold. [B, 48.]—**A. ad obducendas pilulas.** Gold leaf (for coating pills). [B, 98.]—**A. album.** Platinum. [B, 165.]—**A. alcoholisatum.** See *A. præcipitatum.*—**A. borussicum.** Gold cyanide. [B, 165.]—**A. chloratum.** Gold trichloride. [B, 95.]—**A. chloratum acidum.** Chlorauric acid. [B, 257.]—**A. chloratum natronatum.** Gold and sodium chloride. [B, 49.]—**A. chloratum neutrale.** Gold trichloride. [B, 257.]—**A. chlorhydricum.** Chlorauric acid. [B, 257.]—**A. coc-**

tum. Gold leaf. [B, 50.]—**A. crepitans.** Fulminating gold. [B, 88.]—**A. crystallinum.** Ger., *Krystallgold.* Crystal gold. [B, 108.]—**A. cyanatum, A. cyanogenatum.** Gold cyanide. [B, 95.]—**A. diaphoreticum.** Fr., *or diaphorétique.* 1. Fulminating gold. [B, 88.] 2. A mixture of metallic gold and white precipitate. [Horstius (B, 88).]—**A. divisum.** See *Pulvis auri.*—**A. elempium.** Amber. [B, 59.]—**A. foliatum** [Belg. Ph.; Ger. Ph. (1st ed.); Gr. Ph.; Russ. Ph.]. Gold leaf. [B, 95.]—**A. fulminans.** See *Fulminating* GOLD.—**A. granulatum.** Granulated gold. [B, 199.]—**A. graphicum.** Ger., *Schrifterz.* A variety of a. paradoxum with crystalline veins simulating writing. [B.]—**A. horizontale.** A name given by the alchemists to a red preparation made from ordinary mercury, to which they attributed marvelous powers and which they regarded as formed in the transmutation of mercury into gold. [B, 200.]—**A. horizontale Zwingeri.** Syn.: *panacea Kormanni.* A preparation made by triturating together 2 drachms of crocus solis (auric oxide), 4 drachms of cinnabar of antimony, and 3 drops of oil of cinnamon. [B, 119.]—**A. hydrochloratum, A. hydrochloricum.** Gold trichloride. [B, 49.]—**A. hydrocyanicum.** Gold cyanide. [B, 119.]—**A. in bracteas ductum.** Gold leaf. [B. 50.]—**A. in conchis.** See *A. in musculis.*—**A. in fila ductum.** Gold wire. [B, 50.]—**A. in laminas exilissima complanatum.** Gold leaf. [B, 98.]—**A. in musculis.** Ger., *Muschelgold.* Gold shells; the gold bronze-powder formed in hammering gold leaf. This is rubbed up with honey or gum-water, washed, and brought into commerce in shells; whence the name. [B, 48.]—**A. iodatum.** Gold iodide. [B, 95.]—**A. lamellatum.** Gold leaf. [B, 98.]—**A. leporosum, A. leprosum.** An old name for antimony. [L, 84.]—**A. metallicum.** Metallic gold. [B, 108.]—**A. mosaicum.** See *A. musivum.*—**A. muriaticum.** 1. Gold trichloride. 2. See *A. muriaticum inspissatum.*—**A. muriaticum acidum.** Gold trichloride. [B, 165.]—**A. muriaticum inspissatum.** A mixture of gold trichloride and gold and sodium chloride, made by evaporating a solution of 6 parts of gold and 10 of sodium chloride. [B, 48.]—**A. muriaticum natro muriatico** [Gr. Ph.]. Gold and sodium chloride. [B, 95.]—**A. muriaticum natronatum, A. muriaticum natronatum crystallinum.** Chloride of gold and sodium. [B, 48.]—**A. muriaticum natronatum inspissatum.** See *A. muriaticum inspissatum.*—**A. muriaticum purum.** Gold trichloride. [B, 165.]—**A. muriaticum purum, A. muriaticum sine natro.** Gold chloride. [B, 165.]—**A. musicum, A. musivum.** Mosaic gold; the disulphide of tin. [B, 48.]—**A. obrizum, A. obryzum.** 1. A. ad obrusam (*q. v.*). [B, 48.] 2. Gold filings. [B, 50.]—**A. oxydatum.** 1. Gold trioxide. [B, 95.] 2. Gold monoxide. [B, 48.]—**A. paradoxum.** A name given to native tellurium, on account of its metallic lustre, or to the ore of tellurium and gold containing gold in visible particles. [B, 3.]—**A. perchloratum.** Gold trichloride. [B, 108.]—**A. philosophicum.** Ger., *alchemisches Gold.* See *A. sophisticum.*—**A. philosophorum.** Lead. [L, 50.]—**A. pictorium.** See *A. musivum.*—**A. pigmentum.** See AURIPIGMENTUM.—**A. potabile.** Fr., *or potable.* A name given to various liquid preparations alleged to contain gold, but which in reality seldom contained the metal, the latter either remaining undissolved or being precipitated in the course of preparation. The a. potabile of Paracelsus was made by reducing gold leaf or powdered gold "to a juice" (probably by dissolving in aqua regia), distilling 1 part of this with vinegar and adding 5 parts of his aqua vitæ, and letting the mixture digest in a closed vessel for a month. The *or potable des pauvres* [Zaporta (1586)] was a solution of sugar in brandy. Another a. potabile consisted of aurosulphide of potassium, or of sodium, made by fusing gold sulphide with liver of sulphur, dissolved in water. According to Stahl, it was this variety that was given by Moses to the Israelites when he made them drink their golden calf. The a. potabile of Helvetius is also known as tinctura auri (*q. v.*). That of Mlle. Grimaldi is the residue left after distilling the tinctura auri of Lamotte. [B, 3, 88, 255.] See also *Tinctura auri.*—**A. præcipitatum.** Precipitated gold; a cinnamon-colored powder of metallic gold precipitated from a solution of the metal in nitrohydrochloric acid by the addition of ferrous sulphate. [B, 14.]—**A. præcipitatum azurinum.** An oxide of gold precipitated by oil of tartar (potash); said (probably erroneously) to take a blue color when thus prepared. [B, 88.]—**A. præcipitatum purum.** See *A. præcipitatum.*—**A. præparatum.** Prepared gold; a fine powder of metallic gold made by triturating gold leaf with some hard substance, like potassium sulphate. [B, 14.]—**A. problematicum.** See *A. paradoxum.*—**A. pulveratum.** See *A. præcipitatum.*—**A. sophisticum.** 1. A gold bronze made up of 250 parts of verdigris, 125 of tutty, 60 each of borax and nitre, and 8 of corrosive sublimate. [B, 92.] 2. Brass (orichalcum). [B, 109.]—**A. stannatum, A. stanno paratum.** Purple of Cassius. [B, 98, 165.]—**A. trichloratum.** Gold trichloride. [B, 108.]—**A. vegetabile.** Saffron. [L, 84.]—**A. vitæ.** A name given to several preparations of gold. That of Paracelsus was termed "calcinatio et solutio solis" (*alexitère doré*), and was used in the treatment of syphilis; that of Campi (1623) contained gold and mercury, and was used against the plague, syphilis, dropsy, etc.; and that of Quercetanus was an imperfect solution of gold in vinegar and alcohol, and was believed to have marvelous medicinal properties. [B, 88.]—**A. vivum.** Quicksilver. [B, 50.]—**Calx auri.** Gold oxide. [B.]—**Calx auri fulminans.** Fulminating gold. [Plomgren (B, 137).]—**Chloruretum auri.** Gold trichloride. [B, 119.]—**Chloruretum auri et sodii** [Belg. Ph.]. See GOLD *and sodium chloride.*—**Crocus auri.** Fulminating gold. [B, 88.]—**Cyanuretum auri, Cyanuretum auri medicinale** [Belg. Ph.]. Gold cyanide. [B, 98, 119.]—**Elixir auri.** A name given to various preparations made from gold or supposed to contain it, but usually inert or dependent for their activity upon adventitious constituents. [B, 88.]—**Eisetia auri.** A class of preparations similar to the elixir auri. [B, 88.]—**Flores auri.** See IRON *and ammonium chloride.*—**Folium auri.** Gold leaf. [B, 90.]—**Hydrochloras auri et sodii.** Gold and sodium chloride. [B, 176.]—**Ioduretum auri** [Belg. Ph.]. Gold iodide. [B, 95.]—**Limaturi auri.** Gold filings. [B.]—**Magisterium auri** [Angelus Sola]. A mixture of fulminating gold (repeatedly moistened with spirit of melissa and dried), saffron, ambergris, and musk. It was used in the treatment of nervous affections. [B, 88.]—**Menstruum auri.** Nitrohydrochloric acid. [B, 97.]—**Murias auri.** Gold chloride. [B, 110.]—**Murias auri et sodæ.** Gold and sodium chloride. The preparation of this name in the old Austr. Ph. was made from 1 part of gold chloride and 10 parts of sodium chloride, and therefore contained a large excess of the latter. [B, 108, 165.]—**Murias auri liquidus** [Bav. Ph., 1822]. A solution of 1 part of gold chloride in 19 parts of distilled water. [B, 97.]—**Oleum auri.** A preparation made by boiling for two weeks gold "reduced to a succus" (*i. e.*, probably, dissolved in aqua regia) with vinegar in a mixture of chelidonium juice, aqua vitæ (Paracelsus), and "the solution of spirits of salts," and then distilling, when there remained a thick oil, which, according to Paracelsus, was gold without alloy or mixture. [B, 255.]—**Oxydum auri.** Gold trioxide. [B, 165.]—**Oxydum auri ammoniatum.** Fulminating gold. [B, 111.]—**Oxydum auri officinale.** Syn.: *crocus solis.* Gold trioxide. [B, 125.]—**Perchloruretum auri** [Belg. Ph.]. Gold trichloride.—**Peroxydum auri hydratum** [Belg. Ph.]. Hydrated peroxide of gold. See GOLD *trioxide.*—**Protiodetum auri, Protoioduretum auri.** Gold iodide. [B, 165.]—**Quintessentia auri.** A preparation of gold vaguely described by Paracelsus and extolled by him as a medicine. [B, 255.]—**Recrementa auri.** The dross or scoria formed in melting gold. [B, 50.]—**Sal auri de Gozzi.** See *A. muriaticum inspissatum.*—**Sal auri Figuieri.** Gold and sodium chloride. [B, 48.]—**Spuma auri.** Gold litharge. [B, 50.]—**Succus auri.** A form of gold (probably its solution in aqua regia) mentioned by Paracelsus. [B, 28, 255.]—**Syrupus auri.** Syrup of gold. That of the hospital of Montpellier was made of 1 part of powdered gold and 24 parts of syrup of gum arabic. [B, 165.]—**Tinctura auri.** Fr., *teinture* (ou *gouttes*) *d'or.* Ger., *Goldwasser.* It., *tintura d'oro.* A name applied to several preparations of gold. That of Lamotte (*gouttes d'or*) was made, according to some authorities, by precipitating trioxide of gold with potash, dissolving in nitric acid, and exposing for some months to the action of the sun; according to others, it was identical with the golden drops of Bestucheff, or acetated tincture of iron; according to others, it was made by triturating a drachm of fulminating gold with 2 oz. of nitric acid and adding 32 oz. of alcohol. The *gouttes d'or blanches* was an ethereal liquid containing no gold, but a little iron, made by digesting the *gouttes d'or* in the sunlight and evaporating; the residue constituted the *a. potabile* of Mlle. Grimaldi. The tinctura auri (a. potabile) of Helvetius was made by dissolving 1 part of gold in 8 parts of aqua regia and adding 16 of oil of rosemary and 64 of alcohol. It contained gold in a fine state of subdivision held in suspension by the oil. The *cordial solar tincture* was made by mixing 1 part of an inspissated solution of gold (in aqua regia) with 3 parts of a solution of oil of cinnamon in alcohol, and heating on a sand-bath. The resinous, blackish mass thus formed was dissolved in alcohol, forming a deep-brown tincture of an agreeable bitterish taste, which was used as a tonic. Still another tincture was made by fusing gold with antimony trisulphide and sal tartar (forming a soluble alkaline aurosulphide), adding sugar, and dissolving in tartarized alcohol. [B, 88, 119, 200.]

AURUNGZEBE, n. See *Delhi* BOIL.

AURURET, n. A⁴r'u²-re²t. Lat., *aururetum.* Fr., *aurure.* See AURIDE.

AURYL, n. A⁴r'i²l. Fr., *auryle.* Ger., *Auryl.* It., *aurile.* A univalent radicle, A – Au = O, found in metauric acid. [Schottländer, "Ann. der Chemie," v. 217 (1883), p. 312 (B).]—**Acid a. sulphate.** A substance of the composition $AuO.HSO_4$. [Schottländer, *l. c.* (B).]—**A. hydrate.** Fr., *hydrate d'auryle.* Ger., *Aurylhydrat.* It., *idrato di aurile.* See METAURIC *acid.*

AUSARBEITUNG (Ger.), n. A³'us-a³rb-it-ung. See ELABORATION.

AUSART (Ger.), n. A³'us-a³rt. Degeneration, a degenerate variety. [A, 315.]

AUSARTUNG (Ger.), n. A³'us-a³rt-ung. Degeneration, degeneracy. [A, 315; B, 198; L, 80.]

AUSATHMEN (Ger.), v. tr. and intr. A³'us-a³t-me²n. To exhale, expire. [A, 315.]

AUSATHMUNG (Ger.), n. A³'us-a³t-mung. An exhalation, expiration. [A, 315; J.]—**A'sdruck.** The pressure of air in the air-passages during expiration. It is greater than the atmospheric pressure. [J, 7, 53.]—**A'sluft.** The expired air. [J.]

AUSÄTZEN (Ger.), v. tr. A³'us-at-ze²n. To corrode. [A, 315.]

AUSBÄUCHEN (Ger.), v. tr. A³'us-boich²-e²n. To cause to bulge; as a refl. v. (*sich a.*), to swell out like a belly. [A, 315.]—**A'e Gläser.** Convex glasses. [A, 315.]

AUSBEIZEN (Ger.), v. tr. A³'us-bit-ze²n. To corrode, to purify by macerating. [A, 315.]

AUSBILDUNG (Ger.), n. A³'us-bi²ld-ung. Maturation (as of an abscess). [A, 315.]

AUSBLASEN (Ger.), n. A³'us-bla³z-e²n. Exhalation. [L, 80.]

AUSBLEIBEN (Ger.), n. A³'us-blib-e²n. 1. A non-occurrence or cessation. [A, 315.] 2. A popular term for the tone which accompanies the first inspiration on the subsidence of an attack of spasm of the glottis. [D, 39.]

AUSBLÜHEN (Ger.), v. intr. A³'us-blu⁶-he²n. To effloresce; as a n., efflorescence. [B, 196; L, 37.]

AUSBLUTEN (Ger.), v. intr. and tr. A³'us-blut-e²n. To bleed, also to cease bleeding. [A, 315.]—**Das Leben a.** To bleed to death. [A, 315.]

AUSBRECHEN (Ger.), v. tr. and intr. A³'us-bre²ch²-e²n. 1. (Tr.) to vomit up. [A, 315.] 2. (Intr.) to break out (said of eruptive diseases). [A, 315.]—**A'd.** Eruptive. [L, 43.]

AUSBREITUNG (Ger.), n. A^3'us-brit-ung. Extension, ramification, diffusion. [A, 315.]—**A'sfähigkeit.** Diffusibility. [A, 315.]

AUSBRENNEN (Ger.), v. tr. A^3'us-bre^{2}n-ne^{2}n. 1. To cauterize. [A, 315.] 2. To cleanse by fire; to burn, with a view of destroying adventitious matter and obtaining the incombustible matter pure. [B, 48.]

AUSBRUCH (Ger.), n. A^3'us-bruch^2. 1. A breaking out, an eruption. [A, 315.] 2. Wine made without pressing the grapes (said of Hungarian wine). [A, 315.]

AUSBRÜTEN, AUSBRÜTUNG (Ger.), n's. A^3'us-bru^{6}t-e^{2}n, -ung. Incubation. [A, 315.]

AUSBRUNSTEN (Ger.), v. intr. A^3'us-brunst-e^{2}n. To cease rutting. [A, 315.]

AUSBUCHTUNG (Ger.), n. A^3'us-buch^{2}t-ung. A crinkling. [A, 315.]—**Hintere A. der Grosshirnblase.** The posterior cephalic vesicle. [I, 10; K.]—**Untere A. des Ventriculi quarti.** The inferior fovea of the fourth ventricle of the brain. [I, 10; K.]

AUSCULT, v. tr. and intr. A^{4}s-ku^{3}lt'. See AUSCULTATE.

AUSCULTATE, v. tr. and intr. A^{4}s'ku^{3}lt-at. Lat., *auscultare.* Fr., *ausculter.* Ger., *auscultiren, auskultiren.* To examine by auscultation (*q. v.*), to practise auscultation. [D.]

AUSCULTATION, n. A^{4}s-ku^{3}lt-a'shu^{3}n. Lat., *auscultatio* (from *auscultare,* to listen to). Fr., *auscultation.* Ger., *Auscultation, Auskultation.* It., *ascoltazione.* Sp., *auscultación.* The art, process, or method of listening to the sounds produced within the body, for the purpose of ascertaining the condition of the organs or parts so examined as to health or disease.—**A. à distance** (Fr.). See *Mediate a.*—**A. cadavérique** [Piorry]. Experimental mediate a. of the lungs of a cadaver, exposed by removing the chest-wall, for the purpose, apparently, of enabling the observer to distinguish between the sounds heard when the stethoscope is applied under such conditions and those which are really due to respiration. [L, 82.]—**A. plessimétrique** (Fr.). A method of a. in which the examiner applies his ear to one part of the patient's chest or abdomen and taps another part with his fingers; only very gentle tapping is said to be required, so that pain and muscular contraction are avoided. [A. Ruault, "Gaz. hebdom. de méd. et de chir.," July 1, 1887, p. 419.]—**A'srohr** (Ger.), **A'sröhre** (Ger.). See STETHOSCOPE.—**A. transauriculaire** (Fr.). A method of examining the ear by a., to ascertain the situation of disease in the organ. A piece of tubing extends from the ear of the patient to that of the observer, and communicates with an inflation apparatus. A vibrating tuning-fork is held near the patient's head, and the conduction of sound under different degrees of pressure upon the patient's tympanum (which pressure is shut off from the observer's ear by a valve in the tube) may thus be observed. [Gellé, "Tribune méd.," May 7, 1882, p. 223.]—**A.-tube.** Fr., *tube d'a.* Ger., *A'sröhre.* It., *tubo d'ascoltazione.* Sp., *tubo de auscultación.* See STETHOSCOPE and *Three-limbed a.*-TUBE.—**Cephalic a., Cerebral a.** Fr., *a. céphalique.* An auscultatory examination of the head with a view to ascertain the existence of abnormal circulatory sounds. [J. Fisher, "Med. Mag.," Sept., 1833; "Am. Jour. of the Med. Sci.," xiii, p. 289 (L).]—**Immediate a.** Fr., *a. immédiate.* Ger., *unmittelbare A.* A. by the direct application of the ear, without the aid of a stethoscope or any other instrument. [A, 385.]—**Mediate a.** Fr., *a. médiate.* Ger., *mittelbare A.* A. with the aid of a stethoscope. [Laennec (A, 385).]—**Obstetric a.** Fr., *a. obstétricale.* Ger., *geburtshülfliche A.* A. of the gravid uterus or of the abdomen during pregnancy, with reference to the sounds of the fœtal heart and the murmurs to be heard in the uterus, the placenta, the umbilical cord, the arteries of the abdominal wall, etc.—**Vocal a.** A. of the sounds of the voice as transmitted through the wall of the chest. [D, 1.]

AUSCULTATOR, n. A^{4}s'ku^{3}lt-a-to^{2}r. Fr., *ausculteur.* Ger., *Auscultator, Auscultant.* One who practises or is skilled in auscultation. [D.]

AUSCULTATORY, adj. A^{4}s-ku^{3}lt-a^{2}t-o-ri^2. Ger., *auscultatorisch.* Pertaining to or ascertained by auscultation.—**A. percussion.** See under PERCUSSION.

AUSDAMPFEN (Ger.), v. intr. A^3'us-da^{3}mpf-e^{2}n. To evaporate. [A, 315.]

AUSDÄMPFEN (Ger.), v. tr. A^3'us-dampf-e^{2}n. To steam, to evaporate. [L, 30, 46.]

AUSDAMPFUNG (Ger.), n. A^3'us-da^{3}mpf-ung. Exhalation, perspiration. [M, 6.]—**Unmerkliche A.** Insensible perspiration. [M, 6.]

AUSDÄMPFUNG (Ger.), n. A^3'us-dampf-ung. Evaporation. [A, 315.]

AUSDÄRMEN (Ger.), v. tr. A^3'us-darm-e^{3}n. To eviscerate. [L, 46.]

AUSDAUERND (Ger.), adj. A^3'us-da^3-u-e^{2}rnd. In botany, perennial, evergreen. [A, 315; B, 198.]

AUSDEHNBAR (Ger.), adj. A^3'us-dan-ba^{3}r. Expansible, extensible, dilatable. [B, 22; L, 43.]—**A'keit.** Expansibility. [M, 6.]

AUSDEHNER (Ger.), n. A^3'us-dan-e^{2}r. A dilator. [L, 46.]

AUSDEHNSAM (Ger.), adj. A^3'us-dan-za^{3}m. Expansible. [L, 43.]—**A'keit.** Expansibility (said of gases). [B, 48.]

AUSDEHNUNG (Ger.), n. A^3'us-dan-ung. Extension, distension, expansion, dilatation. [B.]—**A. des Herzens.** The diastole of the heart. [L, 46.]—**A'skoëffizient.** The co-efficient of expansion. [B, 49.]—**A'skraft.** A dilating or expanding force. [B.]—**A'svermögen.** Expansibility, distensibility. [L, 46.]—**A'swerkzeug.** A dilating apparatus, a speculum. [A, 315.]—**Körperliche A.** Cubical expansion. [B, 22.]—**Körperlicher A'skoëffizient.** The co-efficient of cubical expansion. [B, 22.]—**Längena'.** Linear expansion. [B, 22.]—**Längena'skoëffizient.** The co-efficient of linear expansion. [B, 49.]—**Relative A., Scheinbare A.** See *Apparent* EXPANSION.—**Sehnige A.** An aponeurosis. [L, 80.]

AUSDORREN (Ger.), v. intr. A^3'us-dor-re^{2}n. To be dried up, parched, withered; as a n., desiccation, withering, the drying up of plants from too great heat. [A, 315; B, 198.]

AUSDÖRREN (Ger.), v. tr. A^3'us-du^{5}r-re^{2}n. To dry, parch, wither; as a n., desiccation (in the active sense). [L, 46, 80.]

AUSDRÜCKEN (Ger.), v. tr. A^3'us-dru^{6}k-e^{2}n. To express, strain, squeeze out. [L, 80.]

AUSDRÜCKUNG (Ger.), n. A^3'us-dru^{6}k-ung. Expression, straining. [A, 315.]

AUSDUFTEN (Ger.), v. intr. A^3'us-duft-e^{2}n. To exhale, evaporate (in the passive sense). [A, 315.]

AUSDÜFTEN (Ger.), v. tr. A^3'us-du^{6}ft-e^{2}n. To exhale (in the passive sense). [A, 315.]

AUSDUFTUNG (Ger.), n. A^3'us-duft-ung. Exhalation. [A, 315.]

AUSDUNST (Ger.), n. A^3'us-dunst. Vapor, exhalation, perspiration. [A, 315.]

AUSDUNSTBAR (Ger.), **AUSDÜNSTBAR** (Ger.), adj's. A^3'us-dunst-ba^{3}r, -du^{6}nst-ba^{3}r. Vaporizable, perspirable, transpirable. [A, 315.]

AUSDUNSTEN (Ger.), **AUSDÜNSTEN** (Ger.), v's tr. To exhale. [J.]

AUSDÜNSTUNG (Ger.), n. A^3'us-du^{6}nst-ung. Exhalation, transpiration, evaporation, effluvium. [B; J; L.]—**Ansteckende A.** A contagium. [A, 315.]—**A'sbefördernd.** Perspiratory. [K.]—**A'skrankheit.** A contagious or infectious disease. [L, 80.]—**A'smass.** See *A'smesser.*—**A'smaterie.** Perspirable matter, matter excreted by the perspiration. [L, 80.]—**A'smesser.** An atmidometer. [B, 48.]—**A'sstoff.** An effluvium. [L, 80.]—**Merkbare A.** Sensible perspiration. [K.]—**Unmerkliche A.** Insensible perspiration. [K.]—**Unterdrückte A., Verhinderte A.** Obstructed or suppressed perspiration. [L, 43.]—**Zurückgehaltene A'smaterie.** Retained perspiratory matter. [L, 80.]

AUSDUFTEN (Ger.), v. intr. A^3'us-duft-e^{2}n. To exhale, evaporate (in the passive sense). [L, 46.]

AUSDUFTUNG (Ger.), n. A^3'us-duft-ung. Exhalation. [A, 315.]

AUSEINANDERFAHREN (Ger.), v. intr. A^3-us-in-a^{3}nd'e^{2}r-fa^{3}r-e^{2}n. To diverge (said of rays of light); as a n., divergence. [L, 46.]—**A'd.** Divergent. [B, 198.]

AUSEINANDERGEBREITED (Ger.), adj. A^3-us-in-a^{3}nd'-e^{2}r-ge^2-brit-e^{2}t. Diffuse, diffused. [L, 43.]

AUSEINANDERGEHEN (Ger.), **AUSEINANDERLAUFEN** (Ger.), v's intr. A^3-us-in-a^{3}nd'e^{2}r-ga-he^{2}n, -la^3-uf-e^{2}n. See AUSEINANDERFAHREN.

AUSEINANDERSTEHEN (Ger.), v. intr. A^3-us-in-a^{3}nd'e^{2}r-sta-he^{2}n. To stand apart; as a n., isolation, separation (as of the teeth). [L, 135.]—**A'd.** In botany, divergent. [B, 198.]

AUSEINANDERSTREBEND (Ger.), adj. A^3-us-in-a^{3}nd'e^{2}r-strab-e^{2}nd. In botany, diverging (as of the loculi of an anther). [B, 198.]

AUSEINANDERWEICHEN (Ger.), v. tr. and intr. A^3-us-in-a^{3}nd'e^{2}r-vich^2-e^{2}n. To cause to suppurate, to suppurate; as a n., a product of suppuration, also a fragment of a broken bone. [L, 46, 80.]—**A'd.** In botany, *discedens* (*q. v.*). [B, 198.]

AUSEITERN (Ger.), v. intr. A^3'us-it-e^{2}rn. To suppurate (with *sein*), to cease to suppurate (with *haben*); as a n., the cleansing of a suppurating surface. [L, 46.]

AUSERDA (Fr.), **AUSERDE** (Fr.), n's. O-se^{2}rd-a^3, -se^{2}rd. A popular name for the lucern in the province of Roussillon, France. [B, 38.]

AUSERON, n. A rare drug brought to Europe from Persia. [L, 109.]

AUSFAHREN (Ger.), n. A^3'us-fa^{3}r-e^{2}n. A cutaneous eruption. [G.]—**Rothes A.** See STROPHULUS.

AUSFALL (Ger.), n. A^3'us-fa^{3}l. A prolapse. [A, 315.]—**A'winkel.** The angle of reflection. [L, 52.]

AUSFALLEN (Ger.), v. intr. and tr. A^3'us-fa^{3}l-le^{2}n. To fall out, to shed or be shed (said of the hair, the teeth, etc.); as a refl. v. (*e. g., sich den Arm a.*), to suffer a dislocation; as a n., a falling out, shedding. [L, 46.]—**A'd.** In botany, *elabens* (said of the capillitium of the *Myxomycetes*). [B, 198.]

AUSFEGEN (Ger.), v. tr. A^3'us-fag-e^{2}n. To purge by evacuation. [L, 46.]

AUSFLIESSEN (Ger.), v. intr. A^3'us-fles-se^{2}n. To flow out, also to cease to flow; as a n., a flow, an emanation. [L, 46, 80.]

AUSFLUSS (Ger.), n. A^3'us-flus. A discharge, flow, emanation. [L, 46.]—**A'mangel.** See ARRHŒA.

AUSFRESSEN (Ger.), v. tr. A^3'us-fre^{2}s-se^{2}n. To corrode. [A, 315.]

AUSFRIEREN (Ger.), v. tr. A^3'us-frer-e^{2}n. To condense a solution or a mixture of liquids (such as one of alcohol and water) by freezing. [B, 48.]

AUSFÜHREN (Ger.), v. tr. A^3'us-fu^{6}r-e^{2}n. To evacuate, purge. [L, 46.]—**A'd.** Excretory. [L, 43.]

AUSFÜHRGANG (Ger.), n. A^3'us-fu^{6}r-ga^{3}ng. An excretory duct. [L, 43.]—**A. der grossen Magendrüse.** The pancreatic duct. [L, 43.]

AUSFÜHRUNG (Ger.), n. A^3'us-fu^{6}r-ung. Evacuation, excretion. [L, 43, 46.]—**A'scanal, A'sgang, A'sgefäss, A'sröhrchen, A'sweg.** See AUSFÜHRGANG.

AUSFÜLLEN (Ger.), v. tr. A[3]'us-fu[6]l-le[2]n. To fill out. [L, 30.] —**A. der Zähne.** Plugging of the teeth. [L, 135.]

AUSFÜLLUNG (Ger.), n. A[3]'us-fu[6]l-lung. A filling, repletion. [L, 80.]—**A'sband.** An obturator ligament. [L, 80.]

AUSGÄHREN (Ger.), v. intr. A[3]'us-gar-e[2]n. To cease fermenting. [A, 315.]

AUSGANG (Ger.), n. A[3]'us-ga[3]ng. An outlet. [L, 43.]—**A's-mündung.** An opening of exit (*e. g.*, the pyloric orifice). [L, 80.]

AUSGÄSCHEN (Ger.), v. intr. A[3]'us-gash-en. See Ausgähren.

AUSGEARBEITET (Ger.), adj. A[3]'us-ge[2]-a[3]rb-it-e[2]t. Elaborated. [A, 315.]

AUSGEBILDET (Ger.), adj. A[3]'us-ge[2]-bi[2]ld-e[2]t. Finished; in botany, figurate (*figuratus*). [A, 315; B, 198.]

AUSGEBISSEN (Ger.), adj. A[3]'us-ge[2]-bi[2]s-se[2]n. In botany, erose. [B, 198.]—**A.-gezähnt.** Eroso-dentate. [B, 198.]—**A.-wimperig.** Eroso-ciliate. [B, 198.]

AUSGEBLASENE (Ger.), n. A[3]'us-ge[2]-bla[3]z-e[2]n-e[2]. See Ecphysema.

AUSGEBREITET (Ger.), adj. A[3]'us-ge[2]-brit-e[2]t. In botany, expanded (*expansus, extensus*), spreading (*patentissimus*). [B, 198.] —**Weit a.** Effusus. [B, 198.]

AUSGEBROCHENE (Ger.), n. A[3]'us-ge[2]-bro[3]ch[2]-e[2]n-e[2]. Vomited matter. [M, 6.]

AUSGEBUCHTIG (Ger.), adj. A[3]'us-ge[2]-buch[2]t-i[2]g. Sinuous, tortuous. [L, 59.]

AUSGEDEHNT (Ger.), adj. A[3]'us-ge[2]-dant. Extended, extensive; in botany, protended. [L, 46, 80.]—**A'sein.** The state of being distended. [L, 50.]

AUSGEFRESSEN (Ger.), adj. A[3]'us-ge[2]-fre[2]s-se[2]n. In botany, eroded (*erosus, exesus*). [B, 198.]—**A.-gezähnt.** Eroso-dentate. [B, 198.]

AUSGEFÜLLT (Ger.), adj. A[3]'us-ge[2]-fu[6]lt. In botany, filled (*farctus*). [L, 46.]

AUSGEFURCHT (Ger.), adj. A[3]'us-ge[2]-furch[2]t. In botany, *exaratus* (*q. v.*). [B. 198.]

AUSGEGRABEN (Ger.), adj. A[3]'us-ge[2]-gra[3]b-e[2]n. In botany, *exsculptus* (*q. v.*). [B, 198.]

AUSGEHEND (Ger.), adj. A[3]'us-ga-he[2]nd. In botany, terminating. [L, 46.]

AUSGEHÖHLT (Ger.), adj. A[3]'us-ge[2]-hu[5]lt. In botany, excavated, canaliculate, striate, sinuate. [A, 315; L, 43.]

AUSGEHUNGERT (Ger.), adj. A[3]'us-ge[2]-hung-e[2]rt. Starved. [A, 315.]

AUSGEHUSTETE (Ger.), n. A[3]'us-ge[2]-hust-e[2]t-e[2]. Expectorated matter. [L, 80.]

AUSGEKERBT (Ger.), adj. A[3]'us-ge[2]-ke[2]rbt. In botany, crenate, serrated. [L, 46.]

AUSGEKÖHTET (Ger.). adj. A[3]'us-ge[2]-ku[5]t-e[2]t. In veterinary medicine, dislocated. [L, 46.]

AUSGELADEN (Ger.), adj. A[3]'us-ge[2]-la[3]d-e[2]n. Discharged (said of an electric machine). [B, 22.]

AUSGELAUGT (Ger.), adj. A[3]'us-ge[2]-la[3]-ugt. Lixiviated. [B, 48.]

AUSGELEERT (Ger.), adj. A[3]'us-ge[2]-lart. Passed, expelled (by the bowels). [A, 355.]

AUSGERANDET (Ger.), adj. A[3]'us-ge[2]-ra[3]nd-e[2]t. In botany, emarginate. [B, 198.]—**A.-angewachsen.** *Emarginato-annexus.* [B, 198.]—**Spitz-a.** Acutely emarginate. [B, 198.]—**Stumpf-a.** Obtusely emarginate. [B, 198.]

AUSGERECKT (Ger.), adj. A[3]'us-ge[2]-re[2]kt. In botany, *porrectus* (*q. v.*). [B, 198.]

AUSGESCHIEDEN (Ger.), adj. A[3]'us-ge[2]-shed-e[2]n. Excreted. [B, 198.]

AUSGESCHNITTEN (Ger.), adj. A[3]'us-ge[2]-shni[2]t-te[2]n. In botany, excised (*excisus*). [B, 198.]

AUSGESCHWEIFT (Ger.), adj. A[3]'us-ge[2]-shwift. In botany, repand. [B, 198.]

AUSGESPERRT (Ger.), adj. A[3]'us ge[2]-spe[2]rt. In botany, divaricate. [B, 198.]

AUSGESPIEENE (Ger.), n. A[3]'us-ge[2]-spe-e[2]n-e[2]. Expectorated matter. [L, 50.]

AUSGESPREITZT (Ger.), adj. A[3]'us-ge[2]-spritzt. See Ausgesperrt.

AUSGESPRENGE (Ger.), **AUSGESPRENGTE** (Ger.), n's. A[3]'us-ge[2]-spre[2]ng-e[2], -te[2]. See Strophulus.

AUSGESTÄUBT (Ger.), adj. A[3]'us-ge[2]-stoibt. In botany, *defloratus* (*q. v.*—said of an anther). [B, 198.]

AUSGESTOCHEN (Ger.), adj. A[3]'us-ge[2]-sto[3]ch[2]-e[2]n. In botany, scrobiculate. [B, 198.]

AUSGESTOPFT (Ger.), adj. A[3]'us-ge[2]-sto[2]pft. In botany, filled (*farctus*). [B, 198.]

AUSGESTOSSENE (Ger.), n. A[3]'us-ge[2]-sto[3]s-se[2]n-e[2]. Expelled matter. [L, 50.]

AUSGESTRECKT (Ger.), adj. A[3]'us-ge[2]-stre[2]kt. In botany, porrect (*porrectus*). [L, 46.]

AUSGETRAGEN (Ger.), adj. A[3]'us-ge[2]-tra[3]g-e[2]n. Mature, carried to full term (said of a fœtus).

AUSGETRETEN (Ger.), adj. A[3]'us-ge[2]-tre[2]t-e[2]n. Extravasated. [L, 43.]

AUSGETRIEBENE (Ger.), n. A[3]'us-ge[2]-treb-e[2]n-e[2]. See Ausgestossene.

AUSGETROCKNET (Ger.), adj. A[3]'us-ge[2]-tro[2]k-ne[2]t. Desiccated; in botany, *aridus, arescens.* [B, 198.]

AUSGEWACHSEN (Ger.), adj. A[3]'us-ge[2]-va[3]ch[2]s-e[2]n. Full-grown; in chemistry, crystallized. [A, 315.]

AUSGEWANDERT (Ger.), adj. A[3]'us-ge[2]-va[3]nd-e[2]rt. Wandering, migrating (lit., having wandered). [A, 315.]

AUSGEWORFENE (Ger.), n. A[3]'us-ge[2]-vo[3]rf-e[2]n-e[2]. Expectorated or vomited matter. [A, 315.]

AUSGEZACKT (Ger.), adj. A[3]'us-ge[2]-tza[3]kt. In botany, crenated. [L, 43.]

AUSGEZWICKT (Ger.), adj. A[3]'us-ge[2]-tzwi[2]kt. In botany, emarginate. [B, 198; L, 46.]

AUSGIESSUNG (Ger.), n. A[3]'us-ges-sung. Effusion. [A, 315.]

AUSGISCHEN (Ger.), v. intr. A[3]'us-gi[2]sh-e[2]n. See Ausgähren.

AUSGLÜHEN (Ger.), v. tr. A[3]'us-glu[6]-he[2]n. To anneal. [A, 315.]

AUSGLÜHUNG (Ger.), n. A[3]'us-glu[6]-hung. Ignition, annealing. [A, 315.]

AUSGURGELN (Ger.), v. tr. A[3]'us-gurg-e[2]ln. To gargle, to cleanse by gargling. [A, 315.]

AUSGUSS (Ger.), n. A[3]'us-gus. Effusion. [A, 315.]

AUSHAAREN (Ger.), v. intr. and tr. A[3]'us-ha[3]r-e[2]n. To lose hair, to epilate. [A, 315.]

AUSHÄREN (Ger.), v. tr. A[3]'us-har-e[2]n. See Aushaaren.

AUSHARNEN (Ger.), v. intr. A[3]'us-ha[3]rn-e[2]n. To pass urine. [A, 315.]

AUSHAUCH (Ger.), n. A[3]'us-ha[3]-uch[2]. An expiration, exhalation, fume. [A, 215.]

AUSHAUCHEN (Ger.), v. tr. A[3]'us-ha[3]-uch[2]-e[2]n. To expire, exhale; as a n., expiration, exhalation. [A, 315.]—**A'd.** Expiratory, exhalent. [A, 355; B, 198.]

AUSHAUEN (Ger.), n. A[3]'us-ha[3]-u-e[2]n. Excision. [L, 43.]

AUSHEBUNG (Ger.), n. A[3]'us-hab-ung. A drawing off with a siphon (as of the contents of the stomach). [L, 57.]

AUSHECKEN (Ger.), v. tr. A[3]'us-he[2]k-e[2]n. To hatch. [A, 315.]

AUSHEILEN (Ger.), v. tr. and intr. A[3]'us-hil-e[2]n. To cure, to be cured. [L, 46.]

AUSHEIMISCH (Ger.), adj. A[3]'us-him-i[2]sh. Exotic. [L, 43.]

AUSHÖHLUNG (Ger.), n. A[3]'us-hu[5]l-ung. An excavation, hollow, cavity, fossa. [L, 80.]

AUSHUNGERN (Ger.), n. A[3]'us-hung-e[2]rn. Abstinence from food. [L, 80.]

AUSHUSTEN (Ger.), v. tr. and intr. A[3]'us-hust-e[2]n. To cough up, expectorate; also (intr.) to cease coughing; as a n., expectoration. [A, 355; L, 46.]

AUSINO, n. A Languedoc name for the nut of the *Quercus ilex*. [B, 121.]

AUSKEGELN (Ger.), v. tr. A[3]'us-kag-e[2]ln. In veterinary medicine, to dislocate. [A, 315.]

AUSKEIMEN (Ger.), v. intr. A[3]'us-kim-e[2]n. To germinate, sprout (with *sein*), to cease germinating (with *haben*). [L, 46.]

AUSKERNEN (Ger.), v. tr. A[3]'us-ke[2]rn-e[2]n. To enucleate. [L, 43.]

AUSKERNUNG (Ger.), n. A[3]'us-ke[2]rn-ung. Enucleation. [L, 43.]

AUSKINDERN (Ger.), v. intr. A[3]'us-ki[2]nd-e[2]rn. To cease bearing children. [L, 46.]

AUSKITTEN (Ger.), v. tr. A[3]'us-ki[2]t-te[2]n. To lute. [L, 46.]

AUSKOCHEN (Ger.), v. tr. A[3]'us-koch[2]-e[2]n. To boil out, to extract by boiling. [L, 46, 80.]

AUSKÖTHEN (Ger.), v. tr. A[3]'us-ku[5]t-e[2]n. To sprain or dislocate (in veterinary practice, said of the fetlock joint). [A, 315.]

AUSKRÄNKELN (Ger.), v. intr. A[3]'us-kre[2]n[2]k-e[2]ln. To cease to be sickly. [A, 315.]

AUSKRATZUNG (Ger.), n. A[3]'us-kra[3]tz-ung. Erasion, curetting.

AUSKULTANT (Ger.), n. A[3]-us-kult-a[3]nt'. See Auscultator.

AUSKULTATION (Ger.), n. A[3]-us-kult-a-tse-on'. See Auscultation.

AUSKULTATORISCH (Ger.), adj. A[3]-us-kult-a[3]-to'ri[2]sh. See Auscultatory.

AUSKULTIREN (Ger.), v. tr. and intr. A[3]-us-kult-e're[2]n. See Auscultate.

AUSKURIREN (Ger.), v. tr. and intr. A[3]'us-kur-e-re[2]n. See Ausheilen.

AUSLADEN (Ger.), v. tr. A[3]'us-la[3]d-en. To discharge (*e. g.*, an electrical machine). [B.]

AUSLADER (Ger.), n. A[3]'us-la[3]d-e[2]r. In electro-physics, a discharger. [B, 22.]

AUSLÄNDISCH (Ger.), adj. A[3]'us-land-i[2]sh. Exotic. [L, 43, 46.]

AUSLAUFEND (Ger.), adj. A[3]'us-la[3]-uf-e[2]nd. In botany, excurrent. [B, 198.]

AUSLAUFER (Ger.), n. A[3]'us-la[3]-uf-e[2]r. A process (in the anatomical sense). [J.]

AUSLÄUFER (Ger.), n. A^3'us-loif-e^{2}r. In botany, a branch which sends down adventitious roots; a stolon, or runner; a flagellum. [B, 198.]—**A'artig.** Flagelliform. [B, 198.]—**A'treibend.** *Flagelliferus.* [B, 198.]

AUSLAUGEN (Ger.), v. tr. A^3'us-la^3-ug-e^{2}n. To lixiviate, to extract; as a n., lixiviation, extraction. [B, 48.]—**Kontinuirliches A., Systematisches A.** See *Continuous* EXTRACTION.

AUSLEEREN (Ger.), v. tr. A^3'us-lar-e^{2}n. To empty, evacuate, drain; in veterinary medicine, to drench. [L, 46, 80.]—**A'd.** Evacuant. [L, 80.]

AUSLEERUNG (Ger.), n. A^3'us-lar-ung. Evacuation, excretion. [K.]—**A'smittel.** An evacuant, a purgative. [L, 46.]—**A's-organ.** An excretory organ. [A, 255.]—**A'sstoff.** Excrementitious matter. [A, 255.]—**Uebermässige A.** Depletion. [A, 255.]

AUSLÖFFELN (Ger.), v. tr. A^3'us-lu^{5}f-fe^{2}ln. To remove with a spoon. [E.]

AUSLÖFFELUNG (Ger.), n. A^3'us-lu^{5}f-fe^{2}l-ung. Erasion, curetting. [L, 57.]

AUSLÖSCHUNG (Ger.), n. A^3'us-lu^{5}sh-ung. Obliteration, extinction. [A, 315 : L, 80.]

AUSLÖSEMESSER (Ger.), n. A^3'us-lu^{5}s-e^2-me^{2}s-se^{2}r. A knife for excision. [L, 43.]

AUSLÖSEN (Ger.), v. tr. A^3'us-lu^{5}s-e^{2}n. To disarticulate. [L, 46.]—**Sich a'd.** See *Ausfallend*, under AUSFALLEN.

AUSLÖSUNG (Ger.), n. A^3'us-lu^{5}s-ung. Detachment, disarticulation. [L, 46.]—**A'shypothese.** See *Avalanche* THEORY.

AUSLÜFTEN (Ger.), v. tr. A^3'us-lu^{6}ft-e^{2}n. To aerate, ventilate. [J ; L, 80.]

AUSLÜFTUNG (Ger.), n. A^3'us-lu^{6}ft-ung. Aeration, ventilation. [J ; L, 50.]

AUSMACHEN (Ger.), v. tr. A^3'us-ma^{3}ch^2-e^{2}n. To blanch (said of almonds). [A, 315.]

AUSMAGERN (Ger.), v. tr. and intr. A^3'us-ma^{3}g-e^{2}rn. To cause to grow lean, to become emaciated. [L, 46.]

AUSMEISSELN (Ger.), v. tr. A^3'us-mis-se^{2}ln. To chisel out. [A, 315.]

AUSMERGELN (Ger.), v. tr. A^3'us-me^{2}rg-e^{2}ln. To make lean, exhaust, enervate, impoverish. [L, 46.]

AUSMESSUNG (Ger.), n. A^3'us-me^{2}s-sung. Mensuration. [A, 255.]

AUSNEHMUNG (Ger.), n. A^3'us-nam-ung. Extraction. [L, 80.]

AUSPINSELN (Ger.), v. tr. A^3'us-pi^{2}ns-e^{2}ln. To pencil out a microscopic preparation. [B.]

AUSPRESSEN (Ger.), v. tr. A^3'us-pre^{2}s-se^{2}n. To express, squeeze out, crush; as a n., expression. [A, 255 ; L, 135.]

AUSPRESSER (Ger.), n. A^3'us-pre^{2}s-se^{2}r. An expressing apparatus.—**A. des Harns.** See DETRUSOR *urinæ.*

AUSPROBEN (Ger.), **AUSPRÜFEN** (Ger.), v's tr. A^3'us-prob-e^{2}n, -pru^{6}f-e^{2}n. To assay. [L, 46.]

AUSRANDUNG (Ger.), n. A^3'us-ra^{3}nd-ung. Emargination. [B, 198.]

AUSRANGIREN (Ger.), v. tr. A^3'us-ra^{3}ng-e-re^{2}n. To garble. [A, 315]

AUSRANKEN (Ger.), v. intr. A^3'us-ra^{3}n^{2}k-e^{2}n. To spread by tendrils. [A, 315.]

AUSRAUCHEN (Ger.), v. tr. A^3'us-ra^3-uch^2-e^{2}n. 1. To smoke out, to expose to smoke. 2. To vaporize. [B ; L, 46.]

AUSRÄUCHERN (Ger.), v. tr. A^3'us-roich^2-e^{2}rn. To fumigate; as a n., fumigation. [B, 270 ; L, 43, 46.]

AUSRÄUMUNG (Ger.), n. A^3'us-roim-ung. An evacuation, emptying (as of the axillary space). [E. Küster, "Ctrlbl. f. Chir.," Mar. 12, 1887, p. 193.]

AUSRÄUSPERN (Ger.), v. tr. A^3'us-roisp-e^{2}rn. To hawk up; as a n., expectoration. [L, 46, 80.]

AUSREINIGEN (Ger.), v. tr. A^3'us-rin-i^{2}g-e^{2}n. To purify, to purge. [L, 46.]—**A'd.** Purifying, purgative. [A, 255.]

AUSREINIGUNG (Ger.), n. A^3'us-rin-ig-ung. Purification, purgation. [L, 80.]

AUSREISSEN (Ger.), v. tr. A^3'us-ris-se^{2}n. To extract; as a n., extraction, evulsion. [L, 43, 46, 80.]

AUSRENKEN (Ger.), v. tr. A^3'us-re^{2}n^{2}k-e^{2}n. To sprain, wrench, dislocate; as a n., a sprain, a dislocation. [L, 43, 46.]

AUSRENKUNG (Ger.), n. A^3'us-re^{2}n^{2}k-ung. A sprain, a dislocation. [L, 46, 80.]

AUSREUTER (Ger.), n. A^3'us-roit-e^{2}r. The impurities of grain, separated by sifting, etc. [B, 270.]

AUSRIESSELN (Ger.), n. A^3'us-res-se^{2}ln. A flow. [L, 80.]

AUSRINGEN (Ger.), v. tr. A^3'us-ri^{2}ng-e^{2}n. 1. To express. 2. To dislocate. [A, 315 ; E.]

AUSRÖCHELN (Ger.), v. intr. A^3'us-ru^{5}ch^2-e^{2}ln. To cease rattling (in the throat). [A. 315.]

AUSROTTBAR (Ger.), adj. A^3'us-ro^{3}t-ba^{3}r. Eradicable. [A, 315.]

AUSROTTEN (Ger.), v. tr. A^3'us-ro^{3}t-te^{2}n. To eradicate, extirpate; as a n., extirpation. [L, 80.]

AUSROTTUNG (Ger.), n. A^3'us-ro^{3}t-tung. Extirpation, eradication. [L, 46.]—**A'sblattern.** Cow-pox. [L, 80.]—**A'smesser.** An extirpating knife. [L, 135.]—**A'spocken.** Cow-pox. [A, 315.]

AUSRÜLPSEN (Ger.), n. A^3'us-ru^{6}lps-e^{2}n. Eructation. [L, 80.]

AUSRUPFEN (Ger.), v. tr. A^3'us-rupf-e^{2}n. To pluck; as a n., deplumation. [A, 315.]—**A. der Haare.** Epilation. [L, 43.]

AUSSAAT (Ger.), n. A^3'us-za^{3}t. A sowing (of seed). [B, 198.]

AUSSÄGUNG (Ger.), n. A^3'us-zag-ung. A sawing out. [A, 315.]

AUSSAIGERN (Ger.), v. tr. A^3'us-za^3-i^{2}g-e^{2}rn. To filter. [A, 315.]

AUSSALBEN (Ger.), v. tr. A^3'us-za^{3}lb-e^{2}n. To anoint. [A, 315.]

AUSSALZEN (Ger.), v. tr. A^3'us-za^{3}ltz-e^{2}n. To precipitate a dissolved substance by adding to the solution a salt which, being readily soluble, withdraws from the first substance the liquid required for its solution. [B, 270.]

AUSSANELLO, AUSSANO, n's. Languedoc names for the fruit of the *Solanum esculentum.* [B, 121.]

AUSSATZ (Ger.), n. A^3'us-za^{3}tz. Leprosy; in plants, a state termed lepra; in sheep, scab, rot; in horses, tetter. [A, 315 ; B, 198 ; G.]—**Abendländischer A.** See LEPRA *occidentalis.*—**Allgemeiner A.** See LEPRA *universalis.*—**A'bacillus.** See BACILLUS *lepræ.*—**A'flecken.** See *Macular* LEPROSY.—**A'haus.** See LEPROSERY.—**Dunkler A.** See LEPRA *nigricans.*—**Griechischer A.** Lepra Græcorum. [L, 43.] See PSORIASIS.—**Knolliger A.** See *Tubercular* LEPROSY.—**Lombardischer A.** See PELLAGRA.—**Morgenländischer A.** See LEPRA *orientalis.*—**Mosaischer A.** See LEPROSY.—**Räudiger A.** Scabby leprosy. [G.] See LEPROSY.—**Schuppiger A.** See LEPRA *squamosa.*—**Schwarzfleckiger A., Schwarzgefleckter A.** See LEPRA *maculosa nigra.*—**Schwarzlicher A.** See LEPRA *nigricans.*—**Wahrer A.** See LEPROSY.—**Weisser A.** See *White* LEPROSY.—**Weissgefleckter A., Weisshaarichter A.** See MORPHŒA *alba.*

AUSSÄTZIG (Ger.), adj. A^3'us-zatz-i^{2}g. Leprous. [L, 43.]

AUSSÄUERN (Ger.), v. tr. A^3'us-zoi-e^{2}rn. To neutralize (an acid substance). [A, 315.]

AUSSAUGEN (Ger.), v. tr. A^3'us-za^3-ug e^{2}n. To suck out, to exhaust. [A, 315 ; B, 48.]

AUSSÄUGEN (Ger.), v. tr. and intr. A^3'us-zoig-e^{2}n. 1. (Tr.) to suckle for the full time. 2. (Intr.) to stop suckling. [A, 315.]

AUSSAUGER (Ger.), n. A^3'us-za^3-ug-e^{2}r. A parasitic plant. [A, 315.]

AUSSCHABEN (Ger.), v. tr. A^3'us-sha^{3}b-e^{2}n. To scrape out. [A, 315.]

AUSSCHÄLEN (Ger.); v. tr. A^3'us-shal-e^{2}n. To decorticate, blanch (almonds), enucleate; as a n., enucleation, decortication. [L, 46, 80.]

AUSSCHALTUNG (Ger.), n. A^3'us-sha^{3}lt-ung. In experimental physiology, the elimination of a disturbing influence. [K, 16.] See under DÉSINTERCALATION.

AUSSCHÄLUNG (Ger.), n. A^3'us-shal-ung. Enucleation. [B.]

AUSSCHÄUMEN (Ger.), v. tr. and intr. A^3'us-shoim-e^{2}n. 1. (Tr.) to throw up in the form of foam. 2. (Intr.) to cease foaming. [A, 315.]

AUSSCHEIDEN (Ger.), v. tr. A^3'us-shid-e^{2}n. To excrete. [L, 80.]—**A'd.** Excretory. [L, 46.]

AUSSCHEIDUNG (Ger.), n. A^3'us-shid-ung. Excretion. [L, 80.]—**A'sorgan.** An excretory organ. [L, 80.]—**A'sstrom.** See *Secretion* CURRENT.

AUSSCHIESSEN (Ger.), v. intr. A^3'us-shes-se^{2}n. To germinate. [L, 46.]

AUSSCHLAG (Ger.), n. A^3'us-shla^{3}g. 1. Germination. [A, 315.] 2. A rash, an exanthem. [G.] 3. In veterinary medicine, farcy. [L, 46.] 4. In the manufacture of soap, nitre, and potash, the lixiviated ash. [B, 48.]—**A'milbe.** The itch-mite. [L, 43.] See SARCOPTES *scabiei.*—**A'schuppig.** Ramentaceous. [B, 198.]—**A'sbeule.** An eruptive boil. [L, 80.]—**A'sfieber.** An eruptive fever. [L, 80.]—**A'skrankheit.** An eruptive disease. [B, 49.]—**A'sschmerz.** Exanthematous rheumatism. [L, 80.]—**A's-schuppe.** A scale. [B, 198 ; L, 80.] See RAMENTUM and SQUAMA.—**A'swinkel.** The angle made by the indicating needle of a balance with the perpendicular when there is a small excess of weight in one of the pans. [B, 22.]—**Blasena'.** Pemphigus.—**Feueriger A.** Eczema. [L, 80.]—**Flechtenartiger A.** Lichen. [L, 80.]—**Hauta'.** See A. (2d def.)—**Hirsenähnlicher A.** See CERCHNASMUS.—**Hitziger A.** An acute exanthem. [A, 355.]

AUSSCHLAGEN (Ger.), v. intr. A^3'us-shla^{3}g-e^{2}n. To break out (said of diseases); as a n., efflorescence, the time of budding of leaves. [A, 315 ; B, 198.]—**A'lehre.** Exanthematology. [L, 43.]

AUSSCHLEUDERN (Ger.), v. tr. A^3'us-shloid-e^{2}rn. To subject to the action of centrifugal force by rapid rotation (in order to separate liquids of different densities, or solids from liquids). [B, 270.]

AUSSCHLIESSUNG (Ger.), n. A^3'us-shles-sung. Excision. [L, 43.]

AUSSCHLUCKEN (Ger.), v. intr. A^3'us-shluk-e^{2}n. To cease hiccoughing. [A, 315.]

AUSSCHMAUCHEN (Ger.), v. tr. A^3'us-shma^3-uch^2-e^{2}n. To fumigate. [A, 315.]

AUSSCHMELZEN (Ger.), v. tr. A^3'us-shme^{2}ltz-e^{2}n. To purify by melting. [A, 315.]

AUSSCHMOREN (Ger.), v. tr. A^3'us-shmor-e^{2}n. To extract by stewing. [A, 315.]

AUSSCHNAUBEN (Ger.), **AUSSCHNAUFEN** (Ger.), v. intr. A^3'us-shna^3-ub-e^{2}n, -uf-e^{2}n. To blow, pant, puff, snort. [A. 315.]

AUSSCHNAUZEN (Ger.), n. A^3'us-shna^3-utz-e^{2}n. The act of blowing the nose. [L, 80.]

AUSSCHNÄUZEN (Ger.), v. refl. (*sich a.*). A^3'us-shnoitz-e^{2}n. To blow the nose. [A, 315.]

AUSSCHNEIDEN (Ger.), v. tr. A^3'us-shnid-e^{2}n. To excise; in veterinary medicine, to castrate; as a n., excision, castration. [L, 46, 80.]

AUSSCHNEIDER (Ger.), n. A^3'us-shnid-e^{2}r. In veterinary medicine, a gelder. [A, 315.]

AUSSCHNEIDUNG (Ger.), n. A^3'us-shnid-ung. Excision. [A, 315.]

AUSSCHNITT (Ger.), n. A^3'us-shni^{2}t. 1. A notch. [A, 355.] 2. Excision. [A, 315.] 3. In botany, see EXCISURA.—**Beutelförmiger A. des Cerebellums.** See *Posterior* NOTCH *of the cerebellum.*—**Drossela'.** The incisura jugularis; the notch in the occipital bone which forms the posterior and middle portions of the posterior jugular foramen. [L, 31.]—**Halbcirkelförmiger A., Halbmondförmiger A.** A semilunar notch. [A, 355.]—**Hinterer A. des Cerebellums.** See *Posterior* NOTCH *of the cerebellum.*—**Schlüsselbeina'.** The clavicular notch; that surface of the sternum which articulates with the clavicle. [L, 31.]

AUSSCHÖPFEN (Ger.), v. tr. A^3'us-shu^{5}pf-e^{2}n. To drain, exhaust; as a n., exhaustion. [A, 450.]

AUSSCHOSSEN (Ger.), v. intr. A^3'us-sho^{3}s-se^{2}n. To sprout. [A, 315.]

AUSSCHRÖPFEN (Ger.), v. tr. A^3'us-shru^{5}pf-e^{2}n. To draw out by scarification or with cupping-glasses. [A, 315.]

AUSSCHWÄREN (Ger.), v. intr. A^3'us-shwar-e^{2}n. To suppurate, to break down by suppuration; also to cease suppurating; as a n., a melting away by suppuration. [A, 301, 315.]

AUSSCHWEFELN (Ger.), v. tr. A^3'us-shwe^{2}f-e^{2}ln. To fumigate or impregnate with sulphur. [A, 315.]

AUSSCHWEISSEN (Ger.), v. tr. A^3'us-shwis-se^{2}n. To treat by sweating. [L, 46.]

AUSSCHWELLEN (Ger.), v. intr. A^3'us-shwe^{2}l-le^{2}n. To swell out. [A, 315.]

AUSSCHWITZEN (Ger.), v. tr. and intr. A^3'us-shwi^{2}tz-e^{2}n. 1. (Tr.) to exude, sweat out, discharge by perspiration. 2. (Intr.) to cease sweating or exuding. [L, 46.] 3. As a n., see AUSSCHWITZUNG.

AUSSCHWITZUNG (Ger.), n. A^3'us-shwi^{2}tz-ung. Exudation, sweating. [A, 315.]

AUSSEE (Ger.), n. A^3'us-za. A place in the Styrian Salzkammergut, near Selzthal, resorted to for its fine climate, its salt springs, and its establishments for hydro-therapeutics, inhalation, the milk-cure, whey-cure, herb-cure, etc. [L, 57.]

AUSSEICHEN (Ger.), v. intr. A^3'us-zich^2-e^{2}n. To pass urine. [A, 315.]

AUSSEIHEN (Ger.), v. tr. A^3'us-zi-he^{2}n. To filter. [A, 315.]

AUSSENFALTE (Ger.), n. A^3'us-se^{2}n-fa^{3}lt-e^2. A term applied by His to the amniotic fold in its early stage. [H.]—**Vordere A.** A term applied by His to the first-formed part of the amnion, in the shape of a fold lying outside the fold formed by the head, which latter he calls the *vordere Kopffalte.* [H.]

AUSSENHAUT (Ger.), n. A^3'us-se^{2}n-ha^3-ut. The tunica exterior of mosses. [B, 198.]

AUSSENKELCH (Ger.), n. A^3'us-se^{2}n-ke^{2}lch^2. In botany, an involucre, a calyculus. [B, 49, 270.]

AUSSENRINDE (Ger.), n. A^3'us-se^{2}n-ri^{2}nd-e^2. Outer bark. [B, 35.]

AUSSENSCHEIDE (Ger.), n. A^3'us-se^{2}n-shid-e^2. An outer sheath. [L, 59.]

AUSSENWAND (Ger.), n. A^3'us-se^{2}n-va^{3}nd. The outer wall (of a cell or a fruit). [B, 198.]

AUSSENWINKEL (Ger.), n. A^3'us-se^{2}n-vi^{2}n^{2}k-e^{2}l. An external angle. [A, 315.]—**A'blatt.** An infra-axillary leaf; a branch-leaf springing from the origin of the branch. [B, 198.]—**A'ständig.** In botany, infra-axillary. [B, 198.]

AUSSENZÄHNIG (Ger.), adj. A^3'us-se^{2}n-tzan-i^{2}g. Having the teeth external (said of mosses [*musci ectopogoni*]). [B, 198.]

AUSSENZONE (Ger.), n. A^3'us-se^{2}n-tzon-e^2. His's term for a crescentic region at the fore and outer part of the transparent area of the blastoderm, at which the separation of the epiblast from the hypoblast is most complete. [A, 8.]

AUSSERACHSELSTÄNDIG (Ger.), **AUSSERGABELSTÄNDIG** (Ger.), adj's. A^3-us-se^{2}r-a^{3}ch^{2}s'e^{2}l-stand-i^{2}g, -ga^{3}b'e^{2}l-stand-i^{2}g. In botany, extra-alary (*subramealis, extrafurcalis*). [B, 198.]

AUSSERKOMMEND (Ger.), adj. A^3'us-se^{2}r-ko^{3}m-me^{2}nd. Adventitious. [L, 44.]

AUSSERSICHSEIN (Ger.), n. A^3'us-se^{2}r-zi^{2}ch^2-zin. Ecstasy. [L, 80.]

AUSSERWESENTLICH (Ger.), adj. A^3'us-se^{2}r-vaz-e^{2}nt-li^{2}ch^2. Non-essential (said of those parts of a flower [the calyx, corolla, etc.] which are not directly concerned in fructification). [B, 198.]

AUSSERWINKELSTÄNDIG (Ger.), adj. A^3'us-se^{2}r-vi^{2}n^{2}k-e^{2}l-stand-i^{2}g. In botany, extra-axillary. [B, 198.]

AUSSERZELLIG (Ger.), adj. A^3'us-se^{2}r-tze^{2}l-li^{2}g. Extracellular. [B, 198.]

AUSSETZEN (Ger.), v. tr. and intr. A^3'us-ze^{2}tz-e^{2}n. 1. (Tr.) to expose (to an influence, like cold). 2. (Intr.) to cease, intermit (said of the pulse and of fevers). 3. As a n., exposure, also intermittence. [L, 46, 80.]—**A'd.** Intermittent. [L, 135.]

AUSSETZUNG (Ger.), n. A^3'us-ze^{2}tz-ung. A pause, intermission. [A, 315.]

AUSSICHTEN (Ger.), v. tr. A^3'us-zi^{2}ch^{2}t-e^{2}n. To sift, winnow, garble. [A, 315.]

AUSSIEBEN (Ger.), v. tr. A^3'us-zeb-e^{2}n. See AUSSICHTEN.

AUSSIEDEN (Ger.), v. tr. and intr. A^3'us-zed-e^{2}n. 1. (Tr.) to boil, boil out. [L, 46.] 2. (Tr.) to purify a surface of gold or silver by boiling with nitric acid or an alkaline mixture. [B, 48.] 3. (Intr.) to cease boiling. [A, 315.]

AUSSOMMERN (Ger.), **AUSSÖMMERN** (Ger.), v's tr. A^3'us-zo^{3}m-me^{2}rn, -zu^{5}m-me^{2}rn. See AUSSONNEN.

AUSSONDERN (Ger.), v. tr. A^3'us-zo^{3}nd-e^{2}rn. To excrete. [A, 315.]

AUSSONDERUNG (Ger.), n. A^3'us-zo^{3}nd-e^{2}r-ung. Excretion, also material excreted. [B, 198; L, 30, 46.]—**A'skrankheit.** An eccritical disease. [A, 355.]—**A'slehre.** The doctrine of eccrisis (*q. v.*). [L, 43.]—**A'sorgan.** An excretory organ. [L, 46.]

AUSSONNEN (Ger.), v. tr. A^3'us-zo^{3}n-ne^{2}n. To expose to the sun. [A, 315.]

AUSSPANNEN (Ger.), v. tr. A^3'us-spa^{3}n-ne^{2}n. To stretch, extend, distend. [A, 315.]

AUSSPANNER (Ger.), n. A^3'us-spa^{3}n-ne^{2}r. An extensor muscle. [L, 80.]

AUSSPANNUNG (Ger.), n. A^3'us-spa^{3}n-nung. Extension, distension. [L, 80.]

AUSSPEIEN (Ger.), v. tr. A^3'us-spi-e^{2}n. To spit up, expectorate, belch up, vomit up; as a n., spitting, expectoration, belching, vomiting. [A, 315, 355.]

AUSSPEIUNG (Ger.), n. A^3'us-spi-ung. Spitting, expectoration, etc. [A, 315.]

AUSSPEYEN (Ger.), v. tr. A^3'us-spi-e^{2}n. See AUSSPEIEN.

AUSSPRACHE (Ger.), n. A^3'us-spra^{3}ch^2-e^2. See ARTICULATION (5th def.).

AUSSPRINGEN (Ger.), v. tr. and intr. A^3'us-spri^{2}ng-e^{2}n. 1. (Tr.) to sprain, to dislocate. 2. (Intr.) to burst forth. 3. As a n., dehiscence, also a sprain or a dislocation. [L, 46, 80.]—**A'd.** Dehiscent. [L, 80.]

AUSSPRITZEN (Ger.), v. tr. and intr. A^3'us-spri^{2}tz-e^{2}n. 1. (Tr.) to syringe (*e. g.*, a wound). 2. (Intr.) to spout, to spurt. 3. As a n., see AUSSPRITZUNG. [L, 46.]

AUSSPRITZUNG (Ger.), n. A^3'us-spri^{2}tz-ung. Injection, emission, ejaculation. [L, 46, 80.]—**A'scanal, A'sgang.** An ejaculatory duct. [L, 80.]

AUSSPROSSEN (Ger.), v. intr. A^3'us-spro^{3}s-se^{2}n. 1. Of plants, to appear as buds. 2. Of metals, to become oxidized, to swell up, to throw off jagged points (as molten silver does when rapidly cooled). [B.]

AUSSPRÖSSLING (Ger.), n. A^3'us-spru^{5}s-li^{2}ng. A shoot, a sprout. [A, 315.]

AUSSPROSSUNG (Ger.), n. A^3'us-spro^{3}s-sung. A budding. [L, 43.]

AUSSPRUDELN (Ger.), v. intr. A^3'us-sprud-e^{2}ln. To bubble forth (said of springs). [A, 315.]

AUSSPRÜHEND (Ger.), adj. A^3'us-spru^6-he^{2}nd. In botany, *explosus* (*q. v.*). [B, 198.]

AUSSPRUNG (Ger.), n. A^3'us-sprung. Tinea of the face. [L, 80.]—**A'swinkel.** The angle of reflection. [L, 46.]—**Räudiger A.** Serpiginous tinea. [L, 80.]

AUSSPUCKEN (Ger.), v. tr. A^3'us-spuk-e^{2}n. To spit out, expectorate. [L, 46, 80.]

AUSSPÜLEN (Ger.), v. tr. A^3'us-spu^{6}l-e^{2}n. To wash out, to rinse; as a n., a rinsing, washing out. [A, 315.]

AUSSTILLEN (Ger.), v. intr. A^3'us-sti^{2}l-le^{2}n. To cease suckling. [A, 315.]

AUSSTOPFEN (Ger.), v. tr. A^3'us-sto^{3}pf-e^{2}n. To stuff, cram; as a n., repletion. [A, 315, 355.]—**A'd.** Obstruent. [L, 43.]

AUSSTOSSEN (Ger.), v. tr. A^3'us-sto^{3}s-se^{2}n. To expel, eject; as a n., see AUSSTOSSUNG.

AUSSTOSSUNG (Ger.), n. A^3'us-sto^{3}s-sung. Expulsion (as of the fœtus), excretion (especially defecation). [K, 16; L, 80.]

AUSSTRAHLEN (Ger.), v. tr. and intr. A^3'us-stra^{3}l-e^{2}n. To give out rays, to radiate; as a n., see AUSSTRAHLUNG. [B, 22.]

AUSSTRAHLUNG (Ger.), n. A^3'us-stra^{3}l-ung. Radiation, emission (as of light or heat). [B, 22, 49.]—**Fasera' des Kleinhirnschenkels.** See under FASER.—**Pinselförmige A.** See CORONA *radiata.*

AUSSTRECKEMUSKEL (Ger.), n. A^3'us-stre^{2}k-e^2-musk-e^{2}l. See AUSSTRECKER.

AUSSTRECKEN (Ger.), v. tr. A^3'us-stre^{2}k-e^{2}n. To stretch out, extend; as a n., see AUSSTRECKUNG. [A, 315, 355.]—**A'd.** Extending, acting as an extensor. [L, 30.]

AUSSTRECKER (Ger.), **AUSSTRECKMUSKEL** (Ger.), n's. A^3'us-stre^{2}k-e^{2}r, -musk-e^{2}l. An extensor muscle. [A, 315; L, 80.]

AUSSTRECKUNG (Ger.), n. A^3'us-stre^{2}k-ung. Extension. [A, 315.]

AUSSTREUEN (Ger.), v. tr. A^3'us-stroi-e^{2}n. To disseminate; as a n., see AUSSTREUUNG. [A, 315.]—**A. von Samen.** An ejaculation of semen. [L, 80.]

AUSSTREUUNG (Ger.), n. A^3'us-stroi-ung. Dissemination. [A, 315.]

AUSSTRÖMEN (Ger.), v. tr. and intr. A^3'us-stru^{6}m-e^{2}n. To discharge, emit, flow, emanate; as a n., see Ausströmung. [A, 315.]

AUSSTRÖMUNG (Ger.), n. A^3'us-stru^{6}m-ung. Emanation, discharge, emission. [L, 30, 80.]—**A'srohr.** A delivery-pipe. [A, 315.]

AUSSTÜLPUNG (Ger.), n. A^3'us-stu^{6}lp-ung. Eversion. [B.]

AUSSUCHEND (Ger.), adj. A^3'us-zuch^2-e^{2}nd. Eclectic, elective. [A, 355.]

AUSSÜSSEN (Ger.), v. tr. A^3'us-zu^{6}s-se^{2}n. To edulcorate; as a n., edulcoration. [A, 315; B, 48; L, 43, 135.]

AUSSÜSSUNG (Ger.), n. A^3'us-zu^{6}s-sung. Maceration, also edulcoration. [A, 301.]

AUSSÜSSTÖPFEN (Ger.), n. pl. A^3'us-zu^{6}s-tu^{6}pf-e^{2}n. Large vessels with lateral openings, used in edulcoration. [B, 48.]

AUSTASTEN (Ger.), v. tr. A^3'us-ta^{3}st-e^{2}n. To examine by the touch. [A, 315.]

AUSTAUSCHUNG (Ger.), n. A^3'us-ta^3-ush-ung. An interchange (as of gases). [A, 315.]

AUSTER (Ger.), n. A^3'ust-e^{2}r. The oyster. [A, 315.]—**A'baum.** See Rhizophora.—**A'npilz.** See Agaricus *ostreatus*.—**A'nschalen, A'schalen.** Oyster-shells. [A, 315.]—**A'schalenpulver.** See Testa *præparata*.—**A'schalenwasser.** See *Aqua* concharum.—**A'schwamm.** See Agaricus *ostreatus*.—**Bereitete A'schalen.** See Testa *præparata*.—**Gemeine A.** The edible oyster (*Ostrea edulis*). [L.]—**Präparirte A'schalen.** See Testa *præparata*.

AUSTERALIS (Lat.), n. f. A^{4}st(a^3-u^{4}st)-e^{2}r-a(a^3)'li^{2}s. An old name for the water-cress. [Apuleius (A, 318).]

AUSTERE, adj. A^{4}st-er'. Gr., αὐστηρός. Lat., *austerus*. Fr., *austère*. Ger., *herbe*, *rauh*. It., Sp., *austero*. Harsh, sharp, astringent, or sour. [A, 322, 385.]

AUSTERITAS (Lat.), n. f. A^{4}s(a^3-u^{4}s)-te^{2}r'i^{2}t-a^{2}s(a^{3}s). Gen., *austerita'tis*. Ger., *Austerität*. The quality of being austere (*q. v.*). [L, 30, 119.]

AUSTILGEN (Ger.), v. tr. A^3'us-ti^{2}lg-e^{2}n. To extirpate, obliterate, destroy. [A, 315.]

AUSTILGUNG (Ger.), n. A^3'us-ti^{2}lg-ung. Extirpation, destruction, obliteration. [A, 315.]

AUSTRACAMPHENE, n. A^{4}st''ra^3-ka^{2}m'fen. Ger., *Austracamphen*. A camphene obtained from the dextro-rotary turpentine oils (American and English turpentines). [B, 257.]

AUSTRAGEN (Ger.), v. tr. A^3'us-tra^{3}g-e^{2}n. To carry (a fœtus) for the full term of gestation. [A, 315.]

AUSTRAL, adj. A^{4}st'ra^{2}l. Lat., *australis*. Fr., *austral*, *australique*. Ger., *austral*, *australisch*, *südlich*. It., *australe*. Sp., *austral*. Southern, living in southern countries. [L, 41.]

AUSTRALENE, n. A^{4}st'ra^{2}l-en. Fr., *australène*. Ger., *Australen*. It., *australene*. Sp., *australeno*. Syn.: *austroterebenthene*. Braconnot's term for a dextro-rotary terebenthene extracted from the *Pinus australis*. It boils between 156° and 157° C. [B, 4, 5, 93, 257; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 384 (B).]

AUSTRALINEÆ (Lat.), n. f. pl. A^{4}st(a^3-u^{4}st)-ra^3-li^{2}n'e^2-e(a^3-e^2). From *Australina*, the typical genus. Fr., *australinées*. A subtribe of urticaceous plants belonging to the *Forskohleæ*, made by Weddell. [B, 170.]

AUSTRAPYROLENE, AUSTRATEREBENTHENE, n's. A^{4}st''ra^3-pi'ro-len, -te^{2}r-e^2-be^{2}nth'en. See Australene.

AUSTREIBEN (Ger.), v. tr. A^3'us-trib-e^{2}n. To expel. [A, 315.]—**A'd.** Expulsive. [L, 30, 43.]

AUSTREIBUNG (Ger.), n. A^3'us-trib-ung. Expulsion, ejaculation. [A, 315, 355.]—**A. des Kindes.** The expulsion of the fœtus. [L, 80.]—**A. des Samens.** An ejaculation of semen. [L, 80.]—**A. des Unraths.** Defecation. [L, 80.]—**A'speriode der Geburt.** The expulsive stage of parturition.

AUSTRETEN (Ger.), v. intr. A^3'us-tre^{2}t-e^{2}n. To flow out, transude, be extravasated; to descend (said of a hernia); as a n., see Austretung. [A, 301; L, 46, 80.]—**A'd.** Efferent. [K.]

AUSTRETUNG (Ger.), n. A^3'us-tre^{2}t-ung. Transudation, extravasation. [L, 46.]

AUSTRITT (Ger.), n. A^3'us-tri^{2}t. Emergence. [A, 315.] See also Excursion.

AUSTRIUM (Lat.), n. n. A^{4}st'(a^3'u^{4}st)-ri^2-u^{3}m(u^{4}m). From *Austria*. Symbol: *Aus*. According to Seipen, a new element discovered by Linnemann. ["Mntsh. f. Chem.," 1886, p. 127 (B).] According to Lecoq de Boisbandeau, it is identical with gallium. ["Ann. di chim. e di farm.," July, 1886, p. 80 (B).]

AUSTROCKNEN (Ger.), v. tr. A^3'us-tro^{2}k-ne^{2}n. To desiccate; as a n., desiccation. [A, 315; L, 80.]—**A'd.** Desiccative, desiccant. [A, 315.]

AUSTROCKNUNG (Ger.), n. A^3'us-tro^{2}k-nung. Desiccation. [L, 135.]

AUSTROMANTIA (Lat.), n. f. A^{4}st''(a^3''u^{4}st)-ro-ma^{2}n(ma^{3}n)-ti(te)'a^3. From *auster*, the south wind, and μαντεία, divination. Ger., *Austromantie*. Divination by observing the south wind. [A, 322.]

AUSTRÖPFELN (Ger.), v. intr. A^3'us-tru^{6}pf-e^{2}ln. To dribble. [L, 80.]

AUSTROTEREBENTHENE, n. A^{4}st''ro-te^{2}r-e^2-be^{2}nth'en. See Australene.

AUSTRUCHE (Fr.), n. Os-tru^{6}sh. The plant *Imperatoria*. [L, 109.]

AUSÜBEN (Ger.), v. tr. A^3'us-u^{6}b-e^{2}n. To exercise, practise (a profession). [A, 315.]—**A'd.** Practising. [A, 315.]

AUSÜBER (Ger.), n. A^3'us-u^{6}b-e^{2}r. A practitioner. [A, 315.]

AUSWACHSEN (Ger.), v. intr. A^3'us-va^{3}ch^{2}s-e^{2}n. To grow in the form of an excrescence; in botany, to sprout; in chemistry, to crystallize; as a n., see Auswachsung. [A, 301; L, 46.]

AUSWACHSUNG (Ger.), n. A^3'us-va^{3}ch^{2}s-ung. An excrescence. [L, 135.]

AUSWÄHLEND (Ger.), adj. A^3'us-val-e^{2}nd. Elective, eclectic. [L, 46, 80.]

AUSWANDERUNG (Ger.), n. A^3'us-va^{3}nd-e^{2}r-ung. Emigration (as of the white blood-corpuscles), displacement (as of an organ). [K; L, 80.]

AUSWÄRTSDREHEN (Ger.), n. A^3'us-varts-dra-he^{2}n. Supination. [L, 80.]

AUSWÄRTSGEBOGEN (Ger.), adj. A^3'us-varts-ge^2-bo-ge^{2}n. In botany, recurved (*recurvatus*). [B, 198.]

AUSWÄRTSGEDREHT (Ger.), adj. A^3'us-varts-ge^2-drat. Supinated; in botany, *retortus* (*q. v.*). [B, 198.]

AUSWÄRTSGEHEN (Ger.), n. A^3'us-varts-ga-he^{2}n. Eversion. [L, 50.]

AUSWÄRTSGEKRÜMMT (Ger.), adj. A^3'us-varts-ge^2-kru^{6}mt. In botany, recurved (*recurvus*, *recuratus*). [B, 198.]

AUSWÄRTSGESCHLAGEN (Ger.), adj. A^3'us-varts-ge^2-shla^{3}g-e^{2}n. In botany, revolute or reduplicate. [B, 35.] See *A'e* Knospendeckung.

AUSWÄRTSKEHRUNG (Ger.), **AUSWÄRTSSTEHEN** (Ger.), n's. A^3'us-varts-ke^{2}r-ung, -sta-he^{2}n. Eversion. [L, 80.]

AUSWÄRTSSTÜLPUNG (Ger.), n. A^3'us-varts-stu^{6}lp-ung. Inversion, extroversion. [L, 135.]

AUSWÄRTSZIEHEN (Ger.), v. tr. A^3'us-varts-tse-he^{2}n. To abduct; as a n., abduction.—**A'd.** Abducent.

AUSWÄRTSZIEHER (Ger.), n. A^3'us-varts-tse-he^{2}r. An abductor muscle. [A, 315, 355.]—**A. der grossen Zehe.** See Abductor *hallucis*.—**A. der kleinen Zehe.** See Abductor *minimi digiti pedis*.—**A. des Armbeins.** See Scapulo-humeralis *magnus*.—**A. des Augapfels.** The external rectus muscle of the eye. [L, 80.]—**Grosser A. des Armbeins.** See Abductor *longus brachii*.—**Kurzer A. des Armbeins.** See Abductor *brevis brachii* and Scapulo-humeralis *minor*.

AUSWASCHEN (Ger.), v. tr. A^3'us-va^{3}sh-e^{2}n. To wash, bathe; as a n., lotion, ablution. [A, 315.] Cf. Aussüssen.

AUSWEG (Ger.), n. A^3'us-ve^{2}g. An aperture of exit, an outlet. [A, 315; L, 80.]

AUSWEICHEN (Ger.), v. intr. A^3'us-vich^2-e^{2}n. To recede, to be displaced. [L, 80.]

AUSWEICHUNG (Ger.), n. A^3'us-vich^2-ung. Deviation, dislocation, displacement. [L, 46, 80, 135.]

AUSWEIDEN (Ger.), v. tr. A^3'us-vid-e^{2}n. To eviscerate. [A, 315.]

AUSWEIDUNG (Ger.), n. A^3'us-vid-ung. Evisceration, exenteration. [B.]

AUSWERFEN (Ger.), v. tr. A^3'us-ve^{2}rf-e^{2}n. To spit up, disgorge, vomit, belch up, expectorate, eject; as a n., spitting, vomiting, belching, expectoration, ejaculation. [A, 315.]

AUSWITTERN (Ger.), v. tr. and intr. A^3'us-vi^{2}t-te^{2}rn. 1. (Tr.) to decompose. [A, 315.] 2. (Intr.) to effloresce. [B, 196.]

AUSWITTERUNG (Ger.), n. A^3'us-vi^{2}t-te^{2}r-ung. 1. Decomposition. [A, 315.] 2. Efflorescence. [L, 43.]

AUSWUCHS (Ger.), n. A^3'us-vuchs. A growth, sprouting, efflorescence, excrescence, protuberance. [A, 315.]—**A. am Zahnfleisch.** See Epulis.—**Warziger A.** A papillary excrescence. [B.]

AUSWURF (Ger.), n. A^3'us-vurf. Anything cast off from the organism, especially the sputum. [A, 315.]—**A'befördende Mittel.** Expectorants. [A, 355; B, 270.]—**A'sstoff.** See *A.*

AUSWURZELN (Ger.), v. tr. A^3'us-vurtz-e^{2}ln. To eradicate. [L, 46.]

AUSZAHNEN (Ger.), v. intr. A^3'us-tza^{3}n-e^{2}n. To cease teething. [L, 46.]

AUSZÄHNUNG (Ger.), n. A^3'us-tzan-ung. Indentation, serration. [A, 315.]

AUSZEHREN (Ger.), v. refl. (*sich a.*). A^3'us-tze^{2}r-e^{2}n. To waste away; as a n., consumption. [A, 315.]—**A'd.** Consumptive, wasting. [L, 80.]

AUSZEHRUNG (Ger.), n. A^3'us-tze^{2}r-ung. Consumption, decline, phthisis, marasmus. [A, 315, 355.]—**A'skräuter.** The herb of the *Galeopsis grandiflora* and the *Pulmonaria*. [B, 270.]

AUSZEICHNEND (Ger.), adj. A^3'us-tzich^2-ne^{2}nd. See Proprius.

AUSZIEHBAR (Ger.), adj. A^3'us-tze-ba^{3}r. Extractive (capable of being extracted). [L, 80.]

AUSZIEHEN (Ger.), v. tr. A^3'us-tze-he^{2}n. To extract; as a n., extraction. [B, 48; L, 80.]

AUSZIEHMITTEL (Ger.), n. A^3'us-tze-mi^{2}t-te^{2}l. See Menstruum.

AUSZIEHUNG (Ger.), n. A^3'us-tze-hung. Extraction. [A, 315.]

AUSZITZEN (Ger.), v. tr. A^3'us-tzi^{2}tz-e^{2}n. See Aussaugen.

AUSZUG (Ger.), n. A^3'us-tzug. An extract. [B, 48.]—**A's-geschichte.** See Palingenesis.

O, no; **O^2**, not; **O^3**, whole; **Th**, thin; **Th^2**, the; **U**, like oo in too; **U^2**, blue; **U^3**, lull; **U^4**, full; **U^5**, urn; **U^6**, like ü (German).

AUSZWÄNGEN (Ger.), v. tr. A^3'us-tzwang-e^{2}n. To force out; as a n., prolapse, procidentia. [A, 315.]

AUTALGIA [Young] (Lat.), n. f. A^{4}t(a^3-u^{4}t)-a^{2}l(a^{3}l)'ji^2(gi^2)-a^3. From *αὐτός*, of itself, and *ἄλγος*, pain. Localized pain or uneasiness, without any apparent cause. [L, 290.]—**A. dolorosa** [Young]. Simple pain or aching. [L, 290.]—**A. pruriginosa** [Young]. Itching. [L, 290.]—**A. vertigo** [Young]. Giddiness. [L, 290.]

AUTAMŒBÆ (Lat.), n. f. pl. A^{4}t(a^3-u^{4}t)-a^{2}m(a^{3}m)-e'(o^2'e^2)-be-(ba^3-e^2). From *αὐτός*, absolute, and *ἀμνιβή* (see AMŒBA). Ger., *einfache Amöben*. Haeckel's term for the simplest forms of the *Amœba*. [L, 121.]

AUTARACHNÆ (Lat.), n. f. pl. A^{4}t(a^3-u^{4}t)-a^{2}r(a^{3}r)-a^{2}k(a^{3}ch^2)'-ne(na^3-e^2). From *αὐτός*, absolute, and *ἀράχνη*, a spider's web. A family of the *Arachnida*, including the true arachnids. [L, 176.]

AUTARCHOGLOSSE (Fr.), adj. Ot-ark-o-glo^{2}s. From *αὔταρχος*, absolute, and *γλῶσσα*, the tongue. In zoology, having the tougue free. [L, 109.]

AUTARCIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-a^{3}r-si(ke)'a^3. Gr., *αυτάρκεια* (from *αὐτός*, one's self, and *ἀρκεῖν*, to suffice). Fr., *autarcie*, *bien-être*. Ger., *Selbstständigkeit*, *Selbsthinlänglichkeit*. Equanimlty with a sense of self-sufficiency. [A, 301, 322; Galen (A, 325).]

AUTECHINIDA (Lat.), n. n. pl. A^{4}t(a^3-u^{4}t)-e^{2}k(e^{2}ch^2)-i^{2}n'-i^{2}d-a^3. From *αὐτός*, absolute, and *ἐχῖνος*, a sea-urchin. A subclass of the *Echinida* of Haeckel, including those with twenty rows of plates. [L, 173.]

AUTECHOSCOPE, n. A^{4}t-e^{2}k'o-skop. Lat., *autechoscopium*, *autechoscopon*, *autechoscopum*, *autechoscopus* (from *αὐτός*, one's self, *ἦχος* [=*ἠχή*], a sound, and *σκοπεῖν*, to examine). Fr., *autéchoscope*. Ger., *Autechoskop*. Syn.: *soniscrutator proprii corporis*. L. A. Kraus's name for an instrument invented by him for practising auscultation on one's self. [A, 322.]

AUTÉE (Fr.), n. O-ta. An old name for pulmonary phthisis in cattle. [L, 41.]

AUTEMESIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-e^{2}m-e(a)'si^2-a^3. From *αὐτός*, of one's self, and *ἐμεῖν*, to vomit. Fr., *autémésie*. Vomiting without any known cause; in Alibert's nosology, a genus of diseases of the family *Gastroses*. [A, 301; L, 41.]

AUTEMPRESMUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-e^{2}m-pre^{2}s(pras)'-mu^{3}s(m^{4}s). From *αὐτός*, of one's self, and *ἐμπρησμός* (= *ἔμπρησις*), combustion. Spontaneous combustion. [L, 45.]

AUTEUIL-PARIS (Fr.), n. O-tu^5-el-pa^{3}r-e. A spring in the department of the Seine, France, the water of which contains calcium, iron, and aluminium sulphates, and is used for anæmia. [A, 385; L, 87.]

AUTEUNUCHUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-u^2-nu^2(nu)'ku^{3}s-(ch^{2}u^{2}s). From *αὐτός*, of one's self, and *εὐνοῦχος*, a eunuch. One who has castrated himself. [A, 322.]

AUTHEE NAR, n. The *Bauhinia diphylla*. [B, 172.]

AUTHEMERON (Lat.), n. n. A^{4}th(a^3-u^{4}th)-e^{2}m(am)'e^{2}r-o^{2}n. Gr., *αὐθήμερον* (from *αὐτός*, the same, and *ἡμέρα*, a day [*φάρμακον* understood]). Fr., *authémeron*. An old name for any medicine that took effect on the very day that it was given. [Hippocrates, Galen (A, 325).]

AUTHEPSA (Lat.), n. f. A^{4}th(a^3-u^{4}th)-e^{2}p'sa^3. Gr., *αὐθέψης* (from *αὐτός*, of itself, and *ἕψειν*, to boil). An ancient cooking-utensil, like a tea-urn. [A, 311, 312.]

AUTHYGIANSIS (Lat.), n. f. A^{4}th(a^3-u^{4}th)-i^{2}j(u^{6}g)-i^2-a^{2}n(a^{3}n)'-si^{2}s. Gen., *authygian'seos* (*-sis*). From *αὐτός*, of one's self, and *ὑγίανσις* (= *ὑγίασις* [from *ὑγιάζειν*, to cure]), a cure. Ger., *Selbstheilung*. A spontaneous cure, also the curative power of nature. [A, 322.] Cf. VIS *medicatrix naturæ*.

AUTHYPNOBATESIS (Lat.), n. f. A^{4}th(a^3-u^{4}th)-i^{2}p(u^{6}p)-no-(no^2)-ba^{2}t(ba^{3}t)-e(a)'si^{2}s. Gen., *authypnobate'seos* (*-sis*). From *αὐτός*, of one's self, *ὕπνος*, sleep, and *βαίνειν*, to walk. Spontaneous somnambulism. [A, 316, 322.]

AUTITES (Lat.), n. m. A^{4}t(a^3-u^{4}t)-i(e)'tez(tas). Gen., *auti'tæ*. Gr., *αὐτίτης* (*οἶνος* understood). 1. Home-made (therefore pure) wine; applied also to other pure, unadulterated articles. [A, 311, 316.] 2. New wine (*i. e.*, not a year old). [A, 325.]

AUTO-AUDIBLE, adj. A^{4}t-o-a^{4}d'i^2-bl. From *αὐτός*, of one's self, and *audire*, to hear. Audible to the patient himself (said of cardiac murmurs). [L, 151.]

AUTOCARPIAN, AUTOCARPIOUS, AUTOCARPOUS, adj's. A^{4}t-o-ka^{3}rp'i^2-a^{2}n, -i^2-u^{3}s, -u^{3}s. Lat., *autocarpianus* (from *αὐτός*, by itself, and *καρπός*, a fruit). Fr., *autocarpien*. In botany, consisting of the ovary alone, without any appendages to the pericarp, such as a persistent calyx, etc. (said of fruits). [B, 7, 121.]

AUTOCETACEA (Lat.), n. n. pl. A^{4}t(a^3-u^{4}t)-o(o^2)-se(ka)-ta-(ta^3)'se^2(ke^2)-a^3. From *αὐτός*, absolute, and *κῆτος*, a sea monster. The true whales. [L, 173.] See CETACEA.

AUTOCHEIR, n. A^{4}t'o-kir. Gr., *αὐτόχειρ*. Ger., *Selbstmörder*. One who has committed suicide. [A, 322.]

AUTOCHEIRIA (Lat.), n f. A^{4}t(a^3-u^{4}t)-o(o^2)-ki'(ch^{2}e^2'i^2)-ri^2-a^3. Gr., *αὐτοχειρία*. Fr., *autochirie*. Ger., *Selbstmord*. Suicide. [L, 44.]

AUTOCHEIRICUS (Lat.), adj. A^{4}t(a^3-u^{4}t)-o(o^2)-ki'(ch^{2}e^2'i^2)-ri^{2}k-u^{3}s(u^{4}s). Gr., *αὐτόχειρ*, *αὐτοχείριος*. Suicidal; pertaining to or having a tendency to suicide. [A, 322.]

AUTOCHEIRUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-o(o^2)-ki'(ch^{2}e^2'i^2)-ru^{3}s-(ru^{4}s). See AUTOCHEIR.

AUTOCHIR, n. A^{4}t'o-kir. See AUTOCHEIR.

AUTOCHIRIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-ki^{2}r(ch^{2}er)'i^2-a^3. See AUTOCHEIRIA.

AUTOCHIRICUS (Lat.), adj. A^{4}t(a^3-u^{4}t)-o(o^2)-ki^{2}r(ch^{2}er)'i^{2}k-u^{3}s(u^{4}s). See AUTOCHEIRICUS.

AUTOCHIRUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-o(o^2)-ki(ch^{2}e)'ru^{3}s(ru^{4}s). See AUTOCHEIR.

AUTOCHTHONIC, AUTOCHTHONOUS, adj's. A^{4}t-o^{2}k-tho^{2}n'i^{2}k, -o^{2}k'tho^{2}n-u^{3}s. Gr., *αὐτόχθων* (from *αὐτός*, itself, and *χθών*, a particular land or country). Fr., *autochthone*. Ger., *autochthonisch*, *eingeboren*. It., *autoctono*. Native, indigenous, aboriginal; in pathology, formed at the situation where it is found, and not carried there after its formation (said of a thrombus). [A, 322, 385; D, 3.]

AUTOCINESIS (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-si^{2}n(ki^{2}n)-e(a)'si^{2}s. Gen., *autocine'seos* (*-sis*). Gr., *αὐτοκίνησις*, *αὐτοκινησία* (from *αὐτός*, of itself, and *κινεῖν*, to move). Fr., *autocinésie*. Ger., *Selbstbewegung*. It., *autocinesi*. 1. Voluntary movement. [A, 322, 385.] 2. Movement of living matter accomplished without the action of any apparent contractile fibres (like that of spermatozooids and white blood-corpuscles, the segmentation of the ovum, etc.). [Bouchut (L, 41).]

AUTOCINETIC, adj. A^{4}t-o-si^{2}n-e^{2}t'i^{2}k. Gr., *αὐτοκίνητος*, *αὐτοκινητικός*. Ger., *autokinetisch*. Pertaining to or endowed with the power of voluntary or spontaneous movement. [A, 325; L, 57, 94.]

AUTÖCISCH (Ger.), adj. A^3'ut-u^{5}tz-i^{2}sh. See AUTŒCIC.

AUTOCLAVE (Fr.), adj. and n. O-to-kla^{3}v. From *αὐτός*, of itself, and *clavare*, to fasten. 1. (Adj.) self-closing (said of the mechanism by which an increased influx of blood into an erectile tissue, like that of the corpora cavernosa, closes the channels of egress and produces an erection). [A, 321.] 2. (N.) See *Papin's* DIGESTER.

AUTOCLINIQUE (Fr.), n. O-to-cli^{2}n-ek. From *αὐτός*, by one's self, and *κλινικός* (see CLINICAL). The study of disease in one's own person. [L, 41.]

AUTOCLYSE (Fr.), n. O-to-klez. From *αὐτός* by one's self, and *κλύσις*, the administration of an enema. A form of rectal syringe which a person can use upon himself. [L, 41.]

AUTOCRACY, AUTOCRASY, n's. A^{4}t-o^{2}k'ra^3-si^2. Gr., *αὐτοκράτεια*, *αὐτοκρατορία* (from *αὐτός*, of one's self, and *κρατεῖν*, to rule). Lat., *autocrateia*, *autocratia*, *autocratoria*. Fr., *autocratie*. Ger., *Autocratie*, *Selbstherrschaft*, *selbstständige Herrschaft*. It., *autocrazia*. Sp., *autocrasia*. The intrinsic force (vital principle) of an organism. [A, 322, 385; K, 4; L, 43, 119.]

AUTOCRATIC, adj. A^{4}t-o-kra^{2}t'i^{2}k. Gr., *αὐτοκρατής*. Lat., *autocraticus*. Fr., *autocratique*. Ger., *selbstherrschend*. Pertaining to or endowed with autocracy. [L, 43.]

AUTOCTONIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}k-to(to^2)'ni^2-a^3. From *αὐτοκτονεῖν*, to kill one's self. Suicide. [A, 316.]

AUTODYNAMIQUE (Fr.), adj. O-to-di^{2}n-a^3-mek. From *αὐτος*, of itself, and *δύναμις*, power. Ger., *autodynamisch*. See AUTOCRATIC.

AUTŒCIC, adj. A^{4}t-e^{2}s'i^{2}k. From *αὐτός*, the same, and *οἰκία*, a dwelling. Fr., *autoïque*. Ger., *autöcisch*. Going through all the stages of development on the same host (said of parasites). [B, 54.] Cf. HETERŒCIC and METŒCIC.

AUTO-ENDOSCOPY, n. A^{4}t''o-e^{2}nd-o^{2}s'ko-pi^2. From *αὐτός*, by one's self, *ἔνδον*, within, and *σκοπεῖν*, to examine. Ger., *Auto-Endoscopie*. The use of an endoscope on one's self. [Grünfeld (L, 57).]

AUTOFECUNDATION, n. A^{4}t''o-fe-ku^{3}nd-a'shu^{3}n. From *αὐτός*, by one's self, and *fecundare*, to fertilize. Fr., *autofécondation*. 1. Fecundation in hermaphrodite animals. [L, 185.] 2. In botany, the fecundation of an ovule by the pollen of the same flower, or, in cryptogams, of the female organ by a male organ springing from the same vegetative filament. [B, 121.]

AUTOGALVANISMUS (Lat.), n. m. A^{4}t''(a^3''u^{4}t)-o(o^2)-ga^{2}l-(ga^{3}l)-va^{2}n(va^{3}n)-i^{2}z(i^{2}s)'mu^{3}s(mu^{4}s). For deriv., see *Auto-** and GALVANISM. The production of so-called galvanic phenomena by the action of organic parts (as when parts that have been severed are immediately brought into contact again). [A, 322.]

AUTOGAMOUS, adj. A^{4}t-o^{2}g'a^{2}m-u^{3}s. From *αὐτός*, itself, and *γαμεῖν*, to marry. Of a flower, fertilizing its ovules with pollen from its own anthers. [B, 75.]

AUTOGAMY, n. A^{4}t-o^{2}g'a^{2}m-i^2. The state of being autogamous or that of having autogamous flowers. [B, 75.]

AUTOGAZOGÈNE (Fr.), adj. O-to-ga^{3}z-o-zhe^{2}n. From *αὐτός*, by itself, *gaz*, gas, and *γεννᾶν*, to generate. Producing its own gas (said of a lamp). [L, 41.]

AUTOGÈNE (Fr.), adj. O-to-zhe^{2}n. See AUTOGENOUS.

AUTOGENEAL, adj. A^{4}t-o-jen'e^2-a^{2}l. See AUTOGENOUS.

AUTOGENES (Lat.), adj. A^{4}t(a^3-u^{4}t)-o^{2}j(o^{2}g)'e^{2}n-ez(as). Gr., *αὐτογενής* (from *αὐτός*, itself, and *γεννᾶν*, to generate). Self-producing; producing leaves before being put into the earth (said of bulbs); as a n., the *Narcissus albo flore*. [B, 109.]

AUTOGENESIS (Lat.), n. f. A^{4}t(a^{3}u^{4}t)-o(o^2)-je^{2}n(ge^{2}n)'e^{2}s-i^{2}s. Gen., *autogene'seos* (*-gen'ésis*). From *αὐτός*, itself, and *γένεσις*, generation. Fr., *autogenèse*, *autogénie*. Ger., *Selbsterzeugung*. It., *autogenesi*. The formation of a structure or an entire organism independently of any pre-existing structure or organism of the same kind; spontaneous generation. [A, 321, 385.]

AUTOGENETIC, adj. A^{4}t-o-je^{2}n-e^{2}t'i^{2}k. Fr., *autogène*. 1. Pertaining to or developed by autogenesis. [K.] 2. Due to the absorption of matter existing within the organism itself or proceeding from it, as opposed to heterogenetic (*q. v.*, said of puerperal infection). [A, 398.]

AUTOGENIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-je^{2}n(ge^{2}n)'i^2-a^3. See AUTOGENESIS

AUTOGENOUS, adj. A^{4}t-o^{2}j'e^{2}n-u^{3}s. 1. See AUTOGENETIC. 2. Having a separate centre of development (said of parts of a

bone). [Owen (L, 153).] 3. Essential, as opposed to accidental (said of the elements of pathological formations). [L, 87.]

AUTOGERUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-o^{2}j(o^{2}g)'e^{2}r-u^{3}s(u^{4}s). A name said to have been applied by Dioscorides to the *Narcissus*. [Bory (B, 121).]

AUTOGNOSIS (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}g-no'si^{2}s. Gen., *autogno'seos* (*-sis*). Gr., αὐτόγνωσις, αὐτογνωσία (from αὐτός, of one's self, and γνῶσις, knowledge). Fr., *autognose*. Ger., *Selbstkenntniss*. It., *autognosi*. Knowledge acquired by observation of one's self. [A, 301.]

AUTOGNOSTICUS (Lat.), adj. A^{4}t(a^3-u^{4}t)-o^{2}g-no^{2}s(nos)'ti^{2}k-u^{3}s(u^{4}s). Pertaining to autognosis. [A, 322.]

AUTOGONY, n. A^{4}t-o^{2}g'o^{2}n-i^2. From αὐτογόνος, self-producing. Fr., *autogonie*. Ger., *Autogonie*. Haeckel's term for the formation of simple organisms in an organic medium by the combination of inorganic bodies. [B, 121.]

AUTOGRAPHIC, adj. A^{4}t-o-gra^{2}f'i^{2}k. Gr., αὐτόγραφος (from αὐτός, self, and γράφειν, to write). Lat., *autographus*. Self-registering. [B, 167.] See *A.* AUXANOMETER.

AUTO-INFECTION, n. A^{4}t''o-i^{2}n-fe^{2}k'shu^{3}n. For deriv., see *Auto-** and INFECTION. Infection of the organism with a poison generated within itself. Cf. HETERO-INFECTION.

AUTO-INOCULATION, n. A^{2}t''o-i^{2}n-o^{2}k-u^2-la'shu^{3}n. For deriv., see *Auto-** and INOCULATION. Fr., *auto-inoculation*. Inoculation of an individual with matter from his own person. [G.]

AUTO-INTOXICATION, n. A^{4}t''o-i^{2}n-to^{2}x-i^2-ka'shu^{3}n. For deriv., see *Auto-** and INTOXICATION. Fr., *auto-intoxication*. Poisoning of an organism with matter produced within itself. [Bouchard, "Union méd.," April 10, 1886, p. 577.]—**A.-i. putride** (Fr.). A.-i. with some material that normally exists within the body, which. although ordinarily harmless, becomes poisonous by decomposition. [Netter, "Arch. gén. de méd.," June, 1884, p. 722 (D).]

AUTOÏQUE (Fr.), n. O-to-ek. See AUTŒCIC.

AUTOLABIS (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}l'a^3-bi^{2}s. Gen., *autolab'idis*. From αὐτός, of itself, and λαβίς, a forceps. Fr., *autolabe*. It., *autolabio*. A forceps that closes by its own elasticity. [A, 322.]

AUTO-LARYNGOSCOPY, n. A^{4}t''o-la^{2}r-i^{2}n^2-go^{2}s'ko^{2}p-i^2. For deriv., see *Auto-** and LARYNGOSCOPE. Ger., *Autolaryngoskopie*. The use of the laryngoscope on one's self. [Schnitzler (L, 57).]

AUTO-LITHOTOMIST, n. A^{4}t''o-li^{2}th-o^{2}t'o^{2}m-i^{2}st. Lat., *autolithotomus* (from αὐτός, by one's self, λίθος, a stone, and τέμνειν, to cut). Fr., *auto-lithotomiste*. 1. A person who has performed lithotomy on himself. [L, 43.] 2. An automatic instrument for the performance of lithotomy. [A, 322.]

AUTOMATIC, adj. A^{4}t-o-ma^{2}t'i^{2}k. Gr., αὐτόματος (from αὐτός, of itself, and μᾶν, to will). Lat., *automatos*. Fr., *automatique*. Ger., *automatisch*. It., *automatico*. Sp.. *automático*. Self-acting, *i. e.*, without the intervention of the will (said of physiological acts and of the mechanisms by which they are performed). The term is applied to acts which, although voluntary at first, become habitual and continue to be performed without any further attention being bestowed on them. [A, 301, 385.]

AUTOMATISM, n. A^{4}t-o^{2}m'a^{2}t-i^{2}zm. Gr., αὐτοματισμός (from αὐτοματίζειν, to happen by itself.) Lat., *automatismus*. Fr., *automatisme*. Ger., *Automatie*. Automatic action (*e. g.*, that of the eyelids in closing when a body is thrown toward the eye). [R. Arndt (A, 319); W. B. Carpenter, "N. Y. Med. Jour.," Jan. 6, 1883, p. 1.]—**Rhythmical a.** Ger., *rhythmische Automatie*. Rhythmical automatic action (like that of the heart). [K, 16.]—**Tonic a.** Ger., *tonische Automatie*. A constant automatic action (like that of the sphincters). [K, 16.]

AUTOMATOS, AUTOMATUS (Lat.), adj's. A^{4}t(a^3-u^{4}t)-o^{2}m'-a^3-to^{2}s, -tu^{3}s(tu^{4}s). See AUTOMATIC.

AUTOMEL, n. An East Indian name for the *Tylophora asthmatica*. [B, 88.]

AUTOMNAL (Fr.), adj. O-to^{2}m-na^{3}l. See AUTUMNALIS.

AUTOMNATION (Fr.), n. O-to^{2}m-na^3-si^2-o^{2}n^2. See AUTUMNATIO.

AUTOMYSOPHOBIA (Lat.), n. f. A^{4}t''(a^3''u^{4}t)-o(o^2)-mi^{2}s-(mu^{6}s)-o(o^2)-fo(fo^2)'bi^2-a^3. For deriv., see *Auto-** and MYSOPHOBIA. Ger., *Automysophobie*. Beard and Hughes's term for a form of monomania characterized by a dread of personal uncleanliness. [R. Arndt (A, 319).]

AUTONOE (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}n'o(o^2)-e(a). Gen., *Auton'oes*. From the nymph Αὐτονόη. A section of the botanical genus *Scilla*, including the *Scilla hyacinthoides*. [Webb (B, 121).]

AUTONOMIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}n-o(o^2)'mi^2-a^3. See AUTONOMY.

AUTONOMIC, AUTONOMOUS, adj's. A^{4}t-o^{2}n-o^{2}m'i^{2}k, -o^{2}n'-o^{2}m-u^{3}s. Gr., αὐτόνομος (from αὐτός, of itself, and νόμος, a law). Lat.. *autonomus*. Fr., *autonome*. Ger., *selbstständig*. 1. Acting spontaneously. [B, 229.] 2. Governed by its own laws, independent of other organisms, of other parts of the same organism, or of external influences. [A, 322, 385.]

AUTONOMY, n. A^{4}t-o^{2}n'o-mi^2. Gr., αὐτονομία. Lat., *autonomia*. Fr., *autonomie*. Ger., *Autonomie*, *Selbstständigkeit*, *Selbstleitung*. Independence in function; the condition of being governed by its own laws, without reference to other tissues, organs, or systems (said of parts of an organism). [A, 385.]

AUTONOSOGRAPHIA (Lat.), n. f. A^{4}t''(a^3''u^{4}t)-o(o^2)-no(no^2)-so(so^2)-gra^{2}f-(gra^{3}f)'i^2-a^3. From αὐτός, of one's self, νόσος, sickness, and γράφειν, to write. Fr., *auto-nosographie*. Ger., *Autonosographie*. A description of one's own disease. [F. G. Sulzer (A, 322).]

AUTONOSOGRAPHICUS (Lat.), adj. A^{4}t''(a^3''u^{4}t)-o(o^2)-no(no^2)-so(so^2)-gra^{2}f(gra^{3}f)'i^{2}k-u^{3}s(u^{4}s). Pertaining to autonosographia. [A, 322.]

AUTONYCTOBATESIS, AUTONYCTOBATIA (Lat.), n's f. A^{4}t''(a^3''u^{4}t)-o(o^2)-ni^{2}k(nu^{6}k)-to(to^2)-ba^3-te(ta)'si^{2}s, -ba(ba^3)'shi^2-(ti^2)-a^3. From αὐτός, by one's self, and νυκτοβατία, or νυκτοβαδία (from νύξ, night, and βαίνειν, to walk), traveling by night. See AUTHYPNOBATESIS.

AUTO-OPHTHALMOSCOPE, n. A^{4}t''o-o^{2}f-tha^{2}l'mo^{2}s-kop. See AUTOPHTHALMOSCOPE.

AUTO-OPHTHALMOSCOPY, n. A^{4}t''o-o^{2}f-tha^{2}l-mo^{2}s'ko^{2}p-i^2. See AUTOPHTHALMOSCOPY.

AUTOPEPSIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-pe^{2}p'si^2 a^3. From αὐτός, itself, and πεπτειν (= πέσσειν), to digest. Fr., *autopepsie*. Self-digestion; post-mortem softening of the stomach. [K.]

AUTOPHAGI (Lat.), n. m. pl. A^{4}t(a^3-u^{4}t)-o^{2}f'a^3-ji(ge). From αὐτός, by itself, and φαγεῖν, to eat. Birds whose young are capable of running about and obtaining food for themselves as soon as they are hatched. [A, 359.]

AUTOPHAGIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-fa^{2}j(fa^{3}g)'i^2-a^3. Fr., *autophagie*. Self-consumption; the wasting of the body that takes place as the result of insufficient food or diseases that interfere with nutrition. [D, 72, 74.]—**A. artificialis.** Fr., *autophagie artificielle*. A proposed method of prolonging life when death from absolute privation of food is apprehended, as in cases of shipwreck and the like, by causing the person to swallow small quantities of his own blood. [Anselmier (A, 385).]—**A. spontanea.** See *A.*

AUTOPHAGISM, n. A^{4}t-o^{2}f'a^3-ji^{2}zm. Lat., *autophagismus*. See AUTOPHAGIA.

AUTOPHAGOUS, adj. A^{4}t-o^{2}f'a^3-gu^{3}s. Lat., *autophagus*. Belonging to the *Autophagi* (*q. v.*). [L, 147.]

AUTOPHAGY, n. A^{4}t-o^{2}f'a^3-ji^2. See AUTOPHAGIA.

AUTOPHIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)'fi^2-a^3. Fr., *autophie*. See AUTOPSY.

AUTOPHILIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-fi^{2}l'i^2-a^3. From αὐτός. self, and φιλεῖν, to love. Fr., *autophilie*. Ger., *übermässige Selbstliebe*. Immoderate self-love, bordering on insanity. [A, 322.]

AUTOPHONIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-fo(fo^2)'ni^2-a^3. Gr., αὐτοφονία (from αὐτός, of one's self, and φόνος, murder)—1st def.; αὐτοφωνία (from αὐτός, itself, and φωνή, the voice)—2d def. Fr., *autophonie*. Ger., *Selbstmord* (1st def.), *Selbststimme* (2d def.). 1. Suicide. [A, 322.] 2. See AUTOPHONY.

AUTOPHONICUS (Lat.), adj. A^{4}t(a^3-u^{4}t)-o(o^2)-fo^{2}n'i^{2}k-u^{3}s-(u^{4}s). Fr., *autophonique*. Pertaining to autophonia. [L, 41.]

AUTOPHONOMANIA (Lat.), n. f. A^{4}t''(a^3''u^{4}t)-o(o^2)-fo^{2}n-o-(o^2)-ma(ma^3)'ni^2-a^3. For deriv., see AUTOPHONIA and MANIA. Suicidal insanity. [L, 45.]

AUTOPHONOS, AUTOPHONUS (Lat.), adj's. A^{4}t(a^3-u^{4}t)-o^{2}f'o^{2}n-o^{2}s, -u^{3}s(u^{4}s). Gr., αὐτοφόνος. Suicidal; as a n., one who commits suicide. [A, 322.]

AUTOPHONY, n. A^{4}t-o^{2}f'o^{2}n-i^2. Gr., αὐτοφωνία (from αὐτός, itself, and φωνή, the voice). Lat., *autophonia*, *vox propria*. Fr., *autophonie*. Ger., *Autophonie*, *Selbststimme*. It., *autofonia*. Sp., *autofonía*. 1. A method of auscultatory examination, or the quality of the sound heard, by the auscultator's applying his head to the patient's chest, and then speaking in a loud voice; the quality of the tone varies according to the condition of the patient's chest. The method is sometimes used when the patient is unable or unwilling to speak. [A, 322, 385; L, 41; Barth and Roget (L, 87).] 2. The altered resonance of one's own voice when one is the subject of acute aural catarrh, due to the impediment to the circulation of air caused by the swollen tissues of the aural passages. [B; F.]

AUTOPHOSPHORUS (Lat.), n. m. A^{4}t(a^3-u^{4}t)-o(o^2)-fo^{2}s(fos)'-fo^{2}r-u^{3}s(u^{4}s). Gr., αὐτοφωσφόρος. Fr., *autophosphore*. An old name for phosphorus. [A, 325; L, 41, 109.]

AUTOPHTHALMOSCOPE, n. A^{4}t-o^{2}f-tha^{2}l'mo^{2}s-kop. From αὐτός, of one's self, ὀφθαλμός, the eye, and σκοπεῖν, to examine. Fr., *auto-ophthalmoscope*. Ger., *Auto-Ophthalmoskop*. An ophthalmoscope with which one may inspect the interior of his own eye. [L, 49.]

AUTOPHTHALMOSCOPY, n. A^{4}t-o^{2}f-tha^{2}l-mo^{2}s'ko^{2}p-i^2. Fr., *auto-ophthalmoscopie*. Ger., *Auto-Ophthalmoskopie*. The examination of one's own eyes with the ophthalmoscope.

AUTOPHYE (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}f'i^2(u^6)-e(a). From αὐτός, of itself, and φύη (from φύειν, to spring forth), a springing forth. A natural spring. [L, 105.]

AUTOPHYLLOGENY, n. A^{4}t-o-fi^{2}l-lo^{2}j'e^{2}n-i^2. From αὐτός, of itself, φύλλον, a leaf, and γεννᾶν, to generate. The growth of one leaf upon another. [A, 316.]

AUTOPHYSIOTHERAPEIA, AUTOPHYSIOTHERAPIA (Lat.), n's f. A^{4}t'''(a^3'''u^{4}t)-o(o^2)-fi^{2}z(fu^{6}s)''i^2-o(o^2)-the^{2}r-a^3-pl'-(pe^2'i^2)-a^3, -pi(pe)'a^3. From αὐτός, of itself, φύσις, nature, and θεραπεία, medical treatment. Fr., *auto-physiothérapie*. Ger., *Naturkraftsheilung*, *naturgemässe Selbstheilung*. Spontaneous cure (*i. e.*, by the powers of nature). [A, 322; L, 30.]

AUTOPLASTIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o(o^2)-pla^{2}st(pla^{3}st)'i^2-a^3. See AUTOPLASTY.

AUTOPLASTIC, adj. A^{4}t-o-pla^{2}st'i^{2}k. Lat., *autoplasticus*. Fr., *autoplastique*. Ger., *autoplastisch*. 1. Pertaining to autoplasty. [L, 41.] 2. Serving the purpose of autoplasty (said of a flap). [A, 301.]

AUTOPLASTICA, AUTOPLASTICE (Lat.), n's f. A^{4}t-(a^3-u^{4}t)-o(o^2)-pla^{2}st(pla^{3}st)'i^2-ka^3, -se(ka). See AUTOPLASTY.

AUTOPLASTIE (Fr.), n. O-to-pla^{3}st-e. See AUTOPLASTY.—**A. à distance.** Autoplasty in which the transplanted tissue is taken from a distant part. [L, 41.]—**A. auriculaire.** See OTOPLASTY.—**A. au voisinage par méthode indienne.** Autoplasty by the sliding of flaps, together with an actual transplantation of tissue taken from the immediate neighborhood. [L, 41.]—**A. indienne.** Autoplasty in which a flap is made from an adjacent part and twisted into place. [L, 41.]—**A. italienne.** It., *autoplastia alla Tagliacozzi* (o *per trapiantamento*). Autoplasty in which the transplanted tissue is taken from a distant part, but is not completely detached until it has contracted adhesions in its new situation. [A, 314; L, 41.]—**A. naturelle.** The restoration of lost contour by the unaided efforts of nature. [Verneuil (L, 87).]—**A. naturelle par emprunt.** The natural restoration of a lost part by adjacent tissue being drawn to the locality by cicatricial contraction. [Verneuil (L, 87).]—**A. naturelle par régénération.** An actual reproduction of a lost part. [L, 87.]—**A. par débridement.** Autoplasty consisting largely of the division of cicatricial contractions. [L, 41.]—**A. par dédoublement, A. par doublure.** A form of autoplasty, devised by Richard, in which the flap is reversed, so that the raw surface is directed externally. [Verneuil (L, 87).]—**A. par extension forcée.** The approximation of separated parts by traction. [L, 41.]—**A. par glissement.** A form of autoplasty in which flaps of the neighboring skin are dissected up and slid into such a position as to cover a fistula or fill up a vacuity. [L, 41.]—**A. par migration successive du lambeau.** A form of autoplasty in which the tissue to be transplanted is taken from a distant part, but, instead of being conveyed at once to the seat of the deformity, is first made to contract adhesions to some intermediate part. [L, 87.]—**A. par simple rapprochement, A. par simple traction.** The simple approximation of parts separated from each other. [L, 41.]—**A. par transformation inodulaire.** The closure of a fistula by cauterization. [Verneuil (L, 87).]—**A. spontanée.** See *A. naturelle.*

AUTOPLASTIK (Ger.), n. A^3-u-to-pla^{3}st-ek'. See AUTOPLASTY.

AUTOPLASTIQUE (Fr.), adj. and n. O-to-pla^{3}st-ek. See AUTOPLASTIC and AUTOPLASTY.

AUTOPLASTS, n. pl. A^{4}t'o-pla^{2}sts. From **αὐτός**, of itself, and **πλάσσειν**, to form. Certain cells (so called because each has a separate origin) which appear to arise independently in the nutritive yolk of the *Cephalopoda;* reach the surface, become fusiform, and form an investment or membrane of a single layer for the nutritive yolk; and disappear with it. Their significance is not understood. [J, 56; L, 121.]

AUTOPLASTY, n. A^{4}t'o-pla^{2}st-i^2. Gr., **αὐτοπλαστική** (**τέχνη** understood). Lat., *autoplastica* (*ars* understood). Fr., *autoplastie, autoplastique.* Ger., *Autoplastik.* It., *autoplastia.* Sp., *autoplastia.* The restoration of a lost part by material belonging to the same organism, usually by transplantation from a neighboring or a remote part. [P. F. Blandin (A, 322).] The term is said to have been first used by Labat, in 1834. [L, 197.]

AUTOPSIA (Lat.), n. f. A^{4}t(a^3-u^{4}t)-o^{2}p'si^2-a^3. Gr., **αὐτοψία** (from **αὐτός**, for one's self, and **ὄψις**, a view). See AUTOPSY.

AUTOPSICAL, adj. A^{4}t-o^{2}ps'i^{2}k-a^{2}l. Fr., *autopsique.* See AUTOPTICAL.

AUTOPSIDES, n. pl. A^{4}t'o^{2}ps-i^{2}dz(idz). Haüy's name for a class of metallic substances having naturally a metallic lustre. [B, 195.]

AUTOPSORIN, n. A^{4}t-o^{2}p-so'ri^{2}n. From **αὐτός**, of one's self, and **ψώρα** (see PSORA). A term said to be applied by the homœopathists to a virus given as a medicine to the individual from whom it is taken. [L, 116.]

AUTOPSY, n. A^{4}t'o^{2}p-si^2. Lat., *autopsia* (*q. v.* for deriv.). Fr., *autopsie.* Ger., *Autopsie, Selbstsehen, Leichenöffnung* (2d def.). *Obduction* (2d def.). It., *autopsia, autossia.* Sp., *autopsia.* 1. A personal examination or inspection. [A, 322, 385.] 2. As now commonly employed, a post-mortem examination. In this sense, it seems to have been first used by J. von Rühl, W. Crighton, and Bluhm, in an account of the case of the Empress Maria Feodorowna, of Russia. ["Salzb. med.-chir. Ztg.," 1829, 1, p. 107 (A, 322).]—**Cadaveric a.** Fr., *autopsie cadavérique.* See *A.* (2d def.).—**Medical a.** Fr., *autopsie médicale.* An a. (2d def.) for scientific purposes only, as distinguished from a medico-legal a. (*q. v.*). [G. Tourdes (L, 87).]—**Medico-legal a.** Fr., *autopsie médico-légale.* An a. (2d def.) for the purpose of aiding in a judicial inquiry. [L.]

AUTOPTICAL, adj. A^{4}t-o^{2}p'ti^{2}k-a^{2}l. Gr., **αὐτοπτικός**. Lat., *autopticus.* Fr., *autoptique.* Ger., *autoptisch.* Pertaining to or ascertained by an autopsy. [L, 43, 56.]

AUTOPYRITES, AUTOPYROS, AUTOPYRUS (Lat.), n's m. A^{4}t(a^3-u^{4}t)-o(o^2)-pi^{2}r(pu^{6}r)'i^{2}t-ez(as), -pi(pu^6)'ro^{2}s, -ru^{3}s(ru^{4}s). Gr., **αὐτοπυρίτης, αὐτόπυρος** (from **αὐτός**, itself, and **πυρίτης** [**ἄρτος** understood], wheaten bread, or **πυρός**, wheat). Ancient names for bread made of unbolted flour. [B, 109; L, 94.]

AUTORRHINOSCOPY, n. A^{4}t''o^{2}r-ri^{2}n-o^{2}s'ko^{2}p-i^2. From **αὐτός**, of one's self, **ῥίς**, the nose, and **σκοπεῖν**, to examine. Ger., *Autorrhinoskopie.* Rhinoscopy (*q. v.*) practised on one's self. [B. Fraenkel (L, 57).]

AUTOSAURIA (Lat.), n. n. pl. A^{4}t(a^3-u^{4}t)-o(o^2)-sa^{4}r'(sa^3'u^{4}r)-i^2-a^3. From **αὐτός** (see *Auto-**), and **σαύρα**, a lizard. See LACERTILIA.

AUTOSCOPE, n. A^{4}t'o^{2}s-kop. From **αὐτός**, one's self, and **σκοπεῖν**, to inspect. See AUTOPHTHALMOSCOPE.

AUTOSCOPY, n. A^{4}t-o^{2}s'ko^{2}p-i^2. Lat., *autoscopia.* Fr., *autoscopie.* Ger., *Selbstuntersuchung.* 1. See AUTOPSY. 2. The examination of one's own person for diagnostic purposes. [A, 316.]

AUTOSITAIRE (Fr.), adj. and n. O-to-si^{2}t-a^{2}r. See AUTOSITIC and AUTOSITE.

AUTOSITE, n. A^{4}t'o-sit. From **αὐτόσιτος** (from **αὐτός**, for himself, and **σῖτος**, nourishment), one who provides his own food. Fr., *autosite, monstre autositaire* (I. Geoffroy St.-Hilaire). Ger., *Autosit.* 1. A monster capable of carrying on an independent existence for a few hours after its separation from the maternal organism, and in some instances indefinitely; possessing, therefore, a perfect circulatory system, lungs, digestive organs, and at least part of a head. In cases of double monstrosity, both individuals are a's when they both continue to live by the activity of their own organs, or both contribute to the common vitality, or each maintains its own. [A, 301, 321, 387; Marchand (A, 319).] Cf. OMPHALOSITE and PARASITE. 2. An organism in or on which another organism lives as a parasite. [Leuckart, quoted by F. S. Billings, "N. Y. Med. Jour.," Aug. 4, 1883, p. 116 (D).]

AUTOSITIC, AUTOSITOUS, adj's. A^{4}t-o-si^{2}t'i^{2}k, -si'tu^{3}s. Gr., **αὐτόσιτος**. Lat., *autositus.* Fr., *autositaire.* Ger., *autositisch.* Pertaining to or having the characteristics of an autosite. [L.]

AUTOSOMNAMBULISMUS (Lat.), n. m. A^{4}t''(a^3''u^{4}t)-o(o^2)-so^{2}m-na^{2}m(na^{3}m)-bu^2(bu^4)-li^{2}z(li^{2}s)'mu^{3}s(mu^{4}s). For deriv., see *Auto-** and SOMNAMBULISM. See AUTHYPNOBATESIS.

AUTOSPADON (Lat.), n. m. A^{4}t(a^3-u^{4}t)-o^{2}s'pa^3-do^{2}n(don). Gen., *autospado'nos (-nis), -on'tos (-tis).* From **αὐτός**, of one's self, and **σπάδων**, a eunuch. One who has castrated himself or made himself impotent. [A, 322.]

AUTOSPECULUM (Lat.), n. n. A^{4}t(a^3-u^{4}t)-o(o^2)-spe^{2}k'u^2(u^4)-lu^{3}m(lu^{2}m). For deriv., see *Auto-** and SPECULUM. A form of vaginal speculum for a patient to use on herself. [L, 45.] Cf. *Bath* SPECULUM.

AUTOSTETHOSCOPE, n. A^{4}t''o-ste^{2}th'o^{2}s-kop. Lat., *autostethoscopum* (from **αὐτός**, of one's self, **στῆθος**, the chest, and **σκοπεῖν**, to examine). Fr., *autostéthoscope.* Ger., *Autostethoskop, Selbstbrustuntersucher.* See AUTECHOSCOPE.

AUTOSTYLIC, adj. A^{4}t-o-stil'i^{2}k. From **αὐτός**, of itself, and **στῦλος**, a bearing. Articulated with the cranium without the intervention of the hyoid arch (said of the mandibular arch). [Huxley (L, 201).] Cf. AMPHISTYLIC (in Supplement) and HYOSTYLIC.

AUTOSUGGESTION, n. A^{4}t-o-su^{3}g(su^{3}d)-je^{2}st'yu^{3}n. For deriv., see *Auto-** and SUGGESTION. Fr., *auto-suggestion.* Suggestion (in the psychological sense) founded on an awakening or reproduction of previous sensory impressions ("*comme le réveil et l'extériorisation de sensations antérieurement emmagasinées*"). [H. Mabillo and J. Ramadier, "Arch. de neurol.," July, 1886, p. 54.]

AUTOSUSPENSION, n. A^{4}t-o-su^{3}s-pe^{2}n'shu^{3}n. See *Self-*SUSPENSION.

AUTOTHERAPEIA, AUTOTHERAPIA (Lat.), n's f. A^{4}t(a^3-u^{4}t)-o(o^2)-the^{2}r-a^3-pi'(pe^2'i^2)-a^3, -pi(pe)'a^3. From **αὐτός**, of itself, and **θεραπεια**, medical treatment. Fr., *autothérapie.* The spontaneous cure of disease. [A, 385.]

AUTOTOMIE (Fr.), n. O-to-to-me. From **αὐτός**, itself, and **τομή**, a cutting. The spontaneous shedding of a limb, in certain of the *Articulata*, for the purpose of escaping capture. [Fredericq (A, 385).]

AUTOTRANSFUSION, n. A^{4}t''o-tra^{2}ns-fu^2'zhu^{3}n. For deriv., see *Auto-** and TRANSFUSION. It., *autotrasfusione.* The expedient of transferring a great portion of the blood contained in the lower part of the body to the central portions and especially the brain, by bandaging the lower limbs tightly and raising the hips; resorted to in cases of severe hæmorrhage and during operations on persons who are very weak. [C. T. Hunter (A, 277).]

AUTOUR (Fr.), n. O-tur. The bark of an Oriental tree of unknown characteristics, used in the preparation of carmin. [B, 121.]

AUTOXENOUS, adj. A^{4}t-o^{2}x'e^{2}n-u^{3}s. From **αὐτός**, the same, and **ξένος**, a guest. See AUTŒCIC.

AUTRUCHE (Fr.), n. O-tru^{6}sh. The ostrich. [A, 385.] See STRUTHIO *camelus.*

AUTTOOKALADUMBO, n. A Tamil name for the *Ipomœa pes capræ.* [P. S. Mootooswamy, "Indian Med. Gaz.," Nov., 1886, p. 325.]

AUTUMNALIS (Lat.), adj. A^{4}t(a^3-u^{4}t)-u^{3}m(u^{4}m)-na(na^3)'li^{2}s. From *autumnus*, autumn. Fr., *automnal.* Ger., *herbstlich.* It., *autumnale.* Autumnal; in botany, flowering in the autumn, or growing and flowering in the course of one autumn. [B, 1.]

AUTUMNATIO (Lat.), n. f. A^{4}t(a^3-u^{4}t)-u^{3}m(u^{4}m)-na(na^3)'shi^2-(ti^2)-o. Gen., *autumnatio'nis.* Fr., *automnation.* The influence of autumn on plants, shown in the ripening of fruits, the change of color in foliage, etc. [B, 195.]

AUTUMNUS (Lat.), adj. A^{4}t(a^3-u^{4}t)-u^{3}m(u^{4}m)'nu^{3}s(nu^{4}s). See AUTUMNALIS.

AUVAREY (Tamil), n. The *Cassia auriculata.* [P. S. Mootooswamy, "Indian Med. Gaz.," Jan., 1887, p. 3.]

AUVARYMOTCHY (Tamil), n. The *Lablab vulgaris.* [B, 172.]

AUVER, n. An alchemical name for pure or soft water. [Ruland (A, 325).]

AUVERNAT (Fr.), n. O-ve^{2}r-na^3. A general name for certain heavy red wines made near Orléans, so called because the vines were originally brought from Auvergne. [A, 300.]

AUVESQUE (Fr.), n. O-ve^{2}sk. A sort of cider made about Bayeux. [L, 41, 109.]

AUVIER (Fr.), n. O-vi^2-a. Carpathian balsam (the turpentine of the *Pinus cembra*). ["Proc. of the Am. Pharm. Assoc.," xxvi, p. 322 (B).]

AUXANOMETER, n. A^{4}x-a^{2}n-o^{2}m'e^{2}t-u^{5}r. From **αὐξάνειν**, to increase, and **μέτρον**, a measure. Fr., *auxanomètre.* An instrument designed to measure the growth of plants in their length. The simplest is Sachs's *thread-indicator*, which consists of a thread

attached to a growing branch or an internode and passing over a pulley. A weight is attached to the thread to keep it constantly stretched, also an index to mark the degree of elongation. The *arc-indicator*, or *arc-a.*, is the same in principle, but the index is carried by the motion of the thread around a graduated arc, and the movement of the needle is much magnified. [B, 167, 229.]—**Arc a.** Fr., *indicateur sur fil.* See under *A.*—**Autographic a., Recording a.** A self-registering a. devised by Sachs. [B, 167.]

AUXEMETER, n. A^{4}x-e^{2}m'e^{2}t-u^{5}r. See AUXOMETER.

AUXEMMA (Lat.), n. n. A^{4}x(a^3-u^{4}x)-e^{2}m'ma^3. Gen., *auxem'-matos* (*-tis*). A genus of plants separated by Miers from *Cordia* and placed in a separate order, the *Auxemmeæ*. The species differ from those of *Cordia* in having a very acuminate 5-winged persistent calyx, much longer than the drupaceous fruit. [B, 121.]

AUXEMMEÆ (Lat.), n. f. pl. A^{4}x(a^3-u^{4}x)-e^{2}m'me^2-e(a^3-e^3). An order of plants made by Miers, including the genera *Auxemma*, *Sacellium*, and *Patagonula*. [B, 121.]

AUXENOMETER, AUXESIMETER, n's. A^{4}x-e^{2}n-o^{2}m'e^{2}t-u^{5}r, -e^{2}s-i^{2}m'e^{2}t-u^{5}r. See AUXOMETER.

AUXESIS (Lat.), n. f. A^{4}x(a^3-u^{4}x)-e(a)'si^{2}s. Gen., *auxe'seos* (*-sis*). Gr., αὔξησις. Fr., *auxésie.* Ger., *Vermehrung, Zunahme, Wachsthum.* Growth, augmentation, increase in size or power, or in the severity of a disease. [K; L, 43.]

AUXILIARIS (Lat.), adj. A^{4}x(a^3-u^{4}x)-i^{2}l-i^2-a(a^3)'ri^{2}s. From *auxilium*, succor. Auxiliary; as a n., the pyramidalis abdominis muscle. [A, 316.]

AUXILIARY, adj. A^{4}x-i^{2}l'i^2-a-ri^2. Lat., *auxiliaris, auxiliarius.* Fr., *auxiliaire.* Ger., *helfend.* It., *ausiliario.* Sp., *auxiliar.* Assisting, supplementary; as a n., an adjuvant. [B, 88.]—**Auxiliaries of respiration.** The muscles brought into action in labored breathing. [J.]

AUXILIATIO (Lat.), n. f. A^{4}x(a^3-u^{4}x)-i^{2}l-i^2-a(a^3)'shi^2(ti^2)-o. Gen., *auxiliatio'nis.* Fr., *auxiliation.* See AUXILIUM.

AUXILIUM (Lat.), n. n. A^{4}x(a^3-u^{4}x)-i^{2}l'i^2-u^{3}m(u^{4}m). Gr., βοήθεια, βοήθημα. Fr., *secours.* Ger., *Hülfe.* It., *ajuto.* An auxiliary, also any assistance in cases of disease or injury, or a remedy. [A, 311, 325; L, 94.]—**Auxilia medica.** Remedies. [B, 98.]

AUXIOMETER, n. A^{4}x-i^2-o^{2}m'e^{2}t-u^{5}r. See AUXOMETER.

AUXIS (Lat.), n. f. A^{4}x'(a^3'u^{4}x)-i^{2}s. Gen., *aux'eos* (*-is*). Gr., αὔξις. See AUXESIS.

AUXOCARDIE (Fr.), n. Ox-o-ka^{3}rd-e. From αὔξις, increase, and καρδία, the heart. Ceradini's term for the increase in the heart's volume when its cavities are distended to their greatest extent; the opposite of *méiocardie* (*q. v.*). [K, 19.]

AUXOMETER, n. A^{4}x-o^{2}m'e^{2}t-u^{5}r. Lat., *auxometrum* (from αὔξις, increase, and μέτρον, a measure). Fr., *auxomètre.* Ger., *Auxometer.* An instrument for measuring the magnifying power of an optical apparatus, the growth of a part (see AUXANOMETER), or the power of muscular contraction (see DYNAMOMETER). [B, 48, 107; L, 180.]

AUXOSPORE, n. A^{4}x'o-spor. From αὔξειν (= αὐξάνειν), to increase, and σπόρος, a seed. Fr., *auxospore.* A name given to large spores or new individuals formed among the *Conjugatæ* (especially the diatoms), by either non-sexual or sexual reproduction. In the non-sexual formation of a's, the protoplasm of the smaller of the two individuals into which a diatom divides escapes from its shell and enlarges until it reaches the size of the other, when it acquires a new shell. In the sexual formation of a's, two individuals approach each other, their valves separate, and the two protoplasmic masses unite, forming one or often two fission-masses, which subsequently enlarge and acquire new shells. [B, 75.]

AUXUBA, n. A large tree with edible fruit, probably the *Carissa carandas* of Linnæus. [B, 88.]

AUXUNGIA (Lat.), n. f. A^{4}x(a^3-u^{4}x)-u^{3}n(un^2)'ji^2(gi^2)-a^3. See AXUNGIA.

AUZANDRI (Fr.), n. O-za^{3}n^2-dre. A name for the *Quercus coccifera* in the south of France. [B, 198.]

AUZERAULE (Fr.), n. O-ze^{2}r-ol. The *Acer campestre.* [B, 173.]

AUZOMETER, n. A^{4}z-o^{2}m'e^{2}t-u^{5}r. See AUXOMETER.

AUZON (Fr.), n. O-zo^{2}n^2. 1. A place in the department of Gard, France, where there are two springs containing varying proportions of calcium, magnesium, and sodium sulphates, calcium and magnesium bicarbonates, calcium, magnesium, and sodium sulphides, alkaline chlorides, silica, and alumina. 2. A spring in the department of the Haute-Loire, France, containing sodium bicarbonate; of only local repute. [L, 87.]

AUZUBA (Sp.), n. A^3-u-th^{2}u'ba^3. According to Oviedo, the *Sideroxylon a.* [B, 121.]

AUZURE (Fr.), n. O-zu^{6}r. A San Domingo tree of unknown botanical characters, having a yellow, sweetish, edible fruit. [B; L, 109.]

AVA, n. Syn.: *awa, aba-kava, kava.* A name given in the South Sea Islands to the *Piper methysticum*, also to a fermented drink made from its root; in New Caledonia, applied to the *Broussonetia papyrifera;* and in Japan, according to Thunberg, to the *Panicum verticillatum.* [B, 88, 121; L, 56.]—**A'pfeffer** (Ger.). The *Piper methysticum.* [L, 80.]

AVA-AVA, n. A Tahiti name for tobacco. [B, 88.]

AVACARI [J. Bauhin]. **AVACCARI,** n's. A tree, perhaps a species of myrtle; astringent and used in dysentery. [B, 88; Bory (B, 121).]

AVAGOODA (Teloogoo), n. The *Trichosanthes palmata.* [B, 172.]

AVAGOUN, n. A Languedoc name for the *Ononis arvensis.* [B, 121.]

AVAILLES (Fr.), n. A^3-va^3-i^2-y'. Syn.: *Absac.* A place in the department of Charente, France, where there is a cold spring containing sodium chloride. [A, 385.]

AVALANCHE, n. A^{2}v'a^3-la^{2}nch. Fr., *avalanche nerveuse.* A term applied by some authors to a phenomenon observed when two similar excitations of a motor nerve are practised, one near the muscle to which it is distributed, and the other at a distance; the latter is said to cause the more energetic contraction of the muscle, and the phenomenon is explained by the theory that the excitation gathers force, like an a., as it proceeds through the nerve. [A, 385; L, 158.]

AVALE (Fr.), n. A^3-va^{3}l. 1. See AVALURE. 2. The posterior aspect of the incisor teeth of the ox and the dog. [A, 301.]

AVALÉ (Fr.), adj. A^3-va^{3}l-a. Relaxed, sunken, pendulous (*e. g.*, *ventre a.* = pendulous abdomen).

AVALGUJA (Sanscr.), n. The *Vernonia anthelminthica.* [B, 181.]

AVALI, n. A genus of evergreen anonaceous shrubs. The powder of the root is used to arrest dysentery; a decoction, used as a lotion, allays articular pains; and the oil of the root is used in diseases of the liver. [L, 109.]

AVALKATI, n. The *Phyllanthus emblica.* ["Proc. of the Am. Pharm. Assoc.," xxviii, p. 194 (B).]

AVALOO (Teloogoo), n. A species of mustard. [A, 316.]

AVALSES, n. A Languedoc name for the *Quercus coccifera.* [B, 121.]

AVALURE (Fr.), n. A^3-va^{3}l-u^{6}r. An enlargement of a horse's hoof, limited to one portion or affecting the whole circumference. [L, 32.]

AVALVULAIRE (Fr.), adj. A^3-va^{3}lv-u^6-la^{2}r. From α priv., and *valvula*, a valve. Having no valves. [A, 385.]

AVANACOE, AVANACU [Rheede], **AVANAK,** n's. See AVANKOU.

AVANCARÉ (Fr.), n. A^3-va^{3}n^2-ka^3-ra. Syn.: *liane des Antilles.* A West Indian plant, perhaps a species of *Phaseolus.* [B, 121.]

AVANCÉ (Fr.), adj. A^3-va^{3}n^2-sa. See PRODUCTUS.

AVANCEMENT (Fr.), n. A^3-va^{3}n^{2}s-ma^{3}n^2. See ADVANCEMENT.

AVANCOU, n. See AVANKOU.

AVANESE (It.), n. A^3-va^{3}n-a'sa. The *Galega officinalis.* [B, 121.]

AVANGOULE (Fr.), n. A^3-va^{3}n^2-gul. The lentil (*Ervum lens*). [B, 121.]

AVANKOU (Malay), n. The *Ricinus communis.* [B, 172; L, 85.]

AVA-NORI, n. A sort of sea-weed (*Fucus* or *Ulva*) which collects on the coast of Japan and is eaten with rice. [Thunberg (B, 88).]

AVANT-BOUCHE (Fr.), n. A^3-va^{3}n^2-bush. The anterior part of the mouth: according to some authors, the portion between the lips and the teeth; according to others, extending as far back as the velum palati. [A, 300, 385; L, 43.]

AVANT-BRAS (Fr.), n. A^3-va^{3}n^2-bra^3. The forearm. [A, 385.]

AVANT-CARPE (Fr.), n. A^3-va^{3}n^2-ka^{3}rp. The metacarpus. [L, 41.]

AVANT-CŒUR (Fr.), n. A^3-va^{3}n^2-ku^{5}r. See ANTICARDIUM and ANTICOR.

AVANT-COIN (Fr.), n. A^3-va^{3}n^2-kwa^{3}n^2. See PRÆCUNEUS.

AVANT-COUREUR (Fr.), n. A^3-va^{3}n^2-ku-ru^{5}r. A precursor, a premonitory sign or symptom. [L, 43.]

AVANT-GOUT (Fr.), n. A^3-va^{3}n^2-gu. Fore-taste; the imaginary taste of a substance before it is taken into the mouth. [A, 300.]

AVANT-LAIT (Fr.), n. A^3-va^{3}n^2-le^2. 1. A pair of prominences peculiar to the cow, situated between the udder and the thigh, immediately in front of the blood-vessels of the udder. [A, 300, 385.] 2. An œdematous puffiness in front of a cow's udder, which often precedes parturition and disappears when lactation is established. [L, 41.]

AVANT-MAIN (Fr.), n. A^3-va^{3}n^2-ma^{2}n^2. 1. The metacarpus. [Paré (A, 300).] 2. The forepart of a horse. [A, 300, 385.]

AVANT-MEMBRE (Fr.), n. A^3-va^{3}n^2-ma^{3}m-br'. The fore-limb of an animal. [L, 41.]

AVANT-MOLAIRE (Fr.), n. A^3-va^{3}n^2-mol-a^{2}r. A pre-molar tooth. [L, 41.]

AVANT-MUR (Fr.), n. A^3-va^{3}n^2-mu^{6}r. See CLAUSTRUM.

AVANT-PEAU (Fr.), n. A^3-va^{3}n^2-po. The prepuce. [L, 41.]

AVANT-PIED (Fr.), n. A^3-va^{3}n^2-pe-a. The metatarsus; in the pl., *a.-p's*, the anterior part of the feet in insects. [L, 41, 180.]

AVANT-POIGNET (Fr.), n. A^3-va^{3}n^2-pwa^{3}n(pon)-ya. The metacarpus; as a popular term, the palm of the hand. [L, 41.]

AVANT-POINT (Fr.), n. A^3-va^{3}n^2-pwa^{3}n^2. See CLAUSTRUM.

AVANT-POITRINE (Fr.), n. A^3-va^{3}n^2-pwa^3-tren. Latreille's term for the inferior portion of the first segment of the thorax in insects. [L, 109, 180.]

AVANT-SUIF (Fr.), n. A^3-va^{3}n^2-swef. A popular name for the mesenteric fat. [L, 41.]

AVANT-STERNUM (Fr.), n. A^3-va^{3}n^2-ste^{2}rn-om. Latreille's term for the lower middle portion of the first segment of the thorax in insects. [L, 180.]

AVAOUSSÉ (Fr.), **AVAOUSSES** (Fr.), n's. A^3-va^3-us-sa, -va^3-us. See AVALSES.

AVARAMO, n. A Brazilian shrub, perhaps a species of *Acacia*, used as a remedy for ulcers and cancer. [B, 121.]—**A. temo.** See ABAREMOTEMO.

AVARA-PALU, n. A Ceylon name for an undetermined species of *Phaseolus*. [B, 121.]

AVARAY, n. See AVARY.

AVARI, n. Maize. [B, 121.]

AVARRA, n. See AVVIRA (the botanical genus).

ÁVARTANI (Sanscr.), n. The *Helicteres isora*. [B, 181.]

AVARU, n. An East Indian name for indigo. [B, 121.]

AVARUM, AVARY (Teloogoo), n's. The *Cassia auriculata*. ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 716 (B); B, 172.]

AVATI, n. See AVARI.

AVAUX (Fr.), n. A^3-vo. See AVALSES.

AVÊA (Port.), n. A^3-va′a^3. The *Avena sativa*. [B, 88.]

AVEEMAH-MARUM (Tamil), n. The *Caryea arborea*. [B, 172.]

AVEIA (Port.), n. A^3-va′i^2-a^3. See AVÊA.

AVEINE (Fr.), n. A^3-ve^{2}n. The *Avena sativa*. [B, 173.]

AVELANE (Fr.), n. A^{3}v-la^{3}n. The hazel-nut. [B, 173.] See AVELLANA.

AVÉLANÈDE (Fr.), n. A^3-va-la^{3}n-e^{2}d. The cupule of the acorn of the *Quercus ægilops* of Linnæus. [B, 173.]

AVELATE, adj. A^{2}v-e′lat. From *a* priv., and *velum*, a veil. In botany, without a veil (said of the *Hymenomycetes*). [*a*, 15.]

AVELINE (Fr.), n. A^{3}v-len. See AVELANE.—**A. d'Inde.** The areca-nut. [L, 87.]—**A. purgative.** See AVELLANA *purgatrix*.

AVELINIER (Fr.), n. A^{3}v-li^{2}n-i^2-a. The hazel-tree (*Corylus avellana*). [B, 173.]

AVELLANA (Lat.), n. f. A^2(a^3)-ve^{2}l(we^{2}l)-la(la^3)′na^3. Properly, *nux a.*, from *Avella* (anciently, *Abella*), a town of the Campagna. Fr., *avelane* (1st def.), *aveline* (1st def.), *noisette* (1st def.), *avelinier* (2d def.), *noisetier* (2d def.). Ger., *Haselnuss* (1st def.), *Haselstrauch* (2d def.). 1. The hazel-nut (the nut of the *Corylus a.*). [B, 180.] 2. A section of the genus *Corylus*, including *Corylus a.*, and one other genus. [B, 121.]—**A. americana.** The peanut-plant (*Arachis hypogœa*). [A, 447.]—**A. byzantina** [Herm.]. The *Corylus colurna*. [B, 211.]—**A. cathartica.** See *A. purgatrix*.—**Avellanæ græcæ.** An old name for sweet almonds. [A, 316.]—**A. indica.** The *Balanus myrepsica*. [B, 109.]—**Avellanæ indicæ genus oblongum.** An inferior sort of nutmeg. [L, 104.]—**Avellanæ indicæ tertium genus** [Bauhin]. The *Achroas sapota*. [B, 211.]—**A. indiana versicolor.** The areca-nut. [L, 104.]—**A. mexicana, Avellanæ mexicanæ.** The fruit of the *Theobroma cacao*. [B, 49, 109.]—**A. nux silvestris** [Fuchs]. The *Corylus a.* [B, 211.]—**A. peregrina humilis** [Bauhin], **A. pumila byzantina** [Clusius]. The *Corylus colurna*. [B, 211.]—**A. purgatrix.** The purging-nut (fruit of the *Jatropha multifida*, also of the *Jatropha curcas* and of *Moringa*). [B, 121.]—**Fructus (seu Nuces, seu Nuclei) avellanæ.** Fr., *noisette* [Fr. Cod.]. Ger., *Haselnuss*. Sp., *avellana* [Sp. Ph.]. Hazel-nuts. [B, 95, 180.]—**Oleum avellanæ (seu avellanarum).** Ger., *Haselnussöl*. It., *olio d'a.* Sp., *aceite de a.* Hazel-nut oil; a fixed oil resembling almond-oil. [A, 319; B, 180.]—**Pollen avellanæ.** The pollen of the flowers of the *Corylus a.*; used as a remedy for diarrhœa. [B, 180.]

AVELLANARIUS (Lat.), adj. A^2(a^3)-ve^{2}l(we^{2}l)-la^{3}n-a(a^3)′ri^2-u^{3}s(u^{4}s). Fr., *avellanaire*. 1. Of the size of a hazel-nut. [B, 195.] 2. Living on hazel-nuts. [B, 195; L, 42.]

AVELLANIER (Fr.), n. A^{3}v-la^{3}n-i^2-a. The hazel-tree (*Corylus avellana*). [B, 173.]—**A. rouge.** The red variety of *Corylus avellana*. [B, 173.]

AVELON (Sp.), n. A^3-ve^{2}l-on′. A place in Spain, where there is a cold sulphurous spring. [A, 385.]

AVENA (Lat.), n. f. A^2(a^3)-ve(wa)′na^3. Gr., βρόμος, βόρμος. Fr., *avoine*. Ger., *Hafer*. It., Sp., *avena*. 1. A Linnæan genus of gramineous plants of the tribe *Aveneæ*, subtribe *Euaveneæ*, including species with paniculate spikelets containing from two to many flowers, the topmost flower being masculine or sterile. The flowering glumes (inferior pales) are dorsally rounded, provided with 5 to 7 rather stiff nerves, and with dorsal twisted or geniculate awns. The fruit is pubescent at the apex, sulcate, and when dry adherent to the pale. It includes the sections *Crithe* [Griesebach], comprising annuals with a lax panicle, pendulous spikelets, 1 or 2 fertile flowers, and the lower glume provided with 7 to 9 nerves; and *Avenastrum* [Koch], comprising perennials with narrow, sometimes setaceous, leaves, narrow strict panicles, erect spikelets, more than 2 fertile flowers, and the lower glume having 1 to 3 nerves. [B, 42.] 2. In pharmacy, oats. See *A. excorticata*.—**Amylum avenæ.** Ger., *Haferstärke*. The starch of oats. [B, 270.] See *Oat* STARCH.—**A. agraria** [Brot.]. A variety of *A. strigosa*. [B. 188.]—**A. airoides.** 1. Of De Candolle, the *Aira* (*Catabrosa*) *aquatica*. 2. Of Koeler, the *Trisetum subspicatum*. [B, 173, 188.]—**A. alpina** [Smith]. Syn.: *A. planiculmis* [Eng. Bot.], *Trisetum alpinum* [Römer and Schultes]. The great alpine oat-grass; a perennial species, perhaps only a variety of *A. pratensis*, growing in the mountains of Scotland. [B, 19, 188.]—**A. alta** [Cavanilles]. A variety of *A. strigosa*. [B, 188.]—**A. amethystina** [De Candolle]. An annual French species, with an erect narrow panicle, 2-flowered glumes, and a 1-awned lower floret; used for the same purposes as *A. sativa*. [B, 173, 188.]—**A. brevis** [Roth]. An annual species growing in Germany, Austria, and Pannonia; used for the same purposes as *A. sativa*. [B. 81, 93.]—**A. bromoides** [Linnæus]. See *A. pratensis*.—**A. bulbosa** [Willdenow]. The *Arrhenatherum avenaceum*. [B, 188.]—**A. canescens** [Weber]. The *Aira* (*Corynephorus*) *canescens*. [B. 188.]—**A. cantabrica** [Lagasca]. See *A. pubescens*.—**A. caryophyllea.** 1. Of Weber, see AIRA *caryophyllea*. 2. Of Smith, a perennial species, akin to *A. pubescens* and *A. pratensis*, growing on the island of Cimoli. [B, 188.]—**A. chinensis.** Ger., *chinesischer* (oder *grosser nackter*) *Hafer*. A variety, probably to be referred to *A. nuda*, yielding poorly, the grain of which is used chiefly for making groats. [B, 49.]—**A. convoluta** [Presl]. A variety of the *A. sempervirens*. [B, 188.]—**A. dianatha** [Haller]. The *Anthoxanthum odoratum*. [B, 173.]—**A. elatior** [Linnæus]. The *Arrhenatherum avenaceum*. [B, 188.]—**A. excorticata.** Fr., *gruau*, *gruau d'avoine* [Fr. Cod.]. Ger., *Hafergrütze*. Syn.: *fructus avenæ excorticatæ*, *grutum*. Husked oats, groats; used in making oat-meal cakes, porridge, and tea, regarded as nutritive and emollient. It contains from 64 to 66 per cent. of starch, 18 to 21 of protein compounds (chiefly avenin), 5 to 7 of fat, and small amounts of salts, sugar, gum, and cellulose. The decoction is used as a demulcent drink, as a mouth-wash and gargle, as a vehicle for corrosive and caustic drugs, and in making poultices. [A, 319; B, 81, 270.]—**A. fallax** [Römer and Schultes]. See *A. sempervirens*.—**Avenæ farina** [U. S. Ph., 1870]. Fr., *farine d'avoine*. Ger., *Hafermehl*. It., *farina d'a.* Sp., *harina de a.* Oat-meal, prepared by grinding the seeds of *A. sativa*. It is a grayish-white powder containing fragments of irregular size. It consists of the pure grain (see *A. excorticata*) mixed with a varying amount of the bran. The latter consists mostly of cellulose, but contains 2 per cent. of protein compounds, from 1 to 1½ per cent. of fixed oil, and from 6 to 7 per cent. of ash. Oat-meal is largely used as an article of food, and is especially recommended in habitual constipation due to intestinal atony. [B, 81, 93.]—**A. fatua** [Linnæus]. Fr., *avoine boufe* (ou *boufle*), *averon*, *pied de mouche*. Ger., *Hafergras*. The wild oat; an annual species distinguished by its very loose panicle, its much bent awn with the lower half twisted, and its long, stiff hairs covering the lower pales. It is much used as a fodder-plant in Europe, and is extensively cultivated in California. [B, 19, 138; "Proc. of the Am. Pharm. Assoc.," xxvii, p. 604 (B).]—**A. flavescens** [Linnæus]. Ger., *Goldhafer*, *gelbes Hafergras*, *gelber Wiesenhafer*. See TRISETUM *flavescens*.—**A. Freyta** [Ortega]. A variety of *A. strigosa*.—**A. græca.** The great wild oat. [L, 119.]—**A. heteromalla** [Mönch]. See *A. orientalis*.—**A. lanata.** See HOLCUS *lanatus*.—**A. latifolia** Host.]. See *A. planiculmis*.—**A. macrocarpa** [Mönch]. See *A. sterilis*.—**A. mollis.** 1. Of Koeler, see HOLCUS *mollis*. 2. Of Michaux, see TRISETUM *molle*.—**A. montana.** 1. Of Brotero, a Portuguese species. 2. Of Koeler, the *Aira* (*Deschampsia*) *flexuosa*. [B, 188.]—**A. nervosa.** 1. Of Lamarck, the *A. strigosa*. 2. Of Brown, an anomalous species growing in New Holland. [B, 180, 188.]—**A. nodosa.** See ARRHENATHERUM *avenaceum*.—**A. nuda** [Linnæus]. Fr., *avoine nue* (ou *à gruau*, ou *de Tartarie*). Ger., *nackter Hafer*. The skinless oat, pill-corn; an annual species cultivated especially in Austria and in Ireland, used for making groats. [A, 315; B, 49, 138, 180.]—**A. odorata** [Persoon, De Candolle]. See HIEROCHLOE *borealis* and HIEROCHLOE *australis*. [B, 173, 188.]—**A. orientalis** [Schreber]. Fr., *avoine de Hongrie* (ou *d'Orient*, ou *à grappes*). Ger., *Fahnenhafer*, *Stangenhafer*, *Traubenhafer*, *Kammhafer*, *türkischer Hafer*. An annual species cultivated in Europe, hardier than the ordinary oat, but less valuable as a grain. [B. 49, 173, 180; L, 135.]—**A. pilosa.** 1. Of Presl, see *A. Preslei*. 2. Of Bieb., an annual species growing in Iberia (the *Trisetum pilosum*). [B, 188.]—**A. planiculmis.** 1. Of the Eng. Bot., the *A. alpina*. 2. Of Schrader, a perennial species growing in Silesia, Moravia, and Transylvania. [B, 188.]—**A. pratensis** [Linnæus]. Fr., *avenette*. Ger., *Trifthafer*, *Berghafer*, *Feldhafer*, *Wiesenhafer*, *rothes Hafergras*. The narrow-leaved oat-grass; a perennial species, with hard, rigid leaves and many-flowered spikelets, growing in moors and dry places. It yields a good and nutritious variety of oats. [B, 19, 49, 173.]—**A. precatoria** [Thuillier]. The *Arrhenatherum avenaceum*. [B, 188.]—**A. Preslei.** A perennial species indigenous to Chili. [B, 188.]—**A. pubescens** [Linnæus]. Fr., *averone*. Ger., *weichhaariger Wiesenhafer*, *feinhaariges Hafergras*. Syn.: *Trisetum pubescens* [Römer and Schultes]. The downy oat-grass; a perennial species growing in limestone pastures, distinguished by its pubescent leaves; included by some in *A. pratensis*. [B, 19, 49, 173, 188.]—**A. racemosa** [Thuillier]. See *A. orientalis*.—**A. sativa** [Linnæus]. Fr., *avoine*, *avoine commune*. Ger., *Saathafer*, *Rispenhafer*. The common oat; an annual species belonging to the section *Crithe*, cultivated in temperate climates throughout the world. It has a smooth culm from 2 to 4 feet in height, linear-lanceolate rough leaves with loose, striate sheaths, pedunculate spikelets, each containing 2 perfect flowers, the inferior usually aristate, and rather cartilaginous pales. It is probably only a variety of one of the wild species (perhaps of the *A. fatua*). A number of varieties are described, differing in the color of the pales, the disposition and character of the awns, etc. It is used both as a forage-plant and

THE AVENA FATUA. [A, 327.]

for its grain, which is made into groats (see *A. excorticata*) and into oat-meal (see *Avenæ farina*). On fermentation, it affords a variety of whisky. The husks of the seeds are used for stuffing cushions and mattresses, especially for children and for persons with fractured limbs, also for covering sick animals. [B, 13, 34, 81, 138, 173, 180.]—**A. sedenensis.** See *A. sempervirens.* — **Avenæ semen.** The grain of the *A. sativa ;* oats. [A, 316.]—**A. sempervirens** [Villars]. Syn. : *Arundo sedenensis* [Lois.]. A perennial species growing in Piedmont, the Pyrenees, Austria, and Siberia, much sought after by sheep. [B, 173, 188.]—**A. sesquitertia.** 1. Of Tenore, the *A. sempervirens.* 2. Of Linnæus, the *A. pubescens.* [B, 173, 188.]—**A. spicata** [Pollin.]. The *Trisetum subspicatum.* [B, 188.] — **A. sterilis** [Linnæus]. The animated oat ; an annual species indigenous to Barbary, southern Europe, and the Philippines, having very long, stout, much twisted, geniculate awns bent at a right angle. Römer and Schultes include it under the *A. fatua.* [B, 138, 188.]—**A. striata.** 1. Of Michaux, a species indigenous to the United States, with the exterior glume striate and the fruit naked. 2. Of Lamarck, the *A. sempervirens.* [B, 138, 173, 188.] — **A. strigosa** [Schreber]. Syn. : *Danthonia strigosa* [Beauvois]. The bristle-pointed oat ; an annual species with 2 long bristles on the aristate inner pales. It is occasionally cultivated and used like *A. sativa.* [B, 19, 180.]—**A. subspicata** [Link]. The *Trisetum subspicatum.* [B, 188.] — **A. tartarica** [Arduino]. See *A. orientalis.*—**Fructus avenæ excorticatæ.** See *A. excorticata.*—**Species pro decocto avenæ.** See SPECIES *avenaceæ.*

THE AVENA SATIVA. (AFTER DE LANESSAN.)

AVENACEA (Lat.), n. n. pl. A^2(a^3)-ve^{2}n(we^{2}n)-a(a^3)′se^2(ke^2)-a^3. Of Trinius, a tribe of gramineous plants including *Avena*, *Avia*, *Trisetum*, and two or three other genera. [B, 170.]

AVENACEÆ (Lat.), n. f. pl. A^2(a^3)-ve^{2}n(we^{2}n)-a(a^3)′se^2(ke^2)-e(a^3-e^2). Fr., *avénacées.* Ger., *Avenaceen.* It., *avenacee.* Of Kunth and others, a tribe (family, order, or division) of gramineous plants including *Anthoxanthum*, *Deyeuxia*, *Aira*, *Avena*, *Holcus*, and other genera having spikelets containing 2 or many flowers (one terminal and usually sterile), 2 glumes, and 2 memanaceo-herbaceous pales, the inferior glume being usually provided with a dorsal (often twisted) awn. [B, 121.]

AVENACEOUS, adj. A^{2}v-e^{2}n-a′shu^{3}s. Lat., *avenaceus.* Fr., *avénacé.* Of or pertaining to oats or the oat (*Avena*), or to the *Avenaceæ.* [B.]

AVENÆ (Lat.), n. f. pl. A^2(a^3)-ve(wa)′ne(na^3-e^2). Of Adanson, a family of gramineous plants including *Alopecurus*, *Anthoxanthum*, *Lagurus*, *Agrostis*, *Avena*, and one other genus. [B, 170.]

AVENAIN, n. A^{2}v-e′na^3-i^{2}n. Fr., *avenaine.* See AVENIN.

AVENARIA (Lat.), n. f. A^2(a^3)-ve^{2}n(we^{2}n)-a(a^3)′ri^2-a^3. Of Reichenbach, a section of the genus *Avena.* [B, 121.]

AVENARIÆ (Lat.), n. f. pl. A^2(a^3)-ve^{2}n(we^{2}n)-a(a^3)′ri^2-e(a^3-e^2). Of Presl, a subtribe of gramineous plants belonging to the *Bromeæ.* [B, 170.]

AVENASTRUM (Lat.), n. n. A^2(a^3)-ve^{2}n(we^{2}n)-a^{2}s(a^{3}s)′tru^{3}m-(tru^{4}m). A section of the genus *Avena*, often regarded as a separate genus. [Koch (B, 42).]

AVENAT (Fr.), n. A^{3}v-na^3. See ARRHENATHERUM *avenaceum.*

AVENATYPUS (Lat.), n. m. A^2(a^3)-ve^{2}n(we^{2}n)-a^{2}t(a^{3}t)′i^2(u^6)-pu^{3}s(pu^{4}s). A section of the genus *Avena*, corresponding nearly to *Crithe.* [B, 42, 121.]

AVENCA, n. A Brazilian name for several ferns, including *Adiantum capillus Veneris* and *Adiantum pedatum.* [B, 121.]

AVÈNE (Fr.), n. A^3-ve^{2}n. A place in the department of Hérault, France, where there is a hot carbonated spring, also a bathing establishment. [Rotureau (L, 87).]

AVENEAE (Lat.), n. f. pl. A^2(a^3)-ve(wa)′ne^2-e(a^3-e^2). Fr., *avénées.* Of Nees, Grisebach, Lindley, and others, a tribe of gramineous plants including *Avena*, *Aira*, and other genera. As defined by Bentham and Hooker, it comprises genera with 2- or many-flowered, frequently paniculate, spikelets ; with rhachilla jointed above the lower glumes ; with flowers either all or all but one hermaphrodite ; with 4 or more glumes, all but the lower 2 of which are flowering and are usually prolonged into a dorsal (sometimes terminal) bent or twisted awn ; and with bi-nerved or bi-carinate pales. It includes 2 subtribes : 1. The *Aireæ*, with 2-flowered spikelets and rhachilla not produced beyond the flowers. 2. The *Euaveneæ*, with 2- to many-flowered spikelets and rhachilla produced beyond the flowers. [B, 42, 170.]

AVENEIN, n. A^{2}v-e′ne^2-i^{2}n. A substance obtained by Serullas from oats ; by oxidation, it forms vanillin. [B, 270.]

AVENELLA (Lat.), n. f. A^2(a^3)-ve^{2}n(we^{2}n)-e^{2}l′la^3. A section of the genus *Aira* made by Koch for *Aira* (*Deschampsia*) *flexuosa.* [B, 42.]

AVENERON (Fr.), n. A^{3}v-ne^{2}r-o^{2}n^2. A name for the *Avena fatua* and similar species resembling *Avena sativa.* [B, 121.]

AVENETTE (Fr.), n. A^{3}v-ne^{2}t. The *Avena pratensis.* [B, 121.]—**A. blonde.** The *Trisetum flavescens.* [B, 121.]

AVENHEIM (Ger.), n. A^3-fe^{2}n-him. A village near Strassburg, where there is an alkaline spring. [L, 30.]

AVENIFORM, adj. A^{2}v-e^{2}n′i^2-fo^{2}rm. Lat., *aveniformis* (from *avena*, the oat, and *forma*, form). Fr., *avéniforme.* Of the size or shape of an oat-grain. [B, 38. 195.]

AVENIN, n. A^{2}v-e′ni^{2}n. Fr., *avénine.* Ger., *Avenin.* It., *avenina.* A nitrogenous principle, resembling casein, found by Norton in oats. According to Ritthausen, it is a mixture of legumin and gliadin. It contains 17 per cent. of nitrogen and from $\frac{3}{4}$ to 1 per cent. of oxygen, and closely resembles legumin. [B, 5, 270.]

AVENINE, n. A^{2}v-e′nen. Of Sauson, an alkaloid (as yet, not isolated) contained in oats. [B, 270.]

AVENIOUS, adj. A^{2}v-e′ni^2-u^{3}s. Lat., *avenis*, *avenius* (from *a* priv., and *vena*, a vein). Ger., *ungeadert*, *aderlos.* In botany, without veins or nerves. [B, 198.]

AVENKA, n. See AVENCA.

AVENNES (Fr.), n. A^3-va^{3}n. A place in the department of Hérault, France, where there is a cold alkaline spring containing sulphates, carbonates, and chlorides. [L, 105, 135.]

AVENONE (It.), n. A^3-ve^{2}n-o′na. A place in Italy, where there is a cold sulphurous spring. [A, 385.]

AVENOUS, adj. A^{2}v-e′nu^{3}s. See AVENIOUS.

AVENQUA, n. See AVENCA.

AVENS, n. A^{2}v′e^{2}nz. Welsh, *afans.* A common name for several plants of the genus *Geum.* [A, 302 ; B, 19.]—**Common a.** The *Geum urbanum.* [B, 19.]—**Mountain a.** The *Dryas octopetala.* [B, 39.]—**Purple a., Water a.** The *Geum rivale.* [B, 19.]

AVENULA (Lat.), n. f. A^2(a^3)-ve^{2}n(we^{2}n)′u^2(u^4)-la^3. A section of the genus *Aira*, made by Trinius. [B. 121.]

AVERAM JUNTE (Malay), **AVERICAY,** n's. The *Cassia auriculata.* [P. S. Mootooswamy, "Indian Med. Gaz.," Jan., 1887, p. 3 ; B, 88.]

AVERIE (Tamil), n. The *Indigofera tinctoria.* [B, 121, 172.]

AVERIKE SAKASEARAGIDA (Can.), n. The *Cassia auriculata.* [P. S. Mootooswamy, "Indian Med. Gaz.," Jan., 1887, p. 3.]

AVERLIN (Fr.), n. A^3-ve^{2}r-la^{2}n^2. Sunstroke in the sheep. [A, 385.]

AVERNO, n. A Provençal name for the *Alnus glutinosa.* [B, 121.]

AVERONE (Fr.), n. A^{3}v-ron. The *Avena pubescens.* [B, 121.]

AVEROON (Dutch), n. The *Artemisia abrotanum.* [B, 88.]

AVERRHOA (Lat.), n. f. A^2(a^3)-ve^{2}r(we^{2}r)′ro-a. From *Averrhoes*, the Arabian philosopher. Fr., *carambolier.* A Linnæan genus of geraniaceous evergreen trees of the tribe *Oxalideæ*, having alternate imparipinnate leaves, racemes of small purple flowers, and ovate, deeply sulcate, 5-celled berries. [B, 19, 49, 93.]—**A. acida** [Linnæus]. See PHYLLANTHUS *longifolia.*—**A. bilimbi** [Linnæus]. The bilimbi-, or blimbing-, tree (Bengal., *bilimbi ;* Malay, *wilumpi ;* Hind., *kamarunga*) ; an East Indian species, from 15 to 20 feet high, resembling the *A. carambola* and used for the same purposes. [B, 19, 88, 172.]—**A. carambola** [Linnæus]. Fr., *cherambolier.* The carambola-tree, or *blimbing-bula* (Malay, *tamaratonga ;* Bengal., *cumurunga*) ; an East Indian species, from 15 to 20 feet high, with from 2 to 5 pairs of ovate-acuminate leaflets and yellowish-purple campanulate, 5-parted flowers springing from the branches, cultivated in most tropical countries. Its fruit, which is acid and pulpy, is used to make a refreshing drink and also in the treatment of dysentery and bilious fevers. [B, 19, 88, 93.]

AVERSE, adj. A^{2}v-u^{5}rs′. Lat., *aversus* (*q. v.*). Having the posterior limbs attached near the anus, so that the body is supported erect (said of birds). [L, 108.]

AVERSION, n. A^{2}v-u^{5}r′zhu^{2}n. Lat., *aversio.* 1. An old term for a turning aside, as of a morbid process by metastasis or derivation ; also in a material sense, that of a displacement or version (as of the uterus). [A, 316 ; L, 41, 119.] 2. Nausea. [L, 119.]

AVERSUS (Lat.), adj. A^2(a^3)-vu^{5}rs(we^{2}rs)′u^{3}s(u^{4}s). From *avertere*, to turn aside. Fr., *détourné.* Ger., *abgewandt*, *abgekerbt.* In botany, turned away from, having the faces looking away from each other. [B, 198.]

AVERTEBRATE, AVERTEBRATED, adj's. A^{2}v-u^{5}rt′-e^{2}b-rat, -rat-e^{2}d. Invertebrate (*q. v.*). [B, 39, 77.]

AVERTIN, n. A^{2}v′u^{5}rt-i^{2}n. Fr., *avertin.* 1. A morbid mental state characterized by obstinacy and furiousness. [A, 300.] 2. See TOURNIS.

AVERTINEUX (Fr.), adj. A^3-ve^{2}r-ti^{2}n-u^5. Affected with the disease avertin (*q. v.*). [L, 109.]

AVERUIT (Dutch), n. The *Artemisia abrotanum.* [A, 259.]

AVES (Lat.), n. f., pl. of *avis* (*q. v.*). A(a^3)′vez(was). Gen., *a′vium.* Fr., *oiseaux.* Ger., *Vögel.* It., *uccelli*, *augelli.* Sp., *aves*, *pájaros.* A class of vertebrate animals consisting of the birds ; warm-blooded oviparous, incubating, feathered animals having four limbs, the posterior pair adapted to terrestrial locomotion, and the anterior developed in the form of wings ; the cranium destitute of sutures ; the cervical vertebræ from 10 to 23 in number ; the alimentary canal comprising an œsophagus, a crop, a membranous stomach, a gizzard, an intestinal canal, and a cloaca com-

mon to the digestive and urinary apertures ; the brain and nervous system largely developed ; and a double circulation. The *A.* are divided by Cuvier into *oiseaux de proie* (the *rapaces* of Duméril), *passereaux*, *grimpeurs*, *gallinacés*, *échassiers*, and *palmipèdes* ; by Blumenbach into *Accipitres*, *Levirostres*, *Pici*, *Ceraces*, *Passeres*, *Gallinæ*, *Struthiones*, *Grallæ*, and *Anseres* ; by Vigers into *Raptores*, *Insessores*, *Rasores*, *Grallatores*, and *Natatores* ; by Owen into *Natatores*, *Grallatores*, *Rasores*, *Cantores*, *Volitores*, *Scansores*, and *Raptores* ; by Huxley into *Saururæ*, *Ratidæ*, and *Carinatæ* ; and by Kirby, whose classification is most commonly accepted, into *Natatores*, *Grallatores*, *Cursores*, *Rasores*, *Scansores*, *Insessores*, *Raptores*, and *Saururæ*. [A, 327 ; L, 14, 147, 203.]—**A. aereæ.** Of Merrem, birds that fly much of the time, as opposed to those that frequent the ground and the water. [L, 121.]—**A. altrices.** Birds which are naked, blind, and helpless when hatched, and for a time dependent upon their parents for food. [L, 14.]—**A. aquaticæ.** Ger., *Wasservögel.* Of Merrem, the water-birds. [L, 121.]—**A. carinatæ.** See CARINATÆ.—**A. cypriæ.** See AVICULÆ *cypriæ*.—**A. erraticæ.** Wandering birds. [L, 147.]—**A. manentes.** Birds which remain in one neighborhood, as opposed to migratory birds. [L, 147.]—**A. migratoriæ.** Migratory birds. [L, 147.]—**A. palustres.** Of Merrem, birds that inhabit marshy places. [L, 121.]—**A. præcoces.** See AUTOPHAGI.—**A. ratitæ.** See RATITÆ.—**A. terrestres.** Ger., *Erdvögel.* Of Merrem, birds that spend most of their time on the ground (*e. g.*, the gallinaceous birds). [L, 121.]

AVESNE (Fr.), n. A^3-ve^{2}n. See AVÈNE.

AVET (Fr.), n. A^3-va. See ABIES *picea.*

AVETTE (Fr.), n. A^3-ve^{2}t. 1. See ABIES *picea.* 2. See APIS.

AVETTÉRÉ, n. An Abyssinian name for the *Zizyphus abyssinica.* [B, 121.]

AVEUGLANT (Fr.), n. A^3-vu^{5}g-la^{3}n^2. See ALIPATA.

AVEUGLE (Fr.), adj. A^3-vu^{6}gl. See BLIND.

AVEUGLEMENT (Fr.), n. A^3-vu^{5}gl-ma^{3}n^2. Blindness. [L, 43.] —**A. de jour.** See NYCTALOPIA.—**A. de neige.** See *Snow*-BLINDNESS.—**A. de nuit.** See HEMERALOPIA.

AVEZOUD, n. A seed obtained in Senegal, from which a sort of bread is made in times of famine. [Geoffroy (B, 88).]

AVI, n. A common name for the mistletoe (*Viscum album*) in the department of the Aube, France. [B, 121.]

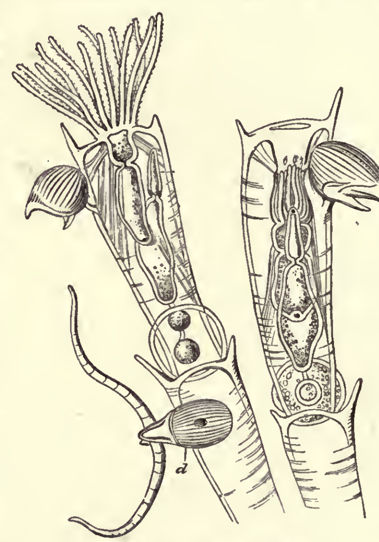
AVICELLA (Lat.), n. f. A^2(a^3)-vi^2(wi^2)-se^{2}l(ke^{2}l)′la^3. See AVICULA.

AVICENNIA (Lat.), n. f. A^2(a^3)-vi^2(wi^2)-se^{2}n(ke^{2}n)′ni^2-a^3. From *Avicenna*, the Arabian physician. Fr., *avicennie.* Ger., *Salzbaum.* A Linnæan genus of evergreen verbenaceous trees belonging to the *Avicennieæ*, with opposite entire, oblong leaves, pubescent inferiorly ; inconspicuous axillary or terminal, closely packed flowers ; and a one-seeded, compressed, leathery fruit, enveloped in the calyx. [B, 19, 49.]—**A. africana** [Palisot de Beauvois]. A species growing in Guinea and Senegambia, used like *A. tomentosa.* [B, 173, 214.]—**A. alba** [Blume]. See *A. officinalis.*—**A. elliptica** [Thunberg]. See *A. tomentosa.*—**A. Meyeri** [Miguel]. See *A. nitida.*—**A. nitida.** Fr., *paletuvier rouge* (2d def.). Syn. : *A. tomentosa* [Meyer] (2d def.), *A. Meyeri* [Miguel] (2d def.), *Mangle laurocerasi foliis*, etc. [Sloane] (2d def.). 1. Of Linnæus, the *couri-da* ; a species growing in tropical America, the bark of which is used in tanning. [B, 19.] 2. Of Jacquin, the *mangue amarello* (or *blanco*) of Brazil ; the *karnaboom* of Surinam, Brazil, Guiana, and the West Indies. [B, 214.]—**A. officinalis** [Linnæus]. Syn. : *A. resinifera* [Forster], *A. tomentosa* [R. Brown], *A. alba* [Blume], *Mangium album* [Rumphius]. The *Oepata* of Rheede, the *Upata* of Adanson ; a species growing in India, Java, southern China, New Holland, New Zealand, eastern and northeastern Africa, and Madagascar, having oblong-lanceolate, subelliptical, or obovate, acuminate, acute, or obtuse, entire, coriaceous leaves. The branchlets and the inferior aspect of the leaves are tomentose, the lobes of the calyx are densely downy, the corolla tube is silky, and the fruit is downy. A resinous gum exudes from it which is eaten by the New Zealanders. [B, 49, 192, 214.]—**A. resinifera** [Forster], **A. resinosa** [Linnæus]. See *A. officinalis.*—**A. tomentosa** [Linnæus]. Fr., *manglier blanc.* Syn. : *A. elliptica* [Thunberg]. The white mangrove ; a small tree with obovate or oval leaves, slightly tomentose beneath, and small, dingy-yellow terminal flowers, growing in various tropical countries. The leaves are used as forage for camels, asses, and sheep. The fruit-kernels are eaten after their bitterness has been destroyed by cooking. The wood is used for tooth-picks, being considered very wholesome for the teeth and gums. The bark is employed in tanning. An aromatic resin which exudes from the trunk is called *manawa* by the natives of New Holland, who use it as a food. The red, odorless, mucilaginous root is used by the Arabs as an aphrodisiac. The green seeds, cooked with the leaves of *Ipomœa campanulata*, are employed to make emollient poultices. The *A. nitida* and the *A. officinalis* have been included in this species, of which Humboldt, Bonpland, and Kunth described several varieties. [B, 49, 93, 172, 173, 214.]

AVICENNIEÆ (Lat.), n. f. pl. A^2(a^3)-vi^2(wi^2)-se^{2}n(ke^{2}n)-ni-(ni^2)′e^2-e(a^3-e^2). Fr., *avicenniées.* A tribe of verbenaceous plants, including the single genus *Avicennia*, in which the ultimate inflorescence is centrifugally cymose, with small capituliform cymes, either axillary and pedunculate or disposed in a thyrse or terminal corymb ; the ovary is incompletely divided into 4 loculi by the 4 alæ radiating from the central column to which the pendulous ovules are attached ; and the fruit a subcarnose bivalve capsule containing a single seed with a large, naked embryo, conduplicate cotyledons, and a hirsute radicle. [B, 42.]

AVICOLE (Fr.), adj. A^3-vi^2-kol. From *avis*, a bird, and *colere*, to inhabit. Infesting birds (said of parasites). [A, 385.]

AVICULA (Lat.), n. f., dim. of *avis.* A^2(a^3)-vi^{2}k(wi^{2}k)′u^2(u^4)-la^3. Fr., *avicule.* Ger., *Vögelchen*, *Vögelein.* A little bird ; the name of a genus of molluscs ; in the pl., *Aviculæ*, see AVICULIDÆ. [B, 38.]—**Aviculæ cypriæ.** Scented candles, formerly burned as a protection against pestilential diseases. [B, 48 ; L, 119.] Cf. CONI *odorati.*—**Aviculæ hermeticæ.** Fr., *avicules hermétiques.* An old term for a "universal salt" said to be found in earth. [B, 38, 200.]



AVICULACEA (Lat.), n. n. pl. A(a^3)-vi^{2}k(wi^{2}k)-u^2(u^4)-la(la^3)′-se^2(ke^2)-a^3. A family of the *Monomya.* [L, 121.]

AVICULAIRE (Fr.), adj. A^3-vi^{2}k-u^6-la^{2}r. Pertaining to birds or resembling a bird ; as a n., the *Polygonum aviculare.* [A, 385 : B, 93.]

AVICULARIA (Lat.), n. f. sing. and n. pl. A^2(a^3)-vi^{2}k(wi^{2}k)-u^2(u^4)-la(la^3)′ri^2-a^3. Fr., *aviculaire.* 1. Of Gesner, see SPECULARIA. 2. Of Meissner, see POLYGONUM. 3. See AVICULARIUM.—**A. Sylvii.** The greater Venus's looking-glass (*Campanula speculum*). [B, 71, 200.]

AVICULARIS (Lat.), adj. A^2(a^3)-vi^{2}k(wi^{2}k)-u^2(u^4)-la(la^3)′ri^{2}s. Fr., *aviculaire.* 1. Pertaining to birds or resembling a bird. 2. Furnishing sustenance to birds. 3. Devouring birds. 4. Inhabiting birds' nests or parasitic on birds. [L, 180.]

AVICULARIUM (Lat.), n. n. A^2(a^3)-vi^{2}k(wi^{2}k)-u^2(u^4)-la(la^3)′ri^2-u^{3}m(u^{4}m). A peculiar appendage of the ectocyst in many of the *Polyzoa* ; so called from its resemblance to a bird's head. It consists essentially of a movable mandible and cup, furnished with a horny beak with which the point of the mandible is capable of being brought into apposition. It is regarded by Huxley as a peculiarly modified zooid having many points of affinity with the brachiopods. [L, 147.]

AVICULARIA. (AFTER HUXLEY.)
At *d* an avicularium is represented as having seized a worm.

AVICULARIUS (Lat.), adj. A^2-(a^3)-vi^{2}k(wi^{2}k)-u^2-(u^4)-la(la^3)′ri^2-u^{3}s-(u^{4}s). See AVICULARIS.

AVICULIDÆ (Lat.), n. f. pl. A^2-(a^3)-vi^{2}k(wi^{2}k)-u^2-(u)′li^{2}d-e(a^3-e^2). A family of the *Asiphonidia*, characterized by the shell being inequivalve, very oblique, and attached by a byssus, the hinge nearly or quite edentulous, the ligament internal, the lobes of the mantle free, the anterior adductor small, leaving its impression within the umbo, the posterior adductor large and subcentral, and the foot small. [L, 147.]

AVIDITY, n. A^{2}v-i^{2}d′i^{2}t-i^2. Lat., *aviditas.* Fr., *avidité.* In chemistry, a tendency to rapid (as distinguished from strong) combination. Thus, nitric acid is said to have more a. for metals than hydrochloric acid, because it dissolves them more readily, although its combination with them is not so strong. [B, 86.]

AVIFORME (Fr.), adj. A^3-vi^2-fo^{2}rm. From *avis*, a bird, and *forma*, form. Bird-shaped, ornithoid. [A, 385.]

AVIGATO, n. A^3-vi^2-ga^3′to. Corrupted from Mex., *ahvacaquavhitl.* Fr., *agnacat.* Ger., *Avogadobaum*, *Avogatobaum.* Sp., *aguacate.* The alligator-pear. [B ; L, 56.] See PERSEA *gratissima.*

AVIGNON BERRIES, n. pl. A^3-ven-yo^{2}n^2. Fr., *graines d'Avignon.* Ger., *Avignonbeeren.* See under BERRY.

AVI-HI-AVI, n. The native name of a Madagascar species of *Dillenia.* [B, 121.]

AVILA, n. A round, yellow fruit, resembling an apple, growing in the West Indies on a shrub or a climbing plant. It contains from 8 to 10 flattish, rounded, convexo-concave, yellowish nuts, obtuse at one end, connected together and yet readily separable, with a thick, woody cortex, each inclosing a soft, white, bitter kernel, which is "esteemed an excellent medicine against poisons and malignity of humors." [Lemery (B, 200).]

AVILES (Sp.), n. A^3-ve′le^{2}s. A place in Spain, where there is a cold spring containing sodium chloride. [A, 385.]

AVINI-UTE, n. A variety of the *Piper methysticum*, the root of which is pinkish internally. [A, 308.]

AVIROSTRATE, adj. A^{2}v-i^2-ro^{2}s′trat. Lat., *avirostris* (from *avis*, a bird, and *rostrum*, a beak). Fr., *avirostre.* Resembling the beak of a bird. [L, 180.]

AVIS (Lat.), n. f. A(a^3)′vi^{2}s(wi^{2}s). Gr., ὄρνις. Fr., *oiseau.* Ger., *Vogel.* It., *uccello*, *augello.* Sp., *ave*, *pájaro.* A bird.—**A. afra.** The ostrich. [L, 105.]—**A. Junonis.** See *A. medica.*—**A. libyca.** See *A. afra.*—**A. medica, A. picta.** The peacock (*Pavo cristatus*), formerly used in medicine. [B ; L, 105.]

AVISAY (Teloogoo), n. The *Agati grandiflora.* [B, 172.]

AVISUGUS (Lat.), adj. A^{2}(a^{3})-vi^{2}(wi^{2})-su^{2}(su)′gu^{3}s(gu^{4}s). From *avis*, a bird, and *sugere*, to suck. Fr., *avisuge*. Sucking birds (applied by Duméril to a family of apterous insects). [L, 116, 180.]

AVITIUM (Lat.), n. n. A^{2}(a^{3})-vi^{2}(wi^{2})′shi^{2}(ti^{2})-u^{3}m(u^{4}m). A general term for birds. [Apuleius (A, 318).]

AVITREOUS, adj. A^{2}v-i^{2}t′re-u^{3}s. From *α* priv., and *vitrum*, glass. Made without glass (*e. g.*, an a. thermometer). ["Boston Med. and Surg. Jour.," Nov. 17, 1887, p. 483 (L).]

AVITUS (Lat.), adj. A^{2}(a^{3})-vi(we)′tu^{3}s(tu^{4}s). From *avus*, an ancestor. Hereditary. [A, 318.]

AVIVEMENT (Fr.), n. A^{3}-vev-ma^{3}n^{2}. The process of refreshing (paring) a surface so that, as in a plastic operation, it may unite with another raw surface with which it is held in contact. [L, 49.]

AVIVES (Fr.), n. pl. A^{3}-vev. From Ar., *al-dhîbabah* (from *dhîb*, a wolf). Sp., *adivas, abivas*. The parotid gland in the horse or a swelling of the gland, also a form of colic supposed to be due to inflammation of that gland. The word has been Anglicized into *vives*. [B, 52; L, 32, 41.]

AVO, n. A tree the bark of which is used in India for making paper. [B, 132.]

AVOCADO, n. A^{3}-vo-ka^{3}′do. From Aztec, *ahuacatl*. [B, 39.] Fr., *avocatier*. Ger., *Avocadobaum*. See PERSEA *gratissima*.

AVOGATEBAUM (Ger.), **AVOGATOBAUM** (Ger.), **AVOGATOBIRNE** (Ger.), n's. A^{3}-fo-ga^{3}′te^{2}-ba^{3}-um, -to-ba^{3}-um, -bern-e^{2}. The *Persea gratissima* (*q. v.*). [B, 49.]

AVOINE (Fr.), n. A^{3}v-wa^{3}n. See AVENA.—**A. à grappes.** See AVENA *orientalis*.—**A. à gruau.** See AVENA *nuda*.—**A. blonde.** The *Trisetum flavescens*. [B, 173.]—**A. boufe, A. boufle.** See AVENA *fatua*.—**A. commune.** See AVENA *sativa*.—**A. d'Écosse, A. de Hollande, A. de Hongrie, A. de Russie.** See AVENA *orientalis*.—**A. des chiens.** The *Pharus lappulaceus*. [B, 173.]—**A. des prés.** See AVENA *pratensis*.—**A. de Tartarie.** See AVENA *nuda*.—**A. d'Orient.** See AVENA *orientalis*.—**A. noire.** The black oat, a variety of *Avena sativa*. [B, 173.]—**A. nue.** See AVENA *nuda*.—**Balle d'a.** The husk of oats. [B, 173.] See AVENA *sativa*.—**Espèces pour la décoction d'a.** See SPECIES *avenaceæ*.—**Farine d'a., Fécule d'a.** See AVENÆ *farina*.—**Folle a.** See AVENA *fatua*.—**Gruau d'a.** [Fr. Cod.]. See AVENA *excorticata*.

AVOIRA, n. 1. The *aouara* (*Elæis guineensis*). [B, 93; "Proc. of the Am. Pharm. Assoc.," xix, p. 296 (B).] 2. Of Aublet, in part the genus *Astrocaryum*. [B, 121.]

AVOIRA SAVANE, n. Of Aublet, the genus *Desmoncus*. [B, 121.]

AVON, n. A^{2}v′o^{2}n. A town on the Erie Railway, in Livingston County, N. Y., 65 miles east of Buffalo, 18 miles south of Rochester, where there are sulphurous springs and arrangements for bathing. According to analyses by Hadley, Chilton, and Beck, the constituents of the waters are:

IN A PINT.	Upper Spring.	Lower Spring.	New Bath Spring.
Calcium carbonate....	1·000 grain.	3·666 grains.	3·370 grains.
Sodium chloride......	2 300 grains.	....	0·710 grain.
Calcium chloride......	....	1·051 "	... .
Sodium sulphate... ..	2·000 "	1·716 "	4·840 grains.
Magnesium sulphate..	1·250 "	6·201 "	1·010 "
Calcium sulphate.....	10·500 "	7·180 "	0·440 grain.
Sodium iodide.........	....	traces.	....
Carbon dioxide	0·70 cu. in.	0·49 cu. in.	....
Hydrogen sulphide ...	1·50 " "	1·25 " "	0·050 cu. in.

[A, 363.]

AVONG-AVONG, n. The native name of an araliaceous Madagascar tree. [B, 132.]

AVORNE (Fr.), n. A^{3}-vorn. The *Alnus glutinosa*. [B, 88.]

AVORNELLUM [Cæsalpinus], n. The *Cytisus laburnum*. [B, 211.]

AVORNIN, n. A^{2}v-o^{2}rn′i^{2}n. Fr., *avornine*. Ger., *Avornin*. A glucoside, $C_{16}H_{18}O_8$, derived from the bark of the buckthorn (*Rhamnus frangula*); by some regarded as identical with *frangulin*. [B, 5, 270.]—**A'säure** (Ger.). See AVORNINIC ACID.

AVORNINIC ACID, n. A^{2}v-o^{2}rn-i^{2}n′i^{2}k. Fr., *acide avorninique*. Ger., *Avorninsäure*. A decomposition product of avornin; according to Faust, frangulic acid. [B, 270.]

AVORNUS (Lat.), n. m. A^{2}(a^{3})-vo^{2}rn(wo^{2}rn)′u^{3}s(u^{4}s). The black alder (*Rhamnus frangula*). [Crescentius (B, 200).]

AVORTEMENT (Fr.), n. A^{3}-vort-ma^{3}n^{2}. See ABORTION.—**A. accidentel.** See *Spontaneous* ABORTION.—**A. à répétition.** See *Habitual* ABORTION.—**A. artificiel.** See *Induced* ABORTION.—**A. chirurgical.** See *A. obstétrical*.—**A. criminel.** See *Criminal* ABORTION.—**A. embryonnaire.** See *Embryonic* ABORTION.—**A. épidémique.** See *Epidemic* ABORTION.—**A. extérieur.** See *A. visible*.—**A. fœtal.** See *Fœtal* ABORTION.—**A. intérieur.** See *A. invisible*.—**A. invisible.** In vegetable teratology, complete absence of a portion of a plant. [Turpin (L, 41).]—**A. naturel.** Abortion due to some recognized abnormity of the uterus or to some derangement of the health. [L, 32.]—**A. obstétrical.** An induced abortion, one brought about for the purpose of saving the mother's life. [A, 385.]—**A. ovulaire.** See *Ovular* ABORTION.—**A. partiel.** See *Partial* ABORTION.—**A. périodique.** See *Habitual* ABORTION.—**A. prophylactique.** See *A. obstétrical*.—**A. provoqué.** See *Induced* ABORTION.—**A. spontané.** See *Spontaneous* ABORTION.—**A. thérapeutique.** See *A. obstétrical*.—**A. visible.** In vegetable teratology, the incomplete development or rudimentary state of a part. [Turpin (L, 41).]

AVORTON (Fr.), n. A^{3}-vort-o^{2}n^{2}. See ABORTION (2d and 3d def's).

AVOUAZA, n. The *Elæis guineensis*. [B, 121.]

AVRANCHES, n. A village in the department of the Manche, France, where there are effervescent springs containing sodium chloride and iron. [Fleury (L, 105).]

AVRANCUM, n. See AURANCUM.

AVRARIC, n. See AURARIC.

AVRON (Fr.), n. A^{3}v-ro^{2}n^{2}. See AVERON.

AVUL CUNDUR, n. A Deccan name for the *Olibanum*. [B, 88.]

AVULSE-ONGLE (Fr.), n. A^{3}-vu^{6}ls-o^{2}n^{2}-gl′. An instrument having a short, broad, blunt blade, designed to be thrust under the nail in the operation of avulsion.

AVULSION, n. A^{2}v-u^{3}l′shu^{3}n. Gr., ἀποσπασμός. Lat., *avulsio* (from *avellere*, to tear away). Fr., *avulsion, arrachement*. Ger., *Avulsion, Abtrennung, Abreissen*. It., *avulsione*. The accidental or intentional tearing away of a part. [E.]

AWA, n. See AVA.

AWAR-AWAR, n. The *Ficus septica*. [L, 87.]

AWARI, n. The *Indigofera tinctoria*. [B, 88.]

AWARRA, n. A Surinam name for the *Astrocaryum guianense*. [B, 121.] Cf. AVOIRA.

AWATUM (Teloogoo), n. The *Spondias mangifera*. [B, 172.]

AWHINTEY-WHINTING, n. See under ADUMBA.

AWK, n. A North American Indian name for the *Helianthus petiolaris* and the *Helianthus lenticularis*. ["Proc. of the Am. Pharm. Assoc.," xxvii, p. 178 (L).]

AWLA, AWLÉ, n's. Abyssinian names for the *Olea chrysophylla* of Lamarck, the young shoots and leaves of which are used as an anthelminthic. ["Proc. of the Am. Pharm. Assoc.," xxviii, p. 194 (B); B, 93; L, 49.]

AWL-SHAPED, adj. A^{4}l′shapd. See SUBULATE.

AWL-TREE, n. A^{4}l′tre. The *Morinda citrifolia*. [B, 19.]

AWL-WORT, n. A^{4}l′wu^{6}rt. The plant *Subularia*. [B, 19.]

AWN, n. A^{4}n. Goth., *ahana*. [A, 302.] Icel., *ogn*. [B, 7.] See ARISTA.

AWNED, adj. A^{4}nd. See ARISTATE.

AWNLESS, adj. A^{4}n′le^{2}s. Without awns. [B, 39.]

AWUL, n. The *Cassia auriculata*. [W. Dymock, "Proc. of the Am. Pharm. Assoc.," xxv, p. 211 (B).]

AWURA-DUNELLI, AWUSADANELLI, n's. The *Phyllanthus emblica*. [B, 46, 88, 121.]

AX (Fr.), n. A^{3}x. A place in the department of Ariège, France, where there are numerous warm sulphurous and saline springs, with arrangements for bathing, douching, etc. [A. Rotureau (L, 87).]

AXAYACATL, n. A Mexican name for a pungent article of food consisting of the eggs of an insect somewhat resembling the grasshopper, which are deposited on grasses. [*a*, 14.]

AXE (Fr., Ger.), n. A^{3}x, a^{3}x′e^{2}. In Ger., usually written *Achse*. See AXIS.—**A. aérien** (Fr.). See *Ascending* AXIS.—**A. anatomique de l'œil** (Fr.). The antero-posterior diameter of the eye. [L, 41.]—**A. ascendant** (Fr.). See *Ascending* AXIS.—**A. bi-auriculaire** (Fr.). See *Bi-auricular* AXIS.—**A. cérébro-spinal** (Fr.). See *Cerebro-spinal* AXIS.—**A. cristallographique** (Fr.). The principal axis of a crystal. [B, 93.]—**A. d'accroissement** (Fr.). See AXIS *of growth*.—**A. décombant** (Fr.). See *Decumbent* AXIS.—**A. de double réfraction** (Fr.). See *Optical* AXIS (1st def.).—**A. défini** (Fr.). See *Definite* AXIS. [B, 38.]—**A. de l'aimant** (Fr.). See *Magnetic* AXIS.—**A. de la coquille** (Fr.). The axis around which the spiral of a turbinated univalve shell winds. [A, 385.]—**A. d'élasticité** (Fr.). See AXIS *of elasticity*.—**A. de réfraction** (Fr.). See AXIS *of refraction*.—**A. de rotation** (Fr.). See AXIS *of rotation*.—**A. de symétrie** (Fr.). See AXIS *of symmetry*.—**A. d'incidence** (Fr.). See AXIS *of incidence*.—**A. du bassin** (Fr.). See AXIS *of the pelvis*.—**A. du cristallin** (Fr.). An antero-posterior axis of the eye passing through the centre of the crystalline lens. [A, 385.]—**A. du nerf optique** (Fr.). See *A. anatomique de l'œil*.—**A. feuillé** (Fr.). The aerial part of the stem of a plant. [B, 121.]—**A. florifère** (Fr.). In botany, the axis which bears the inflorescences; a rhachis. [B, 132.]—**A. horizontal** (Fr.). See *Horizontal* AXIS *of the eye*.—**A. hypocotylé** (Fr.). See *Hypocotyledonous* AXIS.—**A. hypogé** (Fr.). See *Descending* AXIS.—**A. indéfini** (Fr.). See *Indefinite* AXIS.—**A. latéral** (Fr.). See *Lateral* AXIS.—**A. longitudinal** (Fr.). See *Longitudinal* AXIS.—**A. magnétique** (Fr.). See *Magnetic* AXIS.—**A'nband** (Ger.). See AXIS-*cylinder*.—**A'ncanal** (Ger.). See *Central* CANAL.—**A'ncylinder** (Ger.). See AXIS-*cylinder*.—**A'ncylinderfortsatz** (Ger.). See *Axis-cylinder* PROCESS.—**A'ndrehung** (Ger.). Torsion on an axis. [L, 57.]—**A'nfaser** (Ger.). See AXIS-*cylinder*.—**A'nfibrillen** (Ger.). See AXIS-*fibrillæ*.—**A'ngebilde** (Ger.). The axial parts of the embryo, consisting of the notochord, the protovertebræ, and the protovertebral plates of the head. [A, 8.]—**A'nkanal** (Ger.). See *Central* CANAL.—**A'nhypermetropie** (Ger.). See *Axial* HYPERMETROPIA.—**A'nkörper** (Ger.). See *Axile* CORPUSCLE.—**A'norgan** (Ger.). An axial organ. [L, 37.]—**A. matériel** (Fr.). See *Material* AXIS.—**A'nplatte** (Ger.). See *Axis* CORD.—**A'nschlauch** (Ger.). See AXIS-*cylinder*.—**A'nstab** (Ger.). The chorda dorsalis. [A, 317.]—**A'nstrang** (Ger.). A change of direction of an axis (*e. g.*, that of the uterus). [L, 57.]—**A'nwulst** (Ger.). See ENDWULST.—**A. optique** (Fr.). See *Optic* AXIS and *Optical* AXIS.—**A. optique d'une lunette** (Fr.). The

axis of a telescope. [B.]—**A. primaire** (Fr.), **A. principal** (Fr.). See *Primary* AXIS and *Principal* AXIS.—**A. rationel** (Fr.). An imaginary axis; one that is a line merely, wi hout a material representative. [B, 132.] Cf. *Material* AXIS.—**A's secondaires** (Fr.). See *Secondary* AXES, under AXIS.—**A. simple** (Fr.). A non-branching axis (of a plant). [B, 38.]—**A's tertiaires** (Fr.). See *Tertiary* AXES, under AXIS.—**A. végétal** (Fr.). The axis of a plant. [B, 121.]—**A. vertical** (Fr.). See *Vertical* AXIS *of the eye*.—**A. visuel** (Fr.). See *Visual* AXIS.—**Intermuscularer A'ncylinder** (Ger.). See *Intra-muscular* AXIS-*cylinder*.—**Nackter A'ncylinder.** See *Naked* AXIS-*cylinder*.

AXEA COMMISSURA (Lat.), n. f. A^{2}x(a^{3}x)'e^2-a^3. See under COMMISSURA.

AXENSTEIN (Ger.), n. A^{3}x'e^{2}n-stin. A place near Brunnen, in Switzerland, where there is a whey-cure establishment. [L, 57.]

AXERAS (Ar.), n. A general name for the asphodels. [Deleschamps, Bory (B, 121).]

AXÉRASINE (Fr.), n. A^{3}x-a-ra^3-sen. A cosmetic paste. [L, 109.]

AXEROMATICON (Lat.), n. n. A^{2}x(a^{3}x)-e^2-ro(ro^2)-ma^{2}t-(ma^{3}t)'i^{2}k-o^{2}n. A preparation used to prevent sweating of the feet; chiefly rice-powder tinged with carmin and made fragrant with oil of citron. [B, 270.]

AXES, n. A^{2}x'e^{2}z. An old popular term for ague, and especially for the paroxysm. [B, 222.]—**A. grass.** A tea containing buckthorn, used as a remedy for ague. [L, 73.]

AX-FETCH, AX-FITCH, n's. A^{2}x'fe^{2}ch, -fi^{2}ch. Syn.: *ax-vetch*, *ax-wort*. Popular names for the *Securigera coronilla* of De Candolle, on account of the ax-shape of the legumes. [B, 39, 222.]

AX-FORM, adj. A^{2}x'fo^{2}rm. See DOLABRIFORM.

AXI, n. The *Capsicum annuum*. [Bory (B, 121).]

AXIA (Lat.), n. f. A^{2}x(a^{3}x)'i^2-a^3. From ἄξιος, worthy, on account of its medicinal virtues. Fr., *axie*. A genus of plants made by Loureiro, of doubtful botanical station, probably to be referred to *Boerhaavia*. [B, 42, 170.]—**A. cochinchinensis** [Loureiro]. A perennial species indigenous to Cochin-China; used as a stimulant, tonic, emmenagogue, and febrifuge. [B, 173.]

AXIAL, adj. A^{2}x'i^2-a^{2}l. Lat., *axialis*. Fr., Ger., *axial*. Of or pertaining to an axis (in zoology, to the head and trunk as distinguished from the limbs; in botany, to the stem). [B; C; L, 12.]—**A.-Baum** (Ger.). See *Motor* END-PLATE.

AXIALLY, adv. A^{2}x'i^2-a^{2}l-li^2. In an axial position or direction. [B, 39.]

AXIANA [Rafinesque] (Lat.), n. f. A^{2}x(a^{3}x)-i^2-a(a^3)' na^3. See AXIA.

AXICORNIS (Lat.), adj. A^{2}x(a^{3}x)-i^2-ko^{2}rn'i^{2}s. From *axis* (*q. v.*), and *cornu*, a horn. Fr., *axicorne*. Having horns or digitations like those of the axis (an East Indian animal). [L, 109, 180.]

AXICULUS (Lat.), n. m. A^{2}x(a^{2}x)-i^{2}k'u^2(u^4)-lu^{3}s(lu^{4}s). Dim. of *axis*. A cylinder or roller. [B, 80, 200; L, 49.]

AXIE (Fr.), n. A^{3}x-e. See AXIA.

AXIFÈRES (Fr.), n. pl. A^{3}x-i^2-fe^{2}r. Turpin's name for plants (*Fungi* and *Algæ*) which are composed only of a stalk (axis) variously modified and made up solely of cells. [B, 121.]

AXIFEROUS, adj. A^{2}x-i^{2}f'e^{2}r-u^{3}s. Lat., *axiferus* (from *axis* [*q. v.*], and *ferre*, to bear). Fr., *axifère*. In botany, consisting of an axis only, without leaves or other appendages. [B, 7.] Cf. AXIFÈRES and *A.* PLACENTA.

AXIFORM, adj. A^{2}x'i^2-fo^{2}rm. Lat., *axiformis* (from *axis* [*q. v.*], and *forma*, form). Fr., *axiforme*. Ger., *achsenförmig*. Shaped like an axis. [B, 198; L, 180.] See PEDICELLUS *axiformis*.

AXIFUGAL, adj. A^{2}x-i^{2}f'u^{2}g-a^{2}l. Lat., *axifugus* (from *axis* [*q. v.*], and *fugere*, to flee). Fr., *axifuge*. Ger., *axifugal*. Centrifugal. [A, 309; L, 109.]

AXIL, n. A^{2}x'i^{2}l. In botany, an axilla (*q. v.*). [B.]

AXILATUS (Lat.), adj. A^{2}x(a^{3}x)-i^{2}l-a(a^3)'tu^{3}s(tu^{4}s). Fr., *axilé*. In botany, provided with an axis (said of fruits disposed about a common axis, which becomes free by their falling off). [Mirbel (B, 1).]

AXILE, adj. A^{2}x'i^{2}l. Lat., *axilis*. Fr., *axile*. Ger., *achsenständig*. 1. See AXIAL. 2. Pertaining to, or disposed upon or along, an axis. [B, 1.] See *A.* EMBRYO, *A.* PLACENTA, *A.* SEED, and *A.* SYSTEM.

AXILLA (Lat.), n. f. A^{2}x(a^{3}x)-i^{2}l'la^3. Gr., μασχάλη. Fr., *aisselle*. Ger., *Achsel*, *Achselgrube* (1st def.), *Achselhöhle* (1st def.), *Blattwinkel* (2d def.). It., *ascella*. Sp., *sobaco*. 1. The arm-pit; the space, inclosed by the pectoral muscles in front and the large dorsal muscles behind, formed on the lower aspect of the junction of the arm with the trunk. [L, 175.] 2. In botany, an axil; the angle formed by the stem or a branch of a plant and a leaf. 3. In botany (in a more extended sense), an ala; the angle formed between the stem or a branch and any organ growing from it, such as a branchlet, a peduncle, etc. [B, 1, 123.]

AXILLANS (Lat.), adj. A^{2}x(a^{3}x)-i^{2}l'la^{2}nz(la^{3}ns). Fr., *axillant*. In botany, having a bud, a branch, or a flower in its axilla (said of a leaf or of a bract). [B, 121.]

AXILLAR, adj. A^{2}x'i^{2}l-la^{3}r. See AXILLARY. As a n., in the pl., *a's*, axillary feathers. [L.]

AXILLARIA (Lat.), n. f. A^{2}x(a^{3}x)-i^{2}l-la(la^2)'ri^2-a^3. Of Rafinesque, see POLYGONATUM. [B, 121.]

AXILLARY, adj. A^{2}x'i^{2}l-la-ri^2. Lat., *axillaris*. Fr., *axillaire*. Ger., *Achsel-* (in compos.—1st def.), *achselständig* (2d def.), *winkelständig* (2d def.), *blattwinkelständig* (2d def.). It., *ascellare*. Sp., *axilar*. 1. Pertaining to the arm-pit. [C.] 2. Situated in or springing from an axilla (2d and 3d def's—in the latter case, synonymous with *alaris*). [B, 1, 123.] See also *A.* INFLORESCENCE. As a n., in the pl., *axillaries*, a. feathers. [L.]—**Solitary-a.** See *S.-a.* INFLORESCENCE.

AXILLE (Fr.), n. A^{3}x-el. See AXILLA.

AXILLIBARBATE, adj. A^{2}x-i^{2}l''li^2-ba^{3}rb'at. Lat., *axillibarbatus* (from *axilla* [*q. v.*], and *barbatus*, bearded). Fr., *axillibarbu*. Ger., *achselbartig*. In botany, provided with hairs in the axillæ (said of leaves or peduncles). [B, 1.]

AXILLIFLORUS (Lat.), adj. A^{2}x(a^{3}x)-i^{2}l''li^2-flo'ru^{3}s(ru^{4}s). From *axilla* (*q. v.*), and *flos*, a flower. Fr., *axilliflore*. Ger., *achselblüthig*. Bearing axillary flowers. [B, 132, 195; L, 116.]

AXIN, n. A^{2}x'i^{2}n. A buttery substance obtained by boiling the *Coccus a.* [La Llave], an insect found on certain Mexican trees. It occurs in quadrangular or rounded pieces, of a deep orange-red externally, dirty-white or yellowish within, insoluble in water, soluble in hot alcohol. It consists chiefly of lauric mixed with a little palmitic acid. It is used for making a varnish to preserve steel instruments from rusting, and also employed medicinally. [A, 447; B, 270.]

AXINÆA (Lat.), n. f. A^{2}x(a^{3}x)-i^{2}n-e'(a^3'e^2)-a^3. Fr., *axinée*. A genus of melastomaceous plants established by Ruiz and Pavón. [B, 121, 170.]

AXING (Swed.), n. The *Triticum repens*. [B, 121.]

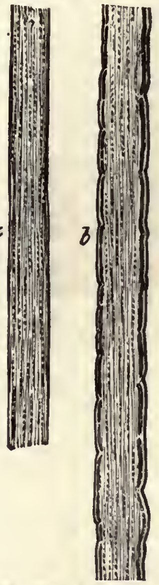
AXINIC ACID, n. A^{2}x-i^{2}n'i^{2}k. Fr., *acide axinique*. Ger., *Axinsäure*. A brownish, oily acid, probably of the composition $C_{18}H_{28}O_2$, produced, along with lauric acid, by the saponification of axin. [B, 196.]

AXINIFORM, adj. A^{2}x-i^{2}n'i^2-fo^{2}rm. From ἀξίνη, an ax, and *forma*, form. Shaped like an ax-head. [Dana (B. 39).]

AXINIPHYLLUM (Lat.), n. n. A^{2}x(a^{3}x)-i^{2}n-i^2-fi^{2}l(fu^{6}l)'lu^{3}m-(lu^{4}m). A genus of composite Mexican plants of the tribe *Helianthoideæ*, established by Bentham. [B, 121.]

AXINOPUS (Lat.), n. m. A^{2}x(a^{3}x)-i^{2}n'o(o^2)-pu^{3}s(pu^{4}s). Of Römer and Schultes, the genus *Paspalum*. [B, 121.]

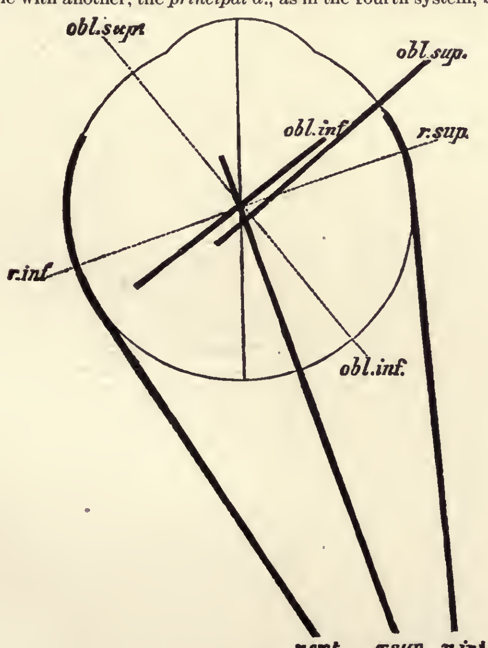
AXI-OBLIQUUS (Lat.), n. m. A^{2}x(a^{3}x)-i^2-o^{2}b-li(le)'kwu^{3}s-(kwu^{4}s). E. Coues's name for the obliquus capitis inferior muscle. ["Med. Record," July 23, 1887 (L).]



AXIPETUS (Lat.), adj. A^{2}x(a^{3}x)-i^{2}p'e^{2}t-u^{3}s(u^{4}s). From *axis* (*q. v.*), and *petere*, to seek. Fr., *axipète*. Axipetal, centripetal. [B, 38, 195; L, 180.]

AXI-RECTUS (Lat.), n. m. A^{2}x(a^{3}x)-i^2-re^{2}k'tu^{3}s(tu^{4}s). E. Coues's name for the rectus capitis posticus major muscle. ["Med. Record," July 23, 1887 (L).]

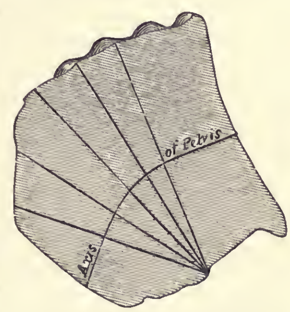
AXIRNACH, n. From Ar., *al-shirnâq*. A fatty tumor of the eyelid. [B, 52.]



AXIS (Lat.), n. m. A^{2}x(a^{3}x)'i^{2}s. Gen., *ax'is*. Pl., *ax'es*. Gr., ἄξων. Fr., *axe*, *essieu* (8th def.), *axoïde* [Chaussier] (8th def.). Ger., *Achse*, *Axe*. It., *asse*. Sp., *eje*. 1. A fixed line, actual or imaginary, about which anything revolves. The a. of a balance is the fixed line about which the beam of the balance turns. [B; C.] 2. The central part of anything; hence a line occupying the centre of anything or about which other parts are symmetrically disposed (a. of symmetry). [B.] 3. In botany, a term applied generically to any portion of a plant that increases by apical growth and sends out lateral offshoots. It is, hence, often used as synonymous with the entire stem of a plant, including both the portion above and that below the surface of the ground (see *Ascending a.* and *Descending a.*). It is further applied to those lateral outgrowths from the stem which are themselves the source of secondary lateral growths, and is especially applied to the rhachis of a raceme or spike of flowers (see *Primary a.*, *Secondary axes*, and *Tertiary axes*). In a special sense, it is the same as *pedicellus axiformis* (*q. v.*). [B, 1, 34, 167, 198.] See also *A. of a flower* and *A. of a fruit*. 4. Any particular diameter of an object, especially its long diameter. 5. In optics, the general direction or course followed by a ray. The a. of a microscope or a telescope is the straight line connecting the centres of the objective and the eye-piece, coinciding with the principal axes of both. [B.] 6. The bony or horny piece by means of which the anterior wing of an insect is connected with the prothorax. [Kirby (L, 180).] 7. In the trilobites, see TERGUM. 8. The second cervical vertebra, so called because the atlas and the cranium turn upon its odontoid process as on a pivot. [A, 385; C.] 9. An East Indian animal of the deer tribe (the *Cervus a.* of Linnæus), the horn of which has been used in medicine. [A, 301.]—**Accessory a.** Ger., *Nebenachse*. A secondary a. of a plant. [B. 19.] See *Secondary axes*.—**Antero-posterior a. of the eye.** See *Optical a.*—**Ascending a.** Lat., *a. ascendens*. Fr., *axe ascendant*. Ger., *aufsteigende Achse*. It., *asse ascendente*. The stem of a plant; that portion of the a. which is usually above ground and is distinguished by regularly producing buds. [B, 34.]—**Axes of the eye.** See *Optical a.*, *Vertical a. of the eye*, *Horizontal a. of the eye*, and *Visual a.*—**A.-band.** See *A.-cylinder*.—**A. cerebro-spinalis.** See *Cerebro-spinal a.*—**A.-cord.** Ger., *Achsenstrang*. See *A.*-CORD and *Primitive* STREAK.—**A.-corpuscle.** See *Axile* CORPUSCLE.—**A.-cylinder.** Lat., *fibra primitiva*. Fr., *cylindre-axe*. Ger., *Achsencylinder*, *Achsenband*, *Achsenfaser*, *Achsenschlauch*. It., *asse cilindrico*, *cilindrasse*, *cilindro centrale* (*o dell' asse*). Syn.: *axial fibre*, *a.-band* (or *-fibre*, or *-tube*), *band-* (or *central*, or *cylinder-*) *a.*, *flattened* (or *primitive*, or *Remak's*) *band*. The central and essential part of every nerve fibre, its size varying directly with that of the whole fibre. It may be inclosed in one or more sheaths, or it may be naked (see *Primitive* SHEATH, MYELIN, *Mauthner's* SHEATH, and *Naked a.-cylinder*). As shown by Schultze, the a.-c. is composed of delicate longitudinal fibrils (see *Primitive* FIBRILS), and it is supposed to be a continuation of the a.-c. process of a nerve cell. [J, 30, 31, 32.]—**A.-cylinder process.** See under PROCESS.—**A. decumbens.** See *Decumbent a.*—**A. descendens.** See *Descending*

a.—**A. encephalo-spinalis.** See *Cerebro-spinal a.*—**A. erectus.** See *Erect a.*—**A. excurrens.** See *Excurrent a.*—**A.-fibre.** See *A.-cylinder.*—**A.-fibrillæ.** See *Primitive* FIBRILS.—**A. funiformis.** See FUNICULUS *centralis.*—**A. gemmæ.** Syn.: *columna gemmæ.* The rudimentary offshoot constituting the bud-stalk and bearing the other parts (leaves or flowers) inclosed in the bud; the base of a bud. [B, 198.]—**A. of a crystal.** Fr., *axe d'un cristal.* See *A. of crystallization* and *Optical a.* (1st def.).—**A. of a lens.** See *Optical a.*, *Principal a.*, and *Secondary axes.*—**A. of a magnet.** See *Magnetic a.*—**A. of a mirror.** See *Optical a.*, *Principal a.*, and *Secondary axes.*—**A. of crystallization.** Fr., *axe de cristallisation.* A line about which the particles of a crystal are more or less symmetrically disposed; a line following the intersection of two of the planes with reference to which the co-ordinates of the crystalline particles are drawn. By reason of variations in the length and direction of these axes, six different systems of crystallization are formed. In the first (*regular* or *cubic*) system, there are three axes of equal length and at right angles to each other. In the second (*hexagonal*) system, there are four axes, three of which, lying in the same plane, make angles of 60° with each other (*secondary axes*), and the fourth (*principal a.*) differs from the others in length and is at right angles to their plane. In the third (*quadratic*, *square prismatic*) system, there are three axes, two of which (*secondary axes*) are equal in length and at right angles, while the third (*principal a.*) is longer or shorter than they and at right angles to both. In the fourth (*rhombic*) system, there are three axes at right angles to each other and all of unequal length; that one along which the crystal is most fully developed, or along the direction of which modifications most frequently occur, is called the *principal a.*, and the others are termed *secondary axes*, the longer one being the *macrodiagonal*, and the shorter one the *brachydiagonal a.* In the fifth (*monoclinic*, *monosymmetric*) system, there are three unequal axes. The *secondary axes* are at right angles to each other, and one of them (the *orthodiagonal a.*) is at right angles to the *principal a.*, while the other (the *clinodiagonal a.*) is inclined at an oblique angle to the latter. In the sixth (*triclinic asymmetric*) system, there are three unequal axes, no one of which forms a right angle with another, the *principal a.*, as in the fourth system, being

THE AXIS-CYLINDER. (FROM FREY, AFTER SCHULTZE.)



a, from the spinal cord of the ox; *b*, from the brain of the electric ray.

THE AXES OF ROTATION OF THE EYEBALL. (FROM RANNEY, AFTER FICK.)

The heavy lines show the direction of the muscles; the dotted lines, the axes of rotation. As the eye is represented as seen from above, the a. of rotation of the external and internal recti is not shown.

the one along which the crystal is principally developed, and the other axes being termed *secondary* and *macrodiagonal* and *brachydiagonal*, as in the fourth system. [B, 3.]—**A. of double refraction.** Fr., *axe de double réfraction.* See *Optical a.* (1st def.).—**A. of elasticity.** Fr., *axe d'élasticité.* An a. along which rays of polarized light show spherical or ellipsoidal wave-surfaces. [A, 385.] Cf. *A. of polarization.*—**A. of examination.** West's term for the a. of the outlet of the pelvis. [A, 84.]—**A. of growth.** A line connecting the organic centres of all the transverse sections of a segment of a plant. [B, 167.]—**A. of incidence.** Fr., *axe d'incidence.* A straight line passing through the point of incidence of a ray of light perpendicularly to the surface of the refracting medium. [L, 41.]—**A. of polarization.** The line about which the rings and other figures produced by the action of polarized light are symmetrically disposed. [Brewster (B, 116).]—**A. of refraction.** Fr., *axe de réfraction.* The prolongation of the a. of incidence into the refracting medium. [L, 41.]—**A. of rotation.** Fr., *axe de rotation.* Ger., *Drehachse.* It., *asse di rotazione.* Sp., *eje de rotación.* The a. around which the eyeball turns when one of its muscles contracts. [F.]—**A. of symmetry.** Fr., *axe de symétrie.* A line about which all the parts of a body are symmetrically disposed, representing the common intersection of all planes which divide the body into two symmetrical equal portions. [B.]—**A. of the brain.** See *Brain-a.*—**A. of the brim of the pelvis.** An imaginary line passing through the centre of the plane of the pelvic inlet in a direction perpendicular to the plane. [J. Wood (L, 133).]—**A. of the cochlea.** Lat., *a. cochleæ.* See MODIOLUS *cochleæ.*—**A. of the eye.** Fr., *axe de l'œil.* See *Optic a.* and *Visual a.*—**A. of the outlet of the pelvis.** An imaginary line passing through the centre of the plane of the pelvic outlet in a direction perpendicular to the plane.—**A. of the pelvis.** Lat., *a. pelvis.* Fr., *axe du bassin, direction de l'excavation pelvienne, ligne de direction.* Ger., *Beckenachse*, *Achse* (oder *mittellinie* oder *Führungslinie*) *der Beckenhöhle*, *Führungslinie des Geburtsprocesses.* Syn.: *guiding line.* A curved line cutting all the median antero-posterior diameters of the pelvic canal at their centres. The a. of any particular part of the pelvis cuts the centre of the plane of that part at right angles. [A, 22, 23.] Cf. CURVE *of Carus.*—**A. of turning.** See *A. of rotation.*—**A. opticus.** See *Optic a.*—**A. pelvis.** See *A. of the pelvis.*—**A. plantæ.** Ger., *Pflanzenachse.* The a. of a plant; the upper and underground stems. [B, 213.]—**A. primarius.** See *Primary a.*—**A.-process.** See *A.-cylinder* PROCESS.—**A. procumbens.** See *Procumbent a.*—**A. solvens.** See *Solvent a.*—**A.-stream.** See *Achsenstrom*, under ACHSE.—**A.-traction.** See under TRACTION.—**A.-tube.** See *A.-cylinder.*—**A. uteri.** 1. The long diameter of the uterus. 2. An imaginary transverse line passing through the uterus at a point near the junction of its body with its neck, on which it is said to turn when it becomes anteverted or retroverted.—**Band a.** See *A.-cylinder.*—**Bare a.-cylinder.** See *Naked a.-cylinder.*—**Basi-cranial a.** A line running from the centre of the anterior margin of the foramen magnum to the centre of the anterior margin of the cerebral surface of the sphenoid bone; as often used, a collective term for the basi-occipital, basi-sphenoid, and presphenoid bones. [L, 142, 149, 153.]—**Basi-facial a.** The forward continuation of the basi-cranial a., extending to the foremost point of the alveolar margin of the superior maxilla; as often used, a collective term for the narrowed anterior end of the presphenoid bone, the vertical plate of the ethmoid, and the septal cartilage of the nose. [L, 142, 149, 153.]—**Bi-auricular a.** Fr., *axe bi-auriculaire.* An imaginary straight line running from one auricular point to the other. [Bertillon (L, 87).]—**Brachy-diagonal a.** In crystals of the triclinic and the rhombic systems, the shorter of the two secondary axes. [B, 3.] See *A. of crystallization.*—**Brain-a.** The isthmus cerebri. [E. C. Spitzka, "Med. Record," Oct. 11, 1884, p. 393 (K).]—**Bulb-a.** In botany, a short, conical, leaf-bearing subterranean a.; a bulb. [B, 75.]—**Central a.** See *A.-cylinder.*—**Cerebro-spinal a.** Lat., *a. cerebro-* (seu *encephalo-*) *spinalis.* Fr., *axe cérébro-spinal.* Ger., *Gehirnrückenmarksachse.* It., *asse cerebro-spinale.* Sp., *eje cerebro-espinal.* The central nervous system; the brain and the spinal cord. [K.]—**Chief a.** See *Principal a.*—**Clinodiagonal a.** In crystals of the monoclinic system, that one of the secondary axes which makes an oblique angle with the principal a. [B, 3.] See *A. of crystallization.*—**Cœliac a.** See *Cœliac* ARTERY.—**Corneal axes.** The axes of the ellipsoid of which the cornea is a segment. [F.]—**Cranio-facial a.** In comparative anatomy, the bones which form the floor of the cranial cavity, including the mesethmoid, the vomeric, the presphenoid, the basi-sphenoid, and the basi-occipital. [C; L, 153.]—**Cranio-spinal a.** See *Cerebro-spinal a.*—**Crystallographic a.** See *A. of crystallization.*—**Decumbent a.** Lat., *a. decumbens.* Fr., *axe décombant.* Ger., *niederliegende Achse.* It., *asse decombante.* A stem which, after rising some distance above the ground, descends and trails upon the ground. [B, 34.]—**Definite a.** Fr., *axe défini.* A plant-a. which is terminated by a flower and then ceases to grow longitudinally, the growth of the plant being carried on only by secondary axes which spring from the axils of the leaves of the primary a. and, after attaining a certain growth, also cease extending longitudinally, and give rise in their turn to tertiary axes of axillary origin. [B, 121.]—**Descending a.** Lat., *a. descendens.* Fr. *axe descendante.* Ger., *hinabsteigende Achse.* In botany, the root; that portion of the a. of a plant which lies habitually beneath the ground, and is distinguished by the presence of fibrillæ (absorbing

THE AXIS OF THE PELVIS, SHOWN ON A PLASTER CAST. (FROM LUSK, AFTER HODGE.)

fibres) and the absence of buds and leaves. [B, 34.]—**Electric a.** A line connecting the two poles of a body possessing electrical properties. [L, 159.]—**Erect a.** Lat., *a. erectus.* Ger., *aufrechte Achse.* It., *asse eretto.* In botany, an ascending a. that rises perpendicularly from the ground. [B, 34.]—**Excurrent a.** Lat., *a. excurrens.* In botany, an ascending a. in which the growth takes place chiefly at the top, and the plant assumes a pyramidal or elongated form, as in the spruce. [B, 34.]—**Flower-a.** That portion of the a. of a plant which bears the flower; comprising the pedicel and receptacle, bearing the bracts, perianth, and male and female organs of the flower. [B, 75.]—**Hæmal a.** See Aorta.—**Horizontal a.** Fr., *axe horizontal.* Ger., *horizontale Achse, Querachse.* It., *asse orizzontale.* Sp., *eje horizontal.* In ophthalmology, a line drawn in a horizontal plane and perpendicular to both the antero-posterior and vertical axes of the eyeball, and passing through its geometrical centre. [F.]—**Hypocotyledonous a.** Fr., *axe hypocotylé.* Irmisch's term for that portion of the a. of the embryo of a plant which is situated below the cotyledons. [B, 121.]—**Indefinite a.** Fr., *axe indéfini.* A plant a. which continues to grow at its apex, and not solely by axillary offshoots. The secondary axes also continue to grow indefinitely at the apex, and the flowers spring from the axils of leaves and are not terminal. [B, 121.]—**Intra-muscular a.-cylinder.** The a.-cylinder of a nerve after it has penetrated the sarcolemma of the muscle to which it is distributed. [J, 35.]—**Lateral a.** Fr., *axe latéral.* Ger., *seitliche Achse.* It., *asse laterale.* A lateral outgrowth from the main a., or stem, of a plant; a shoot or petiole springing from a stem. [B, 167.]—**Longitudinal a.** Fr., *axe longitudinal.* Ger., *Längsachse.* It., *asse longitudinale.* According to Sachs, the a. of growth, but it should be restricted to the latter when it is actually longitudinal, as it usually is. [B, 121, 167.]—**Macrodiagonal a.** In crystals of the rhombic and the triclinic systems, the longer of the two secondary axes. [B, 3.] See *A. of crystallization.*—**Magne-crystallic a.** That line of a crystal which, when the latter is suspended between two magnets, tends to become parallel to the magnetic a. [Faraday (B, 140).]—**Magnetic a.** Fr., *axe magnétique.* Ger., *magnetische Achse.* It., *asse magnetico.* Sp., *eje magnético.* The a. of a magnet; a line connecting its two poles. [B.]—**Material a.** Fr., *axe matériel.* Ger., *materielle Achse.* An a. which has a material representative; a central core or portion which follows the line of the a., as in a fruit. [B.]—**Naked a.-cylinder.** Fr., *axe nu, fibres à myéline nus.* Ger., *nackter Achsencylinder.* A simple, or bare, a.-cylinder; one without either the primitive sheath (neurilemma) or the myelinic sheath. This is the condition of an a.-cylinder as it originates in the a.-cylinder process of a ganglion cell of the central nervous system, and also near its termination. [J, 32, 35.]—**Neural a.** See *Cerebro-spinal a.*—**Notochordal a.** See Notochord.—**Optic a., Optical a.** Lat., *a. opticus.* Fr., *axe optique.* Ger., *optische Achse.* It., *asse ottico.* Sp., *eje óptico.* 1. Of a crystal, the line along which a ray passes without undergoing double refraction. In crystals of the hexagonal and quadratic systems, there is only one optical a., which coincides with the principal a. of the crystal, and the crystal is then said to be uniaxial. In crystals of the rhombic, monoclinic, and triclinic systems, there are two optical axes, and the crystal is said to be biaxial. [B, 3, 21, 270.] 2. Of a lens or a mirror, a line passing through its centre of figure. [B.] See *Principal a.* and *Secondary axes.* 3. Of the eye, an imaginary line drawn from the centre of the cornea to a point midway between the macula lutea and the optic disc; the antero-posterior a. of the eye. [F.]—**Orthodiagonal a.** In crystals of the monoclinic system, that secondary a. which is at right angles to the principal a. [B, 3.] See *A. of crystallization.*—**Pelvic a.** See *A. of the pelvis.*—**Primary a.** Lat., *a. primarius.* Fr., *axe primaire.* Ger., *Hauptachse.* It., *asse primario.* 1. Of a crystal, see *A. of crystallization.* 2. In botany, the central trunk, or stem, of a plant; in a raceme or spike, the main rhachis, from which the lateral rhachides, or peduncles, spring. [B, 198.] 3. In zoology, an imaginary line drawn from the mouth, in certain animals, straight through the digestive cavity. [L, 176.]—**Principal a.** 1. Of a crystal, see *A. of crystallization.* 2. In optics, a line passing through the centre of a lens or mirror and the centre of curvature of the surface of which the lenticular or specular surface is a segment. [B.]—**Procumbent a., Prostrate a.** Lat., *a. procumbens.* Fr., *axe procombant.* Ger., *niederliegende* (oder *hingestreckte*) *Achse.* In botany, an ascending a. growing upon the ground. [B, 34.]—**Secondary axes.** Lat., *axes secundarii.* Fr., *axes secondaires.* Ger., *sekundäre Achsen, Nebenachsen, optische Nebenachsen* (2d def.). It., *assi secondarii.* 1. In crystallography, see *A. of crystallization.* 2. In optics, lines which pass through the centre of a lens or mirror and are oblique to the principal a. [B.] 3. In botany, the primary branches springing from the main trunk, or stem; in a raceme or spike, the secondary rhachides springing from the main rhachis. [B, 198.] 4. In zoology, lines, whether dorso-ventral or transverse, that are perpendicular to the primary a. [L, 176.]—**Simple a.-cylinder.** See *Naked a.-cylinder.*—**Solid a.** A solid chitinous rod found in the hydrosoma of certain *Hydrozoa.* [L, 147.]—**Solvent a.** Lat., *a. solvens.* It., *asse solvente.* In botany, an ascending a. in which the lateral is more marked than the vertical growth; opposed to excurrent a. [B, 34.]—**Spinal a.** In embryology, the notochord (*q. v.*). [L, 146.]—**Stem-a.** The main a., or stem, of a plant; its primary a. [B, 167.]—**Tertiary axes.** Lat., *axes tertiarii.* Fr., *axes tertiaires.* Ger., *tertiäre Achsen.* It., *assi tertiarii.* The secondary branchlets, buds, or other offshoots springing from the secondary axes; in a raceme or spike, tertiary rhachides, springing from the secondary rhachides (axes). [B, 198.]—**Thoracic a.** The occasional common trunk of the superior thoracic and acromiothoracic arteries. [L, 142.]—**Thyreoid a.** Lat., *a. thyreoideus.* Fr., *axe thyréoïdien.* A branch of the first part of the subclavian artery, arising close to the inner side of the scalenus anticus muscle; two or three lines from its origin, it divides into the ascending thyreoid, the suprascapular, and the transverse cervical or superficial cervical arteries. [L, 14.]—**Trailing a.** See *Procumbent a.*—**Uterine a.** See *A. uteri.*—**Vertical a.** Fr., *axe vertical.* Ger., *vertikale Achse.* It., *asse verticale.* Sp., *eje vertical.* In ophthalmology, a line drawn perpendicularly to the optical a. of the eye, in a plane parallel with the median plane of the body, and through the geometrical centre of the eye. [F.]—**Visual a.** Fr., *axe visuel, ligne visuelle.* Ger., *Sehachse.* It., *asse visuale* (o *visivo*). Sp., *eje visual.* Syn.: *visual line.* An imaginary line drawn from a point looked at through the nodal point of the eye to the macula lutea. [F.]

AXIS (Ar.), n. The *Cannabis sativa.* [B, 121.]

AXNEC (Ar.), n. A general name for the mosses. [B, 121.]

AXOCUILLIN, n. A Mexican popular name for axin (*q. v.*). [A, 447.]

AXOGAMIA (Lat.), n. n. pl. A^{2}x(a^{3}x)-o(o^2)-ga^{2}m(ga^{3}m)′i^2-a^3. A cohort of angeiosporous plants (*Cryptogamia*) including those in which antheridia and archegonia are produced in the axils of the leaves. It includes the whole of the grand division *Bryophyta* (*Musci* and *Hepaticæ*) and also the *Characeæ*, now referred to the division *Carposporeæ.* [B, 34.]

AXOID, adj. A^{2}x′oid. Lat., *axoides* (from *axis* [*q. v.*], and εἶδος, resemblance). Fr., *axoïde, axoïdien.* 1. Pivot-shaped. 2. Pertaining to the bone called the axis. [L, 43.]

AXOIDO-ATLOID, adj. A^{2}x-oi″do-a^{2}t′loid. Lat., *axoido-atloideus.* Fr., *axoïdo-atloïdien.* Pertaining to the axis (the bone) and the atlas. [A, 385.]

AXOIDO-ATLOIDEUS (Lat.), n. m. A^{2}x(a^{3}x)-o(o^2)-i(e)″do-(do^2)-a^{2}t(a^{3}t)-lo(lo^2)-i^{2}d(ed)′e^2-u^{3}s(u^{4}s). Fr., *axoïdo-atloïdien.* The obliquus capitis inferior muscle; in the solipeds, an analogous muscle. [L, 9, 13.]

AXOIDO-MASTOIDEUS (Lat.), n. m. A^{2}x(a^{3}x)-o(o^2)-i(e)″do-(do^2)-ma^{2}s(ma^{3}s)-to(to^2)-i^{2}d(ed)′e^2-u^{3}s(u^{4}s). Fr., *axoïdo-mastoïdien.* See Axoido-atloideus.

AXOIDO-OCCIPITALIS (Lat.), n. m. A^{2}x(a^{3}x)-o(o^2)-i(e)″do-(do^2)-o^{2}k-si^{2}p(ki^{2}p)-i^{2}t-a(a^3)′li^{2}s. Fr., *axoïdo-occipital.* The rectus capitis posticus major muscle. An analogous muscle in the solipeds was described by Gerard as consisting of a long and a short division. [L, 9, 13.]

AXOLOPHA (Lat.), n. f. A^{2}x(a^{3}x)-o^{2}l′o(o^2)-fa^3. From ἄξων, an axis, and λόφος, a plume. Fr., *axolophe.* A section of the botanical genus *Lavatera* made by De Candolle. [B, 121; L, 109.]

AXOLOTL, n. A Mexican name for the larval state (by many regarded as the permanent form) of several batrachians of the genus *Siredon* (the *Siredon Humboldtii* [Duméril], the *Siredon Harlanii* [Duméril], and the *Siredon Dumerilii* [Dugès]) found in Mexico, where its flesh is popularly esteemed an analeptic and a syrup made from a decoction of its skin is reputed curative of various pulmonary affections. [A, 447; L, 204.]

AXON (Lat.), n. m. A^{2}x(a^{3}x)′o^{2}n(on). Gen., *ax′onos* (*-nis*). Gr., ἄξων. See Axis.

AXONGE (Fr.), n. A^{3}x-o^{2}n^{2}zh. See Adeps and Axungia.—**A. balsamique, A. benzoïnée** [Fr. Cod.]. See Adeps *benzoinatus.*—**A. de la lune.** See Axungia *lunæ.*—**A. de momie.** See Axungia *de mumia.*—**A. de verre.** See Axungia *vitri.*—**A. du soleil.** See Axungia *solis.*—**A. populinée.** Lard aromatized with poplar buds. [B, 93.]—**A. toluinée.** Lard prepared like benzoinated lard, but with the substitution of balsam of Tolu for benzoin. [B, 46.]

AXONOBLASTEÆ (Lat.), n. f. pl. A^{2}x(a^{3}x)-o^{2}n-o(o^2)-bla^{2}st-(bla^{3}st)′e^2-e(a^3-e^2). From ἄξων, an axis, and βλαστός, a sprout. An order of *Algæ* (*Choristocarpeæ*) made by Kützing, including the families *Dasyeæ, Polysiphonieæ, Rytiphlœaceæ,* and *Chondrieæ.* [B, 170.]

AXONOPE (Fr.), n. A^{3}x-o-nop. See Axonopus.

AXONOPHYTUM (Lat.), n. n. A^{2}x(a^{3}x)-o^{2}n-o^{2}f′i^{2}t(u^{6}t)-u^{3}m-(u^{4}m). From ἄξων, an axis, and φυτόν, a plant. Fr., *axonophyte.* Of Necker, a genus (order) of plants comprising various species (genera), such as *Myrica, Gnetum, Juglans, Cecropia, Quercus, Corylus, Alnus, Betula, Fagus, Liquidambar, Populus, Salix,* etc., which have an amentaceous inflorescence consisting of flowers grouped about a common axis. [B, 121, 170.]

AXONOPUS (Lat.), n. m. A^{2}x(a^{3}x)-o^{2}n′o(o^2)-pu^{3}s(pu^{4}s). Fr., *axonope.* 1. Of Palisot de Beauvois, the botanical genus *Urochloa.* 2. Of Römer and Schultes, the genus *Paspalum.* [B, 121, 170.]

AXOPHYTE, n. A^{2}x′o-fit. From ἄξων, an axis, and φυτόν, a plant. Richard's term for the entire axis of a plant, *i. e.*, both root and stem. [B, 121.]

AXOPUS (Lat.), n. m. A^{2}x(a^{3}x)′o(o^2)-pu^{3}s(pu^{4}s). Of Dumortier, the botanical genus *Urochloa.* [B, 121.]

AXOSPERMUS (Lat.), adj. A^{2}x(a^{3}x)-o(o^2)-spu^{5}rm(spe^{2}rm)′u^{3}s-(u^{4}s). From ἄξων, an axis, and σπέρμα, a seed. Fr., *axosperme.* In botany, having the placenta axile; as a n., in the f. pl., *Axospermæ*, plants with axile placentæ. [B, 121.]

AXOTOMOUS, adj. A^{2}x-o^{2}t′o-mu^{3}s. From ἄξων, an axis, and τέμνειν, to cut. Having a cleavage perpendicular to the axis. [L, 56.]

AX-SEED, n. A^{2}x′sed. See Ax-fetch.

AX-SHAPED, adj. A^{2}x′shapd. See Dolabriform.

AXUEL (Fr.), adj. A^{3}x-u^6-e^{2}l. See Axial.

AXULA (Lat.), n. f. A^{2}x(a^{3}x)′u^2(u^4)-la^3. See Axilla.

AXUNGE, AXUNGER, n's. A^{2}x′u^{3}nj, -u^{3}n′ju^{5}r. See Axungia.

AXUNGIA (Lat.), n. f. A^{2}x(a^{3}x)-u^{3}n(un^2)′ji^2(gi^2)-a^3. From *axis*, an axle, and *ungere* (= *unguere*), to smear. Gr., ἀξύγγια, ἀξύγγιον, ἀξούγγιον (all probably made from the Latin). Fr., *axonge.* Ger., *Schmierfett, Schmalz.* It., *sugna.* Sp., *manteca, unto.* Lit., axle-grease; as now used, any animal fat, particularly lard. The

different fats known under this name contain essentially the same constituents (palmitates, stearates, and oleates of glyceryl), although in somewhat varying proportions; and their properties are substantially the same, the chief point of difference being that of consistence. [B.] Cf. ADEPS.—**A. anatis.** Fr., *graisse de canard.* Ger., *Entenfett.* The fat of the domestic duck, official in the Würt. Ph. of 1798. [B, 180.]—**A. anguillæ.** Fr., *graisse d'anguille.* Ger., *Aalschmalz.* Eel's grease, official in the Würt. Ph. of 1798 and the Sp. Ph. of 1798. [B, 119, 180.]—**A. anguium.** See *A. serpentum.*—**A. anserina, A. anseris.** Fr., *graisse d'oie.* Ger., *Gänsefett, Gänseschmalz.* Goose-grease, official in several old formularies and still used as a domestic remedy. [B, 119, 270.]—**A. ardeæ.** Fr. *graisse de héron.* Ger., *Reiherschmalz.* Heron's fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 119, 180.]—**A. articularis.** Synovia. [A, 316.]—**A. aschiæ, A. aschii, A. asciæ, A. ascii.** Ger., *Aeschenfett.* The oil of the grayling (*Salmo thymallus*), official in several old formularies. [B, 119, 180.]—**A. balsamica, A. benzoata** [Belg. Ph., Norw. Ph., Swed. Ph.], **A. benzoinata.** See ADEPS *benzoinatus.*—**A. canis.** Fr., *graisse de chien.* Ger., *Hundschmalz.* Dog's fat, official in several old formularies. [B, 97, 180.]—**A. caponis.** Capon's grease, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 97, 119.]—**A. castorei.** Ger., *Bibergeilfett.* The fat contained in the oil-sacs of the beaver, adjacent to the castoreum-sacs; not to be confounded with *a. castoris.* [B, 180.]—**A. castoris.** Fr., *graisse de castor.* Ger., *Biberschmalz.* Beaver's fat, official in the Würt. Ph. of 1798. [B, 119, 180.]—**A. catis silvestris.** Fr., *graisse de chat sauvage.* Wild-cat's fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 97, 119.]—**A. cetaria.** Whale oil (oleum cetaceum). [B, 180.]—**A. ciconiæ, A. ciconii.** Stork's fat, official in the Würt. Ph. of 1798. [B, 119. 180.]—**A. colli equi.** Fr., *graisse de col de cheval.* Ger., *Kammfett, Pferdeschmalz.* The fat from the horse's neck. [B, 270.]—**A. corturnicis.** Fr., *graisse de caille.* Ger., *Wachtelschmalz.* Quail's fat, official in the Würt. Ph. of 1798. [B, 119, 180.]—**A. cuculi.** Ger., *Kuckukfett.* Cuckoo's fat, formerly official. [B, 180.]—**A. cuniculi.** Fr., *graisse de lapin.* Ger., *Kaninchenschmalz.* Rabbit's fat, official in the Würt. Ph. of 1798. [B, 119, 180.]—**A. curata** [Swed. Ph.]. Lard. [B.] See ADEPS.—**A. de mumia.** Fr., *axonge de momie.* Syn.: *mumia de medullis.* The marrow of bones. [B, 50.]—**A. equi, A. equi e collo, A. equi e juba.** See *A. colli equi.*—**A. erinacei.** Fr., *graisse de hérisson.* Hedgehog's fat, official in the Palat. Disp. of 1764. [B, 119.]—**A. gadi.** Cod-liver oil. [A, 316.]—**A. gallinæ.** Fr., *graisse de poule.* Ger., *Hühnerfett.* Sp., *grasa* (*ó enjundia*) *de gallina* [Sp. Ph.]. Hen's fat, still official in the Sp. Ph. and formerly in several other formularies. [B, 119, 270.]—**A. gruis.** Ger., *Kranichsfett.* Crane's fat. [B, 180.]—**A. hominis.** Fr., *graisse d'homme.* Ger., *Menschenschmalz.* Human fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 119.]—**A. leporina, A. leporis.** Fr., *graisse de lièvre.* Hare's fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 180, 270.]—**A. lucii piscis.** Fr., *graisse de brochet.* Ger., *Hechtschmalz.* The oil of the pike, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 97.]—**A. lunæ.** Fr., *axonge de la lune.* Ger., *Mondlack.* An old name for a variety of calcium carbonate. [B, 180.] See LAC *lunæ.*—**A. lunæ chymica.** White bole. [L, 119.]—**A. lupi.** Fr., *graisse de loup.* Ger., *Wolfsschmalz.* Wolf's fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 119, 180.]—**A. lutrae.** The fat of the otter (*Lutra vulgaris* [Cuvier]). [B, 180.]—**A. mineralis.** Vaseline. [B, 270.] See PETROLATUM.—**A. muris alpini, A. muris montani.** Fr., *graisse de marmotte.* Ger., *Murmelthierschmalz.* The fat of the marmot (*Arctomys marmotta* [Linnæus]), official in the Würt. Ph. of 1798 and the Turin Ph. of 1839. [B, 97, 180.]—**A. nitrica, A. oxygenata.** See *Unguentum* ACIDI NITRICI and ADEPS *oxygenatus.*—**A. pavonis galli.** Turkey's fat, formerly official. [B, 180.]—**A. pedum tauri.** Fr., *huile de pieds de bœuf.* Ger., *Klauenfett.* Neat's-foot oil. [B, 119; L, 65.] See OLEUM *bubulum.*—**A. phasiani.** The fat of the pheasant (*Phasianus colchicus* [Linnæus]). [B, 180.]—**A. phocæ, A. phoci.** Fr., *graisse de phoque.* Ger., *Seehundsfett.* The fat of the seal (*Phoca vitulina* [Linnæus]), official in the Swed. Ph. of 1817. [B, 119, 180.]—**A. piscina marina.** Cod-liver oil. [A, 316.]—**A. porci** [Austr. Ph., Hung. Ph.], **A. porci depurata** [Belg. Ph.], **A. porci lota** [Dan. Ph.], **A. porcina.** Hog's lard. [B, 95, 119.] See ADEPS.—**A. serpentum.** Fr., *graisse de couleuvre.* Ger., *Schlangenfett.* The fat of the common ringed snake (*Tropidonotus natrix* [Kuhl.], *Coluber natrix* [Linnæus]), official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 119, 180.] Cf. *A. viperarum.*—**A. solis.** Fr., *axonge du soleil.* An old name for a yellow variety of clay (terra sigillata) obtained from Silesia. [B, 88, 132.]—**A. suilla** [Gr. Ph.], **A. suis scrofæ.** Hog's lard. [B, 95, 97.] See ADEPS.—**A. taxi.** Fr., *graisse de blaireau.* Ger., *Dachsenschmalz, Dachsfett.* The fat of the badger (*Meles taxus* [Cuvier]), official in several old formularies. [B, 119, 180.]—**A. thymalli, A. thymalli piscis.** See *A. aschii.*—**A. truttæ.** See *A. pavonis Galli.*—**A. ursi.** Fr., *graisse d'ours.* Ger., *Bärenschmalz.* Bear's grease, official in several old formularies. [B, 119, 180.]—**A. viperarum.** Fr., *graisse de vipère.* Ger., *Vipernschmalz.* Viper's fat, official in several old formularies. [B, 119, 180.]—**A. vitri.** Fr., *axonge de verre.* Salt of glass; a sort of scum that forms on the surface of molten glass; used as a cleansing and desiccative application. [B, 88, 200.]—**A. vulpis.** Fr., *graisse de renard.* Ger., *Fuchsschmalz.* Fox's fat, official in the Palat. Disp. of 1764 and the Würt. Ph. of 1798. [B, 119, 180.]

AXUNGIOUS, adj. A^{2}x-u^{3}n′ji^2-u^{3}s. Greasy, resembling lard. [B, 39.]

AX-VETCH, AX-WORT, n's. A^{2}x′ve^{2}ch, -wu^{5}rt. See AXFETCH.

AXYLÆ (Lat.), n., f. pl. of adj. *axylus* (*q. v.*). A^{2}x(a^{3}x)′i^{2}l(u^{6}l)-e(a^3-e^2). Syn.: *Ananthæ.* Of Dumortier, a division of plants including the subdivisions *Dermosporæ* and *Gliosporæ.* [B, 170.]

AXYLUS (Lat.), adj. A^{2}x(a^{3}x)′i^{2}l(u^{6}l)-u^{3}s(u^{4}s). From α priv. (1st def.), or intens. (2d def.), and ξύλον, wood. Fr., *axyle.* Ger., *holzlos* (1st def.). 1. Destitute of wood (said of plants). 2. Having much wood. [B, 78.]

AXYMUM (Lat.), n. n. A^{2}x(a^{3}x)-i(u^6)′mu^{3}m(mu^{4}m). See AZYMUM.

AYACUCHO (Sp.), n. A^3-ya^3-ku′cho. A place in Peru, where there are sulphurous and ferruginous springs. [a, 5, 14.]

AYAH-MARUM (Tamil), n. The *Ulmus integrifolia.* [B, 172.]

AYALLA, n. The *arbor versicolor* of Rumphius; a large tree of the Moluccas, of uncertain botanical affinities. The bark, which is said to change color, is chewed by the Malays, mixed with the betel-nut, and used as a tonic. [B, 38, 121, 132.]

AYALLY, n. An undetermined gramineous plant of San Domingo, used as a laxative. [B, 132; L, 105.]

AYALOAR-CHEE, AYALOOGI, n's. See ALOES-WOOD.

AYA-PANA [Fr. Cod.], **AYA-PANO,** n's. The *Eupatorium a.-p.*; an aromatic plant indigenous to Brazil and cultivated in the Isle of France, whence the leaves, which are yellowish, of a bitter, astringent taste, and of an agreeable odor, find their way into commerce. It resembles tea in its properties, and was formerly vaunted in various diseases. [A, 259; B, 5, 113.]—**A. sauvage** (Fr.). The *Vernonia cinerea.* [B, 121.]

AYART (Fr.), n. A^3-e-a^{3}r. The *Acer opulifolium.* [B, 19.]

AYAS (Sanscr.), n. Iron. [A, 259; B; L, 105.]

AYASRU, n. The *Santalum album.* [B, 88.]

AYAU, n. A species of *Narcissus,* also the *Ixia bulbocodium.* [B, 38, 132.]

AYBORZAT, n. Galbanum. [B, 132, 200.]

AYCAPHER, AYCOPHES, AYCOPHOS, n's. See ÆS *ustum.*

AYDENDRON (Lat.), n. n. A^3-i^2-de^{2}n′dro^{2}n. From *ai,* a South American name for the sloth, and δένδρον, a tree. A genus of lauraceous trees of the tribe *Perseaceæ,* established by Nees and Martius, having a succulent fruit. [B, 19, 42.]—**A. cujumary** [Nees]. Syn.: *Ocotea cujumari* [Martius]. A Brazilian species of uncertain botanical characters. The aromatic, oily seeds, called Cujumary beans, are used as a tonic and gastric stimulant. [B, 19, 214.]—**A. laurel** [Nees]. Syn.: *Ocotea pichurim* [Kunth], *Laurus pichurim* [Willdenow]. A tree growing in Venezuela, of doubtful botanical characters, said to furnish Pichurim beans. [B, 46, 214.]

AYEGREEN, n. A^3′i^2-gren. The house-leek (*Sempervivum tectorum*). [Halliwell (L, 56).]

AYER, n. Malay, *âyer,* water. A vine of undetermined botanical characters growing in Amboyna; the *funis murænarum latifolius* of Rumphius. [B, 121.]

AYER-AYER, n. The *Lansium domesticum.* [B, 19.]

AYERMADDU (Malay), n. Honey. [B, 88.]

AYEZ, n. See ALLIUM.

AYGREEN, n. See AYEGREEN.

AYIRAMPO, n. An undetermined species of *Cactus* growing in Cusco. [B, 121.]

AYLANTHUS, AYLANTUS (Lat.), n's f. A(a^3-i^2)-la^{2}n(la^{3}n)′-thu^{3}s(thu^{4}s), -tu^{3}s(tu^{4}s). See AILANTUS.

AYLESFORD WELL, n. Alz″fo^{2}rd-we^{2}l′. See LEAMINGTON.

AYLMERIA (Lat.), n. f. Al(a^3-i^{2}l)-me(ma)′ri^2-a^3. Fr., *aylmérie.* See POLYCARPÆA.

AYLOUS, adj. A-i′lu^{3}s. See ANYLOUS.

AYMADAVUM, n. A Kalmuck name for the *Sison ammi.* [B, 88.]

AYMARA-POSOGUERI, n. See POSOQUERIA.

AYMIRI, AYMIRI-MITI, n's. The *Hernandia sonora.* [B, 121.]

AYMOUTABOU, n. The *Moutabea guianensis.* [B, 121.]

AYMPADOO (Hind.), n. The *Brucea sumatrana* of Roxburgh. [B, 88.]

AYND, n. See AANDE.

AYNITU, n. An undetermined tree of the Moluccas, akin to Croton. [Rumphius (B, 121).]

AYN-M'KEBERTA, n. A place in Algeria, where there are cold sulphurous springs. [A, 385.]

AYN-NOUISSY, n. A place in Algeria, where there are hot sulphurous springs. [A, 385.]

AYOS (Sp.), n. A^3′yos. The *Allium sativum.* [B, 88.]

AYOTECTLI, n. A Mexican name for a species of *Bryonia* (the *Bryonia variegata* [Mill.], the *brionía del país*), found in the temperate districts of Mexico; a dangerous drastic. [A, 447.]

AYOUINITABOU, n. A Guiana name for the *Aguanthe.* [B, 121.]

AYOULIBA, n. A Guiana name for the *Eupatorium calthidifolium.* [B, 121.]

AYOU OUSUMI, n. A Turkish name for the *Arctostaphylos uva ursi.* [A, 259.]

AYOU PENTEHESI, n. A Turkish name for the *Acanthus mollis.* [A, 259.]

AYPARHU, n. An Amboyna tree of unknown botanical characters. [Rumphius (B. 121).]

AYPI, n. Manihot; also an imperfectly known species of *Cynanchium.* [B, 121.]

AYPNIA (Lat.), n. f. $A^2(a^3)$-$i^2p(u^6p)'ni^2$-a^3. See Anypnia.

AYPNOS (Lat.), adj. $A^2(a^3)$-$i^2p(u^6p)'no^2s$. Gr., ἄυπνος (from α priv., and ὕπνος, sleep). Sleepless. [A, 322.]

AYRI, n. A Brazilian name for the *Astrocaryum a.* of Martius. [B, 121.]

AYSHWEED, n. Ash'wed. A sort of herb, probably the same as the gout-wort. [Minshen (B, 222).]

AYTIMUL, n. An undetermined tree of the Moluccas, the wood of which is used for making small boxes and for other purposes. [Rumphius (B, 121).]

AYULAN, n. The *Sandaricum indicum* of Cavanilles. [Rumphius (B, 121).]

AYUN, AYUNE, n's. A tree of the Moluccas, the fruit of which, resembling the plum, is edible. [B, 121.]

AYVAL, n. An undetermined tree of the Moluccas, having a milky juice. The young shoots are edible. [Rumphius (B, 121).]

AYVELIN (Tamil), n. The *Bryonia laciniosa* of Linnæus. [B, 121.]

AZA, n. A Basque name for the cabbage. [B, 121.]

AZAA (Ar.), n. "Magra, terra rubea"; probably a sort of red marl. [B, 50, 200.]

AZAC (Ar.), n. Gum ammoniacum. [L, 84, 97.]

AZADARAC (It., Sp.), n. A^3-$dza^3d'a^3$-ra^3k, -$th^2a^3d'a^3$-ra^3k. The *Melia azederach.* [B, 88.]

AZADARACHENI ARBOR (Lat.), n. $A^2z(a^3z)$-$a^2d(a^3d)''a^3r$-$a^2k(a^3ch^2)$-$e(a)'ni(ne)$. Of J. Bauhin, the *Melia azederach.* [B, 211; L, 104.]

AZADARACHT, AZADARACHTA, n's. See Azadirachta.

AZADERACH, n. See Azederach.

AZAD-I-DURUCHT (Pers.), n. See Azederach.

AZADIRACHTA (Lat.), n. f. $A^2z(a^3z)$-$a^2d(a^3d)''i^2r$-$a^2k(a^3ch^2)'$-ta^3. For deriv., see Azederach. A genus of meliaceous trees of the tribe *Melieæ*, having imparipinnate leaves and axillary flowers. It differs from the allied genus *Melia* (to which it is referred by Bentham and Hooker) in the 3-lobed stigma and trilocular ovary containing collateral ovules, and in the 1-celled fruit containing a single exalbuminous seed. [B, 19, 42, 216.]—**Azadirachtæ cortex** [Ind. Ph.]. The bark of *A. indica.* [B.]—**Azadirachtæ folia** [Ind. Ph.]. The leaves of *A. indica.*—**A. indica** [Jussieu]. Fr., *margousier.* Ger., *indischer Zedrach, Paternosterbaum.* Syn.: *Melia a.* [Cavanilles], *Melia foliis pinnatis* [Linnæus]. The nim-tree, or margosa (the *aria-bepon* of Rheede); a tree indigenous to India, with oblique leaflets and small, white flowers disposed in panicles. Its bark (*azadirachtæ cortex* [Ind. Ph.], *cortex azederach* [seu *margosæ*], nim-bark) is said to contain a bitter principle, *margosin*, or, according to some, an alkaloid, *azadirine*, and is used as an anthelminthic, tonic, and (with the root) febrifuge. The leaves (*azadirachtæ folia* [Ind. Ph.]) are employed as an application in rheumatism, contusions, glandular swellings, and certain skin diseases. The fruit furnishes a very bitter, acrid fixed oil (oil of a.) which is used as an illuminating oil, in dyeing cotton fabrics, and medicinally as an anthelminthic and as an embrocation in rheumatism. The seeds are used as an insect-poison and in the preparation of a hair-wash. A gum which exudes from the bark is said to have stimulant properties. A sort of fermented drink is made from the young trees. [A, 385; B, 2, 19, 81.]—**Oil of a.** Nim oil (the *vayppannay* of India); a fixed oil obtained from the ripe fruit of the *A. indica.* [P. S. Mootooswamy, "Indian Med. Gaz.," Jan., 1887, p. 3; B, 2.] See Melia *a.*

AZADIRINE, n. A^2z-$a^2d'i^2r$-en. Fr., *azadirine, azédarine.* Ger., *Azadirin.* A bitter principle, perhaps an alkaloid, extracted from the *Azadirachta indica.* It has been used as a substitute for quinine. [B, 2.]

AZAFRAN (Sp.), n. A^3th^2-a^3-fra^3n'. 1. Saffron (the *Crocus sativus*). [B.] 2. A new Granada name for the *Escobedia scabrifolia*, the root of which is used in dyeing yellow. [B, 121.]—**A. bastardo.** Bastard saffron, dyers' safflower (the *Carthamus tinctorius* [Linnæus]). [A, 361.]—**A. de Castilla.** A medicinal herb imported from the province of San Luis, Argentine Republic. ["Proc. of the Am. Pharm. Assoc.," xxiv, p. 763 (B).]—**A. de Venus.** See Crocus *Martis.*—**A. romi** (ó **romin**). See *A. bastardo.*

AZAFRANCILLO (Sp.), n. A^3 th^2a^3-fra^3n-thel'yo. The *Carthamus tinctorius.* [A, 447.]—**A. de México.** The *Escobedia scabrifolia.* [A, 447.]

AZAFRANINA (Sp.), n. A^3-th^2a^3-fra^3n-$e'na^3$. A resinous coloring matter found by Altamirano in the *Escobedia scabrifolia*; said to form a blue coloration, passing into violet, when treated with sulphuric acid. [Altamirano, "Naturaleza," iii, p. 390 (A, 447).]

AZAGI, n. See Azegi.

AZAGOR, n. Ar., *al-zînjâr*, from Pers., *zengâr.* Also written *asingar* and *asugar.* An alchemical name for verdigris. [B, 50, 52.]

AZAHAR (Sp.), n. A^3-th^2a^3-a^3r'. 1. The flower of the orange-tree. [A, 447.] 2. A variety of the *Cinchona oblongifolia* [Lambert] having scabrous, downy leaves. [B, 46.]—**Agua de a.** Orange-flower water. [A, 361.]—**A. bravo.** The *Lupinus angustifolius.* [A, 361.]

AZAKANA, n. See Asakana.

AZAK EGHIRI, n. A Turkish name for the *Acorus calamus.* [A, 259.]

AZALA, n. A Turkish name for madder. [B, 121.]

AZALEA (Lat.), n. f. $A^2z(a^3z)$-$a(a^3)'le^2$-a^3. From ἀζαλέος (from ἀζαίνειν), dry. Fr., *azalée.* Ger., *Azalea, Felsenstrauch.* A genus of ericaceous shrubs of the suborder *Ericineæ*, established by Linnæus, having alternate, entire leaves, and umbellate clusters of flowers with a small 5-parted calyx, a 5-lobed infundibuliform corolla, 5 declinate, exserted stamens with anthers dehiscing by pores, and a 5-celled, 5-valved capsule containing many seeds. By Bentham and Hooker it is referred to *Rhododendron.* [B, 34, 42.]—**A. arborea** [Linnæus]. See Anthodendron *ponticum.*—**A. bicolor** [Pursh], **A. calendulacea** [Michaux], **A. canescens** [Michaux]. The *Rhododendron nudiflorum.* [B, 215.]—**A. glauca** [Lamarck]. A variety of the *Rhododendron glaucum.* [B, 215.]—**A. indica.** See Rhododendron *indicum.*—**A. nitida** [Pursh]. A variety of the *Rhododendron viscosum.* [B, 215.]—**A. nudiflora** [Linnæus], **A. periclymenoides** [Michaux]. See Rhododendron *nudiflorum.*—**A. pontica** [Linnæus]. See Anthodendron *ponticum* and Rhododendron *ponticum.*—**A. procumbens** [Linnæus]. See Loiseleuria *procumbens.*—**A. sinensis.** See Rhododendron *sinense.*—**A. speciosa** [Willdenow]. The *Rhododendron speciosum* of G. Don. [B, 214.]—**A. tomentosa.** See Loisleuria *procumbens.*—**A. viscosa.** See Rhododendron *venustum.*

AZALEINE, n. A^3z-$a'le^2$-en. Fr., *azaléine.* Ger., *Azaleïn.* A pure variety of fuchsine formerly obtained by treating aniline oil with mercurous nitrate, consisting of the nitrate of rosaniline or pararosaniline. The name is now applied to pure fuchsine, however obtained. [B, 81, 270.]

AZALEM, n. See Azelem.

AZAMAR, n. An alchemical name for native cinnabar. [B, 38.]

AZANE, n. See Adrop.

AZANEC, n. An alchemical name for "armoniacus" (probably sal ammoniac). [B, 50, 200.]
